TRANSFERRED FROM THE OTHER

THOMAS COOKE

DEDICATION.

TO HIS GRACE

JOHN DUKE OF ARGYLL AND GREENWICH, &c.

MY LORD,

As this is the only method by which men of genius and learning, though small perhaps my claim to either, can show their esteem for persons of extraordinary merit, in a superior manner to the rest of mankind, I could never embrace a more favourable opportunity to express my veneration for your Grace, than before a translation of so ancient and valuable an author as Hesiod. Your high descent, and the glory of your illustrious ancestors, are the weakest foundations of your praise; your own exalted worth attracts the admiration, and I may say the love of all virtuous and distinguishing souls; and to that only I dedicate the following work. The many circumstances which contributed to the raising you to the dignities which you now enjoy, and which render you deserving the greatest favours a prince can bestow; and, what is above all, which fix you ever dear in the affection of your country, will be no small part of the English history, and shall make the name of Argyll sacred to every generation; nor is it the least part of your character, that the nation entertains the highest opinion of your taste and judgment in the polite arts.

You, my Lord, know how the works of genius lift up the head of a nation above her neighbours, and give it as much honour as success in arms; among these we must reckon our translations of the classics; by which, when we have naturalized all Greece and Rome, we shall be so much richer than they were by so many original productions as we shall have of our own. By translations when performed by able hands, our countrymen have an opportunity of discovering the beauties of the ancients, without the trouble and expence of learning their languages; which are of no other advantage to us than for the authors who have writ in them; among which the poets are in the first rank of honour, whose verses are the delightful channels through which the best precepts of morality are conveyed to the mind; they have generally something in them so much above the common sense of mankind; and that delivered with such dignity of expression, and in such harmony of numbers, all which put together, constitute the *or divinum*, that the reader is inspired with

sentiments of honour and virtue, he thinks with abhorrence of all that is base and trifling; I may say, while he is reading, he is exalted above himself.

You, my Lord, I say, have a just sense of the benefits arising from works of genius, and will therefore pardon the zeal with which I express myself concerning them: and great is the blessing, that we want not persons who have hearts equal to their power to cherish them: and here I must beg leave to pay a debt of gratitude to one, who, I dare say, is as highly thought of by all lovers of polite learning as by myself, I mean the Earl of Pembroke; whose notes I have used in the words in which he gave them to me, and distinguished them by a particular mark from the rest. Much would I say in commendation of that great man; but I am checked by the fear of offending that virtue which every one admires. The same reason makes me dwell less on the praise of your Grace than my heart inclines me to.

The many obligations which I have received from a lady, of whose virtues I can never say too much, make it a duty in me to mention her in the most grateful manner; and particularly before a translation, to the perfecting which I may with propriety say she greatly conduced, by her kind solicitations in my behalf, and her earnest recommendation of me to several persons of distinction. I believe your Grace will not charge me with vanity, if I confess myself ambitious of being in the least degree of favour with so excellent a lady as the Marchioness of Annandale.

I shall conclude without troubling your Grace with any more circumstances relating to myself, sincerely wishing what I offer was more worthy your patronage; and at the same time I beg it may be received as proceeding from a just sense of your eminence in all that is great and laudable. I am,

My Lord,
with the most profound respect,
your Grace's
most obedient,
and most humble servant,

THOMAS COOKE.

January 1728.

TWO DISCOURSES

ON THE LIFE AND WRITINGS OF HESIOD.

ON THE LIFE OF HESIOD.

Sect. I. *The Introduction.*

THE lives of few persons are confounded with so many uncertainties and fabulous relations as those of Hesiod and Homer; for which reason, what may possibly be true, is sometimes as much disputed as the romantic part of their stories. The first has been more fortunate than the other, in furnishing us, from his writings, with some circumstances of himself and family, as the condition of his father, the place of his birth, and the extent of his travels; and he has put it out of dispute, though he has not fixed the period, that he was one of the earliest writers of whom we have any account.

2. *Of his own and father's country, from his writings.*

He tells us in the second book of his Works and Days, that his father was an inhabitant of Cuma, in one of the Æolian isles; from whence he removed to Ascra, a village in Bœotia, at the foot of mount Helicon; which was doubtless the place of our poet's birth, though Suidas, Lilius Gyraldus, Fabricius, and others, say he was of Cuma. Hesiod himself seems, and not undesignedly, to have prevented any mistake about his country; he tells us positively, in the same book, he never was but once at sea, and that in a voyage from Aulis, a sea port in Bœotia, to the island Eubœa. This, connected with the former passage of his father sailing from Cuma to Bœotia, will leave us in no doubt concerning his country.

3. *Of his quality, from his writings.*

Of what quality his father was we are not very certain; that he was drove from Cuma to Ascra, by misfortunes, we have the testimony of Hesiod. Some tell us he fled to avoid paying a fine; but what reason they have to imagine that I know not. It is remarkable that our poet, in the first book of his Works and Days, calls his brother *διον γένος*. We are told indeed that the name of his father was Dios, of which we are not assured from any of his writings now extant; but if it was, I rather believe, had he designed to call his brother of the race of Dios, he would have used *Διογενής* or *Διυ γένος*; he must therefore by *διον γένος* intend to call him of race divine. Le Clerc observes, on this passage, that the old poets were always proud of the epithet divine; and brings an instance from Homer, who styled the swineherd of Ulysses so. In the same remark he says, he thinks Hesiod debases the word in his application of it, having spoke of the necessitous circumstances of his father

in the following book. I have no doubt but Le Clerc is right in the meaning of the word *διον*; but at the same time I think his observation on it trifling; because, if his father was reduced to poverty, we are not to infer from thence he was never rich, or, if he was always poor, that is no argument against his being of a good family; nor is the word divine in the least debased by being an epithet to the swineherd, but a proof of the dignity of that office in those times. We are supported in this reading by Tzetzes; and Valla and Frisius have took the word in the same sense, in their Latin translations of the Works and Days.

—Frater ades (says Valla) generoso e sanguine Perse.

And Frisius calls him Perse divine.

4. *A judgment of his age and quality from fiction.*

The genealogy likewise which the author of the contention betwixt Homer and Hesiod, gives us, very much countenances this interpretation. We are told in that work, that Linus was the son of Apollo, and of Thoofe the daughter of Neptune; King Pierus was the son of Linus, Oeagrus of Pierus and the nymph Methone, and Orpheus of Oeagrus and the Muse Calliope; Orpheus was the father of Othrys, Othrys of Harmonides, and Harmonides of Philoterpus; from him sprung Euphemus the father of Epiphraides, who begot Menalops the father of Dios; Hesiod and Persees were the sons of Dios by Pucamede the daughter of Apollo; Persees was the father of Mæon, whose daughter Crytheis bore Homer to the river Meles. Homer is here made the great grandson of Persees the brother of Hesiod. I do not give this account with a view it should be much depended on; for it is plain from the poetical etymologies of the names, it is a fictitious generation; yet two useful inferences may be made from it; first, it is natural to suppose the author of this genealogy would not have forged such an honourable descent, unless it was generally believed he was of a great family; nor would he have placed him so long before Homer, had it not been the prevailing opinion he was first.

5. *Of his age, from Longomontanus, and the Arundelian marble.*

Mr. Kennet quotes the Danish astronomer Longomontanus, who undertook to settle the age of Hesiod from some lines in his Works and Days; and he made it agree with the Arundelian marble, which makes him about thirty years before Homer.

6. *From Herodotus.*

Herodotus assures us that Hesiod, whom he places first in his account, and Homer, lived four hundred years and no more before himself; this must carry no small weight with it, when we consider it as delivered down to us by the oldest Greek historian we have.

7. *From his writings.*

The pious exclamation against the vices of his own times, in the beginning of the iron age, and the manner in which the description of that age is wrote, most of the verbs being in the future tense, give us room to imagine he lived when the world had but just departed from their primitive virtue; just as the race of heroes was at an end, and men were sunk into all that is base and wicked.

8. *The opinions of Justus Lipsius, and Ludolphus Neocorus confuted.*

Justus Lipsius, in his notes to the first book of Velleius Paterculus, says, "there is more simplicity, and a greater air of antiquity in the works of Hesiod than of Homer," from which he would infer he is the older writer: and Fabricius gives us these words of Ludolphus Neocorus, who writ a critical history of Homer: "if a judgment of the two poets is to be made from their works, Homer has the advantage in the greater simplicity and air of antiquity in his style. Hesiod is more finished and elegant." One of these is a flagrant instance of the random judgment which the critics and commentators often pass on authors, and how little dependence is to be laid on some of them. In short, they are both in an error; for, had they considered through how many hands the Iliad and Odyssey have been since they came from the first author, they would not have pretended to determine the question, who was first by their style.

9. *Dr. Clarke's and Sir Isaac Newton's opinions considered.*

Dr. Samuel Clarke (who was indeed a person of much more extensive learning and nicer discernment than either Neocorus or Lipsius) has founded an argument for the antiquity of Homer on a quantity of the word *καλος*: in his note on the 43d verse of the 2d book of the Iliad, he observes, that Homer has used the word *καλος* in the Iliad and Odyssey above two hundred and seventy times, and has in every place made the first syllable long; whereas Hesiod frequently makes it long, and often short: and Theocritus uses it both long and short in the same verse; from which our learned critic infers that Hesiod could not be cotemporary with Homer (unless, says he, they spoke different languages in different parts of the country) but much later; because he takes it for granted, that the liberty of making the first syllable of *καλος* short was long after Homer; who uses the word above two hundred and seventy times, and never has the first syllable short. This is a curious piece of criticism, but productive of no certainty

of the age of Homer or Hesiod. The Ionic poets, Dr. Clarke observes, had one fixed rule of making the first syllable in *καλος* long: the Attic poets Sophocles, Euripides, and Aristophanes, in innumerable places, he says, make it short; the Doric poets do the same: all therefore that can be inferred from this is, that Homer always used it in the Ionic manner, and Hesiod often in the Ionic, and often in the Doric. This argument of Dr. Clarke's, founded on a single quantity of a word, is entirely destructive of Sir Isaac Newton's system of chronology; who fixes the time of Troy being taken but thirty-four years before Hesiod flourished. Troy, he says*, was taken nine hundred and four years before Christ, and Hesiod, he says, flourished eight hundred and seventy. This shows Sir Isaac Newton's opinion of the age of Hesiod in regard to his vicinity to Homer: his bringing the chronology of both so low as he does, is to support his favourite scheme of reducing all to scripture chronology.

10. *A thousand years before Christ.*

After all, it is universally agreed he was before, or at least cotemporary with Homer; but I think we have more reason to believe him the older; and Mr. Pope, after all the authorities he could find in behalf of Homer, fixes his decision on the Arundelian marble. To enter into all the disputes which have been on this head, would be endless and unnecessary; but we may venture to place him a thousand years before Christ, without exceeding an hundred, perhaps, on either side.

11. *Some circumstances of his life from his writings.*

Having thus far agreed to his parents, his country, and the time in which he rose, our next business is to trace him in such of his actions as are discoverable; and here we have nothing certain but what occurs to us in his works. That he tended his own flocks on mount Helicon, and there first received his notions of poetry, is very probable from the beginning of his Theogony; but what he there says of the muses appearing to him, and giving him a sceptre of laurel, I pass over as a poetical flight. It likewise appears, from the first book of his Works and Days, that his father left some effects, when he died, on the division of which his brother Perses defrauded him, by bribing the judges. He was so far from being provoked to any act of resentment by this injustice, that he expressed a concern for those poor mistaken mortals, who placed their happiness in riches only, even at the expence of their virtue. He lets us know, in the same poem, that he was not only above want, but capable of assisting his brother in time of need; which he often did after the ill usage he had met with from him. The last passage, relating to himself, is his conquest in a poetical contention. Amphidamas, king of Eubœa, had instituted funeral games in honour of his own memory, which his sons afterwards saw performed: Hesiod here was competitor for the prize in poe-

* In his chronology of ancient kingdoms amended.

DISCOURSES ON THE LIFE AND WRITINGS OF HESIOD.

try, a tripod, which he won, and, as he tells us himself, consecrated to the muses.

12. *From Plutarch, &c.*

Plutarch, in his Banquet of the Seven Wise Men, makes Periander give an account of the poetical contention at Chalcis; in which Hesiod and Homer are made antagonists; the first was conqueror, who received a tripod for his victory, which he dedicated to the muses, with this inscription:

Ἡσιόδος Μυσσαις Ἑλικωνισι τὸνδ' ἀνέθηκεν,
 ὕμνοι νικησας ἐν χαλκίδι Διον Ὀμηρον.

This Hesiod vows to th' Heliconian nine,
 In Chalcis won from Homer the divine.

This story, as related by Plutarch, was doubtless occasioned by what Hesiod says of himself, in the second book of his Works and Days; which passage might possibly give birth to that famous treatise, *Ἀγών Ὀμήρου καὶ Ἡσιόδου*, mentioned in the fourth section of this discourse. Barnes, in his Preloquium to the same treatise, quotes three verses, two from Eustathius, and the third added by Lilius Gyraldus, in his life of our poet, which informs, that Hesiod and Homer sung in Delos to the honour of Apollo.

Ἐν Δῆλῳ τότε πρῶτον ἐγὼ καὶ Ὀμηρος, αἰδοί,
 Μελπομέν, ἐν νηαροῖς ὑμνοῖς ῥαψάντες αὐδῆν,
 Φοῖβον Ἀπολλῶνα χρυσμορὸν οὐ τιχεῖ Ἀπῶν.

Homer, and I, in Delos sung our lays,
 There first we sung, and to Apollo's praise;
 New was the verse in which we then begun
 In honour to the god, Latona's son.

But these, together with the contention betwixt these two great poets, are regarded as no other than fables; and Barnes, who had certainly read as much on this head as any man, and who seems, by some expressions, willing to believe it if he could, is forced to decline the dispute, and leave it in the same uncertainty in which he found it. The story of the two poets meeting in Delos, is a manifest forgery; because, as I observed before, Hesiod positively says he never took any voyage but that to Chalcis; and these verses make his meeting in Delos, which is contrary to his own assertion, precede his contention at Chalcis. Thus have I collected, and compared together, all that is material of his life; in the latter part of which, we are told, he removed to Locris, a town near the same distance from mount Parnassus, as Ascra from Helicon. Lilius Gyraldus, and others, tell us he left a son, and a daughter; and that his son was Stesichorus the poet; but this wants better confirmation than we have of it. It is agreed by all that he lived to a very advanced age.

13. *His Death.*

The story of his death, as told by Solon, in Plutarch's Banquet of the Seven Wise Men, is very remarkable. The man, with whom Hesiod lived at Locris, ravished a maid in the same house. Hesiod, though entirely ignorant of the fact, was maliciously accused, as an accomplice, to her brothers,

who barbarously murdered him with his companion, whose name was Troilus, and threwed their bodies into the sea. The body of Troilus was cast on a rock, which retains the name of Troilus from that accident. The body of Hesiod was received by a shoal of dolphins as soon as it was hurled into the water, and carried to the city Molicria, near the promontory Rhion: near which place the Locrians then held a solemn feast, the same which is at this time celebrated with so much pomp. When they saw a floating carcase, they ran with astonishment to the shore, and finding it to be the body of Hesiod, newly slain, they resolved, as they thought themselves obliged, to detect the murderers of a person they so much esteemed and honoured. When they had found out the wretches who committed the murder, they plunged them alive into the sea, and afterwards destroyed their houses. The remains of Hesiod were deposited in Nemea; and his tomb is unknown to most strangers; the reason of it being concealed, was because of the Orchomenians, who had a design, founded on the advice of an oracle, to steal his remains from thence, and to bury them in their own country. This account of the oracle, here mentioned by Plutarch, is related by Pausanias, in his Bæoticks. He tells us the Orchomenians were advised by the oracle to bring the bones of Hesiod into their country, as the only means to drive away a pestilence which raged among them. They obeyed the oracle, found the bones, and brought them home. Pausanias, say they, erected a tomb over him, with an inscription to this purpose on it:

Hesiod, thy birth is barren Ascra's boast,
 Thy dead remains now grace the Minyan coast;
 Thy honours to meridian glory rise,
 Grateful thy name to all the good and wise.

14. *Monuments, &c. of him.*

We have the knowledge of some few monuments which were raised in honour to this great and ancient poet: Pausanias, in his Bæoticks informs us, that his countrymen the Bæotians erected to his memory an image with a harp in his hand: the same author tells us, in another place, there was likewise a statue of Hesiod in the temple of Jupiter Olympicus. Fulvius Ursinus, and Boissard, in his Antiquities, have exhibited a breast with a head, a trunk without a head, and a gem, of him: and Ursinus says, there is a statue of him, of brass, in the public college of Constantinople. The only original monument of him besides, now remaining, or at least known, is a marble busto in the Pembroke collection at Wilton. "What Fulvius Ursinus has published resembles that, but is only a basso relievo. From the manner of the head being cracked off from the lower part, which has some of the hair behind, it appears that both the parts are of the same work and date."

15. *His character.*

For his character we need go no farther than his Works and Days. With what a dutiful affection he speaks of his father, when he proposes him

as a pattern to his brother. His behaviour, after the unjust treatment from Perses and the judges, proves him both a philosopher and a good man. His moral precepts, in the first book, seem to be as much the dictates of his heart as the fruits of his genius; there we behold a man of the chastest manners, and the best disposition.

He was undoubtedly a great lover of retirement and contemplation, and seems to have had no ambition but that of acting well. I shall conclude my character of him with that part of it which Paterculus so justly thought his due: "perelegantis ingenii, et molissimâ dulcedini carminum memorabilis; otii quietisque cupidissimus:" of a truly elegant genius, and memorable for his most easy sweetness of verse; most fond of leisure and quietude.

ON THE WRITINGS OF HESIOD.

Sect. I. *The Introduction.*

Of all the authors who have given any account of the writings of our poet, I find none so perfect as the learned Fabricius, in his *Bibliotheca Græca*. He there seems to have left unread no work that might in the least contribute to the completing his design: him I shall follow in the succeeding discourse, so far as relates to the titles of the poems, and the authorities for them.

2. *The Theogony.*

I shall begin with the Theogony, or Generation of the Gods, which Fabricius puts out of dispute to be of Hesiod: nor is it doubted, says he, that Pythagoras took it for his, who feigned he saw the soul of our poet in hell chained to a brazen pillar; a punishment inflicted upon him for the stories which he invented of the gods. This doubtless is the poem that gave Herodotus occasion to say that Hesiod, with Homer, was the first who introduced a theogony among the Grecians; the first who gave names to the gods, ascribed to them honours and arts, giving particular descriptions of their persons. The first hundred and fifteen lines of this poem have been disputed; but I am inclined to believe them genuine; because Pausanias takes notice of the sceptre of laurel, which the poet says, in those verses, was a present to him from the muses; and Ovid, in the beginning of his *Art of Love*, alludes to that passage of the muses appearing to him; and Hesiod himself, in the second book of his *Works and Days*, has an allusion to these verses.

3. *The Works and Days.*

The *Works and Days* is the first poem of its kind, if we may rely on the testimony of Pliny; it being very uncertain, says Fabricius, whether the poems attributed to *Orpheus* were older than *Hesiod*; among which the critics and commentators mention one of the same title with this of our poet. Pausanias, in his *Bœoticks*, tells us he saw a copy of this wrote in plates of lead, but without

the first ten verses with which it now begins. The only dispute about this piece has been concerning the title, and the division into books. Some make it two poems; the first they call *Erga*, works, and the second *Ημεραι*, days; others call the first *Εργα και Ημεραι*, works and days, and the second *Ημεραι* only, which part consists of but sixty-four lines: where I mention the number of verses in this discourse, I speak of them as they stand in the original. We find, in some editions, the division beginning at the end of the moral and religious precepts; but Grævius denies such distinctions being in any of the old manuscripts. Whether these divisions were in the first copies signifies little; for as we find them in several late editions, they are very natural, and contribute something to the ease of the reader, without the least detriment to the original text. I am ready to imagine we have not this work delivered down to us so perfect as it came from the hands of the poet, which I shall endeavour to show in the next section. This poem, as Plutarch in his *Symposiacs* assures us, was sung to the harp.

4. *The Theogony, and Works and Days, the only undoubted poems of Hesiod now extant.*

The Theogony, and Works and Days, are the only undoubted pieces of our poet now extant; the *απειρη Ηρακλεις*, the shield of Hercules, is always printed with these two, but has not one convincing argument in its favour by which we may positively declare it a genuine work of Hesiod. We have great reason to believe those two poems only were remaining in the reign of Augustus. Manilius, who was an author of the Augustan age, in the second book of his *Astronomy*, takes notice, in his commendation of our poet and his writings, of no other than the Theogony, and Works and Days. The verses of Manilius are these:

Hesiodus memorat divos, div'umque parentes,
Et chaos enixum terras, orbemque sub illo
Infantem, * primum, titubantia sidera, corpus,
Titanasque senes, Jovis et cunabula magni,
Et sub fratre viri nomen, sine fratre parentis,
Atque iterum patrio nascentem corpore Bacchum,
Omniaque immenso volitantia numina mundo:

* Dr. Bentley, whose *Manilius* was published ten years after the first edition of this discourse, gives *primos titubantia sidera partus*: the old copies, he says, have *primos*, and *partus* is supplied by his own judgment: but *primos partus* for *titubantia sidera* is not consistent with the genealogy of these natural bodies in the Theogony of Hesiod: an exact genealogical table to which I have given at the end of my notes to that poem. I must, with great deference to the superior knowledge of that learned critic, prefer the common reading *primum corpus*: Dr. Bentley's chief objection to this reading is founded on making *primum* to be understood first in point of time; therefore, says he *quomodo vero sidera primum erant corpus, cum ante ille extiterint chaos, terræ, orbis?* Very true; but *primum* must be taken as I have used it in my explanation of it.

Quinetiam rutis cultus, * legesque rogavit,
 Militiamque Soli, quos colles Bacchus amaret,
 Quos fecunda Ceres campos, quod † Bacchus utrumque,
 Atque arbuta vagis essent quod adultera pomis,
 Sylvarumque deos, sacrataque numina nymphas;
 Pacis opus, magnos naturæ condit in usus.

Thus translated by Mr. Creech :

— Hesiod sings the gods immortal race;
 He sings how chaos bore the earthy mass;
 How light from darkness struck did beams display,
 And infant-stars first stagger'd in their way;
 How name of brother veil'd an husband's love,
 And Juno bore unaided by her Jove, [thigh,
 How twice-born Bacchus burst the thund'rer's
 And all the gods that wander through the sky:
 Hence he to fields descends, manures the soil,
 Instructs the plowman, and rewards his toil;
 He sings how corn in plains, how vine in hills,
 Delight, how both with vast increase the olive fills,
 How foreign grafts th' adult'rous stock receives,
 Bears stranger fruit, and wonders at her leaves;
 An useful work when peace and plenty reign,
 And art joins nature to improve the plain.

The observation which Mr. Kennet makes on these lines is, "that those fine things which the Latin poet recounts about the birth of the gods, and the making the world, are not so nearly allied to any passage in the present Theogony as to justify the allusion." An author, who was giving an account of an ancient poet, ought to have been more careful than this biographer was in his judgment of these verses: because such as read him, and are at the same time unlearned in the language of the poet, are to form their notions from his sentiments. Mr. Kennet is so very wrong in his remark here, that in all the seven lines which contain the encomium on the Theogony, I cannot see one expression that has not an allusion, and a strong one, to some particular passage in that poem. I am afraid this gentleman's modesty made him distrust himself, and too servilely follow this translation, which he quotes in his life of Hesiod, where he seems to lay great stress on the judgment of the translator. Mr. Creech has in these few lines so unhappily mistook his author, that in some places he adds what the poet never thought of, leaves whole verses untranslated, and in other places gives a sense quite different to what the poet designed. I shall now proceed to point out these passages to which Manilius particularly alludes. His first line relates to the poem in general, the Generation of the Gods; though we must take notice that he

* For *legesque rogavit* Dr. Bentley gives *legesque novandi*, on the authority of no copy, but from a dislike to the expression of *rogavit cultus* and *rogavit militiam*; but, as the old reading *rogavit* is agreeable to my construction of it, I am for keeping it in.

† For *Bacchus utrumque* Dr. Bentley gives *Pallas utrumque*; and in that sense Mr. Creech has translated it; which would be the more eligible reading, if Hesiod had treated of Olives. *Bacchus utrumque* is a foolish repetition, as Dr. Bentley observes.

I had that part of Hesiod's system in view where he makes matter precede all things, and even the gods themselves; for by *divum parentes* the Latin poet means chaos, heaven, earth, &c. which the Greek poet makes the parents of the gods. Hesiod tells us, verse 116, chaos brought forth the earth her first offspring; to which the second line here quoted has a plain reference; and *orbemque sub illo infantem*, which Mr. Creech has omitted, may either mean the world in general, or, by *sub illo* being annexed, hell, which, according to our poet, was made a subterranean world. *Primum titubantia sidera, corpus*, which is here rendered, and *infant-stars first stagger'd in their way*, are the sun and moon; our poet calls them *Ἡελιον τε μέγαν, λαμπρὸν τε σελήνην*, the great sun, and the bright moon; the Roman calls them the wandering planets, the chief bodies in the firmament, not the first works of heaven, as is interpreted in the Dauphine's edition of Manilius. The fourth verse, which refers to the birth of Jove, and the wars of the giants and the gods, one of the greatest subjects of the Theogony, the English translator has left untouched. I am not ignorant of a various reading of this passage, viz.

"Titanaeque juviffe senis cunabula magni,"

which has a stronger allusion to the battle of the gods than the other reading, *senis cunabula magni*, meaning the second childhood or old age of Saturn. The next verse, which is beautifully expressed in these two lines,

How name of brother veil'd an husband's love,
 And Juno bore unaided by her Jove,

plainly directs to Jupiter taking his sister Juno to wife, and Juno bearing Vulcan, *ἡ φιλοτῆτι, μεγίστη*, by which Hesiod means without the mutual joys of love. The succeeding line has a reference to the birth of Bacchus, and the seventh to the whole poem; so that he may be said to begin and end his panegyric on the Theogony, with a general allusion to the whole. The Latin poet, in his six verses on the Works and Days, begins as on the Theogony, with a general observation on the whole poem: "Hesiod," says he, "inquired into the tillage and management of the country, and into the laws or rules of agriculture:" I do not question but Manilius, in *legesque rogavit*, had his eye on these words of our poet *Οὗτος τοι πιδίων πειλάται νόμος*, this is the law of the fields. What the Roman there says of Bacchus loving hills, and of grafting, has no allusion to any part of the present Works and Days; but we are not to infer from thence that this is not the poem alluded to, but that those passages are lost; of which I have not the least doubt, when I consider of some parts of the Works and Days which are not so well connected as I wish they were. I think it is indisputable that Hesiod writ more of the vintage than we have now extant, and that he likewise laid down rules for the care of trees: this will appear more clearly, if we observe in what manner Virgil introduces this line,

"Aescraeumque cano, Romana per oppida, carmen."

This is in the second book of the Georgics; the chief subjects of which book are the different me-

thods of producing trees, of transplanting, grafting, of the various kinds of trees, the proper soil for each kind, and of the care of vines and olives; and he has in that book the very expression Manilius applies to Hesiod. *Bacchus amat colles*, says Virgil; *rogavit quos colles Bacchus amaret*, says the other of our poet, he inquired after what hills Bacchus loved.

I should not have used Mr. Creech and Mr. Kennet with so much freedom as I have, had not the translation of the one, and the remark of the other, so nearly concerned our poet; but I hope the clearing a difficult and remarkable passage in a classic, will, in some measure, atone for the liberties I have took with those gentlemen.

5. *The Shield of Hercules.*

We have now ascribed to Hesiod a poem under the title of *Ασπίς Ηρακλεις*, the Shield of Hercules; which Aristophanes the grammarian supposes to be spurious, and that it is an imitation of the Shield of Achilles in Homer. Lilius Gyraldus, and Fabricius, bring all the testimonies they can for it being writ by Hesiod; but none of them amount to a proof. Fabricius gives us the opinion of Tanaquil Faber, in these words: I am much surprised that this should formerly have been, and is now, a matter of dispute; those who suppose the Shield not to be of Hesiod, have a very slender knowledge of the Greek poetry. This is only the judgment of one man against a number, and that founded on no authority. I know not what could induce Tanaquil Faber so confidently to assert this, which looks, if I may use the expression, like a sort of bullying a person into his opinion, by forcing him into the dreadful apprehension of being thought no judge of Greek poetry, if he will not come in: I say, I know not what could induce him to assert this; for there is no manner of similitude to the other works of our poet: and here I must call in question the judgment of Aristophanes, and of such as have followed him, for supposing it to be an imitation of the Shield of Achilles. The whole poem consists of four hundred and four score verses; of which the description of the Shield is but one hundred and four score: in this description are some similar passages to that of Achilles, but not sufficient to justify that opinion: there are likewise a few lines the same in both; but after a strict examination, they may possibly appear as much to the disadvantage of Homer, as to the author of this poem. The other parts have no affinity to any book in the two poems of Homer. The poet begins with a beautiful description of the person of Alcmena, her love to Amphitryon, and her amour with Jupiter; from thence he proceeds to the characters of Hercules and Iphiclus, and goes on regularly to the death of Cygnus, which concludes the poem; with many other particulars, which, as I said before, have no relation to any part of Homer. Among the writings of our poet which were lost, we have the titles of *Γυναικων*, or *Ηρωιδων*, *Καταλογος*, and of *Γυναικων Καταλογος*, or *Ηοιαι Μεγαλαι*: both these titles are likely to belong but to one poem, and to that

which Suidas mentions, the Catalogue of Heroic Women, in five books: that he composed such a work, is probable, from the two last verses of the Theogony, and it being often mentioned by ancient writers: we have an account of another poem, under the title of *Ηρωγονια*, the Generation of Heroes. The favourers of the Shield of Hercules would have that poem received as a fragment of one of these; and all that Le Clerc says in defence of it, is, since Hercules was the most famous of heroes, it is not absurd to imagine the Shield to be a part of the *Ηρωγονια*, though it is handed down to us as a distinct work; and yet it is but a fragment of it. Thus we see all their arguments, both for it being genuine, and a fragment of another poem, are but conjectures. I think they ought not to suspect it a part of another work, unless they could tell when, where, or by whom, the title was changed. It is certainly a very ancient piece, and well worth the notice of men of genius.

6. *Poems which are lost.*

Besides the pieces just mentioned, we find the following catalogue in Fabricius attributed to Hesiod, but now lost.

Παραινσεις, or *Τποθηκαι χειρωνος*. This was concerning the education of Achilles under Chiron; which Aristophanes, in one of his comedies, banners as the work of Hesiod.

Μελαμποδια, or *εις τον Μαντιν Μελαμποδα*: a poem on divination. The title is supposed to be took from Melampus, an ancient physician, said to be skilled in divination by birds. Part of this work is commended by Athenæus, book 13.

Αστρονομια μεγαλη, or *Ασρικη βιβλος*: a treatise of astronomy. Pliny says, according to Hesiod, in whose name we have a book of astrology extant, the early setting of the Pleiades is about the end of the autumn equinox. Notwithstanding this quotation, Fabricius tells us, that Athenæus and Pliny, in some other place, have given us reason to believe they thought the poem of astronomy supposititious.

Επικηδριος εις Βατραχον. This is mentioned by Suidas, with the addition of *τινα τραμενον αυτη*, a funeral song on Batrachus, whom he loved.

Περι Ιδαιων Δακτυλων. This was of the Idæi Dactyli, who, says Pliny, in his seventh book, are recorded by Hesiod as discoverers of iron in Crete. This is likewise in the catalogue of Suidas.

Επιθλαμιος Πηλεως και Θειδος: an epithalamium on the marriage of Peleus and Thetis; two verses of which are in the Prolegomena of Isaac Tzetzes to Lycophron.

Γης περιόδος. This book of geography is mentioned by Strabo.

Αιγιμιος: a poem on one Ægimus. This, Athenæus tells us, was writ by Hesiod, or Cecrops; a wretch, whose name is now remembered only for being to Hesiod what Zoilus was to Homer.

Θησιως εις τον αιδη καταβασις: the descent of Theseus into hell. This is attributed to Hesiod, by Pausanias, in his *Boeotica*.

Επη μαντικα και εξηγησεις επι τερασιν: on prophecies, or divination, with an exposition of pro-

digies, or portents. This is likewise mentioned by Pausanias.

Θεοὶ λόγοι: divine speeches; which Maximus Tyrius takes notice of in his sixteenth dissertation.

Μεγάλα ἔργα: great or remarkable actions. We find the title of this work in the eighth book of Athenæus.

Κνύκος γάμος: the marriage of Ceyx. We have an account of this poem, both by Athenæus, and Plutarch, in his *Symposiacs*.

Of all these labours of this great poet, we see nothing but the titles remaining, excepting some fragments preserved by Pausanias, Plutarch, Polybius, &c. We are told that our poet composed some other works, of which we have not even the titles. We are assured, from diverse passages in Pliny, that he wrote of the virtues of herbs; but here Fabricius judiciously observes, that he might, in other poems, occasionally treat of various herbs; as in the beginning of his *Works and Days*, he speaks of the wholesomeness of mallows, and the

daffodil, or asphodelos. Quintilian, in his fifth book, denies the fables of Æsop to have been written originally by him, but says the first author of them was Hesiod; and Plutarch informs us that Æsop was his disciple: but this opinion, though countenanced by some, is exploded by others.

When we reflect on the number of titles, the poems to which are irreparably lost, we should consider them as so many monuments to raise our concern for the loss of so much treasure never to be retrieved. Let us turn our thoughts from that melancholy theme, and view the poet in his living writings; let us read him ourselves, and incite our countrymen to a taste of the politeness of Greece. Scaliger, in an epistle to Salmasius, divides the state of poetry in Greece into four periods of time: in the first arose Homer and Hesiod; on which he has the just observation that concludes my discourse: this, says he, you may not improperly call the spring of poesy; but it is rather the bloom than infancy.

GENERAL ARGUMENT TO THE WORKS AND DAYS.

FROM THE GREEK OF DANIEL HEINSIUS.

THE poet begins with the difference of the two contentions; and rejecting that which is attended with disgrace, he advises his brother Perseus to prefer the other. One is the lover of strife, and the occasion of troubles: the other prompts us on to procure the necessaries of life in a fair and honest way. After Prometheus had by subtlety stole the fire clandestinely from Jove (the fire is by the divine Plato, in his allusion to this passage, called the necessaries, or abundance of life; and those are called subtle, who were solicitous after the abundance of life), the god created a great evil, which was Pandora, that is Fortune, who was endowed with all the gifts of the gods, meaning all the benefits of nature: so Fortune may from thence be said to have the disposal of the comforts of life; and from that time care and prudence are required in the management of human affairs. Before Prometheus had purloined the fire, all the common necessaries of life were near at hand, and easily attained; for Saturn had first made a golden age of men, to which the earth yielded all her fruits spontaneously: the mortals of the golden age submitted to a soft and pleasant death, and were afterwards made demons; and honour attended their names. To this succeeded the second, the silver age, worse in all things than the first, and better than the following; which Jupiter, or Fate, took from the earth, and made happy in their death. Hence the poet passes to the third, the brazen age; the men of which, he says, were fierce and terrible, who ignobly fell by their own folly and civil discord; nor was their future fate like to the other, for they descended to hell. This generation is followed by a race of heroes, Eteocles and Polynices, and the rest who were in the first and oldest Theban war, and Agamemnon

and Menelaus; and such as are recorded by the * poet to be in the Trojan war; of whom some perished entirely by death, and some now inhabit the isles of the blessed. Next he describes the iron age, and the injustice which prevailed in it. He greatly reproves the judges, and taxes them with corruption, in a short and beautiful fable. In the other part of the book, he sets before our eyes the consequences of justice and injustice; and then, in the most sagacious manner, lays down some of the wisest precepts to Perseus. The part which contains the precepts, is chiefly writ in an irregular, free, and easy way; and his frequent repetitions, which custom modern writers have quite avoided, bear no small marks of his antiquity. He often digresses, that his brother might not be tired with his precepts, because of a too much sameness. Hence he passes to rules of economy, beginning with agriculture. He points out the proper season for the plough, the harvest, the vintage, and for felling wood; he shows the fruits of industry, and the ill consequences of negligence. He describes the different seasons, and tells us what works are proper to each. These are the subjects of the first part of his *Economy*. In process of time, and the thirst of gain increasing in men, every method was tried to the procuring riches; men begun to extend their commerce over the seas; for which reason the poet laid down precepts for navigation. He next proceeds to a recommendation of divine worship, the adoration due to the immortal gods, and the various ways of paying our homage to them. He concludes with a short observation on days, dividing them into the good, bad, and indifferent.

* I suppose Heinsius means Homer.

COOKE'S HESIOD.

WORKS AND DAYS*.

BOOK I.

THE ARGUMENT.

This book contains the invocation to the whole, the general proposition, the story of Prometheus, Epimetheus, and Pandora; a description of the golden age, silver age, brazen age, the age of heroes, and the iron age; a recommendation of virtue, from the temporal blessings with which good men are attended, and the condition of the wicked, and several moral precepts proper to be observed through the course of our lives.

SING, muses, sing, from the Pierian grove;
Begin the song, and let the theme be Jove;
From him ye sprung, and him ye first should praise;
From your immortal fire deduce your lays;

* The scholiast Tzetzes tells us, this poem was first called the *Works and Days of Hesiod*, to distinguish it from another on the same subject, and of the same title, wrote by Orpheus. How much this may be depended on I cannot say; but Fabricius assures us from Pliny, book 18. chap. 25. that Hesiod was the first who laid down rules for agriculture. It is certain, that of all the pieces of this nature which were before Virgil, and extant in his days, this was most esteemed by him, otherwise he would not have showed that respect to our author which he does quite through his *Georgic*. In one place he proposes him as a pattern in that great work, where, addressing to his country, he says,

—tibi res antiquæ laudis et artis
Ingredior, sanctos ausus recludere fontes;
Ascræumque cano, Romano per oppida, carmen.
Lib. 2.

For thee my tuneful accents will I raise,
And treat of arts disclos'd in ancient days,
Once more unlock for thee the sacred spring,
And old Ascræan verse in Roman cities sing.

DRYDEN.

He begins the *Georgic* with an explanation of the title of the *Works and Days*.

Quid faciat lætas segetes, quo sidere terram
Vertere, &c.

What makes a plenteous harvest, when to turn
The fruitly soil, and when to sow the corn.

DRYDEN.

for by *Works* is meant the art of agriculture, and by *Days* the proper seasons for works. See farther in my Discourse on the Writings of Hesiod.

To him alone, to his great will we owe,
That we exist, and what we are below.
Whether we blaze among the sons of fame,
Or live obscurely, and without a name,
Or noble or ignoble, still we prove
Our lot determin'd by the will of Jove. 10
With ease he lifts the peasant to a crown,
With the same ease he casts the monarch down;
With ease he clouds the brightest name in night,
And calls the meanest to the fairest light;
At will he varies life through ev'ry state,
Unnerves the strong, and makes the crooked
strait.

Such Jove, who thunders terrible from high,
Who dwells in mansions far above the sky.
Look down, thou pow'r supreme, vouchsafe thine
aid,

And let my judgment be by justice sway'd; 21
O! hear my vows, and thine assistance bring,
While truths undoubted I to Perseus sing.

As here on earth we tread the maze of life,
The minds divided in a double strife;
One by the wise is thought deserving fame,
And this attended by the greatest shame,
The dismal source whence spring pernicious jars,
The baneful fountain of destructive wars,
Which, by the laws of arbitrary fate,
Who follow, though by nature taught to hate;
From night's black realms this took its odious
birth 31

And one Jove planted in the womb of earth,
The better strife; by this the soul is fir'd
To arduous toils, nor with those toils is tir'd;
One sees his neighbour with laborious hand,
Planting his orchard, or manuring land;
He sees another with industrious care,
Materials for the building art prepare;

Idle himself he sees them haste to rise,
 Observes their growing wealth with envious eyes,
 With emulation fir'd, beholds their store, 41
 And toils with joy who never toil'd before :
 The artist envies what the artist gains,
 The bard the rival bard's successful strains.

Perfes attend, my just decrees observe,
 Nor from thy honest labour idly swerve ;
 The love of strife, that joys in evils, shun,
 Nor to the forum from thy duty run.
 How vain the wranglings of the bar to mind,
 While Ceres, yellow goddess, is unkind !
 But when propitious she has heap'd your store,
 For others you may plead, and not before ;
 But let with justice your contentions prove,
 And be your counsels such as come from Jove ;
 Not as of late when we divided lands,
 You grasp'd at all with avaricious hands ;
 When the corrupted bench, for bribes well known,
 Unjustly granted more than was your own.
 Fools, blind to truth ! nor knows their erring
 soul

How much the half is better than the whole, 60
 How great the pleasure wholesome herbs afford,
 How blest'd the frugal, and an honest board !
 Would the immortal gods on men bestow
 A mind, how few the wants of life to know,
 They all the year from labour free might live
 On what the bounty of a day would give,
 They soon the rudder o'er the smoke would lay,
 And let the mule and ox at leisure stray :
 This sense to man the king of gods denies,
 In wrath to him who daring rob'd the skies ; 70
 Dread ills the god prepar'd, unknown before,
 And the stol'n fire back to his heav'n he bore ;
 But from Prometheus 'twas conceal'd in vain,
 Which for the use of man he stole again,
 And, artful in his fraud, brought from above,
 Clos'd in a hollow cane, deceiving Jove :
 Again defrauded of celestial fire,
 Thus spoke the cloud-compelling god in ire :
 Son of Iapetus, o'er subtle, go,
 And glory in thy artful theft below ; 80
 Now of the fire you boast by stealth retriev'd,
 And triumph in almighty Jove deceiv'd ;
 But thou too late shall find the triumph vain,
 And read thy folly in succeeding pain ;
 Posterity the sad effect shall know,
 When, in pursuit of joy, they grasp their woe.
 He spoke, and told to Mulciber his will,
 And, smiling, bade him his commands fulfil,
 To use his greatest art, his nicest care,
 To frame a creature exquisitely fair, 90
 To temper well the clay with water, then
 To add the vigour and the voice of men,
 To let her first in virgin lustre shine,
 In form a goddess, with a bloom divine :
 And next the fire demands Minerva's aid,
 In all her various skill to train the maid,
 Bids her the secrets of the loom impart,
 To cast a curious thread with happy art.
 And golden Venus was to teach the fair,
 The wiles of love, and to improve her air, 100
 And then, in awful majesty, to shed
 A thousand graceful charms around her head :

Next Hermes, artful god, must form her mind,
 One day to torture, and the next be kind,
 With manners all deceitful, and her tongue
 Fraught with abuse, and with detraction hung.
 Jove gave the mandate ; and the gods obey'd.
 First Vulcan form'd of earth the blushing maid ;
 Minerva next perform'd the task assign'd,
 With ev'ry female art adorn'd her mind. 110
 To dress her Suada, and the Graces join ;
 Around her person, lo ! the di'monds shine.
 To deck her brows the fair tress'd seasons bring !
 A garland breathing all the sweets of spring.
 Each present Pallas gives it proper place,
 And adds to ev'ry ornament a grace.
 Next Hermes taught the fair the heart to move,
 With all the false alluring arts of love,
 Her manners all deceitful, and her tongue
 With falsehoods fruitful, and detraction hung. 120
 The finish'd maid the gods Pandora call,
 Because a tribute she receiv'd from all :
 And thus, 'twas Jove's command, the sex began,
 A lovely mischief to the soul of man.
 When the great sire of gods beheld the fair,
 The fatal guile, th' inevitable snare, }
 Hermes he bids to Epimetheus bear.
 Prometheus mindful of his theft above,
 Had warn'd his brother to beware of Jove,
 To take no present that the god should send, 130
 Lest the fair bribe should ill to man portend ;
 But he, forgetful, takes his evil fate,
 Accepts the mischief, and repents too late.
 Mortals at first a blissful earth enjoy'd,
 With ills untainted, nor with cares annoy'd ;
 To them the world was no laborious stage,
 Nor fear'd they then the miseries of age ;
 But soon the sad reversion they behold,
 Alas ! they grow in their afflictions old ;
 For in her hand the nymph a casket bears, 140
 Full of diseases and corroding cares,
 Which open'd, they to taint the world begin,
 And hope alone remains entire within.
 Such was the fatal present from above,
 And such the will of cloud-compelling Jove :
 And now unnumber'd woes o'er mortals reign,
 Alike infected is the land and main ;
 O'er human race distempers silent stray,
 And multiply their strength by night and day :
 'Twas Jove's decree they should in silence rove :
 For who is able to contend with Jove ! 151
 And now the subject of my verse I change ;
 To tales of profit and delight I range ;
 Whence you may pleasure and advantage gain,
 If in your mind you lay the useful strain.

Soon as the deathless gods were born, and man,
 A mortal race, with voice endow'd, began,
 The heav'nly pow'rs from high their work behold,
 And the first age they style an age of gold.
 Men spent a life like gods in Saturn's reign, 160
 Nor felt their mind a care, nor body pain ;
 From labour free, they ev'ry sense enjoy ;
 Nor could the ills of time their peace destroy ;
 In banquets they delight, remov'd from care ;
 Nor troublesome old age intruded there :
 They die, or rather seem to die, they seem
 From hence transported in a pleasing dream.

The fields, as yet untill'd, their fruits afford,
And fill a sumptuous, and unenvy'd board :
Thus, crown'd with happiness their ev'ry day, 170
Serene and joyful, pass'd their lives away.

When in the grave this race of men was laid,
Soon was a world of holy demons made,
Aërial spirits, by great Jove design'd,
To be on earth the guardians of mankind;
Invisible to mortal eyes they go,
And mark our actions, good, or bad, below ;
Th' immortal spies with watchful care preside,
And thrice ten thousand round their charges
glide :

They can reward with glory, or with gold ; 180
A pow'r they by divine permission hold.

Worse than the first, a second age appears,
Which the celestials call the silver years.
The golden age's virtues are no more ;
Nature grows weaker than she was before ;
In strength of body mortals much decay ;
And human wisdom seems to fade away.
An hundred years the careful dames employ,
Before they form'd to man th' unpolish'd boy ;
Who when he reach'd his bloom, his age's prime,
Found, measur'd by his joys, but short his time. 191
Men, prone to ill, deny'd the gods their due,
And by their follies, made their days but few.
The altars of the bless'd neglected stand,
Without the off'rings which the laws demand ;
But angry Jove in dust this people laid,
Because no honours to the gods they paid.
This second race, when clos'd their life's short span,
Was happy deem'd beyond the state of man ; 199
Their names were grateful to their children made ;
Each paid a rev'rence to his father's shade.

And now a third, a brazen people rise,
Unlike the former, men of monstrous size :
Strong arms extensive from their shoulders grow,
Their limbs of equal magnitude below ;
Potent in arms, and dreadful at the spear,
They live injurious, and devoid of fear :
On the crude flesh of beasts they feed alone,
Savage their nature, and their hearts of stone ;
Their houses brass, of brass the warlike blade, 210
Iron was yet unknown, in brass they trade :
Furious, robust, impatient for the fight,
War is their only care, and sole delight,
To the dark shades of death this race descend,
By civil discords, an ignoble end ! [ed might,
Strong though they were, death quell'd their boast-
And forc'd their stubborn souls to leave the light.

To these a fourth, a better race succeeds,
Of godlike heroes, fam'd for martial deeds ;
Them demigods, at first, their matchless worth 220
Proclaim aloud all through the boundless earth,
These, horrid wars, their love of arms destroy,
Some at the gates of Thebes, and some at Troy.
These, for the brothers fell, detested strife !
For beauty those, the lovely Grecian wife !
To these does Jove a second life ordain,
Some happy soil far in the distant main,
Where live the hero-shades in rich repast,
Remote from mortals of a vulgar cast :
There in the island of the bless'd they find, 230
Where Saturn reigns, an endless calm of mind ;

And there the choicest fruits adorn the fields,
And thrice the fertile year a harvest yields.

O ! would I had my hours of life began
Before this fifth, this sinful race of man ;
Or had I not been call'd to breathe the day,
Till the rough iron age had pass'd away :
For now, the times are such, the gods ordain,
That every moment shall be wing'd with pain ;
Condemn'd to sorrows, and to toil we live ; 240
Rest to our labour death alone can give ;
And yet, amid the cares our lives annoy,
The gods will grant some intervals of joy :
But how degen'rate is the human state !
Virtue no more distinguishes the great ;
No safe reception shall the stranger find ;
Nor shall the ties of blood or friendship bind ;
Nor shall the parent, when his sons are nigh,
Look with the fondness of a parent's eye,
Nor to the sire the son obedience pay, 250
Nor look with rev'rence on the locks of gray,
But O ! regardless of the pow'rs divine,
With bitter taunts shall load his life's decline.
Revenge and rapine shall respect command,
The pious, just, and good, neglected stand.
The wicked shall the better man distress,
The righteous suffer, and without redress ;
Strict honesty, and naked truth, shall fail,
The perjur'd villain in his arts prevail.
Hoarse envy shall, unseen, exert her voice, 260
Attend the wretched, and in ill rejoice.
At last fair modesty and justice fly,
Rob'd their pure limbs in white, and gain the sky,
From the wide earth they reach the blest abodes,
And join the grand assembly of the gods,
While mortal men, abandon'd to their grief,
Sink in their sorrows, hopeless of relief.

While now my fable from the birds I bring,
To the great rulers of the earth I sing.
High in the clouds a mighty bird of prey 270
Bore a melodious nightingale away ;
And to the captive, shiv'ring in despair,
Thus, cruel, spoke the tyrant of the air.
Why mourns the wretch in my superior power ?
Thy voice avails not in the ravish'd hour ;
Vain are thy cries ; as my despotic will,
Or I can set thee free, or I can kill.
Unwisely who provokes his abler foe,
Conquest still flies him, and he strives for woe.
Thus spoke th' enslaver with insulting pride. 280

O ! Perseus, justice ever be thy guide :
May malice never gain upon thy will,
Malice that makes the wretch more wretched
still.

The good man, injur'd, to revenge is slow,
To him the vengeance is the greater woe.
Ever will all injurious courses fail,
And justice ever over wrongs prevail ;
Right will take place at last, by fit degrees ;
This truth the fool by sad experience sees.
When suits commence, dishonest strife the cause,
Faith violated, and the breach of laws, 291
Ensue ; the cries of justice haunt the judge,
Of bribes the glutton, and of sin the drudge.
Through cities then the holy demon runs,
Unseen, and mourns the manners of their sons,

Dispersing evils, to reward the crimes
 Of those who banish justice from the times.
 Is there a man whom incorrupt we call,
 Who sits alike unprejudic'd to all,
 By him the city flourishes in peace, 300
 Her borders lengthen and her sons increase;
 From him far-seeing Jove will drive afar
 All civil discord, and the rage of war.
 No days of famine to the righteous fall,
 But all is plenty, and delightful all;
 Nature indulgent o'er their land is seen,
 With oak high tow'ring are their mountains green,
 With heavy mast their arms diffusive bow,
 While from their trunks rich streams of honey flow;
 Of flocks untainted are their pastures full, 310
 Which slowly strut beneath their weight of wool;
 And sons are born the likeness of their sire,
 The fruits of virtue, and a chaste desire:
 O'er the wide seas for wealth they need not roam,
 Many and lasting are their joys at home.
 Not thus the wicked, who in ill delight,
 Whose daily acts pervert the rules of right,
 To these the wise disposer, Jove, ordains,
 Repeated losses, and a world of pains:
 Famines and plagues are, unexpected, nigh: 320
 Their wives are barren, and their kindred die;
 Numbers of these at once are sweep'd away;
 And ships of wealth become the ocean's prey.
 One sinner oft provokes th' avenger's hand;
 And often one man's crimes destroy a land.
 Exactly mark, ye rulers of mankind,
 The ways of truth, nor be to justice blind;
 Consider all ye do, and all ye say,
 The holy demons to their god convey,
 Aërial spirits, by great Jove design'd, 330
 To be on earth the guardians of mankind;
 Invisible to mortal eyes they go,
 And mark our actions, good, or bad, below;
 Th' immortal spies with watchful care preside,
 And thrice ten thousand round their charges glide.
 Justice, unspotted maid, deriv'd from Jove,
 Renown'd, and reverenc'd by the gods above,
 When mortals violate her sacred laws,
 When judges hear the bribe, and not the cause,
 Close by her parent-god behold her stand, 340
 And urge the punishment their sins demand.
 Look in your breasts, and there survey your
 crimes,
 Think, O ye judges! and reform betimes,
 Forget the past, nor more false judgments give,
 Turn from your ways betimes, O turn and live!
 Who, full of wiles, his neighbour's harm contrives,
 False to himself, against himself he strives;
 For he that harbours evil in his mind,
 Will from his evil thoughts but evil find; 349
 And lo! the eye of Jove, that all things knows,
 Can, when he will, the heart of man disclose;
 Open the guilty bosom all within,
 And trace the infant thoughts of future sin.
 O! when I hear the upright man complain.
 And, by his injuries, the judge arraign,
 If to be wicked is to find success,
 I cry, and to be just to meet distress.
 May I nor mine the righteous path pursue,
 ut int'rest only ever keep in view:

But by reflection better taught, I find 460
 We see the present, to the future blind.
 Trust to the will of Jove, and wait the end,
 And good shall always your good acts attend.
 These doctrines, Perseus, treasure in thy heart,
 And never from the paths of justice part:
 Never by brutal violence be sway'd;
 But be the will of Jove in these obey'd.
 In these the brute creation men exceed,
 They, void of reason, by each other bleed,
 While man by justice should be keep'd in awe,
 Justice of nature, well ordain'd, the law. 371
 Who right espouses through a righteous love,
 Shall meet the bounty of the hands of Jove;
 But he that will not be by laws confin'd,
 Whom not the sacrament of oaths can bind,
 Who, with a willing soul, can justice leave,
 A wound immortal shall that man receive;
 His house's honour daily shall decline:
 Fair flourish shall the just from line to line.
 O! Perseus, foolish Perseus, bow thine ear 380
 To the good counsels of a soul sincere.
 To wickedness the road is quickly found,
 Short is the way, and on an easy ground.
 The paths of virtue must be reach'd by toil,
 Arduous and long, and on a rugged soil,
 Thorny the gate, but when the top you gain,
 Fair is the future, and the prospect plain,
 Far does the man all other men excel,
 Who, from his wisdom, thinks in all things well,
 Wisely confid'ring, to himself a friend, 390
 All for the present best, and for the end:
 Nor is the man without his share of praise,
 Who well the dictates of the wise obeys;
 But he that is not wise himself, nor can
 Harken to wisdom, is a useless man.
 Ever observe, Perseus, of birth divine,
 My precepts, and the profit shall be thine;
 Then famine always shall avoid thy door,
 And Ceres, fair-wreath'd goddess, bless thy
 store.
 The slothful wretch, who lives from labour free,
 Like drones, the robbers of the painful bee, 401
 Has always men, and gods, alike his foes;
 Him famine follows with her train of woes.
 With cheerful zeal your mod'rate toils pursue,
 That your full barns you may in season view.
 The man industrious stranger is to need,
 A thousand flocks his fertile pastures feed;
 As with the drone with him it would not prove,
 Him men and gods behold with eyes of love.
 To care and labour think it no disgrace, 410
 False pride! the portion of the sluggard race:
 The slothful man, who never work'd before,
 Shall gaze with envy on thy growing store,
 Like thee to flourish, he will spare no pains;
 For lo! the rich virtue and glory gains.
 Strictly observe the wholesome rules I give,
 And, bless'd in all, thou like a god shalt live.
 Ne'er to thy neighbour's goods extend thy cares,
 Nor be neglectful of thine own affairs.
 Let no degen'rate shame debase thy mind, 420
 Shame that is never to the needy kind;
 The man that has it will continue poor;
 He must be bold that would enlarge his store.

But ravish not, depending on thy might,
 Injurious to thyself, another's right.
 Who, or by open force, or secret stealth,
 Or perjur'd wiles, amasses heaps of wealth,
 Such many are, whom thirst of gain betrays,
 The gods, all seeing, shall o'ercloud his days;
 His wife, his children, and his friends, shall die, 430
 And, like a dream, his ill-got riches fly:
 Nor less, or to insult the suppliant's cries,
 The guilt, or break through hospitable ties.
 Is there who, by incestuous passion led,
 Pollutes with joys unclean his brother's bed;
 Or who, regardless of his tender trust,
 To the poor helpless orphan proves unjust;
 Or, when the father's fatal day appears,
 His body bending through the weight of years,
 A son who views him with unduteous eyes, 440
 And words of comfort to his age denies,
 Great Jove vindictive sees the impious train,
 And, equal to their crimes, inflicts a pain.

These precepts be thy guide thro' life to steer:
 Next learn the gods immortal to revere:
 With unpolluted hands, and heart sincere,
 Let from your herd, or flock, an off'ring rise;
 Of the pure victim burn the white fat thighs;
 And to your wealth confine the sacrifice.
 Let the rich fumes of od'rous incense fly,
 A grateful favour, to the pow'rs on high;
 The due libation nor neglect to pay,
 When ev'ning closes, or when dawns the day:
 Then shall thy work, the gods thy friends, suc-
 ceed;
 Then may you purchase farms, nor sell through
 need.

Enjoy thy riches with a lib'ral soul,
 Plenteous the feast, and smiling be the bowl;
 No friend forget, nor entertain thy foe,
 Nor let thy neighbour uninvited go.
 Happy the man with peace his days are crown'd, 460
 Whose house an honest neighbourhood surround;
 Of foreign harms he never sleeps afraid,
 They, always ready, bring their willing aid;
 Cheerful, should he some busy pressure feel,
 They lend an aid beyond a kindred's zeal;
 They never will conspire to blast his fame:
 Secure he walks, unscully'd his good name;
 Unhappy man, whom neighbours ill surround,
 His oxen die oft' by a treach'rous wound,
 Whate'er you borrow of your neighbour's store,
 Return the same in weight, if able, more; 471

So to yourself will you secure a friend;
 He never after will refuse to lend.
 Whatever by dishonest means you gain,
 You purchase an equivalent of pain.
 To all a love for love return: contend
 In virtuous acts to emulate your friend.
 Be to the good thy favours unconfin'd;
 Neglect a sordid, and ungrateful mind.
 From all the gen'rous a respect command, 480
 While none regard the base ungiving hand:
 The man who gives from an unbounded breast,
 Though large the bounty, in himself is bless'd:
 Who ravishes another's right shall find,
 Though small the prey, a deadly sting behind.
 Content, and honestly enjoy your lot,
 And often add to that already got;
 From little oft' repeated, much will rise,
 And of thy toil the fruits salute thine eyes.
 How sweet at home to have what life demands, 490
 The just reward of our industrious hands,
 To view our neighbour's bliss without desire,
 To dread not famine, with her aspect dire!
 Be these thy thoughts, to these thy heart incline,
 And lo! these blessings shall be surely thine.

When at your board your faithful friend you
 greet,
 Without reserve, and lib'ral be the treat:
 To stint the wine a frugal husband shows,
 When from the middle of the cask it flows.
 Do not, by mirth betray'd, your brother trust,
 Without a witness, he may prove unjust: 501
 Alike it is unsafe for men to be,
 With some too diffident, with some too free.
 Let not a woman steal your heart away,
 By tender looks, and her apparel gay;
 When your abode she languishing inquires,
 Command your heart, and quench the kindling
 fires;
 If love she vows, 'tis madness to believe,
 Turn from the thief, she charms but to deceive:
 Who does too rashly in a woman trust, 510
 Too late will find the wanton proves unjust.
 Take a chaste matron, partner of your breast,
 Contented live, of her alone possess'd;
 Then shall you number many days in peace,
 And with your children see your wealth increase;
 Then shall a duteous careful heir survive,
 To keep the honour of the house alive.
 If large possessions are in life thy view,
 These precepts with assiduous care pursue.

NOTES ON THE FIRST BOOK OF THE WORKS AND DAYS.

VER. I. ARISTARCHUS, and some others, are for having this exordium left out, as not a part of the poem. Praxiphanes, a scholar of Theophrastus, says, he had a copy which begun from this verse.

As here on earth we tread the maze of life.

The reason which Proclus assigns for it not being writ by Hesiod, is, that he who began his Theogony, with an invocation to the muses from Helicon, and who was himself brought up at the foot of that mountain, would never call on the Pierian muses. A weak objection, and unworthy a critic! the distinction is as follows. The muses are said

to be the daughters of Jove, that is, of that power by which we are enabled to perform. Pieria is said to be the birth-place of the muses, and the seat of Jove, that is, the mind, whence all our conceptions arise. Helicon is a place of residence to the muses, where they celebrate the praises of their father, and search into the knowledge of antiquity. In this work Hesiod instructs his brother in the art of tillage and morality, all which doctrines proceed from his own experience, his own natural sentiments, and therefore he invokes the muses from Pieria; his account of the Generation of the Gods, being received, partly from books, and partly from oral tradition, he invokes them from Helicon. Tzet. Here the Scholiast talks as if he did not doubt these lines being genuine.

Ver. 13. This exordium was certainly admired by Horace, who, in one of his odes, has elegantly translated this part of it.

Valet ima summis
Mutare, et insignem attenuat, deus,
Obscura promens.

I must acknowledge, after all, what Pausanias says, in his *Boeotia*, that this beginning was not in the copy which he saw in lead, is a great argument against those who think it of Hesiod: and Plutarch likewise, in his *Symposiacs*, begins this poem according to Pausanias.

Ver. 23. The words of Hesiod are these; "there is not one kind of contention only on earth, but there are two, which divide the mind." In the *Theogony* he makes but one contention, and that sprung from night, soon after the birth of the fates, and other evil deities, which are of the same parent. From contention sprung all that is hurtful to gods and men, as plagues, wars, secret bloodshed, slander, &c. The second contention, emulation, which was planted in the womb of earth by Jove, must be after the invention of arts; for before was no room for emulation. The contention first mentioned, was before the wars of the giants. Of that see farther in the notes to the *Theogony*.

Ver. 29. The truth of this will plainly appear, when we consider the necessity of many of our actions, which, though involuntary, are rendered necessary by the cause. By involuntary I do not mean without the consent of the will, because it is certain that must precede the action, but what we had rather we had no occasion to do.

Ver. 43. Hear Plato on this passage; his words are these: "And so it is necessary," says Hesiod, or according to Hesiod, "it should be among all of the same profession, that they may be filled with envy, and contention." Plato certainly mistakes the poet in this, when he imagines that Hesiod thinks it absolutely necessary for the better government of the world. All that he means is, he finds it so in nature; and, from our appetites natural to us, we cannot avoid it. The rest of the note by Mr. Theobald. Aristotle, in his second book of *Rhetoric*, in the chapter on envy, quotes this passage of Hesiod, though he does not name the author, with this introduction, "because men

"contend, for honour's sake, with their rivals; and with all who have passions and desires like themselves, there is a necessity that they must envy such;" hence it has been said, *καὶ κίραμους κίραμει ποτεῖν*.

Ver. 55. The sin of Peres was reckoned by the ancients one of the most heinous. Seneca begs he may know to divide with his brother, as if he esteemed it one of the most necessary duties of man. This custom of dividing the father's patrimony by lot among all the children, is likewise alluded to in the *Odyssees* of Homer, Book 14.

Ver. 59. What a noble triumph is this over the avarice and injustice of his brother, and the partiality of the judges! How much like a philosopher is this greatness of soul, in his contempt of ill got riches! What a conquest has he gained, though he lost the cause, and suffered by the wickedness of his adversary! He not only shows himself a happy man, but teaches him by whom he is most injured to be so too. I have taken the liberty to add this line, which is not in the original, as an explanation of this famous passage of our poet, which, and no other, I am certain must be his meaning:

How blest'd the frugal, and an honest board.

The *μαλαχὴ* and *ασφοδελος*, the first of which we generally render in English the mallows, and the latter the daffodil, the names of which I have not translated, being of no consequence to the beauty of this passage. Plutarch, in his *Banquet of the Seven Wise Men*, commends as the wholesomest of herbs; he mentions the *ανθρικος*, which Le Clerc tells us is a part of the *ασφοδελος*: the same critic also observes, from Scaliger, that it appears from this verse that the ancients did eat the daffodil, or *ασφοδελος*.

Ver. 67. What the poet means by this, and the preceding lines, is, if we knew how few things are necessary for the support of life, we should not be so solicitous about it as we are; we should not spend so much time in agriculture and navigation as we do. This expression of laying the rudder over the smoke, alludes to the custom of laying it to harden over the smoke at those times in which they did not use it. Says Grævius on this verse, it was customary to hang the rudders in the smoke, when the season for sailing was passed; by which they believed they were preserved from rotting, and kept solid till the next season. This we find likewise among the precepts in the second book of this poem.

And o'er the smoke the well made rudder lay.

Ver. 327.

Which rule also Virgil has laid down in his *Georgic*, in his direction for tools of husbandry:

Et suspenfa focis exploret robora fumus. Lib. I.

Ver. 69. Hear the Scholiast on this passage, on the invention of arts; men, says he, were at first simple and unexperienced; the art of agriculture, and all other, were entirely unknown; they knew not diseases, nor the pangs of death; when they

died they expired on the ground, as if they knew not what they suffered. They enjoyed the fruit of the earth in common among them. Then were no rulers: for all were lords of themselves: but when men grew *προμηθεϊσσοι*, which is the signification of Prometheus, more cunning, more apt to contrive, they departed from their primitive temperance, and consequently their serenity. Then the use of fire was discovered, which was the source of all mechanical arts. *Tzetze*.

Ver. 71. It is beyond dispute, that with the invention and improvement of arts, the luxury of men increased, and that diseases were the effects of luxury.

And the stol'n fire back to the skies he bore.

This passage of the fable, most of the commentators have left untouched, as not knowing what to make of it. I think it must allude to the decay of arts and sciences; which the succeeding verse will farther explain.

Ver. 73. By Prometheus is surely meant, as before, *προμηθεϊσσοι*, wiser men, who were as forward to recover or revive lost arts, as to invent new.

Ver. 76. The original is *εν κελω ναρθηκι*; which expression is used again in the Theogony, verse 567 of the original, and 847 of my translation: there is a curious comment on this passage in Tournesort's account of the island of Skinola, in his voyage into the Levant; which I shall here give as near a translation of as I can. "This island abounds with the *ferula* of the ancients; the old name of which is preserved by the modern Greeks, who call it Nartheca, from *Ναρθηξ*: it has a stalk five feet in height, and three inches thick: every ten inches it has a knot that is branchy, and covered with a hard bark: the hollow of the stalk is full of white marrow, which, when dry, takes fire like a match; which fire continues a long while, and consumes the marrow by slow degrees, without doing any damage to the bark; for which reason this plant is used for carrying fire from one place to another: our sailors laid in a large store of it: this use of it is derived from early antiquity; and may contribute to the explanation of a passage in Hesiod, who, speaking of the fire which Prometheus stole from heaven, says, that he brought it in *ναρθηκι*, i. e. in Latin *ferula*; this fable doubtless arises from Prometheus discovering the use of steel in striking fire from the flint: and Prometheus most probably made use of the marrow of the *ferula*, and instructed men how to preserve fire in the stalk of this plant."

Ver. 112. "The original is *ορμους χρυσειους*. *ορμους χρυσειους*. They placed about her body ornaments of gold. A strict regard ought always to be paid to the original meaning of the ancient author; if a liberty is took by the translator, for the better embellishing the poem, it is proper to have a remark on that occasion. The danger arising from such an omission, is, that the reader who depends on the translation may be misled in facts; as from this passage he would take it for granted, diamonds were in the days

TRANS.

of Hesiod, which does not appear from *ορμους χρυσειους*. This observation will be good in "greater points." * How far I may be indulged in the liberty I have taken with this passage I know not; but I am sure this part of her dress contributes more towards the beauty of the whole, than a golden necklace, which Valla has given her in his following translation:

Aurea candenti posuere monilia collo.

Ver. 121. To pass over the poetical beauty of this allegory, let us come to the explication of it. To punish the crime of Prometheus, Jupiter sends a woman on earth. How agreeable in the whole is the story conducted! Vulcan first moulds her to form; that is after the use of fire was found out, of which Vulcan is called the god, by art men begun to embellish the works of nature: then all the inferior arts, which are meant by the other deities, conspire to render the beauties of nature still more charming. By these means the desires of men grew stronger and impetuous, and plunged them on to such excessive indulgence of their senses, as brought on them the miseries which the poet afterwards mentions.

Ver. 125. How admirable is the fable continued! Here is a virgin made of all the charms of art and nature, to captivate the eyes, and endowed with all the cunning of the sex to gain on the heart, for that is the meaning of her being sent by Hermes. Thus formed, *παν δωρον*, "having received a tribute from all the gods" to complete her, well may the poet call her *δυλον αμνηχανον*, "a temptation that no art can withstand." Here Prometheus, that is the wise man, who foresees the event of things, warns his brother Epimetheus, that is, the man who is wise too late, to avoid the sight of such an assemblage of graces. Of Iapetus, Prometheus, &c. and the deities here mentioned, see farther in the Theogony.

Ver. 140. Pandora's box may properly be took in the same mystical sense, with the apple in the book of Genesis; and in that light the moral will appear without any difficulty.

Ver. 146. With what a sorrowful solemnity these lines run, answerable to the sense contained in them:

Αλλα δε μυρια λυγρα κατ' ανθρωπος αλαληται,
Αλειη μιν γαρ γαια κακων, πλειν δε θαλασσα.

Some think the story of Pandora, and the account we have from Moses of the fall of man, were took from the same tradition. The curse, indeed, pronounced against Adam, in the third chapter of Genesis, is the same with this in the effect; but what weight this imagination may carry with it, I shall not undertake to determine. This story is imitated, and in several lines translated by Quillet, in his Callipædia, and by the late Dr. Parnell, in his poem called, The Rise of Women.

Ver. 160. It is certain, from this passage, that, according to the system of our author in this poem, the golden age preceded the creation of woman, she being sent by Jupiter, who had then the

B

government of heaven. And agreeable to this, is the description of the felicity of human state, before Epimetheus had knowledge of Pandora. We must observe, that this does not coincide with his account in the Theogony, where, after Saturn's revenge on his father, the Furies, Contention, and all the consequences of it, immediately appear.

Ver. 173. The notion of guardian angels has prevailed among many in almost all ages, and all countries. Passages of the like nature are frequent in both the Old and New Testament, and in Homer also; and, as Mr. Addison observes, Milton doubtless had an eye on this part of Hesiod, where he says,

Millions of spiritual creatures walk the earth
Unseen, both when we wake and when we sleep.
Paradise Lost.

I cannot help taking particular notice of the beauty and use of our author's doctrine of guardian angels; he makes them *παντη φοιτωντες ἐπ' αἶαν*, "wandering all over the earth;" *φυλασσουσὶ τιδικας, και χιτλια εργα*, "they keep an account of actions, both just and unjust." These sentiments grafted in the minds of the people, and received as a point of faith by them, would make them always on their guard; and there being *πληροδοῖαι*, "the disposers of riches," would be sufficient to induce them to good actions. The making them the instruments of Providence, to reward men according to their merits to each other in this life, is a doctrine so amiable, that if the truth of it cannot be proved, it ought never to be publicly argued against. Here the poet endeavours to deter his brother from any future injustice, by telling him all his actions are recorded; and that according to their merits, he shall be rewarded.

Ver. 185. Men of the former age were made of the earth, and the first elements, therefore more strong of body than these of a mixed seed. The word *φον*, here made use of for nature, is a metaphor taken from trees and plants. The verb is *φυνω*, to plant, &c. *Tzetze*. Not much unlike this is the account we have from Moses of the different generations of man in earlier times.

Ver. 206. All the commentators which I ever saw, seem to have entirely mislook the sense of this line; nor have Valla and Frisius entered into the meaning of the poet in their translations; the first translates *ἐκ μελίων*

————— Dryadumque creata
Sanguine —————

sprung from the blood of the dryads, or wood-nymphs: and Frisius has it "quercubus ex duris," from hard oaks. I shall use the comment which Mr. Theobald has furnished me with on this occasion, and in the same words in which he gave it to me.

Ζεὺς δὲ πατὴρ τρίτον αἴθερ γένος μερόπων ἀνθρώπων

*Καλκείον ποιεῖ, ἐκ ἀργυρῶν ὅδιν ὁμοῖον,
Ἐκ μελίων δεινὸν τε καὶ ὁμόρριμον οἷσιν ἀεθροῖς
Ἐργ' ἐμελεῖ σφοδρῆϊα καὶ ὑβρίεις.*

I think I may venture to affirm, from the comments they have given it, that none of all the Greek commentators rightly understood this passage. I believe I may say the same of the Latin critics: Grævius, Le Clerc, and Hienfius, have passed the difficulty over in silence. Screevelius falls into the interpretation of the Greek scholiasts; and Guetius, it is plain, saw nothing of what I apprehended to be the meaning of the poet; because he makes an alteration of the text itself, changing *ἐκ μελίων* into *ἐκ τι μελίων*, *absonum inordinatum*: this, too, he borrows from one of the conjectures of Tzetzes; who first, together with Moscopylus and Proclus, tells us, that by *ἐκ μελίων* (for they all make but one word of it), the poet intends to inform us, that this race was made out of ashen trees; that is to say, of a firm and unperishable make: but was the same generation brazen and wooden too? It might much more reasonably been called the wooden age, if Jupiter had formed the people out of trees. Hesiod, I am persuaded, had no thought of obtruding such a generation on us: besides, as neither in the description of the golden or silver age, the poet has given us any account of what materials the men were formed, why should he do it here? In short, let us rectify the pointing of the whole passage, and take the context along with us, and a very little sagacity, I hope, will restore us the author's true meaning. I have a great suspicion the verses ought to be pointed thus:

Ζεὺς δὲ πατὴρ τρίτον αἴθερ γένος μερόπων ἀνθρώπων

*Καλκείον ποιεῖ, ἐκ ἀργυρῶν ὅδιν ὁμοῖον,
Ἐκ μελίων δεινὸν τε καὶ ὁμόρριμον, οἷσιν ἀεθροῖς
Ἐργ' ἐμελεῖ σφοδρῆϊα καὶ ὑβρίεις.*

So *ἐκ μελίων δεινὸν τε καὶ ὁμόρριμον*, will be "potent and dreadful at the spear." *Ἐκ μελίων* is the Doric genitive, instead of *ἐκ μελίων*. *Μελία* is not only the ash tree, but is metaphorically used by Homer, and other poets, for the spear: so Iliad 2. in the description of the Abantes.

*Τῶδ' ἀμ' ἀθαντὲς ἐποντο δοοὶ ὀπίθεν κομῶντες,
Αἰκμηταί, μμηκῶντες ὀρηκτῆσι μελίσσι
Θωρηκὰς ἐξείν δῆϊων ἀμφὶ στήθεσσι.*

Down their broad shoulders falls a length of hair,
Their hands dismiss not the long lance in air,
But with protended spears, in fighting fields,
Pierce the tough corslets, and the brazen shields.

POPE.

The Scholiast on the place, explains *μελίσσι* by the word *δοοῖσιν ἀπὸ αἰλίας ζυλῶ γινόμενοις*, "spears made out of the ash tree." So in our poet, *ἐκ μελίων δεινὸν* I take to be no more than *διὰ τὸν μελίων*, or *τὰς μελίας δεινὸν*, "terrible with spears." Both the prepositions are indifferently used, in the same manner, by the best prose writers, as well as the poets: so in Thucydides we have *ἐκ τῶν σπλῶν*, for *διὰ τῶν σπλῶν* by force of *ἀπὸ*. It may not be unworthy a remark, and to strengthen this conjecture, that Ovid, who had an eye on Hesiod, in the description of the four ages, soon as he names

the brazen age, likewise distinguishes it by this propensity to arms.

*Tertia post illas successit ænea proles,
Sævier ingeniis, et ad horrida promptior arma.*

Ver. 208. Here the poet, speaking of the giant race, says, *οὐδὲ τι σίτην ἠδὲ κῆρον*, of which Schrevelius, Tzetzes, and other commentators, say they feed not on bread, or meat dressed, but tore and eat the limbs of beasts.

Ver. 210. That there was a time when brazen arms were used, we may learn from Plutarch; who tells us, when Cimon, the son of Miltiades, carried the bones of Theseus from the isle of Scyros to Athens, he found interred with him a sword, and the head of a spear, made of brass.

Pausanias, who mentions this fact, tells us, that iron was then begun to be used in war; but for brazen arms in heroical times, he gives the instances of Pyfander's ax, and the dart of Meriones, both from Homer. He likewise alleges the authority of the spear of Achilles, preserved in the temple of Minerva at Phaselis, and the sword of Memnon, all of brass, in the temple of Æsculapius in Nicomedia. Lucretius is a voucher, almost in the words of our author, for the antiquity and use of brass before that of iron.

*Posterioris ferri vis est ærisque reperta,
Sed prius æris erat, quam ferri, cognitus usus.*

The remarks from Pausanias and Lucretius, are by Mr. Theobald. See farther in the observation on line 253d of the Theogony.

Ver. 218. Exactly the same is the distinction Moses makes in Genesis: says he, "There were giants in the earth in those days;" and also after that, "when the sons of God came unto the daughters of men, and they bare children to them, the same became mighty men, which were of old, men of renown." Chap. vi. ver. 4.

Here are plainly the age of giants, and the age of heroes.

Ver. 230. The fortunate islands, by the Greeks thought to be the seats of good men. Homer, Lycoperon, Plutarch, Philostratus, and Dion, as well as Hesiod, have mentioned, and unanimously agree, that they are fragrant fruitful fields, and meadows, as lovely to the eye as the mind of man can imagine. Tzet. Agreeable to this, is that beautiful description of Elysium in the Æneis of Virgil.

*Devenere locus lætos, et amæna vireta
Fortunatorum nemorum, sedesque beatas. Lib. vi.*

————— They took their way,
Where long extended plains of pleasure lay.
The blissful seats of happy souls below. DRYDEN.

Pindar, in his second Olympic, comes nearer to our poet, in his description of those seats of the happy:

————— *ἐνθα μακάρον
Ναῶν ὠκεανίδες
Αὐγαὶ περιπτεροί.*

"Where the gales from the ocean, breathe
"through the island of the blessed." I must here

observe that Homer, in his account of Elysium, judged very wrong, when he made Achilles say to Ulysses, "he would rather serve the poorest on earth, than rule over the departed." Od. B. 11. Speaking thus dreadfully of a future state, and of the happiest condition of it, is no encouragement to the living.

Ver. 231. The original of this is omitted in many editions, but Graevius is for restoring it from a manuscript which he had seen.

Ver. 234. Here he cannot mention the vices of his age without showing the utmost detestation to them. We see the same purity of manners, the same air of piety, running through all his works. See the Life.

Ver. 246. This passage Ovid has beautifully translated in his Metamorphoses; and indeed several parts of Hesiod are well improved by that fine poet. In the division of the ages he differs from our author, and of five makes but four. "It is the opinion of some, that it would have been better, if Ovid had paid as great regard to the historical relations, as to the beauties of those whom he imitates."

Ver. 268. Here the poet likens himself to the nightingale, and the judges to the birds of prey. Tzet. This transition, from the five ages to the fable of the hawk and the nightingale, is a little abrupt. The remaining part of this book contains a beautiful, though small body of moral philosophy.

Ver. 316. By this antithesis how lively is the state of the righteous represented: This it gives such a beauty to the first and thirty-seventh Psalms, where the natural state of the just and unjust is truly described, and in many circumstances like this of our poet.

Ver. 325. Examples of this may be found in history. When a vengeance of this kind happens, the execution of it depends on the degree of the person guilty, and the nature of the crime committed, and against whom, as that of Paris, who was the son of a powerful prince; and who, in breaking the laws of hospitality, offended a powerful people, by which he involved his country in ruin.

Ver. 326. He now turns the discourse from his brother to the judges, by whom likewise he had been injured. He exhorts them to the pursuit of justice, on these two considerations; *first*, Because this wicked man, who plots the destruction of another, at the same time works his own unhappiness; and, *secondly*, Because the gods are not only conscious of all our actions, but our very thoughts.

Ver. 330. This repetition of the circumspection of the guardian angels, and the punishment of the unrighteous, is to keep the crime of which they were guilty fresh in the memory of his brother and the judges. Repetitions of this nature are frequent in the Greek poets, and more particularly in Homer than any other.

Ver. 341. The original has it, that Justice reminds Jove of human wickedness, and solicits him that the people may be punished for the offences of their rulers.

————— *οὐδ' ἀποτίσῃ
Ἀνὴρ ἀταδάλιας βασιλῆων* —————

The Greek commentators are all satisfied with this sense. Monsieur Le Clerc indeed reasonably objects, that if the goddess, who presides over justice, obtains, that the public should suffer for the crimes of their rulers, which they dislike and condemn, where is the justice of it? And he quotes the well-known axiom of Horace, "Delirant reges, placentur achiivi," and refers us to a foregoing passage of our own author; in which he says, a whole city is often destroyed for the guilt of a single person: but it is not obvious to me that this is the poet's meaning. Let us examine the sentiment with the context, and that will best determine us in the meaning here. "Justice (says he) sitting by her father Jove, when any one wrongs her, complains of the iniquity of man, that the people may suffer for the offences of their governors; therefore, ye governors, take heed of pronouncing unjust judgments, for every man's evil machinations fall on his own head." If a man's own ill devices fall on himself, it is most absurd for Justice to solicit that the vulgar should be punished for the crimes of their rulers. In short, though all the copies agree to support this argument, the alteration of a single letter will give it a turn of plain reason, and make all the parts consonant to each other. I propose this change only as a private suspicion; because, as it stands at present, I am at a loss how to satisfy myself in the sense. I would suppose that the author might have wrote it,

Και ε' οποι' αν τις μιν βλαπῃ, σκολιων ονοτα-
ζων,

Αυτικα, παρ δ' ἰ πατρι καθεζομενη κρονιωνι,
Γηρυετ' ανθρωπων αδικον νοον, εφε' αποτιση
Τημος αταδαλιας βασιληων.

The only change that is made in the text is, of *δημος* into *σημος*; but the change from thence in the sense, is very strong and signal: "When Justice is injured, she, sitting by Jove, immediately exclaims against human iniquity, that he might then, or at that instant, punish the enormities of the judges: therefore, ye judges, take heed to be more righteous: for the iniquity of every one falls upon his own head." The words so altered, certainly bear such a sense; and the Greek, I think, without any strain of the language, admits it. *Τημος*, then, is an adverb of time, which answers to *σημος*, when; the want of which is supplied by *οποτε*, which is the same sense with *σημος*, and by *οφρα* and *αυτικα*, by which the connection is entirely grammatical: and then *αποτιση* does not only signify *luc*, *repas do*, but likewise *punio*, *ulciscor*, and governs an accusative case, as Stephens, and other lexicon writers, take notice, and prove by authorities: but, as I said before, I only submit it to judgment. I will conclude this remark with an observation that will not a little strengthen it; which is, that the sense I would give this passage is exactly conformable to what our poet says but few verses before, which are, in your translation, these:

When suits commence, dishonest strife the cause,
Faith violated, and the breath of laws,
Ensnue: the cries of justice haunt the judge,

[This whole note by Mr. Theobald.]

Ver. 354. Plutarch would have these lines left out as blasphemy, and unworthy Hesiod. I must beg leave to dissent from him. The poet here says, with the greatest solemnity, "may I nor mine be just, if to be so is to be unfortunate, and if to be wicked is to be successful," as we see in life it often happens. I think he takes a bold scope, and well solves the objection of Plutarch in this line:

Αλλα τανυ' επω εολπα τελειν δια τερατικεραυνον.

But this is my comfort, "I hope it is not by the consent of Jove." Tzetz.

Ver. 372. Here the poet has a regard to real merit, wisely considering that a good act is sometimes done, and the author of it ignorant of the good he does, therefore consequently void of the merit of it; as on the contrary, a man may commit a crime without the consent of his will, and is therefore guiltless.

Ver. 382. The beauty of this passage is admirable; and it will appear the more so, when we consider the truth of the doctrine in this poetical dress. The road to what he here calls wickedness is soon found; that is, our appetites are no sooner capable of enjoying their proper objects, but such objects are every day presenting themselves to us; the way to what he calls virtue, and which is really so, is truly rugged, because we must resist the dictates of nature, if we consider ourselves as mere sensual beings, and reject those things which would give us immediate pleasure.

Ver. 396. After the poet has endeavoured to excite his brother to acts of justice, by moral precepts, he reminds him of his birth, intimating that by acts of virtue the honour of a family is supported. Tzetz. See farther in the Life.

Ver. 424. How proper is this, after he had recommended boldness to his brother, lest he should mistake that which he designed as an honest resolution boldly pursued, and convert the best advice to the prejudice of others!

Ver. 448. The thighs were offered to the gods, because of the honour due to them, those parts being of greatest service to animals in walking, and generating; and thereby, says Tzetzes, they commended themselves, and their undertakings, to divine protection.

We find the same offerings ordained by the Levitical laws, though perhaps not just on the same occasion. How near the ceremonies agreed is uncertain; for here our author is deficient. We find the same strict command in Leviticus, that the victim should be pure. "And if his offering, for a sacrifice of peace offering, unto the Lord, be of the flock, male or female, he shall offer it without blemish, Chap. iii. ver. 6." There likewise the fat, and those parts which contribute most to generation, are more particularly appropriated to that use. "And he shall offer an offering made by fire unto the Lord; the fat thereof, and the whole rump, it shall he take off hard by the back bone; and the fat that covereth the inwards, and all the fat that is on the inwards. And the two kidneys, and the fat that is on them, which is by the flanks, and the caul

"above the liver, with the kidneys, it shall he take away. And the priest shall burn them on the altar, it is the food of the offering made by fire, for a sweet savour. All the fat is the Lord's, ver. 9, 15, 16." And in the same book are the offerings of frankincense, and drink offerings, instituted. In the Iliad of Homer, book i. the thighs are offered to Apollo, as likewise in the Odysses, book xxi. and in several other parts of these two poems.

Ver. 470. Our author in his rules of morality does not recommend an observation of the laws only, but all that may conduce to the true enjoyment of life, to ourselves, our friends, and our neighbours, as liberality, a particular regard to good men, in our payments to return more than we borrow; none of which we are obliged to by any laws; all this, therefore, must proceed from a generous soul, from a knowledge of the world, and a just and prudent way of thinking. He likewise shows, that to be honest, to be liberal, is not only to indulge a noble passion, but to be friends to ourselves; and the rule he lays down in one line is enforced by the reason in the next. What an elegant praise is that Tully gives our poet, when, to

recommend this passage, he uses the same words, as near as he can, which he so much admires.

"Illud Hesiodum laudatur a doctis quod eadem mensurâ reddere jubet, quâ acciperis, aut etiam cumulatione, si possis.

"That passage of Hesiod is commended by men of learning, because he commands you never to return less than you borrow, but more, if you are able."

Ver. 498. The reason Tzetzes, and some other commentators, give for this advice, is, that wine, when the cask is first pierced, is small, being next the air, and when low, troubled with dregs; at both which times, they say, Hesiod advises not to be sparing, the wine not being of much value; but when it is about half out, it draws more pure; then is the time to be frugal. A poor compliment this to his guests! If so, all his former rules of liberality are destroyed; but these gentlemen must certainly mistake his meaning. All that he would recommend is, not to let our liberality run to profuseness; and, when the wine is strong, not to drink to excess, by which we become enemies to ourselves and friends.

BOOK II.

THE ARGUMENT.

In this book, the poet instructs his countrymen in the arts of agriculture and navigation, and in the management of the vintage: he illustrates the work with rural descriptions, and concludes with several religious precepts, founded on the custom and manners of his age.

WHEN the Pleiades, of Atlas born,
Before the sun's arise illumine the morn,
Apply the sickle to the ripen'd corn;
And when, attendant on the sun's decline,
They in the ev'ning ether only shine,
Then is the season to begin to plough,
To yoke the oxen, and prepare to sow:
There is a time when forty days they lie,
And forty nights, conceal'd from human eye,
But in the course of the revolving year, 10
When the swain sharps the scythe, again appear.
This is the rule to the laborious swain,
Who dwells or near or distant from the main,
Whether the shady vale receives his toil,
And he manures the fat, the inland soil.

Would you the fruits of all your labours see,
Or plow, or sow, or reap, still naked be;
Then shall thy barns, by Ceres blest'd, appear
Full of the various produce of the year;
Nor shall the seasons then behold thee poor, 20
A mean dependant on another's store.
Though, foolish Perseus, bending to thy pray'rs,
I lately heard thy complaints, and eas'd thy cares,
On me no longer for supplies depend,
For I no more shall give, no more shall lend,

Labour industrious, if you would succeed;
That men should labour have the gods decreed,
That with our wives and children we may live,
Without th' assistance that our neighbours give,
That we may never know the pain of mind 30
To ask for succour, and no succour find:
Twice, thrice, perhaps, they may your wants supply;

But constant beggars teach them to deny;
Then wretched may you beg, and beg again,
And use the moving force of words in vain.
Such ills to shun, my counsels lay to heart;
Nor dread the debtor's chain, nor hunger's smart.

A house, and yoke of oxen, first provide,
A maid to guard your herds, and then a bride;
The house be furnish'd as thy need demands, 40
Nor want to borrow from a neighbour's hands.
While to support your wants abroad you roam,
Time glides away, and work stands still at home.
Your business ne'er defer from day to day,
Sorrows and poverty attend delay;
But lo! the careful man shall always find
Increase of wealth according to his mind.

When the hot season of the year is o'er
That draws the toilsome sweat from ev'ry pore,

When o'er our heads th' abated planet rolls 50
A shorter course, and visits distant poles,
When Jove descends in show'rs upon the plains,
And the parch'd earth is cheer'd with plenteous
rains,

When human bodies feel the grateful change,
And less a burden to themselves they range,
When the tall forest sheds her foliage round,
And with autumnal verdure strews the ground,
The hole is incorrupt, the timber good;
Then whet the sounding ax to fell the wood.

Provide a mortar three feet deep, and strong;
And let the pestle be three cubits long. 61

One foot in length next let the mallet be,
Ten spans the wain, seven feet her axletree;
Of wood four crooked bits the wheel compose,
And give the length three spans to each of those.

From hill or field the hardest holm prepare,
To cut the part in which you place the share;
Thence your advantage will be largely found,
With that your oxen may long tear the ground:
And next, the skilful husbandman to show, 70

Fasten the handle to the beam below:

Let the draught-beam of sturdy oak be made,
And for the handle rob the laurel shade;

Or, if the laurel you refuse to fell,

Seek out the elm, the elm will serve as well.

Two ploughs are needful; one let art bestow,

And one let nature to the service bow;

If use or accident, the first destroy,

Its fellow in the furrow'd field employ. [age

Yoke from the herd two sturdy males, whose

Mature secures them from each other's rage; 81

For if too young they will unruly grow,

Unfinish'd leave the work, and break the plough:

These, and your labour shall the better thrive,

Let a good ploughman, year'd to forty, drive;

And see the careful husbandman be fed

With plenteous morsels, and of wholesome bread:

The slave, who numbers fewer days, you'll find

Careless of work, and of a rambling mind;

Perhaps, neglectful to direct the plough, 90

He in one furrow twice the seed will sow.

Observe the crane's departing flight in time,

Who yearly soars to seek a southern clime,

Conscious of cold; when the shrill voice you hear,

Know the fit season for the plough is near;

Then he, for whom no oxen graze the plains,

With aching heart, beholds the winter rains;

Be mindful then the sturdy ox to feed,

And careful keep within the useful breed.

You say, perhaps, you will entreat a friend, 100

A yoke of oxen, and a plough to lend:

He your request, if wise, will thus refuse,

I have but two, and those I want to use;

To make a plough great is th' expence and care;

All these you should, in proper time, prepare.

Reproofs like these avoid; and to behold

Your fields bright waving with their ears of gold,

Let unimprov'd no hour, in season, fly,

But with your servants plough, or wet, or dry;

And in the spring again to turn the soil 110

Observe; the summer shall reward your toil,

While light and fresh the glebe insert the grain;

Then shall your children smile, nor you complain.

Prefer with zeal, when you begin to plough,
To Jove terrene, and Ceres chaste, the vow:

Then will the rural deities regard

Your welfare, and your piety reward.

Forget not, when you sow the grain, to mind

That a boy follows with a rake behind;

And strictly charge him, as you drive, with care,

The seed to cover, and the birds to scare. 121

Through ev'ry task, with diligence, employ

Your strength; and in that duty be your joy;

And, to avoid of life the greatest ill,

Never may sloth prevail upon thy will:

(Bless'd who with order their affairs dispose!

But rude confusion is the source of woes!)

Then shall you see, Olympian Jove your friend,

With pond'rous grain the yellow harvest bend;

Then of Arachne's web the vessels clear, 130

To hoard the produce of the fertile year.

Think then, O think! how pleasant will it be,

At home an annual support to see,

To view with friendly eyes your neighbour's store,

And to be able to relieve the poor.

Learn now what seasons for the plough to shun:

Beneath the tropic of the winter's sun

Be well observant not to turn the ground,

For small advantage will from thence be found:

How will you sigh when thin your crop appears,

And the short stalks support the dusty ears! 141

Your scanty harvest then, in baskets press'd,

Will, by your folly, be your neighbour's jest;

Sometimes, indeed, it otherwise may be;

But who th' effect of a bad cause can see?

If late you to the ploughman's task accede,

The symptoms these the later plough must speed.

When first the cuckoo from the oak you hear,

In welcome sounds, foretel the spring-time near,

If Jove, the ploughman's friend, upon the plains,

Three days and nights, descends in constant

rains, 151

Till on the surface of the glebe the tide

Rise to that height the ox's hoof may hide,

Then may you hope your store of golden grain

Shall equal his who earlier turn'd the plain.

Observe, with care, the precepts I impart,

And may they never wander from thy heart;

Then shall you know the show'rs what seasons

bring,

And what the bus'ness of the painted spring.

In that bleak and dead season of the year, 160

When naked all the woods and fields appear,

When nature lazy for a while remains,

And the blood almost freezes in the veins,

Avoid the public forge where wretches fly

Th' inclement rigour of the winter sky:

Thither behold the slothful vermin stray,

And there in idle talk consume the day;

Half-starv'd they sit, in evil consult join'd,

And, indolent, with hope buoy up their mind;

Hope that is never to the hungry kind! 170

Labour in season to increase thy store,

And never let the winter find thee poor:

Thy servants all employ till summer's past,

For tell them summer will not always last.

The month all hurtful to the lab'ring kine,

In part devoted to the god of wine,

Demands your utmost care; when raging forth,
 O'er the wide seas, the tyrant of the north,
 Bellowing through Thrace, tears up the lofty woods,
 Hardens the earth, and binds the rapid floods. 180
 The mountain oak, high tow'ring to the skies,
 Torn from his root across the valley lies;
 Wide spreading ruin threatens all the shore,
 Loud groans the earth, and all the forests roar:
 And now the beast amaz'd from him that reigns
 Lord of the woods to those which graze the plains,
 Shriv'ring the piercing blast affrighted, flies
 And guards his tender tail betwixt his thighs.
 Now nought avail the roughness of the bear,
 The ox's hide, nor the goat's length of hair, 190
 Rich in their fleece, alone the well cloth'd fold,
 Dread not the blust'ring wind, nor fear the cold.
 The man, who could erect support his age,
 Now bends reluctant to the north-wind's rage:
 From accidents like these the tender maid,
 Free and secure, of storms nor winds afraid,
 Lives, nurtur'd chaste beneath her mother's eye,
 Unhurt, unfully'd, by the winter's sky;
 Or now to bathe her lovely limbs she goes, 199
 Now round the fair the fragrant ointment flows;
 Beneath the virtuous roof she spends the nights,
 Stranger to golden Venus, and her rites.
 Now does the boneless polypus, in rage,
 Feed on his feet, his hunger to assuage;
 The sun no more, bright shining in the day,
 Directs him in the flood to find his prey;
 O'er swarthy nations while he fiercely gleams,
 Greece feels the pow'r but of his fainter beams.
 Now all things have a diff'rent face below;
 The beasts now shiver at the falling snow; 210
 Through woods, and through the shady vale, they
 run

To various haunts, the pinching cold to shun;
 Some to the thicket of the forest flock,
 And some, for shelter, seek the hollow rock.

A winter garment now demands your care,
 To guard the body from th' inclement air;
 Soft be the inward vest, the outward strong,
 And large to wrap you warm, down reaching
 long:

Thin lay your warp, when you the loom prepare,
 And close to weave the woof no labour spare. 220
 The rigour of the day a man defies,
 Thus cloth'd; nor sees his hairs like bristles rise.
 Next for your feet the well hair'd shoes provide,
 Hairy within, of a sound ox's hide.

A kid's soft skin over your shoulders throw,
 Unhurt to keep you from the rain or snow;
 And for your head a well made cov'ring get,
 To keep your ears safe from the cold and wet.

When o'er the plains the north exerts his sway,
 From his sharp blasts piercing begins the day; 230
 Then from the sky the morning dews descend,
 And fruitful o'er the happy lands extend.
 The waters by the winds convey'd on high,
 From living streams in early dew-drops lie
 Bright on the grass; but if the north-wind swells
 With rage, and thick and sable clouds compells,
 They fall in ev'ning storms upon the plain:
 And now from ev'ry part the lab'ring swain
 Foresees the danger of the coming rain;

Leaving his work, panting behold him scour 240
 Homeward, incessant to outrun the shower.

This month commands your care of all the year,
 Alike to man and beast the most severe:

The ox's provender be stinted now;
 But plenteous meals the husbandman allow;
 For the long nights but tedious pass away.
 These rules observe while night succeeds the day,
 Long as our common parent, earth shall bring
 Her various offspring forth to grace the spring.

When from the tropic of the winter's sun, 250
 Thrice twenty days and nights their course have
 run,

And when Arcturus leaves the main to rise
 A star, bright shining in the ev'ning skies,
 Then prune the vine; 'tis dang'rous to delay
 Till with complaints the swallow breaks the day.

When with their domes the flow-pac'd snails
 retreat,

Beneath some foliage, from the burning heat
 Of the Pleiades, your tools prepare;
 The ripen'd harvest then demands your care.
 Now fly the jocund shades, your morning sleep,
 And constant to their work your servants keep;
 All other pleasures to your duty yield; 262

The harvest calls, haste early to the field,
 The morning workman always best succeeds;
 The morn the reaper, and the trav'ler speeds:
 But when the thistle wide begins to spread,
 And rears in triumph his offensive head,
 When in the shady boughs, with quiv'ring wings,
 The grasshopper all day continual sings,

The season when the dog resumes his reign, 270
 Weakens the nerves of man and burns the brain,
 Then the fat flesh of goats is wholesome food,
 And to the heart the gen'rous wine is good;
 Then nature through the softer sex does move,
 And stimulates the fair to acts of love:

Then in the shade avoid the mid day sun,
 Where zephyrs breathe, and living fountains run;
 There pass the sultry hours with friends away,
 And frolic out in harmless mirth the day;
 With country cates your homely table spread, 280
 The goat's new milk, and cakes of milk your
 bread; [meat;

The flesh of beeves, which brouse the trees, your
 Nor spare the tender flesh of kids to eat;
 With Byblian wine the rural feast be crown'd;
 Three parts of water, let the bowl go round.

Forget not, when Orion first appears,
 To make your servants thresh the sacred ears;
 Upon the level floor the harvest lay,
 Where a soft gale may blow the chaff away;
 Then, of your labour to compute the gain, 290
 Before you fill the vessels mete the grain.

Sweep up the chaff, to make your work complete,
 The chaff and straw the ox and mule will eat.
 When in the year's provision you have laid,
 Take home a single man and servant maid;
 Among your workmen let this care be shown
 To one who has no mansion of his own.

Be sure a sharp-tooth'd cur well fed to keep,
 Your house's guard, while you in safety sleep.
 The harvest pass'd, and thus by Ceres blest'd, 300
 Unyoke the beast, and give your servants rest.

Orion and the Dog, each other nigh,
 Together mounted to the midmost sky,
 When in the rosy morn Arcturus shines,
 Then pluck the clusters from the parent vines;
 Forget not next the ripen'd grapes to lay
 Ten nights in air, nor take them in by day;
 Five more remember, ere the wine is made,
 To let them lie to mellow in the shade;
 And in the sixth briskly yourself employ, 310
 To cask the gift of Bacchus, fire of joy.
 Next, in the round do not to plough forget,
 When the Seven Virgins and Orion set:
 Thus an advantage always shall appear,
 In ev'ry labour of the various year.

If o'er your mind prevails the love of gain,
 And tempts you to the dangers of the main,
 Yet in her harbour safe the vessel keep,
 When strong Orion chafes to the deep
 The Virgin stars; then the winds war aloud, 320
 And veil the ocean with a fable cloud:
 Then round the bark, already haul'd on shore,
 Lay stones, to fix her when the tempests roar;
 But first forget not well the keel to drain;
 And draw the pin to save her from the rain.
 Furl the ship's wings, her tackling home convey,
 And o'er the smoke the well made rudder lay.
 With patience wait for a propitious gale,
 And a calm season to unfurl the sail;
 Then launch the swift wing'd vessel on the main,
 With a fit burden to return with gain. 331
 So our poor father toil'd his hours away,
 Careful to live in the unhappy day;
 He, foolish Peres, spent no time in vain,
 But fled misfortunes through the wat'ry plain,
 He, from Æolian Cuma, th' ocean pass'd,
 Here in his fable bark arriv'd at last.
 Not far from Helicon he fix'd his race,
 In Ascrea's village, miserable place!
 How comfortless the winter season there! 340
 And cheerless Ascrea is thy summer air.

O Peres, may'st thou ne'er forget thy fire,
 But let thy breast his good example fire:
 The proper business of each season mind;
 And, O! be cautious when you trust the wind.
 If large the vessel, and her lading large,
 And if the seas prove faithful to their charge,
 Great are your gains; but, by one evil blast,
 Away your hopes are with your venture cast.
 If diligent to live from debtors free, 350
 You rashly are resolv'd to trade by sea,
 To my instructions an attention pay,
 And learn the courses of the liquid way:
 Though nor to build, nor guide a ship I know,
 I'll teach you when the sounding main to plough.

Once I have cross'd the deep, and not before
 Nor since, from Aulis to Eubœa's shore,
 From Aulis, where th' assembled Greeks lay bound,
 All arm'd for Troy, for beauteous dames re-
 nown'd:

At Chalcis, there the youth of noble mind, 360
 For so their great forefather had enjoin'd,
 The games decreed, all sacred to the grave
 Of king Amphidamas, the wise and brave;
 A victor there in song the pride I bore,
 A well ear'd tripod, to my native shore;

Which to the sacred Heliconian nine
 I offer'd grateful for their gift divine,
 Where with the love of verse I first was fir'd,
 Where by the heav'nly maids I was inspir'd;
 To them I owe, to them alone I owe, 370
 What of the seas or of the stars I know;
 Mine is the pow'r to tell, by them reveal'd,
 The will of Jove, tremendous with his shield;
 To them who taught me first, to them belong
 The blooming honours of th' immortal song.

When, from the tropic of the summer's sun,
 Full fifty days and nights their course have run,
 Fearless of danger, for the voy'ge prepare,
 Smooth is the ocean, and serene the air: [view,
 Then you the bark, safe with her freight, may
 And gladsome as the day the joyful crew, 381
 Unless great Jove, the king of gods, or he,
 Neptune, that shakes the earth, and rules the sea,
 The two immortal pow'rs on whom the end
 Of mortals, good and bad, alike depend,
 Should jointly or alone their force employ,
 And in a luckless hour the ship destroy:
 If, free from such mischance, the vessel flies
 O'er a calm sea, beneath indulgent skies, 389
 Let nothing long thee from thy home detain,
 But measure, quickly measure back the main.
 Hasten your return before the vintage past
 Prevent th' autumnal show'rs and southern blast,
 Or you, too late a penitent, will find
 A ruff'd ocean, and unfriendly wind.
 Others there are who choose to hoist the sail,
 And plough the sea, before a spring-tide gale,
 When first the footsteps of the crow are seen
 Clearly as on the trees the budding green:
 But then, may my advice prevail, you'll keep 400
 Your vessel safe at land, nor trust the deep;
 Many, surprising weakness of the mind,
 Tempt all the perils of the sea and wind,
 Face death in all the terrors of the main,
 Seeking, the soul of wretched mortals, gain.
 Would'st thou be safe, my cautions be thy guide;
 'Tis sad to perish in the boist'rous tide.
 When for the voy'ge your vessel leaves the shore,
 Trust in her hollow sides not half your store;
 The less your loss should she return no more: 410
 With all your stock, how dismal would it be
 To have the cargo perish in the sea!
 A load, you know, too ponderous for the wain,
 Will crush the axletree, and spoil the grain.
 Let ev'ry action prove a mean confess'd;
 A moderation is in all the best.

Next to my counsels an attention pay,
 To form your judgment for the nuptial day.
 When you have number'd thrice ten years in time,
 The age mature when manhood dates his prime,
 With caution choose the partner of your bed: 421
 Whom fifteen springs have crown'd, a virgin wed.
 Let prudence now direct your choice; a wife
 Is or a blessing or a curse in life;
 Her father, mother, know, relations, friends,
 For on her education much depends:
 If all are good, accept the maiden bride;
 Then form her manners, and her actions guide:
 A life of bliss succeeds the happy choice;
 Nor shall your friends lament, nor foes rejoice. 430

Wretched the man condemn'd to drag the chain,
 What restless ev'ning his, what days of pain!
 Of a luxurious mate, a wanton dame,
 That ever burns with an insatiate flame,
 A wife who seeks to revel out the nights
 In sumptuous banquets, and in stol'n delights:
 Ah! wretched mortal: though in body strong,
 Thy constitution cannot serve thee long;
 Old age vexatious shall o'ertake thee soon;
 Thine is the ev'n of life before the noon. 440

Observe in all you do, and all you say,
 Regard to the immortal gods to pay.

First in your friendship let your brother stand,
 So nearly join'd in blood, the strictest ban;
 Or should another be your heart's ally,
 Let not a fault of thine dissolve the tie;
 Nor e'er debase the friendship with a lie. }
 Should he offensive, or in deed, or speech,
 First in the sacred union make the breach,
 To punish him may your resentments tend; 450
 For who more guilty than a faithless friend!
 But if, repentant of his breach of trust,
 The self-accuser thinks your vengeance just,
 And humbly begs you would no more complain,
 Sink your resentments, and be friends again;
 Or the poor wretch, all sorrowful to part,
 Sighs for another friend to ease his heart.
 Whatever rage your boiling heart sustains,
 Let not the face disclose your inward pains.

Be your companions o'er the social bowl 460
 The few selected, each a virtuous soul.

Never a friend among the wicked go,
 Nor ever join to be the good man's foe.
 When you behold a man by fortune poor,
 Let him not leave with sharp rebukes the door:
 The treasure of the tongue, in ev'ry cause,
 With moderation us'd obtains applause:
 What of another you severely say,
 May amply be return'd another day.

When you are summon'd to the public feast, 470
 Go with a willing mind a ready guest;
 Grudge not the charge, the burden is but small;
 Good is the custom, and it pleases all.

When the libation of black wine you bring,
 A morning off ring to the heavenly king,
 With hands unclean, if you prefer the pray'r,
 Jove is incens'd, your vows are lost in air;
 So all th' immortal pow'rs on whom we call,
 If with polluted hands, are deaf to all.

When you would have your urine pass away,
 Stand not upright before the eye of day; 481
 And scatter not your water as you go;
 Nor let it, when you're naked, from you flow:
 In either case 'tis an unseemly sight:
 The gods observe alike by day and night:

The man whom we devout and wise may call
 Sits in that act, or streams against a wall.

Whate'er you do in amorous delight,
 Be all transacted in the veil of night;
 And when transported, to your wife's embrace
 You haste, pollute no consecrated place; 491
 Nor seek to taste her beauties when you part
 From a sad fun'ral, with a heavy heart:
 When from the joyous feast you come all gay,
 In her fair arms revel the night away.

When to the rivulet to bathe you go,
 Whose lucid currents never ceasing, flow,
 'Ere to deface the stream you leave the land,
 With the pure limpid waters cleanse each hand;
 Then on the lovely surface fix your look, 500
 And supplicate the guardians of the brook:
 Who in the river thinks himself secure,
 With malice at his heart, and hands impure,
 Too late a penitent, shall find ere long,
 By what the gods inflict, his rashness wrong.

When to the gods your solemn vows you pay,
 Strictly attend while at the feast you stay;
 Nor the black iron to your hands apply,
 From the fresh parts to pare the useless dry.

The bowl, from which you the libation pour
 To heav'n, profane not in the social hour: 511
 Who things devote to vulgar use employ,
 Those men some dreadful vengeance shall destroy.

Never begin to build a mansion seat,
 Unless you're sure to make the work complete;
 Lest on th' unfinish'd roof, high perch'd, the crow
 Croak horrid, and foretel approaching woe.

'Tis hurtful in the footed jar to eat,
 Till purify'd: nor in it bathe your feet.
 Who in a slothful way his children rears, 520
 Will see them feeble in their riper years.

Never by acts effeminate disgrace
 Yourself, nor bathe your body in the place
 Where women bathe; for time and custom can
 Soften your heart to acts beneath a man.

When on the sacred rites you fix your eyes,
 Deride not in your breast the sacrifice;
 For know, the god, to whom the flames aspire,
 May punish you severely in his ire.

Sacred the fountains, and the seas esteem,
 Nor by indecent acts pollute their stream. 531

These precepts keep, fond of a virtuous name,
 And shun the loud reports of evil fame:
 Fame is an ill you may with ease obtain,
 And sad oppression to be borne with pain;
 And when you would the noisy clamours drown,
 You'll find it hard to lay your burden down:
 Fame of whatever kind, not wholly dies;
 A goddess she, and strengthens as she flies.

NOTES TO THE SECOND BOOK OF THE WORKS AND DAYS.

Ver. 1. I shall first observe that the poet very judiciously begins his instructions with a general direction when to sow and to reap; which rule is contained in the two first lines, but lengthened

the translation into seven. This first main precept is to reap when the Pleiades rise, and to plough when they set.

After this he informs his countrymen in their several duties at home and in the fields. For the poetical and allegorical meaning of the Pleiades, I shall use the words of the Scholiast on this passage.

Pleione bore to Atlas seven daughters; the names of which we find in the *Phænomena* of Aratus. Alcyone, Merope, Celæno, Electre, Sterope, Taygete, and Maia; but six of which, says he, are seen. These being pursued by Orion, who was in love with them, were changed into doves, and afterwards placed by Jupiter in the Zodiac. Thus much for the fabulous. By Atlas, who is said to support the heavens on his shoulders, is meant the pole, which divides and determinates the hemispheres; of whom the Pleiades, or seven stars, and all other stars, are said to be born; because, after the separation of the hemispheres, they appeared. The rising of the Pleiades is from the 9th of May to the 23d of June; the setting of them from the 8th of October to the 9th of December. *Tzetz.* What our author means by their rising and setting, I have endeavoured to explain in my translation.

Ver. 8. This is, says Tzetzes, partly in April and partly in May; which is occasioned by the vicinity of the sun to the Pleiades at that time. In April he passes through Aries, and in May through Taurus; in the middle of which sign these stars are placed. Some, contrary to Tzetzes, date the rising of these from the beginning of June; to which month quite through May, say they, the sun passes through Taurus and Gemini.

Ver. 22. It is evident from these and other lines, that though Perseus had defrauded his brother of his right, he was soon reduced to want his assistance. It may not be impertinent here to observe, that Hesiod, in several of his moral precepts, had his eye on the present circumstances of his brother; as in the first book, ver. 431, speaking of the wicked,

— like a dream his ill got riches fly.

Ver. 59. The wood that is felled at this time of the year may be preserved imputrid, the moisture having been dried away by the heat of the weather, which renders it firm and durable; but if felled with the moisture in the trunk or bole, it rots. *Tzetz.*

Ver. 60. Some think this was for the same use of a mill: if so, an argument may be brought, from the invention of mills, for the antiquity of Hesiod, who does not mention one in any of his writings.

Ver. 76. On the ploughs here mentioned, ἀντογυιον και πικυλον, Grævius has a learned note, from the scholiast of Apollonius Rhodius; the first he and other commentators interpret a plough made of a wood that inclines, by nature, to a plough-tail: says one, "aratum quod habet dentale solidum et adnatum, non affixum." Tzetzes takes no notice of this passage. See the View.

Ver. 94. The crane is a very fearful and tender bird, and soon sensible of cold and heat, and, through the weight of its body, easily feels the

quality of the upper air, while flying; which occasions her screaming in cold weather, lest she should fall. *Tzetz.*

Ver. 114. Hesiod keeps up an air of piety quite through his poem, which, as Mr. Addison observes in his *Essay on the Georgic*, should be always maintained. Tzetzes tells us Ζευς χθονιος is Bacchus; and the reason for his being joined with Ceres, is because they were in Egypt together, where they instructed men in the art of tillage, and planting. It is not unreasonable to imagine, the poet should invoke Bacchus and Ceres, who are the two deities which preside over the harvest and the vintage, two great subjects of this book: but the learned Grævius has put it out of dispute that it is Pluto. Ζευς χθονιος, says he, is the infernal Jupiter; by χθονια the Greeks meant καλαχθονια, "what is under ground." This he illustrates by many authorities, and proves χθονιοι θεοι to be "infernal gods." We find many inscriptions, continues he, ΧΘΟΝΙΟΙΣ ΘΕΟΙΣ, in other places θεοις καλαχθονιοις. We see in ancient monuments χθονιος Egeus infernal Mercury, because he drives the souls of the departed to the shades below. Æschylus calls Pluto Ζευς πέκνηποτον, the Jupiter of the dead; and Hesiod, likewise, in his *Theogony*, styles him θεος χθονιος; and the furies are called by Euripides, χθονιαι θεαι, "infernal goddesses." Now let us examine why Pluto is invoked by the husbandmen; he was believed to be author of all the riches which come out of the earth. This we have in a hymn to Pluto ascribed to Orpheus:

Πλουτοδοτων γενεην βροτειν καρποισι ανικυτων.

"The giver of riches to human race in annual fruits" and Cicero, *de Natura Deorum*, thus accounts for it, "quod recidunt omnia in terras, et oriuntur ex terris," because all things must be reduced to, and arise from, the earth. Thus far Grævius; and Valla, in his translation, has took it in the same sense: "Plutonem, in primis, venerare."

Ver. 128. Ει τιλος αετος οσιθεν Ολυμπιος εδωκεν οταζοι, is one line in the original; the construction of which is, "if heaven shall afterwards grant you a good end." The natural interpretation of which is, that proper pains may be taken for the tillage; but, if an unlucky season should happen, the labour of the husbandman is frustrated.

Ver. 137. After the poet has taught his countrymen what seasons to plough and sow in, he teaches them what to avoid; which are all the days in the winter tropic, or what the Latins call Solstice. From the setting of Sagitta, and the rising of Equus, to the rising of the Pleiades, which is from the eighth degree of Aries to the seventh of Cancer, the vernal equinox begins and ends. From the rising of the Pleiades, which is from the eighth degree of Cancer, to the rising of Arcturus and Capricorn, is the summer solstice, of one hundred and twenty-four days. From the rising of Arcturus and Capricorn, to the setting of the Pleiades and Orion, is the autumn equinox, of fifty-six days. From the setting of the Pleiades and Orion, to the setting of Sagitta, and the rising of Equus, is the winter solstice of an hundred days. *Tzetz.*

Ver. 164. Grævius changes the common Latin translation of this passage, *Æneam sedem*, into *officinam arariam*, or *ferrariam*, which is apparently right to all who understand the author. These forges, with the *λειτουργίαι*, were places always open to poor people, where they used to sleep. Proclus, in his remarks on this verse, says, at one time in Athens were three hundred and sixty of these public places. *Θωκος* is the same with *δομος*; in this sense our poet uses it in another place: *Φινυλιν δὲ σκιῶνς θωκος*, fly the open houses, or shady places: hence *θωκεῖν* signifies to loiter, or gossip, in any place; and hence *θωκεῖ*, *καθηλῆαι*, and *ομιλῆαι*, become synonymous. Dicaearchus gives this character of the Athenians: a people, says he, much inclined to vain prating; a lurking, sycophantic crew, very inquisitive after the affairs of other people. Thus much from Grævius. These places, in one sense, are not unlike the *tonstrinae*, or barbers-shops of the Romans, where all the idle people assembled; which were once remarkable, and are now, in several places among us, for being the rendezvous of idle folks. In this sense, Frisius seems to take this passage: *fabrorum vituto focos, nugasque calentes*, &c. This same custom of loitering, and gossiping, at a barber's shop, was notorious too at Athens, as we may learn from the *Plutus* of Aristophanes.

Οὐ πείθομαι

Καὶ τοὶ λόγος γ' ἦν, γη τ' Ἡρακλῆα, πολὺς

Ἐπὶ τοῖσι κουρείοις τῶν καθήμενων.

"By Hercules, I would not believe it, if it was the common talk among the idle fellows in the barbers-shops."

The last part of this note, from Aristophanes, by Mr. Theobald.

Ver. 175. Here begins a lively and poetical description. The coming of the north wind, the effect it has on the land, water, woods, man, and beast, is naturally and beautifully painted. The incidents of the sheep, and the virgin, are ridiculed, by Mr. Addison, in his Essay on the Georgic, as mean. I must beg leave to dissent from that great writer. The representation of their comfortable condition serves to enliven the picture of the distress of the other creatures, who are more exposed to the inclemency of the weather. All this is carried on with great judgment: the poet goes not out of the country for images: he tells us not of the havoc that is made in towns by storms. That of the polypus, is a very proper circumstance, and not foreign to a rural description. Valla and Frisus differ in their names of this month; one will have it to be December, and the other January: be it either of which, it is plain from hence it was the month in which the Greeks celebrated the feast of Bacchus, Hesiod calls it *Ληναιών*, from one of the names of that deity.

Ver. 203. The original, which I have translated Polypus, from the example of every Latin version, and commentator, is *ανοστῖος*, which signifies any thing that is boneless. The Scholiast tells us, from Pliny, book ix. the polypus in the

severe winter seasons keeps in his cave, and gnaws his feet through hunger: and Tzetzes says many of them have been found with maimed feet. From these accounts, we may reasonably conclude what Hesiod calls *ανοστῖος* to be the same fish.

Ver. 215. Here is a description of the old Grecian habit for men in winter. The soft tunic is an under garment, the other a sort of a loose coat to wrap round the body, which he informs you how to make. The warp is that part of the loom, when set, which the shuttle goes through; the woof is the thread which comes from the shuttle in weaving. To keep the neck warm, he advises to throw the skin of some beast cross the shoulders. The covering for the head was a thick cap, which came quite over the ears. From his mentioning nothing else in particular, we may imagine the shoes completed the dress. Le Clerc, on this place, merrily observes, that the earnest directions for making the winter dress, favour very much of old age in the poet: but I must beg leave to remark, that some allowance is to be made for the bad climate of his country, of which we find himself giving a wretched character.

Ver. 233. Hence we may learn the opinion of the ancients concerning the dew. Says Tzetzes, a cloud contracted from humid vapours extenuates into wind: if the vapours are thin, they descend into dew; but if thick, they condense and fall into rain.

I shall recommend to those who would inform themselves better in the nature of these bodies, and how they act on each other, Dr. Woodward's Natural History of the Earth, in the third part of which these subjects are judiciously treated of.

Ver. 244. The reason the Scholiast gives for stinting the provender of the oxen at this time, is, because the days are at the shortest; therefore they are not kept so much to labour as in some other parts of the year, but they sleep most of their time away, and therefore are recruited by rest. The case is not the same with the husbandmen; their labour is not lessened, and they require the more food, the more rigorous the weather.

Ver. 250. The setting of the Pleiades is from the 8th of October to the 9th of December. The winter solstice continues an hundred days after; and, according to the poet, Arcturus rises sixty days after the winter solstice. The use of pruning the vines at this time must be to cut off the leaves which shade the grapes from the sun.

Ver. 255. The poet calls it *πανδιωνίς χελιδόν*, alluding to the story of Progne and Philomela, the daughters of Pandion, king of Athens; the latter of which was married to Tereus, king of Thrace, who was in love with her sister Progne, whom he debauched, and afterwards cut out her tongue. The story is told at large by Ovid, in his *Metamorphoses*, book vi.

Ver. 256. The Greek word, which I have translated snails, is *φειραικος*, which literally signifies any animal that carries its house about with it. The poet here says, it is time to begin the

harvest when the ground is so excessive hot, that the snail, or *φειροεικος*, cannot bear it.

Ver. 269. It is remarkable, that Virgil, and other Latin poets, generally use the epithet *rauca* to *cicada*: whereas the Greeks describe the *τετλιξ* as a musical creature,—*Τετλιγος ιπει τογυ φρεττερον αδεις*. Theoc. Idyl. i.

You sing sweeter than a grasshopper.

Μακαριζομεν σε, τετλιξ,
Οτι δινδριων επ' ακρον,
Ολιγην δροσον πεπωκως,
Βασιλευς οπως, αιιδεις.

ANACREON.

Grasshopper, we hail thee blest'd,
In thy lofty shady nest,
Happy, merry, as a king,
Sipping dew, you sip and sing.

We have a fuller description of this creature in the shield of Hercules:

The season when the grasshopper begun
To welcome with his song the summer sun;
With his black wings he flies the melting day
Beneath the shade, his seat a verdant spray;
He early with the morn exerts his voice,
Him mortals hear, and as they hear rejoice;
All day they hear him from his cool retreat;
The tender dew his drink, the dew his meat.

I must here take notice, that the grasshopper, in the original, is *ηχιτα τετλιξ*.

* "The Greek poets, agreeing thus in their description of this creature, give me reason to believe the common translation of this word into *cicada* is false. Henry Stephens, and others, give us an account of the *cicada*, and *acheta*, the latter of which, say they, is the singer." The following collection, concerning this creature, by Mr. Theobald. The *ηχιτα τετλιξ*, or male singing grasshopper, has such properties ascribed to it, by the ancients, as ought to leave us greatly in doubt, whether it could be the same animal which we now call by that name. I will subjoin what I have met with in authors concerning it, and think the contents of such extracts may stand for reasons. Hesiod, Anacreon, Theocritus, Aristophanes, &c. all concur to celebrate the sweetness of its note: and the old Scholiast upon Aristophanes particularly acquaints us, that the Athenians, of the most early times, wore golden grasshoppers in their hair; because, being a musical animal, it was sacred to Apollo, who was one of their tutelar deities. I can remember but a single passage that contains any thing spoken in derogation of the melody of the *τετλιξ*, and that is from Simonides, as quoted by Atheneus. *Ταν αματτοι τετλιγας*, Lib. xv. cap. 8. Casaubon renders it, "Quam cicadae modorum nescia;" and tells us, that the *τετλιξ* here stand for bad poets, or bad singers. The utmost talent, I think, of our grasshoppers now known, is an acute, but not over grateful, chirping.

Ælian, in particular, *de Animal.* instances, among the preferences that nature gives to the male sex in animals, the singing of the male grasshoppers:

and, in another place, he seems to rank them with birds; for all the other birds that are vocal, says he, express their sound, like man, with the mouth; but the tone of the *τετλιξ* is by the verberation of a little membrane about the loins.

Aristotle does not give us much light upon the question: he says *περι ζωνων*, lib. v. there are two sorts of *τετλιγας*, a larger and a smaller sort; that the large and vocal species were called *αχιτα*, but the small *τετλιγονια*; and subjoins, that no *τετλιγας* are to be found, where no trees are; a point that will presently fall under consideration.

But we learn something farther from Ælian, *de Animal.* lib. xii., that these *τετλιγας* were not only more vocal than what are now met with, but of a size big enough to be sold for food; that there was likewise a sea grasshopper, if we are to call it so, of the bigness of a small crab or cray fish, which made some noise when ever it was taken, lib. xiii. These, indeed, were seldom made use of for food, by reason of a singular superstition; for the Serephians paid them such uncommon homage, as to bury, and weep over, any of them which died, because they esteemed them sacred to Perseus, the son of Jupiter. There is another circumstance, asserted by a number of authors, in which the *τετλιγας* differed from our grasshoppers; and that is, of their sitting and singing in trees. It is evident, says Eustathius, *ad Iliad.* iii., that the *τετλιγας* sing aloft; for a great part of their songs come from the branches of trees, and not from the ground. This necessarily brings me to remember, says he, that symbolical threatening, which a certain prince sent to his enemies, that he would make their *τετλιγας* sing on the ground; meaning, that he would cut down their trees, and lay their country waste. Aristotle *περι εντομικης*, and Demetrius *περι ερμηνειας*, both record this expression, but ascribe it to different persons; and that may be the reason Eustathius names no particular person for it: nor did these *τετλιγας* sing only upon shrubs and bushes, but on the tops of the most lofty trees. Archias, in his epigram, *vid. Anthol. Græc.* mentions the *τετλιξ* sitting upon the green boughs of the flourishing pitchtree; and Leonidas, in another which immediately follows, gives an epithet alluding to its nesting in the oak, *δρυονοιτα τετλιγας*.

Lastly, Another circumstance, in which the *τετλιγας* also differed from our grasshoppers, is, that ours only hop and skip lightly, the other seem to have had a power of flying like birds. Ælian, *de Animal.* lib. v. gives us more than a suspicion of this, or tells us a very ridiculous story, if he did not believe it. He begins with informing us, that the *τετλιγας* both of Rhegium and Locri, if they were removed out of their own confines into the other, became entirely mute; a change, that nature only could account for. He subjoins to this, that as Rhegium and Locri are separated by a small river, though the distance from bank to bank was not, at most, above an acre's breadth, these *τετλιγας* never fly over [*η διαπασηναι*] to the opposite bank. Pausanias, *Ηλιακων* ii. (who gives us the name of this river, Caccinus), puts a different turn

upon the story of these memorable *περὶ τῆς*, that those on the side of Locri were as shrill as any whatever, but that none of those within the territories of Rhegium were ever vocal. So much for grasshoppers. I thought what is mentioned by our poet, concerning the sweetness of their voice, and their perching on trees, might make this note necessary.

Ver. 284. The Scholiast tells us this wine took its name from a country in Thrace abounding with fine wines. Armenidas is of the same opinion; and Epicharmus says it is so called from the Byblian hills. This is mentioned in the catalogue of wines which Philinus gives us; viz. the Lesbian, Chian, Thasian, Byblian, and Mendæan. Theocritus, in his fourteenth Idyllium, calls it the fine flavoured Byblian. *Le Clerc*.

Ver. 285. The Greeks never accustomed themselves to drink their wine unmixed. When Ulysses parted from Calypso. Homer tells us, he took with him "one vessel of wine, and another large one of water." Meander says; *τρεῖς ὕδατος οἶνός δ' ἓνα μόνον*, "three of water; and but one of wine." Barnes's Homer. In the fourth book of the Iliad we find Agamemnon complimenting Idomeneus in this manner:

Though all the rest with stated rules we bound,
Unmix'd, unmeasur'd, are thy goblets crown'd.
POPE.

Ver. 292. This at first seems absurd, to advise to sweep up the chaff after they had threshed it in a place where the wind blowed it away; but we are to take notice, that the time for threshing is when a soft gale blows, sufficient only to separate the chaff from the corn.

Ver. 302. As the business of agriculture is to be minded from the rising and setting of the Pleiades, that of the vintage is from the appearance of Arcturus; when it appears in the evening the vines are to be pruned, and when in the morning the grapes are to be gathered. This, according to the Scholiast, is sometime after the ninth of August.

Ver. 312. Here the poet ends the labours of the year, so far as relates to the harvest and the vintage, concluding with his first instruction founded on the setting of the Pleiades. For the story of Orion, who was changed into a constellation, and the Pleiades, look on the note to the first line of this book.

Ver. 316. The directions for the management of the vessels, to haul them on shore, to block them round with stones, to keep them steady, to drain the keel, &c. and the particular instructions for the voyage, show their ships not to have been very large, nor their commerce very extensive. The largest man of war, mentioned by Homer, in the Grecian fleet, carrying but one hundred and twenty men.

Ver. 336. The Æolian isles took their name from Æolus their king, who was a great mathematician for his time, and skilful in marine affairs, for which he was afterwards called God of the Winds, *Tzetx*. It is not unlikely that Hesiod used this epithet Æolian, to distinguish this city

where his father lived, from Cuma in Italy, famous for the birth of the sybil of that name.

Ver. 339. Ascra is mountainous and windy; where the snow that is on the mountains often melts, and overflows the country. *Tzetx*.

Ver. 356. When we consider this positive declaration of his travels, which seems, as I observed before, as if he designed to prevent mistakes, and that Bœotia and Eubœa are both islands, we cannot in the least dispute his being a Bœotian born.

Ver. 365. The honour here paid to poetry, is very great; for we find the tripod the reward only of great and considerable actions. Agamemnon, in the eighth book of the Iliad, seeing the gallant and wonderful exploits of Teucer, promises, if they take Troy, to give him a tripod, as the meed of his valour; and, among other things, the tripod is offered to Achilles, to regain his friendship, when he had left the field. Pausanias, book 5. give us an account of the funeral games in honour of Pelias, viz. the chariot-race, the quoiting, the discus, the boxing with the cœstus, &c. where Jason, Peleus, and other heroes of the age, contended, and the victor in each had a tripod for his reward. Tripods were for various uses; some were consecrated to the service of religion; some used as seats, some as tables, and some as ornaments; they were supported on three feet, with handles to their sides.

Ver. 383. Neptune is called Earthshaker, because water, according to the opinion of the ancients, is the cause of earthquakes. *Tzetx*. Here the names of Jupiter and Neptune, can be used with no other but a physical meaning, that is, for the air and the sea; so that the end of mariners are justly said to be in the hands of Jupiter and Neptune.

Ver. 419. The reason the Spartan lawgiver gave for advising men not to marry till such an age, was because the children should be strong and vigorous. Hesiod's advice, both for the age of the man and the woman, seems to be reasonably grounded. A man at thirty is certainly as strong in his understanding as ever he can be; so far at least as will serve him to conduct his family affairs. A maid of fifteen comes fresh from the care of her parents, without any tincture of the temper of another man; a prudent husband, therefore, may form her mind according to his own: for this reason he would have her a virgin, knowing likewise that the impression a woman receives from a first love is not easily erased.

Ver. 474. Hector uses almost the same words in which the precept is laid down:

Κεῖσι δ' ἀνιπτοῖσιν δι' ἀλείψειν αἰδοπα οἶνον
Ἀζομαί. Il. 2.

"I am afraid to pour libations of black wine to
"Jove with unwashed hands."

I quote this, as I have other passages with the same view, only to show that the same custom was held sacred in the time of the Trojan wars, according to Homer, as in the days of Hesiod.

Ver. 480. Some of the commentators, and *Tzetzes* among the rest, would persuade us, that the poet

had a secret meaning in each of these superstitious precepts, and that they are not to be took literally, but as so many allegories. In answer to them, we may as well imagine all the Talmud and Levitical laws to be the same. They might as well have said, that the poet would not have us piss towards the sun for fear we should hurt our eyes. I know not whether these and the following precepts favour most of the age of the poet, or of the poet's old age.

Ver. 492. This doubtless is a part of the super-

stition of the age, though the Scholiast would give us a physical reason for abstinence at that time; which is, lest the melancholy of the mind should affect the fruit of the enjoyment. Indeed, the next lines seem to favour this conjecture; and perhaps the poet endeavoured, while he was laying down a religious precept, to strengthen it by philosophy.

Ver. 530. These verses are rejected by Plutarch, whose authority Proclus makes use of, as not of our poet. *Quietus.*

BOOK III*.

THE ARGUMENT.

The poet here distinguishes holidays from others, and what are propitious and what not, for different works; and concludes with a short recommendation of religion and morality.

YOUR servants to a just observance train
Of days, as Heav'n and human rites ordain;
Great Jove with wisdom o'er the year presides,
Directs the seasons, and the moments guides.

Of ev'ry month, the most propitious day,
The thirtieth, choose your labours to survey;
And the due wages to your servants pay. }
The first of ev'ry moon, we sacred deem,
Alike the fourth throughout the year esteem;
And in the seventh Apollo we adore, 10
In which the golden god Latona bore;
Two days succeeding these extend your cares,
Uninterrupted in your own affairs;
Nor in the next two days, but one, delay
The work in hand, the bus'ness of the day,
Of which th' eleventh we propitious hold
To reap the corn, the twelfth to shear the fold;
And then behold, with her industrious train,
The ant, wise reptile, gather in the grain;
Then you may see suspended in the air, 20
The careful spider his domain prepare;
And while the artist spins the cobweb dome,
The matron cheerful plies the loom at home.
Forget not in the thirteenth to refrain
From sowing, lest your work should prove in vain,
Though then the grain may find a barren soil,
The day is grateful to the planter's toil.

* The precepts laid down in this book, concerning the difference of days, from the motion of the moon, seem to be founded partly on nature, and partly on the superstition of the times in which they were writ. The whole is but a sort of an almanack in verse, and affords little room for poetry. Our author, I think, has jumbled his days too negligently together; which confusion, Valla, in his translation, has prevented, by ranging the days in proper succession; a liberty I was fearful to take, as a translator, because almost every line must have been transposed from the original disposition: I have therefore, at the end of the notes, drawn a table of days in their successive order,

Not so the sixteenth to the planter's care;
A day unlucky to the new-born fair,
Alike unhappy to the marry'd then; 30
A day propitious to the birth of men:
The sixth, the same both to the man and maid;
Then secret vows are made, and nymphs betray'd;
The fair by soothing words are captives led;
The gossip's tale is told, detraction spread;
The kid of castrate, and the ram, we hold
Propitious now; alike to pen the fold.
Geld in the eighth the goat, and lowing steer;
Nor in the twelfth to geld the mule-colt fear.
The offspring male born in the twenty'th prize, 40
'Tis a great day, he shall be early wife.
Happy the man-child in the tenth day born;
Happy the virgin in the fourteenth morn;
Then train the mule obedient to your hand,
And teach the snarling cur his lord's command;
Then make the bleating flocks their master know,
And bend the horned oxen to the plough.
What in the twenty-fourth you do beware;
And the fourth day requires an equal care;
Then, then, be circumspect in all your ways, 50
Woes, complicated woes, attend the days.
When, resolute to change a single life,
You wed, on the fourth day lead home your wife;
But first observe the feather'd race that fly,
Remarking well the happy angury.
The fifths of ev'ry month your care require;
Days full of trouble, and afflictions dire:
For then the furies take their round 'tis said,
And heap their vengeance on the perjur'd head.
In the sev'nteenth prepare the level floor; 60
And then of Ceres thresh the sacred store;
In the same day, and when the timber's good,
Fell, for the bed-post and the ship, the wood.
The vessel, suff'ring by the sea and air,
Survey all o'er, and in the fourth repair.
In the nineteenth 'tis better to delay,
Till afternoon, the bus'ness of the day.

Uninterrupted in the ninth pursue
The work in hand, a day propitious through;
Themselves the planters prosp'rous then employ;
To either sex, in birth, a day of joy : 71
The twenty-ninth is best, observe the rule,
Known but to few, to yoke the ox and mule;
'Tis proper then to yoke the flying steed;
But few, alas! these wholesome truths can read;
Then you may fill the cask, nor fill in vain;
Then draw the swift ship to the sable main.
To pierce the cask till the fourteenth delay,
Of all most sacred next the twenty'th day;
After the twenty'th day few of the rest 80
We sacred deem, of that the morn is best.

These are the days of which th' observance can
Bring great advantage to the race of man;
The rest unnam'd indiff'rent pass away,
And nought important marks the vulgar day:
Some one commend, and some another praise,
But most by guess, for few are wise in days;
One cruel as a stepmother we find,
And one as an indulgent mother kind.
O happy mortal! happy he, and blest'd, 99
Whose wisdom here is by his acts confess'd;
Who lives all blameless to immortal eyes,
Who prudently consults the auguries,
Nor by transgression works his neighbour pain,
Nor ever gives him reason to complain.

NOTES ON THE THIRD BOOK OF THE WORKS AND DAYS.

Ver. 1. That is, teach them how to distinguish lucky days from other. It was customary among the Romans to hang up tables, wherein the fortunate and unfortunate days were marked, as appears from Petronius, chap. 30. *Le Clerc*.

Ver. 3. Jove may be said to preside over the year naturally, from the motion of the celestial bodies in the heavens, or, religiously, from his divine administration.

Ver. 10. Tzetzes endeavours to account for Apollo being born in the seventh day, by arguments from nature, making him the same with the sun; which error Valla has run into in his translation. The mistake is very plain, if we have recourse to the Theogony; where the poet makes Latona bring forth Apollo, and Artemis or Diana, to Jove; and in the same poem makes the sun and moon spring from Thia and Hyperion: Hesiod therefore meant it no other wise than the birth-day of one of their imaginary gods. He tells us also the first, fourth, and twentieth, of every month are holidays; but he gives us no reason for their being so. If a conjecture may be allowed, I think it not unlikely but the first may be the feast of the new moon; which day was always held sacred by the Jews: in which the people ceased from business. "When will the new moon be gone, that we may sell corn," Amos, chap. viii. ver. 5: but *Le Clerc* will not allow *ἡμέρα ἑορταστή* here to be a festival: yet the same critic tells us, from Dionysius Petavius, that the Orientals, as well as the most ancient Greeks, went by the lunar month, which they closed with the thirtieth day.

Ver. 18. The poet here makes the ant and the spider sensible of the days; and indeed Tzetzes is

of opinion that the ant is a creature capable of distinction from a sense of the winds, and the influence of the moon: he likewise tells us, from Pliny, that the ants employ themselves all the time of the full of the moon, and cease at the change.

Ver. 24. Melancthon and Frisius tell us it is wrong to sow at this time of the lunar month, because of the excessive moisture, which is hurtful to the corn-seed, and advantageous to plants just planted.

Ver. 54. I translate it, "the feather'd race that fly," to distinguish what kind of augury the poet means. Tzetzes tells us, two crows, the halcyon, or king's-fisher, the dark-coloured hern, a single turtle, and a swallow, &c. are inauspicious; the peacock, and such birds as do no mischief, auspicious. I suppose he does not place the turtle as one of the mischievous kind, but would have the misfortune be in seeing but one.

Ver. 60. He advises to thresh the corn at the time of the full moon, because the air is drier than at other times; and the corn that is sacked, or put up in vessels, while dry, will keep the longer; but if the grain is moist, it will soon grow mouldy and useless.

In the preceding book, the poet tells us the proper month to fell wood in, and in this, the proper day of the month. *Melancthon and Frisius*.

Ver. 92. It is worth observing, that the poet begins and ends his poem with piety towards the gods; the only way to make ourselves acceptable to whom, says he, is by adhering to religion; and, to use the phrase of Scripture, by "eschewing evil."

OBSERVATIONS ON THE ANCIENT GREEK MONTH.

I BELIEVE it will be necessary, for the better understanding the following table, to set in a clear light the ancient Greek month, as we may reasonably conclude it stood in the days of Hesiod, confining ourselves to the last book of his Works and Days.

The poet makes the month contain thirty days, which thirty days he divides into three parts: the first he calls *ισαμενός*, or *ισαμίνος μηνός*, in the genitive case, because of some other word which is commonly joined requiring it to be of that case; the root of which, *ισημι* or *ισαω*, signifies I erect, I set up, I settle, &c. and Henry Stephens interprets the words *ισαμίνος μηνός*, *ineunte mensis*, the entrance of the month, in which sense the poet uses them; which entrance is the first decade, or first ten days. The second he calls *μισσηνός*, which is from *μησσω*, I am in the midst, meaning the middle decade of the month. The third part he calls *φθινονός*, from *φθίνω*, which is from *φθίω*, or *φθίω*, I waste away, meaning the decline, or last decade of the month. Sometimes these words are used in the nominative case.

Before I leave these remarks I shall show the manner of expression of one day in each decade,

from the last book of our poet, which will give a clear idea of all.

Εκλή δ' ἡ μεσση μαλ' ἀσυμφορὸς ἐστὶ φυτοισιν.

Ver. 18.

"The middle sixth is unprofitable to plants."
That is the sixth day of the middle decade.

πηφυλάξο δὲ θυμῷ

Τηλεὰδ' ἀλευθαι φθινονός δ' ἰσαμενός τε.

Ver. 33.

"Keep in your mind to shun the fourth of the entrance and end" of the month. That is the fourth of the entrance or first decade, and the fourth of the end or last decade.

It is proper to observe, that those days which are blanks, are by our poet called indifferent days, days of no importance, either good or bad. It is likewise remarkable, that he makes some days both holidays and working days, as the fourth, fourteenth, and twentieth; but, to clear this, Le Clerc tells us, from our learned countryman, Selden, that *προνῆμας*, though literally a holiday, does not always signify a festival, but often a day propitious to us in our undertakings.

A TABLE OF THE ANCIENT GREEK MONTH.

AS IN THE LAST BOOK OF THE WORKS AND DAYS OF HESIOD.

DECADE I.

1. Day of Decade I. Holiday.
- 2.
- 3.
4. Holiday. Propitious for marriage, and for repairing ships. A day of troubles.
5. In which the furies take their round.
6. Unhappy for the birth of women. Propitious for the birth of men, for gelding the kid and the ram, and for penning the sheep.
7. The birth-day of Apollo. A holiday.
8. Geld the goat and the steer.
9. Propitious quite through. Happy for the birth of both sexes. A day to plant in.
10. Propitious to the birth of men.

DECADE II.

1. Day of Decade II, or 11th of the month. To reap.
2. For women to ply the loom, for the men to shear the sheep, and geld the mule.
3. A day to plant in, and not to sow.
4. Propitious for the birth of women. Break the mule and the ox. Teach your dog and your sheep to know you. Pierce the cask. A holiday.

5.

6. A day unlucky for the marriage, and birth of women. Propitious for the birth of men, and to plant.

7.

7. Thresh the corn, and fell the wood.

8.

9. Luckiest in the afternoon.

10. Happy for the birth of men. Most propitious in the morning. A holiday.

DECADE III.

1. Day of Decade III. or 21st of the month.

2.

3.

4.

5.

6.

7.

8.

9. Yoke the ox, the mule, and the horse. Fill the vessels. Launch the ship.
10. Look over the business of the whole month; and pay the servants their wages.

Those days which are called holidays in the Table, are in the original, *προνῆμας*.

A VIEW OF THE WORKS AND DAYS.

SECT. I. *The Introduction.*

Now we have gone through the Works and Days, it may possibly contribute in some degree to the profit and delight of the reader, to take a view of the poem as we have it delivered down to us. I shall first consider it as an ancient piece, and, in that light, enter into the merit and esteem that it reasonably obtained among the ancients: the authors who have been lavish in their commendations of it are many; the greatest of the Roman writers in prose, Cicero, has more than once expressed his admiration for the system of morality contained in it; and the deference the greatest Latin poet has paid to it, I shall show in my comparison of the Works and Days with the Latin Georgic; nor is the encomium paid by Ovid to our poet to be passed over.

Vive et Aescæus, dum multis uva tumebit,
Dum cadet incurvâ falce resecta Ceres.

While swelling clusters shall the vintage stain,
And Ceres with rich crops shall bless the plain,
Th' Aescæan bard shall in his verse remain.

Eleg. 15. Book I.

And Justin Martyr*, one of the most learned fathers in the Christian church, extols the Works and Days of our poet, while he expresses his dislike to the Theogony.

SECT. 2. *Of the first book.*

The reason why our poet addresses to Perseus, I have showed in my notes: while he directs himself to his brother, he instructs his countrymen in all that is useful to know for the regulating their conduct, both in the business of agriculture, and in their behaviour to each other. He gives us an account of the first ages, according to the common received notion among the Gentiles. The story of Pandora has all the embellishments of poetry which we can find in Ovid, with a clearer moral than is generally in the fables of that poet. His system of morality is calculated so perfectly for the good of society, that there is scarcely any precept omitted that could be properly thought of on that occasion. There is not one of the ten commandments of Moses, which relates to our moral duty to each other, that is not strongly recommended by our poet; nor is it enough, he thinks, to be observant of what the civil government would oblige you to; but to prove yourself a good man, you must have such virtues as no human laws require of you, as those of temperance, generosity, &c. These rules are laid

down in a most proper manner to captivate the reader; here the beauties of poetry and the force of reason combine to make him in love with morality. The poet tells us what effect we are reasonably to expect from such virtues and vices as he mentions; which doctrines are not always to be taken in a positive sense. If we should say a continuance of intemperance in drinking, and of our commerce with women, would carry us early to the grave, it is morally true, according to the natural course of things; but a man of a strong and uncommon constitution, may wanton through an age of pleasure, and so be an exception to this rule, yet not contradict the moral truth of it. Archbishop Tillotson has judiciously told us in what sense we are to take all doctrines of morality; "Aristotle," says that great divine, "observed long since, that moral and proverbial sayings are understood to be true generally, and for the most part; and that is all the truth that is to be expected in them; as when Solomon says, Train up a child in the way wherein he shall go, and when he is old he will not depart from it. This is not to be taken, as if no child that is piously educated, did ever miscarry afterwards, but that the good education of children is the best way to make good men."

SECT. 3. *Of the second book, &c.*

The second book, which comes next under our view, will appear with more dignity when we consider in what esteem the art of agriculture was held in those days in which it was writ: the Georgic did not then concern the ordinary and middling sort of people only, but our poet writ for the instruction of princes likewise, who thought it no disgrace to till the ground which they perhaps had conquered. Homer makes Laertes not only plant, but dung his own lands; the best employment he could find for his health, and consolation, in the absence of his son. The latter part of this book, together with all the third, though too mean for poetry, are not unjustifiable in our author. Had he made those religious and superstitious precepts one entire subject of verse, it would have been a ridiculous fancy, but, as they are only a part, and the smallest part, of a regular poem, they are introduced with a laudable intent. After the poet had laid down proper rules for morality, husbandry, navigation, and the vintage, he knew that religion towards the gods, and a due observance of what was held sacred in his age, were yet wanted to complete the work. These were subjects, he was sensible, incapable of the embellishments of

* In his second discourse or exhortation to the Greeks.
TRANS. II.

poetry; but as they were necessary to his purpose, he would not omit them. Poetry was not then designed as the empty amusement only of an idle hour, consisting of wanton thoughts, or long and tedious descriptions of nothing, but, by the force of harmony and good sense, to purge the mind of its dregs, to give it a great and virtuous turn of thinking: in short, verse was then but the lure to what was useful; which indeed has been, and ever will be, the end pursued by all good poets; with this view, Hesiod seems to have writ, and must be allowed, by all true judges, to have wonderfully succeeded in the age in which he rose.

This advantage more arises to us from the writings of so old an author: we are pleased with those monuments of antiquity, such parts of the ancient Grecian history, as we find in them.

Sect. 4. *A comparison betwixt Hesiod and Virgil, &c.*

I shall now endeavour to show how far Virgil may properly be said to imitate our poet in his Georgic, and to point out some of those passages in which he has either paraphrased, or literally translated, from the Works and Days. It is plain he was a sincere admirer of our poet, and of this poem in particular, of which he twice makes honourable mention, and where it could be only to express the veneration that he bore to the author. The first is in his third pastoral.

In medio duo signa, Conon, et quis fuit alter,
Descripsit, radio, totum qui gentibus orbem,
Tempora quæ messor, que curvus arator, haberet?

Two figures on the sides emboss'd appear,
Conon, and what's his name who made the
sphere,
And show'd the seasons of the sliding year?

DRYDEN.

Notwithstanding the commentators have all disputed whom this interrogation should mean, I am convinced that Virgil had none but Hesiod in his eye. In the next passage I propose to quote the greatest honour that was ever paid by one poet to another is paid to ours. Virgil, in his sixth pastoral, makes Silenus, among other things, relate how Gallus was conducted by a muse to Helicon, where Apollo, and all the muses arose to welcome him; and Linus, approaching him, addressed him in this manner:

—hos tibi dant calamos, en, accipe, musæ,
Astræa quos ante Seni; quibus ille solebat
Cantando rigidas deducere montibus ornos.

Receive this present, by the muses made,
The pipe on which th' Astræan pastor play'd;
With which, of old, he charm'd the savage train.
And call'd the mountain ashes to the plain.

DRYDEN.

The greatest compliment which Virgil thought he could pay his friend and patron, Gallus, was, after all that pompous introduction to the choir of Apollo, to make the muses present him, from the hands of Linus, with the pipe, or calamos, *Astræa*

quos antè seni, which they had formerly presented to Hesiod; which part of the compliment to our poet, Dryden has omitted in his translation.

To return to the Georgic. Virgil can be said to imitate Hesiod in his first and second books only: in the first is scarcely any thing relative to the Georgic itself, the hint of which is not taken from the Works and Days; nay more, in some places, whole lines are paraphrased, and some literally translated. It must indeed be acknowledged, that the Latin poet has sometimes explained, in his translation, what was difficult in the Greek, as where our poet gives directions for two ploughs:

Δοια δὲ θῆσαι ἀροτρα πονησάμενος κατὰ οἶκον
Αὐτογυῖον καὶ πηκτον.

by *αὐτογυῖον* he means that which grows naturally into the shape of a plough, and by *πηκτον* that made by art. Virgil, in his advice to have two ploughs always at hand, has this explanation of *αὐτογυῖον*:

Continuó in sylvis magnâ vi flexa domatur
In burim, et curvi formam accipit ulmus aratri.

GEORG. I.

Young elms, with early force, in copses bow,
Fit for the figure of the crooked plough.

DRYDEN.

Thus we find him imitating the Greek poet in the most minute precepts. Hesiod gives directions for making a plough; Virgil does the same. Even that which has been the subject of ridicule to many critics, viz. "plough and sow naked," is translated in the Georgic; *nudus ara, fere nudus*. Before I proceed any farther, I shall endeavour to obviate the objection which has been frequently made against this precept. Hesiod means to insinuate, that ploughing and sowing are labours which require much industry and application; and he had doubtless this physical reason for his advice, that where such toil is required it is unhealthful, as well as impossible, to go through with the same quantity of clothes as in works of less fatigue. Virgil doubtless saw this reason, or one of equal force, in this rule, or he would not have translated it. In short, we may find him a strict follower of our poet in most of the precepts of husbandry in the Works and Days. I shall give but one instance more, and that in his superstitious observance of days:

—quintum fugæ; pallidus Orcus,
Eumenidesque fatæ, &c.

—the fifths be sure to shun,
That gave the furies, and pale Pluto birth.

DRYDEN.

If the judgment I have passed from the verses of Manilius, and the second book of the Georgic, in my Discourse on the Writings of Hesiod, be allowed to have any force, Virgil has doubtless been as much obliged to our poet in the second book of his Georgic, as in the first; nor has he imitated him in his precepts only, but in some of his finest descriptions, as in the first book describing the effects of a storm:

—quo, maxima, motu,
Terra tremit, fugere feræ, &c.

and a little lower in the same description :

Nunc nemora, ingenti vento, nunc litora plangunt :
which is almost literal from Hesiod, on the power
of the north wind :

—μεμυκε δὲ γαῖα καὶ ὕλη, &c.

Loud groans the earth, and all the forests roar.

I cannot leave this head, without injustice to
the Roman poet, before I take notice of the man-
ner in which he uses that superstitious precept
πεμπτας δ' ἐξαλίσθαι, &c. what in the Greek is
languid, is by him made brilliant :

—quintum fuge : pallidus Orcus,
Eumenidesque fatæ : tum partu, terra, nefando,
Cœumq. Japetumq. creat, favumq. Typhœum,
Et conjuratos cœlum rescindere fratres :
Ter sunt conati, &c.

—the fifts be sure to shun,
That gave the furies, and pale Pluto, birth,
And arm'd against the skies the sons of earth ;
With mountains pil'd on mountains thrice they
 strove
To scale the steepy battlements of Jove ;
And thrice his lightning, and red thunder play'd,
And their demolish'd works in ruin lay'd.

DRYDEN.

As I have shewed where the Roman has fol-
lowed the Greek, I may be thought partial to my
author, if I do not show in what he has excelled
him : and first, he has contributed to the Georgic
most of the subjects in his two last books ; as, in
the third, the management of horses, dogs, &c.
and, in the fourth, the management of the bees.
His style, through the whole, is more poetical,
more abounding with epithets, which are often of
themselves most beautiful metaphors. His invo-
cation on the deities concerned in rural affairs, his
address to Augustus, his account of the prodigies
before the death of Julius Cæsar, in the first book,
his praise of a country life, at the end of the se-
cond, and the force of love in beasts, in the third,
are what were never excelled, and some parts of
them never equalled, in any language.

Allowing all the beauties in the Georgic, these
two poems interfere in the merit of each other so
little, that the Works and Days may be read with
as much pleasure as if the Georgic had never been
written. This leads me into an examination of
part of Mr. Addison's Essay on the Georgic ; in
which that great writer, in some places, seems to
speak so much at venture, that I am afraid he did not
remember enough of the two poems to enter on
such a task. Precepts, says he, of morality, be-
sides the natural corruption of our tempers which
makes us averse to them, are so abstracted from
ideas of sense, that they seldom give an opportu-
nity for those beautiful descriptions and images
which are the spirit and life of poetry. Had he
that part of Hesiod in his eye, where he mentions

the temporal blessings of the righteous, and the
punishment of the wicked, he would have seen
that our poet took an opportunity, from his pre-
cepts of morality, to give us those beautiful de-
scriptions and images which are the spirit and life
of poetry. How lovely is the flourishing state of
the land of the just there described, the increase of
his flocks, and his own progeny ! The reason which
Mr. Addison gives against rules of morality in
verse is to me a reason for them ; for if our tem-
pers are naturally so corrupt as to make us averse
to them, we ought to try all the ways which we
can to reconcile them, and verse among the rest ;
in which, as I have observed before, our poet has
wonderfully succeeded.

The same author, speaking of Hesiod, says, the
precepts he has given us are sown so very thick,
that they clog the poem too much. The poet, to
prevent this, quite through his Works and Days,
has stayed so short a while on every head, that it
is impossible to grow tiresome in either ; the di-
vision of the work I have given at the beginning
of this view, therefore, shall not repeat it. Agri-
culture is but one subject, in many, of the work,
and the reader is there relieved with several rural
descriptions, as of the northwind, autumn, the
country repast in the shades, &c. The rules for
navigation are dispatched with the utmost brevity,
in which the digression, concerning his victory at
the funeral games of Amphidamas, is natural, and
gives a grace to the poem.

I shall mention but one oversight more which
Mr. Addison has made, in his Essay, and conclude
this head : when he condemned that circumstance
of the virgin being at home in the winter season,
free from the inclemency of the weather, I believe
he had forgot that his own author had used almost
the same image, and on almost the same occasion,
though in other words :

Nec nocturna quidem carpentes pensa puellæ
Nescivere hyemem, &c. GEORG. I.

The difference of the manner in which the two
poets use the image is this. Hesiod makes her
with her mother at home, either bathing, or doing
what most pleases her ; and Virgil says, as the
young women are plying their evening tasks, they
are sensible of the winter season, from the oil
sparkling in the lamp, and the snuff hardening.
How properly it is introduced by our poet I have
shewed in my note to the passage.

The only apology I can make for the liberty I
have taken with the writings of so fine an author
as Mr. Addison, is, that I thought it a part of my
duty to our poet, to endeavour to free the reader
from such errors as he might possibly imbibe,
when delivered under the sanction of so great a
name.

SECT. 5. Of the fourth Eclogue of Virgil.

I must not end this view without some observa-
tions on the fourth Eclogue of Virgil, since Pro-
bus, Grævius, Fabricius, and other men of great
learning, have thought fit to apply what has there

been generally said to allude to the Cumæan sybil to our poet:

Ultima Cumæi venit jam carminis ætas.

This line, say they, has an allusion to the golden age of Hesiod; Virgil therefore is supposed to say, the last age of the Cumæan poet now approaches. By last, he means the most remote from his time; which Fabricius explains by *antiquissima*, and quotes an expression from *Cornelius Severus*, in which he uses the word in the same sense, *ultima certamina* for *antiquissima certamina*. The only method by which we can add any weight to this reading, is by comparing the Eclogue of Virgil with some similar passages in Hesiod. To begin, let us therefore read the line before quoted with the two following:

Ultima Cumæi venit jam carmina etas;
Magnus ab integro sæclorum nascitur ordo;
Jam redit et Virgo, redeunt Saturnia regna.

Which will bear this paraphrase. The remotest age mentioned in the verse of the Cumæan poet now approaches; the great order, or round, of ages, as described in the said poet, revolves; now returns the virgin Justice, which, in his iron age, he tells us, left the earth; and now the reign of Saturn, which is described in his golden age, is come again. If we turn to the golden and iron ages, in the Works and Days, we shall find this allusion very natural.

Let us proceed in our connection, and comparison, of the verses. Virgil goes on in his compliment to Pollio on his new-born son:

Ille deum vitam accipiet.

He shall receive, or lead, the life of gods, as the same poet tells us they did in the reign of Saturn.

Ὡς τε θεοὶ δ' ἔζων

Νοσφιν ἀτρε τε πονών.

They liv'd like gods, and entirely without labour.

—feret omnia tellus;

Non rastros patietur humus, non vinea falcem;
Robustus quoque jam tauris juga solvet arator.

The earth shall bear all things; there shall be no occasion for instruments of husbandry, to rake the ground, or prune the vine; the sturdy ploughman shall unyoke his oxen, and live in ease; as they did in the reign of Saturn, as we are told by the same Cumæan poet.

—καρπον δ' ἱφίος ζειδωρος ἀρουρα

Αυτομαίη, πολλὸν τε καὶ ἀφθονον,

The fertile earth bore its fruit spontaneously, and in abundance.

Here we see several natural allusions to our poet, whence it is not unreasonable, for such as mistake the country of Hesiod, to imagine, that all Virgil would say to compliment Pollio, on the birth of his son, is, that now such a son is born, the golden age, as described by Hesiod, shall return; and granting the word *cumæi* to carry this sense with it, there is nothing of a prophecy mentioned, or hinted at, in the whole eclogue, any more than Virgil's own, by poetical license.

A learned prelate of our own church asserts something so very extraordinary on this head, that I cannot avoid quoting it, and making some few remarks upon it: his words are these, "Virgil could not have Hesiod in his eye in speaking of the four ages of the world, because Hesiod makes five ages, before the commencement of the golden." And soon after, continues he, "the predictions in the prophet (meaning Daniel) of four successive empires, that should arise in different ages of the world, gave occasion to the poets, who had the knowledge of these things only by report, to apply them to the state of the world in so many ages, and to describe the renovation of the golden age in the expressions of the prophet concerning the future age of the Messiah, which in Daniel is the fifth kingdom." Bp. Chandler towards the conclusion of his Vindication of his Defence of Christianity. What this learned parade was introduced for, I am at a loss to conceive! First, In that beautiful eclogue, Virgil speaks not of the four ages of the world. Secondly, Hesiod, so far from making five ages before the commencement of the golden, makes the golden age the first. Thirdly, Hesiod could not be one of the poets who applied the predictions in the prophet Daniel to the state of the world in so many ages, because he happened to live some hundred years before the time of Daniel.

This great objection to their interpretation of *cumæi* still remains, which cannot very easily be conquered, that Cuma was not the country of Hesiod, as I have proved in my Discourse on the life of our poet, but of his father; and, what will be a strong argument against it, all the ancient poets, who have used an epithet taken from his country, have chose that of *Ascræus*. Ovid, who mentions him as often as any poet, never uses any other; and, what is the most remarkable, Virgil himself makes use of it in every passage in which he names him; and those monuments of him, exhibited by Urfinus and Boissard, have this inscription:

ΙΣΙΟΔΟΣ

ΔΙΟΥ

ΑΣΚΡΑΙΟΣ.

Ascræan Hesiod, the son of Dione.

INDEX TO THE WORKS AND DAYS.

A.

ADDISON, his essay on the Georgic examined.
View of the Works and Days, sect. 4.

The equinox, vernal, and autumn, book ii. note to the 137th verse.

THE THEOGONY; OR, THE GENERATION OF THE GODS.

To the Most Honourable,

GEORGE MARQUIS OF ANNANDALE*.

MY LORD,

THE reverence I bear to the memory of your late grandfather, with whom I had the honour to be particularly acquainted, and the obligations I have received from the incomparable lady your mother, would make it a duty in me to continue my regard to their heir; but stronger than those are the motives of this address; since I have had the happiness to know you, which has been as long as you have been capable of distinguishing persons, I have often discovered something in you that surpasses your years, and which gives fair promises of an early great man; this has converted what would otherwise be but gratitude to them to a real esteem for yourself. Proceed, my Lord, to make glad the heart of an indulgent mother with your daily progress in learning, wisdom, and virtue. Your friends, in their different spheres, are all solicitous to form you; and among them, permit me to offer my tribute, which may be no small means to the bringing you more readily to an understanding of the classics: for on the theology of the most ancient Greeks, which is the subject of the following

poem, much of succeeding authors depends. Few are the writers, either Greek or Roman, who have not made use of the fables of antiquity; historians have frequent allusions to them; and they are sometimes the very soul of poetry: for these reasons let me admonish you to become soon familiar with Homer and Hesiod, by translations of them: you will perceive the advantage in your future studies; nor will you repent of it when you read the great originals. I have, in my notes, spared no pains to let you into the nature of the Theogony, and to explain the allegories to you; and, indeed, I have been more elaborate for your sake than I should otherwise have been. While I am paying my respect to your Lordship, I would not be thought forgetful of your brother, directing what I have here said, at the same time, to him. Go on, my Lord, to answer the great expectations which your friends have from you; and be your chief ambition to deserve the praise of all wise and good men.—I am, my Lord, with the greatest respect, and most sincere affection, your most obedient and most humble servant,

THOMAS COOKE.

* Lord George Johnston, when this was first published in the year 1728.

THE ARGUMENT.

AFTER the proposition and invocation, the poet begins the generation of the gods. This poem, besides the genealogy of the deities and heroes, contains the story of Heaven, and the conspiracy of his wife and sons against him, the story of Styx and her offsprings, of Saturn and his sons, and of Prometheus and Pandora: hence the poet proceeds to relate the war of the gods, which is the subject of above three hundred verses. The reader is often relieved, from the narrative part of the Theogony, with several beautiful descriptions, and other poetical embellishments.

BEGIN my song, with the melodious nine
Of Helicon, the spacious and divine:
The muses there, a lovely choir advance,
With tender feet to form the skillful dance,

Now round the fable font in order move,
Now round the altar of Saturnian Jove;
Or if the cooling streams to bathe invite,
In thee, Permessus, they awhile delight;

Or now to Hippocrene resort the fair,
 Or Olmuis to thy sacred spring repair. 10
 Veil'd in thick air, they all the night prolong,
 In praise of Ægis-bearing Jove the song:
 And thou, O Argive Juno! golden shod,
 Art join'd in praises with thy consort god:
 Thee, goddess, with the azure eyes, they sing,
 Minerva, daughter of the heav'nly king;
 The sisters to Apollo tune their voice,
 And Artemis, to thee whom darts rejoice;
 And Neptune in the pious hymn they sound,
 Who girts the earth, and shakes the solid ground:
 A tribute they to Themis chaste allow, 21
 And Venus charming with the bending brow,
 Nor Hebe, crown'd with gold, forget to praise,
 Nor fair Dione, in their holy lays;
 Nor thou, Aurora, nor the day's great light,
 Remain unsung, nor the fair lamp of night;
 To thee, Latona, next the numbers range;
 Iāpetus, and Saturn wont to change,
 They chant; thee, Ocean, with an ample breast,
 They sing, and Earth and Night in fable dress'd;
 Nor cease the virgins here the strain divine; 31
 They celebrate the whole immortal line.
 E'er while as they the shepherd swain behold
 Feeding, beneath the sacred mount, his fold,
 With love of charming song his breast they fir'd;
 There me the heav'nly muses first inspir'd;
 There, when the maids of Jove the silence broke,
 To Hesiod thus, the shepherd swain, they spoke:
 Shepherds, attend, your happiness who place
 In gluttony alone, the swain's disgrace; 40
 Strict to your duty in the field you keep,
 There vigilant by night to watch your sheep;
 Attend, ye swains, on whom the muses call,
 Regard the honour not bestow'd on all;
 'Tis ours to speak the truth in language plain,
 Or give the face of truth to what we feign.
 So spoke the maids of Jove, the sacred nine,
 And pluck'd a sceptre from the tree divine,
 To me the branch they gave, with look serene,
 The laurel ensign, never-fading green: 50
 I took the gift, with holy raptures fir'd,
 My words flow sweeter, and my soul's inspir'd;
 Before my eyes appears the various scene
 Of all that is to come, and what has been.
 Me have the muses chose, their bard to grace,
 To celebrate the blest immortal race;
 To them the honours of my verse belong;
 To them I first and last devote the song:
 But where, O where, enchanted do I rove,
 Or o'er the rocks, or through the vocal grove! 60
 Now with th' harmonious nine begin, whose
 voice
 Makes their great fire, Olympian Jove, rejoice;
 The present, future, and the past, they sing,
 Join'd in sweet concert to delight their king;
 Melodious and untir'd their voices flow;
 Olympus echoes, ever crown'd with snow.
 The heav'nly songsters fill th' ethereal round;
 Jove's palace laughs, and all the courts resound:
 Soft warbling endless with their voice divine,
 They celebrate the whole immortal line: 70
 From earth and heav'n, great parents, first they
 The progeny of gods, a bounteous race; [trace

And then to Jove again returns the song,
 Of all in empire, and command, most strong;
 Whose praises first and last their bosom fire,
 Of mortals, and immortal gods, the fire:
 Nor to the sons of men deny they praise,
 To such as merit of their heav'nly lays;
 They sing the giants of puissant arm,
 And with the wond'rous tale their father charm.
 Mnemosyne, in the Pierian grove, 81
 The scene of her intrigue with mighty Jove,
 The empress of Eleuther, fertile earth,
 Brought to Olympian Jove the muses forth;
 Blest offspring, happy maids, whose pow'rful
 art
 Can banish cares, and ease the painful heart.
 Absent from heav'n, to quench his am'rous flame,
 Nine nights the god of gods compress'd the dame.
 Now thrice three times the moon concludes her
 race,
 And shows the produce of the god's embrace, 90
 Fair daughters, pledges of immortal Jove,
 In number equal to the nights of love;
 Blest maids, by harmony of temper join'd;
 And verse, their only care, employs their mind.
 The virgin songsters first beheld the light
 Near where Olympus rears his snowy height;
 Where to the maids fair stately domes ascend,
 Whose steps a constant beauteous choir attend.
 Not far from hence the Graces keep their court,
 And with the god of love in banquets sport; 100
 Meanwhile the nine their heav'nly voices raise,
 To the immortal pow'rs, the song of praise;
 They tune their voices in a sacred cause,
 Their theme the manners of the gods, and laws:
 When to Olympus they pursue their way,
 Sweet warbling, as they go, the deathless lay,
 Meas'ring to Jove, with gentle steps, the ground,
 The fable earth returns the joyful sound.
 Great Jove, their sire, who rules th' ethereal plains,
 Confirm'd in pow'r, of gods the monarch reigns;
 His father Saturn hurl'd from his command 111
 He grasps the thunder with his conqu'ring hand,
 He gives the bolts their vigour as they fly,
 And bids the red-hot lightning pierce the sky:
 His subject deities obey his nod,
 All honours flow from him, of gods the god;
 From him the muses sprung, no less their sire,
 Whose attributes the heav'nly maids inspire:
 Clio begins the lovely tuneful race,
 Melpomene which, and Euterpe, grace, 120
 Terpsichore all joyful in the choir,
 And Erato to love whose lays inspire;
 To these Thalia and Polymnia join,
 Urania, and Calliope divine, }
 The first, in honour, of the tuneful nine;
 She the great acts of virtuous monarchs sings,
 Companion only for the best of kings.
 Happy of princes, softer sons of Jove,
 Whom at his birth the nine with eyes of love
 Behold; to honours they his days design; 130
 He first among the scepter'd hands shall shine;
 Him they adorn with ev'ry grace of song,
 And soft persuasion dwells upon his tongue;
 To him, their judge, the people turn their eye,
 On him for justice in their cause rely,
 C iij

Reason alone his upright judgment guides,
He hears impartial, and for truth decides;
Thus he determines from a sense profound,
And of contention heals the pois'nous wound.
Wise kings, when subjects grow in faction strong,
First calm their minds, and then redress their
wrong,

141

By their good counsels bid the tumult cease,
And sooth contending parties into peace:
His aid with duteous rev'rence they implore,
And as a god their virtuous prince adore:
From whom the muses love such blessings flow,
To them a righteous prince the people owe.
From Jove, great origin, all monarchs spring,
From mighty Jove of kings himself the king;
From the Pierian maids, the heav'nly nine, 150
And from Apollo, sire of verse divine,
Far shooting deity whose beams inspire,
The poets spring, and all who strike the lyre.
Bless'd whom with eyes of love the muses view,
Sweet flow his words, gentle as falling dew.
Is there a man by rising woes oppress'd,
Who feels the pangs of a distracted breast,
Let but the bard, who serves the nine, rehearse
The acts of heroes pass'd, the theme for verse,
Or if the praise of gods, who pass their days 160
In endless ease above, adorns the lays,
The pow'rful words administer relief,
And from the wounded mind expel the grief;
Such are the charms which to the bard belong,
A gift from gods deriv'd, the pow'r of song.

Hail maids celestial, seed of heav'n's great king,
Hear, nor unaided let the poet sing,
Inspire a lovely lay, harmonious nine,
My theme th' immortal gods, a race divine,
Of earth, of heav'n which lamps of light adorn,
And of old fable night, great parents born, 171
And, after, nourish'd by the briny main:
Hear goddesses, and aid the vent'rous strain;
Say whence the deathless gods receiv'd their birth,
And next relate the origin of earth,
Whence the wide sea that spreads from shore to
shore,

Whose surges foam with rage, and billows roar,
Whence rivers which in various channels flow,
And whence the stars which light the world be-
low,

And whence the wide expanse of heav'n, and
whence 180

The gods, to mortals who their good dispense;
Say how from them our honours we receive;
And whence the pow'r that they our wants re-
lieve;

How they arriv'd to the ethereal plains,
And took possession of the fair domains:
With these, Olympian minds, my breast inspire,
And to the end support the sacred fire,
In order all from the beginning trace,
From the first parents of the num'rous race.

Chaos, of all the origin, gave birth 180
First to her offspring the wide bosom'd earth,
The seat secure of all the gods, who now
Possess Olympus ever cloth'd with snow;
Th' abodes of Hell from the same fountain rise,
A gloomy land that subterranean lies;

And hence does Love his ancient lineage trace,
Excelling fair of all th' immortal race;
At his approach all care is chas'd away,
Nor can the wisest pow'r resist his sway;
Nor man, nor god, his mighty force restrains, 200
Alike in ev'ry breast the godhead reigns:
And Erebus, black son, from Chaos came,
Born with his sister Night, a fable dame.

Night bore, the produce of her am'rous play
With Erebus, the sky, and cheerful day.

Earth first an equal to herself in fame
Brought forth, that covers all the starry frame,
The spacious heav'n, of gods the safe domain,
Who live in endless bliss, exempt from pain;
From her the lofty hills, and ev'ry grove, 210
Where nymphs inhabit, goddesses, and rove:
Without the mutual joys of love she bore
The barren Sea, whose whit'ning billows roar.

At length the Ocean, with his pools profound,
Whose whirling streams pursue their rapid round,
Of Heaven and Earth is born; Cœtus his birth
From them derives, and Creus, sons of Earth;
Hyperion and Japhet, brothers, join:
Thea, and Rhea, of this ancient line 219
Descend; and Themis boasts the source divin
And thou, Mnemosyne, and Phœbe crown'd
With gold, and Tethys for her charms renown'd;
To these successive wily Saturn came,
As fire and son in each a barb'rous name.

Three sons are sprung from Heav'n and Earth's
embrace,

The Cyclops bold, in heart a haughty race,
Brontes, and Steropes, and Arges brave,
Who to the hands of Jove the thunder gave;
They for almighty pow'r did lightning frame,
All equal to the gods themselves in fame; 230
One eye was plac'd, a large round orb, and bright,
Amidst their forehead to receive the light;
Hence were they Cyclops call'd; great was their
skill,

Their strength, and vigour, to perform their will.
The fruitful Earth by Heav'n conceiv'd again,
And for three mighty sons the rending pain
She suffer'd; Cottus, terrible to name,
Gyges, and Briareus, of equal fame;
Conspicuous above the rest they shin'd,
Of body strong, magnanimous of mind, 240
Fifty large heads their lusty shoulders bore,
And, dang'rous to approach, hands fifty more:
Of all from Heav'n, their sire, who took their
birth,

These were most dreadful of the sons of Earth;
Their cruel father, from their natal hour,
With hate pursued them, to his utmost pow'r;
He from the parent womb did all convey
Into some secret cave remote from day:
The tyrant father thus his sons oppress'd,
And evil meditations fill'd his breast. 250
Earth deeply groan'd for these her sons confin'd,
And vengeance for their wrongs employ'd her
mind;

She yields black iron from her fruitful vein,
And of it forms an instrument of pain;
Then to her children thus, the silence broke,
Without reserve she deeply sighing spoke.

My sons, descended from a barb'rous fire,
Whose evil acts our breasts to vengeance fire,
Attentive to my friendly voice incline:
Th' aggressor he, and to revenge be thine. 260

The bold proposal they astonish'd hear;
Her words possess them with a silent fear;
Saturn, at last, whom no deceit can blind,
To her responsive thus declar'd his mind:

Matron, for us the throwing pangs who bore,
Much have we suffer'd, but will bear no more;
If such as fathers ought our will not be,
The name of father is no tie to me;
Patient of wrongs if they th' attempt decline,
Th' aggressor he, all to revenge be mine. 270

Earth greatly joy'd at what his words reveal'd,
And in close ambush from him all conceal'd;
Arm'd with the crooked instrument she made,
She taught him to direct the sharp-tooth'd blade.
Great Heav'n approach'd beneath the veil of
Night,

Proposing from his consort, Earth, delight;
As in full length the god extended lay,
No fraud suspecting in his am'rous play,
Out rush'd his son, complotter with his wife,
His right hand grasp'd the long, the fatal knife, }
His left the channel of the seed of life, 281
Which from the roots the rough-tooth'd metal
tore,

And bath'd his fingers with his father's gore;
He throw'd behind the source of Heav'n's pain;
Nor fell the ruins of the god in vain:
The sanguine drops which from the members fall,
The fertile earth receives, and drinks them all:
Hence at the end of the revolving year,
Sprung mighty giants, pow'rful with the spear,
Shining in arms; the Furies took their birth 290
Hence, and the Wood-nymphs of the spacious earth.
Saturn the parts divided from the wound,
Spoils of his parent god, cast from the ground
Into the sea; long through the watery plain;
They journey'd on the surface of the main:
Fruitful at length th' immortal substance grows,
Whit'ning it foams, and in a circle flows:
Behold a nymph arise divinely fair,
Whom to Cythera first the surges bear;
Hence is she borne, safe o'er the deeps profound 300
To Cyprus, water'd by the waves around:
And here she walks endow'd with every grace
To charm, the goddess blooming in her face;
Her looks demand respect, and where she goes
Beneath her tender feet the herbage blows;
And Aphrodite, from the foam her name,
Among the race of gods and men the same;
And Cytherea from Cythera came;
Whence, beauteous crown'd she safely cross'd the
sea,

And call'd, O Cyprus, Cypria from thee; 310
Nor less by Philomedeia known on earth,
A name deriv'd immediate from her birth:
Her first attendants to th' immortal choir
Where Love, the oldest god, and fair Desire:
The virgin whisper, and the tempting smile,
The sweet allurements that can hearts beguile,
Soft blandishments which never fail to move,
Friendship, and all the fond deceits in love,

Constant her steps pursue, or will she go
Among the gods above, or men below. 320
Great Heaven was wrath thus by his sons to
bleed,

And call'd them Titans from the barbarous deed;
He told them all, from a prophetic mind,
The hours of his revenge were sure behind.

Now darksome Night fruitful begun to prove,
Without the knowledge of connubial love;
From her black womb sad Destiny and Fate,
Death, Sleep, and num'rous Dreams, derive their
date:

With Momus the dark goddess teems again,
And Care the mother of a doleful train; 330
Th' Hesperides she bore, far in the seas,
Guards of the golden fruit, and fertile trees:
From the same parent sprung the rig'rous three,
The goddesses of Fate and Destiny,
Clotho and Lachesis, whose boundless sway,
With Atrop' both men and gods obey;
To human race they, from their birth ordain
A life of pleasure, or a life of pain;
To slav'ry or to empire, such their pow'r,

They fix a mortal at his natal hour; 340
The crimes of men and gods the Fates pursue,
And give to each alike the vengeance due;
Nor can the greatest their resentment fly,
They punish e'er they lay their anger by:
And Nemesis from the same fountain rose,
From hurtful Night, herself the source of woes:
Hence Fraud and loose Desire the bane of life,
Old age vexatious, and corroding Strife.

From Strife pernicious painful labour rose,
Oblivion, famine, and tormenting woes; 350
Hence combats, murders, wars, and slaughters rise,
Deceits and quarrels, and injurious lies;
Unruly licence hence that knows no bounds,
And losses spring, and sad domestic wounds;
Hence perjury, black perjury, began,
A crime destructive to the race of man.

Old Nereus to the Sea was born of Earth,
Nereus who claims the precedence in birth
To their descendants; him old god they call,
Because sincere and affable to all; 360
In judgment moderation he preserves,
And never from the paths of justice swerves.
Thaumas the great from the same parents came,
Phorcys the strong, and Ceto beauteous dame:
To the same fire did Earth Euribia bear,
As iron hard her heart, a cruel fair.

Doris to Nereus bore a lovely train,
Fifty fair daughters, wand'ers of the main;
A beauteous mother she, of Ocean born,
Whose graceful head the comly't locks adorn: 370
Proto, Eucrate, nymphs begin the line,
Sao to whom, and Amphitrite join;
Eudore, Thetis, and Galeae, grace,
With Glaucé, and Cymothoe, the race;
Swift-footed Spio hence derives her birth,
With thee, Thalia, ever prone to mirth;
And Melite, charming in mien to see,
Did the same mother bear Eulimene,
Agave too, Palitheia and thee; }
From whom sprung Erato, Eunice you, 380
With arms appearing of a rosy hue;

Doto and Proto join the progeny,
 With them Pherusa and Dunamene;
 Nisea and Actea boast the same,
 Protomedia from the fruitful dame,
 And Doris honour'd with maternal name;
 And hence does Panope her lineage trace,
 And Galatea with a lovely face;
 And hence Hippothoe who sweetly charms,
 And thou Hipponoe with thy rosy arms: 390
 And hence Cymodoce the floods who binds,
 And with Cymatolege stills the winds;
 With them the power does Amphitrite share,
 Of all the main the lovely'st footed fair;
 Cumo, Heione, and Halimed
 With a sweet garland that adorns her head,
 Boast the same rise, joyful Glauconome,
 Pontoporea, and Liagore;
 Evagore, Laomedia join,
 And thou Polynome, the num'rous line; 400
 Autonoe, Lyfianassa, name,
 Sisters descended from the fertile dame;
 In the bright list Evarne fair we find,
 Spotless the nymph both in her form and mind,
 And Psamathe of a majestic mien:
 And thou divine Menippe there art seen;
 To these we Neso add, Eupompe thee,
 And thee Themisto next, and Pronoe;
 Nemertes, virgin chaste, completes the race, 410
 Not last in honour, though the last in place;
 Her breast the virtues of her parent fire,
 Her mind the copy of her deathless fire.
 From blameless Nereus these, the fruits of joy,
 And goodly offices the nymphs employ.
 Of Ocean born, Elestre plights her word
 To Thaumias, and obeys her rightful lord;
 Iris to whom, a goddess swift, she bears;
 From them the Harpies, with their comely hairs,
 Descend, Aello who pursues the wind,
 And with her sister leaves the birds behind; 420
 Ocypete the other; when they fly,
 They seem with rapid wings to reach the sky.
 Ceto to Phorcys bore the Graiae, gray
 From the first moment they beheld the day;
 Hence gods and men these daughters Graiae
 name;
 Pephredo lovely veil'd from Ceto came,
 And Enyo with her sacred veil: the same
 To Phorcys bore the Gorgons, who remain
 Far in the feat of night, the distant main, 429
 Where, murm'ring at their task, th' Hesperides
 Watch o'er the golden fruit, and fertile trees:
 The number of the Gorgons once were three,
 Stheno, Medusa, and Euryale;
 Of which two sisters draw immortal breath,
 Free from the fears of age as free from death;
 But thou Medusa felt a pow'rful foe,
 A mortal thou, and born to mortal woe;
 Nothing avail'd of love thy blissful hours,
 In a soft meadow, on a bed of flow'rs,
 Thy tender dalliance with the ocean's king, 440
 And in the beauty of the year the spring;
 You by the conqu'ring hand of Perseus bled,
 Perseus whose sword laid low in dust thy head;
 Then started out when you began to bleed,
 The great Chrysaor, and the gallant steed

Call'd Pegasus, a name not giv'n in vain,
 Born near the fountains of the spacious main.
 His birth will great Chrysaor's name unfold,
 When in his hand glitter'd the sword of gold;
 Mounted on Pegasus he soar'd above, 450
 And fought the palace of Almighty Jove;
 Loaded with lightning through he skies he rode,
 And bore it with the thunder to the god.
 Chrysaor, love the guide, Calliroe led,
 Daughter of Ocean, to the genial bed;
 Whence Geryon sprung, fierce with his triple
 head;
 Whom Hercules laid breathless on the ground,
 In Erythea which the waves surround;
 His oxen lowing round their master stand,
 While he falls gasping from the conqu'ror's
 hand:
 That fatal day beheld Eurytion fall, 461
 And with him Orthus in a gloomy stall;
 By his strong arm the dog and herdsmen slain,
 The hero drove the oxen cross the main;
 The wide-brow'd herds he to Tirynthus bore,
 And safely landed on the sacred shore.
 Calliroe in a cave conceiv'd again,
 And for Echidna bore maternal pain;
 A monster she of an undaunted mind,
 Unlike the gods, nor like the human-kind; 470
 One half a nymph of a prodigious size,
 Fair her complexion, and asquint her eyes;
 The other half a serpent dire to view,
 Large, and voracious, and of various hue;
 Deep in a Syrian rock her horrid den,
 From the immortal gods remote, and men;
 There, so the council of the gods ordains,
 Forlorn, and ever young, the nymph remains.
 In love Echidna with Typhaon join'd,
 Outrageous he, and blust'ring as the wind; 480
 Of these the offsprings prov'd a furious race;
 Orthus, the produce of the first embrace,
 Was vigilant to watch his master's herd,
 The dog of Geryon and a trusty guard:
 Next Cerberus, the dog of Pluto, came,
 Devouring direful of a monstrous frame;
 From fifty heads he barks with fifty tongues,
 Fierce and undaunted with his brazen lungs:
 The dreadful Hydra rose from the same bed,
 In Lerna by the fair-arm'd Juno bred, 490
 Juno, with hate implacable, who strove
 Against the virtues of the son of Jove;
 But Hercules, with Iolaus join'd,
 Amphitryon's race, and of a martial mind,
 Bless'd with the counsel of the warlike maid,
 Dead at his feet the horrid monster laid:
 From the same parents sprung Chimæra dire,
 From whose black nostrils issued flames of fire;
 Strong and of size immense; a monster she,
 Rapid in flight, astonishing to see; 500
 A lion's head on her large shoulder's grew,
 The goat's and dragon's terrible to view;
 A lion she before in mane and throat,
 Behind a dragon, in the midst a goat;
 Her Pegasus the swift subdued in flight,
 Back'd by Bellerophon a gallant knight.
 From Orthus and Chimera, foul embrace,
 Is Sphinx deriv'd, a monster to the race

Of Cadmus fatal; from the same dire veins
Sprung the stern ranger of Nemean plains, 510
The lion nourish'd by the wife of Jove,
Permitted lord of Tretum's mount to rove;
Nemea he, and Apelas, commands,
Alarms the people, and destroys their lands;
In Hercules at last a foe he found,
And from his arm receiv'd a mortal wound.

Ceto and Phorcys both renew'd their flame;
From which amour a horrid serpent came;
Who keeps, while in a spacious cave he lies,
Watchful o'er all the golden fruit his eyes. 520

Tethys and Ocean, horn of heav'n, embrace,
Whence springs the Nile, and a long wat'ry race,
Alpheus, and Eridamus the strong,
That rises deep, and stately rolls along,
Strymon, Mæander, and the Ister clear;
Nor, Phasis, are thy streams omitted here;
To the same rise Rhesus his current owes,
And Achelous that like silver flows;
Hence Nessus takes his course, and Rhodius,
With Haliacmon and Heptaporus; 530

To these the Granic and Æsopus join,
Hermus to these, and Simois divine,
Penæus, and the Caic flood that laves
The verdant margins with his beauteous waves;
The great Sangarius, and the Ladon, name,
Parthenius, and Evenus, streams of fame,
And you, Ardescus, boast the fruitful line,
And lastly you Scamender the divine.

From the same parents, fertile pair, we trace
A progeny of nymphs, a sacred race; 540
Who, from their birth, o'er all mankind the care
With the great king Apollo jointly share;
In this is Jove, the god of gods, obey'd,
Who grants the rivers all to lend their aid.

The nymphs from Tethys, and old Ocean, these,
Pitho, Admete, daughters of the seas,
Iante and Electra, nymphs of fame,
Doris and Prymno, and the beauteous dame
Urania, as a goddess fair in face;
Hence Hippo, and hence Clymene we trace, 550

And thou, Rodia, of the num'rous race;
Zeuxo to these succeeds Calliroe,
Clytie, Idya, and Pasithoe;
Plexaure here, and Galaxaure join,
And lovely Dion of a lovely nine;
Molobosis and Thoe add to these,
And charming Polydora form'd to please,
Cercus whose beauties all from nature rise,
And Pluto with her large majestic eyes;
Perseis, Xanthe, in the list we see, 560

And Ianira, and Acaste thee;
Menestho, nor Europa, hence remove,
Nor Metis, nor Petrea raising love;
Crisie and Asia boast one ancient sire,
With fair Calypso, object of desire,
Telestho, saffron-veil'd, Eurynome,
Eudore, Tyche, and Ocycroe,
And thou Amphiro of the source divine,
And Styx exceeding all the lovely line:

These are the sons first in the list of fame, 570
And daughters, which from ancient Ocean came,
And fruitful Tethys, venerable dame:

Thousands of streams which flow the spacious earth
From Tethys, and her sons, deduce their birth;

Numbers of tides she yielded to her lord,
Too many for a mortal to record;
But they who on or near their borders dwell,
Their virtues know, and can describe them well.

The fruits of Thia and Hyperion rise,
And with refulgent lustre light the skies, 580
The great, the glorious sun transcending bright,
And the fair splendid moon the lamp of night;
With them Aurora, when whose dawn appears,
Who mortal men and gods immortal cheers.

To Creus, her espous'd, a son of earth,
Eurybia gave the great Astræus birth;
Perfes from them, of all most skilful came,
And Pallas first of goddesses in fame.

Aurora brought to great Astræus forth
The west, the south-wind, and the rapid north;
The morning-star fair Lucifer she bore,
And ornaments of heav'n ten thousand more.

From Styx, the fairest of old Ocean's line,
And Pallas sprung a progeny divine,
Zeal to perform, and Vict'ry in her pace
Fair-footed, Valour, Might, a glorious race!
They hold a mansion in the realms above,
Their seat is always near the throne of Jove;
Where the dread thund'ring god pursues his way,
They march, and close behind his steps obey. 600
This honour they by Styx their mother gain'd;
Which by her prudence she from Jove obtain'd:
When the great pow'r that ev'n the gods com-
mands,

Who sends the bolts from his almighty hands,
Summon'd th' immortals, who obey'd his call,
He thus address'd them in th' Olympian hall:
Ye gods, like gods, with me who dauntless
dare

To face the Titans in a dreadful war,
Above the rest in honour shall ye stand,
And ample recompence shall load your hand: 610
To Saturn's reign who bow'd, and unprefer'd,
Void of distinction, and without reward,
Great, and magnificently rich, shall shine,
As right requires, and suits a pow'r divine.

First, as her father counsell'd, Styx ascends,
And her brave offsprings to the god commends;
Great Jove receiv'd her with peculiar grace,
Nor honour'd less the mother than her race;
Enrich'd with gifts she left the bright abodes,
By Jove ordain'd the solemn oath of gods; 620
Her children, as she wish'd, behind remain,
Constant attendants on the thund'rer's train:
Alike the god with all maintain'd his word,
And rules in empire strong of lords the lord.

Phœbe with fondness to her Cœus cleav'd,
And she a goddess by a god conceiv'd;
Latona, fable-veil'd, the produce proves,
Pleasing to all of their connubial loves,
Sweetly engaging from her natal hour,
The most delightful in th' Olympian bow'r:
From them Asterea sprung, a nymph renown'd,
And with the spousal love of Perfes crown'd;
To whom she bore Hecate, lov'd by Jove,
And honour'd by th' inhabitants above,
Profusely gifted from th' almighty hand,
With pow'r extensive o'er the sea and land,
And great the honour she by Jove's high leave,
Does from the starry vault of heav'n receive,

When to the gods the sacred flames aspire,
 From human off'rings as the laws require, 640
 To Hecate the vows are first preferr'd;
 Happy of men whose pray'rs are kindly heard,
 Success attends his every act below,
 Honour, wealth, pow'r, to him abundant flow.
 The gods who all from earth and heaven descend,
 On her decision for their lots depend;
 Nor what the earliest gods the Titans claim,
 By her ordain'd, of honour or of fame,
 Has Jove revok'd by his supreme command,
 For her decrees irrevocable stand: 650
 Nor is her honour less, nor less her pow'r,
 Because she only blest the nuptial hour;
 Great is her pow'r on earth, and great her fame,
 Nor less in heav'n, and o'er the main the same, }
 Because Saturnian Jove reveres the dame: }
 The man she loves she can to greatness raise,
 And grant to whom she favours public praise;
 This shines for words distinguish'd at the bar;
 One proudly triumphs in the spoils of war;
 And she alone can speedy vict'ry give, 660
 And rich in glory bid the conquerer live:
 And where the venerable rulers meet
 She sits supreme upon the judgment-seat:
 In single trials or of strength or skill,
 Propitious she presides o'er whom she will:
 To honour she extends the beauteous crown,
 And glads the parent with the son's renown,
 With rapid swiftness wings the gallant steeds,
 And in the race the flying courser speeds.
 Who, urg'd by want, and led by hopes of gain, 670
 Pursue their journey cross the dang'rous main,
 To Hecate they all for safety bow,
 And to their god and her prefer the bow.
 With ease the goddess, venerable dame,
 Gives to the sportsman's hand his wish'd-for
 game;

Or now the weary'd creature faintly flies,
 And for a while eludes the huntsman's eyes,
 Who stretches sure to seize the panting prey,
 And bear the glory of the chase away,
 Till by the kind protect'refs of the plains, 680
 Her strength recovers, and new life she gains,
 She starts, surprising, and outstrips the wind,
 And leaves the masters of the chase behind.
 With Mercury the watchful goddess guards
 Of goats the straggling flocks, the lowing herds,
 And bleating folds rich with the pond'rous fleece;
 By her they lessen, and by her increase.
 The only daughter of her mother born,
 And her the gods with various gifts adorn:
 O'er infants she, so Jove ordain'd, presides, 690
 And the upgrowing youth to merit guides;
 Great is the trust the future man to breed,
 A trust to her by Saturn's son decreed.

Rhea to Saturn bore her brother god,
 Vesta and Ceres: Juno golden shod,
 And Pluto hard of heart, whose wide command
 Is o'er a dark and subterranean land,
 A pow'rful monarch, hence derive their birth,
 With Neptune, deity who shakes the earth;
 Of these great Jove, the ruler of the skies, 700
 Of gods and men the sire, in counsel wise,
 Is born; and him the universe adores,
 And the earth trembles when his thunder roars.

Saturn from earth, and heav'n adorn'd with stars
 Had learn'd the rumour of approaching wars,
 Great as he was, a greater should arise, }
 To rob him of the empire of the skies, }
 The mighty Jove, his son, in counsel wise:
 With dread the fatal prophecy he heard,
 And for his regal honours greatly fear'd,
 And that the dire decree might fruitless prove,
 Devour's his pledges, at their birth, of love:
 Now Rhea, who her slaughter'd children griev'd,
 With Jove, the fire of gods and men, conceiv'd;
 To earth and heav'n she for assistance runs,
 And begs their counsel to revenge her sons,
 To guard her Jove from wily Saturn's ire,
 Secret to keep him from a barb'rous fire:
 They to their daughter lend a willing ear,
 And to her speak the hour of vengeance near, 720
 Nor hide they from her what the fates ordain
 Of her great-minded son, and Saturn's reign:
 Her safe to Crete the parent gods convey,
 In Lyc'us there, a fertile soil, she lay;
 At length the tedious months their course had run,
 When mighty Jove she bore, her youngest son;
 Wide-spreading earth receiv'd the child with joy,
 And train'd the god up from a new-born boy.
 Rhea to Lyc'us safely took her flight,
 Protected by the sable veil of night; 730
 Far in the sacred earth her son she laid,
 On mount Ægæus ever crown'd with shade.
 When the old king, who once could boast his reign
 O'er all the gods, and the ethereal plain,
 Came jealous of the infant's future pow'r,
 A stone the mother gave him to devour;
 Greedy he seiz'd th' imaginary child,
 And swallow'd heedless, by the dress beguild;
 Nor thought the wretched god of ought to fear,
 Nor knew the day of his disgrace was near; 740
 Invincible remains his Jove alive,
 His throne to shake, and from his kingdom drive
 The cruel parent, for to him 'tis giv'n
 To rule the gods, and mount the throne of heav'n.
 Well thriv'd the deity, nor was it long
 Before his strength increas'd, and limbs grew'd
 strong.

When the revolving year his course had run,
 By earth thy art and Jove his pow'rful son,
 The crafty Saturn, once by gods ador'd,
 His injur'd offsprings to the light restor'd: 750
 First from within he yielded to the day
 The stone deceitful, and his latest prey;
 This Jove, in mem'ry of the wond'rous tale,
 Fix'd on Parnassus in a sacred vale,
 In Pytho the divine, a mark to be,
 That future ages may astonish'd see:
 And now a greater task behind remains,
 To free his kindred heav'n-born race from chains,
 In an ill hour by Saturn rashly bound, 759
 Who from the hands of Jove their freedom found;
 With zeal the gods perform'd a thankful part,
 The debt of gratitude lay next their heart;
 Jove owes to them the bolts which dreadful fly,
 And the bright lightning which illumines the sky;
 To him th' exchange for liberty they bore,
 Gifts deep in earth conceal'd, unknown before;
 Now arm'd with them, he reigns almighty Jove,
 The lord of men below, and gods above.

Clymene, ocean-born, with beauteous feet,
 And Japhet, in the bands of wedlock meet; 770
 From whose embrace a glorious offspring came,
 Atlas magnanimous, and great in fame,
 Menœtius, thou with lasting honours crown'd,
 Prometheus for his artifice renown'd,
 And Epimetheus of unstedfast mind,
 Lur'd to false joys, and to the future blind,
 Who, rashly weak by soft temptations mov'd,
 The bane of arts and their inventors prov'd,
 Who took the work of Jove, the virgin fair,
 Nor saw beneath her charms the latent snare. 780
 Blasted by lightning from the hands of Jove,
 Menœtius fell in Erebus to rove;
 His dauntless mind that could not brook command,
 And prone to ill, provok'd th' almighty hand.
 Atlas, so hard necessity ordains,
 Erect the pond'rous vault of stars sustains;
 Not far from the Hesperides he stands,
 Nor from the load retracts his head or hands:
 Here was he fix'd by Jove in counsel wise,
 Who all disposes, and who rules the skies? 790
 To the same god Prometheus ow'd his pains,
 Fast bound with hard execrable chains
 To a large column, in the midmost part,
 Who bore his sufferings with a dauntless heart;
 From Jove an eagle flew, with wings wide spread,
 And on his never-dying liver fed;
 What with his rav'nous beak by day he tore
 The night supply'd, and furnish'd him with more:
 Great Hercules to his assistance came,
 Born of Alcmena, lovely-footed dame; 800
 And first he made the bird voracious bleed,
 And from his chains the son of Japhet freed;
 To this the god consents, th' Olympian fire,
 Who, for his son's renown, suppress'd his ire,
 The wrath he bore against the wretch who strove
 In counsel with himself, the pow'rful Jove;
 Such was the mighty thund'rer's will, to raise
 To greatest height the Theban hero's praise.
 When at Meconia a contention rose,
 Men and immortals to each other foes, 810
 The strife Prometheus offer'd to compose;
 In the division of the sacrifice,
 Intending to deceive great Jove the wife,
 He stuff'd the flesh in the large ox's skin,
 And bound the entrails with the fat within,
 Next the white bones with artful care dispos'd,
 And in the candid fat from sight enclos'd:
 The fire of gods and men, who saw the cheat,
 Thus spoke expressive of the dark deceit.
 In this division how unjust the parts, 820
 O Japhet's son, of kings the first in arts!
 Reproachful spoke the god in council wise;
 To whom Prometheus full of guile replies:
 O Jove, the greatest of the powers divine,
 View the division, and the choice be thine.
 Wily he spoke from a deceitful mind;
 Jove saw his thoughts, nor to his heart was blind;
 And then the god, in wrath of soul, began
 To plot misfortunes to his subject man:
 The lots survey'd, he with his hands embrac'd 830
 The parts which were in the white fat incas'd;
 He saw the bones, and anger sat confess'd
 Upon his brow, for anger seiz'd his breast:

Hence to the gods the od'rous flames aspire
 From the white bones which feed the sacred fire.
 The cloud compelling Jove, by Japhet's son
 Enrag'd, to him in words like these begun:
 O! who in mal-contrivance all transcend,
 Thine arts thou wilt not yet, obdurate, end.
 So spoke th' eternal wisdom, full of ire, 840
 And from that hour deny'd the use of fire
 To wretched men, who pass on earth their time,
 Mindful, Prometheus, of thy artful crime:
 But Jove in vain conceal'd the splendid flame;
 The son of Japhet, of immortal fame,
 Brought the bright sparks clandestine from above
 Clos'd in a hollow cane; the thund'ring Jove
 Soon from the bitterness of soul, began
 To plot destruction to the peace of man.
 Vulcan, a god renown'd, by Jove's command,
 Form'd a fair virgin with a master hand, 850
 Earth her first principle, her native air
 As modest seeming as her face was fair.
 The nymph, by Pallas, blue-ey'd goddess, dress'd,
 Bright shin'd improv'd beneath the candid vest;
 The rich wrought veil behind, wond'rous to see,
 Fruitful with art, bespoke the deity;
 Her brows to compass did Minerva bring
 A garland breathing all the sweets of spring:
 And next the goddess, glorious to behold, 860
 Plac'd on her head a glitt'ring crown of gold,
 The work of Vulcan by his master hand,
 The labour of the god by Jove's command;
 There seem'd to scud along the finny breed;
 And there the beasts of land appear'd to feed;
 Nature and art were there so much at strife,
 The miracle might well be took for life.
 Vulcan the lovely bane, the finish'd maid,
 To the immortal gods and men convey'd;
 Graceful by Pallas dress'd the virgin trod, 870
 And seem'd a blessing or for man or god:
 Soon as they see th' inevitable snare,
 They praise the artist, and admire the fair;
 From her, the fatal guile, a sex derives
 To men pernicious, and contracts their lives,
 The softer kind, a false alluring train,
 Tempting to joys which ever end with pain,
 Never beheld with the penurious race,
 But ever seen where lux'ry shows her face.
 As drones oppressive habitants of hives, 880
 Owe to the labour of the bees their lives,
 Whose work is always with the day begun,
 And never ends but with the setting sun,
 From flow'r to flow'r they rove, and loaded
 home
 Return to build the white, the wazen comb,
 While lazy the luxurious race remain
 Within, and of their toils enjoy the gain,
 So woman, by the thund'rer's hard decree,
 And wretched man, are like the drone and bee:
 If man the galling chain of wedlock shuns, 890
 He from one evil to another runs;
 He, when his hairs are winter'd o'er with gray,
 Will want a helpmate in th' afflicting day;
 And if possessions large have bless'd his life,
 He dies, and proves perhaps the source of strife;
 A distant kindred, far allay'd in blood,
 Contend to make their doubtful titles good:

Or should he, these calamities to fly,
His honour plight and join the mutual tie,
And should the partner of his bosom prove 900
A chaste and prudent matron worthy love;
Yet he would find this chaste, this prudent wife
The hapless author of a checquer'd life:
But should he, wretched man, a nymph embrace,
A stubborn consort, of a stubborn race,
Poor hamper'd slave, how must he drag the chain!
His mind, his breast, his heart, o'ercharg'd with
pain!

What congregated woes must he endure!
What ills on ills which will admit no cure!
Th' omnipotence of Jove in all we see, 910
Whom none eludes, and what he wills must be;
Not thou, to none injurious, Japhet's son,
With all thy wisdom, could his anger shun;
His rage you suffer'd, and confess'd his pow'r,
Chain'd in hard durance in the penal hour.

The brothers Briareus and Cottus lay,
With Gyges, bound in chains, remov'd from day,
By their hard-hearted sire, who with surprise
View'd their vast strength, their form, and mon-
strous size:

In the remotest parts of earth confin'd 920
They sat, and silent sorrows wreck'd their mind,
Till by th' advice of Earth, and aid of Jove,
With other gods, the fruits of Saturn's love,
With Rhea beauteous dress'd, they broke the
chain,

And from their dungeons burst to light again.
Earth told them all from a prophetic light,
How gods encount'ring gods should meet in fight,
To them foretold, who stood devoid of fear,
Their hour of vict'ry and renown was near;
The Titans, and the bold Saturnian race, 930
Should wage a dreadful war, ten years the space.
The Titans brave on lofty Othyrs stand,
And gloriously dare the thund'rer's hand:
The gods from Saturn sprung, ally their pow'r;
(Gods Rhea bore him in a fatal hour):
From high Olympus they like gods engage,
And dauntless face, like gods, Titanian rage,
In the dire conflict neither party gains,
In equal balance long the war remains;
At last by truce each soul immortal rests, 940
Each God on nectar and ambrosia feasts;
Their spirits nectar and ambrosia raise,
And fire their generous breasts to acts of praise;
To whom, the banquet o'er, in council join'd,
The sire of gods, and men express'd his mind:

Gods, who from earth and heav'n, great rise,
descend,

To what my heart commands to speak attend:
For vict'ry long, and empire, have we strove,
Long have ye battel'd in defence of Jove;
To war again, invincible your might,
And dare the Titans to the dreadful fight;
Of friendship strict observe the sacred charms,
Be that the cement of the gods in arms;
Grateful remember, when in chains ye lay,
From darkness Jove redeem'd ye to the day.

He spoke, and Cottus to the god replies:
O venerable sire! in council wise,
Who freed immortals from a state of woe,
Of what you utter well the truth we know:

Rescu'd from chains and darkness here we stand,
O son of Saturn! by thy pow'rful hand; 961
Nor will we, king, the rage of war decline,
ill pow'r, indisputable pow'r, is thine;
The right of conquest shall confirm thy sway,
And teach the Titans whom they must obey.

He ends, the rest assent to what he says;
And the gods thank him with the voice of praise;
He more than ever feels himself inspir'd,
And his mind burns with love of glory fir'd.
All rush to battle with impetuous might, 970

And gods and goddesses provoke the fight.
The race that Rhea to her lord conceiv'd,
And the Titanic gods by Jove reliev'd
From Erybus, who there in bondage lay,
Ally their arms in this immortal day.
Each brother fearless the dire conflict stands,
Each rears his fifty heads, and hundred hands;
They mighty rocks from their foundations tore,
And fiercely brave against the Titans bore.
Furious and swift the Titan phalanx drove, 980
And both with mighty force for empire strove:
The ocean roar'd from ev'ry part profound,
And the earth bellow'd from her inmost ground:
Heav'n groans, and, to the gods, conflicting bends,
And the loud tumult high Olympus rends.
So strong the darts from god to god were hurl'd,
The clamour reach'd the subterranean world;
And where, with haughty strides, each warrior
trod,

Hell felt the weight, and sunk beneath the god;
All Tartarus could hear the blows from far: 990
Such was the big, the horrid, voice of war!
And now the murmur of incitement flies,
All rang'd in martial order, through the skies;
Here Jove above the rest conspicuous shin'd,
In valour equal to his strength his mind;
Erect and dauntless see the thund'rer stand,
The bolts red hissing from his vengeful hand;
He walks majestic round the starry frame;
And now the lightnings from Olympus flame:
The earth wide blazes with the fires of Jove, 1000
Nor the flash spares the verdure of the grove.
Fierce glows the air, the boiling ocean roars,
And the seas wash with burning waves their shores;
The dazzling vapours round the Titans glare,
A light too pow'rful for their eyes to bear!
One conflagration seems to seize on all,
And threatens Chaos with the gen'ral fall.
From what their eyes behold, and what they hear,
The universal wreck of worlds is near:
Should the large vault of stars, the heav'ns, descend,
And with the earth in loud confusion blend, 1011
Like this would seem the great tumultuous jar:
The gods engag'd, such the big voice of war!
And now the batt'ling winds their havoc make,
Thick whirls the dust, earth, thy foundations shake;
The arms of Jove thick and terrific fly,
And blaze and bellow through the trembling sky;
Winds, thunder, lightning, through both armies
drove,

Their course impetuous, from the hands of Jove;
Loud and stupendous is the raging fight, 1020
And now each warrior god exerts his might.
Cottus, and Briareus, who scorns to yield,
And Gyges panting for the martial field,

Foremost the labours of the day increase,
 Nor let the horrors of the battle cease: [throw,
 From their strong hands three hundred rocks they
 And, oft repeated, overwhelm the foe;
 They forc'd the Titans deep beneath the ground,
 Cast from their pride, and in sad durance bound;
 Far from the surface of the earth they lie, 1030
 In chains, as earth is distant from the sky;
 From earth the distance to the starry frame,
 From earth to gloomy Tartarus, the same.
 From the high heav'n a brazen anvil cast,
 Nine nights and days in rapid whirls would last,
 And reach the earth the tenth, whence strongly
 hurl'd,

The same the passage to th' infernal world,
 To Tart'rus; which, a brazen closure bounds,
 And whose black entrance threefold night sur-
 rounds,

With earth thy vast foundations cover'd o'er; 1040
 And there the ocean's endless fountains roar:
 By cloud-compelling Jove the Titans fell,
 And there in thick, in horrid darkness dwell:
 They lie confin'd, unable thence to pass,
 The wall and gates by Neptune made of brass;
 Jove's trusty guards, Gyges and Cottus, stand
 There, and with Briareus the pass command.
 The entrance there, and the last limits, lie
 Of earth, the barren main, the starry sky,
 And Tart'rus, there of all the fountains rise, 1050
 A sight detested by immortal eyes:

A mighty chasm, horror and darkness here;
 And from the gates the journey of a year;
 Here storms in hoarse, in frightful murmurs play,
 The seat of Night, where mists exclude the day.
 Before the gate the son of Japhet stands,
 Nor from the skies retracts his head or hands;
 Where night and day their course alternate lead;
 Where both their entrance make and both recede,
 Both wait the season to direct their way, 1060
 And spread, successive, o'er the earth their sway:
 This cheers the eyes of mortals with her light;
 The harbinger of Sleep pernicious Night:
 And here the sons of Night their mansion keep,
 Sad deities, Death and his brother Sleep;
 Whom, from the dawn to the decline of day,
 The sun beholds not with his piercing ray:
 One o'er the land extends, and o'er the seas,
 And lulls the weary'd mind of man to ease;
 That iron-hearted, and of cruel soul, 1070
 Brazen his breast, nor can he brook controul,
 To whom, and ne'er return, all mortals go,
 And even to immortal gods a foe.

Foremost th' infernal palaces are seen
 Of Pluto, and Persephone his queen;
 A horrid dog, and grim, couch'd on the floor,
 Guards, with malicious art, the sounding door;
 On each, who in the entrance first appears,
 He fawning wags his tail, and cocks his ears:
 If any strive to measure back the way, 1080
 Their steps he watches, and devours his prey.
 Here Styx, a goddess, whom immortals hate,
 The first-born fair of Ocean, keeps her state;
 From gods remote her silver columns rise,
 Roof'd with large rocks her dome that fronts the
 skies:

Here, cross the main, swift-footed Iris brings
 A message seldom from the king of kings;
 But when among the gods contention spreads,
 And in debate divides immortal heads,
 From Jove the goddess wings her rapid flight 1090
 To the fam'd river, and the seat of Night,
 Thence in a golden vase the water bears,
 By whose cool streams each pow'r immortal swears,
 Styx from a sacred fount her course derives,
 And far beneath the earth her passage drives;
 From a stupendous rock descend her waves,
 And the black realms of Night her current laves:
 Could any her capacious channels drain,
 They'd prove a tenth of all the spacious main;
 Nine parts in mazes clear as silver glide 1100
 Along the earth, or join the ocean's tide;
 The other from the rock in billows rolls,
 Source of misfortune to immortal souls.
 Who with false oaths disgrace th' Olympian bow'rs,
 Incur the punishment of heav'nly pow'rs:
 The perjurd god, as in the arms of death,
 Lethargic lies, nor seems to draw his breath;
 Nor him the nectar and ambrosia cheer,
 While the sun goes his journey of a year;
 Nor with the lethargy concludes his pain, 1110
 But complicated woes behind remain:
 Nine tedious years he must an exile rove,
 Nor join the council, nor the feasts of Jove;
 The banish'd god back in the tenth they call
 To heav'nly banquets and th' Olympian hall:
 The honours such the gods on Styx bestow,
 Whose living streams through rugged channels
 flow,

Where the beginning, and last limits lie
 Of earth, the barren main, the starry sky,
 And Tart'rus; where of all the fountains rise; 1120
 A sight detested by immortal eyes.
 Th' inhabitants through brazen portals pass,
 Over a threshold of everlasting brass,
 The growth spontaneous, and foundations deep;
 And here th' allies of Jove their captives keep,
 The Titans, who to utter darkness fell,
 And in the farthest parts of Chaos dwell.
 Jove grateful gave to his auxiliar train,
 Cottus and Gyges, mansions in the main;
 To Briareus, for his superior might 1130
 Exerted fiercely in the dreadful fight,
 Neptune who shakes the earth, his daughter gave,
 Cymopolia, to reward the brave.

When the great victor god, almighty Jove,
 The Titans from celestial regions drove,
 Wide Earth Typhoeus bore, with Tart'rus join'd,
 Her youngest born, and blust'ring as the wind;
 Fit for most arduous works his brawny hands,
 On feet as durable as gods he stands; 1139
 From heads of serpents hiss and hundred tongues,
 And lick his horrid jaws, untir'd his lungs;
 From his dire hundred heads his eye-balls stare,
 And fire-like, dreadful to beholders glare;
 Terrific from his hundred mouths to hear,
 Voices of ev'ry kind torment the ear;
 His utterance sounds like gods in council full;
 And now he bellows like the lordly bull:
 And now he roars like the stern beast that reigns
 King of the woods, and terror of the plains;

And now, surprising to be heard, he yelps, 1150
 Like, from his ev'ry voice, the lion's whelps;
 And now, so loud a noise the monster makes,
 The loftiest mountain from its basis shakes:
 And now Typhœus had perplex'd the day,
 And over men and gods usurp'd the sway,
 Had not the pow'rful monarch of the skies,
 Of men and gods the fire, great Jove the wife,
 Against the foe his hottest vengeance hurl'd,
 Which blaz'd and thunder'd through th' ethereal
 world; 1159

Through land and main the bolts red hissing fell,
 And through old Ocean reach'd the gates of Hell.
 Th' almighty rising made Olympus nod,
 And the earth groan'd beneath the vengeful god.
 Hoarse through the cerule main the thunder
 roll'd,

Through which the light'ning flew, both un-
 controul'd;

Fire caught the winds which on their wings they
 bore, [roar,

Fierce flame the earth and heav'n, the seas loud
 And beat with burning waves the burning shore;

The tumult of the gods was heard afar:

How hard to lay this hurricane of war! 1170

The god who o'er the dead infernal reigns,

E'en Pluto, trembled in his dark domains:

Dire horror seiz'd the rebel Titan band,

In Tartarus who round their Saturn stand:

But Jove at last collected all his might,

With light'ning arm'd, and thunder for the fight.

With strides majestic from Olympus strode;

What pow'r is able now to face the god!

The flash obedient executes his ire;

The giant blazes with vindictive fire; 1180

From ev'ry head a diff'rent flame ascends;

The monster bellows, and Olympus bends:

The god repeats his blows, beneath each wound

All maim'd the giant falls, and groans the ground,

Fierce flash the lightnings from the hands of Jove,

The mountains burn, and crackles ev'ry grove.

The melted earth floats from her inmost caves,

As from the furnace run metallic waves:

Under the caverns of the sacred ground, 1189

Where Vulcan works, and restless anvils found,

Beneath the hand divine the iron grows

Ductile, and liquid from the furnace flows;

So the earth melted: and the giant fell,

Plung'd by the arms of mighty Jove to hell.

Typhœus bore the rapid winds which fly

With tempests wing'd, and darken all the sky;

But from the bounteous gods derive their birth

The gales which breathe frugiferous to earth,

The south, the north, and the swift western wind

Which ever blow to profit human kind: 1200

Those from Typhœus sprung, an useless train,

To men pernicious, bluster o'er the main;

With thick and sable clouds they veil the deep,

And now destructive cross the ocean sweep;

The mariner with dread beholds from far

The gathering storms, and elemental war;

His bark the furious blast and billows rend;

The surges rise, and cataracts descend;

Above, beneath, he hears the tempest roar;

Now sinks the vessel, and he fears no more: 1210

And remedy to this they none can find,
 Who are resolv'd to trade by sea and wind.
 On land in whirlwinds, or unkindly show'rs,
 They blast the lovely fruits and blooming flow'rs;
 O'er sea and land the blust'ring tyrants reign,
 And make of earth-born men the labours vain.

And now the gods, who fought for endless fame,
 The god of gods almighty Jove proclaim,
 As Earth advis'd: nor reigns Olympian Jove
 Ingrate to them who with the Titans strove; 1220
 On those who war'd beneath his wide command
 He honours heaps with an impartial hand.

And now the king of gods, Jove, Metis led,
 The wisest fair one, to the genial bed;
 Who with the blue-ey'd virgin fruitful proves,
 Minerva, pledge of their celestial loves;
 The fire, from what kind earth and heav'n re-
 veal'd,

Artful the matron in himself conceal'd;
 From her it was decreed a race should rise
 That would usurp the kingdom of the skies: 1230

And first the virgin with her azure eyes,
 Equal in strength, and as her father wife,

Is born, the offspring of th' almighty's brain:

And Metis by the god conceiv'd again,

A son decreed to reign o'er heav'n and earth,

Had not the fire destroy'd the mighty birth:

He made the goddess in himself reside,

To be in ev'ry act th' eternal guide.

The Hours to Jove did lovely Themis bear,
 Eunomie, Dice, and Irene fair; 1240

O'er human labours they the pow'r possess,

With seasons kind the fruits of earth to bless:

She by the thund'ring god conceiv'd again,

And suffer'd for the fates the rending pain,

Clotho and Lachesis to whom we owe,

With Atropos, our shares of joy or woe;

This honour they receiv'd from Jove the wife,

The mighty fire, the ruler of the skies.

Eurynome, from ocean sprung, to Jove

The beauteous graces bore inspiring love, 1250

Aglaia, and Euphrosyne the fair,

And thou Thalia of a graceful air;

From the bright eyes of these such charms proceed

As make the hearts of all beholders bleed.

He Ceres next, a bounteous goddess led

To taste the pleasures of the genial bed;

To him fair-arm'd Persephone she bore,

Whom Pluto ravish'd from her native shore:

The mournful dame he of her child bereft,

But the wise fire assented to the theft. 1260

Mnemosyne his breast with love inspires,

The fair-tress'd object of the god's desires;

Of whom the muses, tuneful nine, are born,

Whose brows rich diadems of gold adorn;

To them uninterrupted joys belong,

Them the gay feast delights, and sacred song.

Latona bore, the fruits of Jove's embrace,

The loveliest offsprings of th' ethereal race;

She for Apollo felt the child-bed throw;

And Artemis for thee who twang the bow. 1270

Last Juno fills th' almighty monarch's arms,

A blooming consort, and replete with charms;

From her Lucina, Mars, and Hebe, spring;

Their fire of gods the god, of kings the king.

Minerva, goddess of the martial train, [brain ;
Whom wars delight, sprung from th' almighty's
The rev'rend dame, unconquerable maid,
The battle rouses, of no power afraid.

Juno, proud goddess, with her consort strove.
And soon conceiv'd without the joys of love :
Thee she produc'd without the aid of Jove, 1281
Vulcan, who far in ev'ry art excel
The gods who in celestial mansions dwell.

To Neptune beauteous Amphitrite bore
Triton, dread god, who makes the surges roar ;
Who dwells in seats of gold beneath the main,
Where Neptune and fair Amphitrite reign.
To Mars, who pierces with his spear the shield,
Terror and fear did Cytherea yield ;
Dire brothers, who in war disorder spread, 1290
Break the thick phalanx, and increase the dead ;
They wait in ev'ry act their father's call,
By whose strong hand the proudest cities fall :
Harmonia, sprung from that immortal bed,
Was to the scene of love by Cadmus led.
Maia, of Atlas born, and mighty Jove,
Join in the sacred bands of mutual love :
From whom behold the glorious Hermes rise,
A god renown'd, the herald of the skies.

Cadmean Simile, a mortal dame, 1300
Gave to th' almighty's love a child of fame,
Bacchus, from whom our cheerful spirits flow,
Mother and son alike immortal now.
The mighty Hercules Alcmena bore
To the great god who makes the thunder roar.

Lame Vulcan made Aglaia fair his bride,
The youngest grace, and in her blooming pride.

Bacchus, conspicuous with his golden hair,
Thee Ariadne weds, a beauteous fair,
From Minos sprung, whom mighty Jove the sage
Allows to charm her lord exempt from age. 1311

Great Hercules, who with misfortunes strove
Long, is rewarded with a virtuous love,
Hebe, the daughter of the thund'ring god,
By his fair consort Juno golden shod :
Thrice happy he safe from his toils to rise,
And ever young a god to grace the skies !

From the bright son, and thee, Perseis, spring
Fam'd offsprings, Circe, and Æetes king.

Æetes thee, beauteous Idya, led, 1320
Daughter of Ocean, to the genial bed ; [crown'd ;
And with th' applause of heav'n your loves were
From whom Medea sprung, a fair renown'd.

All hail Olympian maids, harmonious nine,
Daughters of Ægis-bearing Jove divine,
Forsake the land, forsake the briny main,
The god and goddesses, celestial train ;
Ye Muses, each immortal fair record
Who deign'd to revel with a mortal lord,
In whose illustrious offsprings all might trace
The glorious likeness of a godlike race. 1331

Jason, an hero through the world renown'd,
Was with the joyous love of Ceres crown'd ;
Their joys they acted in a fertile soil [toil ;
Of Crete, which thrice had bore the ploughman's
Of them was Plutus born, who spreads his hand,
Dispersing wealth o'er all the sea and land ;
Happy the man who in his favour lives,
Riches to him, and all their joys he gives, 1339

TRANS. II.

Cadmus Harmonia lov'd the fair and young,
A fruitful dame from golden Venus sprung ;
Ino and Simile, Agave fair,

And thee, Autonoe, thy lover's care,
(Young Aristæus with his comely hair),
She bore ; and Polydore completes the race,
Born in the walls of Thebes a stately place.

The brave Chrysaor thee, Calliroe led
Daughter of Ocean to the genial bed ;
Whence Geryon sprung fierce with his triple
head ;

Whom Hercules laid breathless on the ground,
In Erythia which the waves surround ; 1351
By his strong arm the mighty giant slain,
The hero drove his oxen cross the main.

Two royal sons were to Tithonus born,
Of thee, Aurora, goddess of the morn ;
Hemathion from whom and Memnon spring,
Known by his brazen helm was Ethiop's king.

Pregnant by Cephalus the goddess proves,
A son of high renown rewards their loves ;
In form like the possessors of the skies, 1630
Great Phaëthon, whom with desiring eyes
Fair Aphrodite views : in blooming days
She to her sacred fane the youth conveys ;
Inhabitant divine he there remain'd,
His task nocturnal by the fair ordain'd.

When Peleis, haughty prince of wide command,
Of much th' atchiever with an impious hand,
Success attending his injurious mind,
Gave the swell'd sails to fly before the wind,
Æsonides, such gods were thy decrees, 1370
The daughter of Æetes cross the seas
Rap'd from her sire ; the hero much endur'd
Ere in his vessel he the fair secur'd ;
Her to Iolcus in her youthful pride
He bore, and there possess'd the charming bride ;
To Jason, her espous'd, the lovely dame
Medeus yields, pledge of the monarch's flame ;
Whom Chiron artful by his precepts sway'd :
Thus was the will of mighty Jove obey'd.

The Nereid Psamathe did Phocus bear 1380
To Æacus, herself excelling fair.

To Peleus Thetis, silver-footed dame,
Achilles bore in war a mighty name.

Fair Cytherea, ever flush'd with charms,
Resign'd them to a mortal hero's arms :
To thee, Anchises, the celestial bride
Æneas bore high in the shades of Ide.

Circe, the daughter of the sun, inclin'd
To thee, Ulysses, of a patient mind ;
Hence Agrius sprung, and Hence Latinus came,
A valiant hero, and a spotless name. 1391
The sacred isles were by the brothers sway'd ;
And them the Tyrrhenes, men renown'd, obey'd.

Calypso with the sage indulg'd her flame ;
From them Nausithous and Nausinous came.

Thus each immortal fair the nine record
Who deign'd to revel with a mortal lord ;
In whose illustrious offsprings all might trace
The glorious likeness of a godlike race :
And now, Olympian maids, harmonious nine,
Daughters of Ægis-bearing Jove divine, 1401
In lasting song the mortal dames rehearse ;
Let the bright belles of earth adorn the verse.

D

NOTES ON THE THEOGONY.

Ver. 1. I shall refer the reader to what I have said in the second and fourth sections of my Discourse on the writings of Hesiod, concerning the genuineness of the beginning of this poem, and the explanation of the Theogony. Our author here takes an occasion to celebrate the offices and power of the muses, and to give a short repetition of the greater deities. To what end is this grand assembly of divine personages introduced? To inspire the poet with thoughts suitable to the dignity of their characters; and by raising his imagination to such a height, as to believe they preside over his labours, he becomes the amanuensis of the gods. The muses, says the Earl of Shaftesbury, in his letter concerning enthusiasm, were so many divine persons in the heathen creed. The same noble writer has in that discourse elegantly showed the necessity and beauty of enthusiasm in poetry.

Ver. 2. A mountain in Bœotia, so called from the Phœnician word *bhalik*, or *bhalikon*, which signifies a high mountain. Bochart, in his Chan. book i. chap. 16, shows that Bœotia was full of Phœnician names and colonies. *Le Clerc*. Pausanias, in his Bœotica, says Helicon excels all the mountains in Greece, in the abundance and virtues of the trees which grow on it: he likewise tells us it produces no letiferous herbs or roots.

Ver. 5. Grævius and *Le Clerc* both agree in this reading, and derive *ισειδης* from *ειδος* *ισ*, having the dusky colour of iron; they likewise bring instances from Homer, and other poets, of the same word being used to the sea, rivers, and fountains; by which epithet, say they, they expressed the depth and plenty of the water.

Ver. 8. Pausanias, and Tzetzes after him, reads it *Termessus*, but this may proceed from their ignorance of the radix, which, says *Le Clerc*, is the Phœnician word *pbeer-metso*; the interpretation of which is a pure fountain. The river is at the foot of Helicon.

Ver. 9. The Phœnician word, says Bochart, is *bapphigran*, which signifies the eruption of a fountain: the word being corrupted into *Hippocrène*, gave rise to the story of the fountain of the horse. *Le Clerc*.

Ver. 10. The Phœnician word is *bhol-maio*, sweet water. *Le Clerc*.

Ver. 12. The historical and physical interpretation of the deities here mentioned, I shall defer till I come to them in the course of the Theogony.

Ver. 22. Some translate this passage *nigris oculis*, and *Le Clerc* chooses *blandis*: I would correct them, and have it arched or bending. Tzetzes entirely favours my interpretation of *ελικοβλαφερον*, eye-brows arched into a circle; a metaphor taken, says he, *εκ των της αμωιλης ελικον*, from the curling of the vine.

Ver. 33. This extravagance in our poet has been the subject of satire to some; but Lucian has been the most severe in his dialogue betwixt himself and Hesiod. Ovid has an allusion to this passage in the beginning of his Art of Love; which Dryden has thus translated:

Nor Clio, nor her sisters, have I seen.
As Hesiod saw them in the shady green.

This flight, however extravagant it may seem to some, certainly adds a grace to the poem; and whoever consults the nineteenth ode of the second book, and the fourth of the third book of Horace, will find this sort of enthusiasm carried to a great height.

Ver. 46. The poet here, from the mouth of the muse, prepares the reader for what he is to expect. Though he proposes to give an historical and physical relation of the generation of the gods, according to the received opinion, yet supplies from invention are necessary to make the work agreeable as a poem.

Ver. 50. *Le Clerc* has a long note on this verse, from Claud. Salmasius, proving the rhapsodists to be so called *απο της ραψοδου*, from singing with a bough in their hands, in imitation of the ancient poets; which bough was of laurel: but why of laurel before any other? The Scholiast Tzetzes gave two very good reasons: first, says he, the poet makes the sceptre, which he received from the muses, of laurel, because Helicon, the place on which they presented it, abounds with that tree; secondly, as the laurel is ever green, it is the most proper emblem of works of genius, which never fade.

Ver. 59. Exactly the same is the flight in the fourth ode of the third book of Horace:

— an me ludit amabilis
Infamia? Audire et videor pios
Errare per lucos, amœnæ
Quos et aquæ subeunt, et auræ!

The sense of which, in short, is this: "Am I agreeably deluded, while I seem to wander through poetic scenes!" And again,

Quo me, Bacche, rapis tui
Plenum! Quæ in nemora, aut quos, agor, in
specus,
Velox mente novâ! Lib. 3. Od. 25.

It is worth observing, that the best poets are generally most poetical in their invocations, or in other parts, where a deity is introduced; for then they seem to be overpowered with the inspiration; but here the fine imagination, and exalted genius, are most required, that while fancy takes her full stretch in fiction, it may seem the real "numinis afflatus."

Ver. 68. Le Clerc judiciously observes, that the poets frequently make inanimate beings affected, or with joy or grief, when there is reason for either, that it may be said, even inanimate beings are moved. This, I think, is a boldness seldom practised but by the best poets, and most frequently among the ancients. We find it with as much success as any where in the poetical parts of the Old Testament.

"The vallies shall stand so thick with corn that
"they shall laugh and sing." Psalm lvi. ver. 14.

ἐξέλασσε δὲ γαῖα πύλινον,
Γῆθησεν δὲ βάθυσ πόντος.

Theognis.

"The wide earth laugh'd, and the deep sea re-
"joic'd."

Tibi rident æquora ponti.

Lucret.

"To thee the waters of the ocean smile."

I give these three quotations to show as the Latin were followers of the Greek poets, it is not unlikely the Greek might imitate the style of the eastern writers in many places.

Ver. 81. Mnemosyne, the same with memory, is here made a person, and the mother of the muses; which, with the etymology of the word *peria*, which Le Clerc tells us, is, in the Phœnician tongue, fruitfulness, and the note to the first verse of the Works and Days, will let us clearly into the poetical meaning of the parents and birthplace of the muses. The same critic derives the word muse from the Phœnician word *mosa*, the feminine for inventor. See farther in the Discourse, &c.

It will now be proper to inquire into the reason of the poet making Mnemosyne empress of Eleuther. Eleuther is a part of Bœotia, so called from a prince of that name: here, says Tzetzes, the poet endeavours to add a glory to his country; for though the muses themselves were born on Pieria, he makes their mother a Bœotian. Pieria is the name of a mountain, and a country lying beneath it, bounded on the north with Thessaly, and on the south with Macedon. Le Clerc derives the word Eleuther from the Phœnician word *Halethir*, a high place from which we see afar off, which word is a compound of *balab*, to ascend, and *thour*, to see afar off. The reader must here observe, that great part of the art of this poem depends on the etymology of the words, and on the prosopopœias. Plutarch, in his rules for the education of children, has observed, that the mythologists have judiciously made Mnemosyne the mother of the muses, intimating that nothing so much cherishes learning as the memory.

Ver. 96. A mountain in Thessaly, which, for the extraordinary height, is often used for heaven.

Ver. 99. The god of love and the graces are proper companions for the muses; for the gifts of the muses are of little value without grace and love: and at banquets, love and good manners, which are implied by the graces, compose the harmony. Tzet.

Ver. 109. Le Clerc here raises a difficulty, and I think without reason; he says the poet so confounds the man Jupiter with the god, that he knows not how to account for it. The poet could here design no other but the Supreme Being; first for the honour of poetry, as appears from some following verses; and secondly, because God is the source of all wisdom, he is the father of the muses, who preside over the principal arts.

Ver. 119. The names of the muses, and their derivations. Clio, from κλειω, to celebrate, to render glorious. Melpomene, from μελπομαι, to sing or warble. Euterpe, from ευ and τερπω, to delight well. Terpsichore, from τερπω to delight, and χορος a choir. Erato, from εραω, to love. Thalia, from θαλαι banquets, or θαλλω, to flourish. Polymnia, πολυς many, and υμνος a song or hymn. Urania, from ουρανος heaven. Calliope, from καλος beautiful, and οψ a voice. Our poet attributes no particular art to each muse; but, according to him, poetry is the province of all. Calliope, indeed, is distinguished from the rest, as presiding over the greater sort of poetry. See the Discourse on the Theology of the ancients, &c.

Ver. 134. Le Clerc tells us, from Dionysius Halicarnassensis, that, at first, all the cities in Greece looked on their kings as their judges to determine all controverted points; and he was esteemed the best king who was the best judge, and the strictest observer of the laws: for the certainty of this, we need no better authority than our own poet, and particularly in his Works and Days: it is worth observing how very careful he is to inspire his readers with sentiments of respect and dignity towards their rulers; and to increase our reverence for them, he derives them from the great Ruler of the universe; and from the same origin are the muses; all which must be thus understood, the prince owes all his regal honours and power to the Supreme Being, and no less than Almighty aid is necessary to make a good poet. I can add nothing more proper to what I have said concerning princes, their office, and derivation of their power, than the first three verses of the sixth chapter of the Wisdom of Solomon. "Hear, therefore, O ye
"kings, and understand; learn ye that be judges
"of the ends of the earth, give ear, you that rule
"the people, and glory in the multitude of na-
"tions; for power is given you of the Lord, and
"sovereignty from the highest, who shall try your
"works, and search out your counsels."

Ver. 156. This, and the nine following verses, are by some attributed to Homer, among the fragments of that poet; where the mistake lies, I cannot tell; but I shall here take an occasion to account, in general, for several verses in the Iliad, Odyssey, the Works and Days, and the Theogony, being alike; they are either such as where they mention the Pleiades, Hyades, and Orion, constellations which were most taken notice of by the old poets, and the names of which naturally run into an hexameter verse; or such as were common or proverbial sayings of the times, which circumstances render it very possible for divers to have wrote the same lines without one ever

seeing the works of the other. I am persuaded that all or most of the similar passages in these two poets are of this nature. If, therefore, some of the old scholiasts and commentators had thoroughly considered this, they would not have had so many impertinencies in their remarks as they have.

Ver. 172. I know not how this is to be taken but physically; if we suppose all things to be the offsprings of Chaos, which are all natural beings, they may properly be said to be nourished by the main, that is by prolific humour. In this sense Milton, in the seventh book of his *Paradise Lost*, judiciously uses the word, speaking of the creation.

Over all the face of the earth
Main ocean flow'd, not idle, but with warm
Prolific humour, soft'ning all her glebe,
Fermenting the great mother to conceive.

Ver. 190. In my interpretation of the generation of the deities I shall chiefly have regard to the physical meanings; such passages as I leave unobserved are what any reader with little trouble may clear to himself, after he has seen my explanations of the most material.

This fable, says Lord Bacon, in his *Wisdom of the Ancients*, speaking of Heaven, seems to contain an enigma of the origin of things, not much different from the truth of the divine word, which tells us of a deformed matter before the works of the six days. To this eternity of confused matter Milton alludes in the seventh book of his *Paradise Lost*.

Far into Chaos, and the world unborn.

Ver. 191. Plato, in his *Phædo*, says the earth was the seat and foundation of the gods, ἀθανάτων he calls them, to show that the gods were once preserved with pious men. *Tzet.* This is strange philosophy, to imagine any beings to have a beginning, and yet immutable and immortal from their first rise; but it is apparent that the poet makes matter precede all things, even the gods. Guetius judges the next verse to be supposititious.

Ver. 194. Tartarus, or hell, is said to be brought forth with the earth, because it is feigned to be in the inmost recesses of the earth. The word Tartarus is derived from the Phœnician *tarabtarabb*, the radix of which is the Hebrew and Arabic *tarabb*, which signifies, he created trouble. *Le Clerc.*

Ver. 196. This fable alludes to, and enters into the cradle of nature. Love seems to be the appetite, or stimulation, of the first matter; or, to speak more intelligible, the natural motion of the atom. *Lord Bacon.*

Ver. 202. It is rightly observed that darkness was over all till the sky was illumined by the sun and the stars; Chaos therefore brought forth darkness and night. *Tzet.* Before any thing appeared all was *herēb* or *eruo*, darkness or night; the same is the account which Moses gives us. *Le Clerc.*

Ver. 204. I believe the word αἰθήρ does not mean the chief, or material, part of the air, but is the same with αἰθήρ serenity. *Le Clerc.* So

night and darkness are properly said to be the parents of day and serenity.

Ver. 206. All that the poet means, is, that earth appeared before the firmament which surrounds it. Similar to this is the description Milton gives of the offsprings of earth.

—God said,
Be gather'd now ye waters under heav'n,
Into one place, and let dry land appear,

Immediately the mountains huge appear
Emergent, and their broad bare backs upheave
Into the clouds.

Book 6.

Let us now consider the difference betwixt *πῶς* *λαγος* or *πῶντες* and *ωκεανος*, which I render the sea and the ocean, and why the sea is said to be from earth only, and the ocean from earth and heaven. That part of the ocean is generally agreed to be called sea which takes a name from any country or particular circumstance; the ocean, Diodorus Siculus tells us, in his first book, comprehends, according to the opinion of the ancients, all moisture which nourishes the universe; and Henry Stephens quotes many authorities to show it was always used in that sense; I shall content myself with one from Homer, and another from Pliny.

Εξ οὗτις πάντες ποταμοί, καὶ πᾶσα θάλασσα,
καὶ πᾶσαι κρήναι, &c.

From which are derived all rivers, every sea, and all fountains.

The ocean, says Pliny, is the receptacle of all waters, and from which all waters flow; it is that which feeds the clouds and the very stars.

Ver. 214. Le Clerc is inclined to think that these names are some of real persons, and some only poetical, as Themis and Mnemosyne which are justice and memory. The same critic might have quoted Plutarch to countenance this opinion, who names for real persons Cœus, Creus, Hyperion, and Japhet: nor is it unreasonable to believe that the poet designed some as persons; for, without such to measure time, Saturn, or *Κρονος*, which signifies time, would be introduced with impropriety.

The etymology of the names of the Cyclops are literally expressive of their nature. The general name to all is from *κύκλος* a circle, and *ὤψ* an eye, Brontes from *βροντή* thunder; Steropes from *αστεροπή* brightness; Arges from *αργος* white, splendid, swift. Apollodorus varies from our poet in one of the names of the Cyclops; instead of *Αργη* he calls him *Αρπη*. It has been often remarked that Homer, Hesiod, Apollodorus, and other mythologists, frequently differ in names: I here give one instance, from many observations which I have made, of their not differing in sense though in name; for as swift, or splendid, is a proper epithet for lightning; *αρπη*, a fork, is as significant a name for one of the Cyclops as *αργη*.

Cottus, Gyges, and Briareus. Grævius will have these three to be men, and robbers; he says

the ancients intended, by the terrible description of their many heads and hands, to express their violence, ferocity, and injustice. The Scholiast Tzetzes says, they are turbulent winds; which physical interpretation seems most agreeable to me; their heads and hands well express their rage; they being imprisoned by their father in the bowels of the earth, and relieved by their mother in process of time, which is the meaning of Saturn releasing them, is all pertinent to the winds. I am not insensible of an objection that may be started in this explication, from the manner in which they are made part of the war with the gods; but we are to consider that the poet does not confine himself to direct physical truth; for which reason he prepared his readers for a mixture of fiction, from the mouth of the muse, in the beginning of the poem.

Let us come to the explanation of the conspiracy of Earth and Saturn against Heaven. Tzetzes, Guilietus, and Le Clerc, have this conjecture likewise of the children which were confined by Heaven in the recesses of the earth; they were the corn-fruits of the earth, which, in time, some person found to be of benefit to human kind: He discovered the metal of which he made a sickle: the posture of reaping is designed by his left hand applied to the members of his father, and his right to the instrument. The giants and nymphs, which are said to spring from the blood of Heaven, are those who had the advantages of the invention. The warlike giants and furies are wars and tumults, which were the consequences of plenty and riches. Saturn throwing the members into the sea, denotes traffic with foreign countries.

Venus, says Lord Bacon, is designed to express the concord of things.

Heaven called his sons Titans, from *τιταινα*, to revenge: his prophecy may allude to the disturbances in the world which were the effects of plenty and luxury.

How monstrous does this story seem in the text! Certainly the author must have some physical meaning in view; and what more probable than the last which we have offered? This allegorical way of writing will cease to be a wonder, when we consider the custom of the times, and the love that the ancients bore to fables; and we must think ourselves happy that we can attain such light into them as we have, since we are divided by such length of time from the first inventors, and seeing the poetical embellishments since added to them, have rendered them more obscure; but of this I shall speak more largely in my discourse at the end.

Ver. 325. The distinction which Tzetzes makes betwixt *Μοῖρα* and *Κηρὰ*, which I translate Destiny and Fate, is this; one confirms the decree concerning our death, and the other the punishment attending evil works. Le Clerc infers, from the poet making even the gods subject to the Fates, that they must be mere men which were immortalized by human adoration; but the passage which Plutarch, in his inquiry after God, quotes from Plato, will better reconcile this; Fate, says

he, is the eternal reason and law implanted in the nature of every being.

Momus is called a deity, because he animadverts on the vices both of men and gods; but why is he called the son of Night? Because censure and backbitings are generally spread privately, and as in the dark. His name is from *Μοῦμος* or *Μομ*, the Phœnician word for vice. Lucian, in his Assembly of the Gods, makes Momus speak thus of himself: "All know me to be free of my tongue, and that I conceal nothing ill done: I blab out every thing," &c. *Le Clerc*.

The Hesperides are nymphs which are said to watch the golden fruit in the western parts of the world. Tzetzes thus interprets this story: The Hesperides are the nocturnal hours in which the stars are in their lustre; by Hercules who is feigned to have plucked the golden fruit, is meant the sun, at whose appearance the stars cease to shine.

Nemesis is called the goddess of Revenge, and the etymology of her name speaks her office, which is from *νέμεσις*, "to resent." Our poet, in his Works and Days, ranks her with Modesty.

Ver. 357. Nereus, which in the Phœnician tongue is *naharo*, "a river," is said to be the son of the Sea, because all rivers take their rise from thence, according to the opinion of the poet. The reason, perhaps, for which he has this extraordinary character in the Theogony, is because he was esteemed a prophetic deity. *Le Clerc*.

Thaumas is here made the son of the Sea and Earth, and the father of Iris: Le Clerc says he is thus allied to the Sea and Iris; he is the deity that presides over clouds and vapours, which arise from the sea and the earth, and cause Iris, or the rainbow. He is called Thaumas, from *θαυμάζω*, "to wonder at, or admire," or from the Phœnician word of the same signification, *thamab*, because all meteors excite wonder or admiration.

Phorcys, says Le Clerc, seems to have been one who employed himself in navigation; but his derivation of the word is too far fetched from the Syrian *pbrak*, "he departed, or travelled." The same critic is surprised, and, indeed, not without reason, that Ceto should be called fair, and have such horrid children; he derives her name from *kout*, "to be contentious, to lothe."

Eurybia is from *εὐρύς*, "wide," and *βίη*, "force," one of extensive power.

Ver. 367. Tzetzes thinks the poet, by the names of the Nereids, designed to express several parts and qualities of the sea; but Le Clerc believes them only the arbitrary invention of the poets. Spenser, in the eleventh canto of the fourth book of his Faery Queene, has introduced a beautiful assemblage of the Nereids, and other sea and river-deities, at the marriage of Thames and Medway: and he has imitated and paraphrased many verses together out of our poet, and translated many more; and most, in my judgment, superior to the Greek; whose manner of imitating the ancients will appear by a quotation of one stanza.

Stanza 48th.

And after these the sea-nymphs marched all,
All goodly damsels, deck'd with long green hair,

Whom of their sire Nereides men call,
 All which the Ocean's daughter to him bare,
 The gray-ey'd Doris; all which fifty are;
 All which she there on her attending had;
 Swift Proto, mild Eucrate, Thetis fair,
 Soft Spio, sweet Eudore, Sao sad,
 Light Doto, wanton Glauce, and Galene glad.

Ver. 418. The Harpies are violent storms; the etymologies of their names are significant of their nature. The word Harpies is from *αρπαζω* to tear, to destroy; Aëlo from *αελλα* a storm; Ocypete from *οκυς* swift, and *πιτομαι* to fly.

Ver. 423. I shall give the story of the Gorgons, and the Graiæ, as related by Lord Bacon, with reflections on the same.

Perseus is said to have been sent by Pallas to slay Medusa, who was very pernicious to many of the inhabitants of the western parts of Hiberia; for she was so dire and horrid a monster, that by her aspect only, she converted men into stones. Of the Gorgons Medusa only was mortal: Perseus, preparing himself to kill her, received arms and other gifts from three deities; from Mercury he had wings for his heels, from Pluto, a helmet, and from Pallas a shield and a looking-glass. He went not immediately towards Medusa, though he was so well instructed; but first to the Graiæ, who were gray and like old women from their birth. They had all but one eye and one tooth, which she who went abroad used, and laid down when she returned. This eye and tooth they lent to Perseus, who finding himself thus completely furnished for his design, flew without delay to Medusa, whom he found sleeping: if she should awake he dared not look in her face; therefore, turning his head aside, he beheld her in the glass of Pallas, and in that manner taking his aim he cut off her head: from her blood instantly sprung Pegasus with wings. Perseus fixed her head in the shield of Pallas, which retained this power, that all who beheld it became stupid as if thunderstruck.

This fable seems invented to show the prudence required in waging war; in which three weighty precepts are to be considered as from the counsel of Pallas. First, In the enlarging dominions, the occasion, facility, and profits of a war, are to be thought of before vicinity of territories; therefore Perseus, though an oriental, did not decline an expedition to the extremest parts of the west. Secondly, Regard ought to be had to the motives of a war, which should be just and honourable; for a war on such terms adds alacrity both to the soldiers and those who bear the expence of the war; it obtains and secures aids, and has many other advantages. No cause of a war is more pious than the quelling tyranny, which so subdues the people as to deprive them of all soul and vigour, which is signified by the aspect of Medusa. Thirdly, The Gorgons were three, by which wars are represented, and Perseus is judiciously made to encounter her only who was mortal; that is, he would not pursue vast and endless hopes, but undertook a war that might be brought to a period. The instruction which Perseus received is that

which conduces to the success or fortune of the war: he received swiftness from Mercury, secrecy of counsels from Orcus, and providence from Pallas. Though Perseus wanted not age nor courage, that he should consult the Graiæ was necessary. The Graiæ are treasons, and elegantly said to be gray, and like old women, from their birth, because of the perpetual fears and tremblings with which traitors are attended. All their force, before they appear in open rebellion, is an eye, or a tooth; for every faction alienated from a state contemplates and bites: this eye and tooth is in common, for what they learn and know passes through the hands of faction from one to the other; the meaning of the tooth is, they all bite alike. Perseus therefore was to make friends of the Graiæ, that they might lend him the eye and the tooth. Two effects follow the conclusion of the war; first, the generation of Pegasus, which plainly denotes fame, that flies abroad and proclaims the victory; the second is the bearing the head of Medusa in the shield; for one glorious and memorable act happily accomplished, restrains all the motions of enemies, and makes even malice amazed and dumb. Thus far Lord Bacon. The following physical explanation from Tzetzes:

Phorcys signifies the vehemence of the waters, Ceto the depth; *γραιαι* the Scholiast interprets *αφρον* the foam, Pephredo and Enyo the desire of marine expeditions. The poet calls the Hesperides murmuring, because the stars in those parts, according to Aristotle, move to a musical harmony: by Stheno and Euryale, which are immortal, he means the immense and inexhaustible parts of the ocean; by Medusa the waters which the sun, or Perseus dries up by his beams. Chrysaor and Pegasus are those parts of matter which are exalted on high, and break in thunder and lightning. Pegasus, says Grævius, is so called, because he was born near *πηγεας*, the fountains of the main; Chrysaor, from his having in his hand *χρυσαιον αορ*, a golden sword. Le Clerc tells us that this fable is originally Phœnician; he derives the name of Perseus from *pharseto* a horseman, and Chrysaor from the Phœnician word *chrisaor* the keeper of fire.

Ver. 456. Some, says the Scholiast, will have Geryon to signify time: his three heads mean the present, past, and the future; Erythea is an island in the ocean where he kept his herds. *Τριτα*.

Le Clerc tells us that when Hercules invaded the island which Geryon possessed, he was opposed by three parties which were inhabitants, and conquered them; which explains his cutting off his three heads.

The same critic afterwards seems to doubt this interpretation; he quotes Bochart to prove that no oxen were in Erythea, and that the island was not productive of grass; but I think if heads are figuratively meant for parties, the herds may as well be took for the men who composed those parties.

Ver. 462. Orthus is the dog of Geryon that watched the herds, which may be some chief officer; and his being murdered in a gloomy stall,

may signify the shameful retreat he made in his time of danger.

Ver. 485. Cerberus, Le Clerc derives from *ebra-brosch*, having many heads. The Hydra, he tells us, means the inhabitants about the lake Lerna: Juno may therefore signify the earth who nourished the Hydra.

Ver. 497. Chimæra is from the Phœnician *chamirab*, burned; it was a mountain so called because it emitted flames; of which says Pliny, the mountain Chimæra in Phælis flames, without ceasing, night and day. Strabo thinks the fable took a rise from this mountain: the three heads may be three cliffs; Bochart supposes them to be three leaders of the people of Pisidia, whose names may have a similitude to the nature of the three animals, the lion, the goat, and the serpent. Bellerophon is said to conquer this monster, to whom the poet gives Pegasus, because to gain the summit of the mountain, no less than a winged horse was required. *Le Clerc*. The interpretation of Chimæra, a mountain, is not unnatural, when we consider her the daughter of Typhaon, of whom we shall speak more largely in a following note.

Ver. 508. Sphinx is thus described by Apollodorus; "she had the breast and face of a woman, the feet and tail of a lion, and the wings of a bird." *Le Clerc* has this interpretation, which seems the most reasonable, of this monster. After deriving the name from *Sphica* which is a murderer, he tells us in Sphinx is shadowed a gang of robbers which lurked in the cavities of a mountain; she is said to have had the face and breast of a woman, because some women were among them, who perhaps allured the travellers; the feet and tail of a lion, because they were cruel and destructive; and the wings of a bird, from their swiftness. She is said to have slain those who could not explain her enigma; that is, they murdered such as unwarily came where they were, and knew not their haunts. Oedipus is recorded to have unravelled the enigma, because he found them and destroyed them.

The Nemæan lion may be an allegory of the same nature, or literally a lion.

The 31st verse, in the original, is commonly given thus:

Κοιρανιον τρητοιο Νημειης ηδ' απισαντος.

in which *τρητοιο* is taken as an adjective signifying *subversive*; but Mr. Robinson, in his edition of Hesiod, published since my translation of our poet, rightly judges *τρητοιο* to be a proper name, and quotes a passage from Diodorus Siculus, and another from Pausanias, in which the den of the Nemæan lion is said to have been in the mountain Tretum: read, therefore, henceforward,

Κοιρανιον Τρητοιο, Νημειης, ηδ' απισαντος.

Ver. 517. Serpents are often in fabulous history constituted guards of things of immense value. The serpent Python kept the oracle at Delphi; and a serpent is made to watch the golden fruit. What is the moral of all this? When we are intrusted with affairs of price and importance, we ought to be as vigilant as serpents. The word *οφις*, "a serpent," from *οφις*, "to see;" and the Phœni-

cian *nabbasch*, "a serpent," is from a verb in the same language, to see. *Le Clerc*. I must add to this explanation, the serpent being placed in a cave to guard the fruit, denotes secrecy, as well as vigilance.

Ver. 522. The commentators have concluded Hesiod later than Homer, from his naming the chief river in Egypt under the appellation of the Nile, which, they say, was not so called in the days of Homer, but Egyptus. This argument cannot prevail, when we consider the word in the *radix*, which, says *Le Clerc*, is *nubbul* and *nbbil*, and in Hebrew *nabbal*, which is the common name for any river; Hesiod, therefore, might choose Nile, κατ' ἐξοχην, for eminence, it being the principal river; or for the same reason, which is not unlikely, that Homer might choose Egyptus, because it came more readily into the verse: but whatever their reasons were for choosing these different names of the same river, here is no foundation to determine so difficult a point as the age of either of these poets from it.

Ver. 523. Alpheus is a river in Elis, and has something more extraordinary, says Pausanias, in it than any other river; it often flows underground and breaks out again. Eridanus, a river, says the Scholiast, of the Sceltæ. Strymon, a river in Thrace. Mæander, in Lydia or Icaria. Ister, in Scythia. Phasis, in Colchis. Rhesus, in Troy. Athelous, in Acarnia or Ætolia. Nessus, in Thrace. Rhodius, in Troy. Haliacmon, in Macedon. Heptaporus, Granicus, and Æsopus, in Troy. Hermus, in Lydia. Simois, in Troy. Peneus, in Thessaly; and some, says Tzetzes, say Granicus and Simois are in Thessaly. Caicus, in Mysia. Sangarius, in Upper Phrygia. Ladon, in Arcadia; this river, says Pausanias, exceeds all the rivers in Greece for clearness of water. Parthenius, in Paphlagonia. Evenus, in Ætolia. Ardescus, in Scythia. Scamander, in Troy. The daughters of Pethys and Ocean, are only poetical names; designed, says the Scholiast, for lakes and rivers of less note than the sons. They are said, continues he, to have the care of mankind from their birth jointly with Apollo, because heat and moisture contribute to generation, and the nutriment of men through life.

Ver. 581. The sun is called *Ἡλιος*, from the Phœnician word *belojo*, that is, high; though this name may suit all the planets, yet it is more properly given to the most eminent of them. He is sprung from Hyperion, that is, from him that exists on high.

Ver. 582. The word *Σεληνη*, the moon, or in the Doric *Σελανη*, is from the Phœnician word *sebelanab*, that is, one that wanders through the night. Aurora, or the morning, being born of the same parents, needs no explanation.

Ver. 585. *Le Clerc* says, the children of Creus and Eurybia, are not to be found in any ancient history, nor to be explained from the nature of things; but if we consider the etymologies of the names of the parents, his remark will prove invalid. Creus is from the verb to judge, and Eurybia, as I have before observed, signifies wide com-

mand; judgment, therefore, and power, are made the parents of three offsprings of renown. I must here observe, that Pallas cannot be the same with her, who is afterwards said to spring from the head of Jove. Our poet calls this Pallas only, and the latter Athena and Tritogenia. The following verses, which tells us the winds sprung from Astræus and Aurora, I should suppose spurious, because we are told in the same poem they sprung from Typhæus, which is every way agreeable to the physical sense; we must therefore suppose them supposititious, or the poet has committed a very great blunder. See farther in the note to ver. 1195.

Ver. 593. Styx, says the Scholiast, is from *στυγία*, to hate, to dread; why her offsprings are made attendants on the Almighty, is conspicuous; but I am not satisfied in Pallas being their father: Tzetzes tells us, that he understands by Pallas, the superior motion which produces such effects. The name, I believe, must come from *παλλω*, a verb, to express extraordinary action; in Latin, *vibro*, *agito*, &c. We are told here, that Styx was ordained by Jove, the oath of the gods; on which Lord Bacon has the following remark. Necessity is elegantly represented by Styx, a fatal and irre-mearable river. The same noble author goes on to show, that the force of leagues is to take away the power of offending, by making it necessary that the offender should undergo the penalty enacted. Thus he proceeds; if the power of hurting be taken away, or if, on breach of covenant, the danger of ruin, or loss of honour or estate, must be the consequence, the league may be said to be ratified, as by the sacrament of Styx, since the dread of banishment from the banquets of the gods follows; under which terms are signified by the ancients, the laws, prerogatives affluence, and felicity of empire. See farther, ver. 1082.

Ver. 625. Le Clerc derives Phœbe from the Phœnician, *phc-pab*, which is *os in illâ*, that is, a prophetic mouth; for, in the Phœnician tongue, the oracle is called the mouth of God; and, to say we consult the mouth of God, is the same as to say we consult the oracle. *Latona*, in Greek, *Leto*, the same critic derives from *lout*, or *lito* or *leto*, which is to use magic charms; therefore, says he, Apollo and Diana, who preside over magic arts, are said to be born of her. *Asteria*, he tells us, comes from *bassetbirab*, which signifies lying hid, not an improper name for an enchantress.

Ver. 633. Hecate is by the Phœnicians called *Ecbatba*, that is, the only *unica*; for which reason the poet calls her *μυνογενής*, the only begotten. She is esteemed the chief president over magic arts, and reckoned the same with the moon. The Phœnicians invoked her, because she is the regent of the night, the time when all incantations, charms, and the like, are performed. The sun is in the same language called *bbadad*, the only, or one *unus*. Hecate is here said to have the fate of mariners jointly with Neptune in her power, because the moon has an influence over the sea, as well as over the land. *Le Clerc*. The Scholiast says, the poet gives this great character of Hecate, because the person who was, perhaps, after her

death honoured with divine rites, was a Bœotian.

Ver. 694. *Estin*, by the Latins called *Vesta*, is by the learned justly derived from *Esch*, or the Syrian *eschtha*, fire; she is esteemed the goddess of fire. Ceres, the Greek *Δημιτρη*, comes from *dai*, a Phœnician word, signifying plenty; a proper name for her who has the honour of being thought the first who taught to cultivate the ground, and to raise fruit-trees. *Hēn*, the Greek name of Juno, is from the Phœnician word *bira* or *barab*, jealousy; than which no name could be more apt to Juno, who is often represented as teasing her husband with jealous surmises. *Aidēs*, or Pluto, is from the Phœnician word *ed* or *ajid*, which is death or destruction; the poet calls him hard of heart, because he spares none. Plutarch tells us, in his life of Theseus, that the descent which that hero is said to make into hell, means nothing more than his journey to Epirus, of which *Aidēs*, or Pluto, was king. Pluto is sometimes called the god of riches, because he had in his kingdom many mines of silver and gold. We now come to the etymologies of *Εννοσιγαιος* and *Ποσειδων*, the names of Neptune, *Posedon* signifies a destroyer of ships, *εννοσιγαιος*, earth-shaker. Jupiter is called the father of gods and men, because all sovereigns are fathers of their people. Saturn is said to swallow his children, that is, he imprisoned them. Thus far Le Clerc. I shall conclude this note with the following remark from Lord Bacon. The first distinction of ages is signified by the reign of Saturn, who, through the frequent dissolutions and short continuances of his sons, is said to have devoured them; the second is described by the reign of Jupiter, who drove those continual changes into Tartarus, by which place is meant perturbation. Guicetus thinks the twelve lines from ver. 745. to 757. supposititious.

Ver. 769. The learned will have Japhet to be the son of Noah, whose posterity inhabited Europe; but, since so many interpolations and falsehoods are mixed with the history of antiquity, we cannot wonder if this story, in some degree, remains yet obscure. Atlas is said to support the heavens near where the Hesperides are situated: Atlas might probably have been the founder of the people who possessed the extremest parts of Africa about the mountain Atlas; which mountain, through the extraordinary height, seemed to prop up heaven, and because it was far in the west, where they imagined heaven almost met the earth. This mountain might have had the name from the first ruler of the people. Menætiſ is called *υβριςτης*, contumelious, or injurious, which is agreeable to the radix, the Chaldean word *menatb*, he terrified. Bochart, in his *Phaleg*, book 1. chap. 2. tells us the true name of Prometheus was Magog, who was the son of Japhet: he is said to have been bound to Caucasus, because he settled near it, and to have stole fire from heaven, because he found out the use of those metals which were in the mines about Caucasus. *Æschylus* puts these words into the mouth of Prometheus, "Who will say he found out brass, iron, silver, and gold, before me?"

The etymology of Magog seems to favour the story of the vulture gnawing his liver; the Hebrew name is *moug* or *magag*, which is to waste away. The radix of Gog is, he burned, not an improper name for him who was enamoured with Pandora. *Le Clerc*. To these accounts, I shall add the following from Diodorus Siculus: "The Nile, under the rising of the Dog-star, at which time it was usually full, overflowed the bounds, and laid great part of Egypt under water. Prometheus, who tried to preserve the people, by endeavouring to stop the flood, died through grief, because he could not accomplish his design. Hercules, inured to labour, and to overcome difficulties, stopped the current, and turned it to the former channel. This gave rise, among the Greek poets, to the story of Hercules killing the eagle which preyed on the liver of Prometheus. The name of the river was then *Αἴτος*, the Greek word for an eagle."

Since the opinions of the learned are so various on this and several other fables of antiquity, we must rest on those interpretations which come nearest to nature, and which leave us least in the dark. My judgment is, that whatever might give birth to this fable, our poet, not regarding the different relations in his time, designed it as a moral lesson, showing the bad effects of a too free indulgence of the passions; and, in the character of Prometheus, the benefits of regulating them with discretion; which I think I have showed in my remarks on this story, as told in the Works and Days; to which I shall add the following reflections from Lord Bacon, which are more properly introduced here, as they more particularly regard this fable, as told in the Theogony.

"After the improvement of arts and the human understanding, the parable passes to religion, for the cultivation of arts was followed by the institution of divine worship, which hypocrisy soon polluted. Under the twofold sacrifice, the religious person and the hypocrite are truly represented: one contains the fat, which is the portion of God, by the flame and fumes arising, from which the affection and zeal for the glory of God are signified; by the entrails and flesh of the sacrifice, which are good and wholesome, are meant the bowels of charity. In the other is nothing but dry and naked bones, which only stuff up the skin, while they make a fair show of a sacrifice. In the other part of the fable, Prometheus means prudent men who consider for the future, and warily avoid the many evils and misfortunes which human nature is liable to: but this good property is accompanied with many cares, with the deprivation of pleasures; they defraud their genius of various joys of life, they perplex themselves with intestine fears and troublesome reflections, which are denoted by the eagle gnawing his liver while he is bound to the pillar of necessity: from the night they obtain some relief, but wake in the morning to fresh anxieties. Prometheus having assistance from Hercules, means fortitude of mind. The same is the explanation by the Scholiast of the eagle. The poet goes farther than what Tzetzes and Lord Bacon have observed: he makes Her-

cules free Prometheus by the consent of Jupiter; the meaning of which must be, that such miseries are not to be undergone patiently without divine aid to support the spirits. This story is not yet without obscurities; for Hesiod calls Prometheus *ἀπαρητα*, blameless, hurtful to none; and at the same time makes him playing tricks with Jupiter in his offerings. I must here observe, that this fable is more consistent in every part as told in the Works and Days; nor is it to be wondered at, when we consider that poem as the work of his riper years, when his genius was more sedate, and his judgment more settled." I shall conclude this note with an allusion which Milton has, in his description of Eve, to the story of Pandora; from which it is evident he took the box of Pandora in the same sense with the forbidden fruit; and, as I have already observed in my notes to the Works and Days, many have been of opinion that both are from one tradition. The lines in Paradise Lost are these:

More lovely than Pandora, whom the gods
Endow'd with all their gifts, (and, O! too like
In sad event!) when, to th' unwiser son
Of Japhet brought by Hermes, she ensnar'd
Mankind with her fair looks. Book 4.

Ver. 916. Here begins the battle of the gods, which continues to ver. 1222. In this the learned are much divided concerning the intention of the poet, and from whence he took his account of the war. Some imagine it of Egyptian rise, from the story of Typhon; nor are they few who believe it, from the tradition of the battle of the angels; but Tzetzes thinks it no other than a poetical description of a war of the elements: but they are certainly wrong who think it entirely from either. I do not in the least doubt but the poet had a physical view in some passages, and in some particulars may possibly have had a regard to some relations, fabulous or real, of antiquity; but his main design seems to have been that of relating a war betwixt supernatural beings, and, by raising his imagination to the utmost height, to present the dreadfullest ideas which the human mind is capable of conceiving: and I believe I may venture to say, some parts of this war are the sublimest of the sublime poetry of the ancients. If a nicer eye should discover every part of this war to be entirely physical, which I think impossible, yet I am unjustifiable in my supposing his design to be that of relating a war betwixt supernatural beings; for while those parts of nature are clothed in prosopopæias they cease to be parts of nature till the allegory is unfolded; our ideas, therefore, are to be placed on the immediate objects of sense, which are the persons of the war, as they directly present themselves to our eyes from the description of the poet. I must here observe, that all the commentators on our poet are silent on the poetical beauties of this war, which makes me think them to have been men of more learning than taste.

Our poet tells us the gods eat nectar and ambrosia; and Homer mentions a river of nectar and ambrosia, *ἀμβροσίης καὶ νέκταρος ποταμὸς*.

Odyss. τ.: from which we may conclude those words to be used both for meat and drink among the gods.

Ver. 973. The reader is to take notice, that though most of the Titans were against Jupiter, all were not, for Cottus, Gyges, and Briareus, were Titans; what an image in these three brothers tearing up the rocks, and throwing them against the enemy! Heaven, earth, the ocean, and hell, are all disturbed by the tumult. The poet artfully takes care to raise our ideas, by heightening the images to the last. The description of the battle, from ver. 970. to 993. is great, but it is impossible that any reader should not feel himself more affected with the grandeur and terror with which Jupiter urges the fight. Heaven, earth, the ocean, and hell, are all disturbed as before, but the additional terror, and the variation of the language, make a new scene to the mind.

One conflagration seems to rise on all,
And threatens Chaos with the gen'ral fall.

How elevated are these in the original! Could the genius of man think of any thing sublimer to paint the horror of the day, attended with the roar of all the winds, and the whirling of the dust! Could he think of ought more adequate to our ideas, to express the voice of the war by, than by likening it to the confused meeting of the heavens and the earth, to the wreck of worlds! "Do you see," says Longinus on another author, "the earth opening to her centre, the regions of death just ready to appear, and the whole fabric of the world upon the point of being rent asunder and destroyed, to signify, that in this combat, heaven, hell, things mortal and immortal, every thing, co-laboured, as it were, with the gods, and that all nature was endangered." This passage of Longinus could never be applied with more justice than here, nor more properly expressed in our own language, than in the words of Mr. Welfsted, from his translation of that author.

Milton, in his *Battle of the Angels*, has judiciously imitated several parts of our poet. In one place, says he,

Hell heard th' unsufferable noise——

And, a little farther,

—— confounded Chaos roar'd,
And felt tenfold confusion. *Book 6.*

Le Clerc thinks Chaos here means the whole vast extent of air; but Grævius takes it for *μυγα χασμα*, "the vast chasm that leads to hell;" in which last sense Milton likewise takes it, describing the pass from hell to earth:

Before their eyes, in sudden view, appear
The secrets of the hoary deep; a dark
Illimitable ocean! without bound,
Without dimension; where length, breadth, and
height,
And time, and place, are lost; where eldest Night,
And Chaos, ancestors of nature, hold
Eternal anarchy, amidst the noise
Of endless wars. *Book 2.*

And, in the first book,

—— the universal host upsent
A shout that tore Hell's concave, and beyond
Frighted the reign of Chaos and old Night.

Ver. 1030. From this verse to ver. 1134. the poet judiciously relieves the mind from the rage of battle, with a description of Tartarus, Styx, &c. with an intent to end the war, and surprise us with something more sublime than we could expect, after what had preceded the single combat betwixt Jupiter and Typhæus. In the description of Tartarus, Milton has many imitations of our poet:

With earth thy vast foundations cover'd o'er
Hesiod.

Satan describing his realm.

—— lately heav'n, and earth, another world,
Hung o'er my realm. *Milton, book 2.*

The entrance there, and the last limits, lie
Of earth, the barren main, the starry sky,
And Tart'rus; there of all the fountains rise.
Hesiod.

—— this wild abyss,
The womb of nature, and perhaps her grave.
Milton, book 2.

—— where heav'n
With earth and ocean meets. *Book 4.*

And afterwards:

—— and now, in little space,
The confines met of empyrean heav'n,
And of this world, and on the left hand hell.
Book 10.

Here storms in hoarse, in frightful murmurs
play. *Hesiod.*

—— nor was his ear less peal'd
With noises loud and ruinous. *Milton, book 2.*

And a little lower, in the same book:

At length a universal hubbub wild
Of stunning sounds, and voices all confus'd,
Borne through the hollow dark, assaults his ears.

Tzetzes says the beginning and end of things are said to be here figuratively, because we are in the dark as to the knowledge of them. The verses in which Atlas is made to prop up the heavens, Guetus supposes not genuine.

Ver. 1082. The story of Styx, with the punishment of the perjured gods, is chiefly poetical. Why this river should be detestable to immortals I know not, unless they think it a sad restraint to be deterred from perjury: this thought has too much impiety in it, therefore we must give it another turn; as relating to the oaths of great men, or in the same sense that death is called a foe to the gods, which is from the grief they are sometimes made to suffer for the death of any favourite mortal, as Venus for Adonis, and Thetis for Achilles.

Ver. 1136. Typhæus and Typhaon seem to be different persons (though some will have them two names of one person), because Typhæus is no sooner born but he rebels, and is immediately destroyed: and Typhaon is made the father of

many children. Le Clerc derives the word Typhæus from the Phœnician word *touphon*, the radix of which is *touph*, to overflow, to overwhelm. He is not injudiciously called the father of the winds, and the son of Earth and Tartarus; the various voices which the poet gives him are agreeable to the several tones of the winds at several times. Lord Bacon has this reflection on the poetical description of this monster. Speaking of rebellion, he says, because of the infinite evils which it brings on princes and their subjects, it is represented by the horrid image of Typhæus, whose hundred heads are the divided powers and flaming jaws incendiary designs.

Ver. 1154. With what dignity Jupiter sets out for this single combat! heaven and earth tremble beneath him when he rises in anger. Similar to this passage, is the seventh verse of the eighteenth Psalm. "Then the earth shook and trembled, the foundations of the hills also moved, and were shaken, because he was wroth."

Here are three circumstances which exalt the images above those in the former battles, the winds bearing the fire on their wings, the giant flaming from his hundred heads, and the similitude of the furnace.

Ver. 1195. In the winds which are here said to be from the gods, the poet omits the east wind; though some will have *apyrens* to be the name of a wind, and as such Mombrilius takes it in his translation; Aulus Gellius indeed gives it as the name of a wind, but as one that blows from the west, by the Latins called Caurus. Stephens gives examples of it being used for the epithet swift; and Scapula quotes Aristotle to show he uses it in the same sense, *apyrens* *κεραυνοι* the swift lightnings: *apyrens* is from the same radix, and of the same signification with *apyrens*. The poet calls the winds sprung from Typhæus greatly destructive to mortals, and those from the gods profitable; the two following verses from Exodus, therefore, will, in some degree, countenance my interpretation of Argestes; which I make an adjective to agree with *Ζεφυρος*, i. e. *αργεσιω Ζεφυρος*. "The Lord brought an east-wind on the land all that day, and all that night, and when it was morning the east-wind brought the locusts." Chap. x. 13. "The Lord turned a mighty strong west-wind, which took away the locusts." Ver. 19. Though this is related as a miracle, we may suppose the properest winds were chosen to bring the evil and the good on the land. In whatever sense this word is taken, our poet is not free from absurdity in his philosophy, when he makes the north, south, and west winds, spring from the gods, and those which tyrannize by sea and land from Typhæus: for the winds from each corner are hurtful sometimes, all depending on what circumstances the elements are in, and not from what part the winds come.

Ver. 1222 Here ends the war. Tzetzes says the conquest which Jupiter gained over the foe, was the tranquillity of nature after the confusion of the elements was laid. However the physical interpretation may hold good through the whole,

the war is regularly conducted, and justly concluded; the hero is happily situated, the enemy punished, and the allies rewarded.

Ver. 1223. I shall give the explanation of the story of Minerva springing from the head of Jove, in the words of Lord Bacon, from his Essay on Counsel.

The ancient times do set forth in figure, both the incorporation, and inseparable conjunction, of counsel with kings, and the wise and politic use of counsel by kings; the one in that they say Jupiter did marry Metis, which signifieth counsel, whereby they intend that sovereignty is married to counsel; the other in that which followeth, which was thus; they say after Jupiter was married to Metis she conceived by him, and was with child; but Jupiter suffered her not to stay till she brought forth, but eat her up; whereby he became himself with child, and was delivered of Pallas armed out of his head; which monstrous fable containeth a secret of empire, how kings are to make use of their council of state; that first they ought to refer matters unto them, which is the first begetting or impregnation; but when they are elaborate, moulded, and shaped, in the womb of their council, and grow ripe, and ready to be brought forth, that then they suffer not their counsel to go through with the resolution and direction as if it depended on them, but take the matter back into their own hands, and make it appear to the world that the decrees and final directions (which, because they come forth with prudence and power, are resembled by Pallas armed) proceeded from themselves, and not only from their authority, but, the more to add reputation to themselves, from their head and device. Thus far Lord Bacon. What to make of the son whom Jupiter destroyed before his birth, I know not, unless tyranny is shadowed in that allegory, which often follows power, but was here quelled before it could exert itself, by wisdom or reflection. Milton has judiciously applied this image of Pallas springing from the head of Jove to Sin and Satan, in the second book of Paradise Lost, where Sin giving an account of her birth, thus speaks to Satan,

All on a sudden, miserable pain

Surpris'd thee, dim thine eyes, and dizzy swum
In darkness; while thy head flames thick and
fast

Threw forth, till on the left side op'ning wide;
Likest to thee in shape, and count'nance bright,
Then shining heavenly fair, a goddess arm'd,
Out of thy head I sprung.

Ver. 1239. Jupiter and Themis are said to be the parents of the hours; the meaning of which is, power and justice bless the land, or make the seasons or hours propitious, by laying down good laws which preserve property and peace. Some take Eunomie, Dice, and Irene, to be only poetical names for the hours or seasons of the year; but Grævius laughs at the ignorance of such interpreters, and proves, beyond contradiction, they mean good laws, right, and peace; which is the literal

construction of the names. He produces a passage from Pindar, Olymp. 13, where they can be understood in no other sense; the words of the poet, in English, are these. Here Eunomia dwells with her sisters, Dica the safe foundations of cities, and Irena endowed with the same manners, with the other, the disposers of riches to men, the golden daughters of Themis good in counsel. We are to observe the difference of the names in Hesiod and Pindar is only from a change of the dialect in the latter. Mombricitus has taken the hours in the same sense:

Dein horas Themis ediderat, Jovis altera conjux,
Justitiam, legemque bonam pacemque virentem.

The poet before makes the Fates spring from Night; a mistake therefore must be in one place; Le Clerc supposes it here. Mr. Robinson, to avoid the contradiction which is made by the common interpretation of *Μοῖρας*, &c. here places *Μοῖρας* after *ωραιῶσι*, in the construction, and not after *τικῶν*; which gives it a better sense; however, *ωραιῶσι Μοῖρας*, with their names as they stand here, will not well admit of this construction which Mr. Robinson makes, "bonæ leges, justitia, et pax, humanam sortem pulchram et felicem reddunt." I am inclined to think the three verses here concerning the fates spurious: I am sure they are absurd.

Ver. 1251. Aglaia from *αγλαος*, splendid; Euphrosyne signifies joy; Thalia from *θαλαῖαι*, banquets.

Ver. 1257. Persephone, by the Latins called Proserpina, Le Clerc derives from the Phœnician word *perisaphoun*, in English hidden fruit, which means the fruit committed to the earth; Jove, therefore, whether we understand him as the Supreme Being, or physically the air, is properly called the father of Persephone, and Ceres her mother. Pluto is the heat in the earth which contributes towards maturing the fruits. Besides this interpretation, a story is told of Ceres, a queen of Sicily, whose daughter was forced away by Pluto.

Ver. 1264. Grævius makes one inference from the Muses having diadems of gold on their heads, which is that luxury in dress which prevailed among the ancients. On this occasion he uses the words of Ælian from his Various History, book 1. chap. 18. "Who can deny that the women among the ancients abounded in luxury?"

Ver. 1267. Le Clerc says Phœbus Apollo comes from the Hebrew *phe-bo-hapollon*, having a wonderful mouth; but we must take notice that the poet calls him only Apollo here. Artemis, whom the Latins call Diana, the same critic derives from the Phœnician words *bar*, a mountain, and *thamab*, admired.

Ver. 1271. The poet means by this, that Juno was the last of goddesses whom he took to his bed, and whom he made his wife; the rest were only concubines. The word *ακοῖτις*, a wife, our author uses to none but Juno.

Hebe, the goddess of youth is derived from the Hebrew word *eb*, to flourish; *Ἀρης*, in Latin Mars, from *Hari*, which signifies a mountain-man: it is well known that the seat of Mars was on the

mountains of Thrace. *Εἰλεθυῖα*, or Lucina, is from *heilidia*, she caused to bring forth; a proper name for a goddess who presides over human birth. *Le Clerc*.

The meaning of this may be, that to the supreme beings, or to earth and air, which are here Jupiter and Juno, we owe our birth, our bloom of youth, and vigour or maturity; which are denoted by Lucina, Hebe, and Mars.

Ver. 1280. The vulgar reading of this passage is this; nor is it in any edition I have seen otherwise.

Ἦν δ' ἠφαιστον κλυτον ἐν φιλοτητι μίγνισα
Γενάτο.

Juno, joining in love, brought forth the renowned Vulcan; than which reading nothing can be more absurd. This is a flagrant instance of the ignorance of the transcribers; nor indeed are those free from censure who have had the care of the press in the printed editions. The very words which follow point out the mistake of *ἐν φιλοτητι*.

—καὶ ζαμυνῆσι, καὶ ἦρισιν ὡ παρικοῖσι.

She used her utmost endeavours, and contended with her husband. For what did she contend with her husband? To bring forth without his assistance, as he did without her. Had the poet intended to make Vulcan the son of Jupiter and Juno, he would have placed him in the list with Hebe, Mars, and Lucina; but, instead of that, he lets the birth of Minerva, though he had given an account of it before, intervene, that the reason of the resentment of Juno may immediately appear: let us therefore read it *ἐν φιλοτητι μίγνισα*, and the sense will be this: Juno, without the joys of love, brought forth the renowned Vulcan, resolving to revenge herself on her husband. Thus Tzetzes and Grævius take it; and thus Mombricitus has translated it:

Sic quoque, nullius commixta libidine, Juno
Te Vulcane tulit.

Sic quoque is here very proper, because it alludes to the preceding lines of the birth of Minerva. *ἠφαιστος*, I believe, comes from *απῆω*, to burn, and from *αἰσῶ*, to destroy. I have another reason which may possibly enforce this reading, and which I have never met with. As Vulcan is called the god of artificers, in metals he is rightly the son of Juno only, who is sometimes physically taken for the earth.

Ver. 1285. Triton is feigned to be the son of Neptune and Amphitrite, and by later poets made the trumpeter of Neptune. Le Clerc takes the name from the Chaldean word *retat*, he stirred up a clamour.

Ver. 1288. This passage, where Terror and Fear are made the sons of Mars, wants no explanation; why Harmonia is the daughter of him and Venus I know not, unless the poet means that beauty is sometimes the reward of courage.

Ver. 1296. Maia is one of the Pleiades; how she may be said to be the daughter of Atlas, see in the Works and Days, book 2. note 1. The Scholiast interprets Hermes, being the messenger of the

gods, thus; the herald of heaven is that which brings divine things to light.

Ver. 1300. Bacchus is said to be born of Semele, which word Le Clerc derives from the Phœnician *šmelab*, which signifies a virgin ripe for man. The Greek name of Bacchus is *Διονυσος*, which is literally the son of Jove; some have a different derivation; but since this agrees with his birth, according to the Theogony, it will be needless to seek any other. He is the god who presides over the vintage; therefore, as all pleasures are from God, he is justly derived from the same source. See farther in the Discourse at the end.

Ver. 1304. The story of Jupiter possessing Alcmena in the shape of her husband Amphitryon, is well known: Hercules physically signifies strength and courage, which are from Jove.

Ver. 1306. Vulcan and Aglaia are here husband and wife; but Venus is made the consort of Vulcan by other authors. Vulcan, the god of artificers in fire, and Aglaia, one of the Graces, are properly joined, because, by the help of both, all that is ornamental is brought to perfection. Vulcan is called lame, because fire cannot subsist without fuel. These two are brought together, but no children are born of them, which does not answer the title of the generation of the gods, therefore improperly introduced in a poem under that title, as are the other persons who meet and not propagate.

Ver. 1312. Hercules is married to Hebe, that is, to eternal youth, the reward of great and glorious actions.

Ver. 1318. Circe, as an enchantress, is properly said to be a daughter of the Sun; and Medea, for the same reason, is justly derived from the same source.

Ver. 1332. We are now come to the last part of the poem, where goddesses submit to the embraces of mortals. How ridiculous would these stories seem, were they to be understood in the very letter! Such, therefore, (an observation I have made before) as remain obscure to us, we must conclude to have lost of their explanation through the length of time in which they have been handed down to us. The meeting of Jason and Ceres in Crete, plainly signifies the land being cultivated by that hero; and Plutus, the god of riches, being the produce of their loves, means the fruits of his labour and industry.

Ver. 1340. Cadmus and Harmonia have, doubtless, some relation to persons in history. Polydore, the Scholiast, says, was so called, because the gods distributed their gifts at the nuptials of his parents.

Ver. 1347. These verses of Chrysaor and Callirhoe, are, doubtless, placed here by mistake, since they were introduced before in a more proper manner: here they are absurd, because Chrysaor and Callirhoe are not reckoned mortals.

Ver. 1354. I believe Memnon and Hemathion were called by the ancient Greeks, sons of Aurora, because they were of the orientals which settled in Greece. Memnon was king of Ethiopia, which country is in the east from Greece. *Le Clerc*. Tzetzes tells us, that Macedon was so called from Hemathion, who was slain by Hercules; but that does not agree with Memnon being slain by Achilles, because the distance of time betwixt Hercules and Achilles was too long; besides Memnon was slain in his youth, which increases the error in point of time. The reason which Lord Bacon gives for Memnon being the son of Aurora, is, that as he was a youth whose glories were short-lived, he is properly said to be the son of the morning, whose beauties soon pass away. The same remark, perhaps, may be applied to Hemathion and Phaëthon.

Ver. 1366. Many passages may be collected, from which the Argonauts will appear to have been Thessalian merchants, who sailed to Colchis; but, since Hesiod intended not to relate the expedition, it would be needless to give the history here. *Le Clerc*.

Ver. 1380. Æacus, Achilles, and Æneas, are names well known in history, and seem to be mentioned only as the reputed sons of goddesses by mortals without any physical view; which seems to be the end of introducing Agrius, Latinus, and other names.

Ver. 1394. Le Clerc takes Naufinous to be the inclination which Ulysses had to leave Calypso, and Naufithous the ship in which he sailed from her; both words, indeed, are expressive of such meanings, but as many persons have had names from their dispositions, offices, or some particular circumstance of their lives, or names given them significant of some quality or employment, yet not applicable to those who are so named, we are not certain whether these are designed as real names or not.

Ver. 1403. This concludes the Theogony, as the poem now stands, from which it appears, that the poet writ or intended to write, of women of renown; but such a work could not come under the title of the Theogony; of which see farther in the fifth section of my Discourse on the Writings of Hesiod.

A DISCOURSE

ON THE THEOLOGY AND MYTHOLOGY OF THE ANCIENTS.

IN the following discourse I shall confine myself to the Theology and Mythology of the ancient Greeks, showing their rise and progress, with a view only to the Theogony of Hesiod, intending it but as an appendix to the notes.

The Greeks, doubtless, derived great part of their religion from the Egyptians; and though Herodotus tells us, in one place, that Hesiod, with Homer, was the first who introduced a Theogony among the Grecians, and the first who gave names to the gods, yet he contradicts that opinion in his second book, where he says Melampus seems to have learned the stories of Bacchus from Cadmus and other Tyrians, which came with him from Phœnicia to the country now called Bœotia: he must therefore mean that Hesiod and Homer were the first who gave the gods a poetical dress, and who used them with more freedom in their writings than preceding authors.

Herodotus, Diodorus Siculus, and Pausanias, all mention Cadmus settling in Bœotia, and Egyptian colonies in other parts of Greece; and Herodotus says almost all the names of the gods in Greece were from Egypt: to enforce which, I have translated the following account from Diodorus Siculus.

We learn from the Egyptians that many by nature mortal, were honoured with immortality for their wisdom, and inventions which proved useful to mankind, some of which were kings of Egypt; and to such they gave the names of the celestial deities. Their first prince was called *Ἡλῖος*, from the planet of that name, the sun. We are told that *Ἡφαίστος*, or Vulcan, was the inventor of fire, that is, the use of it; for seeing a tree on the mountains blasted from heaven, and the wood burning, he received much comfort from the heat, being then winter; from this he fired some combustible matter, and preserved the use of it afterwards to men; for which reason he was made ruler of the people. After this Chronos, or Saturn reigned, who married his sister Rhea, of whom five deities were born, whose names were Osiris, Isis, Typhon, Apollo, Aphrodite. Osiris, is Bacchus and Isis, Ceres, or Demeter. Isis was married to Osiris, and, after she shared the dominion, made many discoveries for the benefit of life; she found the use of corn, which grew before neglected in the fields like other herbs; and Osiris began to cultivate the fruit-trees. In remembrance of these persons annual rites were decreed, which are now preserved; in the time of harvest they offer the first-fruits of the corn to Isis, and invoke her.

Hermes invented letters, and the lyre of three chords; the first instituted divine worship, and ordained sacrifices to the gods.

The same historian proceeds to relate the expedition of Osiris, who was accompanied by his brother Apollo, who is said to be the first that pointed out the laurel. Osiris took great delight in music, for which reason he carried with him a company of musicians, among which were nine virgins eminent for their skill in singing, and in other sciences, whom the Greeks call the Muses, and Apollo they style their president. Osiris at his return was deified, and afterwards murdered by his brother Typhon, a turbulent and impious man. Isis and her son revenged themselves on Typhon and his accomplices.

Thus far Diodorus in his first book; and Plutarch, in his treatise of Isis and Osiris, seems to think the Grecian poets, in their stories of Jupiter and the Titans, and of Bacchus and Ceres, indebted to the Egyptians.

Diodorus, in his third book, tells us Cadmus, who was derived from Egypt, brought letters from Phœnicia, and Linus was the first among the Greeks who invented poetic numbers and melody, and who writ an account of the actions of the first Bacchus; he had many disciples, the most renowned of which were Hercules, Thamyris, and Orpheus. We are told by the same author, that Orpheus, who was let into the theology of the Egyptians, applied the generation of the Osiris of old, to the then modern times, and, being gratified by the Cadmeans, instituted new rites. Semele, the daughter of Cadmus, being deflowered, bore a child of the same likeness, which they attributed to Osiris of Egypt; Orpheus, who was admitted into the mysteries of the religion, endeavoured to veil her shame, by giving out that Semele conceived by Jove, and brought forth Bacchus. Hence men, partly through ignorance, and partly through the honour which they had for Orpheus, and confidence in him, were deceived.

From these passages we learn that the religion and gods of Egypt were, in part, translated with the colonies into Greece; but they continued not long without innovations and alterations. Linus first sung the exploits of the first Bacchus or Osiris; he, doubtless, took all the poetical liberty that he could with his subject: Orpheus after him banished the first Bacchus from the theology, and introduced the second with a lie to conceal the shame of a polluted woman. In short, all the stories

which were told in honour of those Egyptians, who had deserved well of their country, were, with their names, applied to other persons. Thus, according to the historian, the divine Orpheus set out with bribery, flattery, and delusion.

Hesiod begins his Theogony with the first principle of the heathen system, that Chaos was the parent of all, and Heaven and Earth the parents of all visible things. That Heaven is the father, says Plutarch, in his Inquiry after God, appears from his pouring down the waters which have the spermatic faculty, and Earth the mother, because she brings forth. This, according to the opinion of Plutarch, and many more, was the origin of the multiplicity of gods, men esteeming those bodies in the heavens and on the earth, from which they received benefit, the immediate objects of their gratitude and adoration: the same were the motives afterwards which induced them to pay divine honours to mortal men, as we see in the account we have from Diodorus. The design of the poet was to give a catalogue of those deities who were, in any sense, esteemed as such in the times in which he lived, whether fabulous, historical, or physical; but we must take notice, that even where a story had rise from fable, or history, he seems to labour at reducing it to nature, as in that of the muses: what was before of mean original, from nine minstrels, slaves to a prince, is rendered great by the genius of the poet.

I shall conclude, thinking it all that is farther necessary to be said, and particularly on the Mythology, with the following translation from the preface of Lord Bacon to his treatise on the Wisdom of the Ancients.

I am not ignorant how uncertain fiction is, and how liable to be wrested to this or that sense, nor how prevalent wit and discourse are, so as ingeniously to apply such meanings as were not thought of originally: but let not the follies and license of few lessen the esteem due to parables; for that would be profane and bold, since religion delights in such veils and shadows: but, reflecting on human wisdom, I ingeniously confess my real opinion is, that mystery and allegory were from the original intended in many fables of the ancient poets; this appears apt and conspicuous to me, whether ravished with a veneration for antiquity, or because I find such coherence in the similitude with the things signified, in the very texture of the fable, and in the propriety of the names which are given to the persons or actors in the fable; and no man can positively deny that this was the sense proposed from the beginning, and industriously veiled in this manner. How can the conformity and judgment of the names be obscure to any? Metis being made the wife of Jove, plainly signifies counsel. No one should be moved if he sometimes finds any addition for the sake of history, or by way of embellishment, or if chronology should happen to be confounded, or if part of one fable should be transferred to another, and a new allegory introduced; for these were all necessary and to be expected, seeing they are the inventions of men of different ages, and who writ to

different ends, some with a view to the nature of things, and other to civil affairs.

We have another sign, and that no small one, of this hidden sense which we have been speaking of; which is, that some of these fables are in the narration, that is, in themselves literally understood, so foolish and absurd, that they seem to proclaim a parable at a distance. Such as are probable may be feigned for amusement, and in imitation of history; but where no such designs appear, but they seem to be what none would imagine or relate, they must be calculated for other uses! What a fiction is this! Jove took Metis for his wife, and as soon as he perceived her pregnant, eat her, whence he himself conceived, and brought forth Pallas, armed from his head. Nothing can appear more monstrous, more like a dream, and more out of the course of thinking, than this story in itself. What has a great weight with me, is, that many of these fables seem not to be invented by those who have related them, Homer, Hesiod, and other writers; for were they the fictions of that age, and of those who delivered them down to us, nothing great and exalted, according to my opinion, could be expected from such an origin: but if any one will deliberate on this subject attentively, these will appear to be delivered and related as what were before believed and received, and not as tales then first invented and communicated; besides, as they are told in different manners by authors of almost the same times, they are easily perceived to be common, and derived from old memorial tradition, and are various only from the additional embellishments which diverse writers have bestowed on them.

In old times, when the inventions of men, and the conclusions deduced from them, were new and uncommon, parables, and similes, of all kinds abounded. As hieroglyphics were more ancient than parables, parables were more ancient than arguments. We shall close what we have here said, with this observation; the wisdom of the ancients was either great or happy; great if these figures were the fruits of their industry, and happy if they looked no farther, that they have afforded matter and occasion so worthy contemplation.

POSTSCRIPT.

I CANNOT take my leave of this work without expressing my gratitude to Mr. Theobald for his kind assistance in it. Much may with justice be said to the advantage of that gentleman, but his own writings will be testimonies of his abilities, when, perhaps, this profession of my friendship for him, and of my zeal for his merit, shall be forgot.

Such remarks as I have received from my friends I have distinguished from my own, in justice to those by whom I have been so obliged, lest, by a general acknowledgment only, such errors as I may have possibly committed, should, by the wrong guesses of some, be unjustly imputed to them.

Feb. 15. 1728.

THOMAS COOKE.

FRANCIS FAWKES, M. A.

Τοις Βουκολικοις, πλην ολιγων των εξωθεν, ο Θεοκρίτος επιτυχισματος.
LONGINUS.

THE WORKS

THEOCRIST

TRANSLATED FROM THE GREEK

BY FRANCIS PARKES, M.A.

Printed by J. G. & J. H. G. in the Strand, London.

DEDICATION.

To the Honourable

CHARLES YORKE.

SIR,

THE complaint which Theocritus makes in one of his Idylliums, of the neglect shown to his muse, naturally reminded me of my own necessity. The utmost ambition of my wishes could not have aspired after a more illustrious patron than Mr. Yorke; I was not kept long in suspense, having, through a worthy friend, received permission to inscribe to you the subsequent sheets; and the favour was granted in a manner so peculiarly polite, that I esteemed the obligation more than doubled.

It was customary among the ancient Romans, for the plebeians to choose out of the body of the patricians protectors or patrons, whose care it was to assist their clients with their interest, and defend them from the oppression of the great; to advise them in points of law, to manage their suits, and secure their peace and happiness: what a powerful advocate, in this respect, you would prove, let the pleadings at the bar, the decisions in Westminster-hall, and the debates in the senate, determine. But the friend I seek at present, must be eminent for his enlivened genius, the delicacy of his taste in literature, his classical learning, and his generous protection of the muses: and where can I find these shining abilities, and these benevolent virtues so happily combined, as in that eminent patron, who does me the honour to countenance the following work? You, Sir, are not only "*mus*," "*sis amicus*," but

—*Musarumq. comes, cui carmina semper
Et citharæ cordi.*

You have long since sacrificed to the muses with success; and had not the tenor of your studies,

warmed by the example, and improved by the knowledge and experience of your admirable father, formed you to shine with so much lustre in a more active and exalted sphere, you had been ranked with the most celebrated authors in polite learning. But I cease to wonder, that you should have attained qualifications like these, in the early culture of your talents, when I consider your zeal to vindicate the privilege of your predecessors; for the great lawgivers of antiquity were generally poets: Themis and the muses are nearly joined in affinity; both derived from heaven; they both distribute concord, harmony, and good will, among the inhabitants of the earth.

To whom, then, can I present these Arcadian scenes with so much propriety, as to the friend of ancient eloquence and poetry; one whom I know to have been an intelligent reader and admirer of Theocritus? Let me congratulate myself on my good fortune, in having, by this performance, found more distinguished favour from Mr. Yorke, than Theocritus experienced at the court of Hiero.

That the honours and reputation you have so deservedly acquired, may increase more and more; that you may live long and happily, for the encouragement of the liberal sciences, and the service of your country, is the earnest wish of,

SIR,

Your most obliged, and obedient servant,

FRANCIS FAWKES,

ORPINGTON, }
January 10. 1767. }

P R E F A C E.

WHEN I had formed a resolution of publishing a translation of this inimitable poet, I intended to have availed myself of every elegant and faithful version of any particular Idyllium that fell in my way; and then have endeavoured, to the best of

my ability, to make up the deficiency. With this view, I carefully examined Mr. Dryden, who has left translations of four Idylliums, the 3d, the 8th, the 23d, and the 27th. There are many beautiful lines in the third; but take it altogether, and it is a

edious paraphrase; for the original contains only fifty-four verses, which he has multiplied into no fewer than one hundred and twenty-seven; particularly there are three lines, beginning at the 18th.

Ω το καλὸν ποθοῦσα το παν λιθὸς ὡ πῦρ
νοφρῶ

Νυμφα. κ. τ. λ.

Sweet black-eye'd maid, &c.

Which he has expanded into twelve. Now, though English heroic verse consists of no more than ten syllables, and the Greek hexameter sometimes rises to seventeen, but if, upon an average, we say fifteen, then two Greek verses is equal, in point of syllables, to three of English; but if a translator is so extravagantly licentious, he must lose sight of his original, and by introducing new thoughts of his own, disguise his author, so that nobody can know him again. But Mr. Dryden has a far greater foible than this, which effectually prevents me from inserting any of his translations in this volume, which is, that whenever he meets with any sentiment in an author which has the least tendency to indecency, he always renders it worse; nay, even in these Idylliums, where the original has given him no handle at all, he has wrapt the simple meaning of Theocritus into obscenity. "Sed vitiis nemo sine nascitur;" no man had more excellencies, as a poet, than Mr. Dryden, therefore the hand of candour should draw a veil over constitutional blemishes.

In Dryden's Miscellany Poems, there are seven or eight translations of other Idylliums, viz. the 2d, 10th, 14th, and 20th, by W. Bowles; the 11th by Duke, and the 1st, and some others, by different hands: but none of these, I found, would suit my purpose: there are so many wild deviations from the original, such gross mistakes, and so many incorrect and empty lines, that they will sound very harshly in the polished ears of the present age. Fully satisfied with this inquiry, I then determined to undertake the whole work myself; considering that every translation from an ancient author, as well as every original work, is generally most agreeable to the reader which is finished by the same hand: because, in this case, there is kept up a certain uniformity of style, an idiomatical propriety of diction, which is infinitely more pleasing than if some different, though more able hand, had here and there interlarded it with a shining version, than if

Purpureus, late qui splendeat, unus et alter
Assuitur pannus.

I have been informed by some venerable critics, that Creech's translation of Theocritus was well done, and a book of reputation; that he thoroughly understood the classics, and had a peculiar facility in unfolding their beauties, and that, if there was published a new edition of his translation, there would be no necessity for its being superseded by another. I beg leave to dissent entirely, from these gentlemen, who probably having read Creech when they were young, and having no ear for poetical numbers, are better pleased with th

rough music of the last age, than the refined harmony of this; and will not easily be persuaded, that modern improvements can produce any thing superior. However Creech may have approved himself in Lucretius, or Manilius, I shall venture to pronounce this translation of Theocritus very bald and hard, and more rustic than any of the rustics in the Sicilian bard: he himself modestly intitles his book, "the Idylliums of Theocritus done into English;" and they are done as well as can be expected from Creech, who had neither an ear for numbers, nor the least delicacy of expression.

It will be incumbent upon me to make good this bold assertion, which I can easily do by producing a few examples. In the first Idyllium, he calls that noble pastoral cup "a fine two handled pot;" and the *ελίζ*, "the tendrils or claspers," with which scandent plants use to sustain themselves in climbing, he transforms into kids;—"where kids do seem to brouse." In the description of the fisherman, ver. 43. he has these lines:

The nerves in's neck are swoln, look firm, and strong,

Although he's old, and fit for one that's young.

Ver. 112. He makes Daphnis say to Venus:

Go now stout Diomed, go soon pursue,

Go nose him now, and boast, my arts o'er-threw:

Young Daphnis, fight, for I'm a match for you.

Ελικας ριον and *σᾶμα Λυκαονιδας*, he renders, "Helick's cliff" and "Licon's tomb." A little further on, and likewise in the 5th Idyllium, he turns nightingales into thrushes.

Idyllium III. Where Olpis is looking out for tunnies, he makes him stand, "to snare his trouts." The girl Erithacis he calls tawny Bess, and Alphe-sibæa's mother. Alphib's mother.

Idyllium V. ver. 11. He translates Crocylus into Dick, and Idyllium XIV. Argivus. Apis and Cleunicus, into Tom, Will and Dick. Near the end of the 5th, Lacon says:

I love Eumedes much, I gave my pipe,
How sweet a kiss he gave; ah charming lip!

Then come successively the following delicate rhymes, strains, swans; shame, lamb, piece, fees; joy, sky: afterwards he makes Comates say

I'll toot at Lacon, I have won the lamb,
Go foolish shepherd, pine, and die for shame.

Idyllium VII. ver. 120. He renders *απισ*, *parfley* thinking it the same as *apium*, whereas it signifies a pear.

Idyllium XI. He makes Polyphemus say of himself;

Sure I am somewhat, they my worth can see,
And I myself will now grow proud of me.

He says of Cynisca, Idyl. XIV. ver. 23.
That you might light a candle at her nose.

Idyllium XV. One of the gossips says to a stranger,

You are a saucy friend,
I'm ne'er beholding t'ye, and there's an end.

And so there's an end of my animadversions upon Mr. Creech; were I to quote all his dull insipid lines, I should quote above half his book: thus much was proper for me to say in my own vindication; and to add more, might, to some people, seem invidious.

It has been hinted to me by more ingenious judges, that if Theocritus was translated in the language of Spenser, he would appear to great advantage, as such an antique style would be a proper succedaneum to the Doric idiom. There appeared to me at first something plausible in this scheme; but happening to find part of Moschus's first Idyllium, which is a hue and cry after Cupid, paraphrastically translated by Spenser himself, I had reason to alter my opinion. I shall transcribe the passage, that the reader may judge whether such a version would be more agreeable than one in modern language.

It fortun'd, fair Venus having lost
Her little son, the winged god of love,
Who for some light displeasure, which him crost,
Was from her fled, as flit as any dove,
And left her blissful bower of joy above;
(So from her often he had fled away,
When she for aught him sharply did reprove,
And wander'd in the world in strange array,
Disguis'd in thousand shapes, that none might him
bewray:

Him for to seek, she left her heavenly house,
And searched every way, through which his
wings
Had borne him, or his tract she mote detect:
She promis'd kisses sweet, and sweeter things,
Unto the man that of him tidings to her brings.

Faery Queen, B. 3. ch. 6.

From this specimen I could not be persuaded to think, that a translation of Theocritus, even in the purest language of Spenser, would afford any pleasure to an English reader: and therefore I have given him the dress which I apprehend would best become him. How I have executed this work, I leave to the decision of the candid and impartial, desiring they will allow me all the indulgence which the translator of so various and difficult an author can reasonably require; an author on whom there are but few Greek scholia published, only to the 17th Idyllium inclusive, and these often extremely puerile; an author on whom fewer notes have been written than upon any other equally excellent. Scaliger, Casaubon, Heinsius and Meursius frequently leave the most difficult passages untouched; their observations are sometimes trifling and unsatisfactory, often repugnant to each other, and now and then learnedly obscure: amidst these disadvantages, I have endeavoured to conduct myself with the utmost caution; and if I may be allowed to speak of the following sheets, I will briefly explain what I have endeavoured to accomplish. First, then, as to the translation; I have neither followed my author too closely, nor aban-

doned him too wantonly, but have endeavoured to keep the original in view, without too essentially deviating from the sense; no literal translation can be just; as to this point, Horace gives us an excellent caution:

*Nec verbum verbo curabis reddere fidus
Interpres.*

Nor word for word too faithfully translate.

A too faithful interpretation, Mr. Dryden says, must be a pedantic one; an admirable precept to this purpose is contained in the compliment Sir John Denham pays Sir Richard Fanshawe on his version of the Pastor Fido:

That servile path thou nobly dost decline,
Of tracing word by word, and line by line;
A new and nobler way thou dost pursue,
To make translations, and translators too;
They but preserve the ashes, thou the flame,
True to his sense, but truer to his fame.

And as I have not endeavoured to give a verbal translation, so neither have I indulged myself in a rash paraphrase, which always loses the spirit of an ancient, by degenerating into the modern manners of expression: and to the best of my recollection, I have taken no liberties but those which are necessary for exhibiting the graces of my author, transfusing the spirit of the original, and supporting the poetical style of the translation. This is the plan, and these are the rules by which every translator should conduct himself: how I have acquitted myself in these points, must be left to the determination of superior judges. As to the notes, which I found the most laborious part of my task, they are intended either to illustrate the most difficult, and exemplify the beautiful passages; or else to exhibit the various imitations of authors which I look upon as an agreeable comment, for they not only show the manner in which the ancients copied each other's excellencies, but likewise often help to elucidate the passages that are quoted. Upon a review of my notes, I am afraid I have instanced too many passages from Virgil as imitations of Theocritus: what I have to say in my defence is, they appeared to me at the time to be similar, if they do not appear in the same light to the reader, they are easily overlooked: if I have in this respect committed a fault, this acknowledgement will plead in mitigation of it.

Besides these errors and mistakes, I am conscious of many more, though I hope not very material ones; those the learned and judicious, who are sensible of the difficulty of this undertaking, will readily excuse. This work has already met with the approbation of the best critics of the age, therefore what the worst may think or say of it, will give me no concern. I must acknowledge a fault or two *quas incuria fudit*: there are I believe two or three proper names false accented: I have also mistaken the sense of my author in the first Idyllium, ver. 31.

This goat with twins I'll give, &c.

It should have been translated, "I will give you

“ three milkings of this goat ; *εἰ τρεῖς ἀμειλῆσαι*, that
 “ you may milk her three times ; not the goat
 “ herself and twins,” which would have been a
 most extravagant present from a poor goatherd, in
 return for a song. The reader, therefore, may cor-
 rect the passage thus :

Thrice shall you milk this goat ; she never fails
 Two kids to suckle, though she fills two pails ;
 To this I'll add, &c.

This mistake was imparted to me by the ingenious
 and learned Dr. Jortin, together with the follow-
 ing emendation ; see note on ver. 57, “ for *χρυσεία*
 “ you read, with Pierfon, *κροισίαι* ; which, as to
 “ the sense, seems to be right. But, as the Ionic
 “ dialect is not often used in a Doric song, I
 “ should prefer the adjective *κροίσια*, which is also
 “ a smaller alteration. As from *χρυσός* comes
 “ *χρυσίος*, so from *κροισός*, *κροισίος*.” I am much
 obliged to the same gentleman for the following
 short, but full account :

OF THE BUCOLIC MEASURE.

“ Whosoever shall carefully examine in Theo-
 “ critus the composition of his verses, may per-
 “ ceive, that, in his opinion, the nature of bucolic
 “ or pastoral metre, requires that the fourth foot
 “ of the verse be a dactyl, and that the last syl-
 “ lable of this dactyl be the end of a word, which
 “ must not run into the next foot. The first foot
 “ also should rather be a dactyl than a spondee,
 “ and the cæsura is here likewise to be shunned. If
 “ after the fourth foot there be a pause of a com-
 “ ma at least, the verse will be still more elegant ;
 “ as

Ἀρχεῖτε | Βωκολικὰς, Μοῖσαι φίλαι, | ἀρχεῖτ' αἰοῖδας.

“ Thus the verses will abound with dactyls, which,
 “ together with the broad Doric dialect, gives a
 “ certain rustic vivacity and lightness to the poesy.
 “ But yet the above-mentioned rules, if they were
 “ constantly observed, would displease by a tire-
 “ some uniformity, and confine the poet too much ;
 “ and therefore a variety is better, as in the line,

Ἀμφώεις, νοτοῦχες, εἰσι γλυφαῖ | νοῖο ποτοσδόν.

“ And it is sufficient if the other structure predo-
 “ minate. These rules Virgil hath quite neglect-
 “ ed, except in those verses of his eighth eclogue,
 “ which are called *versus intercalares* :

“ Incipe Mænalios mecum, mea | tibia, versus,”

And

“ Ducite ab urbe donum, mea carmina, | ducite
 “ Daphnim,

“ For a further account of this matter, the curious
 “ reader is referred to the *Memoires de L'Acad.*
 “ Tom. vi. p. 238.”

AN ACCOUNT OF SOME MSS. AND CURIOUS EDITIONS OF THEOCRITUS.

It may be asked, why I have not acted the part
 of a verbal critic in this performance ? My reason
 was, that far more able men had considered Theo-
 critus in that light. The late Mr. D'Orville, the

author of the *Critica Vannus*, and *Sicula*, during
 his travels in Italy and Sicily, collated upwards of
 forty MSS. of Theocritus ; his collation is now at
 Amsterdam. Mr. St. Amand, a few years ago,
 left to the University of Oxford, a large collection
 of collations, which Mr. Thomas Warton, who
 has prepared a noble edition of this author, has
 the use of. Mr. Taylor, late Greek professor of
 Cambridge, left likewise a Theocritus almost ready
 for the press. In the public library at Cambridge,
 there are some notes on Theocritus by Isaac Ca-
 saubon, written in the margin of Henry Stephens's
Poetæ Græci ; likewise manuscript notes in the
 edition of Commelin, printed in quarto ; and also
 some notes by Thomas Stanley, the author of the
Lives of the Philosophers : all these, and likewise
 a MS. Theocritus are in the public library at Cam-
 bridge. There is also a MS. of the first eight
 Idylliums in Emanuel College library. Mr. Hob-
 lyn, late member for the city of Bristol, left be-
 hind him many notes and observations for an edi-
 tion of Theocritus. Besides these, there are great
 materials for illustrating this author in private
 libraries.

As to the editions of Theocritus, which are
 very numerous, I think proper to say something ;
 as we have but an imperfect account of them in
 Fabricius and Maittaire. Reiske, in the preface
 to his late edition of this Greek poet, has given us
 an account of the various editions, but this account
 is far from being satisfactory. The first edition of
 Theocritus was printed at Milan in the year 1493,
 the letter is the same with the *Isocrates* of the
 same place and date. See the catalogue of the
 Leyden library, page 251. The second edition
 was printed by Aldus Manutius at Venice, in the
 year 1495 ; this is the only edition Aldus ever
 printed ; there are some leaves cancelled in it,
 which is the reason why Reiske and others have
 imagined that Aldus printed two editions. Mr.
 Maittaire, in the first volume of his *Annales Typo-*
graphici page 244, has given us an account of
 these differences. In the year 1515, we have an
 edition by Philip Junta at Florence ; and another
 in 1516, by Zachary Caliergus at Rome.

These are all the editions that came out before
 the year 1520. Besides these, and those mentioned
 by Reiske, which I have seen, there are some cu-
 rious editions, viz. that of Florence by Benedict
 Junta, printed in the year 1540 ; the Basil edition
 of 1558, and the Paris edition of 1627, printed by
 John Libert. I have purposely omitted mention-
 ing the others, as they are already taken notice of,
 either by Fabricius, Maittaire, or Reiske.

I cannot conclude this preface without paying
 my acknowledgments to those gentlemen who
 have kindly assisted me in this undertaking. Dr.
 Pearce, the present Lord Bishop of Rochester, many
 years eminent for his critical disquisitions, has, in
 the friendliness of conversation, furnished me with
 several useful rules for conducting my translation.
 Dr. Jortin has favoured me with a concise, but full
 account of the old bucolic measure, and a few va-
 luable notes. The celebrated Mr. Samuel Johnson
 has corrected part of this work, and furnished me

with some judicious remarks. In a short conversation with the ingenious Mr. Joseph Warton, I gathered several observations, particularly in regard to the superiority of Theocritus to Virgil in pastoral, which are interspersed among the notes. The learned Dr. Plumptre, Archdeacon of Ely, has, with great candour and accuracy, done me the honour to peruse and amend every sheet as it came from the press. Dr. Askew, so eminently distinguished in his profession, as well as for a large and most curious collection of the classics, and an intimate knowledge of them, with the sincerity of an old acquaintance and a friend, gave me many various readings, showed me every valuable edition of Theocritus that is extant, and furnished me with the account of some MSS. and scarce editions of my author, which were never taken notice of by former editors. Swithin Adee, M. D. and the

Rev. Mr. John Duncombe of Canterbury, have, at my own request, sent me several notes and strictures upon my performance, which are candid and valuable. Mr. Burnaby Greene, author of Juvenal paraphrastically imitated, very obligingly supplied the Essay on Pastoral, and some ingenious observations: and Dr. William Watson lent me his friendly assistance in the botanical part. I could mention other eminent names of gentlemen who have corrected and improved this work;

————— Each finding, like a friend,
Something to blame, and something to commend.

The list I have given, I am apprehensive, will appear ostentatious—however, I had rather be convicted of the foible of vanity, than thought guilty of the sin of ingratitude.

SOME ACCOUNT OF THE LIFE AND WRITINGS OF THEOCRITUS.

As the life of Theocritus has been several times written in English, I flattered myself that I might single out the account I liked best, and save myself the trouble of compiling it afresh. I depended a good deal upon Kennet, but when I came to peruse his account of Theocritus, I found it unsatisfactory, and no ways answerable to my purpose: he seems more solicitous, in an affected quaintness of style, to exhibit a display of his own learning, than studious, by the investigation of truth, to give information to his readers: his thoughts lie loose and unconnected, and therefore are generally tedious and perplexing.

The account of our author in the Biographical Dictionary, published in twelve volumes octavo, is nothing but a servile epitome of Kennet, and, where the conciseness of it will allow, expressed in his very words. Thus dissatisfied with the moderns, I had recourse to the ancients: in the life generally prefixed to his works by Suidas, we are told, "That Theocritus was a Chian, a rhetorician: but that there was another Theocritus, the son of Praxagoras and Philina, though some say of Simichidas, a Syracusan;" others say, "he was born at Cos, but lived at Syracuse;" now this was the case of Epicharmus, and might easily occasion the mistake. See the note on Epigram XVII.

In another Greek account in the front of his works, we are told, that "Theocritus the Bucolic poet was born at Syracuse, and that his father's name was Simichidas." Gyrardus says, "some have thought him of Cos, some of Chios." From such a confused jumble of relations, what can with certainty be made out?

Then take him to develope if you can,
And hew the block off, and get out the man.

There are but few memorials left of this poet; those that I produce I shall endeavour to establish on good authority, and whenever an opportunity offers, which is but very reasonable, will let him speak for himself.

Theocritus was a Sicilian, as is evident from many testimonies. Virgil invokes the Sicilian muses, because Theocritus, whom he professedly imitates, was of that country; *Sicilides Musa, paulo majora canamus*, Ecl. 4. 1. and, *Extremum hunc, Arctibusa, mihi concede laborem*, Ecl. 10. 1. He is called a Sicilian poet by the emperor Julian, in one of his epistles; and by Terentianus Maurus, in his book de Metris, ver. 407, *Sicula telluris alumnus*: by Manilius, Book 2. ver. 40. he is said to be *Siculâ tellure creatus*, which fixes his birth on that island: and that he was born at Syracuse, Virgil seems to intimate, when he says, *Prima Syracosio dignata est ludere versu*, Ecl. 6. 1. But in one of his own epigrams, which generally stands in the front of his works, probably according to his own original intention, he assures us he was born at Syracuse, and gives us the names of his parents:

Ἄλλος δ' Χίος' ἐγὼ δὲ Θεοκρίτος ἐς ταῦτα γράφαμαι
Εἰς ἀπὸ τῶν πολλῶν εἰμι Συρακοσίῳ,
Υἱὸς Πραξαγόραο, περικλεῆτος τε Φιλίης.
Μῶσαν δ' ὀδυμένην ἔποτ' ἐφελκυσσάμην.

A Syracusan born, no right I claim,
To Chios, and Theocritus my name:

Praxagoras' and fam'd Philina's son;
My laurels from unborrow'd verse are won.

After this plain declaration, it is amazing that the old grammarians will not rest satisfied, but endeavour to rob him both of his parents and his country. The chief view which the poet had in writing this epigram, though perhaps it may not appear at first sight, seems to be this; he had a namesake of Chios, a rhetorician, and pretender to poetry, who, according to Plutarch, suffered an ignominious death, for some crime committed against king Antigonus; and therefore Theocritus the poet, by this epigram, took all possible precaution to be distinguished from his namesake the rhetorician. "The other Theocritus," says he, "is of Chios; I that am the author of these poems, am a Syracusan, the son of Praxagoras and the celebrated Philina: I never borrowed other people's numbers." The last sentence is an honest declaration, that the poet had not been a plagiarist, like many of his predecessors and contemporaries.

Theocritus is said to have been the scholar of Philetas, and Asclepiades, or Sicelidas: Philetas was an elegiac poet of the island of Cos, had the honour to be preceptor to Ptolemy Philadelphus, and is celebrated by Ovid and Propertius: Sicelidas was a Samian, a writer of epigrams: he mentions both these with honour in his seventh Idyllium, see ver. 53.

As to the age in which he flourished, it seems indisputably to be ascertained by two Idylliums that remain, one is addressed to Hiero king of Syracuse, and the other to Ptolemy Philadelphus, the Egyptian monarch. Hiero began his reign, as Caufabon asserts in his observations on Polybius, in the second year of the 126th Olympiad, or about 275 years before Christ; and Ptolemy in the fourth year of the 123d Olympiad. Though the exploits of Hiero are recorded greatly to his advantage by Polybius, in the first book of his history; though he had many virtues, had frequently signalized his courage and conduct, and distinguished himself by several achievements in war; yet he seems, or at least in the early part of his reign, to have expressed no great affection for learning or men of letters; and this is supposed to have given occasion to the 16th Idyllium, inscribed with the name of Hiero; where the poet asserts the dignity of his profession, complains that it met with neither favour nor protection, and in a very artful manner, touches upon some of the virtues of this prince, and insinuates what an illustrious figure he would have made in poetry, had he been as noble a patron, as he was an argument for the muses.

His not meeting with the encouragement he expected in his own country, was in all probability the reason that induced Theocritus to leave Syracuse for the more friendly climate of Alexandria, where Ptolemy Philadelphus then reigned in unrivalled splendour, the great encourager of arts and sciences, and the patron of learned men. In his voyage to Egypt he touched at Cos, an island in the Archipelago not far from Rhodes, where he was honourably entertained by Phrasidamus

and Atigenes, who invited him into the country to celebrate the festival of Ceres, as appears by the seventh idyllium.

We have all the reason in the world to imagine that he met with a more favourable reception at Alexandria, than he had experienced at Syracuse, from his encomium on Ptolemy, contained in the 17th Idyllium, where he rises above his pastoral style, and shows, that he could, upon occasion (as Virgil did afterwards), exalt his Sicilian muse to a sublimer strain, *paula majora*: he derives the race of Ptolemy from Hercules, he enumerates his many cities, he describes his great power and immense riches, but above all, he commemorates his royal munificence to the sons of the muses. Towards the conclusion of the 14th Idyllium, there is a short, but very noble panegyric on Ptolemy: in the 15th Idyllium, he celebrates Berenice, the mother, and Arsinoe, the wife of Ptolemy.

I do not recollect any more memorials of this poet's life, which can be gathered from his works, except his friendship with Aratus, the famous author of the Phenomena; to whom he addresses his sixth Idyllium, and whose amours he describes in the seventh.

There is one circumstance more in regard to Theocritus, which is so improbable, that I should not have thought it worth while to have troubled the reader with it, if it had not been mentioned by all his biographers, viz. that he lies under the suspicion of having suffered an ignominious death: this takes its rise from a distich of Ovid in his Ibis.

Utque Syracosio præstrictâ fauce poetæ,
Sic animæ laqueo sit via clausa tuæ.

But it does not appear, that by the Syracusan poet Ovid means Theocritus; more probably, some commentators on the passage have supposed, Empedocles, who was a poet and philosopher of Sicily, is the person pointed at: others think that Ovid, by a small mistake or slip of his memory, might confound Theocritus the rhetorician of Chios, who was executed by order of King Antigonus, with Theocritus the poet of Syracuse; and the epigram quoted above very strongly indicates how apprehensive our poet was of being confounded with that person: it seems, indeed, as I hinted before, composed on purpose to manifest the distinction.

After this short account of our author, it will be proper to say something of his works; for to write the life of a poet, without speaking of his compositions, would be as absurd as to pretend to publish the memoirs of a hero, and omit the relation of his most material exploits.

All the writings of Theocritus that now remain are his Idylliums and Epigrams; in regard to the word Idylliums, D. Heinsius tells us, that the grammarians termed all those smaller compositions *Εἰδή* (a species of poetry), which could not be defined from their subjects, which are various: thus the *Sylvæ* of Statius, had they been written in Greek, would have been called *Εἰδή* and *Εἰδολαίαι*; even the Roman poets make use of this term; thus Ausonius styles one of his books of poems on

various subjects Edyllia: this ancient title, then, may serve to express the smallness and variety of their natures; they would now, perhaps, be called Poems on Several Occasions. Though in deference to so great an authority, I shall take the liberty to make a conjecture: Heinſius tells us, that originally there were different titles or inscriptions prefixed to the poems of Theocritus; first of all his Bucolics were separated and distinguished by the title of *Ἔπη Βουκολικά*, and were called by the grammarians *Εἰδυλλία Βουκολικά*; but might it not at first have been written *Εἰπωλλία*? which signifies Poems or Verses, and by an easy mistake of the transcriber altered into *Εἰδυλλία*? this reading delivers us at once from the embarrassment attending the derivation of the word Idylliums, and *Ἐπωλλία*, the same as *Versiculi*, very naturally flows from the word *Ἔπη*, the plural of *Ἔπος*, *Carmen*; thus we have *Ἐπη χρυσεία*: it is to be observed, that Aristophanes uses the word three times, see his *Ranæ*, ver. 973, *Acharnenses*, ver. 397; and in his *Pax*, ver. 531, he has *ἔπωλλων Εὐριπίδου*, *Versiculorum Euripidis*: this, however, is only conjecture. Under the second title, every poem that was ascribed to Theocritus, though the character and argument were very different, was inserted. Under the third were contained a collection of bucolic poems, whether by Theocritus, Moschus, Bion, or others, and the name of Theocritus prefixed to the whole; on which occasion there is an Epigram in the Anthologia, ascribed to Artemidorus:

*Βουκολικαὶ Μοῦσαι σποράδην ποικα, νῦν δ' ἀμα
παταὶ*

Ἐντι μίας μανδράς, ἐντι μίας ἀγέλας.

Wild rov'd the pastoral Muses o'er the plains,
But now one fold the single flock contains.

Besides the Idylliums that we now have, Theocritus is said by Suidas to have written *Προϊτίδες*, *Ἐλπιδας*, *Ῥήματα*, *Ἡρώνας*, *Ἐπικηδέια μέλη*, *Ελεγίαι*, καὶ *ἱαμβοὺς*: that is, *Proetides*, *Hopes*, *Hymns*, *Heroines*, *Dirges*, *Elegies*, and *Iambics*: the *Proetides* were the daughters of Proteus, king of the Argives, who preferring themselves to Juno, went mad, and imagined themselves turned into crows, but were cured by Melampus; the Idyllium in praise of Castor and Pollux is supposed to be one of the hymns, and there are five verses remaining of a poem, in praise of Berenice, which may be classed among the Heroines.

It is to be observed, that Theocritus generally wrote in the modern Doric, sometimes indeed, he used the Ionic; the Doric dialect was of two sorts, the old and new; the old sounded harsh and rough, but the new was much softer and smoother; this, as Mr. Pope justly observes, in the time of Theocritus had its beauty and propriety, was used in part of Greece, and frequent in the mouths of many of the greatest persons. It has been thought by some that the Dorian phrase in which he wrote, has a great share in his honours; but exclusive of this advantage, he can produce other ample claims to secure his rural crown from the

boldest competitor. A proof of this, I think, will appear from this circumstance; that Virgil, who is the great rival of the Sicilian, has few images in his Eclogues but what are borrowed from Theocritus; nay, he not only continually imitates, but frequently translates several lines together, and often in these very passages falls short of his master, as will appear in the notes.

Though Theocritus is generally esteemed only a pastoral poet, yet he is manifestly robbed of a great part of his fame, if his other pieces have not their proper laurels. At the same time his Pastorals are, without doubt, to be considered as the foundation of his credit; upon this claim, he will be admitted for the happy finisher, as well as the inventor of his art; and will be acknowledged to have excelled all his imitators, as much as originals usually do their copies. He has the same advantage in bucolic, as Homer had in epic poetry, which is to make the critics turn his practice into eternal rules and to measure nature herself by his accomplished model: therefore, as to enumerate the glories of heroic poetry, is the same thing as to sum up the praises of Homer, so to exhibit the beauties of pastoral verse, is only an indirect way of making panegyrics on Theocritus. Indeed, the Sicilian has in this respect been somewhat more fortunate than Homer, as Virgil's Eclogues are reckoned more unequal imitations of his Idylliums, than in the *Æneis* of the *Iliad*.

I think I cannot conclude this account of Theocritus with more propriety than by collecting the sentiments, not only of the ancients, but likewise of the moderns, in regard to the character of our author. Longinus says, (see the motto) "Theocritus has shown the happiest vein imaginable for pastorals, excepting those in which he has deviated from the country:" or perhaps it may more properly be rendered, as Fabricius understands it, "excepting in those few pieces that are of another argument." Quintilian says, "Admirabilis in suo genere Theocritus, sed musa illa rustica et pastoralis non forum modo verum etiam urbem reformidat:" "Theocritus is admirable in his way, but his rustic and pastoral muse is not only afraid of appearing in the forum, but even in the city:" by which he means, that the language and thoughts of Theocritus's shepherds ought not to be imitated in public speaking, nor in polite composition; yet, for all this "he was admirable in his way." Manilius in the second book of his *Astronomicum* gives a just character of our poet *:

*Quinetiam pecorum ritus, et Pana sonantem
In calamos, Siculâ memorat tellure creatus:
Nec sylvis sylvestre canit perque horrida motus
Rura ferit dulces: musamque inducit in auras.*

The sweet Theocritus, with softest strains,
Makes piping Pan delight Sicilian swains;
Through his smooth reed no rustic numbers move,
But all is tenderness, and all is love;

* Instead of *pecorum ritus*, Dr. Bently reads *ritus pastorum*.

As if the muses sat in every vale,
Inspir'd the song, and told the melting tale.

CREECH.

One would imagine these authorities were sufficient to establish, or at least to fix the reputation of Theocritus, on a very sure footing; and yet Dr. John Martyn, who has translated Virgil's Eclogues and Georgics into prose, with many learned notes, seems to be of a different persuasion. In the latter end of his preface to the Eclogues, after observing that Virgil, in almost every Eclogue, entertains the reader with a rural scene, a sort of fine landscape, and enumerating these scenes, he says, "and having now seen this excellence in Virgil, we may venture to affirm, that there is something more required in a good pastoral, than the affectation of using coarse, rude, or obsolete expressions; or a mere nothingness, without either thought or design, under a false notion of rural simplicity." That he here means Theocritus, or else he means nothing, is plain from his mention of him immediately after: in regard to the charge of his "affectedly using coarse, rude, and obsolete expressions," I imagine he alludes to the fifth Idyllium, which indeed must be allowed to be too rustic and abusive: but we must remember that Theocritus intended this poem as a specimen of the original old bucolic Idyllium, which was very rude, and often obscene; as the learned Heinsius has more than once observed; his words are, "multum a reliquis differunt quæ αἰπολικά sunt, in quibus major est incivilitas; ut in quinto apparet, quod Idyllium singulare est, et in suo genere exemplum, antiquæ nimirum Βαυκολίας; ubi nunquam fere sine obsceno sensu rixatur caprarius." And in another place: "veræ βαυκολίας exemplum in quinto Theocriti, in Virgili tertio habemus." Therefore, instead of condemning Theocritus, we ought to think ourselves much obliged to him for leaving us one example of the ancient rustic bucolic; Virgil certainly thought so, otherwise he would not have imitated that very piece. As to the scenery with which the Eclogues are embellished, all the Idylliums, or at least the greatest part of them, are ornamented in the same manner, which will appear so evident to every reader, that it would be impertinent to point it out. As to the other part of the Doctor's observation, "a mere nothingness, without thought or design," it is such a despicable falsity, that it is not worth notice.

Throughout his whole preface and life of Virgil, the Doctor is very singular in giving Virgil the preference to Theocritus upon every occasion: particularly he declaims against the cup in the first Idyllium, says the description of it is long and tedious, and far exceeded by Virgil in the third Eclogue; notwithstanding the Doctor's assertion, some gentlemen, whose critical disquisitions have deservedly announced them the best judges of polite literature, think that the images in Theocritus' cup, viz. "the beautiful woman and two lovers, the striking figure of the fisherman labouring to throw his net, the rock, the vine-

yard, the foxes, and the boy sitting carelessly and framing traps for grasshoppers," are charming embellishments, and far more pastoral and natural than Virgil's "Orpheus in medio posuit sylvasque sequentes," "Orpheus in the middle, and the woods following him." In regard to the length of the description, it is observed, that the cup of Theocritus was very large and capacious; he calls it *βαθὺ κισσυβιον*, "a deep pastoral cup;" and Caufabon says it was "amplissimi vasis pastoritii genus; capacitatem ejus licet colligere ex cælaturæ multiplici argumento:" and I am informed, that when Mr. Thomas Warton's long-expected edition of Theocritus appears, it will be evidently proved, perhaps, from some old scholia not yet printed, that this *κισσυβιον* was of an extraordinary size, very deep and wide, and therefore capable of being adorned with such a variety of figures in the sculpture; it was not intended for the use of drinking out of, or mixing any pastoral beverage, but chiefly for ornament: and therefore the vessel being so capacious and remarkable, the poet will be cleared from the charge of being thought tedious in the description of it.

In the preface above mentioned, the Doctor says, "It is not a little surprising, that many of our modern poets and critics should be of opinion, that the rusticity of Theocritus is to be imitated rather than the rural delicacy of Virgil." How can it be thought surprising that Theocritus should be imitated rather than Virgil? the reason is manifest, because the generality of poets and critics prefer the Sicilian far before the Roman, as a pastoral writer. I should not have troubled myself about Dr. Martyn's opinion, but only as it is prefixed to Virgil, I thought perhaps it might possibly mislead the unwary young scholar into a wrong judgment, and induce him to prefer Virgil, without first considering the more original beauties of Theocritus. As a contrast to the Doctor's strange and singular decision, who acknowledges himself to be no poet, and therefore cannot be deemed a competent judge of poetical writings, I shall conclude this account with the sentiments of several of the finest writers, both critics and poets, of the last and present age, in regard to the matter in question: two of them are translators of Virgil, and therefore cannot be supposed to be partial to Theocritus.

I shall begin with Mr. Dryden: "That which distinguishes Theocritus," says he, "from all other poets, both Greek and Latin, and which raises him even above Virgil in his Eclogues, is the inimitable tenderness of his passions, and the natural expression of them in words so becoming of a pastoral. A simplicity shines throughout all he writes. He shows his art and learning by disguising both. His shepherds never rise above their country education in their complaints of love. There is the same difference between him and Virgil, as there is between Tasso's Aminta, and the Pastor Fido of Guarini. Virgil's shepherds are too well read in the philosophy of Epicurus and Plato; and Guarini's seem to have been bred in courts."

But Theocritus and Tasso have taken theirs from cottages and plains. It was said of Tasso; in relation to his similitudes, that he never departed from the woods, that is, all his comparisons were taken from the country: the same may be said of Theocritus. He is softer than Ovid; he touches the passions more delicately, and performs all this out of his own fund, without diving into the arts and sciences for a supply. Even his Doric dialect has an incomparable sweetness in its clownishness, like a fair shepherdess, in her country russet, talking in a Yorkshire tone. This was impossible for Virgil to imitate, because the severity of the Roman language denied him that advantage. Spenser has endeavoured it in his *Shepherd's Calendar*, but it can never succeed in English. Thus far Mr. Dryden in the preface to his translations; in another place he says, "Theocritus may justly be preferred as the original, without injury to Virgil, who modestly contents himself with the second place, and glories only in being the first who transplanted pastoral into his own country."

Dr. Felton observes, "The *Idylliums* of Theocritus have something so inimitably sweet in the verse and thoughts, such a native simplicity, and are so genuine, so natural a result of the rural life, that I must in my judgment allow him the honour of the pastoral."

Mr. Blackwell upon the classics, says, "Theocritus is another bright instance of the happy abilities and various accomplishments of the ancients. He has writ in several sorts of poetry, and succeeded in them all. It seems unnecessary to praise the native simplicity and easy freedom of his pastorals, when Virgil himself sometimes invokes the muse of Syracuse; when he imitates him through all his own poems of that kind, and in several passages translates him. In many of his other poems he shows such strength of reason and politeness, as would qualify him to plead among the orators, and make him acceptable in the courts of princes. In his smaller poems of Cupid stung, Adonis killed by the boar, and others, you have the vigour and delicacy of Anacreon; in his *Hylas*, and combat of Pollux and Amycus, he is much more pathetic, clear, and pleasant, than Apollonius on the same, or any other subject. In his conversation of Alcmena and Tiresias, of Hercules and the old servant of Augeas, in *Cynisca* and *Thyonichus*, and the women going to the ceremonies of Adonis, there is all the easiness and engaging familiarity of humour and dialogue which reign in the *Odyssey*; and in Hercules destroying the lion of *Nemæa*, the spirit and majesty of the *Iliad*. The panegyric upon King Ptolemy is justly esteemed an original and model of perfection in that way of writing. Both in that excellent poem, and the noble hymn upon Castor and Pollux, he has praised his gods and his hero with that delicacy and dexterity of address, with those

sublime and graceful expressions of devotion and respect, that in politeness, smoothness of turn, and refined art of praising without offence, or appearance of flattery, he has equalled Callimachus; and, in loftiness and flight of thought, scarce yields to Pindar or Homer."

The author of the *Guardian*, No. 28. observes, "The softness of the Doric dialect, which Theocritus is said to have improved beyond any who came before him, is what the ancient Roman writers owned their language could not approach. But, besides this beauty, he seems to me to have a soul more softly and tenderly inclined to this way of writing than Virgil, whose genius led him naturally to sublimity."

Mr. Pope briefly remarks, that "Theocritus excels all others in nature and simplicity: that the subjects of his *Idylliums* are purely pastoral: that other pastoral writers have learned their excellencies from him; and that his dialect alone has a secret charm in it, which no other could ever attain."

Lord Lyttleton beautifully says,

From love Theocritus, on Enna's plains.

Learn'd the wild sweetness of his Doric strains.

Ecl. 2.

Mr. Warton, the worthy master of Winchester school, gives us his sentiments on this subject in his prefatory dedication of Virgil to Lord Lyttleton: "There are few images and sentiments in the *Eclogues* of Virgil, but what are drawn from the *Idylliums* of Theocritus: in whom there is a rural, romantic wildness of thought, heightened by the Doric dialect; with such lively pictures of the passions, and of simple unadorned nature, as are infinitely pleasing to such lovers and judges of true poetry as yourself. Theocritus is indeed the great storehouse of pastoral description; and every succeeding painter of rural beauty (except Thomson in his *Seasons*) hath copied his images from him, without ever looking abroad upon the face of nature themselves." To the same purpose, in his *Dissertation on Pastoral Poetry*, he says, "If I might venture to speak of the merits of the several pastoral writers, I would say, that in Theocritus we are charmed with a certain sweetness, a romantic rusticity and wildness, heightened by the Doric dialect, that are almost inimitable. Several of his pieces indicate a genius of a higher class, far superior to pastoral, and equal to the sublimest species of poetry: such are particularly his panegyric on Ptolemy, the fight between Amycus and Pollux, the *Epithalamium* of Helen, the young Hercules, the grief of Hercules for Hylas, the death of Pentheus, and the killing of the *Nemæan lion*."

AN ESSAY ON PASTORAL POETRY

BY EDWARD BURNBAY GREEN, ESQ.

Gaudentes rure Camænæ. Hor.

THE precise time when the pastoral muse made her appearance in the world, history seems to have left uncertain. Conjectures have been hazarded, and * presumptions multiplied, yet her origin is still unrivalled; and the less inquisitive genius sits down contented with ascertaining her first perfection in the writings of Theocritus.

Indeed researches of this nature are rather curious, than interesting; for though we may perhaps meet with some plausible accounts, we can trace none that carry conviction. The † very few writers, handed down to us from Greece and Rome in that species of composition, are but insufficient guides to the rise of the art itself.

As it is more entertaining, it is likewise more to the honour of pastoral to observe, that it must necessarily have existed in the earlier ages of the world; existed, not indeed in the set form and elegance of numbers, but in the genuine sentiments of the heart, which nature alone inspired.

For the mind being on all sides surrounded with rural objects, those objects would not fail to make an impression; and whether the patriarchs of old, with our parents in Milton, piously broke out into the praise of their Creator, or reflected in silent admiration on the beauties of the earth, their hymns or their meditations must have been purely pastoral.

It has been remarked by a laborious commentator on the Eclogues of Virgil, that the lives of our earliest forefathers were spent in husbandry, and the feeding of cattle. And indeed it could not have been otherwise. At a period, when the numbers of mankind were comparatively insignificant, and their thoughts engaged

in procuring subsistence, while luxury and ambition were yet unknown, it is inconsistent to suppose, but that the sons of earth were all in a manner the sons of agriculture.

When the world, however, increased, and its inhabitants dispersed into various regions; when societies were formed, and laws established; and when (the natural consequence of such expansion) the plagues of war and contention arose, different orders and conditions were settled for the regulation of kingdoms, rustic awkwardness received the polish of civil life, and the ploughshare was converted into instruments of destruction. Thus, by degrees, from an honourable situation, husbandry became the employment of those alone who had the least ambition and the greatest probability

But in those climates, whither emigrations being less fashionable, the people retained their primitive simplicity, it is no wonder, if in process of time considerable advance was made, and regularity introduced into pastoral reflections, that the dictates of unrefined nature were improved by the harmony of numbers.

We may accordingly observe, that in the countries which suffered the least variation from their original form, pastoral was most esteemed; there the thoughts were still allured, and the imagination feasted with rural scenes unimproved, or more properly uncorrupted; for the cottage had not felt the infection of the court.

Arcadia, so usually painted the flowery kingdom of romance, is more ingeniously accounted the land of pastoral. Its inland situation, and the plenty of its pasture, with the * well-known characters of its inhabitants, conspire to favour the title. That the ancient poets described this place as the seat of pastoral, is evident, a shepherd †, peculiarly skilled in singing, being familiarly termed an Arcadian. There appears, however, in ma-

* See what may be called the *Prolegomena to the Oixiprta wpiokomiva* cum Græcis Scholiis. printed at London 1743, wpi τῷ πρῶτῳ τῶν ἐν τῇ βιβλίῳ, where the reputed invention of pastoral poetry has neither the air of probability nor ingenuity.

† Moschus and Bion, with Theocritus, among the Greeks, and Virgil among the Romans, are the only standard writers of pastoral, mentioned by Warton in the dissertation prefixed to his edition of Virgil; that editor, with the critic ‡ Rapin, seeming to explode all other ancient authors in that branch of poetry.

‡ Rapin's Critical Works, vol. ii. remarks on pastoral poetry.

* Dr. Martyn, in his preface to the eclogues of Virgil, calls Arcadia "mountainous, and almost inaccessible;" another reason in support of the pastoral disposition of its people.

† Virgil, in his 7th eclogue, says of two shepherds, that they were "Arcades ambo;" upon which Servius remarks, that they were not Arcadians, but so skilful in singing, that they might be esteemed Arcadians.

ny traditions of the country, such a strong mixture of the fabulous, that we may well suspect them to be the product rather of fancy than of truth.

Nor less fantastic are the descriptions of the golden age; the ideal manners of which are esteemed, by the more refined critic, the genuine source of pastoral.

To a taste so delicate, the least appearance of the rustic is disgusting. A becoming, indeed an elegant simplicity, and the purest innocence, must compose the character of the shepherd. No passions, but of the softest and most engaging kind, are to be introduced: in short, the swain is to be what no swain ever was.

In these elevated notions of humble pastoral, reality is sacrificed to the phantoms of the imagination: the more characteristic strokes in the picture of rural life being utterly erased, the bright colours of unsported integrity are indeed more pleasing to the eye, but in a piece where nature should predominate, are more properly blended with the shade of frailty. For if mankind are to be represented entirely free from faults, we cannot look for their existence later than the fall.

On this fastidious principle, it is esteemed necessary that rural happiness should be described perfect and uninterrupted. The life of the shepherd is to be one perpetual spring, without a cloud to disturb its calmness. The vicissitudes, indeed, of love, which gives birth to more than half our modern pastorals, are admitted into the piece; for it seems to be with some as essential for a shepherd to be in love, as to have been born.

Yet even here the representation is confined. The swain, after whining and crying (as Achilles did to his good-mother Thetis), calls on the trees and bushes, and every thing in nature, to be witnesses of his unhappiness; but, after all, the performance, like our novels and romances, those standards of propriety, must have a fortunate conclusion *.

But whatever fond and amusing prospects the country naturally opens to the mind, experience teaches us, that even there vexations will arise: the seasons of quiet and uneasiness succeed as familiarly as summer and winter; groves and lawns, and purling streams, sound very prettily in description, chiefly when flowing through the numbers or some under-aged amorato; but reason cannot set her seal to the luxuriancy of this Mahometan paradise.

From sentiments so extravagantly refined, let us turn to those of a more sordid complexion. As the former satiate the judicious reader with beds of roses, the latter disgust him with the filthiness of a dunghill. With critics of this cast, the manners of the mere peasant are the sole foundation of pastoral; even less rustic and homely appellations are banished from the characters; and the

* It has indeed a tendency altogether immoral to represent with Theocritus a disappointed lover hanging himself. The present mode of indifference in these concerns, is more eligible, and on the whole may be thought more natural. Love-sorrows are very rarely fatal.

Melibæus, or Neera of Virgil, are so much too courtly, that in their place are to be substituted the *Αισωλος* and *Βουκολισκος* of Theocritus, and the Colin Clout or Hobbinol of Spenser.

The Doric dialect, which transfuses such a natural gracefulness over the Idylliums of the Grecian, has been a stumbling-block to these lovers of inelegance. There is a rustic propriety in the language of the dialect, which was familiar to the cottager in the age of Theocritus; but it must be remembered, that his pastorals contain likewise a delicacy of sentiment which may well be presumed to have attracted the attention of * Ptolemy, whose polished court was the asylum of genius.

But though it should be allowed that pastoral ought strictly to be limited to the actions of the peasant, it is not solely intended for his perusal. The critic, as he cannot on the one hand permit nature to be excluded, cannot relish on the other her being exposed in disgraceful colours.

There are in almost every situation some circumstances over which we should draw the veil, for all is not to be painted with a close exactness. Coarseness of sentiment, and indelicacy of expression, are an offence to decorum, and give modesty the blush. Writings of such illiberal tendency counteract the best and principal end of composition; they hold up the mirror to vice † and immorality, and sacrifice virtue to contempt.

To those who live in our meridian of more refined simplicity, pastoral appears most properly in the dress of rural elegance. Something is indulged to the character of the shepherd, and something to the genius of the writer. They who should place the former on the toilette, would betray an absurdity which would no less extend to the latter, whose thoughts flowed in the rude channel of uninformed rusticity.

The country is the scene in which pastoral is naturally laid; but various may be the subjects of this little drama. The spirit of the poet would be wretchedly cramped, if never permitted to step aside. An insipid sameness runs through the pieces ‡, founded on the impropriety of this indulgence; and most of our later pastorals are in this respect but unmeaning paraphrases of earlier authors.

Were we to attempt an historical epitome of pastoral composition, we might place Theocritus in its dawn, in that earlier age when rural simpli-

* Ptolemy Philadelphus, king of Egypt, to make amends for many atrocious crimes, was remarkable for his singular regard to the welfare of his subjects, and was a distinguished encourager of learned men. See *Enc. Univ. Hist.* vol. 9. p. 386. note T.

† On this principle, it were to be wished that the subject of Virgil's second eclogue were not greatly liable to exception; though the morals of the poet should not be personally impeached, we must lament that he has varnished in his Alexis the depravity of his times. Several representations in Theocritus are glaringly obscene.

‡ Modern eclogues, from this reason, abound with repetitions of amorous scenes, or of swains piping for a reward; not to mention other subjects of a like interesting nature, which from constant use are worn to tatters.

city was cultivated and revered. Though we are sometimes struck with the rays of his genius breaking out into more exalted descriptions, pastoral appears to be his favourite province *.

Considering him as a writer who drew his sentiments from the principles of nature, we may rather admire that his Idylliums are so engaging, than cavil at his blemishes; we may reflect upon Theocritus as the hive whence the most established writers of Eclogues have derived their sweets, or as a diamond, whose intrinsic worth has received a lustre from the refinement of succeeding times.

There is a very considerable gap in the history of pastoral, between the age of Theocritus and Virgil, who was reserved for the noon of its perfection. It would scarcely at first sight appear, that the period when civil war desolated the provinces, and spread all its horrors over the neighbourhood of Rome, should tend to the improvement of the pastoral muse, whose spirit it was likely to have totally destroyed. Yet to this seemingly unfavourable situation, we owe the most pleasing and interesting bucolis of Virgil, who has made the history of his country subservient to the efforts of his genius †.

In those several pieces to which the distresses of his times, or other political considerations gave rise, he seems more elaborately to have exercised the faculty of invention. But where ‡ genuine nature was to be represented, he borrowed largely from Theocritus; many of his similes, sentiments, and descriptions, being literal translations from his Grecian master.

Even in this less original task, the merits of the Roman are conspicuous; he has separated the ore from the dross, and transplanted those flowers alone which could add a fragrance to his work.

On the whole, the pastorals of Virgil are most agreeably conducted; they are not set forth in jewels, or arrayed in silks, nor sordidly dressed in rags. In the "paula majora" of his muse, the poet rarely loses sight of the shepherd; and we may style him the refined Theocritus of an Augustan age.

From this elegant era, when the language of the country and court was purity itself, let us pass over to the days of our excellent Spenser, when the conversation of the latter had just emerged from rusticity.

The genius of Spenser was formed for poetry. The rich luxuriance of fancy which shines through the Faery Queen, surpasses the sublime of antiquity. Such bold conceptions little speak a writer qualified for pastoral. The fire of imagination,

which strikes us in more elevated compositions, must in this be suspended; for nature is most advantageously shown, when she seems to borrow the least from art.

Our author was too great to rise by imitation. Though he had both Theocritus and Virgil for his models, his Shepherd's Calendar is altogether original. The dialect of his times is as happily adapted to rustic life, as the Doric of the former, and the easy flow of his descriptions, with the natural variety of his landscapes, rivals the poetic excellence of the latter.

Proverbial sayings, not too closely crowded, add to the simplicity of pastoral; Spenser is fortunate in such applications; but I own myself most peculiarly attracted with his short lessons of morality: they add a pleasing innocence to the character of the shepherd, and reflect a lustre on the poet.

Yet amidst this superior merit, it must be observed, that a masterly writer of our own days has censured the dialogue of Spenser as affectedly barbarous, and the reflections of his peasants as too exalted.

It is necessary, however, to premise, that the criticism of this author is confined to the September of the Shepherd's Calendar; an eclogue which is indeed conveyed in a dialect singularly rustic; and the subject being the depravity of ecclesiastical manners in popish countries, the sordid language, under which the satire is couched, gives the greater offence to the critic; who concludes with this exclamation: "Surely at the same time that a shepherd learns theology, he may gain some acquaintance with his native language!"

The more ancient dialect seems here to have been selected, as a disguise to the real purport or characters of the piece. The reign of Mary, when England was under the bondage of an arbitrary religion, and oppressed by foreign counsels, may be esteemed the period of the Pastoral. The violence, which had been so barbarously exerted throughout the country at that baleful season, was too recent to have been forgotten; and the Shepherd is very naturally described as having fled from a persecution, the censure of which was a compliment to the principles of Elizabeth.

A rural metaphor is manifestly sustained through the performance, as if to obviate the inconsistency, which is alleged. So far from discussing knotty points of theological learning, the province of the peasant is closely preserved; unless it should be insisted, that nothing relative to religion ought to concern a shepherd.

To descend from the writings of Spenser to the succeeding age, would be to point out the decline of the pastoral muse. Indeed, she has scarcely existed, but in the productions of † Philips and of

* The praises of Ptolemy, the Hylas, and the Hiero, are by no means pastoral; but if Theocritus is entitled to a greater share of praise for any particular parts of those performances, it is where he deviates into pastoral representations.

† The first and ninth eclogues deserve attention on this account. To these we may also join the fourth and fifth.

‡ See the third, seventh, and eighth eclogues, where imitations from Theocritus abound.

* The late Romish brutality was at that time so interesting a topic, and so flattering to the crown, that Spenser has employed three eclogues on the subject.

† The pastorals of Gay seem to have been designed, as burlesque representations of scenes altogether rustic, and particularly as a ridicule of preceding authors, of

Pope. Philips is so often on the whine, that we are apt to overlook his less exceptionable descriptions; he has injudiciously blended the polish of Virgil's language, with the simplicity of Spenser's; and so great is his want of original matter, that he is at best to be regarded as a graceful copyist*.

whom many, it must be confessed, deserved such a treatment. I have, on this account, omitted his name as a pastoral writer, though his genius sufficiently qualified him for the task of eclogue.

* *The fifth pastoral, which relates the contest of the Swain and Nightingale, is prettily turned on the whole; but the thought, like Philips's other more agreeable ones, is borrowed. The same may be remarked of the pastorals of Pope.*

TRANS. II.

Pope has been so assiduous to refine his periods, that his spirit is greatly evaporated; and his pastorals, excepting the Messiah, only merit our attention as the marks of early genius. Sweetness of versification, and purity of expression, may constitute the character of a poet; but courtliness is not the whole that is expected in a writer of eclogues.

That love of the country, which is inherent in the bosom of reflection, has occasionally produced many later attempts on pastoral, but the most successful ones are fainter traces of rural life; the muse has at last varied her form, and united the charms of elegance and nature in the Ballads of Shenstone.

THEOCRITUS'S IDYLLIUMS.

IDYLLIUM I.

THYRSIS, OR THE HIMERÆN ODE.

THE ARGUMENT.

THIS Idyllium contains a dialogue between the shepherd Thyrsis and a goatherd. Thyrsis, at the request of his friend, sings the fate of Daphnis, who died for love; for which he is rewarded with a milch goat, and a noble pastoral cup of most excellent sculpture. This piece is with great propriety considered as the pattern and standard of the old bucolic poems. The scene changes from a rising ground to a lower situation near a fountain, where there is a shepherd's bower facing the statues of Priapus and the Nymphs, and not far distant a grove of oaks.

Thyrsis.

SWEET are the whispers of yon vocal pine,
Whose boughs, projecting o'er the springs, recline;

Sweet is thy warbled reed's melodious lay;
Thou, next to Pan, shalt bear the prize away:
If to the god a horn'd he-goat belong,
The gentler female shall reward thy song;
If he the female claim, a kid's thy share,
And, till you milk them, kid's are dainty fare.

Goatherd.

Sweeter thy song, O shepherd, than the rill
That rolls its music down the rocky hill; 10
If one white ewe content the tuneful nine,
A stall-fed lamb, meet recompence, is thine;
And if the muses claim the lamb their due,
My gentle Thyrsis shall obtain the ewe.

Thyrsis.

Wilt thou on this declivity repose,
Where the rough tamarisk luxuriant grows,
And gratify the nymphs with sprightly strain?
I'll feed thy goats, and tend the browsing train.

Goatherd.

I dare not, dare not, shepherd, grant your boon,
Pan's rage I fear, who always rests at noon, 20
When tir'd with hunting, stretch'd in sleep along,
His bitter rage will burst upon my song:
But well you know love's pains, which Daphnis
rues,

You the great master of the rural muse;
Let us beneath yon shady elm retreat,
Where nature forms a lovely pastoral seat,
Where sculptur'd Naiads and Priapus stand,
And groves of oak extending o'er the land;
There if you sing as sweetly as of yore,
When you the prize from Lybian Chromis bore,
This goat with twins I'll give that never fails 31
Two kids to suckle, and to fill two pails:
To these I'll add, with scented wax o'erlaid,
Of curious workmanship, and newly made,
A deep two-handled cup, whose brim is crown'd
With ivy, join'd with helichryse around;

Small tendrils with close-clasping arms uphold
The fruit rich speckled with the seeds of gold.
Within, a woman's well-wrought image shines,
A vest her limbs, her locks a caul confines; 40
And near, two neat-curl'd youths in amorous
strains

With fruitless strife communicate their pains:
Smiling, by turns, she views the rival pair;
Grief swells their eyes, their heavy hearts despair.
Hard by, a fisherman, advanc'd in years,
On the rough margin of a rock appears;
Intent he stands t' enclose the fish below,
Lifts a large net, and labours at the throw:
Such strong expression rises on the sight,
You'd swear the man exerted all his might; 50
For his round neck with turgid veins appears—
'In years he seems, yet not impair'd by years.'

A vineyard next, with intersected lines,
And red ripe clustres load the bending vines:
To guard the fruit a boy sits idly by,
In ambush near, two skulking foxes lie;
This plots the branches of ripe grapes to strip,
But that, more daring, meditates the scrip;
Resolv'd ere long to seize the savoury prey,
And send the youngster dinnerless away: 60
Meanwhile on rushes all his art he plies,
In framing traps for grasshoppers and flies;
And earnest only on his own designs,
Forgets his satchel, and neglects his vines:
All round the soft acanthus spreads its train—
This cup, admir'd by each Æolian swain,
From far a Caledonian sailor brought,
For a she-goat and new-made cheese I bought;
No lip has touch'd it, still unus'd it stood;
To you I give this masterpiece of wood, 70
If you those Himeræan strains rehearse
Of Daphnis' woes—I envy not your verse—
Dread fate, alas! may soon demand your breath,
And close your music in oblivious death.

Thyrsis.

Begin, ye nine, that sweetly wont to play,
Begin, ye muses, the bucolic lay.

"Thyrsis my name, to Ætna I belong,
 "Sicilian swain, and this is Thyrsis' song :"
 Where were ye, nymphs, in what sequester'd
 grove?

Where were ye, nymphs, when Daphnis pin'd
 with love? 80

Did ye on Pindus' steepy top reside?
 Or where through Tempe Peneus rolls his tide?
 For where the waters of Anapus flow,
 Fam'd streams! ye play'd not, nor on Ætna's
 brow;

Nor where chaste Acis laves Sicilian plains—

Begin, ye muses, sweet bucolic strains.
 Him savage panthers in wild woods bemoan'd
 For him fierce wolves in hideous howlings groan'd
 His fate fell lions mourn'd the live-long day—

Begin, ye nine, the sweet bucolic lay. 90
 Meek heifers, patient cows, and gentle steers,
 Moan'd at his feet, and melted into tears;
 Ev'n bulls loud bellowing wail'd the shepherd-
 swain—

Begin, ye nine, the sweet bucolic strain.
 First from the mountain winged Hermes came;
 "Ah! whence, he cried, proceeds this fatal flame?
 "What nymph, O Daphnis, steals thine heart
 "away?"

Begin, ye nine, the sweet bucolic lay.
 Goatherds and hinds approach'd; the youth they
 hail'd, 99

And shepherds kindly ask'd him what he ail'd.
 Priapus came, soft pity in his eye,
 "And why this grief, he said, ah! Daphnis, why?"
 Meanwhile the nymph disconsolately roves,
 With naked feet through fountains, woods, and
 groves,

And thus of faithless Daphnis she complains;
 (Begin, ye muses, sweet bucolic strains)
 "Ah youth! defective both in head and heart,
 "A cowherd styl'd, a goatherd sure thou art,
 "Who when askance with leering eye he notes
 "The amorous gambols of his frisking goats, 110
 "He longs to emulate their wanton play:"

Begin, ye nine, the sweet bucolic lay.
 "So when you see the virgin train advance
 "With nimble feet, light bounding in the dance;
 "Or when they softly speak, or sweetly smile,
 "You pine with grief, and envy all the while."
 Unmov'd he sat, and no reply return'd,
 But still with unavailing passion burn'd;
 To death he nourish'd love's consuming pain—

Begin, ye nine, the sweet bucolic strain. 120
 Venus insulting came, the youth address'd,
 Forc'd a faint smile, with torture at her breast;
 "Daphnis, you boasted you could love subdue,
 "But tell me has not love defeated you?
 "Alas! you sink beneath his mighty sway."

Begin, ye nine, the sweet bucolic lay.
 "Ah, cruel Venus! Daphnis thus began,
 "Abhor'd and curs'd by all the race of man,
 "My day's decline, my setting sun I know,
 "I pass a victim to the shades below, 130
 "Where riots love with insolent disdain"—

Begin, ye nine, the sweet bucolic strain.
 "To Ida, Venus, fly, expose your charms,
 "Rush to Anchises', your old cowherd's arms;

"There bowering oaks will compass you around,
 "Here low cyperus scarcely shades the ground,
 "Here bees with hollow hums disturb the day."

Begin, ye nine, the sweet bucolic lay.
 "Adonis feeds his flocks, though passing fair,
 "With his keen darts he wounds the flying hare,
 "And hunts the beasts of prey along the plain."

Begin, ye nine, the sweet bucolic strain. 142
 "Say, if again arm'd Diomed you see,
 "I conquer'd Daphnis, and will challenge thee;
 "Dar'ft thou, bold chief, with me renew the
 "fray?"

Begin, ye nine, the sweet bucolic lay.
 "Farewell, ye wolves, and bears and lynxes dire;
 "My steps no more the tedious chase shall tire:
 "The herdsman, Daphnis, now no longer roves,
 "Through flowery shrubs, thick woods, or shady
 "groves. 150

"Fair Arethusa, and ye streams that swell
 "In gentle tides near Thymbrian towers, fare-
 "well,
 "Your cooling waves flow-winding o'er the
 "plains."

Begin, ye muses, sweet bucolic strains.
 "I Daphnis here my lowing oxen fed,
 "And here my heifers to their watering led,
 "With bulls and steers no longer now I stray,"
 Begin, ye nine, the sweet bucolic lay.

"Pan, whether now on Mænalus you rove,
 "Or loiter careless in Lycæus' grove, 160
 "Leave yon aerial promontory's height
 "Of Helicé projecting to the sight,
 "Where fam'd Lycaon's stately tomb is rear'd,
 "Lost in the skies, and by the gods rever'd;
 "Haste and revisit fair Sicilia's plains."

Cease, muses, cease the sweet bucolic strains.
 "Pan, take this pipe, to me for ever mute,
 "Sweet ton'd, and bent your rosy lip to suit,
 "Compacted close with wax, and join'd with
 "art,
 "For love, alas! commands me to depart; 170
 "Dread love and death have summon'd me a-
 "way"—

Cease, muses, cease the sweet bucolic lay.
 "Let violets deck the bramble-bush and thorn,
 "And fair Narcissus junipers adorn.
 "Let all things nature's contradiction wear,
 "And lofty pines produce the luscious pear;
 "Since Daphnis dies, let all things change around,
 "Let timorous deer pursue the flying hound;
 "Let screech-owls soft as nightingales complain"—

Cease, cease, ye nine, the sweet bucolic strain.
 He died—and Venus strove to raise his head, 181
 But fate had cut the last remaining thread—
 The lake he pass'd, the whelming wave he prov'd,
 Friend to the muses, by the nymphs belov'd.

Cease, sacred nine, that sweetly went to play,
 Cease, cease, ye muses, the bucolic lay.
 Now, friend, the cup and goat are fairly mine,
 Her milk's a sweet libation to the nine:
 Ye muses, hail! all praise to you belongs,
 And future days shall furnish better songs. 190

Godtberd.

O, be thy mouth with figs Ægilean fill'd,
 And drops of honey on thy lips distill'd!

F ij

Thine is the cup (for sweeter far thy voice
Than when in spring the grasshoppers rejoice)
Sweet is the smell, and scented as the bowers
Wash'd by the fountains of the blissful hours.

Come, Cifs! let Thyrsis milk thee—kids, for-
bear
Your gambols, lo! the wanton goat is near.

NOTES ON IDYLLIUM I.

Ver. 1. POETS frequently speak of the whispering or murmuring of trees: the word ψιθυρισμα, which Theocritus uses, is very expressive of the thing he describes, and properly signifies to whisper softly in the ear. Thus our author says the two lovers, Idyl. 27. ἀλλήλοισι ψιθυρίζον, and Idyl. 2. ver. 141. ἐψιθυρισδομένης αὐτοῦ. Virgil has "argutum nemus, pinosque loquentes," Ecl. 8. 22. and "Sæpe levi somnum suadebit inire susurro," Ecl. 1. 56. Mr. Pope seems to have had this passage in view, and even improved it, in his Eloisa to Abelard:

The darksome pines that o'er yon rocks reclin'd
Wave high, and murmur to the hollow wind.

He has also finely imitated this passage, and the beginning of the goatherd's speech, "Sweeter thy song," &c.

Thyrsis, the music of that murmuring spring
Is not so mournful as the strains you sing:
Nor rivers winding through the vales below,
So sweetly warble, or so smoothly flow. *Past.* 4.

Ver. 4. Virgil comparing a shepherd with Pan, says,

Tu nunc eris alter ab illo. *Ecl.* 5. 49.

Ver. 9. The Greek is—*ἡ το καταχες
τὴν ἀπο τὰς πέτρας καταλειβεται ὑψοῦν ὕδωρ.*

These ten words flow with most melodious sweetness: every one of them contributes to heighten the image they are to represent.

Homer has the same image in nearly the same words,

—Κατὰ δὲ ψυχρὸν ῥεῖν ὕδωρ
ὑψοῦν ἐκ πέτρης, &c. *Odys.* B. 17.

Where, from the rock, with liquid lapse distills
A limpid fount, &c. *Pope.*

Virgil has imitated this passage,

Tale tuum carmen nobis, divine poeta,
Quale sopor fessi in gramine, quale per æstum
Dulcis aquæ saliente sitim restinguere rivo. *Ecl.* 5. 45.

And again,

Nam neque me tantùm venientis sibilus austri,
Nec percussa juvant fluctu tam litora, nec quæ
Saxosæ inter decurrunt flumina valles. *Ecl.* 5. 82.

Ver. 15. The Greek is, *ὡς το καταντες τὸ το
γυαλοφον, ἀπὲ μωρικαι.* The same verse occurs, Idyl. 5. ver. 101. in the Greek; in the translation 110.

Ver. 18.

Pascentes servabit Tityrus hædos— *Ecl.* 5. 12.

Ver. 20. Goats and their keepers were under the protection of Pan; it is with good reason, therefore, that the goatherd is afraid of offending that deity.

Horace, describing the middle of a hot day, says, "caretque Ripa vagis taciturna ventis." Ode 29. B. 3. On which Dacier observes, 'the ancients believed that at mid-day every thing was calm and serene, because at that season the Sylvan deities reposed themselves,' and quotes this passage of Theocritus in confirmation of it.

Ver. 22. Horace describes Faunus as a very choleric god, Ode 18. B. 3. and begs he would pass through his grounds in good temper. The Greek is remarkable, *Καὶ οἱ αἰ δριμυτὰ χολὰ ποτὶ ρινὴ κα-
θεται*—"And bitter choler always remains on his nostrils." Casaubon observes, that all violent passions cause a sensation in the nostrils, arising from the ebullition of the spirits, which mount towards the brain, and endeavouring to free themselves from restraint, find a vent by the nostril, and crowding through it, dilate it in their passage. This is evident from animals, and the nobler kinds of them, as the bull, the horse, the lion, whose nostrils always dilate when moved to anger. Homer has a similar expression in his Odyssey, B. 24. *ἀνα ῥίνας δὲ οἱ ἤδη Δριμυ μινος πρῆτυψεν*—"A sharp sensation struck his nostrils:" though this is to express another passion, viz. that of sorrow arising from filial tenderness; and is a description of Ulysses and his interview with Laertes. Persius in the same manner says—

Ira cadat naso, rugosaque fanna. *Sat.* 5. 91.

Ver. 23.

Si quos aut Phyllidis ignes,
Aut Alconis habes laudes, aut jurgia Cædri. *Ecl.* 5. 10.

Ver. 24.

Montibus in nostris solus tibi certet Amyntas. *Ecl.* 5. 8.

Ver. 25.

—Si quid cessare potes, requiesce sub umbrâ— *Ecl.* 7. 10.

Ver. 32.

Bis venit ad mulctram, binos alit ubere sætus. *Ecl.* 3. 30.

Ver. 33. Heinsius observes, that we have here a description of that art which the ancients called *κηρογραφία*, or in laying with wax, which in the days of Theocritus was very much practised by

the Egyptians and Sicilians. In beautifying the prows of their ships, the ancients made use of several colours, which were not barely varnished over with them, but very often annealed by wax melted in the fire, so as neither the sun, winds, nor water were able to deface them: the art of doing this was called from the wax *κηρογραφία*. See Potter's *Ant.* and Vitruvius, I. 7. cap. 9.

Ver. 35. This is a very striking description of those large pastoral cups which the ancient shepherds occasionally filled with wine, milk, &c. We may guess at the capaciousness of this cup from the multiplicity of subjects which are carved upon it. Virgil imitates this passage.

————— pocula ponam
Fagina, cœlatum divini opus Alcimedontis;
Lenta quibus torno facili superaddita vitis
Diffusos hederâ vestit pallente corymbos.

Ecl. 3. 36.

And I this bowl where wanton ivy twines,
And swelling clusters bend the curling vines—

Pope, Past. 1.

Ver. 36. Here are three sorts of ivy mentioned, *κισσός*, *ελιχευσός*, and *ελιξ*. Pliny and Theophrastus say, that *κισσός* is a kind of ivy that grows alone without a support: *ελιχευσός* is probably the poetical ivy which Virgil mentions, *Ecl.* 8. 12. "hanc sine tempora circum inter victrices hederam tibi serpere lauros:" it has golden or saffron-coloured berries, and is styled "Hedera baccis aureis, and chrysocarpum:" the *ελιξ* bears no fruit at all, but has white twigs, and small, angular, reddish leaves, which are more neat than the other sorts.

Martyn.

Nonnus in his *Dionysiaca*, B. 19. has elegantly imitated this and many other passages of Theocritus.

Ver. 37. Creech has thus translated this passage.
With crocus mix'd, where seem the *kids* to brouse,
The berries crop, and wanton in the boughs—

On which Dr. Martyn observes, "it is hardly possible for a translation to be more erroneous: *καροποι κροκονη* signifies a fruit of a yellow or saffron colour, which Creech has rendered crocus; but crocus or saffron is a flower, not a fruit. I was a long time puzzled to discover where he found the *kids*: but suppose it must be from mistaking the sense of the word *ελιξ*; it signifies those *tendrils* which sustain the vine in climbing: the Romans call it *capreolus*, hence the translator finding *ελιξ* to be *capreolus* in Latin, which also signifies a *kid*, took it in the latter sense: but he ought to have known, that though *capreolus* is used both for a *kid* and a *tendril*, yet *ελιξ* signifies only the latter." There is a translation of this Idyllium in the second volume of Whaley's *Poems* which retains the same absurdity,

Around its lips the circling ivy strays,
And a young *kid* in wanton gambols plays,

Ver. 39.

Orpheaque in medio posuit, sylvasque sequentes.

Ecl. 3. 46.

Ver. 50.

Fert ingens toto connexus corpore saxum.

Æn. 10. 127.

Ver. 51.

————Plenis tumuerunt guttura venis—

Ovid. Met. 3. 73.

Ver. 53. This is similar to an image in Homer's *Iliad*, B. 18. thus translated by Mr. Pope.

Next ripe in yellow gold, a vineyard shines,
Bent with the pond'rous harvest of its vines.

Ver. 56. Foxes are observed by many authors to be fond of grapes, and to make great havoc in vineyards; Aristophanes in his *Equites* compares soldiers to foxes who spoil whole countries, as the other do vineyards: Galen, in his book of *Aliments*, tells us, that hunters do not scruple to eat the flesh of foxes in autumn, when they were grown fat with feeding on grapes. In the Song of Solomon, chap. ii. ver. 15. we read, "Take us the foxes, the little foxes that spoil the vines," &c. And agreeably to this, Nicander in *Alexiph.* v. 185. assures us that foxes will spoil the vines, *Πι-δμεν κ. τ. λ.* ———

Cum pingui nocuit vulpes versuta racemo—

Ver. 62.

————gracili fiscellam texit hibisco. *Vir. Ecl.* 10. 17.

Ver. 63.

————molli circum est anfas amplexus acantho.

Ecl. 3. 45.

Ver. 67. Though Homer, in his Catalogue of the Ships, reckons Calydon among the *Ætolian* cities, yet it is certain that formerly it not only belonged to the *Æolians*, but was likewise called *Æolis*: Thucydides says in his third history *αναχωρησαν εις την Αιολίδα την νυν καλυμμένην Καλυδονα.*

Casaubon.

Ver. 69.

Necdum illis labra admovi, sed condita servo.

Ecl. 3. 47.

Homer mentions the not having been used as a commendation of a cup in the 16th *Iliad*.

From thence he took a bowl of antique frame,
Which never man had stained with ruddy wine—

Pope.

Ver. 71. The Greek is *τον εφιμερον υμνον*, and is generally reckoned "amabile carmen:" thus Horace, *Epist.* 3. B. 1. ver. 24. "seu conditis amabile carmen:" but the correction which Heinsius makes is undoubtedly genuine; he reads *τον εφ' Ιμερα υμνον*, the Hymn of Himera, a river in Sicily, the banks of which were the scene of the loves of Daphnis, as is evident from a passage in the 7th Idyllium, ver. in the Greek 73, &c.—Besides we have the indisputable authority of *Ælian*, who, speaking of Daphnis and this Hymn, says it is that which the goatherd calls, *τον εφ' Ιμερα υμνον*, and that Stesichorus the Himeræan bard first sung this celebrated Hymn.

Ver. 72.

Non equidem invideo.

Ecl. 1. 11.

Ver. 75.

Incipe Mœnialios mecum, mea tibi versus.

Ecl. 8. 21.

Ver. 77. *Θυρσίς ὁδ' ὡς Αἰγυγίς, καὶ Θυρσίδος ἀδία φωνά*, Thyrsis Aëgius hic est, et hæc est Thyrsidis cantilena; Heinsius observes this is the title or prelude to the hymn, very agreeable to the manner of the ancients; thus Herodotus—"Herodoti Halicarnessensis hæc est Historia; he mentions his name, his country, and writings, exactly in the same manner as Thyrsis."

Ver. 79. Virgil, Milton, Mr. Pope and Lord Lyttleton have imitated this passage—

Quæ nemora, aut qui vos saltus habuere, puellæ
Naïdes, indigno cum Gallos amore periret?
Nam neque Parnassi vobis juga, nam neque Pindi
Ulla morem fecere, neque Aoniæ Aganippes.

Ecl. 10. 9.

Where were ye, nymphs, when the remorseless deep

Clos'd o'er the head of your lov'd Lycidas?
For neither were ye playing on the steep,
Where your old bards, the famous Druids, lie,
Nor on the shaggy top of Mona high,
Nor yet where Deva spreads her wizard stream.

Lycidas.

Where stray ye, Muses, in what lawn or grove,
While your Alexis pines in hopeless love?
In those fair fields where sacred Isis glides,
Or else where Cam his winding vales divides?

Pope.

Where were ye, muses, &c. See Lord Lyttleton's beautiful Monody—

The 10th Eclogue of Virgil is indeed only a sort of parody on this first Idyllium of Theocritus.

Ver. 87.

Daphni, tuum Pœnos etiam ingemuiffeleones
Interitum, montesque feri sylvæque loquuntur.

Ecl. 5. 27.

Ver. 91.

Stant et oves circum—

Ecl. 10. 16.

Ver. 95.

Pan, deus Arcadiæ venit—

Ecl. 10. 26.

Ver. 96.

—dicat Opuntia

Frater Megillæ, quo beatus

Vulnere, quâ pereat sagittâ.

Hor. L. 1. Od. 27.

Ver. 99.

Venit et upilio; tardi venere babulci;

Omnes, unde amor iste, rogant, tibi—

Ecl. 10. 19.

Ver. 102.

Galle: quid insanis? inquit; tua cura, Lycoris,

Perque nives alium, perque horrida castra secuta
est.

Ecl. 10. 22.

Ver. 107. The Greek Scholiast supposes this verse, and as far as to the 116th verse inclusive, to be the speech of Priapus comforting Daphnis; whereas it is undoubtedly that of the nymph Echenais, the mistress of Daphnis, upbraiding him for his incontinent passion; for he had been guilty of a breach of promise to her, and had offended her by following other women; taken in this light, the whole passage is beautiful, simple, and easy; "Daphnis,"

says she, 'you was used to be styled a cowherd, a man of continency, but, behold! you have adopted the manners of a goatherd, who when he observes the lasciviousness of his flock, wishes himself a goat:' *Heinsius*. Virgil alludes to this place, "Novimus et qui te transversa tuentibus hircis."

Ecl. 3.

Τακίται οφθαλμοῖς is a very strong expression, and emphatically denotes the effect which is produced in the eyes of any person who vehemently longs after an object which he can never attain. Horace has a similar expression,

Cum semel fixæ cibo
Intabuiscent populæ.

Epode 5. 39.

Ver. 122.

—premit altum corde dolorem—

Virg. Æn. B. 4.

Ver. 129. That is, he foresaw his death; that he should no more behold the light of the sun: an expression usual to the ancient poets; thus in Homer's *Odyssey*, B. 20. when the prophet Theoclymenus foresaw the death of the suitors, he says, *ἡλίου δὲ οὐρανὸν ἐξαπολλῶναι*, The sun has perished from heaven. Mr. Pope renders it,

Nor gives the sun his golden orb to roll,
But universal night usurps the pole.

Ver. 135.

Hic virides tenerâ pretextit arundine ripas
Mincius æque sacrâ resonant examina quercu.

Ecl. 7. 12.

Ver. 137. The Greek verse is very expressive of the sense: we hear the humming and buzzing of bees.

Ὡδὲ καλὸν βομβεῦντι ποτὶ σμανισαὶ μελισσαι—

Ver. 139.

Et formosus oves ad flumina pavit Adonis—

Ecl. 10. 18.

Adonis was the son of Cynaras, king of Cyprus, by his own daughter Myrrha—he was the great favourite of Venus, and has been abundantly celebrated by the Greek poets.

Martyn.

Ver. 140.

Auritosque sequi lepores, tum figere damas.

Geor. 1. 308.

Ver. 143. See Homer's *Iliad*, B. 5.

Ver. 147. Thus Virgil says, Vivite sylvæ, i. e. Valet—

Ecl. 8. 58.

Ver. 155.

Daphnis ego in sylvis, hinc usque ad sidera notus,
Formosi pecoris custos—

Ecl. 5. 43.

Here Virgil exceeds Theocritus, who only mentions the rural employments of Daphnis, whereas Virgil represents his Daphnis as a person whose fame had reached up to heaven.

Martyn.

Ver. 159.

Ipsc nemus linquens patrium, saltusque Lycæi,
Pan ovium custos, tua sibi Mænala curæ,
Adsis, O Tegæc favens—

Geor. L. 1. v. 16.

Ver. 167.

—Hos tibi dant calamos (en accipe) musæ,
 Ascrao quos antè seni—

Ecl. 6. 69.

Ver. 169.

Pan primus calamos cerâ conjungere plures
 Instituit—

Ecl. 2. 32.

The shepherd's pipe was composed of seven reeds, unequal in length, and of different tones, joined together with wax—Indeed in the 8th Idyllium there are two pipes described, composed of nine reeds each, but seven was the usual number—

Ver. 171.

—sed me
 Imperiosa trahit Proserpina—

Her. L. 2. Sat. 5.

Ver. 172.

Define, Mænalios jam define, tibia, versus.

Virg. Ecl. 8. 61.

Ver. 173. Virgil and Pope have imitated this passage—

Nunc et oves ultro fugiat lupus; aurea duræ
 Mala ferant quercus; narcisso floreat alnus.

Ecl. 8. 52.

Let opening roses knotted oaks adorn,
 And liquid amber drop from every thorn.

Pope, Past. 3.

Ver. 178.

Cum canibus timidi venient ad pocula damæ.

Ecl. 8. 28.

Ver. 179.

Certent et cynis ululæ—

Ecl. 8. 55.

Ver. 182.

—Extremaque Lapso

Parcæ fila legunt—

Æn. L. 10. 814.

Ver. 190.

Carmina tum melius, cum venerit ipse, canemus.

Ecl. 9. 67.

Ver. 197.

Κισσαία, the name of the goat, from
 κισσός, ivy, and αἶσρος, bright or shining.

IDYLLIUM II.

PHARMACEUTRIA.

THE ARGUMENT.

SIMÆTHEA is here introduced complaining of Delphis, who had debauched and forsaken her; she makes use of several incantations in order to regain his affection; and discovers all the variety of passions that are incident to a neglected lover.

WHERE are my laurels, and my philtres where?
 Quick bring them, Thestylis—the charm prepare;
 This purple fillet round the cauldron strain,
 That I with spells may prove my perjur'd swain:
 For since he rapt my door twelve days are fled,
 Nor knows he whether I'm alive or dead:
 Perhaps to some new face his heart's inclin'd,
 For love has wings, and he a changeful mind.
 To the Palæstra with the morn I'll go,
 And see and ask him why he shuns me so? 10
 Meanwhile my charms shall work: O queen of
 night:

Pale moon, assist me with refulgent light;
 My imprecations I address to thee,
 Great goddess, and infernal Hecate [dread,
 Stain'd with black gore, whom ev'n gaunt mastiffs
 Whene'er she haunts the mansions of the dead;
 Hail, horrid Hecate, and aid me still
 With Circe's power, or Perimedo's skill,
 Or mad Medea's art—Restore my charms,
 My lingering Delphis to my longing arms. 20

The cake's consum'd—burn; Thestylis, the rest
 In flames; what frenzy has your mind possess?
 Am I your scorn, that thus you disobey,
 Base maid, my strict commands?—Strew salt, and
 say, [charms,

“Thus Delphis' bones I strew”—Restore my
 The perjur'd Delphis to my longing arms.

5

Delphis inflames my bosom with desire;
 For him I burn this laurel in the fire:
 And as it fumes and crackles in the blaze,
 And without ashes instantly decays, 30
 So may the flesh of Delphis burn—My charms,
 Restore the perjur'd Delphis to my arms.

As melts this waxen form, by fire defac'd,
 So in love's flames may Myndian Delphis waste:
 And as this brazen wheel, though quick roll'd
 round,

Returns, and in its orbit still is found,
 So may his love return—restore my charms,
 The ling'ring Delphis to my longing arms.

I'll strew the bran: Diana's power can bow
 Rough Rhadamanth, and all that's stern below. 40
 Hark! hark! the village dogs! the goddess soon
 Will come—the dogs terrific bay the moon—
 Strike, strike the sounding brass—Restore my
 charms,

Restore false Delphis to my longing arms.

Calm is the ocean, silent is the wind,
 But grief's black tempest rages in my mind.
 I burn for him whose perfidy betray'd
 My innocence; and me, ah, thoughtless maid!
 Robb'd of my richest gem—Restore my charms,
 False Delphis to my long-deluded arms. 50

I pour libations thrice, and thrice I pray;
 O shine, great goddess, with auspicious ray!

F iijj

Whoe'er she be, blest nymph! that now detains
My fugitive in love's delightful chains;
Be she for ever in oblivion lost,
Like Ariadne, 'lorn on Dia's coast,
Abandon'd by false Theseus—O, my charms,
Restore the lovely Delphis to my arms.

Hippomanes, a plant Arcadia bears,
Makes the colts mad, and stimulates the mares, 60
O'er hills, through streams they rage: O, could I
see

Young Delphis thus run madding after me,
And quit the fam'd Palæstra!—O, my charms!
Restore false Delphis to my longing arms. [wear,

This garment's fringe, which Delphis wont to
To burn in flames I into tatters tear.

Ah, cruel love! that my best life-blood drains
From my pale limbs, and empties all my veins,
As leeches suck young steeds—Restore my charms,
My lingering Delphis to my longing arms. 70

A lizard bruise'd shall make a potent bowl,
And charm to-morrow his obdurate soul;
Meanwhile this potion on his threshold spill,
Where, though despis'd, my soul inhabits still;
No kindness he nor pity will repay;
Spit on the threshold, Thestylis, and say, [charms,
"Thus Delphis' bones I strew"—Restore my
The dear, deluding Delphis to my arms.

She's gone, and now, alas! I'm left alone!
But how shall I my sorrow's cause bemoan? 80
My ill-requited passion, how bewail?
And where begin the melancholy tale?

When fair Anaxa at Diana's fane
Her offering paid, and left the virgin-train,
Me warmly she requested, breathing love,
At Dian's feast to meet her in the grove:
Where savage beasts, in howling deserts bred,
(And with them a gaunt lioness) were led
'To grace the solemn honours of the day.—

Whence rose my passion, sacred Phœbe, say—
Theucarila's kind nurse, who lately died, 91
Begg'd I would go, and she would be my guide;
Alas! their importunity prevail'd,
And my kind stars and better genius fail'd;
I went adorn'd in Clearista's clothes—

Say, sacred Phœbe, whence my flame arose—
Soon as where Lyco's mansion stands I came,
Delphis the lovely author of my flame
I saw with Eudamippus, from the crowd
Distinguish'd, for like helichrysus glow'd 100
The gold down on their chins, their bosoms far
Outshone the moon, and every splendid star;
For lately had they left the field of fame—

Say, sacred Phœbe, whence arose my flame—
O, how I gaz'd! what ecstasies begun
'To fire my soul? I sigh'd, and was undone:
The pompous show no longer should surprise,
No longer beauty sparkled in my eyes:
Home I return'd, but knew not how I came:
My head disorder'd, and my heart on flame: 110
Ten tedious days and nights sore sick I lay—

Whence rose my passion, sacred Phœbe, say—
Soon from my cheeks the crimson colour fled,
And my fair tresses perish'd on my head:
Forlorn I liv'd, of body quite bereft,
Of bones and skin were all that I had left:

All charms I try'd, to each enchantress round
I fought; alas! no remedy I found:
Time wing'd his way, but not to sooth my woes—

Say, sacred Phœbe, whence my flame arose—
Till to my maid, oppress'd with fear and shame, 121
I told the secret of my growing flame;

'Dear Thestylis, thy healing aid impart—
'The love of Delphis has engross'd my heart.
'He in the school of exercise delights,
'Athletic labours, and heroic fights;
'And oft he enters on the lists of fame'—

Say, sacred Phœbe, whence arose my flame—
'Haste thither, and the hint in private give,
'Say that I sent you—tell him where I live.' 130
She heard, she flew, she found the youth I sought,
And all in secret to my arms she brought.

Soon at my gate his nimble foot I heard,
Soon to my eyes his lovely form appear'd;
Ye gods! how blest my Delphis to survey!

Whence rose my passion, sacred Phœbe, say—
Cold as the snow my freezing limbs were chill'd,
Like southern vapours from my brow distill'd
The dewy damps; faint tremors seiz'd my tongue,
And on my lips the faltering accents hung; 140
As when from babes imperfect accents fall,
When murmuring in their dreams they on their
mothers call.

Seaseless I stood, nor could my mind disclose—

Say, sacred Phœbe, whence my flame arose—
My strange surprise he saw, then prest the bed,
Fix'd on the ground his eyes, and thus he said:
'Me, dear Simætha, you have much surpass'd,
'As when I ran with young Philinus last
'I far out-strip him, though he bravely strove;
'But you have all prevented me with love; 150
'Welcome as day your kind appointment came'—

Say, sacred Phœbe, when arose my flame—
'Yes, I had come, by all the powers above,
'Or, rather let me swear by mighty love,
'Unsent for I had come, to Venus true,
'This night attended by a chosen few,
'With apples to present you, and my brows
'Adorn'd like Hercules, with poplar boughs,
'Wove in a wreath with purple ribbands gay'—

Whence rose my passion, sacred Phœbe, say—
'Had you receiv'd me, all had then been well, 161
'For I in swiftness and in form excel;
'And should have deem'd it no ignoble bliss
'The roses of your balmy lips to kiss:
'Had you refus'd me, and your doors been barr'd,
'With axe and torch I should have come pre-
'par'd,

'Resolv'd with force resistance to oppose'—
Say, sacred Phœbe, whence my flame arose—
'And first to beauty's queen my thanks are due,
'Next, dear Simætha, I'm in debt to you, 170
'Who by your maid, love's gentle herald, prove
'My fair deliverer from the fires of love:

'More raging fires than Ætna's waste my frame'—
Say, sacred Phœbe, whence arose my flame—
'Love from their beds enraptur'd virgins charms,
'And wives new-married from their husbands'
'arms.'

He said, (alas what frenzy seiz'd my mind!)
Soft prest my hand, and on the couch reclin'd;

Love kindled warmth as close embrac'd we lay,
And sweetly whisper'd precious hours away. 180
At length, O moon, with mutual raptures fir'd,
We both accomplish'd—what we both desir'd.
E'er since no pause of love or bliss we knew,
But wing'd with joy the feather'd minutes flew;
Till yester morning, as the radiant sun
His steeds had harness'd, and his course begun,
Restoring fair Aurora from the main,
I heard, alas! the cause of all my pain;
Philista's mother told me, ' she knew well
' That Delphis lov'd, but whom she could not tell:
' The marks are plain, he drinks his favourite toast,
' Then hies him to the maid he values most:
' Besides with garlands gay his house is crown'd :'
All this she told me, which too true I found.

He oft would see me twice or thrice a day,
Then left some token that he would not stay
Long from my arms, and now twelve days are past
Since my fond eyes beheld the wanderer last—
It must be so—'tis my unhappy lot
Thus to be scorn'd, neglected and forgot. 200
He woos, nodoubt, he woos some happier maid—
Meanwhile I'll call enchantment to my aid :
And should he scorn me still, a charm I know
Shall soon dispatch him to the shades below;
So strong the bowl, so deadly is the draught;
To me the secret an Assyrian taught.
Now, Cynthia, drive your coursers to the main;
Those ills I can't redress I must sustain.
Farewell, dread moon, for I have ceas'd my spell,
And all ye stars, that rule by night, farewell. 210

NOTES ON IDYLLIUM II.

Ver. 1. This whole Idyllium, as Heinſius obſerves, ſeems to have been pronounced with great gesticulation, as is evident from the exordium, Πά μοι ται Δάφναι; πα δὲ τα φίλτρα; which is a direct imitation of the beginning of an ancient ſong, that uſed to be frequently rehearſed in the ſtreets, and was called ἀνθίμα, Πά μοι τα ρόδα; τὰ μοι τα ἴα; Where are my roſes; where are my violets?

Ver. 3. It is uncertain what ſort of veſſel the Κιλιθῆ was. Nicander uſes the word in his Theriacis, and there it ſignifies a mortar in which any thing is pounded. Caſaubon thinks it may be taken in the ſame ſenſe here. It is worth obſervation, that though Virgil has ſtudiouſly imitated this whole Idyllium, he choſe not to mention any ſort of veſſel, but ſays, “moll icinge hæc alteria vittâ.”
Ecl. 8. 64.

Ver. 4.
Conjugis ut magicis ſanos avertere ſacris
Experiar ſenſus— *Ecl. 8. 66.*

Ver. 9. The place for wreſtling, and other exerciſes.

Ver. 11. Sorcerers addreſſed their prayers to the Moon and to Night, the witneſſes of their abominations.—Thus Medea in Ovid, Met. B. vii.

Nox, ait, arcanis fidiffima— [noſtris
Tuque triceps Hecate quæ cæptis conſcia
Adjutrixque venis—
Canidia addreſſes the ſame powers—O rebus meis
Non infideles arbitrae,
Nox, & Diana quæ ſilentium regis
Arcana cum ſunt ſacra;
Nunc, nunc adefle. *Hor. Epode 5. 49.*

Ver. 19. The Greek is Ιωνυξ a bird which magicians made uſe of in their incantations, ſuppoſed to be the wry-neck—Virgil has “Ducite ab urbe domum, mea Carmina, ducite Daphnim.”
Ecl. 8. 68.

Ver. 22. Ah, Corydon, Corydon, quæ te demencia cipit?
Ecl. 2. 69.

Ver. 28.

Fragiles incende bitumine lauros.
Daphnis me maulus urit, ego hanc in Daphnida
laurum. *Ecl. 8. 82.*

The laurel was burnt in order to conſume the fleſh of the perſon, on whoſe account the magical rites were performed. It was thought, according to Pliny, B. 16. chap. laſt, by its crackling noiſe, to expreſs a deteſtation of fire. Mr. Gay has finely imitated this paſſage, in his fourth Paſtoral.

Two hazel nuts I threw into the flame,
And to each nut I gave a ſweetheart's name :
This with the loudeſt bounce me ſore amaz'd,
That in a flame of brighteſt colour blaz'd :
As blaz'd the nut, ſo may thy paſſion grow,
For 'twas thy nut that did ſo brightly glow.

Ver. 33. It was cuſtomary to melt wax, thereby to molify the heart of the perſon beloved; the ſorcerers in Virgil, *Ecl. 8.* makes uſe of two images, one of mud and the other of wax.

Limus ut hic dureſcit, & hæc ut cera liqueſcit
Uno eodemque igni : ſic noſtro Daphnis amore.

Ver. 35. It was alſo uſual to imitate all the actions they wiſhed the loved perſon to perform : thus Simæthe rolls a brazen wheel, believing that the motion of this magic machine had the virtue to inſpire her lover with thoſe paſſions which ſhe wiſhed. Canidia makes uſe of this wheel. See *Hor. Epode 17. 6, 7.*

Canidia, parce vocibus tandem ſacris,
Citumque retro ſolve, ſolve turbinem.

Ver. 41.—Hylax in limine lattat—
Virg. Ecl. 8. 107.

—viſæquæ canes ululare per umbram.
Adventante Deâ— *Æn. 6. 257.*

The reaſon why Hecate was placed in the public ways, was becauſe ſhe preſided over piacular pollutions : every new moon there was a public ſupper provided at the charge of the richer ſort in a place where three ways met; hence ſhe was cal-

ed Trivia, which was no sooner brought, but the poor people carried it all off, giving out that Hecate had devoured it; these suppers were expiatory offerings to move this goddess to avert any evils, which might impend, by reason of piacular crimes committed in the highways. *Potter's Ant.*

Ver. 43.

Tinnitufque cie, & matris quate cymbala circum.

Virg. Georg. 4. 64.

Ver. 45.

Et nunc omne tibi stratum flet æquor, & omnes (Aspice) ventosi ceciderunt murmuris auræ.

Ecl. 9. 57.

Ver. 51. The number three was held sacred by the ancients, being thought the most perfect of all numbers, as having a regard to the beginning, middle, and end. We shall see a further propriety in it, if we consider that Hecate, who presided over magical rites, had three faces.

Terna tibi hæc primum triplici diversa colore
Licia circundo, terque hæc altaria circum
Effigiem duco: numero deus impare gaudet.

Ecl. 8. 73.

Ver. 59. Hippomanes here undoubtedly signifies a plant, which is described as having the fruit of the wild cucumber, and the leaves of the prickly poppy; perhaps a kind of mullien; though in Virgil, *Geor. 3. 280.* it means a poison. See *Martyn.*

Ver. 60.

Cum tibi flagrans amor & libido,
Quæ solet matres furiare equorum, &c.

Hor. B. 1. Od. 25.

Ver. 65. Simæthe burns the borders of Delphis's garment, that the owner may be tortured with the like flame: Virgil's enchantress deposits her lover's pledges in the ground, under her threshold, in order to retain his love, and secure his affections from wandering.

Has olim exuvias mihi perfidus ille reliquit
Pignora cara sui; quæ nunc ego limine in ipso,
Terra, tibi mando——

Ecl. 8. 91.

Ver. 71.

Has herbas, atque hæc Ponto mihi lecta venena.

Ecl. 8. 95.

Horace has—

Majus parabo, majus infundam tibi
Fastidienti poculum——

Epode 5. 77.

Mr. Gay had this passage in view.

These golden lines into his mug I'll throw,
And soon the swain with fervent love shall glow.

Past. 4.

Ver. 83. The Athenian virgins were presented to Diana before it was lawful for them to marry, on which occasion they offered baskets full of little curiosities to that goddess, to gain leave to depart out of her train, and change their state of life.

Potter.

Ver. 95. This is a stroke on the pride of those women who trick themselves in hired clothes; and is entirely similar to a passage in Juvenal, *Sat. 6. 351.*

Ut spectet ludos condncit Ogulnia vestem,
Ogulnia borrows clothes to see the show.

Ver. 105. The Greek is *Χαῖς ἰδὼν, ὡς ἑμάνην. κ. τ. λ.* There is a similar line in the 3d Idyl. ver 42. *Ὡς ἰδὼν, ὡς ἑμάνην, ὡς ἐκβαθὺν ἀλλὰ τ' ἐρωτα.*

Virgil has—

Ut vidi, ut perii, ut me malus abstulit error.

Ecl. 8. 41.

which is confessedly inferior to the Greek.

Ver. 113. The literal translation of this passage is, *And my colour was like thapsus*—*θαψος* is a Scythian wood of a boxen or golden colour; some take it to be the Indian guaiacum. The women that chose to look pale, tinged their cheeks with it. *Heinsius's Notes.*

Ver. 116. Our poet uses the same proverb, Idyl, 4. ver. 16. and Virgil has—*vix ossibus hærent.*

Ecl. 3. 102.

Ver. 119.

Sed fugit interea, fugit irreparabile tempus.

Geor. B. 3. 284.

Ver. 121.

Cum sic unanimem alloquitur malè sana sororem.

Æn. B. 4. 8.

Ver. 124.

Solus hic inflexit sensus, animumque labantem

Impulit——

Ver. 22.

Ver. 137. Diriguit visu in medio: calor ossa reliquit. *Æn. B. 3. 308.* If the learned reader will compare this passage with Sappho's celebrated ode *Εἰς τὴν ἐρωμένην*, he will find great similarity both in the thoughts and expressions.

Ver. 153. Heinsius observes there was a custom at Athens, that whenever a young man was smitten with the beauty of any lady, especially that of a courtesan, he wrote her name in a place appointed for the purpose, with some encomium upon her; and having acknowledged his passion, the day following he appointed for a festival, *πρὸς τὴν ἀναδήσιν*, that is, to crown her head with a wreath of flowers and ribbands. Thus in Plato, Alcibiades, at a festival, resorts to Agatho, with a crown and ribbands to adorn his head.

Ver. 158. The poplar was sacred to Hercules. Virgil has,

Populeis adsunt evincti tempora, ramis. *Æn. 8. 286.*

Ver. 166. If, after rapping at the door, the lover was refused admittance, *πρὸς τὴν ἀναδήσιν*, to place the flowery crown on the head of his mistress, he then threatened axes and torches to break or burn the door—Thus Horace

Hic hic ponite lucida

Funalia, et vestes, et arcus

Oppositis foribus minaces— *B. 3. Od. 26.*

Ver. 175. The Greek is *παρθένον ἐκ θαλαμῶν*, the thalami signified the inner chambers where the virgins were kept closely confined, and not permitted to converse with men. In Homer, *Iliad, b. 6.* the rooms where Priam's daughters livid are called *τιγροὶ θαλάμοι*, as being placed at the top of the house; for the women's lodgings were usually in the uppermost rooms, as Eustathius remarks

upon the passage; which was another means to keep them from company.

Ver. 180. *Εἰς οὐρανὸν ἀνύσσει*. See Idyl. i. v. 1.

Ver. 193. That it was usual for lovers to adorn their houses with flowers and garlands in honour of their mistresses, is evident from a passage in Catullus, *de Aty*, ver. 66.

Mihi floridis corollis redimita domus erat,
Linquendum ubi esset orto mihi sole cubiculum.

Fair flowery wreaths around my house are spread,
When with the rising sun I leave my bed.

Ver. 202.

His ego Daphnim Aggrediar.

Ecl. 8. 102.

Ver. 203.

Majus parabo, majus infundam tibi

Fastidienti poculum.

Hor. Epod. 5. 77.

Ver. 206.

Has herbas, atque hæc ponto mihi lecta venena

Ipse dedit mæris.

Ecl. 8. 95.

The Assyrians were greatly addicted to magic.

IDYLLIUM III.

AMARYLLIS.

THE ARGUMENT.

A goatherd declares his passion for his mistress Amaryllis, laments her cruelty, commends her charms, solicits her favours, and, distracted at the thoughts of not obtaining them, threatens to drown himself; tries experiments to know if she loves him, sings love-songs, and seems resolved to die, and be devoured by wolves.

To Amaryllis, lovely nymph, I speed,
Meanwhile my goats along the mountain feed:
O Tityrus, tend them with assiduous care,
In freshest pasture, and in purest air;
At evening see them to the water led,
And ware the Libyan ram with butting head.
Sweet Amaryllis!—once how blest my lot
When here you meet me in the conscious grot?
I, whom you call'd your dear, your love, so late,
Say, am I now the object of your hate? 10
Does my flat nose or beard your eyes offend?—
This love will surely bring me to my end—
Lo! ten fair apples, tempting to the view,
Pluck'd from your favourite tree, where late they
grew;
Accept this boon, 'tis all my present store—
To-morrow shall produce as many more;
Meanwhile these heart-consuming pains remove,
And give me gentle pity for my love—
Oh! were I made, by some transforming power,
A bee to buzz in your sequester'd bower! 20
To pierce your ivy shade with murmuring sound,
And the fern leaves which compass you around—
I know thee, love, and to my sorrow find
A god thou art, but of the savage kind;
A lioness sure suckled the fell child,
Fed with her whelps, and nurs'd him in the wild:
On me his scorching flames incessant prey,
Glow in my veins, and melt my soul away—
Sweet black-ey'd maid! what charms those eyes
impart!
Soft are your looks, but flinty is your heart; 30
With kisses kind this rage of love appease,
For me the joys of empty kisses please.
Your scorn distracts me, and will make me tear
The flowery crown I wove for you to wear,
Where rose-buds mingled with the ivy-wreath,
And fragrant parsley sweetest odours breathe—

Ah me! what pangs I feel? and yet the fair
Nor sees my sorrows, nor will hear my prayer—
I'll doff my goat-skin, since I needs must die,
And thence, where Olpis views the scaly fry— 40
Inquisitive, a dire impending steep,
Headlong I'll plunge into the foamy deep;
And though perchance I buoyant rise again,
You'll laugh to see me flouncing in the main—
By one prophetic orpine-leaf I found
Your chang'd affection, for it gave no sound,
Though on my hand struck hollow as it lay,
But quickly wither'd, like your love, away—
An old witch brought sad tidings to my ears,
She who tells fortunes with the sieve and sheers:
For, leasing barley in my fields of late, 50
She told me, 'I should love, and you should
hate'—

For you my care a milk-white goat supplied,
Two wanton kids skip gamesome at her side,
Which Mermnon's girl, Erithacis the brown,
Has oft petition'd me to call her own;
And since you thus my ardent passion slight,
Hers they shall be before to-morrow night—
My right eye itches; may it lucky prove!
Perchance I soon shall see the nymph I love; 60
Beneath yon pine I'll sing distinct and clear—
Perchance the fair my tender notes may hear;
Perchance may pity my melodious moan—
She is not metamorphos'd into stone—
Hippomanes, provok'd by noble strife,
To win a mistress, or to lose his life,
Threw golden fruit in Atalanta's way,
The bright temptation caus'd the maid to stay;
She look'd, she languish'd, all her soul took
fire,
She plung'd into the gulf of deep desire. 70
From Othry's top the bard Melampus came,
He drove the herd to Pyle, and won the dame:

Alphesibœa's mother, fam'd for charms
Of beauty, blest heroic Bias' arms.
Adonis fed his flocks upon the plain,
Yet heavenly Venus lov'd the shepherd swain;
She mourn'd him wounded in the fatal chace,
Nor dead dismiss'd him from her warm embrace.
Though young Endymion was by Cynthia blest,
I envy nothing but his lasting rest. 80

Idion too was happy to obtain
The pleasures too divine for ears profane.
My head grows giddy---love affects me sore;
Yet you regard not, so I'll sing no more---
Stretch'd near your grotto when I've breath'd
my last,
My flesh will give the wolves a rich repast,
This will be sweet as honey to your taste. }

NOTES ON IDYLLIUM III.

This Idyllium affords us a specimen of ancient gallantry, namely, of the *παρὰ κλαυσίῳ*, or mournful song, which excluded lovers used to sing at the doors of their mistresses. They had two methods of performing this: one was to sing it as they lay on the ground; thus Horace, Ode 10. B. 3. was sung while the lover was *porrectus ante fores*; but this was performed standing, and with great gesticulation of body, and motion of the feet: It is called *Comastes*, which signifies, according to Hesychius, a shepherd that dances and sings at the same time. The turns in this song are very abrupt, sudden, and striking, and gives us a lively picture of a distracted lover.

Ver. 2.

Pascuntur vero sylvas et summa Lycæi.

Geor. 3. 314.

Ver. 3. Virgil has translated these three lines, Tityre, dum redeo, brevis est via, pascite capellas: Et notum pastas age, Tityre: et inter agendum Occursare capro, cornu ferit ille, caveto. *Ecl.* 9. 23.

This passage of Virgil, Dr. Martyn thinks, seems to intimate, that he was engaged in translating the Idylliums of our poet.

Ver. 6. The Greek is *ενορχαν*, which in this place undoubtedly signifies a ram. Thus Homer has Πεντικοντα δ' ενορχα. κ. τ. λ. Full fifty rams to bleed in sacrifice. *Pope's Iliad.* B. 23.

Creech and Dryden have rendered it Ridgil: Dryden and Warton also have rendered the word *capro* in Virgil by the same term.

Ver. 10.

Dumque tibi est odio mea fistula, dumque capellæ,
Hirsutumque supercilium, proluxaque barba.

Ecl. 8. 33.

Ver. 12.

Mori me denique coges,

Ecl. 2. 7.

Ver. 13.

Quod potui, puero sylvestri ex arbore lecta
Aurea mala decem misi: cras altera mittam.

Ecl. 3. 70.

Ver. 20. The Greek is, *Α βομβυσα μελισσα*, and is very expressive of the sense. See *Idyl.* I. 137.

Ver. 22. The ancient shepherds often made themselves beds of fern, because they imagined that the smell of it would drive away serpents.

Ver. 23. Virgil has,

Nunc scio quid sic Amor: duris in cotibus illum
Hmarus, aut Rhodope, aut extremi Garamantes,

Nec nostri generis puerum nec sanguinis edunt.

Ecl. 8. 43.

These ideas, not owing their original to rural objects, are not pastoral, and therefore improper: sentiments like these, as they have no ground in nature, are indeed of little value in any poem; but in pastoral they are particularly liable to censure, because they are more proper for tragic, or heroic writings. *Ramblar.* No. 37.

Pope, endeavouring to copy Virgil, was carried to still greater impropriety;

I know thee love! on foreign mountains bred,
Wolves gave thee suck, and savage tygers fed.
Thou wert from Ætna's burning entrails torn,
Got by fierce whirlwinds and in thunder born.

Ver. 32. *Εστι και εν κεινοισι φιλαμασιν αδια τριψις*;

Exactly the same verse occurs, *Idyl.* 27. l. 4. Moschus calls it, *γυμνον το φιλαμα*, a naked kiss.

Ver. 35.

Floribus, atque apio crines ornatus amaro. *Ecl.* 6. 68.

The ancients thought that ivy and parsley had the virtue of dissipating the vapours of wine.

Ver. 42. Virgil has,

Præceps ærii speculâ de montis in undas
Deferar.

Ecl. 8. 59.

Ver. 45. *Τηλιφιλον* is properly orpine, a low plant whose branches trail on the ground; the leaves are small, roundish, and of a glaucous colour, the flowers small, and of a whitish green.

Cool violets, and orpine growing still,
Embathed balm and cheerful galingale. *Spenser.*

Ver. 49. The Greek is *Αγροιω*, and generally taken for a proper name; but Heinsius, with good reason, thinks it should be wrote *α γραια*, an old woman. We have a similar passage in the 6th *Idyl.* ver. 40. *Ταυτα γαρ α γραια με Κοτυτταρις εξιδιδαξεν*,

For this the old woman Cottyтарis taught me.

Ver. 50. This was another sort of divination.

Ver. 53. Virgil has entirely copied this;

Præterea duo nec tum mihi valle reperti
Capreoli sparsis etiam nunc pellibus albo,
Bina die siccant ovis ubera; quos tibi servo.
Jampridem alme illos abducere Thestylis orat;
Et faciet; quoniam sordent tibi munera nostra.

Ecl. 2. 40.

Ver. 59. The palpitation of the right eye was reckoned a lucky omen. *Potter.*

Ver. 65. See the story in Ovid's *Met.* B. 10. ver. 664.

Ver. 69. The Greek is,

Ως ἰδεν, ως ἑμάνη, ως εἰ βαθυὺν ἀλλιστ' ἐρωτα!

There is a similar ver. *Idyl.* 2. 82.

Χως ἰδον, ως ἑμάνη, ως μὲν περὶ θυμὸς ἰαφθεύ—

Virgil has, "Ut vidi, ut perii, ut me malus abstulit error!" *Ecl.* 8. 41.

Which is far inferior to the Greek; *abstulit error* is much more languid.

Ver. 71. This was a mountain in Thessaly; which country was famous for such an extraordinary breed of oxen, that Neleus, king of Pylus, refused to give his daughter in marriage to Melampus, king of Tyrius, except he procured him some of them, which he soon after accomplished by the help of his brother Bias.

Univ. Hist. vol. vi. p. 215. 8vo.

Turpia perpeffus vates est vincia Melampus.

Prop. B. 2. *Ecl.* 3.

Ver. 78. Bion, in his epitaph on Adonis, has a beautiful thought in allusion to this, ver. 45.

Εγχείο τυτθόν, Ἀδωνί, το δ' αὖ πυματόν με φιλάσθω,
κ. τ. λ.

Raise, lov'd Adonis, raise thy drooping head,
And kiss me ere thy parting breath be fled;
The last fond token of affection give,
O kiss thy Venus, while the kisses live;
Till in my breast I draw thy lingering breath,
And with my lips imbibe thy love in death. *F. F.*

Ver. 81. The son of Jupiter and Electra: he lay with Ceres, and was by Jupiter struck with thunder:

Scarce could Iasion taste her heavenly charms,
But Jove's swift lightning scorch'd him in her arms. *Pope's Od.* B. 5.

Ver. 82.

Procul, ô, procul este profani. *Æn.* B. 6. 258.

Ver. 84.

Amor non talia curat. *Ecl.* 10. 28.

Ver. 87.

Hoc juvat, & melli est. *Hor.* B. ii. Sat. 6. ver. 32.

IDYLLIUM IV.

THE SHEPHERDS.

THE ARGUMENT.

We have here a dialogue between Battus, a shepherd, and Corydon, a neatherd. The beauty of this *Idyllium* consists in that natural representation of sorrow which the poet makes the herds affected with in the absence of their master: Battus laments the death of Amaryllis. The latter part of this piece is very natural, but too much inclining to rusticity.

Battus.

ARE these Philonda's cows that graze the mead?

Corydon.

No; Ægon's—Ægon gave them me to feed.

Battus.

Don't you play false, and milk them by the by?

Corydon.

My shrewd old master keeps too strict an eye;
The calves he suckles, and prevents the fraud.

Battus.

But where is Ægon? is he gone abroad?

Corydon.

What, han't you heard it from the mouth of fame?
Milo entic'd him to th' Olympic game.

Battus.

Will he engage in that athletic toil,
Who never yet beheld Olympic oil? 10

Corydon.

Fame says, his strength with Hercules may vie;

Battus.

And that stout Pollux is worse man than I.

Corydon.

He with his spade is gone, at honour's call,
And twenty sheep to keep himself withal.

Battus.

To Milo surely high regard is had;
The wolves at his persuasion will run mad.

Corydon.

These heifers want him, moaning o'er the mead.

Battus.

Alas! they've got a wretched groom indeed.

Corydon.

Poor beasts, I pity them! they even refrain
To pick the scanty herbage of the plain. 20

Battus.

Yon heifer's bones are all that strike the view:
Say, does she live, like grasshoppers, on dew?

Corydon.

No, troth! by Æser's banks she loves to stray,
And there I bring her many a lock of hay;
And oft she wantons in Latymnus' shades,
And crops fresh pasture in the opening glades.

Battus.

That red bull's quite reduc'd to skin and bone;
May the Lampriadae, when they atone
The wrath of Juno, sacrifice his mate!
A wretched offering suits a wretched state. 30

Corydon.

And yet on Phycus, or the marsh, he feeds,
 Or where Neæthus laves the verdant meads;
 Where bright-ey'd flowers diffuse their odour
 round, [abound.
 Buck-wheat and flea-bane bloom, and honey-bells

Battus.

Alas! These herds will perish on the plain,
 While Ægon courts fair victory in vain;
 His pipe, which sweetest music could produce,
 His pipe, too, will be spoil'd for want of use.

Corydon.

No fear of that, for when he went away,
 He left it me, and I can sing and play : 40
 I warble Pyrrhus' songs, and Glaucæ's lays,
 Zycynthus fair, and healthful Croton praise,
 And proud Lacinium, rising to the east,
 Where Ægon swallow'd four score cakes at least :
 There, too, a bull he boldly dar'd pursue,
 Seiz'd by the hoof, and down the mountain drew;
 Then gave it Amaryllis; with glad shout
 The maids approv'd the deed, loud laugh'd the
 lubber lout.

Battus.

Sweet Amaryllis! though entomb'd you lie,
 With me your memory shall never die : 50
 I lov'd you dearer than my flocks of late,
 And now, alas! I mourn your cruel fate.

Corydon.

Yet courage, friend; to-morrow fortune's ray
 May shine with comfort, though it lowers to day :
 Hopes to the living, not the dead remain;
 And the soft season brightens after rain.

Battus.

Firm is my trust—but see! these hungry cows
 (White-face, away) my tender olives browse!

Corydon.

Away, Cymætha, to the bank! by Jove,
 If I come near you, faith! I'll make you move—
 See! she returns—O that I had my pike! 61
 I'd give the beast a blow she would not like.

Battus.

Pray, Corydon, see here! thy aid I beg;
 A long sharp-pointed prick has pierc'd my leg;
 How high these thorns and spindling brambles
 grow!
 Do'st see't?—'twas long of her; plague take the
 cow!

Corydon.

Here comes the thorn! your throbbing pain I've
 found.

Battus.

How great the anguish! yet how small the
 wound!

Corydon.

These thorny, furzy hills should ne'er be trod
 With legs unguarded, and by feet unshod. 70

Battus.

Does your old master still persist to prize
 His quondam mistress with the jet black eyes?

Corydon.

The same; for lately in the wattled ground,
 In the soft scene of love the carle I found.

Battus.

O, nobly done! lascivious old man!
 Meet match for satyrs, or salacious Pan.

NOTES ON IDYLLIUM IV.

Virgil begins his third Eclogue with almost the
 same words,

Ver. 1.

Dic mihi, Damoeta, cum pecus? an Melibœi?
 D. Non, verum Ægonis: nuper mihi tradidit Æ-
 gon.

Ver. 3.

Hic alienus oves custos bis mulget in horâ.

Ecl. 3. 5.

There was a peculiar kind of theft which the
 mercenary herdsmen among the ancients were
 guilty of, which was to milk the cattle they tend-
 ed clandestinely in the absence of their masters;
 these delinquents were called ἀμειλίγοι.

Ver. 10. It was customary for the wrestlers,
 and other combatants at the Olympic games, to
 anoint themselves with oil, not only to render
 their limbs more supple, but likewise that their
 antagonists might have no advantage over them.

Ver. 13. Casaubon observes, that those who in-
 tended to be competitors at the Olympic games,
 came thirty days at least before they began, to be
 trained up and exercised by those who presided
 over the games, which lasted five days; so that
 the combatants remained at Elis near forty, at least

five and thirty days: the twenty sheep therefore
 which Ægon carried with him were for his pro-
 vision during his stay at Elis, and perhaps for sa-
 crifice, and to entertain his friends. A spade, σπα-
 ταν, was the emblem or badge of a wrestler, and
 therefore painters and sculptors, as Festus Pom-
 peius observes, represented wrestlers with this in-
 strument in their hands: his words are, "Ru-
 "trum tenentis juvenis est effigies in capitolio,
 "ephebi, more Græcorum, arenam ruentis exerci-
 "tationis gratiâ;" in the capitol there is the effigy
 of a youth holding a spade, and, after the Grecian
 manner, turning the sand for the lake of exercise.

Ver. 16. The Greek Scholiast observes, that
 madness is a distemper to which dogs, of all ani-
 mals, are most liable: thus Virgil, Geor. 3. 496.
 "Hinc canibus blandis rabies." Hence gentle
 dogs run mad; at least much more so than wolves:
 therefore, says Battus, if Milo can prevail on the
 rustic Ægon to go to the Olympic games, he
 might persuade even wolves to run mad.

Ver. 17. Moschus, Idyl. 3. ver. 23. has a pas-
 sage extremely similar to this,

Ωρεα δ' ἔσαν ἀφωνα, καὶ αἱ βοῆς αἱ ποτὶ ταύρους
 Πληζόμεναι γαίοντι, καὶ ἐκ ἐθιλοντι νηυσθαί.

And now each straggling heifer strays alone,
And to the silent mountains makes her moan;
The bulls loud-bellowing o'er the forests rove,
Forsake their pasture, and forget their love. *F. F.*

Ver. 21. ——— vix ossibus hærent. *Ecl. 3. 102.*

Ver. 22.
Dumque thymo pascentur apes, dum rore cicadæ.
Ecl. 5. 77.

Ver. 27.
Eheu, quam pingui macer mihi taurus in arvo;
Ecl. 3.
How lean my bull on yonder clover'd plain.
Watson.

Ver. 28. Heinsius takes the Lampridæ to have been the inhabitants of Lacinium, a promontory not far from Croton, where there was a celebrated temple erected to Juno—*Atollit se diua Lacinia contra. Æn. 3. 552.* They formerly were opulent, but afterwards reduced to extreme penury and wretchedness.

Ver. 31.
Saltibus in vacuis pascant, et plena secundum
Flumina; muscus ubi et viridissima gramine ripa.
Geor. 3.

Ver. 34. The Greek is, *Αἰγίστιρος, καὶ κινύζα, καὶ ἐνωδὴς μιλίσσια*
The virgins that attended at the feast held in honour of Ceres, called *Θεσμοφορία*, strewed on their beds such herbs as were thought effectual to

destroy all appetite for venereal pleasures, as *κινύζα, fœa bane, agnus castus, &c.* See *Potter.*

Ver. 40.
—— et me fecere poetam
Pierides; sunt et mihi carmina. *Ecl. 9. 32.*

Ver. 41. Glaucia was a lutanist of Chios, Pyrrhus a Lesbian poet.

Ver. 44. Horace says of a glutton,
—— Porcius infra,
Ridiculus totas simul absorbere placentas.
B. 2. Sat. 8.

Ver. 49. This short eulogy on the deceased Amaryllis, late the mistress of Battus, is beautifully introduced on Corydon's mentioning her name.

Ver. 33.
—— sed credula vitam
Spes fovet, et melius cras fore semper ait.
Tibul. B. 2. El. 6.

And Horace,
—— informes hyemes reducit Jupiter: idem Sum-
movet:
Non, si male nunc et olim Sic erit. *B. 2. Od. 10.*

Jove spreads the heavens with dusky clouds;
The clouds he chides away;
To-morrow's sun shall shine serene,
Though fortune lows to-day. *Duncombe.*

Ver. 61. Unde mihi lapidem? unde sagittas?
Hor. B. 2. Sat. 7.

IDYLLIUM V.

THE TRAVELLERS.

THE ARGUMENT.

THIS Idyllium is of the dramatic kind: Comates a goatherd, and Lacon a shepherd, after exchanging some very coarse railleries, a true image of vulgar freedom, contend in singing. The beauty of this piece consists in that air of simplicity in which the shepherds are painted; full of themselves, boastful of favours received, and making sudden transitions, agreeable to the desultory genius of uncivilized nature.

Comates.

My goats of Lacon, Sybarite base take heed;
He stole my goatskin—at a distance feed.

Lacon.

Fly, fly, my lambs, these springs—nor longer stay,
Comates comes who stole my flute away.

Comates.

What flute, thou servile Sybaritic brute!
Pray, when wast thou e'er master of a flute?
'Twas all thy pride, with Corydon, to draw
The rustic rout with scrannel pipes of straw.

Lacon.

The flute which Lycon gave me frank and free:
But pray, what goatskin did I steal from thee? IO
What goatskin e'er hadst thou, thou lubber lout?
It is well known thy master sleeps without.

Comates.

What Crocylus bestow'd, of special note,
When to the nymphs he sacrific'd a goat;
Thou envied'st me the present, and by these
Hast basely of the speckled pelt bereft.

Lacon.

I stole it not; I swear by mighty Pan;
Comates, thou'rt mistaken in thy man;
Or may I, seiz'd with instant frenzy, leap
Headlong from this high rock into the deep. 20

Comates.

Thy flute I stole not; by the nymphs I swear,
The fountain nymphs, to me for ever dear.

Lacon.

If I believe thee, goatherd, may I prove
The desperate pains of Daphnis, pin'd with love

Nought now is sacred—yet a kid stake down,
Thoult find my skill superior to thy own.

Comates.

A sow Minerva brav'd: for singin's sake,
I'll lay a kid, if thou a lamb wilt stake.

Lacon.

Ah fly old fox! but how can this be fair?
For good sheep's wool who ever sheer'd goat's
hair?

30

What booby, blown to folly's utmost pitch,
E'er left an udder'd goat to milk a bitch?

Comates.

He that's as sure as thou art to excel,
Though wasps may sing with grasshoppers as well:
But lest thou turn thy challenge to a flam,
I'll stake this full-grown goat against thy lamb.

Lacon.

Soft, hasty goatherd! let us hence remove
To yon wild olive-shade beside the grove;
There sing thy best, while in pure streams below,
Grateful to swains, the cooling fountains flow; 40
There spring sweet herbs, soft couches wait thy
choice,

And there the sprightly grasshoppers rejoice.

Comates.

Hasty I'm not, but greatly vex'd at heart
That thou dar'st brave thy teacher at his art;
Requital base!—Breed hounds, or wolf-whelps
breed,
Ungrateful, they'll devour you for the deed.

Lacon.

Ye goatherds love beyond the truth to stretch:
When learnt I ought of thee, invidious wretch?
But, come, vain boaster, to the grove along,
No more thoult challenge shepherds at the song. 50

Comates.

Here rest we; lo! cyperus decks the ground,
Oaks lend their shade, and sweet bees murmur
round

Their honied hives; here two cool fountains spring;
Here merrily the birds on branches sing;
Here pines in clusters more umbrageous grow,
Wave high their heads, and scatter cones below.

Lacon.

With me retreat, where skins of lambs I keep,
Whose wool's a pillow softer far than sleep:
Thy goat-skins ill with cleanliness agree,
So rank they smell, nay rather worse than thee. 60
There to the nymphs I'll crown, delightful toil
One bowl of milk, and one of sweetest oil.

Comates.

Retire with me to more sequester'd bowers,
There thou shalt rest on fern, and fragrant flowers;
O'er these the skins of tender kids I'll spread,
A softer far than thine and sweeter bed:
Eight bowls of milk, to Pan, great god, shall foam,
And eight of honey, and the honey-comb.

Lacon.

Agreed: the contest lest thou shouldst evade,
I'll wait thy summons at thy oaken shade. 70
Who shall decide the honours of the day?
Perhaps Lycopas is not far away.

Comates.

No need of him for judge; for here's as good,
Morion the keeper of thy master's wood;
He's cleaving faggots.

Lacon.

Call the woodman near.

Comates.

Call him thyself, for thou canst make him hear.

Lacon.

Friend, hither haste while we in song contest,
And judge impartial who performs the best.

Comates.

Let merit only thy just judgment guide,
Lean not to mine, or favour Lacon's side. 80
Thurius commits to Lacon's care his sheep;
Eumara's goats of Sybaris I keep.

Lacon.

Who ask'd thee, goatherd, of thy tongue too free,
Whether the flock belong'd to him or me?

Comates.

By Jove, I vow the simple truth I've told;
But thou grow'st vain, and scurrilously bold.

Lacon.

Sing on, proud swain, nor thus consume thy breath;
But not, like Sirens, sing thy judge to death.

Comates.

Me more than Daphnis the chaste muses love;
Two kids I offer'd in their laurel grove. 90

Lacon.

Me Phœbus loves, for him a ram I feed,
Which at the next Carnean feast shall bleed.

Comates.

Twin-bearing goats I milk; "Ah, hapless swain,
"Alcippe cries, dost thou their udders drain?"

Lacon.

Full twenty presses I with cheese can fill,
And have a love-intrigue whene'er I will.

Comates.

Gay Clearista, when perchance we meet,
Pelts me with apples, and says something sweet.

Lacon.

Young Cratidas inspires my heart to glow, 99
For down his comely neck the lovely tresses flow.

Comates.

Can dog-briar, or anemonies that bloom
In hedges, match with roses in perfume?

Lacon.

Can acorns crude, whose coat is rough and dry,
With the soft fruitage of the chefnut vie?

Comates.

In yonder juniper there broods a dove,
The young, when fledg'd, I'll carry to my love.

Lacon.

Soft wool to weave a garment, if I live
To shear my sheep, to Cratidas I'll give.

Comates.

Leave those wild olives, kids, and feed below,
Where the rough tamarisks luxuriant grow. 110

Lacon.

Conarus, Cymy, leave those oak-crown'd meads,
And pasture eastward, where the white ram feeds.

Comates.

A cypress pail is mine, and sculptur'd bowl,
I'll keep them for the charmer of my soul.

Lacon.

This wolf-dog, to his flock and master true,
I'll give my boy, the wild beasts to pursue.

Comates.

Ye prowling locusts, that devour my fruits,
Touch not my vines, for tender are the shoots.

Ye grasshoppers, how I this goatherd vex!
Thus you the reapers of the field perplex. 120

Comates.

I hate the brush-tail'd foxes, that by night
Steal Myco's grapes, and then escape by flight.

Lacon.

I hate dull beetles, that devour for prey
Philonda's figs, then buzzing wheel away.

Comates.

Have you forgot, when once beneath my stroke,
You writh'd with pain, and ran to yonder oak?

Lacon.

Yes, faith! but when Eumara last'd thee well,
And bound with thongs, I readily can tell.

Comates.

Morfon, who's angry now?—Go, frantic swain,
Go, gather squills to calm your ruffled brain. 130

Lacon.

Morfon, I've nettled somebody full sore—
Go, gather fowbread, and be mad no more.

Comates.

May Himera with milk, and Crathis flow,
With wine, and fruit on plants aquatic grow.

Lacon.

May Sybaris with honey streams distil,
And maids each morn their urns with honey fill.

Comates.

My goats on cytissus and wild oats browse,
And rest on arbutus and lentisk boughs.

Lacon.

With fragrant balm my sheep are daily fed,
And ivy mix'd with roses is their bed. 140

Comates.

Alcippe charms not, though I sent a dove,
She neither press'd my ears, nor kiss'd me for my love.

Lacon.

I love with warmest ardour young Eumede,
Who gave me kisses for a pastoral reed.

Comates.

Can pies contend with nightingales? the owl
With swans? but you love discord at your soul,

Morfon.

Cease, Lacon, cease thy song; for I decree
The lamb, Comates, as thy due to thee:
Go, to the nymphs the welcome offering make,
And let thy Morfon of the feast partake. 155

Comates.

By mighty Pan, thou shalt, auspicious boy;
See how my goats leap wantonly for joy!
I too will leap, victorious as I am,
And laugh at Lacon, since I've gain'd the lamb.
Rejoice, my kids, for in the cooling wave
Of Sybaris to-morrow ye shall lave.
You butting, wanton goat I must forbid,
Till I have sacrific'd, to touch a kid—
What, ruttish still:—your courage I'll abate,
Or may I suffer poor Melanthius' fate. 160

NOTES ON IDYLLIUM V.

Ver. 1. Sybaris was once a powerful city of Calabria near Croton, in the bay of Tarentum; the inhabitants were so much addicted to pleasure and effeminacy, that their luxury became a proverb.

Ver. 5.

—aut unquam tibi fistula cerâ
Juncta fuit? non tu in triviis, indocte, solebas
Stridenti miserum stipulâ disperdere carmen?
Virg. Ecl. 3. 25.

Ver. 8. The Greek is καλαμάς αυλον πομπυσεν ιχοντι, the word πομπυσεν seems very expressive of the mean idea Comates had of the shepherd's piping.—Milton had both Theocritus and Virgil in view.

—Their lean and flashy songs
Grate on their scrannel pipes of wretched straw.
Lycidas.

Ver. 9.

—Damœtas dono mihi quam dedit olim.
Ecl. 2. 37.

Ver. 12. The ancients used to sleep on various sorts of skins; thus in Homer, Iliad 10., speaking of Diomed,

Εν δ', ὑπο δ' ἔστρωτο ριναν βοῶς ἀργυυλοιο.

A bull's black hide compos'd the hero's bed;
A splendid carpet roll'd beneath his head. *Pope.*

TRANS. II.

Ver. 20. The Greek is ες Κραθίς, into Crathis the name of a river near Sybaris.

Ver. 25. This is a proverb that seems to have taken its rise from the following circumstance: Hercules, on his arrival at Dios, a city of Macedonia, saw several people coming out of a temple; and being himself desirous to enter and worship, he inquired to whom it belonged; and being informed it was dedicated to Adonis, he answered, οὐδὲν ἄγρον, nothing is sacred: for Adonis being no deity, he did not think him deserving of any honour or worship; by which seems to be meant, things that make a show of something great and sacred, but in reality are nothing but sorry and ridiculous trifles. *Potter.*

Ver. 27. Τε ποτ' Ἀθανάσιον ἱεὺς ἦεν, an adage that is used, when ignorant people put themselves in competition with men of learning.

Ver. 32. —Τε κακὰν κυνὰ δηλὸν ἀμύλαιν.

Virgil has,
—Idem jungat vulpes & mulgeat hircos.
Ecl. 3. 91.

Ver. 40.

Hic gelidi fontes, hic mollia prata, Lycori;
Hic nemus. *Ecl. 10. 42.*

Ver. 42.

—Resonant arbuta cicadis. *Ecl. 2. 13.*

Ver. 48. There was a necessity in this place to

omit translating four lines in the original, which are infinitely too indelicate for modest ears.

Ver. 50.
Efficiam posthac ne quenquam voce laceffas.

Ecl. 3. 51.

Ver. 51. The Greek is,
Τυλὼ δρυὶς, ὠδὲ κυπείρου,
Ὡδὲ καλὸν βομβεῖν τῇ σμάνισσι μελίσσαι.

Which occurs in the first Idyllium. See ver. 136.

Ver. 52.
Eque sacra resonant examina quereu. *Ecl.* 7. 13.

Ver. 56. The Greek word is, *κωνες*; Virgil has
Strata jacent passim sua quæque sub arbore poma.
Ecl. 7. 54.

Ver. 58. The Greek is, *υπνω μαλακώμερα*. We find the same expression in the fifteenth Idyl. ver. 125, in the Greek.

Πορφύρεοι δὲ σαπνῆς ἀνω, μαλακώμεροι ὑπνω.

Virgil has, somno mollior herba. *Ecl.* 7. 45.

Softer than sleep, seems full as proper a figure as *dorwny sleep*, which is frequently used by modern poets.

Ver. 62.
Pocula bina novo spumantia lacte quotannis,
Craterasque duos statuam tibi pinguis olivi.
Ecl. 5. 67.

Ver. 64. See the note on ver. 22. Idyl. III.
The Greek is, *γλαχων*, which an eminent botanist informs me is the *horned poppy*.

Ver. 69.
Nunquam hodiè effugies; veniam quocunque vocaris.
Ecl. 3.

Ver. 77.
———Ocyus, inquit,
Hunc ades, ô Melibœe. *Ecl.* 7. 8.

Ver. 87.
Quin age si quid habes, &c. *Ecl.* 7. 52.

Ver. 89. Theocritus, as well as Virgil, lays it down as an indispensable rule to himself, in these *Amœbæan* verses, to make the respondent shepherd answer his opponent in exactly the same number of lines: which must be allowed to be extremely difficult in a translation: how I have succeeded, must be left to the determination of the candid reader, who, it is hoped, will make proper allowances for such a constraint.

Ver. 91.
Et me Phœbus amat. *Ecl.* 3. 62.

Ver. 92. This was a festival observed in most of the cities of Greece, in honour of Apollo, surnamed *Carneus*, from one *Carnus* an *Arcanian*,

who was instructed by this god in the art of divination, but afterward murdered by the Dorians; this fact Apollo revenged upon them by a dreadful plague, to avert which, they instituted this festival. See *Potter's Ant.*

Ver. 97.
Malo me Galatea petit, lasciva puella. *Ecl.* 3. 64.

Ver. 99.
At mihi sese offert ultro meus ignis Amyntas.
Ecl. 3. 66.

Ver. 100. Long hair was peculiar to the Lacedemonians; they looked upon it as the emblem of liberty, and those who wore it as incapable of committing any illiberal action.

Ver. 105.
Parta mæe Veneri sunt munera; namque notavi
Ipse locum, aëriæ quo congressere palumbes.
Ecl. 3. 68.

Ver. 110. See Idyl. I. ver. 16.
Ver. 122. See note of Idyl. I. ver. 56.
Ver. 133. Ovid has a similar passage, *Met.* B. I. ver. 111.

Flumina jam lactis, jam flumina nectaris ibant.
Ver. 134. The Greek is, *σιν*, which my botanic friend takes to be *water-parsnips*.

Ver. 135.
Mella fluant illi, ferat et rubus asper amomum.
Ecl. 3.

Ver. 137.
Florentem cytifum sequitur lasciva capella.
Ecl. 2. 64.

Ver. 138. The Greek is, *σχινος*, the tree that produces *mastich*.

Ver. 142. There was a particular sort of kiss, which is called by Suidas *χυλρον*, the *pot*, when they took the person; like a pot, by both his ears: it is mentioned by Tibullus,

———Natusque parenti
Oscula comprensus auribus eripiet. *B. 2. Eleg.* 5.

Ver. 145.
Certent et cynnis ululæ. *Ecl.* 8. 55.

Ver. 155.
Ipse, ubi tempus erit, omnes in fonte lavabo.
Ecl. 3. 97.

Ver. 160. The fate of Melanthius, one of the suitors of Penelope, is thus described by Homer. See his *Odyssey*, B. 22. as translated by Mr. Pope.

Then forth they led Melanthius, and began
Their bloody work: they lopp'd away the man,
Morsel for dogs: then trimm'd with brazen sheers
The wretch, and shorten'd of his nose and ears;
His hands and feet next felt the cruel steel:
He roar'd, and torments gave his soul to hell.

IDYLLIUM VI.

THE HERDSMEN.

THE ARGUMENT.

DAMOETAS and Daphnis drive their herds together into one place, and sing alternately the passion of Polyphemus for Galatæa. Daphnis begins first, and addresses himself to Damœtas as to the Cyclops; Damœtas answers him, as in the person of Polyphemus. Galatæa's love is described from her wanton actions, and Polyphemus's obduracy from his neglect of the sea-nymph. This Idyllium is inscribed to Aratus, who was the friend of Theocritus, and supposed to be the author of an astronomical poem, called *Arati Phænomena*.

DAMOETUS and young Daphnis, tuneful swains,
Late fed their herds, Aratus, on the plains;
The first was ruddy with a golden beard;
On Daphnis' cheek scarce doubtful down appear'd.
Fast by the margin of a murmuring spring,
'Midst noon-tide heat, they thus essay'd to sing.
And, while their cattle sought the cooling wave,
First Daphnis sung, for he the challenge gave.

Daphnis.

O Polyphemus, while your flocks you keep,
With apples Galatæa pelts your sheep, 10
And calls you goatherd, and ungrateful swain;
Meanwhile you pipe in sweetly warbled strain,
Nor see the wild nymph, senseless as a log;
And lo! again she pelts your faithful dog;
Lift! lift! he barks, and in a strange amaze
His dancing shadow in the sea surveys;
Ah! call him back, lest on the maid he leap,
And tear her limbs emerging from the deep.
Lo! where she wantons, frolic light, and fair,
As down of bearsfoot in soft summer air; 20
And still impell'd by strange capricious fate,
Flies those that love, and follows those that hate.
In vain the blandishments of love she plies,
For faults are beauties in a lover's eyes.
Thus Daphnis sung, Damœtas thus reply'd:

Damœtas.

By mighty Pan, the wily nymph I spy'd
Pelting my flock, I saw with this one eye—
May heaven preserve its lustre till I die:
Though Telemus presages ills to come;
Let him reserve them for his sons at home. 30
To tease, I seem regardless of her game,
And drop some items of another flame:

Soon to her ears the spreading rumour flies,
For envy then and jealousy she dies:
And furious, rising from her azure waves,
She searches all my folds and all my caves:
And then my dog, obedient to command,
Barks as she walks, and bays her off the strand:
For when I lov'd, he wagg'd his tail with glee,
Fawn'd, whin'd, and loll'd his head upon her
knee. 40

This practice shortly will successful prove,
She'll surely send me tidings of her love.
But I'll exclude this sea-jilt, till she swears
To press with me the bed herself prepares.
Nor am I so deform'd, for late I stood,
And view'd my face in ocean's tranquil flood;
My beard seem'd fair, and comely to the sight;
My eye, though single, sparkling, full, and
bright:

My teeth array'd in beauteous order shone, 49
Well-match'd, and whiter than the Parian stone.
And lest enchantment should my limbs infest,
I three times dropt my spittle on my breast;
This charm I learnt from an old sorceress' tongue,
Who harvest-home at Hipocoon's sung.

Damœtas ended, and with eager joy
Daphnis embrac'd, and kiss'd the blooming boy;
Then gave, as best his sprightly taste might suit,
A pipe melodious, and receiv'd a flute.
Damœtas dextly on the flute could play,
And Daphnis sweetly pip'd, and caroll'd to his
lay: 60

Their heifers gambol'd on the grass green fields;
In singing neither conquers, neither yields.

NOTES ON IDYLLIUM VI.

Ver. 1.

Compulerantque gregis Corydon et Thyrsis in
unam.

Ver. 10. See Idyl. V. ver. 97.

Virg. Ecl. 7. 2.

Ver. 12.

—Tu, Tityre, lentus in umbrâ
Formosam resonare doces Amaryllida sylvas.

Ecl. 1. 4.

G ij

Ver. 20. *Azaxia*; see Martyn's note on Geor. B. 4. 123.

Ver. 22. Horace has a passage similar to this,
 ———— *Meus est amor huic similis, nam*
Transvolat in medio posita, et fugientia captat.
B. 1. Sat. 2.

Ver. 29. Polyphemus, in the 9th Book of Homer's *Odyssey*, gives an account of Telemus, which I beg leave to lay before the reader in Mr. Pope's translation, ver. 593.

Th' astonish'd savage with a roar replies :
 Oh heav'n's! oh faith of ancient prophecies!
 This Telemus Eurymedes foretold,
 (The mighty seer, who on these hills grew old;
 Skill'd the dark fate of mortals to declare,
 And learn'd in all wing'd omens of the air)
 Long since he menac'd, such was fate's command;
 And nam'd Ulysses as the destin'd hand.

Ver. 30.
Dii capiti ipsius generique reservent.
Æn. B. 8. 484.

Ver. 39. Horace, speaking of Cerberus fawning upon Bacchus, expresses himself almost in the same words,

————— *Leniter atterens*
Caudam, et recedentis trilingui
Ore pedes, tetigitque crura. *B. 2. Od. 19.*

Ver. 45. Nothing can be better fancied than to make this enormous son of Neptune use the sea for his looking-glass; but is Virgil so happy when his little landmen says,

Non sum adeo in ormis : nuper me in littore vidi,
Cum placidum ventis flaret mare? *Ecl. 2. 25.*

His wonderful judgment for once deserted him, or he might have retained the sentiment with a slight change in the application.

Hurd's Letter on the Marks of Imitation.

Ovid also imitates this passage in his *Metam.* B. 13. ver. 840.

Certe ego me novi, liquidæque in imagine vidi
Nuper aquæ : placuitque mihi mea forma videnti.

Ver. 50. Horace has,
 ———— *Glyceræ nitor*
Splendentis Pario marmore purius. *B. 1. Od. 19.*

Ver. 52. The ancients imagined that spitting in their bosoms three times (which was a sacred number, see note on *Idyl.* 11. ver. 51.) would prevent fascination.

Ver. 53. The Greek is *α γ γ α ι α κ ο τ υ τ τ α ι ε*, which all the interpreters have taken for a proper name, whereas it undoubtedly signifies an enchantress or sorceress; for Horace calls the magical arts, which Canidia makes use of, *Cotyttia*. See Canidia's answer.

Inultus ut tu riseris Cotyttia
Vulgata, sacrum liberi Cupidinis?

Safely shalt thou Cotytto's rites
 Divulge, and lawless love's delights? *Duncombe.*

Cotys, as Dacier observes, was the goddess that presided over enchantments and all the abominations that were practised in Greece and Thrace. See Juvenal, *Sat.* 2. ver. 91.

Ver. 54. This verse occurs, *Idyl.* X. ver. 16.

Ver. 59.
Tu calamos inflare leves, ego dicere versus.
Ecl. 5. 2.

Ver. 61. Horace has the same thought,
Ludit herbofo pecus omne campo, &c. *B. 3. Od. 18.*

In pastures all the cattle sport,
 Soon as returns thy hallow'd day;
 To meads the vacant hinds resort,
 And, round th' unharnes'd oxen play.

Duncombe.

IDYLLIUM VII.

THALYSIA; OR, THE VERNAL VOYAGE.

THE ARGUMENT.

THIS is a narration of a journey which Theocritus, along with two friends, took to Alexandria; as they are travelling, they happen to meet with the goatherd Lycidas, with whom they join company, and entertain each other with singing. Our poet had contracted a friendship, in the isle of Cos, with Praxidamus and Antigenes, who invited him into the country to celebrate the feast of Ceres. The Thalsia was a sacrifice offered by husbandmen, after harvest, in gratitude to the gods, by whose blessing they enjoyed the fruits of the earth.

WHEN Eucritus and I, with one consent,
 Join'd by Amyntas, from the city went,
 And in our progress, meditating slow,
 March'd where the waters of Halenta flow:
 Antigenes and Phrasidamus, names
 Renown'd afar, for each bright honour claims,

The sons of Lycopæus, at the shrine
 Of fruitful Ceres offer'd rites divine:
 In their rich veins the blood divinely roll'd
 Of Clytia virtuous, and of Chalcon bold;
 Chalcon, supreme of Cos, at whose command
 The Burine fountain flow'd, and fertiliz'd the land;

Near it tall elms their amorous arms enwove
 With poplars pale, and form'd a shady grove.
 Scarce had we measur'd half our destin'd way,
 Nor could the tomb of Brasilius survey;
 When travelling on the road we chanc'd to meet
 The tuneful goatherd, Lycidas of Crete;
 His very looks confest his trade; you'd swear
 The man a goatherd by his gait and air: 20
 His shoulders broad a goatskin white array'd,
 Shaggy and rough, which smelt as newly slay'd;
 A threadbare mantle wrapt his breast around,
 Which with a wide-wove surcingle he bound;
 In his right hand, of rough wild olive made,
 A rustic crook his steps securely stay'd;
 A smile serenely cheer'd his gentle look,
 And thus with pleasure in his eye he spoke:

‘Whither, Simichidas, so fast away,
 Now when meridian beams inflame the day? 30
 Now when green lizards on the hedges lie,
 And crested larks forsake the fervid sky.
 Say, does the proffer'd feast your haste excite,
 Or to the wine-press some old friend invite?
 For such your speed, the pebbles on the ground,
 Dash'd by your clogs, at every step resound.’

Then I; “Dear Lycidas, so sweet your strains,
 You shame the reapers and the shepherd swains;
 Your pipe’s fam’d numbers, though they please
 “me well,

“Hope spurs me on to rival, or excel: 40
 “We go great Ceres’ festival to share;
 “Our honour’d friends the sacred rites prepare:
 “To her they bring the first fruit of their store,
 “For with abundance she has blest their floor.
 “But since, my friend, we steer one common way,
 “And share the common blessings of the day,
 “Let us as thus we gently pace along,
 “Divert the journey with bucolic song.
 “Me the fond swains have honour’d from my
 “youth,

“And call the muses’ most melodious mouth; 50
 “They strive my ears incredulous to catch
 “With praise in vain; for I, who ne’er can match
 “Sicelidas, or sweet Philetas’ song.
 “Croak like a frog the grasshopper’s among.”

Thus with alluring words I sooth’d the man,
 And thus the goatherd with a smile began:

‘Accept this crook, small token of my love,
 For sure you draw your origin from Jove!
 I scorn the builder, who, to show his skill,
 Rears walls to match Oromedon’s proud hill; 60
 Nor do those poets merit more regard
 Who dare to emulate the Chian bard.
 Since songs are grateful to the shepherd swain,
 Let each rehearse some sweet bucolic strain;
 I’ll sing those lays (and may the numbers please)
 Which late last spring I labour’d at my ease.’

“Oh may Agenax, with prosperous gale,
 To Mitylene, the pride of Lesbos, sail!
 Though now the south winds the vext ocean sweep,
 And stern Orion walks upon the deep; 70
 So will he sooth those love-consuming pains
 That burn my breast and glow within my veins.
 May Halcyons smooth the waves, and calm the
 seas,

And the rough south-east sink into a breeze;

Halcyons, of all the birds that haunt the main,
 Most lov’d and honour’d by the Nereid train.
 May all things smile propitious while he sails!
 To the wish’d port convey him safe, ye gales!
 Then shall my brows with violets be crown’d,
 Or dill sweet smelling, or with roses bound: 80
 Before the hearth I’ll quaff the Ptelean bowl;
 Parch’d beans shall stimulate my thirsty soul:
 High as my arms the flowery couch shall swell
 Of fleabane, parsley, and sweet asphodel.
 Mindful of dear Ageanax, I’ll drink,
 Till to the lees the rosy bowl I sink.

Two shepherds sweetly on the pipe shall play,
 And Tityrus exalt the vocal lay:
 Shall sing how Daphnis the coy damsel lov’d,
 And, her pursuing, o’er the mountains rov’d; 90
 How the rough oaks bewail’d his fate, that grow
 Where Himera’s meandering waters flow;
 While he still urg’d o’er Rhodope his flight,
 O’er Hæmus, Caucasus, or Atho’s height,
 And, like the snow that on their tops appears,
 Dissolv’d in love, as that dissolves in tears.

Next he shall sing the much enduring hind
 By his harsh lord in cedar chest confin’d;
 And how the honey bees, from roseat bowers,
 Sustain’d him with the quintessence of flowers;
 For on his lips the muse her balm distill’d, 100
 And his sweet mouth with sweetest nectar fill’d.

O blest Comatas! nobly hast thou sped,
 Confin’d all spring, to be with honey fed!
 O had’st thou liv’d in these auspicious days!
 I’d drive thy goats on breezy hills to graze,
 While thou should’st under oaken shades recline,
 Or sweetly chant beneath the verdant pine.”

He sung—and thus I answer’d: “Friendly swain,
 Far other numbers me the wood-nymph train 110
 Taught, when my herds along the hills I drove,
 Whose fame, perchance, has reach’d the throne
 “of Jove.

Yet, for thy sake, the choicest will I choose;
 Then lend an ear, thou darling of the muse!”

“On me bland Cupids sneez’d, who Myrto love
 Dearly, as kids the spring-embellish’d grove: 120
 Aratus too, whose friendship is my joy,
 Aratus fondly loves the beauteous boy;
 And well Ariflis, to the muses dear,
 Whose lyre Apollo would vouchsafe to hear, 120
 And well Aristis knows, renown’d for truth,
 How fond Aratus loves the blooming youth.

O Pan! whose Omole’s fair mountain charms,
 Place him, uncall’d, in dear Aratus’ arms!
 Whether Philinus, or some softer name;

Then may Arcadian youths no longer maim,
 With scaly squills, thy shoulders or thy side,
 When in the chase no venison is supply’d.

But may’st thou, if thou dar’st my boon deny,
 Torn by fell claws, on beds of nettles lie, 130

All the cold winter freeze beneath the pole
 Where Hebrus’ waves down Edon’s mountains
 In summer, glow in Ethiopia’s fires, [roll;
 Where under Blemyan rocks scorch’d Nile retires.
 Leave, O ye loves, whose cheeks out-blush the rose!
 The meads where Hyetis and Byblis flows,
 To fair Dione’s sacred hill remove,
 And bid the coy Philinus glow with love,

Though as a pear he's ripe, the women say,
Thy bloom, alas! Philinus, fades away! 140
No more, Aratus, let us watch so late,
Nor nightly serenade before his gate:
But in this school let some unmeaning sot [his lot,
Toil when the first cock crows, and hanging be
Rest be our portion! and, with potent charm,
May some enchantress keep us free from harm!"

I sung: he view'd me with a smiling look;
And for my song presented me his crook:
Then to the left he turn'd, through flowery meads,
The winding path-way that to Pyxa leads; 150
While with my friends I took the right-hand road
Where Phrasidamus makes his sweet abode;
Who courteous bade us on soft beds recline
Of lentisk, and young branches of the vine;
Poplars and elms above, their foliage spread,
Lent a cool shade, and wav'd the breezy head;
Below, a stream, from the nymphs sacred cave,
In free meanders led its murmuring wave:
In the warm sun-beams, verdant shrubs among,
Shrill grasshoppers renew'd their plaintive song: 160
At distance far, conceal'd in shades, alone,
Sweet Philomela pour'd her tuneful moan:

The lark, the goldfinch warbled lays of love,
And sweetly pensive coo'd the turtle dove:
While honey-bees, for ever on the wing, [spring-
Hum'd round the flowers, or sift the silver
The rich, ripe season gratify'd the sense
With summer's sweets, and autumn's redolence.
Apples and pear lay strew'd in heaps around,
And the plum's loaded branches kiss'd the ground,
Wine flow'd abundant from capacious tuns, 171
Matur'd divinely by four summers suns,
Say, nymphs of Castaly: for ye can tell,
Who on the summit of Parnassus dwell,
Did Chiron e'er to Hercules produce
In Pholus' cave such bowls of generous juice?
Did Polypheme, who from the mountain's steep
Hurl'd rocks at vessels sailing on the deep,
E'er drain the goblet with such nectar crown'd,
Nectar that nimbly made the Cyclops bound, 180
As then, ye nymphs! at Ceres' holy shrine
Ye mix'd the milk, the honey, and the wine,
O may I prove once more that happy man
In her large heaps to fix the purging fan!
And may the goddess smile serene and bland,
While ears of corn, and poppies grace her hand.

NOTES ON IDYLLIUM VII.

THIS idyllium is called ΘΑΛΥΣΙΑ, or ΕΑΡΙΝΗ ΟΔΟΠΟΡΙΑ, which has always been translated Thalyssia; or, the Vernal Journey, but certainly very absurdly, as it implies a contradiction, the Thalyssia being celebrated in autumn. Heinsius has proved, that οδοπορία signifies ο πλους, a navigation or voyage: this poem, therefore, may be styled the Vernal Voyage of Ageanax. It is well known that the ancients undertook no voyages but in the spring or autumn; the vernal navigation was called εαρινή, and the other Σεπτεμνί: Lycidas, therefore, the preceding spring, had composed a poem on the vernal voyage of his friend, which, as they are travelling on the road, he repeats: It contains the most ardent wishes and vows for his safety, and seems to have given Horace the hint for his third Ode of the first book, on Virgil's voyage.

Ver. 10. The Scholiast says, that Clytia was the daughter of Merops, and married to Eurypilus, king of the Coans, who was contemporary with Hercules; she was the mother of Chalcon. Homer mentions Eurypilus as king of Cos;

Cos, where Eurypilus possess'd the sway
Till great Alcides made the realms obey.

Pope's II. B. 1.

Ver. 13.

— hic candida populos antro
Imminet, et lentæ texunt umbracula vites.

Ecl. 9. 41.

Here, o'er the grotto, the pale poplar weaves
With blushing vines, a canopy of leaves. Warton.

Ver. 15.

Hinc adeo media est nobis via: namque sepulchrum
Incipit apparere Bianoris.

Ecl. 9. 59.

Ancient tombs were usually placed by the road side; hence the expression *siste viator*, which is absurdly introduced into modern epitaphs not placed in such situations.

Ver. 29.

Quo te, Mæri, pedes? an, quo via ducit, in urbem?
Ecl. 9. 1.

The grammarians have puzzled themselves to find out who this Simichidas was; it is strange they did not recollect a passage of Theocritus, in his poem called the Syrinx, where he claims this appellation to himself:

Ω, τοῦ τυφλοφορῶν κρατον

Παρα Παρις δέτε Σιμιχίδας

Ψυχάν. Cui (Pari) hunc peras-portantium
amabilem thesaurum Paris posuit Simichidas animo;
where, in a mystical manner, he confesses Simichidas and Theocritus to be the same person: Paris and Theocritus are the same; for Paris, when he was made judge of the beauty of the three goddesses, was Theocritus, that is, Θεῶν Κριτής: Thus Paris metaleptically is taken for Theocritus.

Heinsius.

Ver. 31. The green lizard is very common in Italy; it is larger than our common est, or swift; this circumstance strongly marks the time of the day. — Virgil imitates the passage,

Nunc virides etiam occultant spineta lacertos.

Ecl. 2. 8.

Ver. 36. The Greek is αἰβυλίδισσιν: αἰβυλή was a kind of wooden shoe armed with iron nails, peculiar to the Boeotians, with which they used to tread the grapes in the wine-press.

Ver. 44.

Neque illum
Flava Ceres alto necquicquam spectat Olympo.

Geor. B. I. 95.

Ver. 47.

Cantantes licet usque, minus via lædet, eamus.

Ecl. 9. 64.

Ver. 49.

Et me fecere poetam
Pierides: sunt et mihi carmina: me quoque dicunt
Vatem pastores, sed non ego credulus illis.

Ecl. 9. 64.

Ver. 52. Virgil follows very close;

Nam neque adhuc Varo videor, nec dicere Cinnā
Digna, sed argutos inter strepere anser olores.

Ecl. 9. 35.

Ver. 53. That is, Asclepiades, the son of Sice-
lidas; the father's name is put for the son's: he
was a Samian poet, a writer of epigrams. Phile-
tas was of Cos. Both these are mentioned in that
beautiful Idyllium which Moschus wrote on the
death of Bion: indeed this mention is in the six
verses which were wanting in the ancient editions
of that poet, and which are supposed to have been
supplied by Marcus Musurus of Crete; though
Scaliger affirms that they were written by Moschus:

Sicelidas, the Samian shepherd sweet,
And Lycidas, the blithest bard of Crete,
Whose sprightly looks erst spoke their hearts elate,
Now sorrowing mourn thy sad untimely fate;
Mourns too, Philetas' elegiac muse.

F. F.

Ver. 57.

At tu fume pedum.

Ecl. 5. 88.

Ver. 60. This was the name of a mountain in
the island of Cos, which seems to have taken its
appellation from a giant who was slain and buried
there. Propertius mentions Oromedon as one of
the giants who waged war against the gods;

Canam cœloque minantem
Cœum, & Phlegæis Oromedonta jugis. B. 3. El. 8.
Oromedon on Phlegra's heights I'll sing,
And Cœus threatening heaven's eternal king.

Ver. 61. The literal sense of the original, is, as
Heinsius observes: "And those birds, or cocks of
the muses (poets), that pretend to rival the Chian
cock or bard (Homer), strive to no purpose:" for
the word *αἰνῆς* and *αἰνῶδες* means the same thing:
Theocritus calls Homer the Chian bard or cock,
in the same manner as Horace styles Varius the
cock of the Mæonian song, or the prince of Epic
poetry:

Scriberis Vario fortis, & hostium
Victor Mæonii carminis alite.

B. I. Ode 6.

This passage of Theocritus might, perhaps, be
thus translated:

Nor do those muse-cocks merit more regard,
Who crow defiance to the Chian bard.

Ver. 65.

Imo hæc, in viridi nuper quæ cortice fagi
Carmina descripsi, & modulans alterna notavi,
Experiar.

Ecl. 5. 13.

Ver. 66. The Greek is *ἐν ὄρεϊ*, in a mountain;
instead of which, Heinsius rightly reads *ἐν ὄρεϊ*, in
the spring; for *ὄρεϊ* sometimes signifies *το ἄρος*, the
spring.

Ver. 70.

Quam magnus Orion,
Cum pedes incedit medii per maxima Nerei
Stagna, viam scindens, humero supereminet undas,

Æn. 10. 763.

So through mid-ocean when Orion strides,
His bulk enormous tow'rs above the tides.

Pitt.

Mr. Warton observes, that Virgil has not bor-
rowed this thought from Homer: but he does not
seem to have taken it from Theocritus.

Ver. 73. The fable of Ceyx and his wife Hal-
cyone being turned into birds, is beautifully related
in the eleventh book of Ovid's Metamorph. The
mutual love of these persons subsisted after their
change; in honour of which the gods are said to
have ordained, that while they sit on their nest,
which floats on the sea, there should be no storm;

Alcyone compest,
Seven days sits brooding on her floating nest,
A wintery queen: her fire at length is kind,
Calms every storm, and hushes every wind;
Prepares his empire for his daughter's ease,
And for his hatching nephews smoothes the seas.

Dryden

Ver. 81.

Ante facum, si frigus erit; si messis, in umbrâ;
Vina novum fundam calathis arvisia nectar.

Ecl. 5. 70.

In winter shall the genial feast be made
Before the fire; by summer in the shade.

Dryden.

The ancients held three things requisite towards
indulging their genius, namely, a good fire, wine,
and music: Lycidas promises himself these three
blessings, if Ageanax is favoured with a prosperous
voyage.

Heinsius.

Ver. 84. See note on Idyl. 4. 34. Asphodel; or
the day-lily: Asphodels were by the ancients
planted near burying places, in order to supply the
manes of the dead with nourishment.

Johnson's Dict.

By those happy souls who dwell
In yellow meads of asphodel.

Pope's St. Cecilia.

Ver. 86. At entertainments, when they drank
healths, it was usual to drain the vessel they drank
out of as far as the sediment: thus Horace, B. 3.
Ode 15, addressing himself to an ancient lady,
says, it did not become her to empty the vessel of
wine to the lees; *nec poti vetulam face tenui cadi*.

Ver. 87.

Cantabunt mihi Damœtas, & Lycæus Ægon.

Ecl. 5. 72.

Ver. 89. The Greek is, *Ἐχεναις*, and commonly
understood as a proper name, but Heinsius ob-
serves, that it is here only appellative, and signifies
a certain damsel; as *Ἐχεναις Ἀθηναίος* is *Atheniensis qui-*
dam, a certain Athenian the mistress of Daphnia
was named Echenais. See note on Idyl. I. 107.

Ver. 91.

Illum etiam lauri, illum etiam flevire myricæ,

Ecl. 10.

Ver. 92. See note on Idyl. I. 71.

Ver. 93. Virgil imitates this passage twice :

Aut Tmarus, aut Rhodope, aut extremi Garamantes.
Ecl. 8. 44.

Aut Atho, aut Rhodopen, aut alta Ceraunia.
Geor. I. 332.

The disjunctive particle *aut*, in each verse, is thrice repeated agreeable to Theocritus,

ἢ Ἀθῶ, ἢ Ῥοδόπην, ἢ Κερραυνῶν.

Ver. 105.

Atque utinam ex vobis unus, vestrique fuisset
Aut custos gregis, &c. *Ecl. 10. 35.*

Ver. 115. Some sneezes were reckoned profitable, others prejudicial : Caufabon observes, that sneezing was a disease, or at least a symptom of some infirmity : and therefore, when any one sneezed, it was usual to say, Ζηῆ, *May you live* ; or Ζεῦ σῶσον, *God bless you*. See Potter's *Antiq.* ch. 17.

Ver. 117. Supposed to be the author of the *Phænomena*.

Ver. 123. A mountain of Thessaly, near Othrys, the seat of the Centaurs. See Virg. *Æn.* B. 7. 674.

Ver. 126. It was usual for the ancient heathens to treat the images of their gods well or ill, just as they fancied they had been used by them : in like manner the modern Indians chastise their idols with scourges whenever any calamity befalls them. There is a passage in Anacreon, Ode 10. where a rustic thus addresses a little waxen image of Cupid :

This instant, love, my breast inspire,
There kindle all thy gentle fire ;
But, if thou fail'st to favour me,
I swear I'll make a fire of thee. *F. F.*

Fan had a festival in Arcadia, the country he chiefly delighted in, at which the Arcadians, if they missed of their prey in hunting, in anger at the god whom they reputed the president of that sport, used to beat his statue with squills, or sea-onions.
Potter's Ant. ch. 20.

Ver. 131.

Nec si frigoribus mediis Hebrumque bibamus,
Sithoniasque nives hiemis subeamus aquosæ :
Nec si, cum moriens altâ liber aret in ulmo,
Ethiopum versemus oves sub sidere Cancrî.
Ecl. 10. 65.

Thus also Horace, B. 1. Ode 22. "Pone me pigris," &c.

Place me where no soft summer gale
Among the quivering branches sighs,
Where clouds, condens'd, for ever veil
With horrid gloom the frowning skies :

Place me beneath the burning zone,
A clime deny'd to human race ;

My flame for Lalagé I'll own ;
Her voice and smiles my song shall grace.

Duncombe.

Ver. 132. A river, and mountain of Thrace.

Ver. 140. Thus Anacreon, Ode 11th. *Ἀργεῖον αἰ γυναικί.*

Oft, with wanton smiles and jeers,
Women tell me I'm in years.

Ver. 150. This is supposed to be a city in the island of Cos.

Ver. 154. See Idyl. 5. 138.

Ver. 160. I am aware, that the Greek word, τέρτιξ, and the Latin *cicadia*, means a different insect from our grasshopper ; for it has a rounder and shorter body, is of a dark green colour, sits upon trees, and makes a noise five times louder than our grasshopper : it begins its song as soon as the sun grows hot, and continues singing till it sets : its wings are beautiful, being streaked with silver, and marked with brown spots ; the outer wings are twice as long as the inner, and more variegated ; yet, after the example of Mr. Pope, (see *Iliad* 3. ver. 200.) I retain the usual term.

Ver. 164. *Nec gemere aëriâ cessabit turtur ab ulmo.*
Ecl. 1. 59.

Ver. 167.

Tuis hic omnia plena
Muneribus ; tibi pampineo gravidus autumnus
Fleret ager ; spumat plenis vindemia labris.
Geor. 2. 5.

Here all the riches of thy reign abound ;
Each field replete with blushing autumn glows,
And in deep tides for thee the foaming vintage flows.

Warton.

Ver. 172. Horace has, "quadrimum merum."
B. 1. Ode 9.

Ver. 175. Two centaurs : Chiron is said to have taught Æsculapius physic, Apollo music, and Hercules astronomy, and was tutor to Achilles.

Ver. 178.

A larger rock then heaving from the plain,
He whirl'd it round ; it sung across the main ;
It fell and brush'd the stern ; the billows roar,
Shake at the weight, and reflux beat the shore.
Pope's Odys. B. 9.

Ver. 180. Horace seems to allude to this,
Pastorem saltaret uti Cyclopa rogabat.

B. 1. Sat. 5.

Ver. 182.

Cui tu lacte favos, et miti dilue Baccho.
Geor. B. 1. 344.

Mix honey sweet, with milk and mellow wine.
Warton.

IDYLLIUM VIII.

THE BUCOLIC SINGERS.

THE ARGUMENT.

A contest in singing, between the shepherd Menalcas and the neatherd Daphnis, is related; a goat-herd is chosen judge; they stake down their pastoral pipes as the reward of victory; the prize is decreed to Daphnis. In this Idyllium, as in the fifth, the second speaker seems to follow the turn of thought used by the first. Dr. Spence observes, there are persons in Italy, and particularly in Tuscany, named *Improvisatori*, who are like the shepherds in Theocritus, surprisingly ready at their answers, *respondere parati*, and go on speech for speech alternately, *alternis dicetis, amant alterna camena*. This Idyllium is addressed to his friend Diophantus.

Daphnis, Menalcas, Goatherd.

DEAR Diophantus, some few days ago,
Menalcas, on the mountain's breezy brow,
By chance met Daphnis, bonny, blithe, and fair;
This fed his herds, and that his fleecy care.
Both grac'd with golden tresses, both were young,
Both sweetly pip'd, and both melodious sung:
Then first Menalcas, with complacent look,
Survey'd the master of the herd, and spoke:

Menalcas.

Daphnis, thou keeper of the bellowing kine!
Wilt thou to me the palm of song resign?
Or try thy skill, and then thy master own?
Thus Daphnis answer'd:

Daphnis.

Thou sheep-tending clown,
Poor-piping shepherd! sing'st thou e'er so well,
Thou canst not Daphnis at the song excel.

Menalcas.

Stake then some wager; let us trial make:

Daphnis.

I'll make the trial, and the wager stake.

Menalcas.

What shall we lay, to equal our renown?

Daphnis.

I'll lay a calf, and thou a lamb full-grown.

Menalcas.

A lamb I dare not; for my parents keep
Strict watch, and ev'ry ev'ning count my sheep. 20

Daphnis.

What wilt thou stake? and what the victor's gains?

Menalcas.

A pipe I form'd of nine unequal strains,
Sweet-ton'd, with whitest wax compacted tight;
This, this I'll stake—but not my parent's right.

Daphnis.

And I have one of nine unequal strains, [pains,
Sweet-ton'd, and wax'd throughout with nicest
Which late I made, ev'n now my finger bleeds,
Sore wounded by a splinter of the reeds.
Who shall decide the honours of the day?

Menalcas.

Yon goatherd, let him judge the vocal lay; 30
Our dog barks at him—call—the man is near:
The shepherds call'd, the goatherd came to hear:

The last decided, while the former sung.
Menalcas first essay'd his tuneful tongue:
Thus in alternate strains the contest ran,
Daphnis reply'd—Menalcas first began;

Menalcas.

Ye vales, ye streams, from source celestial sprung,
If e'er Menalcas sweetly pip'd or sung,
Feed well my lambs, and if my Daphnis need
Your flowery herbage, let his heifers feed. 40

Daphnis.

Fountains and herbs, rich pasturage, if e'er
Sung Daphnis meet for nightingales to hear,
Fatten my herds; if to these meadows fair
Menalcas drives, O feed his fleecy care.

Menalcas.

When here my fair one comes, spring smiles a-
round,
Meads flourish, and the teats with milk abound,
My lambs grow fat; if she no longer stay,
Parch'd are the meads, the shepherd pines away.

Daphnis.

Where Milo walks, the flower-ennamour'd bees
Work food nectareous, taller are the trees, 50
The goats bear twins; if he no longer stay,
The herdsman withers, and the herds decay.

Menalcas.

O goat, the husband of the white-hair'd flock!
Drink at the shady fount by yonder rock,
'Tis there she lives; and let young Milo know,
Proteus fed sea-calves in the deep below.

Daphnis.

Not Pelops' lands, not Cræsus' wealth excite
My wish, nor speed to match the winds in flight;
But in yon cave to carol with my friend,
And view the ocean, while our flocks we tend. 60

Menalcas.

To teats the drought, to birds the snare, the wind
To trees, and toils are fatal to the hind;
To man the virgin's scorn. O, father Jove!
Thou too hast languish'd with the pains of love.

Thus in alternate strains the contest ran,
And thus Menalcas his last lay began:
"Wolf, spare my kids, my young and tender
sheep;
Though low my lot, a numerous flock I keep.

Rouse, Lightfoot, rouse from indolence profound;
Ill fits a shepherd's dog to sleep so sound. 70

Fear not, my sheep, to crop the verdant plain;
The pastur'd herbage soon will grow again:
Feed well, and fill your udders in the vale,
And when my lambs have suckled, fill the pail."

He sung, and Daphnis sweetly thus reply'd:
"Me, from her grot, a lovely nymph espy'd,
As late I drove my cattle cross the plain; [swain.
A long, long look she cast, and call'd me handsome
I answer'd not, but, as in thought profound,
Pursu'd my road, with eyes upon the ground. 80
The heifer sweetly breathes, and sweetly lows,
Sweet is the bullock's voice, and sweet the cow's:
'Tis passing sweet to lie by murm'ring streams,
And waste long summer-days in gentle dreams.
On oaks smooth acorns ornamental grow,
And golden apples on the pippen glow;
Calves grace the cows, light-skipping on the plain,
And lussy cows commend the careful swain."

They sung; the goatherd thus:

Goatberd.

Thy verse appears

So sweet, O Daphnis! to my ravish'd ears,
More pleasing far thy charming voice to me
Than to my taste the nectar of the bee.
Receive these pipes, the victor's rightful meed:
And wouldst thou teach me, while my kids I feed,
This goat rewards thy pains, that never fails
Each morn to fill the largest of my pails.
As skips the fawn her mother doe around,
So Daphnis leap'd for joy, and dancing beat the
ground:
As grieve new-married maids their fires to leave,
So deeply sighing, did Menalcas grieve. 100
Since that time Daphnis, chief of shepherd-
swains,
Daphnis supreme without a rival reigns:
And, to complete his happiness, he led
The blooming Nais to his nuptial bed.

NOTES ON IDYLLIUM VIII.

Ver. 1. The Greek is, *Μαλα νημων (ως φαντι)* κατ' ωρεα μακρα Μενάλκας' the expression *ως φαντι*, as they say, seems very flat, and not correspondent with the native elegance of Theocritus: and therefore the learned and ingenious John Pierfon (see his *Verisimilia*, p. 46.) proposes to read *Μαλα νημων, Διοφαντι, κατ' ωρεα κ. τ. λ.* observing that Theocritus inscribes several Idylliums to his intimate friends; for instance, he addresses the 6th to Aratus, the 11th and the 13th to Nicias the physician, and to this same Diophantus the 21st. This very plausible emendation I have followed in my translation. That the librarians often obliterated proper names will appear in the note on ver. 53. of this Idyllium. Virgil imitates this passage;

Compulerantque greges Corydon et Thyrsis in unum;

*Thyrsis oves, Corydon distentas lacte capellas:
Ambo florentes ætatibus, Arcades ambo:
Et cantare pares, et respondere parati. Ecl. 7. 2.*

Ver. 6.

Tu calamos inflare leves, ego dicere versus.

Ecl. 5. 2.

Ver. 15.

*Vis ergo inter nos, quid possit uterque, vicissim
Experiamur? Ecl. 3. 28.*

Ver. 18.

Ego hanc vitulam, ne forte recuses, Depono.

Ibid.

Ver. 19.

*De grege non ausim quicquam deponere tecum:
Est mihi namque domi pater, est injusta noverva:
Bisque die numerant ambo pecus, alter et hædos.*

Ecl. 3. 32.

Ver. 22. Though nine strains, or reeds, are here mentioned, yet the shepherd's pipe was generally composed of seven reeds, unequal in length, and of different tones, joined together with wax. See note on Idyl. 1. 169; and Virgil,

*Est mihi disparibus septem compacta cicutis
Fistula.*

Ecl. 2. 36.

It is difficult to conceive how the ancient shepherds could pipe and sing at the same time: certainly that was impracticable: the most probable opinion is, that they first played over the tune, and then sung a verse or stanza of the song answering thereto, and so played and sung alternately; which manner of playing and singing is very common with the pipers and fiddlers at our country wakes, who, perhaps, originally borrowed the custom from the Romans, during their residence in Britain. We find the old English minstrels used to warble on their harps, and then sing—See Percy's essay on the subject.

Ver. 29. The same verse occurs, Idyl. 5. 71.

Ver. 35.

*Alternis igitur contendere versibus ambo Cœpère:
Hos Corydon, illos referebat in ordine Thyrsis.*

Ecl. 7. 18.

Ver. 45.

Phyllidis adventu nostræ nemus omne virebit.

Ecl. 7. 59.

Ver. 48.

Aret ager; vitio moriens sitit æris herba. Ib. 57.

Pope has finely imitated both Theocritus and Virgil;

Strepson.

All nature mourns, the skies relent in showers,
Hush'd are the birds, and clos'd the drooping
flowers;

If Delia smile, the flowers begin to spring,
The skies to brighten, and the birds to sing.

Daphnis.

All nature laughs, the groves are fresh and fair,
The sun's mild lustre warms the vital air;
If Sylvia smiles, new glories gild the shore,
And vanquish'd Nature seems to charm no more.

Ver. 51.

At si formosus Alexis
Montibus his abeat, videas et flumina sicca.

Ecl. 7. 55.

Ver. 55. The Greek is. Μη μοι γὰρ Πειλοπος, μη μοι χρυσεία τεύχεα εἶναι εἶναι! May the territories of Pelops, and golden talents, never fall to my share! χρυσεία τεύχεα is very frigid; one expects something better than this from the Sicilian muse, and therefore the ingenious Pierſon (see his Verisimilia) observing that the librarians frequently obliterated proper names, instead of χρυσεία reads Κροισίῳ τεύχεα; then a new beauty arises in the opposition between the extensive territories of Pelops, and the talents, or treasures of Cræſus; and what adds to the probability that this is the true reading, Theocritus mentions the riches of Cræſus in the tenth Idyl. ver. 39. and likewise Anacreon, Ode 26. ver. 3. Δοκῶν δ' εἶναι τὰ Κροισῶν, Rich I seem as Lydia's king: indeed every school-boy knows that the riches of Cræſus became a proverb.

Ver. 56.

Proteus turpes pascit sub gurgite phœcas.

Georg. 4. 395.

Ver. 58.

Curſuque pedum prævertere ventos.

Æn. 7. 807.

Ver. 61. The present reading in the original is, ὑδάσι δ' ἀνυχμός, the drought is fatal to waters; but a friend of mine reads ὑδάσιν ἀνυχμός, drought is fatal to the teats, which is far more natural, and agreeable to the idea of a shepherd.

Triste lupus stabulis, maturis frugibus imbres,
Arboribus venti; nobis Amaryllidis ira.

Ecl. 3. 80.

Ver. 70. This seems to be an imitation of a verse in Homer:

Οὐ καὶ πάννηχον εὐδὲν βλάηφορον ἀνδρά.

Il. B. 2. 24.

Ill fits a chief, who mighty nations guides,
To waste long nights in indolent repose. Pope.

Ver. 72. Thus Virgil,

Gregibus non gramina defunt, &c.

Georg. B. 2. 200.

There for thy flocks fresh fountains never fail,
Undying verdure clothes the grassy vale;
And what is cropp'd by day the night renews.

Warton.

Ver. 78.

Et longum, formose, vale, vale, inquit, Iola!

Ecl. 3. 79.

Ver. 81. This verse occurs, Idyl. 9. ver. 7. in the Greek.

Ver. 83.

Fortunate senex, hic inter flumina nota,
Et fontes sacros, frigus captabis opacum.

Ecl. 1. 52.

Ver. 85.

Vitis ut arboribus decori est, ut vitibus uvæ,
Ut gregibus tauri, segetes ut pinguibus arvis.

Ecl. 5. 32.

As vines the trees, as grapes the vines adorn.

As bulls the herds, and fields the yellow corn.

Dryden.

Ver. 91.

Tale tuum carmen nobis, divine poeta, &c.

Ecl. 5. 45.

Mr. Gay has imitated this passage, in his fifth pastoral:

Albeit thy songs are sweeter to mine ear,
Than to the thirsty cattle rivers clear,
Or winter porridge to the labouring youth,
Or buns and sugar to the damsel's tooth.

Ver. 93.

Hos tibi dant calamos, en accipe, musæ.

Ecl. 6. 69.

Ver. 101.

Ex illo Corydon, Corydon est tempore nobis.

Ecl. 7. 70.

IDYLLIUM IX.

DAPHNIS AND MENALCAS.

THE ARGUMENT.

THE herdsman Daphnis, and the shepherd Menalcas, are urged by a neighbouring shepherd to contend in singing: the song is in alternate strains, and each receives a prize; Daphnis a finely-finished club, and Menalcas a conch. The beauty of this Idyllium consists in the true character of low life, full of self-commendation, and boastful of its own fortune.

DAPHNIS, begin! for merrily you play,
Daphnis begin the sweet bucolic lay;
Menalcas next shall sing; while pasturing near
Calves mix with cows, the heifer with the steer;
The bulls together with the herd may browse,
Rove round the copse, and crop the tender boughs;

Daphnis, begin the sweet bucolic strain;
Menalcas next shall charm the shepherd-swain.

Daphnis.

Sweet low the herds along the pastur'd ground,
Sweet is the vocal reed's melodious sound;

Sweet pipes the jocund herdsman, sweet I sing,
And lodge securely by yon cooling spring,
Where the soft skins of milk-white heifers, spread
In order fair, compose my decent bed :
Ah luckie's! browsing on the mountain's side,
The south wind dash'd them headlong, and they
died.

There I regard no more bright summer's fires
Than youthful lovers their upbraiding fires.

Thus Daphnis chanted his bucolic strain; 19
And thus Menalcas charm'd the shepherd-swain.

Menalcas.
Ætna's my parent; there I love to dwell,
Where the rock-mountains form an ample cell :
And there, with affluence blest, as great I live,
As swains can wish, or golden slumbers give ;
By me large flocks of goats and sheep are fed,
Their wool my pillow, and their skins my bed :
In cauldrons boil'd, their flesh sustains me well ;
Dry beechen faggots wint'ry frosts expel.
Thus I regard no more the cold severe
Then toothless men hard nuts when pulse is
near. 30

Here cea'd the youths; I prais'd their pastoral
strains,
And gave to each a present for his pains :

A well-form'd club became young Daphnis' due,
Which in my own paternal woodlands grew,
So exquisitely shap'd from end to end,
An artist might admire, but could not mend.
A pearly conch, wreath'd beautifully round,
Late on the Icarian rocky beach I found,
The shell I gave Menalcas for his share ; 39
Large was the conch, its flesh was rich and rare,
(This in five equal portions I divide)
And to five friends a plenteous meal supply'd.
Pleas'd he receiv'd, and lik'd his present well,
And thus he sweetly blew the shining shell :

Hail, rural muses, teach your bard those strains
Which once I sung, and charm'd the list'ning swains:
Then would my tongue repeat the pleasing lore,
And painful blisters never gall it more.
To grasshoppers the grasshoppers are friends,
And ant on ant for mutual aid depends ; 50
The ravenous kite protects his brother kite ;
But me the muse and gentle song delight.
O, may my cave with frequent song be blest !
For neither roseat spring, nor downy rest,
So sweat the labourer sooth; nor to the bee
Are flowers so grateful, as the muse to me :
For Circe's strongest magic ne'er can harm
Those whom the muses with soft rapture charm.

NOTES ON IDYLLIUM IX.

Ver. 1. The first eight lines in the translation
of this Idyllium are supposed to be spoken by the
shepherd, who endeavours to engage Daphnis and
Menalcas to sing :

Incipe, Mopse, prior. *Ecl. 4. 10.*

Ver. 2.
Incipe, Damocæta; tu deinde sequere, Menalca.
Ecl. 3. 58.

Ver. 9. This verse occurs Idyllium 8th, 77, in
the original :

Dulce satis humor, depulsis arbutus hædis,
Lenta salix sæto pecori, mihi solus Amyntas.
Ecl. 3. 82.

Ver. 19.
Hos Corydon, illos referebat in ordine Thyrsis.
Ecl. 7. 20.

Ver. 22. Ovid has a similar description of Po-
lyphemus's cave :

Sunt mihi pars montis vivo pendentia saxo
Antra. *Metamorph. B. 13. 810.*

Ver. 28.
Hic focus, et tædæ pingues; hic plurimus ignis
Semper, et assiduâ postes fuligine nigri.
Hic tantum Boreæ curamus frigora, quantum
Aut numerum lupo, aut torrentia flumina ripas.
Ecl. 7. 49.

Here ever-glowing hearths embrown the posts,
Here blazing pines expel the pinching frosts,

Here cold and Boreas' blasts we dread no more
Than wolves the sheep, or torrent streams the
shore. *Warton.*

Ver. 30. The Greek is ἀμύλας, which I appre-
hend signifies wheat boiled, without having been
first ground in the mill, something in the nature
of frumenty.

Ver. 31. Here the shepherd resumes his account
of the contest between Daphnis and Menalcas, and
describes the presents he made them.

Ver. 45.
Nymphæ, noster amor, Libethrides, aut mihi car-
men,
Quale meo Codro, concedite. *Ecl. 7. 21.*

Give me the lays, nymphs of th' inspiring springs,
Which Codrus, rival of Apollo, sings. *Warton.*

Ver. 48. The ancients believed that a lie was
always followed by some punishment, as a blister
on the tip of the tongue, a pimple on the nose,
&c. See Idyl. 12. verse 32. see also Hor. B. 2.
Ode 8.

Ver. 49. Juvenal has a similar passage, Sat. 15.
163.

Indica tigris agit rabidâ cum tygride pacem
Perpetuam: sævis inter se convenit uris.

Tiger with Tiger, bear with bear you'll find
In leagues offensive and defensive join'd. *Tate.*

Ver. 52.

Me verò primùm dulces ante omnia musæ,
Quarum sacra fero, ingenti perculsus amore,
Accipiant. *Geor. 2. 475.*

Ye sacred muses with whose beauty fir'd,
My soul is ravish'd, and my brain inspir'd.
Whose priest I am, give me, &c. *Dryden.*

Tale tuum carmen nobis, divine poeta,
Quale sopor fessis in gramine, quale per æstum

Dulcis aquæ saliente sitim restinguere rivo.
E. l. 5. 46.

Mr. Pope has something very similar:

Not bubbling fountains to the thirsty swain,
Not balmy sleep to labourers faint with pain,
Not showers to larks, or sunshine to the bee,
Are half so charming as thy sight to me.

Past. 3.

IDYLLIUM X.

THE REAPERS

THE ARGUMENT.

MILLO and Battus, two reapers, have a conference as they are at work; Battus not reaping so fast as usual, Milo asks him the reason of it: he frankly confesses it was owing to love; and, at the request of Milo, sings a song in praise of his mistress: Milo afterwards repeats the poetical maxims of Lytterses.

MILLO AND BATTUS.

Milo.

BATTUS, some evil sure afflicts you sore;
You cannot reap as you have reap'd before;
No longer you your sheaves with vigour bind,
But, like a wounded sheep, lag heavily behind.
If thus you fail with early morning's light,
How can you work till noon or slow-pac'd night?

Battus.

Milo, thou moiling drudge as hard as stone,
An absent mistress did'st thou ne'er bemoan?

Milo.

Not I—I never learnt fair maids to woo;
Pray what with love have labouring men to do?

Battus.

Did love then never interrupt thy sleep? 11

Milo.

No, Battus: dogs should never run at sheep.

Battus.

But I have lov'd these ten long days and more.

Milo.

Yes, you're a wealthy man, and I am poor.

Battus.

Hence all things round me in confusion lie.

Milo.

But tell me who's this charmer of your eye?

Battus.

Old Polybata's niece, the gay, the young,
Who harvest-home at Hypocoon's sung.

Milo.

Then for your sins you will be finely sped;
Each night a grizzle grasshopper in bed. 20

Battus.

Yet spare your insults, cruel and unkind!
Plutus, you know, as well as love, is blind.

Milo.

No harm I mean—But, Battus, as you play
On the sweet pipe, and sing an amorous lay,

With music's charm's our pleasing toils prolong;
Your mistress be the subject of your song.

Battus.

Ye muses sweetly let the numbers flow,
For you new beauty on all thenies bestow.
Charming Bombyce, though some call you thin,
And blame the tawny colour of your skin; 30
Yet I the lustre of your beauty own,
And deem you like Hyblæan honey brown.
The letter'd hyacinth's of darksome hue,
And the sweet violet a sable blue;
Yet these in crowns ambrosial odours shed,
And grace fair garlands that adorn the head.
Kids flowery thyme, gaunt wolves the kid pursue,
The crane the plough-share, and I follow you.
Were I as rich as Cræsus was of old,
Our statues soon should rise of purest gold. 40
In Cytherea's sacred shrine to stand,
You with an apple, rose, and lute in hand;
I like a dancer would attract the sight,
In gaudy sandals gay, and habit light.
Charming Bombyce, you my numbers greet;
How lovely, fair, and beautiful your feet!
Soft is your voice—but I no words can find
To represent the moral of your mind.

Milo.

How sweetly, swain, your carols you rehearse?
How aptly scan the measure of your verse? 50
A wit so barren with a beard so long—
Attend to tuneful Lytterses' song.

O fruitful Ceres, bless with corn the field;
May the full ears a plenteous harvest yield! [say,
Bind, reapers, bind your sheaves, lest strangers
“Ah, lazy drones! their hire is thrown away.”
To the fresh north wind, or the zephyrs rear
Your shocks; those breezes fill the swelling ear.
Ye threshers, never sleep at noon of day;
For then the light chaff quickly blows away, 60
Reapers should rise with larks to earn their hire,
Rest in the heat, and when they roost, retire.

How happy is the fortune of a frog,
He wants no moisture in his watery bog. [mean;
Steward, boil all the pulse; such pinching's
You'll wound your hand by splitting of a bean.

These songs the reapers of the field improve;
But your sad lay, your starveling tale of love,
Which soon will bring you to a crust of bread;
Keep for your mother, as she yawns in bed. 70

NOTES ON IDYLLIUM X.

This Idyllium, as Dr. Martyn observes, being a dialogue between two reapers, is generally excluded by the critics from the number of the pastorals: and yet, perhaps, if we consider that a herdsman may very naturally describe a conversation between two of his country neighbours, who entertain each other with a rural song, we may soften a little the severity of our critical temper, and allow even this to be called a pastoral.

Ver. 4. Virgil, speaking of a sickening sheep, says, *you will see it.*

*Extremaque sequi, aut medio procumbere campo
Pascentem.* Georg. B. 3. 466.

Ver. 12.

Ut canis a corio nunquam absterrebitur uncto.

Horace, B. 2. Sat. 5.

Ver. 14. The original is, *Εκ πίθω ἀντλεις δῆλον· ἐγὼ δ' ἔχω ἔδ' ἀλεις ὄζος*, instead of *δελον*, Hoelzinus (See his notes on Apollonius, B. 3. ver. 902.) reads *πηλον*, and then the interpretation will be, "You drink red wine out of a hog's head; but I have scarcely vinegar enough."

Ver. 18. This line occurs Idyllium 6. 54.

Ver. 20. Heinſius observes, that the grasshopper, here called *μάντις*, is the same that was called *γραυς*: *στριφες γραυς* was a proverbial expression, and equal to *anus quæ in virginitate consenuit*: *metaphora sumpta est a sylvestri locustâ, quam vocant γραυν στριφην καὶ μαντιν.* Suid. Milo therefore humourously laughs at Battus for falling in love with an old virgin.

Ver. 33. The Greek is, *Καὶ τοῖον μέλαν ἐντὶ καὶ α γραπτα βακινθος*, which Virgil has literally translated;

— — — *Quid tum si fuscus Amyntas?*

Et nigre violæ sunt, et vaccinia nigra. Ecl. 10. 38.

What if the boy's smooth skin be brown to view,
Dark is the hyacinth and violet's hue. Warton.

Virgil likewise has, "Inscripti nomina regum flores." Ecl. 3. 106.

Ver. 37.

*Torva læna lupum sequitur, lupus ipse capellam;
Florentem cytisum sequitur lasciva capella:*

Te Corydon, ô Alexi. Ecl. 2. 63.

Ver. 30. A king of Lydia, whose riches became a proverb.

Ver. 40.

*Nunc te marmoreum pro tempore fecimus: at tu,
Si foetura gregem suppleverit, aureus esto.*

Ecl. 7. 36.

But if the falling lambs increase my fold,
Thy marble statue shall be turn'd to gold. Dryden.

Ver. 46. Thus in Solomon's Song, Ch. vii. 1. we read, "How beautiful are thy feet with shoes!" On which Mr. Percy observes, "Or more exactly, *within thy sandals.*" The Hebrew women were remarkably nice in adorning their sandals, and in having them fit neatly, so as to display the fine shape of the foot: *Vid. Clerici Comment.* Judith's sandals are mentioned along with the bracelets and other ornaments of jewels, with which she set off her beauty when she went to captivate the heart of Holofernes, chap. x. 4. And it is expressly said, that "her sandals ravish'd his eyes," chap. xvi. 9.

Ver. 51. A long beard was looked on as a mark of wisdom: see Hor. Sat. 3. B. 2. ver. 35. "Sapientem pascere barbam."

Ver. 52. Lytierſes was a bastard son of Midas, king of Phrygia; the poets tell us, that in a trial of skill in music between Apollo and Pan, Midas gave sentence in favour of the latter, whereupon Apollo clapt a pair of asses ears on his head. On the other hand, Conon, in his first narration (apud Phot. Biblioth.) tells us, that Midas had a great many spies dispersed up and down the country, by whose information he knew whatever his subjects did or said; thus he reigned in peace and tranquillity to a great age, none daring to conspire against him. His knowing by this means whatever his subjects spoke of him, occasioned the saying, that Midas had "long ears;" and as asses are said to be endowed with the sense of hearing to a degree of perfection above other animals, he was also said to have asses ears; thus what was at first spoken in a metaphorical sense, afterwards ran current in the world for truth. As to Lytierſes, he reigned, after Midas, at Celænæ, the chief city of Phrygia, and is described as a rustic, unsociable and inhuman tyrant: of an insatiable appetite, devouring, in one day, three large baskets of bread, and drinking ten gallons of wine. He took great pleasure in agriculture; but, as acts of cruelty, were his chief delight, he used to oblige such as happened to pass by while he was reaping, to join with him in the work; and then, cutting off their heads, he bound up their bodies in the sheaves. For these, and such like cruelties, he was put to death by Hercules, and his body thrown into the Mæander: however, his memory was cherished by the reapers of Phrygia, and an hymn, from him called Lytierſes, sung in harvest time, in honour of their fellow labourer. See Univ. Hist. vol. 4. 8vo. page 459.

This anecdote is taken from one of the tragedies of Secibius, an ancient Syracusan poet, who, according to Vossius, flourished in the 166th Olym-

piad. As this passage is scarce, I shall take the liberty to lay it before the learned reader, exactly as the illustrious Casaubon has corrected and amended it, together with a translation: the two verses between comma's, are supposed to be spoken by a different person of the drama, and therefore omitted in the translation.

Αἰθ' οἱ Κελαιναὶ πατρὶς, ἀρχαία πόλις
Μῖδᾶ γέροντος, οὐκ ὡς ἔχων οὐκ,
Ἡγασσε· “καὶ νῦν φανὸς εὐειδὴς ἀγαν.”
Οὗτος δ' ἐκείνῳ πᾶσι παραπλάστος νοθός.
“Μητρός δ' ὁποίας ἡ τέκνῳ ἐπιστάται.”

Εσθὲ μὲν ἀγῶν τρεῖς οὐκ ἀνθελίας.
Τρεῖς τῆς βραχέας ἡμέρας πίνειθ' ἄμα,
Καλὴν μετρητὴν τὸν δεκάμφορον πίθον·
Εργάζεται δ' ἐλαφρὰ πρὸς τὰ σίτια.
Οἶνον θείζῃ τῇ μίᾳ δ' ἐν ἡμέρᾳ
Λεκαγυὸν ομπνὴν συντὶν εἰς τέλος·
Χ' ὡτ' ἀντὶς ἐλθὼν ξένος, ἡ παρ' ἐξῆς,
Φαγεῖν τ' ἐδωκεν εὖ, καὶ εὖ πέχουρτασεν.
Καὶ τὰ ποτὶς πρᾶττειν ὡς ἀντὶν θέρει
Πλῶν. φθονεῖν γὰρ ὠκνεῖ τοῖς θανόμενοις·
Επὶ δ' ἀγῶν ἐδίξε Μαιανδρὸν ῥοαίς
Καρπευμάτων ἀρδευτὰ δαψίλει ποτῶ
Τὸν ἀνδρομνηκὴ πύρον ἠκονημένη
Ἀρπὴ θείζῃ. τὸν ξένον δὲ δραγματὶ
Αὐτῶ κυλίσας, κρατὸς ὀφρανον φέρε·
Γέλων φέρεσθιν ὡς ἀντὶν ἠέρισεν.

Lytierfes

Celænæ, city fam'd in former years,
Where Midas reign'd, renown'd for asses ears:
Whose bastard son, that like a monster fed,
Daily devour'd * three asses loads of bread;

* A close translation would be, “three asses of bread,” that is, the burden which three asses carry; agreeable to that passage in Samuel, ch. xvi. ver. 10. “Jesse took an ass laden with bread;” the Hebrew is, “he took an ass of bread.” See Poole's Synopsis.

A large wine cask, which once a day he drain'd,
He call'd two gallons, though it ten contain'd.
Daily he labour'd in the corn-clad ground,
Reap'd ten whole acres, and in bundles bound.
If chance a stranger in his fields he spy'd,
Abundant wine and viands he supply'd,
Largely to drink, and sumptuously to feed,
Nor envied he the wretch he doom'd to bleed.
He points to meadows, arrogant and vain,
Of richest pasture, fields of golden grain,
Where through irriguous vales Mæander winds;
Then lops his head, and in the sheaves he binds
The trembling carcase, and with horrid jest
Laughs at the rashness of his murder'd guest.

Menander mentions this song in his Carchedonium: Ἀδόντα Λιτυέρσην ἀπ' ἀρίστης τῆς, “Singing Lytierfes soon after dinner.”

Heinsius very justly observes, that this Lytierfes is only a set of formulary maxims, or old sayings, and as such I have distinguished them in distichs, as they are in the Greek.

Ver. 59. Virgil has something similar;

At rubicunda Ceres medeo succiditur æstu;
Et medeo tostas æstu terit area fruges.

Geor. B. I. 2976

But cut the golden corn at mid-day's heat,
And the parch'd grain at noon's high ardour beat.

Warton.

The ancients did not thresh or winnow their corn: in the heat of the day, as soon as it was reaped, they laid it on a floor, made on purpose, in the middle of the field, and then they drove horses and mules round about it, till they trod all the grain out.

Benson.

Ver. 66. A sordid miser used formerly to be called *κωμνοπρίστης*, that is, a “bean-splitter.”

IDYLLIUM XI.

CYCLOPS.

THE ARGUMENT.

THIS is the last of those Idylliums that are generally allowed to be true pastorals, and is very beautiful. The poet addresses himself to Nicias, a physician of Miletus, and observes, there is no cure for love but the Muse—he then gives an account of Polyphemus's passion for Galatea, a sea-nymph, the daughter of Nereus and Doris: he describes him sitting upon a rock that overlooked the ocean, and soothing his passion with the charms of poetry.

No remedy the power of love subdues;
No medicine, dearest Nicias, but the muse;
This plain prescription gratifies the mind
With sweet complacence—but how hard to find!

This well you know, who first in physic shine,
And are the lov'd familiar of the nine.
Thus the fam'd Cyclops, Polypheme, when young,
Calm'd his fond passion with the power of song;

When blooming years imbib'd the soft desire,
 And Galatea kindled amorous fire :
 He gave no wreaths of roses to the fair,
 Nor apples, nor sweet parsley for her hair :
 Love did the tenor of his mind controul,
 And took the whole possession of his soul.
 His flocks untended oft refus'd to feed,
 And, for the fold, forsook the grassy mead ;
 While on the sedgy shore he lay reclin'd,
 And sooth'd with song the anguish of his mind.
 From morn to night he pin'd ; for love's keen dart
 Had pierc'd the deep recesses of his heart :
 Yet, yet a cure he found—for on a steep,
 Rough-pointed rock, that overlook'd the deep,
 And with brown horror high impending hung,
 The giant monster sat, and thus he sung :

“ Fair nymph, why will you thus my passion
 flight !
 Softer than lambs you seem, than curds more white,
 Wanton as calves before the udder'd kine,
 Harsh as the unripe fruitage of the vine.
 You come when pleasing sleep has clos'd mine eye,
 And like a vision with my slumbers fly, 30
 Swift as before the wolf the lambkin bounds,
 Panting and trembling, o'er the furrow'd grounds.
 Then first I lov'd, and thence I date my flame,
 When here to gather hyacinths you came :
 My mother brought you—'twas a fatal day ;
 And I, alas ! unwary led the way :
 E'er since my tortur'd mind has known no rest ;
 Peace is become a stranger to my breast :
 Yet you nor pity, nor relieve my pain—
 Yes, yes, I know the cause of your disdain ; 40
 For, stretch'd from ear to ear with shagged grace,
 My single brow adds horror to my face :
 My single eye enormous lids enclose,
 And o'er my blubber'd lips projects my nose.
 Yet homely as I am, large flocks I keep,
 And drain the udders of a thousand sheep ; [fill,
 My pails with milk, my shelves with cheese they
 In summer scorching, and in winter chill.
 The vocal pipe I tune with pleasing glee,
 No other Cyclops can compare with me : 50
 Your charms I sing, sweet apple of delight !
 Myself and you I sing the live long night.
 For you ten fawns, with collars deck'd I feed,
 And four young bears for your diversion breed :
 Come, live with me ; all these you may command,
 And change your azure ocean for the land :
 More pleasing slumbers will my cave bestow,
 There spiry cypresses and green laurels grow ;

There round my trees the sable ivy twines,
 And grapes as sweet as honey loads my vines ; 60
 From grove-crown'd Ætna, rob'd in purest snow,
 Cool springs roll nectar to the swains below.
 Say, who would quit such peaceful scenes as these
 For blustering billows and tempestuous seas ?
 Though my rough form's no object of desire,
 My oaks supply me with abundant fire :
 My hearth unceasing blazes—though I swear
 By this one eye, to me for ever dear,
 Well might that fire to warm my breast suffice,
 That kindled at the lightning of your eyes. 70
 Had I, like fish, with fins and gills been made,
 Then might I in your element have play'd,
 With ease have div'd beneath your azure tide,
 And kiss'd your hand though you your lips deny'd ?
 Brought lilies fair, or poppies red that grow
 In summer's solstice or in winter's snow ;
 These flowers I could not both together bear
 That bloom'd in different seasons of the year.
 Well, I'm resolv'd, fair nymph, I'll learn to dive,
 If e'er a sailor at this port arrive, 80
 Then shall I surely by experience know
 What pleasures charm you in the depths below.
 Emerge, O Galatea ! from the sea,
 And here forget your native home like me.
 O would you feed my flock and milk my ewes,
 And e'er you press my cheese the runnet sharp in-
 fuse !—

My mother is my only foe I fear ;
 She never whispers soft things in your ear,
 Although she knows my grief, and every day
 Sees how I languish, pine, and waste away. 90
 I, to alarm her, will aloud complain,
 And more disorders than I suffer feign,
 Say my head aches, sharp pains my limbs oppress,
 That she may feel and pity my distress.
 Ah Cyclops, Cyclops, where's your reason fled !—
 If with the leafy spray your lambs you fed,
 Or ev'n wove baskets, you would seem more wise ;
 Milk the first cow, pursue not her that flies :
 You'll soon, since Galatea proves unkind,
 A sweeter, fairer Galatea find. 100
 Me gamesome girls to sport and toy invite,
 And meet my kind compliance with delight :
 Sure I may draw this fair conclusion hence,
 Here I'm a man of no small consequence.

Thus Cyclops learn'd love's torment to endure,
 And calm'd that passion which he could not cure.
 More sweetly far with song he sooth'd his heart,
 Than if his gold had brib'd the doctor's art.

NOTES ON IDYLLIUM XI.

Ver. 1. Ovid makes Apollo express the same
 sentiment as he is pursuing Daphne ;
 Hei mihi, quod nullis Amor est medicabilis herbis !
 Nec profunt domino, quæ profunt omnibus, artes !
Metam. B. I. 523.
 To cure the pains of love no plant avails ;
 And his own physic the physician fails. *Dryden.*

Ver. 11. The Greek is, ἤμετρο δ' ἐπὶ γόδοις, ἡ μά-
 λαις, ἢ δὲ κικίνοις ; which Heinsius has very properly
 corrected, and reads δὲς σελινοῖς, nor with parsley-
 wreaths ; and observes, that our author is never
 more entertaining than when he alludes to some
 old proverb, as in this place he does : your com-
 mon lovers, such as were not quite stark staring

stad, and not extravagantly profuse in their presents to their mistresses, were said, *εραν μελοισ, και ροδοισ*, to love with apples and roses; or, as others affirm, *μελοισ και σιφανοισ*, with apples and garlands, which were generally composed of roses and parsley. See Idyllium 3. ver. 35.

Where rose-buds mingled with the ivy wreath,
And fragrant parsley sweetest odours breath.

Ver. 21. Bion imitates this passage, see his 7th Idyl. ver. 3.

Such as the Cyclops, on a rock reclin'd,
Sung to the sea-nymph to compose his mind,
And sent it in the whispers of the wind. F. F.

This fable of Polyphemus and Galatea has furnished matter for several poets, particularly Ovid, who, in the 13th book of the *Metamorphoses*, fable the 6th, has borrowed very freely from Theocritus. See Dryden's elegant translation of that fable.

Ver. 25.
Nerine Galatea, thymo mihi dulcior Hyblæ,
Candidior cynis, hederâ formosior albâ. *Ecl. 7. 37.*
O Galatea! nymph than swans more bright,
More sweet than thyme, more fair than ivy white.

Warton.

Are not our author's images far more natural, and consequently more adapted to pastoral than Virgil's?

Ver. 27. Ovid has,
Splendidior vitro; tenero lascivior hœdo.
Brighter than glass seems but a puerile sentiment.

Ver. 31.
Quem tu, cervus uti vallis in alterâ
Visum parte lupum graminis immemor,
Sublimi fugies mollis anhelitu. *Her. B. 1. Ode 15.*
Whose rage thou fly'st, with trembling fear,
As from the wolf the timorous deer. F. F.
— Quam tu fugis, ut pavet acres Agna lupos.

Ibid. B. 5. Ode 12.

Ver. 34.
Sepibus in nostris parvam te roscida mala,
(Dux ego vester eram) vidi cum matre legentem. *Ecl. 8.*

Ver. 41.
O digno conjuncta viro! dum despicias omnes,
Dumque tibi est odio mea fistula, dumque capellæ,
Hirsutumque supercilium, prolixaque barba.

Ecl. 8. 32.

Has not Virgil's wonderful judgment once more deserted him? *Hirsutum supercilium*, the shaggy eyebrow, being mentioned only as a single one, might suit a Cyclops with great propriety; it is indeed a translation of Theocritus's *λασια οφρυς μια μακρη*; but can this horrid eyebrow, with any accuracy, come into the description of an Italian shepherd?

Ver. 43. Unum est in mediâ lumen mihi fronte.
Ovid. Metam.

Ver. 45.
Mille meæ Siculis erant in montibus agnæ;
Lac mihi non æstate novum, non frigore defit.

Ecl. 2. 21.

Ver. 47. Martyn thinks this *ευρος*, or, as in Virgil, "pressi copia lactis," means curd, from which the milk has been squeezed out, in order to make cheese. We find in the third *Georgic*, ver. 400, that the shepherds used to carry the curd, as soon as it was pressed, into the town; or else salt it, and so lay it by for cheese against winter, "Quod sur- gente die," &c.

Ver. 53. The Greek is *ενδεκα νεβροι Πασας αμνοφορας*, eleven young hinds, and all of them pregnant; which, certainly, as Casaubon observes, cannot be probable, viz. that young hinds should be pregnant: there is an old Roman edition of Theocritus, which elucidates this passage, for it reads, *πασας μαννοφορας*, all bearing collars: and nothing is more manifest, than that the ancients, as well as moderns, were fond of ornamenting those animals which they brought up tame with such sort of appendages.

Ver. 54. Ovid imitates Theocritus,
Inveni geminos, qui tecum ludere possunt;
Villosæ catulos in summis montibus ursæ.

Met. 13. 831.

These bears are highly in character, and well adapted presents from Polyphemus to his mistress.

Ver. 55.
Huc ades, O Galatea! quis est nam ludus in udus?
Hic ver purpureuni, varios hic flumina circum
Fundit humus flores; hic candida populus antro
Imminet, & lentæ texunt umbracula vites.
Huc ades: infani feriant sine littora fluctus.

Ecl. 9. 39.

O lovely Galatea! hither haste!
For what delight affords the watery waste?
Here purple spring her gifts profusely pours,
And paints the river-banks with balmy flowers;
Here, o'er the grotto, the pale poplar weaves
With blushing vines a canopy of leaves;
Then quit the seas! against the sounding shore
Let the vext ocean's billows idly roar. Warton.

Ver. 69. I here follow the interpretation of Heinsius.

Ver. 75.
Tibi lilia plenis
Ecce ferunt nymphæ calathis: tibi candida Nais
Pallentes violas, & summa papavera carpens.

Ecl. 2. 45.

Ver. 85.
O tantum libeat mecum tibi sordida rura,
Atque humiles habitare casas, & figere cervos,
Hædorumque gregem viridi compellere hibisco!

Ecl. 2. 28.

O that you lov'd the fields and shady grots,
To dwell with me in bowers and lowly cots,
To drive the kids to fold! &c. Warton.

Ver. 95.
Ah, Corydon, Corydon, quæ te dementia cepit?
What phrenzy, Corydon, invades thy breast?

Ecl. 2.

Ver. 98. Thus Ovid,
Melius sequerere volentem
Optantemque eadem, pariliqûe cupidine captam.

Met. B. 14. 28.

When maids are coy, have manlier arts in view;
Leave those that fly, but those that like pursue.

Garth.

Ver. 100.

Invenies alium, si te hic fastidit, Alexim. *Ecl.* 2. 73.
Theocritus here greatly excels his imitator; for

to wave the superiority he holds in his application to one of the fair sex, there seems to be great consolation implied in the assurance that he shall find *ισως και καλλιον καλλαν*, "perhaps a fairer mistress;" in Virgil is implied desperation, *si et hic fastidit*.

IDYLLIUM XII.

AITES.

THE ARGUMENT.

THIS piece is in the Ionic dialect, and supposed not to have been written by Theocritus. The word *Aites* is variously interpreted, being taken for a *person beloved*, a *companion*, a *man of probity*, a *cohabitant*, and *fellow-citizen*: see the argument. The amoroſo addreſſes his friend, and wiſhes an union of their ſouls, a perpetual friendship, and that, after death, poſterity may celebrate the affection and harmony that ſubſiſted between them. He then praiſes the Megareſians for the divine honours they paid to Diocles, who loſt his life in the defence of his friend.

SAY, are you come? but firſt three days are told:
Dear friend, true lovers in one day grow old.
As vernal gales exceed the wint'ry blaſt,
As plums by ſweeter apples are ſurpaſt;
As in the woolly fleece the tender lambs
Produce not half the tribute of their dams;
As blooming maidens raiſe more pleaſing flames
Than dull, indifferent, thrice married dames;
As fawns outleap young calves: as Philomel
Does all her rivals in the grove excel;
So me your preſence cheers; eager I run,
As ſwains ſeek umbrage from the burning fun.
O may we ſtill to nobler love aſpire,
And every day improve the concord higher!
So ſhall we reap renown from loving well,
And future poets thus our ſtory tell!
' Two youths late liv'd in friendſhip's chain com-
bin'd,
' One was benevolent, the other kind;
' Such as once flouriſh'd in the days of old,
' Saturnian days, and ſtamp't the age with gold.'
O grant this privilege, almighty Jove!
That we, exempt from age and woe, may rove
In the bleſt regions of eternal day;
And when fix thouſand years have roll'd away,
Some welcome ſhade may this glad meſſage bear,
Ev'n in Elyſium would ſuch tidings cheer;

' Your friendſhip and your love by every tongue
' Are praiſ'd and honour'd---chiefly by the young.'
But this I leave to Jove's all-ruling care;
If right he'll grant, if wrong reject my prayer. 30
Meantime my ſong ſhall celebrate your praiſe,
Nor ſhall the honeſt truth a bliſter raiſe: [part,
And though keen ſarcaſms your ſharp words im-
I find them not the language of your heart;
You give me pleaſure double to my pain,
And thus my loſs is recompens'd with gain.
Ye Megareſians, fam'd for well tim'd oars,
May bliſs attend you ſtill on Attic ſhores!
To ſtrangers kind, your deeds themſelves com-
mend,
To Diocles the lover and the friend: 40
For at his tomb each ſpring the boys conteſt
In amoroſus battles who ſucceeds the beſt;
And he who maſter of the field is found,
Returns with honorary garlands crown'd.
Bleſt who decides the merits of the day!
Bleſt, next to him, who bears the prize away!
Sure he muſt make to Ganymede his vow,
That he ſweet lips of magic would beſtow,
With ſuch reſiſtleſs charms and virtues fraught,
As that fam'd ſtone from Lydia's confines brought,
By whoſe bare touch an artiſt can explore 51
The baſer metal from the purer ore.

NOTES ON IDYLLIUM XII.

Ver. 1.

—Longo poſt tempore venit.

Ecl. 1. 32.

Ver. 3.

Lenta ſalix quantum pallenti cedit olivæ,

Puniceis humilis quantum ſaliunca roſetis:

Judicio noſtro tantum tibi cedit Amyntas.

Ecl. 5. 16.

Ver. 4. *Βραβυλος* is a ſort of large indifferent plum.

Ver. 11. Horace has ſomething ſimilar:

—Vultus ubi tuus

Affulſit populo, gratior it dies,

Et ſoles melius nitent.

B. 4. *Ode* 5.

So, in thy presence, smoother run
The hours, and brighter shines the sun. *Duncombe.*

Ver. 17. His amor unus erat. *Æn. 9. 182.*

Ver. 20. The Greek is, *χρυσὴν ἀνδρὶς*, which Heinſius takes to mean something amiable and delightful; thus Horace,

Qui nunc te fruitur credulus aureâ :
Qui semper vacuum, semper amabilem
Sperat. *B. 1. Ode 5.*

Auream et amabilem he looks upon as synonymous: The Greeks have *χρυσὴν Ἀφροδίτην*, and Virgil, *Venus aurea*,

Aureus hanc vitam in terris Saturnus agebat.
Georg. B. 2. 538.

Ver. 22. *ὀδυσσεύς*, thus in the *Odyssey*, B. 5. Calypso says of Ulysses,

She promis'd (vainly promis'd) to bestow
Immortal life, exempt from age and woe. *Pope.*

Ver. 24. The Greek is, *γυναῖς διηκοσίων*, two hundred ages: an age, according to the common computation, is thirty years; thus Mr. Pope understands the word *γυναῖς* in the first book of the *Iliad*, speaking of the age of Nestor,

Two generations now had pass'd away,
Wife by his rules, and happy by his sway.

Ver. 32. See *Idyl. 9. ver. 48.* and the note.

Ver. 40. At Megara, a city of Achaia, between Athens and the Isthmus of Corinth, was an annual festival held in the spring, in memory of the Athenian hero Diocles, who died in the defence of a certain youth whom he loved: whence there was a contention at his tomb, wherein a garland was given to the youth who gave the sweetest kiss.
Potter's Arch. ch. 20.

IDYLLIUM XIII.

HYLAS.

THE ARGUMENT.

If the severity of critics will not allow this piece the title of a pastoral, yet as the actions of gods and heroes used to be sung by the ancient herdsmen, we may venture to affirm that our author intended it as such. It contains a relation of the rape of Hylas by the nymphs, when he went to fetch water for Hercules, and the wandering of that hero, and his extreme grief for the loss of him.

Love, gentle Nicias, of celestial kind,
For us alone, sure never was design'd;
Nor do the charms of beauty only sway
Our mortal breasts, the beings of a day:
Amphitryon's son was taught his power to feel,
Though arm'd with iron breast and heart of steel,
Who slew the lion fell, lov'd Hylas fair,
Young Hylas graceful with his curling hair.
And, as a son by some wise parent taught,
The love of virtue in his breast he wrought, 10
By precept, and example was his guide,
A faithful friend, for ever at his side:
Whether the morn return'd from Jove's high hall
On snow-white steeds, or noontide mark'd the
wall,
Or night the plaintive chickens warn'd to rest,
When careful mothers brood, and flutter o'er the
nest:
That, fully form'd and finish'd to his plan,
Time soon might lead him to a perfect man.
But when bold Jason, with the sons of Greece,
Sail'd the salt seas to gain the golden fleece, 20
The valiant chiefs from every city came,
Renown'd for virtue, or heroic fame,
With these assembled for the host's relief,
Alcmena's son, the toil enduring chief,
Firm Argo bore him cross the yielding tide
With his lov'd friend, young Hylas, at his side;
Between Cyane's rocky isles she past,
Now safely fix'd on firm foundations fast,

Thence as an eagle swift with prosperous gales
She flew, and in deep Phasis furl'd her sails. 30
When first the pleasing Pleiades appear,
And grass-green meads pronounc'd the summer
near,
Of chiefs a valiant band, the flower of Greece,
Had plann'd the emprise of the golden fleece,
In Argo lodg'd they spread their swelling sails,
And soon pass'd Hellespont with southern gales,
And smooth Propontis, where the land appears
Turn'd in straight furrows by Cyanean steers.
With eve they land; some on the greenward
spread
Their hasty meal; some raise the spacious bed 40
With plants and shrubs that in the meadows grow,
Sweet-flowering rushes, and cyperus low.
In brazen vase fair Hylas went to bring
Fresh fountain-water from the crystal spring.
For Hercules, and Telamon his guest;
One board they spread, associates at the feast:
Fast by, in lowly dale, a well he found
Beset with plants, and various herbage round,
Cerulean celandine, bright maiden-hair,
And parsley green, and bindweed flourish'd there;
Deep in the flood the dance fair Naiads led, 50
And kept strict vigils to the rustic's dread,
Eunica, Malis form'd the festive ring,
And fair Nychéa, blooming as the spring:
When to the stream the hapless youth apply'd
His vase capacious to receive the tide,

The Naiads seiz'd his hand with frantic joy,
 All were enamour'd of the Grecian boy:
 He fell, he sunk; as from th' ethereal plain
 A flaming star falls headlong on the main; 60
 The boatswain crys aloud, 'Unfurl your sails,
 'And spread the canvass to the rising gales.'
 In vain the Naiads sooth'd the weeping boy,
 And strove to lull him in their laps to joy.
 But care and grief had mark'd Alcides' brow,
 Fierce as a Scythian chief he grasp'd his bow,
 And his rough club, which well he could command,
 The pride and terror of his red right hand:
 On Hylas thrice he call'd with voice profound,
 Thrice Hylas heard the unavailing sound; 70
 From the deep well soft murmurs touch'd his ear,
 The sound seem'd distant, though the voice was
 near.
 As when the hungry lion hears a fawn
 Distressful bleat on some far distant lawn,

Fierce from his covert bolts the savage beast,
 And speeds to riot on the ready feast.
 Thus, anxious for the boy, Alcides takes
 His weary way through woods and pathless brakes;
 Ah wretched they that pine away for love!
 O'er hills he rang'd and many a devious grove. 80
 The bold adventurers blam'd the hero's stay,
 While long equipt the ready vessel lay;
 With anxious hearts they spread their sails by
 night,
 And wish'd his presence with the morning light:
 But he with frantic speed regardless stray'd,
 Love pierc'd his heart, and all the hero sway'd.
 Thus Hylas, honour'd with Alcides' love,
 Is number'd with the deities above,
 While to Amphitryon's son the heroes give
 This shameful term, 'The Argo's fugitive':
 But soon on foot the chief to Colchos came,
 With deeds heroic to redeem his fame.

NOTES ON IDYLLIUM XIII.

* Theocritus addresses this Idyllium, as he did the eleventh, to his friend Nicias, a Milesian physician.

Georg. 3. 242.

Thus man and beast, the tenants of the flood,
 The herds that graze the plain, the feathery brood,
 Rush into love, and feel the genial flame,
 'For love is lord of all, and is in all the same.'

Warton.

Ver. 6. Thus Horace, "Illi robur et æs triplex
 Circa pectus erat." B. 1. O. 3.

And Moschus, in his poem intituled Megara,
 speaking of Hercules,

Πιτρεὺς οὐ γὰρ ἰψὺν νόον, καὶ σιδηρεὺς
 καρτερεὺς ἐν στήθεσσι.

His heart, like iron or a rock,
 Unmov'd, and still superior to the shock.

Ver. 7. Hylas was the son of Theodamus, whom
 Hercules slew, because he denied him a supply of
 provision.

Ver. 9.

—Infuevit pater optimus hoc me, &c.

Hor. B. 1. Sat. 4.

Ver. 14. The Greek is λευκιππος. Dr. Spence
 very justly observes that the poets are very incon-
 sistent in their descriptions of Aurora, particularly
 in the colour of her horses; here they are white,
 whereas Virgil represents them rose-coloured, "roseis
 Aurora quadrigis." Æn. 6. 535. and B. 7. 26.
 "Aurora in roseis fulgebat lutea bigis." The best
 critics have ever thought, that consistency is re-
 quired in the most unbounded fictions: if I mis-
 take not, Homer is more regular in this, as in all
 other fictions, Essay on the Odyssey.

Ver. 18. Thus Bion,

—Ὥς δ' ἀνέρος εἰς μέτρον ἐλθῆς.

Idyl. 2.

As soon as time shall lead you up to man. F. F.

Ver. 21.

Alter erit tum Tiphys et altera quæ vehat Argo
 Delectos heroas. Ecl. 4. 34.

Ver. 27. The Cyanean isles, or Symplegades,
 are two small islands near the entrance of the Eux-
 ine, or Black Sea, in the mouth of the Straits of
 Constantinople, over against one another; at so
 small a distance, that to a ship passing by they ap-
 pear but one; whence the poets fancied, that they
 sometimes met, and came together, therefore call-
 ed them concurrentia saxa Cyaneæ. Juvenal, Sat. 15.
 19. See also Idyl. 22. ver. 29.

Ver. 29.

—Illa noto citius, volucrique sagittâ
 Ad terram fugit, et portu se condidit alto.

Æn. 5. 242.

Ver. 30. A large river of Colchis, which dis-
 chargeth itself into the Euxine. Ovid, speaking
 of the Argonauts, says,

Multaquæ perpeffi claro sub Jäfone, tandem
 Contigerant rapidas limosi Phasidos undas.

Met. B. 7. 5.

Ver. 31. The Pleiades rise with the sun on the
 twenty-second of April, according to Columella.

Ver. 33. The Argonauts were fifty-two in
 number: Pindar calls them the flower of sailors,
 Theocritus, the flower of heroes, and Virgil, chosen
 heroes, "delectos heroas;" see ver. 21.

Ver. 42. The Greek is βύρρουον ὄζυ, which there
 is great reason to believe is the carex acuta of Virgil,
 Frondibus hirsutis, et carice pastus acutâ.

Georg. B. 3. 231.

On prickly leaves and pointed rushes fed. Warton.

Ovid applies the same epithet to the *juncus*, *acutâ casside junci*. The word comes from βῆς, an ox, and τέμνω to cut; so called, because the leaves of this plant are so sharp, that the tongue and lips of oxen, who are great lovers of it, are wounded by it. See Butomus in Miller.

Ver. 49. The Greek is, Κυαντον χελιδονιον.

Χλωρον τ' αδιαντον, *Capillus Veneris*.

Ver. 50. The Greek is, Ειλιτενης αγρωεις; as it is difficult to determine what plant Theocritus here means, I have rendered it *bindweed*, or *convolvulus*, which seems an exact translation of ειλιτενης.

Ver. 55. The Greek is, Ητοι ο κηρος επειχε ποτω πολυχανδρια κρωισσον; instead of ποτω, Pierfon reads ρω, which is probably right, being the same word which Appollonius Rhodius makes use of, when treating of the same subject. See b. i. ver. 1234.

Αυταρ ογ' ως ταπρωτα ρω ενι καλπιν ερρισε.

Ver. 59. Hylas falling into a well, was said to be snatched away by the Nymphs. Ovid, speaking of Phæton, has something very similar to this passage.

Volvitur in præceps, longoque per aëra tractu
Fertur; ut interdum de cælo stella fereno,
Etsi non cecidit, potuit cecidisse videri.

Met. B. 2. 319.

The breathless Phæton, with flaming hair,
Shot from the chariot, like a falling star
That in a summer's evening from the top
Of heav'n drops down, or seems at least to drop.

Addison.

Ver. 60. These sort of meteors were reckoned prognostics of winds,

Sæpe etiam stellas, vento impendente, videbis
Præcipites cælo labi. *Geor. B. 1. 365.*

Ver. 61.

Solvite vela citi. *Æn. 4. 574.*

Ver. 65. Virgil of Hercules,
Hic vero Alcidae furiis exarserat atro
Felle dolor; rapit arma manu, nodisque gravatum
Robur. *Æn. B. 8. 219.*

Alcides seiz'd his arms, inflam'd with ire,
Rage in his looks, and all his soul on fire;
Fierce in his hands the ponderous club he shook.

Pitt.

Ver. 69.
Ut littus, Hyla, Hyla, omne sonaret. *Ec. 6. 44.*

And Spenser,

And every wood, and every valley wide,
He fill'd with Hyla's name, the Nymphs eke Hy-
las cride. *Faery Queen, B. 3. c. 12.*

Antoninus has given us an explanation of the circumstance of Hyla's name being so often repeated, which is so particularly insisted on by the poets: "Hercules," says he, "having made the hills and forests tremble, by calling so mightily on the name Hylas: the Nymphs who had snatched him away, fearing lest the enraged lover should at last discover Hylas in their fountain, transformed him into Echo, which answered Hylas to every call of Hercules."

Warton's Observations.

Ver. 73. This simile seems to have pleased Appollonius so well, that writing on the same subject, the Rape of Hylas, he has imitated it twice; see book i. ver. 1243, &c. Ovid also had it in view;

Tigris ut, auditis diversâ valle duorum
Extimulata fame mugitibus armentorum, &c.

Met. B. 5. 164.

Ver. 79.

Ah, virgo infelix, tu nunc in montibus erras!
Ec. 6. 52.

Ver. 87. Horace says,

—Sic Jovis interest
Optatis epulis impiger Hercules. *B. 4. Ode 8.*

This κατακοιμησις, or fate of Hylas, as Heinsius observes, with which the poet concludes this charming poem, is extremely elegant and agreeable;

Ουτο μιν καλλαιστος Τλας μακαρον αριθμειται,

Thus the beautiful Hylas is numbered among the blessed.

He would not say, Ουτος ο Τλας τεθνηκεν, "thus Hylas died;" but, "thus he is numbered with the blessed." See his notes.

IDYLLIUM XIV.

CYNISCA'S LOVE.

THE ARGUMENT.

ÆSCHINES being in love with Cynisca, is despised by her, she having placed her affections on Lycus. Æschines accidentally meets with his friend Thyonichus, whom he had not seen of a long time, and tells him his lamentable tale, and that he is determined to turn soldier. Thyonichus advises him to enter into the service of Ptolemy Philadelphus, on whom he bestows a short but very noble encomium.

ÆSCHINES AND THYONICHUS.

Æschines.

ALL health to good Thyonichus, my friend,

Thyonichus.

May the same blessing Æschines attend.

Æschines.

I see you seldom.—*Tby.* Well, what ails you now?

Æschines.

All is not well with me.—*Tby.* You therefore grow
So much a floven, so exceeding thin, [chin.

Your hair untrimm'd, your beard deforms your

H ii

A poor Pythag'rist late I chanc'd to meet,
Pale fac'd, like you, and naked were his feet;
He came from learned Athens, as he said,
And was in love too—with a loaf of bread. 10

Æschines.

You jest, but proud Cynisca makes me sad;
Nay, I'm within a hair-breadth raving mad.

Thyonichus.

Such is your temper, so perverse you grow,
You hope all smooth: but what affects you now?

Æschines.

I and Cleonicus and the Greek agreed
With Apis skill'd Thessalian colts to breed,
In my green court, with wine to cheer our souls:
A sucking pig I dress'd, and brace of fowls:
And fragrant wine produc'd, four summers old,
Phœnicia's generous wine that makes us bold: 20
Onions and shell-fish last the table crown'd,
And gaily went the cheering cup around;
Then healths were drank, and each oblig'd to name
The lovely mistress that inspir'd his flame.
Cynisca (she was by) then charm'd my soul,
And to her health I drain'd the foaming bowl:
She pledg'd me not, nor deign'd a kind reply:
Think how my rage, inflam'd with wine, ran
high.

"What, are you mute?" I said—a waggish guest,
"Perhaps she's seen a Wolf," rejoind in jest: 30

At this her cheeks to scarlet turn'd apace;
Sure you might light a candle at her face.
Now Wolf is Laba's son, whom most men call
A comely spark, is handsome, young, and tall.
For him she sigh'd; and this by chance I heard;
Yet took no note, and vainly nurs'd my beard.
We four, now warm, and mellow with the wine,
Arch Apis, with a mischievous design,
Nam'd Wolf, and sung encomiums of the boy,
Which made Cynisca fairly weep for joy, 40
Like a fond girl, whom love maternal warms,
That longs to wanton in her mother's arms:
I swell'd with rage, and, in revengeful pique,
My hand discharg'd my passion on her cheek:
"Since thee," I cry'd, "my love no more en-
dears,

"Go court some other with those tender tears."
She rose, and gathering in a knot her vest,
Flew swiftly; as the swallow from her nest,

Beneath the tiling skims in quest of food;
To still the clamours of her craving brood. 50
Thus from her downy couch in eager haste,
Through the first door, and through the gate she
pass'd.

Where'er her feet, where'er her fancy led;
The proverb says, 'The bull to wood is fled.'
Now twenty days are past, ten, nine, and eight,
Two and eleven add—two months complete,
Since we last met, and like the boors of Thrace,
In all that time I never trimm'd my face.
Wolf now enjoys her, is her sole delight:
She, when he calls, unbars the door at night: 60
While I, alas! on no occasion priz'd,
Like the forlorn Megareans am despis'd.
Oh could I from these wild desires refrain,
And love her less, all would be well again!
Now like a mouse ensnar'd on pitch I move;
Nor know I any remedy for love.

Yet in love's flames our neighbour Simus burn'd,
Sought ease by travel, and when cur'd return'd;
I'll fail, turn soldier, and though not the first
In fighting fields I would not prove the worst. 70

Thyonichus.

May all that's good, whate'er you wish, attend
On Æschines, my favourite and friend.
If you're resolv'd, and sailing is your plan,
Seræ Ptolemy, he loves a worthy man.

Æschines.

What is his character? *Thy.* A royal spirit,
To point out genius, and encourage merit:
The poet's friend, humane, and good, and kind;
Of manners gentle, and of generous mind.
He marks his friend, but more he marks his foe;
His hand is ever ready to bestow: 80
Request with reason, and he'll grant the thing,
And what he gives, he gives it like a king.
Go then, and buckle to your manly breast
The brazen corslet, and the warrior vest;
Go brave and bold, to friendly Egypt go,
Meet in the tented field, the rushing foe.
Age soon will come, with envious hand to shed
The snow of winter on the hoary head,
Will sap the man, and all his vigour drain,
'Tis our's to act while youth and strength re-
main. 90

NOTES ON IDYLLIUM XIV.

Ver. 1. Thus Terence,
Salvere Hegionem plurimum Jubeo.

Adelpb. Act 3. Sc. 5.

Ver. 6.

—Vultus gravis, horrida sicca Sylva comæ.

Juv. Sat. 9. 12.

Ver. 8. He ridicules and distinguishes the Pythagorists by the same marks as Aristophanes does the disciples of Socrates.

Τὸς ἀρχαίωντας, τὸς ἀνυποδόντας λαγυίς.

Plut. Act 1. Sc. 1.

"You would say that they were pale-faced and
"barefoot."

Ver. 9.

—Mediis sed natus Athenis. *Juv. Sat. 3.*

Ver. 17. The Greek is, *Εν χορῇ παρ' ἐμῇ*, which Heinsius corrects *Εν χορῇ παρ' ἐμῇ*, that is, in that part of the house where the ancients used to dine and sup; which being originally *ἐν χορῇ*, "on the grass," well adapted to the ancient shepherds still retained its name, though it was afterward

surrounded with various apartments; therefore it probably means the inner court.

Ver. 20. The Greek is, *βυβλινον οινον*, which Athenæus, B. I. chap. 28. allows to be Phœnician wine.

Ver. 28.

Quid mihi tunc animi credis, germane, fuisse?

Ovid. Epist. Can. to Macar.

Ver. 30 That is, *Λυκον*, "Wolf," her sweetheart.

—Lupi Mœrim videre priores. *Ec. 9. 54.*

On which Dr. Martyn observes, "that a notion obtained among the ancient Italians, that if a wolf saw any man first, it deprived him of his voice for the present; but, says he, Theocritus gives this story a contrary turn; as if the seeing a wolf, instead of being seen by him, made a person mute." The doctor, and likewise Mr. Warton, did not observe our author's double meaning, viz. that *λυκο* signified not only a wolf, but was likewise the name of Cynisca's lover.

Ver. 36. *Ματαν εις ανδρα γυντιων*, "quod de iis dicebatur, quorum conjuges impune cum aliis solebant; quique hanc contumeliam leni et pacato animo ferebant." *Heinsius.*

Ver. 47.

Nodoque sinus collecta fluentes. *Æn. I. 324.*
Close, in a knot, her flowing robes she drew. *Pitt.*

Ver. 48. Virgil has plainly borrowed this simile from our author, though Mr. Warton says he is obliged to Apollonius for it: it is not improbable but that Virgil's may be the copy of the copier.

Nigra velut magnas domini cum divitis ædes
Pervolat, et pennis alta atria lustrat hirundo,
Pabula parva legens, nidisque loquacibus escas,
Et hunc porticibus vacuis, nunc humida circum
Stagna sonat. *Æn. B. 12. 473.*

As the black swallow, that in quest of prey,
Round the proud palace wings her wanton way,
When for her children she provides the feast,
To still the clamours of the craving nest;
Now wild excursions round the cloyster takes;
Now sportive winds, or skims along the lakes.

Pitt.

Virgil has spun this simile into more than four lines, whereas Theocritus comprehends it in two.

Ver. 54. A proverb signifying that he will not return.

Ver. 55. The literal interpretation is, "And now twenty and eight, and nine, and ten days are past, to-day is the eleventh, add two more, and there will be two months." A similar but more perplexing method of numeration we meet with in the 17th Idyl. ver. 95.

Ver. 62. The Megareans entertaining a vain conceit that they were the most valiant of the Grecians, inquired of the oracle if any nation excelled them: the conclusion of the answer was,

*Τρις δ', Μεγαρεϊς, ητις τριτοι, ητις τεταρτοι,
Ουτε δυωδεκατοι, ητ' εν λογον, ητ' εν αριθμω.*

Nor in the third, nor in the fourth, Megareans call,
Nor in the twelfth, nor any rank at all.

Ver. 65. The Greek is, *ως μου γυμνιδα πισσαει*
"like a mouse I have tasted pitch."

Ver. 71.

Tibi Dî, quæcunque preceris, Commoda dent.

Hor. B. 2. Sat. 8.

Ver. 82. To this noble encomium of Ptolemy by the Sicilian poet, I shall briefly show the favourable side of his character, as it is given by the historians. He was a prince of great learning, and a zealous promoter and encourager of it in others, an industrious collector of books, and a generous patron to all those who were eminent in any branch of literature. The fame of his generosity drew seven celebrated poets to his court, who, from their number, were called Pleiades: these were Aratus, Theocritus, Callimachus, Lycophron, Apollonius, Nicander, and Philicus. To him we are indebted for the Greek translation of the scripture, called the Septuagint. Notwithstanding his peculiar taste for the sciences, yet he applied himself with indefatigable industry to business, studying all possible methods to render his subjects happy, and raise his dominions to a flourishing condition. Athenæus called him the richest of all the princes of his age; and Appian says, that he was the most magnificent and generous of all kings in laying out his money, so he was of all the most skilful and industrious in raising it. He built an incredible number of cities, and left so many other public monuments of his magnificence, that all works of an extravagant taste and grandeur, were proverbially called Philadelphian works.

IDYLLIUM XV.

THE SYRACUSIAN GOSSIPS.

THE ARGUMENT.

Two Syracusan women, who had travelled to Alexandria, go to see the solemnity of Adonis's festival, which had been prepared by Arsinoë, the queen of Ptolemy Philadelphus: the humours of these gossips are naturally described. Theocritus, to gratify the queen, introduces a Grecian singing girl who rehearſes the magnificence of the pomp which Arsinoë had provided.

GORG0, EUNOE, PRAXINOE, OLD WOMAN AND STRANGER.

Gorgo.

PRAY, is Praxinoë at home?

Eunoe.

Dear Gorgo, yes,—how late you come!

Praxinoë.

Well! is it you? Maid, bring a chair

And cushion. *Gor.* Thank you. *Prax.* Pray sit there.

Gorgo.

Lord bleſs me! what a buſtling throng!

I ſcarce could get alive along:

In chariots ſuch a heap of folks!

And men in arms, and men in cloaks—

Befides I live ſo diſtant hence

The journey really is impenſe.

Praxinoë.

My huſband, heav'n his ſenſes mend!

Here will inhabit the world's end,

This horrid houſe, or rather den;

More fit for ſavages than men.

This ſcheme with envious aim he labours,

Only to ſeparate good neighbours—

My plague eternal!

Gorgo.

Softly, pray,

The child attends to all you ſay;

Name not your huſband when he's by—

Obſerve how earneſt is his eye!

Praxinoë.

Sweet Zopy! there's a bonny lad,

Cheer up! I did not mean your dad.

Gorgo.

'Tis a good dad—! I'll take an oath,

The urchin underſtands us both.

Praxinoë.

(Let's talk as if ſome time ago,

And then we ſhall be ſafe, you know)

This perſon happen'd once to ſtop

To purchaſe nitre at a ſh-p,

And what d' ye think? the ſilly creature

Bought ſalt, and took it for ſaltpetre.

Gorgo.

My huſband's ſuch another honey,

And thus, as idly ſpends his money;

Five fleeces for ſeven drachms he bought,

Coarſe as dog's hair; not worth a groat.

But take your cloak, and garment grac'd

With claſps, that lightly binds your waſt;

Adonis' feſtival invites,

And Ptolemy's gay court delights:

Befides our matchleſs queen, they ſay,

Exhibits ſome grand ſight to-day.

Praxinoë.

No wonder—every body knows

Great folks can always make fine ſhows:

But tell me what you went to ſee,

And what you heard—'tis new to me.

Gorgo.

The feaſt now calls us hence away,

And we ſhall oft keep holiday.

Praxinoë.

Maid? water quickly—ſet it down—

Lord! how undelicate you're grown!

Diſperſe the cats that love their caſe—

But firſt the water, if you pleaſe—

Quick! how ſhe creeps; pour, huſſey, pour;

You've ſpoil'd my gown—ſo, ſo—no more.

Well, now I'm waſh'd—ye gods be bleſt!

Here—bring the key of my large cheſt.

Gorgo.

This robe becomes you mighty well;

What might it coſt you? can you tell?

Praxinoë.

Three pounds or more; I'd not have done it,

But that I'd ſet my heart upon it.

Gorgo.

'Tis wonderous cheap. *Prax.* You think ſo?—Maid,

Fetch my umbrella and my ſhade;

So, put it on—fy, Zophy, fy!

Stay within doors, and don't you cry:

The horſe will kick you in the dirt—

Roar as you pleaſe, you ſhan't get hurt.

Pray, maid, divert him—come, 'tis late:

Call in the dog, and ſhut the gate.

Lord! here's a buſtle and a throng—

How ſhall we ever get along?

Such numbers cover all the way,

Like emmets on a ſummer's day.

O Ptolemy! thy fame exceeds

Thy godlike fire's in noble deeds:

No robber now with Pharian wiles

The ſtranger of his purſe beguiles;

No ruffians now infest the street,
And stab the passengers they meet.
What shall we do? lo here advance
The king's war-horses---how they prance!
Don't tread upon me, honest friend---
Lord, how that mad horse rears an end! 80
He'll throw his rider down, I fear---
I'm glad I left the child my dear.

Gorgo.

Don't be afraid; the danger's o'er;
The horses, see! are gone before.

Praxinoe.

I'm better now, but always quake
Whene'er I see a horse or snake:
They rear, and look so fierce and wild---
I own, I've loath'd them from a child.
Walk quicker---what a crowd is this? 89

Gorgo.

Pray, come you from the palace? *Old Wo.* Yes.

Gorgo.

Can we get in, d'ye think? *Old Wo.* Make trial---
The steady never take denial;
The steady Greeks old Ilium won:
By trial all things may be done.

Gorgo.

Gone, like a riddle in the dark;
These crones, if we their tales remark,
Know better far than I or you know
How Jupiter was join'd to Juno.
Lo! at the gate what crowds are there!

Praxinoe.

Immense, indeed! Your hand, my dear; 100
And let the maids join hands, and close us,
Left in the bustle they should lose us.
Let's crowd together through the door---
Heav'n's blest me! how my gown is tore!
By Jove, but this is past a joke---
Pray, good Sir, don't you rend my cloak.

Man.

I can't avoid it; I'm so prest.

Praxinoe.

Like pigs they jostle, I protest.

Man.

Cheer up, for now we're safe and sound.

Praxinoe.

May you in happiness abound: 110
For you have serv'd us all you can---
Gorgo!--a mighty civil man---
See how the folks poor Eunoe jostle!
Push through the crowd, girl!--bustle, bustle---
Now we're all in; as Dromo said,
When he had got his bride in bed.

Gorgo.

Lo! what rich hangings grace the rooms---
Sure they were wove in heavenly looms.

Praxinoe.

Gracious! how delicately fine
The work how noble the design! 120
How true, how happy is the draught!
The figures seem inform'd with thought---
No artists sure the story wove;
They're real men---they live, they move.
From these amazing works we find,
How great, how wise the human mind.
Lo! stretch'd upon a silver bed,
Scarce has the down his cheeks o'erspread)

Adonis lies; O charming show!
Lov'd by the fable pow'rs below. 130

Stranger.

Hift! your Sicilian prate forbear:
Your mouths extend from ear to ear,
Like turtles that forever moan;
You stun us with your rustic tone.

Gorgo.

Sure! we may speak! what fellow's this?
And do you take it, Sir, amiss?
Go, keep Egyptian slaves in awe:
Think not to give Sicilians law:
Besides, we're of Corinthian mold,
As was Bellerophon of old: 140
Our language is entirely Greek---
The Dorians may the Doric speak.

Praxinoe.

O sweet Proserpina, sure none
Presumes to give us law but one!
To us there is no fear you should
Do harm, who cannot do us good.

Gorgo.

Hark! the Greek girl's about to raise
Her voice in fair Adonis' praise;
She's a sweet pipe for funeral airs:
She's just beginning, she prepares: 150
She'll Sperchis, and the world excel,
That by her prelude you may tell.

The Greek Girl sings.

"O chief of Golgos, and the Idalian grove,
And breezy Eryx, beauteous queen of Love!
Once more the soft-foot hours approaching flow,
Restore Adonis from the realms below;
Welcome to man they come with silent pace,
Diffusing benisons to human race.
O Venus, daughter of Dione fair,
You gave to Berenice's lot to share 160
Immortal joys in heavenly regions blest,
And with divine ambrosia fill'd her breast.
And now in due return, O heavenly born!
Whose honour'd name a thousand fanes adorn,
Arctinoe pays the pompous rites divine,
Rival of Helen, at Adonis' shrine;
All fruits she offers that ripe autumn yields,
The produce of the gardens, and the fields;
All herbs and plants which silver baskets hold;
And Syrian unguents flow from shells of gold. 170
With finest meal sweet paste the women make,
Oil, flowers and honey mingling in the cake:
Earth and the air afford a large supply
Of animals that creep, and birds that fly.
Green bow'rs are built with dill sweet-smelling
crown'd,

And little Cupids hover all around;
And as young nightingales their wings essay,
Skip here and there, and hop from spray to spray.
What heaps of golden vessels glittering bright!
What stores of ebony black, and ivory white! 180
In ivory carv'd large eagles seem to move,
And through the clouds bear Ganymede to Jove.
Lo! purple tapestry arrang'd on high
Charms the spectators with the Tyrian dye,
The Samian and Milesian swains, who keep
Large flocks, acknowledge 'tis more soft than sleep:
Of this Adonis claims a downy bed,
And lo! another for fair Venus spread!

Her bridegroom scarce attains to nineteen years,
 Rosy his lips, and no rough beard appears. 190
 Let raptur'd Venus now enjoy her mate,
 While we, descending to the city gate,
 Array'd in decent robes that sweep the ground,
 With naked bosoms, and with hair unbound,
 Bring forth Adonis, slain in youthful years,
 Ere Phœbus drinks the morning's early tears.
 And while to yonder flood we march along,
 With tuneful voices raise the funeral song.

Adonis, you alone of demigods,
 Now visit earth, and now hell's dire abodes: 200
 Not fam'd Atrides could this favour boast,
 Nor furious Ajax, though himself an host;
 Nor Hector, long his mother's grace and joy
 Of twenty sons, not Pyrrhus safe from Troy,

Not brave Patroclus of immortal fame,
 Nor the fierce Lapithæ, a deathless name;
 Nor sons of Pelops, nor Deucalion's race,
 Nor stout Pelasgians, Argos' honour'd grace.
 As now, divine Adonis, you appear
 Kind to our prayers, O bless the future year! 210
 As now propitious to our vows you prove,
 Return with meek benevolence and love.

Gorgo.

O, fam'd for knowledge in mysterious things!
 How sweet, Praxinoë, the damsel sings!
 Time calls me home to keep my husband kind,
 He's prone to anger if he has not din'd.
 Farewell, Adonis, lov'd and honour'd boy;
 O come propitious, and augment our joy.

NOTES ON IDYLLIUM XV.

Ver. 1.

Anne est intus Pamphilus? *Ter. And. Act 5. Sc. 2.*

Ver. 17.

Ni dictu fœdum, visuque, &c. *Juv. Sat. 14. 44.*

Suffer no lewdness, or indecent speech
 Th' apartment of the tender youth to reach.

Dryden.

Ver. 33. A drachma is seven-pence three-farthings.

Ver. 35. Hence we learn, says Casaubon, that the ladies formerly had an under garment, which was fastened to the breast by clasps: the ladies of fashion had clasps of gold;

Aurea purpuream subnectit fibula vestem.

Æn. B. 139.

A golden clasp her purple garment binds. *Pitt.*

Ver. 51.

—Move vero occys Te, nutrix. *Ter. Eun. Act 5.*

Ver. 67.

Di boni quid turbæ est! *Ter. Heaut. Act 2.*

Ver. 70.

Ac veluti ingentem formicæ, &c. *Æn. 4. 401.*

Ver. 78.

Post bellator equus. *Æn. 11. 98.*

Ver. 80.

Tollit se arrectum quadrupes. *Æn. 10. 892.*

Ver. 86. The Greek is *Ψυχρον οφιν*, a cold snake, thus Virgil,

Frigidus, ô pueri, fugite hinc latet anguis in herbâ.

And

Ecl. 3. 93.

Frigidus in partis cantando rumpitur anguis.

Ecl. 8. 71.

Ver. 97. Plautus seems to have imitated this,

Id quod in aurem rex reginæ dixerit

Sciunt; quod Juno fabulata est cum Jove.

Ver. 117. Thus Telemachus expresses his surprise to Pisistratus at the magnificent furniture of Menelaus's palace at Sparta;

View'st thou unmov'd, O ever honour'd most!

These prodigies of art and wondrous cost!

Above, beneath, around the palace shines

The sumless treasure of exhausted mines;

The spoils of elephants the roof inlay,

And fludded amber darts a golden ray:

Such, and not nobler, in the realms above

My wonder dictates is the dome of Jove.

Pope's Odyss. B. 4.

Ver. 124.

—Velut si

Re verâ pugnent, ferient, vitentque moventes

Arma viri.

Hor. B. 2. Sat. 7.

Ver. 127. At the feast of Adonis they always placed his image on a magnificent bed; thus Bion,

Εὖ ἀγαθὰ τίσεις κ. τ. λ.

Idyl. 1. 69.

—Behold the stately bed,

On which Adonis, now depriv'd of breath,

Seems sunk in slumbers, beauteous ev'n in death.

F. F.

Ver. 128.

—Flaventem prima lanugine malas.

Æn. B. 10. 324.

Ver. 134. A citizen of Alexandria finds fault with the Syracusan gossips for opening their mouths so wide when they speak; the good women are affronted, and tell him, that as they are Dorians, they will make use of the Doric dialect: hence we may observe, that the pronunciation of the Dorians was very coarse and broad, and sounded harsh in the ears of the politer Grecians.

Martyn's Pref. to Virgil.

Ver. 145. Here I entirely follow the ingenious interpretation of Heinſius.

Ver. 151. A celebrated singer.

Ver. 153. Golgos was a small but very ancient town in Cyprus, where Venus was worshipped. Catullus has translated this verse of Theocritus.

Quæque regis Golgos, quæque Idalium frondosum.
De Nup. Pl. & Thet.

Ver. 154. Eryx was a mountain in Sicily.

Ver. 162. Ovid has imitated this passage; speaking of the deification of Æneas, he says,

—Ambrosiâ cum dulci nectare mistâ
Contigit, os; fecitque Deum. *Met. B. 14. 606.*

Ver. 164. This is similar to the beginning of Sappho's first ode,

Ποικιλοθρον' κ. τ. λ.

Venus, bright goddess of the skies,
To whom unnumber'd temples rise.

R. F.

Ver. 169. The Greek is *απαλοι καπποι*, *soft gardens*; Archbishop Potter observes, that at the feast of Adonis, there were carried shells filled with earth, in which grew several sorts of herbs, especially lettuces, in memory that Adonis was laid out by Venus on a bed of lettuces: these were called *καπποι*, *gardens*; whence *Αδωνιδος καππος* are proverbially applied to things unfruitful, or fading, because those herbs were only sown so long before the festival, as to sprout forth, and be green at that time, and afterwards cast in the water. See *Antiquit. vol. I.*

Nam quotcunque ferunt campi, quos Thessala
magnis

Montibus ora creat. *Catull. & de Pel. & Thet.*

Ver. 176. Thus Bion, *Ἀμφὶ δὲ μὲν κ. τ. λ.*

Epit. Adon.

Surrounding Cupids heave their breasts with sighs.

And Moschus,

The little loves, lamenting at his doom,
Strike their fair breasts, and weep around his tomb.

F. F.

But as Longepierre observes, images of Cupids were never omitted at this festival. Ovid seems to have had this in view when he wrote,

Ecce puer Veneris fert everfamque pharetram,
Et fractos arcus, et sine luce facem.

Aspice demissis ut eat miserabilis alis,

Pectoraque infestâ tundit aperta manu.

Excipiunt lacrymas sparsi per colla capilli,

Oraque singultu concutiente sonant.

Amor. B. 3 El. 2.

See Venus' son his torch extinguish'd brings,

His quiver all revers'd, and broke his bow!

See, pensive how he droops with flagging
wings,

And strikes his bared bosom many a blow!

Loose and neglected, scatter'd o'er his neck,

His golden locks drink many a falling tear;

What piteous sobs, as if his heart would break,

Shake his swol'n cheek? Ah, sorrow too
severe!

Ver. 178. Thus Bion, speaking likewise of Cupid,

τα καὶ τὰ τὸν ἔρωτα μεταλμμενον,

How here and there he skipt, and hopt from tree
to tree.

Ver. 181. Virgil has an image of this sort,
Intextusque puer——quem præpes ab Idâ, &c.
Æn. B. 5.

There royal Ganymede, inwrought with art,
O'er hills and forests hunts the bounding hart;
The beauteous youth, all wondrous to behold:
Pants in the moving threads, and lives in gold:
From towering Ida shoots the bird of Jove,
And bears him struggling through the clouds
above;

With out-stretch'd hands his hoary guardians cry,
And the loud hounds spring furious at the sky.

Pitt.

I transcribed this fine passage from Mr. Pitt's translation of Virgil, that I might lay before the reader Mr. Warton's note upon it. "The description of this beautiful piece of tapestry is extremely picturesque: the circumstances of the boy's panting, the old men lifting up their hands, and above all, the dogs looking up and barking after him, are painted in the liveliest manner imaginable. There is a very fine painting by Michael Angelo on this subject, who has exactly copied Virgil's description, except that he has omitted the circumstance of the dogs, which Spenser has likewise, in describing this story, as part of the tapestry with which the house of Busyrane was adorned."

—When as the Trojan boy so faire
He snatch'd from Ida hill, and with him bare,
Wondrous delight it was, there to behold,
How the rude shepherds after him did stare,
Trembling through fear lest he down fallen should,
And often to him calling to take surer holde.

F. Q. B. 3. c. II.

Ver. 185. Thus Virgil,
Quamvis Milesia magno
Vellera mutantur Tyrios incocta rubores.

Geor. B. 3. 306.

Ver. 186. See Idyl. v. ver. 58, and the note.

Ver. 210.

Sis bonus ô felixque tuis. *Ecl. 5. 65.*

Sis felix, nostrumque leves quæcunque laborem.

Æn. I. 330.

Ver. 212. This superstitious mystery, of lamenting for Adonis, may be thus explained: Adonis was the sun; the upper hemisphere of the earth, or that which we think so, was anciently called Venus, the under Proserpine, therefore; when the sun was in the six inferior signs, they said, he was with Proserpine; when he was in the six superior, with Venus. By the boar that slew Adonis, they understood Winter; for they made the boar, not unaptly, the emblem of that rigid season. Or, by Adonis, they meant the fruits of the earth, which are for one while buried, but at length appear flourishing to the sight; when, therefore, the seed was thrown into the ground, they said, Adonis was gone to Proserpine; but when it sprouted up, they said, he had revisited the light and Venus. Hence probably it was

that they sowed corn, and made gardens for Adonis.

Univ. Hist. vol. ii.

Milton has some fine melodious lines on this subject.

Thammuz came next behind,
Whose annual wound in Lebanon allur'd
The Syrian damsels to lament his fate
In amorous ditties all a summer's day,
While smooth Adonis, from his native rock,
Ran purple to the sea, suppos'd with blood
Of Thammuz yearly wounded.

Par. Lost. B. 1.

Give me leave here to insert the account given by the late Mr. Maundrel of this ancient piece of worship, and probably the first occasion of such a superstition. "We had the fortune to see what may be supposed to be the occasion of that opinion which Lucian relates, viz. That this stream (the river Adonis) at certain seasons of the year, especially about the feast of Adonis, is of a bloody colour; which the Heathens looked upon as proceeding from a kind of sympathy in

"the river for the death of Adonis, who was killed by a wild boar in the mountains, out of which this stream rises. Something like this we saw actually come to pass; for the water was stained to a surprising redness; and as we observed in travelling, had discoloured the sea a great way into a reddish hue, occasioned, doubtless, by a sort of minium or red earth, washed into the river by the violence of the rain, and not by any stain from the blood of Adonis."

The prophet Ezekial saw the women at Jerusalem lamenting Tammuz, ch. viii ver. 14. "He brought me to the door of the gate of the Lord's house which was towards the north, and behold there sat women weeping for Tammuz."

Ver. 216.

Thus Horace,
Impransus non qui oivem dignosceret hoste.

B. 1. Ep. 15.

With hunger keen,
On friends and foes he vented his chagrin.

Duncombe.

IDYLLIUM XVI.

THE GRACES, OR HIERO.

THE ARGUMENT.

THIS Idyllium is addressed to Hiero, the last tyrant of Sicily. Theocritus having before celebrated this prince, without being recompensed for his trouble, composed this poem, in which he complains of the ingratitude of princes to poets, who can alone render their actions immortal. He observes that not only the Lycian and Trojan heroes, but even Ulysses himself, would have been buried in oblivion, if their fame had not been celebrated by Homer.

It fits the muse's tongue, the poet's pen,
To praise th' immortal gods, and famous men:
The nine are deities and gods resound,
But bards are men, and sing of men renown'd.
Yet who that lives beneath heav'n's cope regards
The incense, or the sacrifice of bards?
Who opens now the hospitable door,
And makes the muses richer than before?
Barefoot, unpaid, indignant they return,
Reproach my zeal, and unavailing mourn; 10
To the dark chest their labours they consign,
And on cold knees the languid head recline;
For none, alas! the race of men among,
Receives the bard, or hears his lofty song;
Men thirst not now for glory as of old,
But all their passions are confin'd to gold;
To their mean breast their thrifty hands they
join,
And scarce will give the canker of their coin.
Hint at a recompense, they thus begin;
'Close is my shirt, but closer is my skin: 20
'My own I'll keep; and may the gods reward,
'And crown with honours every living bard.
'Homer's the prince of poets—sure 'tis sense,
'To read the noblest works at no expence.'

What profit, wretched churls, can gold afford,
Which thus in coffers ye abundant hoard?
The wise a different use for riches know,
And love on men of genius to bestow;
Part on themselves, to others part they spare,
And some their friends, and some their kinsmen
share: 30
To every man their bounty shines display'd,
And yet the offerings of the gods are paid.
With prudent hospitality they spend,
And kindly greeting speed the parting friend.
But most the muses' sons these honours claim,
Whose deathless lays immortalize their fame;
Then will they never rove, inglorious shades,
(Like those who living labour'd with their spades)
Along cold Acheron's infernal river,
And mourn hereditary want for ever. 40
Aleua and Antiochus we're told,
Reign'd rich, and mighty potentates of old,
And to a thousand slaves, their menial train,
In lots distributed the monthly grain:
In Scopas' fields unnumber'd heifers fed, [head:
And bulls that proudly toss'd the rough-horn'd
For good Creondas' use the shepherd-swains
Fed flocks in myriads on Cranonian plains:

These after death their sweet enjoyments lost,
 When in hell's spacious barge their ghosts had crost
 Th' infernal river, and unhonour'd all, 51
 To other heirs their vast possessions fall;
 And these among the miserable train
 Had long in darkness and oblivion lain,
 Had not the Cean muse extoll'd their name,
 Awak'd his sounding lyre, and giv'n them death-
 less fame [meed,
 Verse crowns the race-horse with fair honour's
 That in the field has signaliz'd his speed.
 Who had the Lycian thieves, and Trojan known,
 Or Cycnus, delicate with milk-white crown, 60
 Had not the BARD delighted to rehearse
 Their bold achievements in heroic verse?
 Ulysses ne'er had endless glory gain'd,
 Though for ten tedious summers he sustain'd
 Unnumber'd toils, while he observant stray'd
 From clime to clime, and men and states survey'd;
 Ev'n though he 'scap'd the Cyclops' gloomy cell,
 And quick descended to the realms of hell:
 Philætiæ and Eumæus with the dead
 Had lain as nameless as the beasts they fed; 70
 And brave Laertes with his parting breath
 Had dy'd, but Homer snatch'd their names from
 death.

All human fame is by the muses spread,
 And heirs consume the riches of the dead.
 Yet 'tis an easier task, when tempests roar,
 To count the waves that ceaseless lash the shore:
 'Tis easier far to bleach the Ethiop soul,
 Than turn the tenor of the miser's soul.
 Curse on the wretch, that thus augments his store!
 And much possessing, may he wish for more! 80
 I still prefer fair fame, with better sense,
 And, more than riches, mens benevolence.
 And yet, alas! what guardian shall I choose,
 What princely chief to patronize my muse?
 In perilous paths the race of poets rove,
 Dubious their fate, without the aid of Jove.
 But still the sun rolls glorious in the skies;
 And future victors in the race will rise:

The chief will rise, who shall my numbers claim,
 Equal to great Eacides in fame, 90
 Equal to Ajax on the Phrygian plains,
 Where Illus' tomb near Simois' streams remains.
 The bold Phœnicians, sons of Libya far,
 Shrink at the rumour of approaching war:
 For lo! their spears the Syracusians wield,
 And bend the pliant fallow to a shield:
 These Hiero leads, superior to the rest,
 And on his helmet nods the horse-hair crest.
 O Jupiter, and thou Minerva chaste,
 And Proserpine, to our protection haste, 100
 With Ceres thou delightest to partake
 Those fair built walls by Lysimelia's lake:
 Oh, may the fates, in pity to our woes,
 On the Sardonian main disperse our foes!
 And let the few that reach their country tell
 Their wives and children how their fathers fell!
 And let the natives dwell in peace and rest
 In all the cities which the foes possess!
 May swains, along the pastures, fat and fair,
 In flocks of thousands tend their bleating care! 110
 And lowing herds, returning to the stall,
 Wind o'er the plain, as slow as foot can fall!
 May the crops flourish, and with feeble voice,
 On leafy shrubs the grasshopper rejoice!
 While spiders stretch their webs along the shore,
 And war's dread name be never mention'd more!
 May godlike poets, in undying strain,
 Bear Hiero's praise beyond the Scythian main,
 Beyond the walls, with black bitumen made,
 Where proud Semiramis the sceptre sway'd. 120
 I am but one; Jove's daughters fair regard
 With sweetest favour many a living bard;
 These shall Sicilian Arethusa sing,
 The happy people, and the valiant king.
 Ye Graces Eteoclean, who reside
 Where Minyas, curst by Thebans, rolls his tide,
 Unask'd I'll rest; yet not, if call'd, refuse
 With you to bring my sweet associate muse:
 Without you what to men can pleasures give?
 Oh! may I ever with the Graces live! 130

NOTES ON IDYLLIUM XVI.

This little piece abounds with so many beauties and graces, that it is with great propriety styled *Xapris*, or, the Graces. Hiero, the subject of this poem, was the son of Hierocles, one of the descendants of Gelon the first king of Syracuse. Hiero succeeded to the throne of Syracuse 265 years before Christ. He was remarkable for his constant attachment to, and generous friendship for the Romans.

Ver. 2 In like manner Horace says,
*Quem virum, aut heroa, lyrâ, vel acri
 Tibiâ sumes celebrare, Clio?
 Quem Deum?* B. I. Ode 12.

What man, what hero shall inspire,
 My Clio's life with sprightly lays?

Or will she choose to strike the lyre
 Devoted to the gods in hymns of praise?

Ver. 5.

*Quis tibi Mæcenas? quis nunc erit aut Proculus,
 Aut Fabius? quis Cotta iterum? quis Lentulus al-
 ter?* Juv. Sat. 7. 94.

All these great men were celebrated for their generosity and liberality to the Muses.

Ver. 7.

Nemo cibo, nemo hospitio, tectoque juvabit.

Juv. Sat. 3. 211.

Through the wide world a wretched vagrant roam,
 For where can starving merit find a home?
 In vain your mournful narrative disclose,
 While all neglect, and most insult your woes.

S. Johnson

Ver. 9. The protection of princes is the greatest incentive to the diligence of poets, and often of more avail than the inspiration of Apollo, "Et spes & ratio studiorum in Cæsare tantum." Juvenal says,

Tædia tunc subeunt animos, tunc seque, suamque
Terpsichoren odit facunda & nuda senectus. *Sat. 7.*

Last, crush'd by age, in poverty ye pine,
And sighing curse the unavailing nine.

Bur. Greene.

Ver. 17. Illiberal persons were said to hold their hands in their bosoms.

Ver. 20. The Greek is ἀπομακρύνει τὴν γυνὴν ἡ γυνή, My leg is further off than my knee. I would not recollect an English proverb more correspondent to the original than what I have substituted; the Romans have one similar,

Tunica pallio proprior.

Plaut.

My waistcoat is nearer than my cloak.

Ver. 23.

Priores Mæonius tenet
Sedes Homerus.

Hor. B. 4. Ode 9.

Ver. 25.

Nullus argento color est, avaris
Abditæ terris inimice lamnæ
Crispe Sallusti, nisi temperato

Splendeat usu. *Hor. B. 2. Ode 2.*

My Sallust's generous thoughts disdain
The sordid miser's hoarded gain;
Since silver with no lustre glows,
But what a moderate use bestows.

Duncombe.

Ver. 28. Horace has something similar;
Cur eget indignus quisquam te divete? &c.

B. 2. S. 2.

Then, like the sun let bounty spread her ray,
And shine that superfluity away.
Oh, impudence of wealth! with all thy store,
How dar'st thou let one worthy man be poor?

Pope.

Ver. 34. Here are some admirable precepts for social life; some of them seem to be borrowed from Homer's *Odyssey*, B. 15. which I shall give in Mr. Pope's version.

True friendship's laws are by this rule exprest,
Welcome the coming, speed the parting guest.

Which he has adopted in his imitation of the 2d satire of the 2d book of Horace.

Ver. 38. The sense of the original is, "Like some ditcher, who by labouring hard with his spade, has rendered his hands callous."

Ver. 40.

Nunc et pauperiem & duros perferre labores.

Æn. B. 6. 636.

Ver. 41. Antiochus was king of Syria: the Alenadæ and Scopadæ reigned in Thessaly and the neighbouring islands.

Ver. 44. Anciently the masters of families used to distribute to their slaves, every month, such a measure of corn as would keep them the month, which they called *Demensum*; thus Terence,

Quod ille unciatim vix de demenso suo,
Suam defraudans genium, compar sit miser.

Plor. Act 1. Sc. 1.

Ver. 48. Cranon was a city of Thessaly.

Ver. 50.

Et ferruginâ subvectat corpora cymbâ.

Æn. 6. 304.

Ver. 52.

Linquenda tellus, et domus, et placens

Uxor— *Hor. B. 2. Ode 14.*

Ver. 53.

—Omnes illachrymabiles Urgentur, &c.

Hor. B. 4. Ode 9.

Vain was the chief's, the sage's pride!

They had no poet, and they dy'd.

In vain they schem'd, in vain they bled!

They had no poet, and are dead.

Pope.

Ver. 53. Simonides, a native of Céos, an island in the *Ægæan Sea*. He was a moving and a passionate writer, and succeeded chiefly in elegies: he gained as much honour as he gave by his poems on the four celebrated battles at Marathon, Thermopylæ, Salamis and Plataea.

Ver. 59. These were Sarpedon and Glaucus: Cycnus, the son of Neptune, was slain by Achilles, and turned into a swan: Hesiod, according to the Scholiast, describes Cycnus with a white head.

Ver. 65. Thus Horace,

—Multorum providus urbes,
Et mores hominum inspexit, latumque per æquor,
Dum sibi, dum sociis reditum parat, aspera multa
Pertulit. *B. 1. Ep. 2.*

Ver. 69. It is here worth observation, that after the enumeration of these great heroes, Theocritus does not forget his pastoral capacity, or omit to mention the swineherd Eumæus, and the neatherd Philætius. See *Homer's Odyssey*.

Ver. 73.

Dignum laude virum musam vetat mori.

Hor. B. 4. Ode 8.

Ver. 74.

—Extractis in altum Divitiis potiatur hæres.

Hor. B. 2. Ode 3.

Ver. 75. Virgil seems to have imitated this passage:

Quem qui scire velit, &c. *Geor. B. 2. 105.*
Or tell the billows, as they beat the shores,
When all th' Ionian sea with raging Boreas roars.

Warton.

Ver. 88. Thus Virgil:

Alter erit Tiphys, et altera quæ vebat Argo
Delectas heroas: erunt etiam altera bella,
Atque iterum ad Trojan magnus mittetur Achilles.

4.

Another Tiphys shall new seas explore,
Another Argos land the chiefs on shore;
New wars the bleeding nations shall destroy,
And great Achilles find a second Troy.

Dryd. and War.

Ver. 92. Homer has,

—Διὸς παρὰ σήματι Ἴλῳ. *Iliad, B. 11. 415.*
From ancient Ilus' ruin'd monument.

Pope.

Ver. 96. Thus Virgil,
—Flectuntque salignas
Umbonum crates.

Æn. B. 7. 632.

And for the shield the pliant fallow bend. *Pitt.*

Pindar seems to make an allusion to this circumstance, in his first Pythian Ode, which I shall give in the excellent translation of the late Gilbert West, Esq.

And do thou aid Sicilia's hoary lord,
To form and rule his son's obedient mind;
And still in golden days of sweet accord,
And mutual peace the friendly people bind,
Then grant, O son of Saturn, grant my pray'r!
The bold Phœnician on his shore detain, &c.

Ver. 98.
—Crista hirsutus equina. *Æn. 10. 869.*

High on his head the crested helm he wore. *Pitt.*

Ver. 99. *Αἰ γὰρ, Ζην κυδιστὶ πατέρ κ. τ. λ.*
This verse is an imitation of that of Homer;

Αἰ γὰρ Ζεὺ τὶ πατέρ καὶ Ἀθηναίη καὶ Ἀπόλλων.
Sic pater ille deum faciat, sic altus Apollo.
Virg. Æn. 10. 875.

So may great Jove, and he, the god of light. *Pitt.*

Ver. 100. These deities were worshipped by the Syracusians.

Ver. 102. A lake not far from Syracuse.

Ver. 104. These were the Carthaginians, who used frequently to invade Sicily.

Ver. 105. The Greek is *αριθμῶτος*, numerabiles, *easy to be told*, which is elegantly used for a *few*: Horace has the same expression, "Quo
" sane populus numerabilis, utpote parvus.

Art. Poet. 206.

Ver. 110. Thus the Psalmist, "That our flocks
" may bring forth thousands and ten thousands in
" our streets;" that is, in their pastures or walks;
or, may they increase so as not only to fill our
pastures, but the streets of our villages.

Ver. 114.
Sole sub ardenti resonant arbuta cicadis.

Virg. Ecl. 2.

Ver. 115.
In foribus laxos suspendit aranea casset.

Virg. Georg. 4. 247.

Ver. 119. Thus Ovid;
—Ubi dicitur altam
Cocclibus muris cinxisse Semiramis arbem.

Met. 4. 57.

—Where proud Semiramis, for state,
Rais'd walls of brick magnificently great. *Eusden.*

Ver. 125. By the Graces are meant the Muses: Eteocles was the elder son of Oedippus by Jocasta: he is said to have first sacrificed to the Muses at Orchomenos: whence they are called the Eteoclean Deities, or Graces. Homer mentions the river Minyas. *Iliad, B. 11.*

Soft Minyas rolls his waters to the main. *Pope.*

Ver. 130. Milton seems to allude to this,
These delights if thou canst give,
Mirth, with thee I mean to live.

There is a beautiful passage in my friend Mr. William Whitehead's excellent poem called, "The
" Danger of Writing Verse," which I shall beg leave
to transcribe, as the subject is the same with this
Idyllium, and the last line refers to our next poem,
"The Encomium of Ptolemy:" complaining that
the great showed no regard to the Muses, he says,

Yet let ev'n these be taught in mystic rhyme,
'Tis verse alone arrests the wings of time.
Fast to the thread of life annex'd by fame,
A sculptur'd medal bears each human name:
O'er Lethe's streams the fatal threads depend,
The glittering medal trembles as they bend;
Close but the shears, when chance or nature calls,
The birds of rumour catch it as it falls;
A while from bill to bill the trifle's tost,
The waves receive it, and 'tis ever lost.

But should the meanest swan that cuts the stream,
Consign'd to Phœbus, catch the favour'd name,
Safe in her mouth she bears the sacred prize,
To where bright Fame's eternal altars rise:
'Tis there the Muse's friends true laurels wear,
There * Egypt's monarch reigns, and great Au-
gustus there.

* *Ptolemy Philadelphus.*

IDYLLIUM XVII.

PTOLEMY.

THE ARGUMENT.

THEOCRITUS rises above his pastoral style when he celebrates the praises of Ptolemy Philadelphus, the son of Ptolemy Lagus and Berenice: he derives his race from Hercules; enumerates his many cities; describes his immense treasures, and though he extols him for his military preparations, he commends his love of peace: but above all he commemorates his royal munificence to the sons of the Muses.

WITH Jove begin, ye nine, and end with Jove,
Whene'er ye praise the greatest god above:

But if of noblest men the song ye cast,
Let Ptolemy be first, and midst, and last.

Heroes of old, from demigods that sprung,
 Chose lofty poets who their actions sung:
 Well skill'd, I tune to Ptolemy my reed;
 Hymns are of gods above the honour'd meed.
 To Ida, when the woodman winds his way,
 Where verdant pines their towering tops display,
 Doubtful he stands, with undetermin'd look,
 Where first to deal the meditated stroke:
 And where shall I commence? new themes arise,
 Deeds that exalt his glory to the skies.
 If from his fathers we commence the plan,
 Lagus, how great, how excellent a man!
 Who to no earthly potentate would yield
 For wisdom at the board, or valour in the field:
 Him with the gods Jove equals, and has given
 A golden palace in the realms of heaven; 20
 Near him sits Alexander, wise and great,
 The fell destroyer of the Persian state.
 Against them, thron'd in adamant, in view
 Alcides, who the Cretan monster flew,
 Reclines, and, as with gods the feast he shares,
 Glories to meet his own descendant heirs,
 From age and pain's impediments repriev'd,
 And in the rank of deities receiv'd.
 For in his line are both these heroes class'd,
 And both deriv'd from Hercules the last. 30
 Thence, when the nectar'd bowl his love inspires,
 And to the blooming Hebe he retires,
 To this his bow and quiver he allots,
 To that his iron club, distinct with knots;
 Thus Jove's great son is by his offspring led
 To silver-footed Hebe's rosy bed.

How Berenice shone! her parents pride;
 Virtue her aim, and wisdom was her guide:
 Sure Venus with light touch her bosom prest,
 Infusing in her soft ambrosial breast 40
 Pure, constant love: hence faithful records tell,
 No monarch ever lov'd his queen so well;
 No queen with such undying passion burn'd,
 For more than equal fondness she return'd.
 Whene'er to love the chief his mind unbends,
 To his son's care the kingdom he commends.
 Unfaithful wives, dissatisfied at home,
 Let their wild thoughts on joys forbidden roam:
 Their births are known, yet of a numerous race,
 None shows the features of the father's face. 50
 Venus, than all the goddesses more fair,
 The lovely Berenice was thy care;
 To thee 'twas owing, gentle, kind and good,
 She past not Acheron's woe-working flood.
 Thou caught'st her e'er she went where spectres
 dwell,
 Or Charon, the grim ferryman of hell;
 And in thy temple plac'd the royal fair,
 Thine own high honour's privilege to share.
 Thence gentle love in mortals she inspires,
 And soft solitudes, and sweet desires. 60
 The fair Deipyle to Tydeus bare
 Stern Diomed, the thunderbolt of war:
 And Thetis, goddess of the azure wave,
 To Peleus brought Achilles, bold and brave:
 But Berenice nobler praise hath won,
 Who bore great Ptolemy as great a son:
 And sea-girt Cos receiv'd thee soon as born,
 When first thine eyes beheld the radiant morn.

For there thy mother to Lucina pray'd,
 Who sends, to those that suffer child-bed, aid. 70
 She came, and friendly to the genial bed,
 A placid, sweet tranquillity she shed
 O'er all her limbs: and thus serene and mild,
 Like his lov'd sire, was born the lovely child.
 Cos saw, and fondling in her arms the boy,
 Thus spoke transported, with the voice of joy:
 "Quick rise to light, auspicious babe be born!
 "And me with equal dignity adorn
 "As Phœbus Delos;—on fam'd Triop's brow,
 "And on the neighbouring Dorian race bestow 80
 "Just honours, and as favourably smile, [isle."
 "As the god views with joy Rhenæa's fertile
 The island spoke; and thrice the bird of Jove
 His pinions clang'd, resounding from above;
 Jove's omen thunder'd from his eagle's wings;
 Jove loves and honours venerable kings.
 But whom in infancy his care befriends,
 Him power, and wealth, and happiness attends:
 He rules belov'd unbounded tracts of land,
 And various oceans roll at his command. 90
 Unnumber'd nations view their happy plains,
 Fresh fertiliz'd by Jove's prolific rains:
 But no, like Egypt, can such plenty boast,
 When genial Nile o'erflows the humid coast:
 No realm for numerous cities thus renown'd,
 Where arts and fam'd artificers abound:
 Three times ten thousand towery towns obey
 Illustrious Ptolemy's pacific sway.
 He o'er Phœnicia, Syria, Libya reigns,
 Arabian deserts, Ethiopian plains, 100
 Pamphylians, and Cilicians bold in war,
 And Carians brave, and Lycians fam'd afar;
 The distant Cyclades confess his reign,
 Whose fleets assert the empire of the main;
 So far his ships their conquering flags display,
 Him seas, and lands, and sounding floods obey.
 Horsemen and spearmen guard the monarch round,
 Their arms resplendent send a brazen sound;
 Such tributes daily aggrandize his store,
 No king e'er own'd such boundless wealth be-
 fore. 110
 His peaceful subjects ply at ease their toil,
 No foes invade the fertile banks of Nile,
 Nor pitch their camps along the peaceful plains
 With war to terrify the village swains:
 No pirates haunt the shore in quest of prey,
 Nor bear by stealth the lowing herds away;
 For graceful Ptolemy renown'd in arms,
 Guards his extended plains from hostile harms,
 Like a wise king, the conquests of his sire
 He knows to keep, and new ones to acquire. 120
 And yet he hoards not up his useless store,
 Like ants still labouring, still amassing more;
 The holy shrines and temples are his care,
 For they the first-fruits of his favour share:
 To mighty kings his bounties he extends,
 To states confederate, and illustrious friends.
 No bard at Bacchus' festival appears,
 Whose lyre has power to charm the ravish'd ears,
 But he bright honours and rewards imparts,
 Due to his merits, equal to his arts. 130
 And poets hence, for deathless song renown'd,
 The generous fame of Ptolemy resound.

At what more glorious can the wealthy aim,
 Than thus to purchase fair and lasting fame?
 The great Atridae this alone enjoy,
 While all the wealth and spoil of plunder'd
 Troy,
 That scap'd the raging flame, or whelming
 wave,
 Lies buried in oblivion's greedy grave.
 Close trode great Ptolemy, at virtue's call,
 His father's footsteps, but surpass them all. 140
 He rear'd the fragrant temple, and the shrine,
 And to his parents offer'd rites divine:
 Whose forms in gold and ivory are design'd,
 And worshipp'd as the guardians of mankind.
 There oft as circling moons divide the year,
 On the red altar bleeds the fatten'd steer;

His hands the thighs for holy flames divide,
 Fair blooms the lov'd Arsinoë at his side;
 Than whom no nobler queen of mortal race,
 A greater prince detains in fond embrace; 150
 And, as kind nature the soft tie approves,
 Dearly the brother and the husband loves.
 Such are the nuptials in the blest abodes,
 And such the union of immortal gods:
 Iris, who still retains her virgin bloom,
 Whose radiant fingers breathe divine perfume,
 For Jove prepares the bed, where at his side
 Fair Juno sleeps, his sister and his bride.
 Hail, noble Ptolemy! illustrious king!
 Thee peer to mighty demigods I'll sing; 160
 And future ages shall the verse approve:
 Hail! and fair virtue only ask of Jove.

NOTES ON IDYLLIUM XVII.

The common title of this Idyllium is "The Encomium of Ptolemy." Heinſius makes no doubt but that the inscription should be simply "Ptolemy:" for Theocritus had written two poems, one was called "Ptolemy," the other "Berenice;" the first celebrated the virtues of that illustrious monarch, the second those of his royal mother, who at that time was enrolled among the gods. For Ptolemy's character, see Idyllium XIV. and the note on verse 82.

Ver. 1. The Greek is, *Εκ Διὸς ἀρχώμεσθα*, which are the very words with which Aratus begins his poem called *Phænomena*: as Theocritus and Aratus were intimate friends, and flourished nearly at the same time, though the Sicilian bard was older, it is hard to say which borrowed from the other: Virgil has,

A Jove principium, Musæ. *Ecl.* 3.
 A te principium, tibi desinet. *Ecl.* 8.
 With thee began my songs, with thee shall end. *Wart.*

Ver. 4. Milton has,
 On earth join all ye creatures to extol
 Him first, him last, him midst, and without end.
 Milton has greatly improved this by adding, "and without end;" as he is celebrating God, and Theocritus only a man,

Ver. 8.
 Carmine Dī superi placanter, carmine manes. *Hor. B. 2. Ep. 1.*

Verse can the gods of heaven and hell appease.

Ver. 16. Ptolemy Lagus was one of Alexander's captains, who upon that monarch's death, and the division of his empire, had Egypt, Libya, and that part of Arabia which borders upon Egypt, allotted to his share: but at the time of his death, he held several other countries, which are enumerated below. See ver. 97, &c.

Ver. 21.
 Quos inter Augustus recumbens. *Hor. B. 3. O. 3.*
 TRANS. II.

—*wife, &c.*] I would choose to read, *αιολομητῆς*, *varium consilium habens*, and not *αιολομητρῆς* with Casaubon.

Ver. 24.
 Tu Cressia mactas Prodigia. *Æn.* 8. 294.

You slew the bull whose rage dispeopled Crete. *Pitt.*

Ver. 25.
 —Sic Jovis interest
 Optatis epulis impiger Hercules. *Hor. B. 4. Ode 8.*

Ver. 26. The Greek is, *ἀθάνατοι δὲ καλῶνται θεοὶ νεποδὶς γίγαωτες*, which is rendered, "immortales vero vocantur Dii, sine pedum usu facti;" and being formed without feet they are called immortal gods. It is amazing how a clear and elegant passage should be corrupted into such nonsense: Heinſius undoubtedly reads right; *θεοὶ νεποδὶς γίγαωτες*, that is, *αὐτοὶ νεποδοὶ ὄντες*, "those that were his nephews;" he rejoices that his nephews are called (or are become) immortal.

Ver. 30.
 Julius, a magno demissum nomen Jūlo. *Æn.* 1. 288.
 Ver. 31.

Purpureo bibit ore nectar. *Hor. B. 3. O. 3.*

Ver. 33. Thus Ovid. *Met. B. 3. 165.*

—Nympharum tradidit uni
 Armigeræ jaculum, pharetramque arcusque
 retentos.

Ver. 45. Ptolemy made his son Philadelphus partner with him in the empire.

Ver. 49. The Greek is, *ῥῆιδαι δὲ γοναί*, which is wrong translated, "faciles quidem partus sunt," their births are easy; whereas it should be rendered, as Casaubon rightly observes, "their births are easily to be judged of," viz. that they are adulterous; the latter part of the verse explains the former, *ῥῆιδαι δὲ γοναί, σίκα δ' ἐποτ' εἰκοσιτα τὰτρί*, "their births are easy to be judged, for the children do not resemble their father." The ancients imagined those children not to be legitimate who

were unlike their parents; and therefore Hesiod reckons it among the felicities which attend good men, that

The wives bear sons resembling their own fires.

Τικτεσιν δὲ γυναῖκες ὅμοια τέκνα γονεσσι.

Ver. 233.

Ver. 56.

Portitor has horrendus aquas at flumina servat

Terribili squalore Charon. *Æu B. 6. 298*

Ver. 73. Virgil has something similar.

At Venus Ascanio placidam per membra quietem
Irrigat, &c. *Æn. B. 1. 695.*

Mean time the goddess on Ascanius throws

A balmy slumber, and a sweet repose;

Lull'd in her lap to rest, &c. *Pitt.*

Ver. 75. The personifying of this island is sublime and noble, and bear a great resemblance to that passage in Isaiah; "Break forth into singing, ye mountains! O forest, and every tree therein!" Virgil has,

Ipsi latitiâ coces ad sidera jactant

Intonsi montes. *Ecl. 5. 62.*

Ver 79. An island in the Ægean sea, where Latona was delivered of Apollo and Diana; it was once a floating island, but fixed by Apollo.

Quam pius Arcitenens, &c. *Virg. Æn. 3. 75.*

Which Phœbus fix'd; for once she wander'd round

The shores, and floated on the vast profound;

But now, unmov'd the peopled region braves

The roaring whirlwinds, and the furious waves.

Pitt.

Ver. 79. The Scholiast. says Triops was a king of Cos, from whom the promontory near Cnidus took its denomination.

Ver. 82. An island separated from Delos by a narrow strait about three times as big as Delos.

Ver. 86. Thus Callimachus, *Εκ δὲ Διὸς βασιλῆς* "kings are from Jupiter;" which Virgil has translated, "Ab Jove sunt reges;" but they all seem to have copied after Hesiod. Theog. ver. 96.

*Εκ δὲ Διὸς βασιλῆς. Ο δ' ὀβελίος οὐτινα Μῦσαι
Φιμῶνται.*

—Kings are deriv'd from Jove;
And blest the mortal whom the muses love.

Ver. 94. The Nile is the greatest wonder of Egypt: as it seldom rains there, this river, which waters the whole country by its regular inundations, supplies that defect, by bringing, as a yearly tribute, the rains of the other countries. To multiply so beneficent a river, Egypt was cut into numberless canals, of a length and breadth proportioned to the different situation and wants of the lands; the Nile brought fertility every where with its salutary streams; it united cities one with another, and the Mediterranean with the Red-sea; maintained trade at home and abroad, and fortified the kingdom against the enemy; so that it was at once the nourisher and pro-

tect of Egypt. There cannot be a more delightful prospect than the Nile affords at two seasons of the year; for if you ascend some mountain, or one of the great pyramids of Grand Cairo about the month, of July and August, you behold a vast sea, in which a prodigious number of towns, villages, turrets, and spires appear, like the isles in the Ægean sea, with causeways leading from place to place, intermixed with groves and fruit-trees, whose tops only are visible; this view is terminated by mountains and woods, which, at a distance, form the most agreeable perspective that can be imagined. But in the winter, that is, in the months of January and February, the whole country is like one continued scene of beautiful meadows, enamelled with all kinds of flowers: you see on every side herds and flocks scattered over the plain, with infinite numbers of husbandmen and gardeners: the air is then embalmed by the great quantity of blossoms on the orange, lemon, and other trees; and is so pure, that a wholesomer and more agreeable is not to be found in the world: so that nature, which is then as it were dead in so many other climates, seems to revive only for the sake of so delightful an abode.

Rollin's Ant. Hist.

Ver. 97. The original is extremely perplexing; literally translated it would run thus,

He has three hundred cities,	-	-	-	300
Add three thousand	-	-	-	3000
To thirty thousand,	-	-	-	30000
Twice three	-	-	-	6
And three times eleven,	-	-	-	33

33339

I have made it the round number of thirty thousand. We meet with an embarrassed method of numeration in the 14th Idyl. ver. 55.

Ver. 104. Waller has a passage resembling this,

Where'er thy navy spreads her canvass wings,
Homage to thee, and peace to all she brings.

Which Creech stuck in his translation. Ptolemy intended to engross the whole trade of the east and west to himself, and therefore fitted out two great fleets to protect his trading subjects: one of these he kept in the Red sea, the other in the Mediterranean: the latter was very numerous, and had several ships of an extraordinary size; two of them in particular had thirty oars on a side, one of twenty, four of fourteen, two of twelve, fourteen of eleven, thirty of nine, thirty-seven of seven, five of six, seventeen of five, and besides these, an incredible number of vessels with four and three oars on a side. By this means, the whole trade being fixed at Alexandria, that place became the chief mart of all the traffic that was carried on between the east and the west, and continued to be the greatest emporium in the world above seventeen hundred years, till another passage was found out by the Cape of Good Hope: but as the road to the Red sea lay cross the deserts, where no water could be had, nor any convenience of towns or houses for lodging

passengers, Ptolemy, to remedy both these evils, opened a canal along the great road, into which he conveyed the water of the Nile, and built on it houses at proper distances; so that passengers found every night convenient lodgings, and necessary refreshments for themselves, and their beasts of burden.

Univ. Hist. vol. ix. 8vo. p. 383.

Ver. 111. The amiable picture Theocritus here gives us of the happiness the Egyptians enjoyed under the mild administration of Ptolemy, very much resembles that which Paternus gives of the happiness of the Romans, in the reign of Augustus, B. 2. ch. 89. "Finita vicesimo anno bella civilia, sepulta externa, revocata pax, sopitus ubique armorum furor; restituta vis legibus, judiciis auctoritas, senatui majestas, &c. prisca illa et antiqua reipublicæ forma revocata; rediit cultus agris, sacris honos, securitas hominibus, certa cuique rerum suarum possessio; leges emendatæ utiliter, latæ salubriter." In his twentieth year, all wars, both civil and foreign, were happily extinguished; peace returned; the rage of arms ceased; vigour was restored to the laws; authority to the tribunals; majesty to the senate, &c. the ancient and venerable form of the republic revived; the fields were again cultivated; religion honoured, and every one enjoyed his own possessions with the utmost security; the old laws were revised and improved, and excellent new ones added.

Ver. 118. Thus Horace;

Custode rerum Cæsare, non furor
Civilis, aut vis exigit otium. *B. 4. Ode 15.*

While Cæsar reigns, nor civil jars
Shall break our peace, nor foreign wars.

Duncombe.

Ver. 122.

Ore trahit quodcunque potest, atque addit acervo.
Hor. B. 1. Sat. 1.

Ver. 123.

— I'ua largâ
Sæpe manu multisque oneravit limina donis.
Virg. Æn. B. 10. 619.

To thy great name due honours has he paid,
And rich oblations on thy altars laid. *Pitt.*

Ver. 131. The same of Ptolemy's munificence

drew several celebrated poets to his court. See Note on verse 82. Idyl. XIV.

Ver. 139. The original is a little perplexed, but I follow Hicinsius, and take the sense to be this: "Ptolemy alone treading close in the footsteps of his forefathers, yet warm in the dust, defaced and rose over them." Theocritus alludes to a contest usual among the ancients, wherein the antagonist used to place his right-foot in the left footstep of his competitor, who went before him, and his left foot in the right footstep, which if he could exceed, he would cry aloud, *Επιβιβνχα σοι Ταραναι*, "I have stepped over you, I am beyond you." Homer, speaking of Ulysses contending with Ajax in the race, has something very similar. *Iliad. B. 23. 763.*

Αυταρ οπισθεν

Ιχνια τυπτε ποδεσσιν, παρος κονιν αμφιχυθηναι.

Graceful in motion thus, his foe he plies,
And treads each footstep e'er the dust can rise.

Pope.

Ver. 150. Virgil thus speaks of Venus embracing Vulcan,

— Niveis hinc atque hinc, &c.

Æn. B. 8. 387.

— Her arms, that match the winter snows,
Around her unresolving lord she throws. *Pitt.*

Ver. 158. Juno, speaking of herself, says,

Ast ego, quæ divum incedo regina, Jovisque
Et soror et conjux. *Æn. 1. 47.*

But I, who move supreme in heav'n's abodes,
Jove's sister-wife, and empress of the gods.

Pitt.

Ver. 162. Theocritus having already celebrated Ptolemy's riches and power, which were so great, that he could not even wish an increase of them, nobly concludes his poem with this fine precept, *Ασταν γα μιν εκ Διος αρετη*, "Ask virtue of Jupiter:" as if he could not have too large a share of virtue, though eminently renowned for it: by this the poet proves himself an excellent moralist, and plainly hints at that maxim of the Stoics, who maintained that virtue was entirely sufficient for a happy life.

IDYLLIUM XVIII.

THE EPITHALAMIUM OF HELEN.

ARGUMENT.

TWELVE Spartan virgins of the first rank are here introduced singing this song at the nuptials of Helen, before the bride-chamber: first they are jocular; then they congratulate Menelaus on his being preferred to so many rival princes, and made the son-in-law of Jupiter: they celebrate the beauty of Helen, and conclude with wishing the married couple prosperity.

WHEN Sparta's monarch, Menelaus, led
The beauteous Helen to his bridal bed,

Twelve noble virgins, blooming, young, and fair,
With hyacinthine wreaths adorn'd their hair,

And pleas'd the vocal benison to shower,
 To the soft cithern danc'd before the bower;
 As bounding light in circling steps they move,
 Their feet beat time, and every heart beat love:
 This was the nuptial song—'Why, happy groom,
 Steal you thus early to the genial room? 10
 Has sleep or wine your manly limbs oppress'd,
 That thus, thus soon you seek the bed of rest?
 If drowsy slumbers lull you to a drone,
 Go take refreshing sleep, but sleep alone;
 Leave Helen with her maiden mates, to play
 At harmless pastimes till the dawn of day:
 This night we claim, then yield her yours for life,
 From morn to night, from year to year your wife.
 Hail happy prince! whom Venus wafted o'er,
 With prosperous omens to the Spartan shore; 20
 To bless her bed, from all the princely crowd,
 Fair Helen chose you—Cupid sneez'd aloud.
 Of all our demigods 'tis you aspire,
 Alone, to call Saturnian Jove your fire:
 Jove's daughter now your warm embraces meets,
 The pride of Greece between two lily sheets.
 Sure will the offspring from that soft caress,
 The mother's charms in miniature express.
 Thrice eighty virgins of the Spartan race,
 Her equals we in years, but not in face, 30
 Our limbs diffusing with ambrosial oil,
 Were wont on smooth Eurota's banks to toil
 In manly sports; and though each nymph was fair,
 None could with her in beauty's charms compare:
 When winter thus in night no longer lours,
 And spring is usher'd by the blooming hours,
 The rising morning with her radiant eyes,
 Salutes the world, and brightens all the skies.
 So shines fair Helen, by the Graces drest,
 In face, shape, size, superior to the rest: 40
 As corn the fields, as pines the garden grace,
 As steeds of Thessaly the chariot race;
 So Helen's beauties bright encomiums claim,
 And beam forth honour on the Spartan name.

What nymph can rival Helen at the loom,
 And make fair art like living nature bloom?
 The blended tints in sweet proportion join'd,
 Express the soft ideas of her mind.
 What nymph like her of all the tuneful quire,
 Can raise the voice, or animate the lyre? 50
 Whether of Pallas great in arms she sings,
 Or Dian bathing in the silver springs.
 A thousand little Loves in ambush lie,
 And shoot their arrows from her beaming eye.
 O lovely Helen, whom all hearts adore,
 A matron now you rise, a maid no more!
 Yet ere another sun shall gild the morn,
 We'll gather flowers your temples to adorn,
 Ambrosial flowers, as o'er the meads we stray,
 And frequent sigh that Helen is away; 60
 Mindful of Helen still, as unwean'd lambs
 Rove round the pastures bleating for their dams;
 Fair flowers of lotè we'll cull, that sweetly breathe,
 And on yon spreading plane suspend the wreath.
 But first from silver shells shall unguents flow,
 Bedew the spreading plane and all the flowers
 below:
 And on the rind we'll write, that all may see,
 "Here pay your honours, I am Helen's tree."
 Joy to the bride, and to the bridegroom joy,
 And may Latona bless you with a boy! 70
 May Venus furnish both with equal love!
 And lasting riches be the gift of Jove!
 May these descend and by possession grow,
 From fire to son, augmenting as they flow!
 Now sweetly slumber, mutual love inspire,
 And gratify the fulness of desire:
 Rise with the blushing morning, nor forget
 The due of Venus, and discharge the debt:
 And, ere the day's loud herald has begun
 To speak his early prologue to the sun, 80
 Again we'll greet your joys with cheerful voice,
 O Hymen, Hymen, at this match rejoice!

NOTES ON IDYLLIUM XVIII.

There are two sorts of Epithalamiums, or Nuptial Songs among the ancients; the first was sung in the evening, after the bride was introduced into the bride-chamber, it was named *Κοιμητικόν*, and intended to dispose the married couple to sleep; the second was sung in the morning, termed *Εγχετικόν*, and designed to awaken them. See the conclusion of this Idyllium. As Theocritus lived at the polite court of Ptolemy Philadelphus, during the time that the seventy interpreters resided there, he would probably, by reading their translation of the Old Testament, borrow some beautiful images from the Scriptures, conceived in oriental magnificence; a few specimens of these will be found in the notes on this Idyllium.

Ver. 6 Thus Horace,

*Junctæque Nymphis Gratia decentes
 Alterno terram quatunt pede.*

B. I. Ode 4.

Ver. 22 Sneezing was sometimes reckoned a lucky omen. See Potter's *Archæologia*, ch. 17. and Catullus de *Acme & Septimio*;

*Hoc ut dixit, Amor sinistram, ut ante
 Dextram, sternuit approbationem.*

See also the note on Idyllium 7. ver. 115.

That new-married persons were attended by singers and dancers, Homer acquaints us in his description of the shield of Achilles, *Iliad*, B. 18.

Here sacred pomp and genial feast delight,
 And solemn dance, and Hymenæal rite;
 Along the street the new-made brides are led,
 With torches flaming, to the nuptial bed:
 The youthful dancers in a circle bound
 To the soft flute and cithern's silver sound:
 Through the fair streets, the matrons in a row,
 Stand in their porches, and enjoy the show. *Pope.*

Ver. 31. Thus the handmaids of Nausicaa in Homer anoint themselves with oil. *Odyf. B. 6.*

Then with a short repast relieve their toil,
And o'er their limbs diffuse ambrosial oil. *Pope.*

Ver. 35. Thus Solomon's Song, ch. ii. ver. 11.
"Lo the winter is past, the rain is over and gone."

Ver. 37. "Who is she that looketh forth as the
"morning," ch. vi. ver. 10. and in the book of
Job, ch. xli. ver. 18. speaking of the Leviathan,
we read "His eyes are like the eye-lids of the
"morning."

Here the marks of imitation appear very strong.

Ver. 41. Virgil has,
Fraxinus in sylvis pulcherrima, pinus in hortis.

Ecl. 7. 65.

Ver. 42. Theocritus still seems to borrow from
the royal author; "I have compared thee, O my
"love, to a company of horses in Pharoah's cha-
"riots," Solomon's Song, ch. i. ver. 9 — The ori-
ginal literally signifies, "I have compared thee to
"my mare, &c." Nor ought we to think the
comparison coarse or vulgar, if we consider what
beautiful and delicate creatures the eastern horses
are, and how highly they are valued.

See Percy on Solomon's Song.

Ver. 53. Thus Hero is described in Musæus,

Εἰς δὲ τις Ἥρῃς Ὀφθαλμοῖς γελῶν. π. τ. λ.
Ver. 64.

When Hero smiles, a thousand Graces rise,
Sport on her cheek, and rival in her eyes. *F. F.*

Ver. 63. Millar says the leaves of the lote-tree,
or nettle tree, are like those of the nettle; the
flower consists of five leaves, expanded in form of
a rose, containing many short stamina, in the bo-
som; the fruit, which is a roundish berry, grows
single in the bosom of its leaves. Dr. Martyn says,

it is more probable, that the lotus of the Loto-
phagi is what we call zizyphus or the jujube-tree;
The leaves of this are about an inch and a half in
length, an inch in breadth, of a shining green co-
lour and ferrated, about the edges; the fruit is of
the shape and size of olives, and the pulp of it has
a sweet taste like honey; and therefore cannot be
the nettle-tree, the fruit of which is far from that
delicacy which is ascribed to the lotus of the an-
cients. See Martyn on the *Geor. B. 2. 84.* But
the lotus here spoken of is most probably an herb
the same which Homer describes in the *Odyssey*,
B. 9. and which Eustathius takes to be an herb;
he says, there is an Egyptian lotus which grows
in great abundance along the Nile, in the time of
its inundations. Prosper Alpinus, an author of
good credit, who travelled into Egypt, assures us,
that the Egyptian lotus does not at all differ from
our great white water-lily.

Ver. 67. The custom of writing on the bark of
trees was very common among the ancients, thus
Virgil;

*Centum est in sylvis, inter spelæa ferarum
Malle pati, tenerisque meos incidere amores
Arboribus: crescent illæ, crescetis amores Ecl. 10.*

See Ovid in *Oenone*, Propertius, *B. 1. Eleg.*
18. &c.

Nothing can be more beautifully pastoral than
this inscription on the bark of the plane-tree, as
also the simile at the 61st and 62d verses.

Ver. 75.
Quæ sepirabat amores. Hor. B. 4. Ode 13.

Ver. 81. The chorus of virgins here promise to
return early in the morning, and sing the carmen
Εγερτικόν.

Ver. 82. Thus Catullus, *Carm. Nup.*
Hymen, O Hymenæe, Hymen ades, O Hymenæe.

IDYLLIUM XIX.

THE HONEY-STEALER.

THE ARGUMENT.

As Cupid is stealing honey from a bee-hive, he is stung by a bee; on which he runs and complains to
his mother, that so small an animal should inflict so great a wound; she immediately answers, that
he himself is but little like a bee, yet the wounds he gives are grievous.

As Cupid, the sleepest young wanton alive,
Of its hoard of sweet honey was robbing a hive,
The centinel bee buzz'd with anger and grief,
And darted his sting in the hand of the thief.
He sobb'd, blew his fingers, stamp'd hard on the
ground,
And leaping in anguish shew'd Venus the wound;

Then began in a sorrowful tone to complain,
That an insect so little should cause so great pain,
Venus smiling, her son in such taking to see,
Said, "Cupid, you put me in mind of a bee; 10
"You're just such a busy, diminutive thing,
"Yet you make woful wounds with a desperate
"sting."

NOTES ON IDYLLIUM XIX.

In this small poem Theocritus has copied the 40th Ode of Anacreon, in every thing but the measure of his verse: the original of this is in Hexameter, and therefore I thought it improper to give it Anacreontic numbers. I shall take the liberty to insert a translation of the Teian bard's little poem, that the English reader may have the pleasure to see the manner in which the ancient poets copied their predecessors.

Once, as Cupid, tir'd with play,
On a bed of roses lay,
A rude bee that slept unseen,
The sweet breathing buds between,
Stung his finger, cruel chance!
With its little pointed lance.

Straight he fills the air with cries,
Weeps and sobs, and runs and flies;
Till the god to Venus came,
Lovely, laughter-loving dame:
Then he thus began to plain;
" Oh! undone—I die with pain—
" Dear mamma, a serpent small,
" Which a bee the ploughmen call,
" Imp'd with wings, and arm'd with dart,
" Oh!—has stung me to the heart."
Venus thus replied, and smil'd;
" Dry those tears, for shame! my child;
" If a bee can wound so deep,
" Causing Cupid thus to weep,
" Think, O think, what cruel pains
" He that's stung by thee sustains."

F. E.

IDYLLIUM XX.

EUNICA, OR THE NEATHERD.

THE ARGUMENT.

A ROUGH neatherd complains of the pride and insolence of a city girl, who refused to let him kiss her and rallied his awkward figure: he appeals to the neighbouring shepherds, and asks them if he is not handsome; if his voice is not sweet, and his songs enchanting: and relates examples of goddesses that have been enamoured of herdsmen. In this Idyllium the poet is thought to be severe on those who with arrogance despise the sweetness and simplicity of bucolic numbers. It is strange that the commentators will not allow this piece to be styled a pastoral: surely it is bucolical enough.

WHEN lately I offer'd Eunica to kiss,
She fier'd, and she flouted, and took it amiss;
" Begone, you great booby, she cry'd with a
" frown. [clown?
" Do you think that I long to be kiss'd by a
" The sparks of the city my kisses esteem;
" You never shall kiss me, no, not in a dream.
" How pleasing you look, and how gently you
" play!
" How soft is your voice! and what fine things
" you say!
" So neat is your beard, and so comely your hair!
" Your hands are so white, and your lips, a sweet
" pair! 10
" But on your dear person, I never shall doat:
" So pray keep your distance—you smell like a
" goat."
Thus spoke the pert hussy, and view'd me all round
With an eye of disdain, and thrice spit on the
ground,
Look'd proud of her charms, with an insolent sneer,
And sent me away with a flea in my ear.
My blood quickly boil'd in a violent pique,
And red as a rose, passion glow'd on my cheek;

For it vex'd me, that thus in derision she jeer'd
My looks, and my voice, and my hair and my
beard. 20
But, am I not handsome, ye shepherds, say true?
Or has any god alter'd my person anew?
For lately on oaks, like the ivy, with grace
My hair and my beard added charms to my face:
My eyebrows were sable, my forehead milkwhite,
And my eyes, like Minerva's, were azure and
bright;
My lips, sweet as cream, were with music replete,
For from them flow'd sounds as the honey-comb
sweet;
My songs are enchanting; nor ought can exceed
The tunes of my pipe, or the notes of my reed. 30
The girls of the country, if they had their wills,
Would kiss me, and press me to stay on the hills;
For they say that I'm fair; but this flirt of the
town
Refus'd my sweet kisses, and call'd me a clown.
Alas! she forgot, or perhaps did not know,
That Bacchus fed herds in the valley below;
That Venus a swain lov'd with hearty goodwill,
And help'd him his cattle to tend on the hill;

Adonis, while living, in groves she ador'd,
And dead in the groves and on mountains de-
plor'd.

40

If right my conjecture, Endymion, I ween,
Like me too once tended his steers on the green;
Yet the Moon in this neatherd took such a delight,
That she met him at Latmos, and kiss'd him all
night.

Ev'n Cybele mourn'd for a herdsman; and Jove
Snatch'd a boy from his herd to be waiter above.

But Eunice disdains me, nor lists to my vow;
Is she better than Cynthia, or Cybele, trow?
Does she think that in bloom, and the beauty of
face
She is equal to Venus? if that be the case, 50
May she never behold sweet Adonis again
On the hill, in the vale, in the city or plain;
And may the proud minx, for her crime to
atone,
If she can, sleep contented—but always alone!

NOTES ON IDYLLIUM XX.

This Idyllium has by Daniel Heinsius, and other learned critics, been ascribed to Moschus, and for that reason I published a translation of it some time ago, along with a version of the other beautiful pieces of that, and of four other Greek poets, viz. Anacreon, Sappho, Bion, and Musæus; but as in all probability Theocritus is the real author, I here insert it with several alterations and corrections, as I shall entirely omit it in the second edition of my work abovementioned, which will shortly be published; the first having been very favourably received by the public.

Ver. 5. The Greek is *μεμαμνηκα ατυκα χειλια λαβειν*. "Didici urbana labra terere," which Virgil seems to have had an eye to, when he says, "Calamo trivisse labellum:" on which Mr. War-ton observes, there is a fondness in mentioning this circumstance of "wearing his lip." The constant effect of playing on the "fistula," which is used to this day in the Grecian islands, is making the lips thick and callous. Mr. Dawkins assured me he saw several shepherds with such lips.

Ver. 13. Virgil has something similar.
Talia dicentem jamdudum averfa tuetor,
Huc illuc volvens oculos, totumque pererrat
Luminibus tacitis. *Æn. B. 4. 362.*

Ver. 14. The Greek is, *τρεις εις τον επουστο κολπον*, and should be rendered, "She thrice spit into her bosom." Archbishop Potter observes, see Archæol. ch. xvii. it was customary for the ancient Grecians to spit three times into their bosoms at the sight of a madman, or one troubled with an epilepsy; this they did in defiance, as it were, of the omen: for spitting was a sign of the greatest contempt and detestation, whence *πτουιν*, "to spit," is put for "to contemn."

Ver. 22. The poet here seems to allude to a passage in Homer's *Odys. B. 13.* where Minerva changes Ulysses into the figure of an old beggar,

She spake, and touch'd him with her powerful wand;
The skin shrunk up, and wither'd at her hand;
A swift old age o'er all his members spread;
A sudden frost was sprinkled on his head;
No longer in the heavy eye-ball shin'd
The glance divine, forth beaming from the mind.

Pope.

Ver. 26. Theocritus seems to have Anacraon in view, Ode 28.

All thy art her eyes require,
Make her eyes of living fire,
Glowing with celestial sheen,
Like Minerva's, bright and keen;
On her lips, that sweetly swell,
Let divine persuasion dwell.

F. F.

Ver. 27. This is entirely taken from Solomon's Song, ch. iv. 11. "Thy lips, O my spouse, drop as the honeycomb; honey and milk are under thy tongue."

Ver. 40. See Bion's beautiful Idyllium on the death of Adonis.

Ver. 41.
Latmius Endymion non est tibi, Luna, rubori.
Ovid. Art. Aman. 3. 85.

Ver. 54. Sappho, with the most elegant simplicity complains, that she is deserted and left alone.

Δηδυκε μεν ασελανα, κ. τ. λ. See her Frag.

The Pleiads now no more are seen,
Nor shines the silver moon serene,
In dark and dismal clouds o'ercastr;
The love appointed hour is past;
Midnight usurps her fable throne,
And yet, alas! I lie alone.

F. F.

IDYLLIUM XXI.

THE FISHERMEN.

ARGUMENT.

THIS piece is a dialogue between two fishermen; which for its singular simplicity of sentiment, as well as character, is peculiarly beautiful and regular: one of them relates his dream; which was

that he had caught a large fish of solid gold, on which he resolves to follow his laborious occupation no longer, but live luxuriously: in the morning his fish and his hopes vanish, and necessity compels him to return to his accustomed labours. This Idyllium admonishes every one to rest content with his lot; and, under the shadow of a golden dream, beautifully displays the vanity of all human hopes and desires.

NEED, Diophantus, ready wit imparts,
Is labour's mistress, and the nurse of arts;
Corroding cares the toiling wretch infest,
And spoil the peaceful tenor of his breast;
And if soft slumbers on his eye-lids creep,
Some curst care steals in, and murders sleep.

Two ancient fishers in a straw-thatch'd shed,
Leaves were their walls, and sea-weed was their bed,

Reclin'd their weary limbs: hard by were laid
Baskets, and all their implements of trade, [hairs,
Rods, hooks, and lines, compos'd of stout horse-
And nets of various sorts, and various snares,
The seine, the cast-net, and the wicker maze,
To waste the watery tribes a thousand ways:

A crazy boat was drawn upon a plank;
Matts were their pillow, wove of osier dank;
Skins, caps, and rugged coats, a covering made:
This was their wealth, their labour, and their trade,

No pot to boil, no watch-dog to defend;
Yet blest they liv'd with penury their friend. 20
None visited their shed, save every tide

The wanton waves that wash'd its tottering side.
When half her course the moon's bright car had sped,

Joint labour rous'd the tenants of the shed.
The dews of slumber from their eyes they clear'd,
And thus their minds with pleasing parley cheer'd:

Asphalion.

I hold, my friend, that trite opinion wrong,
That summer-nights are short when days are long.
Yes—I have seen a thousand dreams to-night,
And yet no morn appears, nor morning-light: 30
Sure on my mind some strange illusions play,
And make short nights wear heavily away.

Friend.

Fair summer seasons you unjustly blame,
Their bounds are equal, and their pace the same;
But cares, Asphalion, in a busy throng,
Break on your rest, and make the night seem long.

Asphalion.

Say, hast thou genius to interpret right
My dream? I've had a jolly one to-night. [wish,
Thou shalt go halves, and more thou canst not
We'll share the vision as we share our fish. 40
I know thee shrewd, expert of dreams to spell;
He's the best judge who can conjecture well.

We've leisure time, which can't be better spent
By wretched carles in wave-wash'd cabin pent,
And lodg'd on leaves; yet why should we repine,
While living lights in Prytaneum shine?

Friend.

To thy fast friend each circumstance recite,
And let me hear this vision of the night.

Asphalion.

Last evening, weary with the toils of day,
Lull'd in the lap of rest secure I lay;
Full late we supp'd, and sparingly we eat;
No danger of a surfeit from our meat.
Methought I sat upon a shelly steep,
And watch'd the fish that gambol'd in the deep:
Suspended by my rod, I gently shook
The bait fallacious, which a huge one took;
(Sleeping, we image what awake we wish;
Dogs dream of bones, and fishermen of fish.)
Bent was my rod, and from his gills the blood
With crimson stream distain'd the silver flood. 60
I stretch'd my arm out, lest the line should break;
The fish so vigorous, and my hook so weak!
Anxious I gaz'd; he struggled to be gone:

'You're wounded—I'll be with you, friend, anon'—
'Still do you tease me?' for he plagu'd me fore;
At last, quite spent, I drew him safe on shore;
Then grasp'd him with my hand, for surer hold,
A noble prize, a fish of solid gold!
But fears suspicious in my bosom throng'd,
Lest to the god of ocean he belong'd; 70

Or, haply wandering in the azure main,
Some favourite fish of Amphitrite's train.
My prize I loos'd, and strictest caution took,
For fear some gold might stick about the hook;
Then safe secur'd him, and devoutly swore
Never to venture on the ocean more;
But live on land as happy as a king:
At this I wak'd: what think you of the thing?
Speak free, for know I am extremely loth,
And greatly fear to violate my oath. 80

Friend.

Fear not, old friend; you took no oath, for why?
You took no fish—your vision's all a lie.
Go search the shoals, not sleeping, but awake,
Hunger will soon discover your mistake;
Catch real fish; you need not sure be told
Those fools must starve who only dream of gold.

NOTES ON IDYLLIUM XXI.

Ver. 1. Thus Virgil,
Tum varix venere artes: labor omnia vincit
Improbis, et duris urgens in rebus egestas.

Geor. I. 145.

Then all those arts that polish life succeed;
What cannot ceaseless toil, and pressing need!

Warton.

And Persius, Prol.

Quis expedit pſittaco ſuum χαιρς,
Picaſque docuit verba noſtra conari?
Magiſter artis, ingenique largitor Venter.

Who taught the parrot human notes to try,
Or with a voice endued the chattering pye?
'Twas witty want, fierce hunger to appeaſe:
Want taught their maſters, and their maſters theſe.

Dryd.

Ver. 3.

Nec placidam membris dat cura quietem. *Virg.*

Ver. 5. Juvenal has,

Nocte brevem ſi forte indulſit cura ſoporem.

Sat. 13. 217.

Ver. 6.

—Sub noctem cura recurſat. *Virg. Æn. B. 1.*

Ver. 19. The Greek is ε κοινα, and is an emen-
dation of the learned Johannes Auratus; before it
was read εχ ινα. *Heinfius.*

Ver. 33. Here I entirely follow the emendation
of Heinfius; the text ſtands thus:

Ασφαλιων, μιμνη το καλον θερος, ε γαρ ο καιρος
Αυτοματως παριβα τον ιον δρομον.

"Asphalion, you accuſe the fair ſummer; for that
ſeaſon never willingly paſſes its bounds:" which
is nonſenſe; but, by tranſpoſing the firſt word of
each verſe, thus,

Αυτοματως, μιμνη το καλον θερος, ε γαρ ο καιρος,
Ασφαλιων, παριβα τον ιον δρομον.

"In vain, and without any reaſon, you accuſe the
fair ſummer, &c.

Ver. 42. This ſeems to be taken from that verſe
of Euripides, which we read in Plutarch,

Μαντις δ' αειρες οςις ικαζει καλος,

Which Tully has thus tranſlated,

Qui bene conjecit, vatem perhibebo optimum.

Ver. 46. The Prytaneum was a common-hall
in the cities of Greece, where thoſe that had de-

ſerved well of their country were maintained at
the public charge; where alſo the fire conſecrated
to Vulcan was kept, as that ſacred to Veſta was
at Rome. Cicero de Orat. 1. 54. ſays, "Ut ci-
viſtus quotidianus in Prytaneo publice præbere-
tur." If this be underſtood of the Prytaneum
at Athens, Scaliger obſerves that there is great
impropriety in Sicilian fiſhermen mentioning places
ſo far remote from the ſcene of their labours; but
from what follows, it appears that there was a
place in the neighbourhood, very commodious for
fiſhing, named Prytaneum, on which nocturnal
lamps were fixed, as was cuſtomary, for the con-
venience of fiſhing by night. Sannazarius was
not ignorant of this cuſtom, who in his ſecond
Piſcatory Eclogue ſays,

Dumque Alii notosque ſinus, piſcoſaque circum
Æquora colluſtrant flammis.

While others on the well-known bay,
Or fiſhy ſeas, their lights diſplay.

Ver. 55. Ovid has ſomething ſimilar,

Nunc in mole ſedens moderabar arundine limum.

Met. B. 13. 923.

Ver. 57. There is ſomething very beautiful in
what Ovid makes Sappho ſay to Phaon,

Tu mihi cura, Phaon; te ſomnia noſtra reducunt;
Somnia formoſo candidiora die, &c.

Which Mr. Pope has greatly improved upon,

Oh night more pleaſing than the brighteſt day,
When fancy gives what abſence takes away,
And, dreſſed in all its viſionary charms,
Reſtores my fair deſerter to my arms!

Ver. 77. The expreſſion in the original is re-
markable, τῷ χρησθῇ βασιλευίν, "to reign in riches;"
ſpeaking of the happineſs of the old Corycian far-
mer, Virgil ſays,

Regum æquabat opes animis.

Geor. 4. 132.

Ver. 81. Solve metus.

Virg.

IDYLLIUM XXII.

CASTOR AND POLLUX.

THE ARGUMENT.

THIS is a hymn, after the manner of the ancient Arcadians, in praiſe of Caſtor and Pollux. The firſt
part deſcribes the combat between Pollux and Amycus, the ſon of Neptune, and king of the Bebry-
cians; who valuing himſelf on his ſuperiority in ſtrength, and the art of boxing, uſed to compel
every ſtranger that touched upon his coaſt to take up the cæſtus, and make trial of his ſkill in the
management of that rude inſtrument of death; for ſo it proved to many, till Pollux, who arrived
there with the Argonauts, encountered him, and conquered: Apollonius ſays he ſlew him; but this
is denied by other authors.

THE ſons of Leda, and of Jove, I ſing,
Immortal Jove, the ægis-bearing king,
Caſtor and Pollux, with the ceſtus grac'd, [brac'd:
Which round his wrift thick thongs of bull-hide

In ſtrains repeated ſhall my muſe reſound
The Spartan twins with manly virtues crown'd:
Safeguards of men diſtreſt, and generous ſteeds,
When in the fields of death the battle bleeds;

Safeguards of sailors, who the Twins implore,
When on the deep the thundering tempests roar.
These in the hollow vessel from the side, 11
Or head or helm pour the high swelling tide:
Burst are the planks, the tackling torn, the mast
Snapt, the sails rent before the furious blast:
Suspended showers obscure the cheerful light,
Fades the pale day before approaching night,
Rise the rough winds resounding storms prevail,
And the vast ocean roars beneath the scourging
hail.

Still you the wreck can save, the storm dispel,
And snatch the sailors from the jaws of hell. 20
The winds disperse, the roaring waves subside,
And smooth'd to stillness sleeps the lenient tide.
When shine the Bears, and 'twixt the Asses seen,
Though faint their manger, ocean proves serene.
O, friends of human kind, in utmost need,
Fam'd for the song, the lyre, the gauntlet, and the
steed!

Whose praises first shall my rapt muse rehearse?
Both claim my praise, but Pollux first my verse.

When Argo reach'd (Cyane's islands past)
Cold Pontus harass'd by the northern blast, 30
Soon to Bebrycia, with the sons of fame,
A freight of chiefs and demigods, she came.
Forth from her sides, the country to explore,
The crew descended to the breezy shore:
On the dry beach they rais'd the leafy bed,
The fires they kindled, and the tables spread.

Meanwhile the royal brothers devious stray'd
Far from the shore, and sought the cooling shade.
Hard by, a hill with waving forests crown'd
Their eyes attracted; in the dale they found 40
A spring perennial in a rocky cave,
Full to the margin flow'd the lucid wave:
Below small fountains gush'd, and murmuring
near,

Sparkled like silver, and as crystal clear:
Above tall pines and poplars quivering play'd,
And planes and cypress in dark green array'd:
Around balm-breathing flowers of every hue,
The bee's ambrosia, in the meadows grew.

There sat a chief, tremendous to the eye,
His couch the rock, his canopy the sky: 50
The gauntlet's strokes, his cheeks and ears around,
Had mark'd his face with many a desp'rate wound.
Round as a globe, and prominent his chest,
Broad was his back, but broader was his breast;
Firm was his flesh, with iron sinews fraught,
Like some Colossus, on an anvil wrought.

As rocks, that in the rapid streams abound,
Are wash'd by rolling torrents smooth and round,
The ridges rise, in crystal streams beheld:

So on his brawny arms the rising muscles swell'd.
A lion's spoils around his loins he draws, 61

Beneath his chin suspended by the paws:
Victorious Pollux, with attentive look,
View'd, and complacent, thus the chief bespoke:

Pollux.

Peace, gentle friend! to wandering strangers tell
What tribes, what nations in these regions dwell?

Amycus.

What peace to me, while on my native shore,
I see strange guests I never saw before?

Pollux.

Fear not; no foes, nor mean of birth are here.

Amycus.

Thou hast no cause to bid me not to fear. 70

Pollux.

Rude are your words, and wrongfully apply'd,
Your manners fierce, your bosom swoln with pride.

Amycus.

Thou see'st me as I am: these lands are mine;
I never yet have troubled thee or thine.

Pollux.

Whene'er you come, you will a welcome find,
And presents, as befits a liberal mind.

Amycus.

Nor I thy welcome, nor thy gifts partake;
I gave no welcome, and no presents make.

Pollux.

May I not taste the stream that murmurs by?

Amycus.

I'll solve that question when thy throat is dry. 80

Pollux.

Will gold, or other bribe the purchase gain?

Amycus.

Nought but to prove thy prowess on the plain;
Stand forth; let man oppos'd to man provoke,
With gauntlet-guarded arm, th' impending stroke;
Eye meeting eye, exert thy utmost might,
By feint or force to triumph in the fight.

Pollux.

Whom must I fight? mine adversary who?

Amycus.

Thou see'st thy match, no despicable foe.

Pollux.

But what reward shall the stout victor have?

Amycus.

The conquer'd man shall be the conqueror's slave.

Pollux.

This is cock's play, and such the terms severe 91
In fight of scarlet-crested chanticler.

Amycus.

Or be it cock's, or be it lion's play,
These are the fix'd conditions of the fray.

This said, his hollow conch he instant blew,
Quick through the coast the sounds alarming
flew;

The signal rous'd the stout Bebrycian train,
Who join'd their chief beneath the shady plain.
Illustrious Castor from the neighbouring strand,
Call'd to the conflict Argo's chosen band. 100
Meanwhile the combatants, of mind elate,
Drew on their hands the dreadful gloves of fate;
The leathern thongs, that brac'd their shoulders
round,

Firm to their arms the ponderous gauntlets bound,
Amid the circle now the champions stood,
Breathing revenge, and vehement for blood.
Studious each strove the piercing light to shun,
And on his shoulders catch the gleaming sun:
You call'd, O Pollux, prudence to your aid;
In Amycus's eyes the solar splendors play'd. 110
This did th' enormous chieftan's rage provoke
To strike at once some death-denouncing stroke;
But watchful Pollux dealt a weighty blow
Full on the cheek of his advancing foe;

Incens'd more ardent to the fight he came,
And forward bent to take the surer aim.
Through the Bebrycian band loud clamours run;
Nor less the Greeks encourag'd Leda's son.
Yet rising fears their generous breasts appal,
Left on their friend the bulk of Amycus should fall:
Vain fears! for with both hands brave Pollux
ply'd 121

His furious blows, and storm'd on every side;
The quick-repeated strokes his rival stun,
And curb the force of Neptune's lawless son.
Giddy with blows the tottering hero stood,
And from his mouth discharg'd the purple blood.
Loud shouted the Greek warriors when they saw
Bebrycia's champion's batter'd cheeks and jaw.
His eyes, within their sockets deep impell'd,
Seem'd lessen'd, and his bruised visage swell'd. 130
Still the prince ply'd his mighty rival hard,
And feintful soon surpris'd him off his guard;
And as he stagger'd, fall upon his brow
With all his force he drove the furious blow,
And mash'd his front; the giant with the wound
Fell flat, and stretch'd his bulk unwieldy on the
ground.

But soon his vigour and his strength return'd,
He rose, and then again the battle-burn'd:
With iron hands their hollow sides they pound,
And deal vindictive many a desperate wound. 140
Fierce on his foe Bebrycia's monarch prest,
And made rude onsets on his neck and breast:
But Jove's unconquer'd son far better sped,
Who aim'd his thunder at his rival's head.

Fast down their limbs the sweat began to flow,
And quickly lay the lofty champion low;
Yet Pollux firmer stood with nobler grace,
And fresher was the colour of his face.

How Amycus before Jove's offspring fell,
Sing, heaven-descended muse; for you can tell:
Your mandates I implicitly obey, 151
And gladly follow where you lead the way.

Resolv'd by one bold stroke to win renown,
He seiz'd on Pollux' left hand with his own;
Then bent oblique to guard against a blow,
And sped his right with vengeance on the foe,
In hopes to strike his royal rival dead,
Who 'scap'd the blow, declining back his head;
Then Pollux aim'd his weighty stroke so well,
Full on the crest of Amycus it fell, 160
And gor'd his temples with an iron wound;
The black blood issuing flow'd and trickled to the
ground.

Still with his left he maul'd his faltering foe,
Whose mash'd teeth crackled with each boisterous
blow;

With strokes redoubled he deform'd his face;
Bruis'd cheeks and jaws proclaim'd his foul disgrace.
All on the ground he measur'd out his length,
Stunn'd with hard thwacks, and destitute of strength,
And, hands up-rais'd, with death-presaging mind,
At once the fight and victory declin'd. 170

Brave son of Jove, though you the conquest gain'd,
With no base deed the glorious day you stain'd;
The vanquish'd by his father Neptune swore,
That he would never, never injure strangers more.

NOTES ON IDYLLIUM XXII.

Virgil, in his description of the contest between Dares and Entellus, has borrowed some circumstances from this encounter between Amycus and Pollux, which shall be specified in their course: Apollonius Rhodius, in his second book of the *Argonautics*, has likewise described this last-mentioned contest, but is, in the opinion of Casaubon, far surpassed by Theocritus. Speaking of the first part of this Idyllium, he says, "Porro qui contulerit priorem partem, quæ Pollucis pugilatum cum Amyco describit, cum iis quæ habet Apollonius, reperiet profecto Theocritum tantum excellere Apollonium,

Quantum lenta solent inter viburna cupressi.

As lofty cypresses low shrubs exceed. *Warton.*

And yet Scaliger, in his dogmatical manner, gives the preference to Apollonius: "Splendore & arte ab Apollonio Theocritus superatur." Poet. B. 5. C. 6. whose determination the ingenious translator of Virgil's *Eclogues* and *Georgics* has adopted; but I am inclined to think, that my friend Mr. Warton, who perhaps admires Apollonius more, and understands him better than any man in the kingdom, may be too partial to his favourite author: I shall not take upon me to decide in this point, but after the Epigrams of The-

ocritus, I propose to print a translation of the combat between Pollux and Amycus from Apollonius, which I hope will be acceptable to the curious reader, as it has never, that I know of, been translated into English; he will then have an opportunity of forming a comparison, and in some sort judging of the merits of the two originals: I profess, without any kind of partiality, I have endeavoured to do all the justice in my power to them both. It is to be observed, that Apollonius flourished in the reign of Ptolemy Evergetes, and, therefore, as he wrote after Theocritus, he probably borrowed many things from him.

Ver. 1. In the same manner Horace,
Dicam et Alcidem, puerosque Ledæ;
Hunc equis, illum superare pugnis
Nobilem. *B. 1. Ode 12.*

Ver. 3. "The cæstus, says Gilbert West, Esq. consisted of many thongs of leather, or raw hides of bulls, wound about the hand and arm up to the elbow: I must here observe that none of the three Greek poets, Homer II. B. 23. Apollonius, nor our author, who all have given us a description of the cæstus, make any mention of plates of lead or iron;" as Virgil has done,

—Tantorum ingentia septem
Terga boum plumbo infuto, ferroque regebant.

Æn. B. 5.

Seven thick bull-hides, their volumes huge dispread,
Ponderous with iron and a weight of lead. *Pitt.*

Amycus is said to have invented the combat of the cæstus.

Ver. 19. Archbishop Potter observes, "When the two lambent flames, about the heads of Castor and Pollux, appeared together, they were esteemed an excellent omen, foreboding good weather." Thus Horace,

Clarum Tyndaridæ fidus, &c. *B. 4. Ode 8.*

Thus the twin-stars, indulgent, save
The shatter'd vessel from the wave. *Duncombe.*

And B. 1. Ode 12. Quorum simul alba nautis Stella refulsit, &c.

Soon as their happy stars appear,
Hush'd is the storm, the waves subside,
The clouds disperse, the skies are clear,
And without murmurs sleeps th' obedient tide.

Duncombe.

Ver. 24. According to Aratus, there is a little cloud in the shell of the crab, between the shoulders, on each side of which is a star, called the *Asses*, the intermediate cloud therefore is properly styled their *Manger*.

Ver. 29. See *Idyllium xiii. ver. 27.* and note.

Ver. 31. A country near Bithynia in Asia, bounded on the north by the Euxine sea.

Ver. 35.

Tunc littore curvo Extruimus toros. *Virg.*

Ver. 37. We may look upon every circumstance relating to this remarkable combat to commence here, the preceding lines being chiefly a noble encomium on these illustrious twin-sons of Jupiter, and then it is observable, that this conflict in Theocritus takes up 103 verses, and the episode on the same subject in Apollonius 97.

Ver. 45.

Qua pinus ingens, albaque populus. *Hor.*

Ver. 49. Virgil, speaking of the Cyclops, says,
Nec visu facilis, nec dictu affabilis ulli.

Æn. 3. 621.

A savage fiend! tremendous to the fight. *Pitt.*

Ver. 57. This is surely a new and noble thought, to compare the protuberant muscles of a giant to the rocky shelves under water, that are worn smooth and round by the transparent stream.

Ver. 61. Diomed is thus array'd. *Il. B. 10.*

This said, the hero o'er his shoulder flung
A lion's spoils, that to his ancles hung. *Pope.*

Ver. 95. Before trumpets were invented, conchs were used to sound the signal for battle. Virgil says of Misenus,

Sed tum forte cavâ dum personat æquora conchâ.
Æn. B. 5.

Ver. 97. Thus in Virgil, the rustics are stirred up to war by Alecto.

Tum vero ad vocem celeres, &c. *Æn. 7. 519.*

Then the mad rustics caught the dire alarms,
And at the horrid signal flew to arms,
Nor less in succour of the princely boy,
Pour forth to battle all the troops of Troy. *Pitt.*

Ver. 101.

Satus Anchisæ cæstus pater extulit æquos, &c.

Æn. 5. 424.

Then the great prince with equal gauntlets bound
Their vigorous hands, and brac'd their arms around
Pitt.

Ver. 105. Theocritus has Homer frequently in view in describing the combat of the cæstus. See *Il. 23. 685.*

Ες μεσσον ἀγῶνα.

Amid the circle now each champion stands. *Pope.*

Ver. 113.

Επι δ' ἀργυρο θεῖος Ἐπιος,
Κοψὲ δὲ παπτηναντα παρηϊον.

At length Epæus dealt a weighty blow,
Full on the cheek of his unwary foe. *Pope.*

Ver. 115.

Tum pudor incendit vires. *Æn. 5. 455.*

Ver. 117.

It clamor cælo, &c. *451.*

At once the Trojans and Sicilians rise,
And with divided clamours rend the skies. *Pitt.*

Ver. 121. Thus Virgil,

Creber utrâque manu pulsat versatque Dareta.

460.

Ver. 126. Thus Homer,

Αἷμα παχὺ πτυόντα.

His mouth and nostrils pour the clotted gore. *Pope.*

And Virgil,

—Crassumque cruorem Ore ejectiontem. *469.*

Ver. 137.

Acrior ad pugnam, &c. *454.*

Improv'd in spirit to the fight he came. *Pitt.*

Ver. 139.

Multa viri nequicquam inter se vulnera jactant,
Multa cavo lateri ingeminant, et pectore vastos
Dant sonitus. *433.*

Ver. 145.

—Εἶρρε δ' ἰδρῶς

Παντοθεν ἐκ μελλίων.

Il. B. 23. 688.

And painful sweat from all their members flows. *Pope.*

Ver. 150. These addresses to the muses are frequent in the best poets.

Pandite nunc Helicon, Deæ, &c. *Æn. 7. 641.*
Et meministis enim, Divæ, et memorare potestis.

Ver. 156. Virgil follows very close;
Ostendit dextram insurgens Entellus, et alte.

Extulit: ille ictum venientem a vertice velox
Prævidit, celerique elapsus corpore cessit.

Æn. B. 5. 443.

Ver. 163.

—Erratque aures et tempora circum
Crebra manus: duro crepitant sub vulnere malæ.

435.

With swift repeated words their hands fly round
Their heads and cheeks; their crackling jaws re-
found.

Pitt.

Ver. 162. The Greek verse consists of seventeen
syllables,

Ἐκ δὲ χυθὴν μέλαν αἷμα θοῶς πρόσφατον χανόντες,

and was certainly intended to image the trickling
of the blood, which I have endeavoured to preserve
in an Alexandrine.

Ver. 169. It was customary in the ancient com-
bats for the vanquished person to stretch out his
hands to the conqueror, signifying that he declin-
ed the battle, acknowledged that he was conquer-

ed, and submitted to the discretion of the victor:
thus Turnus in Virgil:

Vicisti, et victum tendere palmas Aufonii vidēre.

Thine is the conquest; lo! the Latian bands
Behold their general stretch his suppliant hands.

Pitt.

I shall finish my observations on this Idyllium,
with a translation of a Greek opinion of Lucilius,
showing that the consequences of these kind of bat-
tles were sometimes very terrible, though the com-
batants might escape with their lives and limbs.

On a Conqueror in the Cæstus, *Antbol. B. 2.*

This victor, glorious in his olive wreath,
Had once eyes, eye-brows, nose and ears, and teeth;
But turning cæstus champion, to his cost,
These and still worse! his heritage he lost;
For by his brother su'd, disown'd at last,
Confronted with his picture he was cast.

IDYLLIUM XXII.

PART II.

THE ARGUMENT.

CASTOR and Pollux had carried off Phœbe and Talaira, the daughters of Leucippus, brother of the
deceased Aphareus, who were betrothed to Lynceus and Idas, the sons of Aphareus; the husbands
pursued the ravishers, and claimed their wives; on this a battle ensued, in which Castor kills Lyn-
ceus, and Idas is slain by lightning. Ovid relates the event of this combat very differently. See
the Note.

POLLUX, thy name has dignify'd my song:
To Castor now the lofty lays belong;
Fam'd for bright armour on th' embattled plain,
And forming steeds obedient to the rein.

The bold twin-sons of Jove by stealth had led
Leucippus' daughters to their lawless bed.
Lynceus and Idas, much for strength renown'd,
Long since by promise to the damsels bound,
Aphareus' sons, the foul dishonour view'd,
And fir'd with wrath the ravishers pursued. 10
But when they reach'd deceas'd Alphareus' tomb,
Encompass'd round with venerable gloom,
Each hero leap'd impetuous from his car,
All arm'd, and well appointed for the war.
Lynceus aloud beneath his helmet spoke:

'Why will ye frantic thus the fight provoke?
'Of others wives why make unjust demands?
'Why gleam the naked faulchions in your hands?
'To us Leucippus has betroth'd them both
'Long since, and seal'd the contract with an oath:
'Tis base to make of others wives your prey, 21
'And bear their riches, mules, and lowing herds
'away,
'To threat the fire with force, or bribe with
'wealth,
'And seize on others properties by stealth.

'Oft, though ungrac'd with eloquence and art,
'Thus have I spoke the language of my heart:
'Princes, my friends, should not on any score
'Solicit maids that are espous'd before:
'Sparta for virgins, Elis for swift steeds
'Are fam'd, large flocks and herds Arcadia breeds;
'Messene, Argos numerous natives boast, 31
'And fair looks Corinth on the sea-beat coast:
'There nymphs unnumber'd bloom, a lovely race,
'Acknowledg'd beauties both of mind and face:
'There ye may gain the dames your fancies choose;
'No parents will the rich and brave refuse.
'For you the love of noble deeds inspires;
'Ye are the sons of honourable fires.
'Let us our nuptials undisturb'd pursue,
'And we'll unite to find fit brides for you." 40
'My words ne'er mov'd your unrelenting minds,
'The waves receiv'd them from the driving winds.
'Yet now, ev'n now your deeds let justice guide;
'We both are cousins by the father's side.
'But if mad rage impels you not to yield,
'And arms must fix the fortune of the field;
'Let Idas and brave Pollux both refrain
'From the fell combat on the list'd plain:
'And only I and Castor prove our might,
'By birth the youngest in decisive fight. 50

' Why should we give our parents cause to grieve,
' And their fond arms of all their sons bereave;
' Let some survive our drooping friends to cheer,
' And mate the virgins whom they held so dear,
' The wife with prudence their dissensions state,
' And lesser ills conclude the great debate.'

Thus he, nor thus in vain; for on the ground
Pollux and Idas plac'd their arms around.
Lynceus first march'd undaunted to the field,
And shook his spear beneath his ample shield. 60
Castor to war his brandish'd lance addrest;
And on each helmet wav'd the nodding crest.
First with their spears began the dreadful strife,
Each chief explor'd the avenues of life.
But thus unhurt the battle they maintain'd,
Broke in their shields the spears sharp points re-
main'd; [drew,

Then from their sheaths their shining swords they
And fierce to fight the raging heroes flew:
On Lynceus' buckler Castor boldly prest,
And his bright helmet with the triple crest; 70
Lynceus, sharp-sighted, kept his foe at bay,
And struck his helmet's purple plume away;
Who quick retreating all his art display'd,
And lopt the hand that held the glittering blade:
Down dropt the sword; to his fire's tomb he flew,
Where Idas sat the fatal fight to view;
Close follow'd Castor, all his force apply'd,
And furious drove the faulchion in his side,
Outguth'd his bowels through the gaping wound,
And vanquish'd Lynceus prest the gory ground;

In dim, dark mists the shades of death arise, 81
And in eternal slumber seal his eyes.
Nor was brave Idas by his mother led,
Laocoossa to the nuptial bed:
For he, vindictive of fall'n Lynceus' doom,
Tore up a column from Aphareus' tomb,
Aiming at Castor, dreadfully he stood,
The bold avenger of his brother's blood;
Jove interpos'd, and with the forked brand
Quick struck the polish'd marble from his hand;
He wreath'd convulsive, scorch'd on every side,
And in a peal of rattling thunder dy'd. 92

Thus shall the brothers be with conquest
crown'd,
Brave of themselves, and sprung from chiefs re-
nown'd.

Hail, Leda's valiant sons! my muse inspire,
And still preserve the honour of my lyre.
Ye, and fair Helen, to all bards are dear,
With joy the names of those bold chiefs they hear,
Who in the cause of Menelaus drew
Their conquering swords, proud Ilium to sub-
due. 100

Your praise, O kings, the Chian muse recites
Troy's famous city, and the Phrygian fights,
He sings the Grecian fleet renown'd afar,
And great Achilles, bulwark of the war.
I bring the tribute of a feeble lyre,
Sweet warbling what the rapturous nine inspire,
The best I may; verse to the gods belongs;
The gods delight in honorary songs.

NOTES ON IDYLLIUM XXII. PART II.

Ver. 5. Ovid's account of this battle begins at
verse 700 of the 5th book of his *Fasti*; "Abstu-
lerant raptas Phœben," &c.

The sons of Tyndarus, with conquest crown'd,
For boxing one, and one for steeds renown'd,
Had stol'n, injurious, as their lawful prey,
Lencippus' daughters from their mates away;
Lynceus and Idas claim superior right,
Long since affianc'd, and prepare for fight.
Love urges both to combat on the plain,
These to retake, the others to retain.
The brother-twins might well escape by speed,
But held it base by flying to succeed.
All on an open plain the champions stood,
Aphidna nam'd, fit place for scenes of blood.
Castor by Lynceus' sword receiv'd a wound
Deep in his side, and lifeless prest the ground;
Avengeful Pollux, quick advancing near,
Through Lynceus' shoulders drove the forceful
spear:

On him prest Idas, but Jove's flaming brand
Dash'd the pois'd javelin from his lifted hand.

F. F.

Ver. 16.

Quo, quo scelesti, ruitis? aut cur dexteris
Aptantur enses conditi? *Hor. Epode 7.*

Say, ye vile race, what phrenzy draws
Your darling faulchions in sedition's cause?

Duncombe.

Ver. 33. Thus Æneas says,
Sunt aliæ innuptæ Latio & Laurentibus agris,
Nec genus indecores. *Æn. B. 12. 24.*

Ver. 38.
Turnus avis atavisq. potens. *Æn. 7. 56.*

Ver. 47.
Teucrûm arma quiescant
Et Rutilûm; nostro dirimamus sanguine bellum.
Æn. 12. 78.

The celebrated ballad called Chevy Chace, has
the same thought;

Let thou and I the battle try,
And set our men aside, &c.

Ver. 51. Thus Nisus addresses Euryalus in the
same sense,

Neu matri miseræ tanti sim causa doloris.
Æn. 9. 216.

Why should I cause thy mother's soul to know
Such heart-felt pangs! unutterable woe! *Pitt.*

Ver. 60. Thus Mezentius in Virgil,
At vero ingentum quatiens Mezentius hastam
Ingreditur campo. *Æn. 10. 762.*

Ver. 63. In almost all heroic duels, the combatants first threw their spears, and then made use of their swords. Thus Hector and Achilles, *Iliad*, B. 20. and 22. Menelaus and Paris, B. 3. and the rest of the heroes attack one another. *Potter.*

Ver. 64.
Partes rimatur apertas,
Quà vulnus lethale ferat. *Virg. Æn. B. II. 748.*

Ver. 67.
Vaginâque cavâ fulgentem diripit ensen.
Æn. B. 10.

And from the sheath the shining faulchion drew.
Pitt.

Ver. 71. Horace says,
Non possis oculo quantum contendere Lynceus.
B. I. Ep. I.

Hence the proverb of Lyncean eyes: Pindar tells us, Lynceus could discover Castor and Pollux hid in the trunk of a tree from the top of mount Taygetus: nay, he had so piercing a sight, that if we believe the poets, he could see what was doing in heaven and hell: the ground of the fable was, that he understood the secret powers of nature. Though it may admit of a doubt, whether this is the sharp-sighted Lynceus that attended the Argonautic expedition; from the poet's words, *Ἀργεῖος οὐρανοῖ Λυγκεύς*, I think it manifest that he was.

Ver. 72.
Summasq. excussit vertice cristas. *Æn. 12. 492.*
But the swift javelin strikes his plume away.
Pitt.

Ver. 74.
Strymonio dextram fulgenti diripit ense.
Æn. B. 10. 414.
The faulchion lops his hand.

Ver. 81.
Olli dura quies oculos, et ferreus urget
Somnus; in æternum clauduntur lumina noctem.
Æn. 10. 745.

Ver. 94.
Fortes Creantur fortibus. *Hor. B. 4. Ode 4.*

Ver. 99.
Quincunque Iliacos ferro violavimus agros.
Æn. 11. 255.

Ver. 101. I do not remember that Homer any where mentions Castor and Pollux, except in the third book of the *Iliad*, where the commemoration of them by their sister Helen is finely introduced, and in the true spirit of poetry. I shall beg leave to transcribe the whole passage in the admirable

translation of Mr. Pope, because I think it as beautiful and pathetic as almost any part of the whole work;

Yet two are wanting of the numerous train,
Whom long my eyes have sought, but sought in vain;

Castor and Pollux, first in martial force,
One bold on foot, and one renown'd for horse:
My brothers these; the same our native shore,
One house contain'd us, and one mother bore.
Perhaps the chiefs, from warlike toils at ease,
For distant Troy refus'd to sail the seas:
Perhaps their sword some nobler quarrel draws,
Asham'd to combat in their sister's cause.

So spoke the fair, nor knew her brother's doom,
Wrapt in the cold embraces of the tomb;
Adorn'd with honours in their native shore,
Silent they slept, and heard of wars no more.

As Theocritus both here and in the 7th Idyllium, styles Homer the Chian Bard, *Χίος Ἀνδρόν*, we have reason to conjecture, that Chios has the honour of being the place of his nativity: Simonides in his Epigram on Human Life, calls him the Man of Chios; for quoting a verse of Homer, he says,

Εν δὲ το καλλίστῳ Χίος ἐσιπεν ἀνθρ.

The Chians pleaded these ancient authorities for Homer's being born among them: they mention a race they had, called the Homeridæ, whom they accounted his posterity; they cast medals of him; they show to this day an Homerium, or temple of Homer, near Bolissus; and close their arguments with a quotation from the hymn to Apollo (which is acknowledged for Homer's by Thucydides), where he calls himself, "The blind man that inhabits Chios." One cannot avoid being surpris'd at the prodigious veneration for his character, which could engage mankind with such eagerness in a point so little essential; that kings should send to oracles for the inquiry of his birth-place; that cities should be in strife about it; that whole lives of learned men should be employed upon it; that some should write treatises, others call up spirits about it: that thus, in short, heaven, earth and hell, should be sought to, for the decision of a question which terminates in curiosity only. Thus far Mr. Pope, in his Essay on Homer. Yet, though this point is not essential, and only matter of curiosity, we may observe, that these inquiries, disputes, and contentions, plead strongly in favour of the muses, and set the character of a poet in the most eminent and exalted station.

IDYLLIUM XXIII.

THE DESPAIRING LOVER.

THE ARGUMENT.

AN unhappy lover, despairing to gain the affections of his mistress, by whom he is despised, makes away with himself: the cruel fair is soon after killed by the image of Cupid, that fell upon her as she was bathing.

AN amorous shepherd lov'd a cruel fair;
The haughty beauty plung'd him in despair:

She loth'd the swain, nor aught her breast could
She scorn'd the lover, and the god of love; [move

Nor knew the puissance of his bow and darts,
 To tame the stubbornness of human hearts.
 With cold disdain she griev'd the shepherd sore,
 The more he sigh'd, she scorn'd him still the more.
 No solace she afforded, no soft look,
 Nor e'er the words of sweet compassion spoke : 10
 Her eye, her cheek, ne'er glow'd her flame to prove,
 No kiss she gave, the lenient balm of love :
 But as a lion, on the desert plain,
 With savage pleasure views the hunter train ;
 Thus in her scorn severe delight she took ;
 Her words, her eyes, were fierce, and death was
 in her look.
 She look'd her soul ; her face was pal'd with ire ;
 Yet she was fair ; her frowns but rais'd desire.
 At length, he could no more, but sought relief
 From tears, the dumb petitioners of grief ; 20
 Before her gate he wept, with haggard look,
 And, kissing the bare threshold, thus he spoke :
 ' Ah, savage fair, whom no entreaties move !
 ' Hard heart of stone, unworthy of my love !
 ' Accept this cord, 'tis now in vain to live,
 ' This friendly gift, the last that I shall give ;
 ' I go where doom'd ; my love, my life are o'er,
 ' No more I grieve, and you are teaz'd no more ;
 ' I go the last kind remedy to prove,
 ' And drink below oblivion to my love. 30
 ' But, ah ! what draughts my fierce desires can
 ' Or quench the raging fury of my flame ? [tame,
 ' Adieu, ye doors ! eternally adieu !
 ' I see the future, and I know it true.
 ' Fragrant the rose, but soon it fades away ;
 ' The violet sweet, but quickly will decay ;
 ' The lily fair a transient beauty wears ;
 ' And the white snow soon weeps away in tears :
 ' Such is the bloom of beauty, cropt by time,
 ' Full soon it fades, and withers in its prime. 40
 ' The days will come when your hard heart shall
 ' burn
 ' In scorching flames, yet meet no kind return.

' Yet grant this boon, the last that I implore :
 ' When you shall see, suspended at your door,
 ' This wretched corse, pass not unheeding by,
 ' But let the tear of sorrow dim your eye :
 ' Then loose the fatal cord, and from your breast
 ' Lend the light robe, and screen me with your
 ' vest :
 ' Imprint one kiss when my sad soul is fled ;
 ' Ah, grudge not thus to gratify the dead ! 50
 ' Fear not---your kisses cannot life restore :
 ' Though you relent, yet I shall wake no more.
 ' And last, a decent monument prepare,
 ' And bury with my love my body there ;
 ' And thrice repeat, " Here rests my friend his
 " head ;"
 ' Or rather add, " My dearest lover's dead."
 ' With this inscription be the stone supplied ;
 " By Cupid's dart this hapless shepherd dy'd :
 " Ah ! passenger, a little moment spare
 " To stop, and say, He lov'd a cruel fair." 60
 This said, he tries against the wall to shove
 A mighty stone, and to a beam above
 Suspends the cord, impatient of delay,
 Fits the dire noose, and spurns the stone away ;
 Quivering in air he hung, till welcome death
 Securely clos'd the avenues of breath.
 The fair one, when the pendant swain she saw,
 Nor pity felt, nor reverential awe ;
 But as she pass'd, for not a tear she shed,
 Her garments were polluted by the dead. 70
 Then to the circus, where the wrestlers fought,
 Or the more pleasing bath of love she sought :
 High on a marble pedestal above,
 Frown'd the dread image of the god of love,
 Aiming in wrath the meditated blow,
 Then fell revengeful on the nymph below ;
 With the pure fountain mix'd her purple blood---
 These words were heard emerging from the flood :
 " Lovers, farewell ; nor your admirers flight ;
 " Resign'd I die, for Heav'n pronounces right."

NOTES ON IDYLLIUM XXIII.

THE argument of this Idyllium is similar to the argument of Virgil's second eclogue, though this is more tragical : I have taken the liberty to make a general transformation, which renders it a thousand times more natural, decent, and gallant.

Ver. 1.

Formosum pastor Corydon ardebat Alexim.

Virg. Ec. 2.

Young Corydon with hopeless love ador'd
 The fair Alexis, favourite of his lord. Warton.

Ver. 7. Ovid says of Anaxareté,

Spernit et irridet ; factisque immitibus addit
 Verba superba ferox ; et spe quoque fraudat aman-
 tem. Met. B. 14. 714.

Ver. 16. The Greek is, Εἰς τὴν ἀνάγκην, or, as Heinſius more plausibly reads, Εἰς τὴν ἀνάγκην, " she looked necessity," that is, death or fate ; thus Horace has,

Semotique prius tarda necessitas

Lethi corripuit gradum. B. 1. O. 3.

And, Te semper anteit sæva necessitas. B. 1. O. 35.

Which elegant use of the word *necessitas* he has taken from the Grecians : Pindar has, *εὐχὴν ἀνάγκης* : and Euripides, *δύστην ἀνάγκην*, which is exactly the *dura necessitas* of Horace, B. 3. O. 24.

Ver. 21. Thus Ovid, speaking of Iphis,

Non tulit impatiens longi tormenta doloris
 Iphis, et ante fores hæc verba novissima dixit.

Met. B. 14.

Ver. 30. Virgil says of souls that endure transmigration,

Lethæi ad fluminis undam
 Securos latices, et longa oblivia potant. Æn. B. 6.

To yon dark streams the gliding ghosts repair,
 And quaff deep draughts of long oblivion there.

Pitt.

Ver. 34. *Virg. Æn. 4. 50.*
Haud ignara futuri.

Ver. 36. Thus Ovid, in his Art of Love,
Nec violæ semper nec hiantia lilia florent,
Et riget amissâ spina relicta rosâ. *B. 2. 115.*

Ver. 39. Thus Horace,
Fugit retrò
Levis juvenas et decor. *B. 2. O. 11.*

Ver. 46.
Debitâ sparges lacrymâ favillam
Vatis amici. *Hor. B. 2. O. 6.*

Ver. 53. Thus Virgil,
Et tumulum facite, et tumulo superaddite carmen. *Ec. 5.*

With grateful hands his monument erect,
And be the stone with this inscription deck'd.
Warton.

Ver. 55. Of the inclamation at the tomb, Æ-
neas thus tells Deiphobus,
Magnâ Manes ter voce vocavi. *Æn. 6. 506.*

Ver. 61. The fate of Isis in Ovid is very simi-
lar,
Dixit, et ad postes, &c. *Met. B. 14.*

Then o'er the posts, once hung with wreathes, he
throws

The ready cord, and fits the fatal noose,
For death prepares, and bounding from above,
At once the wretch concludes his life and love.
Garth.

Ver. 79. Moschus, Idyl. 6. has nearly the same
thought. *Ταυτα λεγω πασιν, κ. τ. λ.*

Ye scornful nymphs and swains, I tell
This truth to you; pray mark it well:
"If to your lovers kind you prove,
"You'll gain the hearts of those you love." *F. F.*

The fate of this scornful beauty is similar to that
of a youth who was killed by the statue of his
stepmother falling upon him. See Callimachus,
Epig. 11. thus translated by Mr. Duncombe.

A youth, who thought his father's wife
Had lost her malice with her life,
Officious with a chaplet grac'd
The statue on her tomb-stone plac'd;
When, falling sudden on his head,
With the dire blow it struck him dead:
Be warn'd from hence, each foster-son,
Your stepdame's sepulchre to shun.

IDYLLIUM XXIV.

THE YOUNG HERCULES.

THE ARGUMENT.

THIS Idyllium is entirely narrative: it first of all gives an account how Hercules, when only ten months old, slew two monstrous serpents which Juno had sent to devour him; then it relates the prophecy of Tiresias, and afterwards describes the education of Hercules, and enumerates his several preceptors. The conclusion of this poem is lost.

WASH'D with pure water, and with milk well
To pleasing rest her sons Alcmena led, [fed,
Alcides, ten months old, yet arm'd with might,
And twin Iphiclus younger by a night:
On a broad shield, of fine brass metal made,
The careful queen her royal offspring laid;
(The shield from Pterilus Amphitryon won
In fight, a noble cradle for his son!)
Fondly the babes she view'd, and on each head
She plac'd her tender hands, and thus she said: 10
"Sleep, gentle babes, and sweetly take your rest,
"Sleep, dearest twins, with softest slumbers blest;
"Securely pass the tedious night away,
"And rise refresh'd with the fair rising day."

She spoke, and gently rock'd the mighty shield;
Obsequious slumbers soon their eye-lids seal'd.
But when at midnight sunk the bright-ey'd Bear,
And broad Orion's shoulder 'gan appear,
Stern Juno, urg'd by unrelenting hate,
Sent two fell serpents to Amphitryon's gate, 20
Charg'd with severe commission to destroy
The young Alcides, Jove-begotten boy:
Horrid and huge, with many an azure fold,
Fierce through the portal's opening valves they
roll'd;

TRANS. II,

Then on their bellies prone, high swoln with gore,
They glided smooth along the marble floor;
Their fiery eye-balls darted sanguine flame,
And from their jaws destructive poison came.
Alcmena's sons, when near the serpents prest,
Darting their forked tongues, awoke from rest; 30
All o'er the chamber shone a sudden light,
For all is clear to Jove's discerning sight.
When on the shield his foes Iphiclus saw,
And their dire fangs that arm'd each horrid jaw,
Aghast he rais'd his voice with bitter cry,
Threw off the covering, and prepar'd to fly:
But Hercules stretch'd out his hands to clasp
The scaly monsters in his iron grasp;
Fast in each hand the venom'd jaws he prest
Of the curst serpents, which ev'n gods detest. 40
Their circling spires, in many a dreadful fold,
Around the flow-begotten babe they roll'd,
The babe unwean'd, yet ignorant of fear,
Who never utter'd cry, nor shed a tear.
At length their curls they loos'd, for rack'd with
pain

They strove to 'scape the deathful gripe in vain.
Alcmena first o'erheard the mournful cries,
And to her husband thus: "Amphitryon, rise!

■

" Distressful fears my boding soul dismay;
 " This instant rise, nor for thy sandals stay: 50
 " Hark, how for help the young Iphiclus calls!
 " A sudden splendour, lo! illumines the walls!
 " Though yet the shades of night obscure the skies;
 " Some dire disaster threatens: Amphitryon, rise."

She spoke: the prince, obedient to her word,
 Rose from the bed, and seiz'd his rich-wrought sword,

Which, on a glittering nail above his head,
 Hung by the baldrick to the cedar bed;
 Then from the radiant sheath, of lotos made,
 With ready hand he drew the shining blade: 60
 Instant the light withdrew, and sudden gloom
 Involv'd again the wide-extended room.

Amphitryon call'd his train, that slumbering lay,
 And slept secure the careless hours away.

" Rise, rise, my servants, from your couches strait,
 " Bring lights this instant, and unbar the gate."

He spoke: the train, obedient to command,
 Appear'd with each a flambeau in his hand:

Rapt with amaze, young Hercules they saw
 Grasp two fell serpents close beneath the jaw: 70

The mighty infant show'd them to his fire,
 And smil'd to see the wreathing snakes expire;

He leapt for joy that thus his foes he slew,
 And at his father's feet the scaly monsters threw.

With tender care Alcmena fondly prest,
 Half-dead with fear, Iphiclus to her breast;

While o'er his mighty son Amphitryon spread
 The lamb's soft fleece, and sought again his bed.

When thrice the cock pronounc'd the morning
 near,

Alcmena call'd the truth-proclaiming seer, 80
 Divine Tiresias; and to him she told

This strange event, and urg'd him to unfold
 Whate'er the adverse deities ordain: [plain;

" Fear not," she cried, " but fate's whole will ex-
 " For well thou know'st, O! venerable seer,

" Those ills which fate determines, man must
 " bear."

She spoke: the holy augur thus reply'd:

" Hail, mighty queen, to Perseus near ally'd;

" Parent of godlike chiefs: by these dear eyes,

" Which never more shall view the morning

rise, 90

" Full many Grecian maids, for charms renown'd,

" While merrily they twirl the spindle round,

" Till day's decline thy praises shall proclaim,

" And Grecian matrons celebrate thy fame.

" So great, so noble will thy offspring prove,

" The most gigantic of the gods above, [fway,

" Whose arm, endow'd with more than mortal

" Shall many men and many monsters slay:

" Twelve labours past, he shall to heav'n aspire, 100

" His mortal part first purified by fire,

" And son-in-law be nam'd of that dread power

" Who sent these deadly serpents to devour

" The slumbering child: then wolves shall rove

" the lawns,

" And strike no terror in the pasturing fawns.

" But, O great queen! be this thy instant care,

" On the broad hearth dry faggots to prepare,

" Aspalathus, or prickly brambles, bind,

" Or the tall thorn that trembles in the wind,

" And at dark midnight burn (what time they
 " came

" To slay thy son) the serpents in the flame. 110

" Next morn, collected by thy faithful maid,

" Be all the ashes to the flood convey'd, [wind,

" And blown on rough rocks by the favouring

" Thence let her fly, but cast no look behind.

" Next with pure sulphur purge the house, and

" bring

" The purest water from the freshest spring;

" This, mix'd with salt, and with green olive

" crown'd,

" Will cleanse the late contaminated ground.

" Last, let a boar on Jove's high altar bleed,

" That ye in all achievements may succeed." 120

Thus spoke Tiresias, bending low with age,

And to his ivory car retir'd the reverend sage,

Alcides grew beneath his mother's care,

Like some young plant, luxuriant, fresh, and fair,

That screen'd from storms defies the baleful blast,

And for Amphitryon's valiant son he past,

Linus, who claim'd Apollo for his sire,

With love of letters did his youth inspire,

And strove his great ideas to enlarge,

A friendly tutor, faithful to his charge. 130

From Eurytus his skill in shooting came,

To send the shaft unerring of its aim.

Eumolpus tun'd his manly voice to sing,

And call sweet music from the speaking string.

In list'd fields to wrestle with his foe,

With iron arm to deal the deathful blow,

And each achievement where fair fame is sought,

Harpalycus, the son of Hermes, taught;

Whose look so grim and terrible in fight,

No man could bear the formidable fight. 140

But fond Amphitryon, with a father's care,

To drive the chariot taught his godlike heir,

At the sharp turn with rapid wheels to roll,

Nor break the grazing axle on the goal;

On Argive plains, for generous steeds renown'd,

Oft was the chief with race-won honours crown'd;

And still unbroke his ancient chariot lay,

Though cankering time had eat the reins away.

To launch the spear, to rush upon the foe,

Beneath the shield to shun the faulchion's blow,

To marshal hosts, opposing force to force, 151

To lay close ambush, and lead on the horse,

These Castor taught him, of equestrian fame,

What time to Argos exil'd Tydeus came,

Where from Adrastus he high favour gain'd,

And o'er a kingdom, rich in vineyards, reign'd.

No chief like Castor, till consuming time

Unnerv'd his youth, and crop'd the golden prime.

Thus Hercules, his mother's joy and pride,

Was train'd up like a warrior: by the side 160

Of his great father's his rough couch was spread,

A lion's spoils compos'd his grateful bed.

Roast meat he lov'd at supper to partake,

The bread he fancied was the Doric cake,

Enough to satisfy the labouring hind;

But still at noon full sparingly he din'd.

His dress, contriv'd for use, was neat and plain;

His skirts were scanty, for he wore no train.

The conclusion of this Idyllium is wanting in the original.

NOTES ON IDYLLIUM XXIV.

Ver. 7. Virgil says nearly the same thing of the coat of mail which was taken from Demoleus, *Loricam quam Demoleo detraxerat ipse*.
Victor apud rapidum Simoenta sub illo alto.

Æn. B. 5. 260.

By observing the use this shield is put to, we have an agreeable picture presented to the mind: it is an emblem of the peace and tranquillity which always succeed the tumults of war; and likewise a prognostic of the future greatness of this mighty champion in embryo.

Ver. 19. Pindar, in his first Nemæan Ode, tells this same story, which, as it may be a satisfaction to the curious to see how different writers manage the same subject, I shall take the liberty to give in Mr. West's translation.

Then glowing with immortal rage,
The gold-enthroned empress of the gods,
Her eager thirst of vengeance to assuage,
Strait to her hated rival's curs'd abodes
Bade her vindictive serpents haste.

They through the opening valves with speed
On to the chamber's deep recesses past,

To perpetrate their murderous deed:
And now, in knotty mazes to unfold

Their destin'd prey, on curling spires they roll'd,
His dauntless brow, when young Alcides rear'd,

And for their first attempt his infant arms prepar'd.
Fast by their azure necks he held,
And grip'd in either hand his scaly foes;
Till from their horrid carcases expell'd,
At length the poisonous soul unwilling flows.

Ver. 27. The Greek is, *απ' οφθαλμων δε κακον πυρ Ερχομεναις λαμπισκε*; "a pernicious flame shot from their eyes as they approached:" Pierson, (see his *Verisimilia*) reads with much more elegance and propriety *Διερχομεναις*, "looking very keenly," as the eyes of serpents are always represented: Hesiod, speaking of dragons, uses the same word twice, *εξ κεφαλων πυρ παειν δερκομεναις*. Theog. ver. 828. and in the shield of Hercules, ver. 145, *λαμπομεναισι δεδορκως*. He brings likewise the authorities of Homer, Æschylus and Opi-
pian, to support this reading: Virgil has,

*Ardentesq; oculi suffecti sanguine et igni,
Sibila lambebant linguis vibrantibus ora.*

Æn. B. 2. 210.

Ver. 41. Thus Virgil, speaking of the serpents that devoured Laocoon's sons,

Parva duorum Corpora natorum, &c.

Æn. B. 2. 213.

And first in curling fiery volumes bound
His two young sons, and wrapt them round and round.

Pitt.

Ver. 64. The Greek is, *υπνον βαρυν εκπυσαντας*, similar to what Virgil says of Rhamnes, *Æn. 9. 326.*

—In slumbers deep he lay,
And, labouring, slept the full debauch away.

Ver. 75. Thus Virgil,
Et trepidæ matres pressiere ad pectora natos.

Æn. B. 7. 518.

Ver. 84. Thus Achilles says to Calchas, *Il. B. 1.*

From thy inmost soul
Speak what thou know'st, and speak without con-
troul.

Pope.

Fix'd is the term to all the race of earth,
And such the hard condition of our birth:
No force can then resist, no flight can save;
All sink alike, the fearful and the brave.

Ver. 96. The words of Theocritus are *απο τερονων πλατυς ηρω*; "the broad-breasted hero;" I am in doubt how it should be rendered: Creech has translated it, "The noblest burden of the bending sky." In Homer's *Odyssey*, B. 11. Hercules is thus represented among the shades below,

Now I the strength of Hercules behold,
A towering spectre of gigantic mould;
A shadowy form! for high in heaven's abodes
Himself resides, a god among the gods.

Pope.

On which Mr. Pope observes, "The ancients imagined, that immediately after death, there was a partition of the human composition into three parts, the *body*, *image*, and *mind*; the *body* is buried in the earth; the *image*, or *ειδωλον*, descends into the regions of the departed; the *mind*, or *φρον*, the divine part, is received into heaven; thus the body of Hercules was consumed in the flames, his image is in hell, and his soul in heaven."

Ver. 100. The Greek is, *θηητα δε παντα πυρκα Τραχινιος εζει*, "The Trachinian pyre will consume his mortal part." Trachin was a city of Thessaly built by Hercules, and the place to which he sent to Dejanira for the shirt which proved fatal to him, and was the occasion of throwing himself into the fire that consumed him; hence therefore, probably, Theocritus calls it the Trachinian pyre.

Ver. 103. Virgil has, "Nec lupo infidias pecori," &c. Both authors seem to have borrowed from Isaiah, chap. ii. ver. 6. "The wolf shall dwell with the lamb, and the leopard shall lie down with the kid."

Ver. 105. Archbishop Potter observes, "Sometimes the ominous thing was burnt with *ligna infelicia*, that is, such sort of wood as was in *tutela inferum deorum avertentiumque*, sacred to the gods of hell, and those which averted evil omens, being chiefly thorns and such other trees as were fit for no other use than to be burned."

K ij

Sometimes the prodigy, when burnt, was cast into the water, and particularly into the sea, as Theocritus has described. Chap. xvii.

Ver. 107. A plant called the Rose of Jerusalem, or our Lady's Thorn. *Johnson's Dict.*

The Greek is *παλιυρος*, "paliuros," which Martyn says, is most probably the plant which is cultivated in our gardens under the name of Christ's Thorn, and is supposed to be the thorn, of which the crown was made, that was put upon our Saviour's head. Notes on Virg. Ecl. 5.

Ver. 108. The Greek is *ἡ ἀνέμος διδονήμενον ἄνρον ἀχέρδον*, "or the dry acherdus which is agitated by the wind:" it is uncertain what plant will answer to the acherdus of the ancients: Homer in the Odyssey, B. 14. ver. 10. has fenced the sylvan lodge of Eumæus with acherdus, *καὶ ἀνέγκασιν ἀχέρδον*,

The wall was stone, from neighb'ring quarries borne,

Encircled with a fence of native thorn. *Pope.*

Ver. 111. The most powerful of all incantations was to throw the ashes of the sacrifice backward into the water. Thus Virgil, "Fer cineres, Amarilli, foras; rivoq; fluenti."

Transque caput jace; ne respexeris. *Ecl. 8.*

Ver. 124. Theocritus has borrowed this from Homer, Il. B. 18. Thetis, speaking of her son, says,

Τον μὲν ἐγὼ βρέψασα, φυτόν αὖ γένον αἰώης.

Like some fair plant, beneath my careful hand,
He grew, he flourish'd, and he grac'd the land.

Pope.

Ver. 140. Virgil says of Dares,

Nec quisquam ex agmine tanto
Audet adire virum, manibusq; inducere cæstus.

Æn. B. 5.

Ver. 144. In the chariot-race, the greatest care was to be taken to avoid running against the goal; Nestor, in the 23d book of the Iliad, very particularly cautions his son in regard to this point; and Horace says,

Metaque servidis Evitata rotis.

Ode 1.

Ver. 154. The Greek is,

*Καστορ ἰππαλίδας ἰδαιν, φυχας Ἀργεος εἰδων,
Ὅτ' ἄποκα κληρον ἀπαγτα καὶ οἰνοπέδον μέγα Τυδείης
Ναιε, παρ' Ἀδραστοῖο λαβὼν ἰππλάστον Ἀργεος.*

"These accomplishments Castor, skilled in horsemanship, taught him, when he came an exile from Argos, at the time that Tydeus ruled over the whole kingdom famed for vineyards, having received Argos from Adrastus. There is great inconsistency in this passage, which nobody, that I know of, has observed or tried to remedy: we have no account in history, that Castor came a fugitive to Argos, but that Tydeus did, we have indisputable authority. See Homer's Il. B. 14. ver. 119. Diomed says of his father, *πατὴρ ἔλκος Ἀργεὺς κούρη, κ. τ. λ.*

My fire: from Calydon expell'd
He past to Argos, and in exile dwell'd;
The monarch's daughter there (so Jove ordain'd),
He won, and flourish'd where Adrastus reign'd:
There rich in fortune's gifts his acres till'd,
Beheld his vines their liquid harvest yield,
And numerous flocks that whiten'd all the field.

Pope.

On which Eustathius observes; "This is a very artful colour: Diomed calls the flight of his father, for killing one of his brothers, travelling and dwelling at Argos, without mentioning the cause or occasion of his retreat." Might I venture to offer an emendation, I would read, *φυχας Ἀργεὺς εἰδων*, and then the construction might be, "Castor taught him these accomplishments at the time that Tydeus reigned over the kingdom of Argos, whither he had fled an exile, having received the sovereignty from Adrastus." Thus the passage becomes correspondent with Homer, with good sense and history; for Tydeus fled from Calydonia to Argos for manslaughter, where he married Deipyle, the daughter of Adrastus, and it should seem by this passage, afterwards succeeded him in the kingdom.

Ver. 164. A coarse bread like those cakes which the Athenians called *πλάκας*.

IDYLLIUM XXV.

HERCULES THE LION-SLAYER.

THE ARGUMENT.

HERCULES having occasion to wait upon Augéas king of Elis, meets with an old herdsman, by whom he is introduced to the king, who, with his son Phyleus, had come into the country to take a view of his numerous herds: afterwards Hercules and Phyleus walk together to the city; in the way, the prince admiring the monstrous lion's skin which Hercules wore, takes occasion to inquire where he had it; this introduces an account how Hercules slew the Nemean lion.

The beginning is wanting.

THE good old herdsman laid his work aside,
And thus complacent to the chief reply'd:

Whate'er you ask, O stranger, I'll impart,
Whate'er you wish, and with a cheerful heart;
For much I venerate the son of May,
Who stands rever'd in every public way:

' Those most he hates of all the gods on high
 ' Who the lone traveller's request deny.
 ' The numerous flocks your eyes behold around,
 ' With which the vales are stor'd, the hills are
 ' crown'd,
 ' Augeas owns; o'er various walks they spread,
 ' In different meads, in different pastures fed;
 ' Some on the banks of Elisuntus stray,
 ' Some where divine Alphæus winds his way,
 ' Some in Buprasium, where rich wines abound,
 ' And some in this well-cultivated ground.
 ' And though exceeding many flocks are told,
 ' Each separate flock enjoys a separate fold.
 ' Here, though of oxen numerous herds are seen,
 ' Yet springs the herbage ever fresh and green 20
 ' In the moist marsh of Menius: every mead,
 ' And vale irriguous, where the cattle feed,
 ' Produce sweet herbs, embalm'd in dewy tears,
 ' Whose fragrant virtue fattens well the steers.
 ' Behold that stall beyond the winding flood,
 ' Which to the right appears by yonder wood,
 ' Where the wild olive, and perennial plane,
 ' Grow, spread, and flourish, great Apollo's fane,
 ' To which the hinds, to which the shepherds bow,
 ' And deem him greatest deity below! 30
 ' Next are the stalls of swains, whose labours bring
 ' Abundant riches to the wealthy king;
 ' Four times each year the fertile soil they plough,
 ' And gather thrice the harvests which they sow;
 ' The lab'ring hinds, whose hands the vineyards
 ' dress,
 ' Whose feet the grapes in purple autumn press,
 ' Know well the vast domain Augéas owns,
 ' Rich fields, whose lap the golden ear imbrowns,
 ' Or shaded gardens, far as yonder hills,
 ' Whose brows are water'd by resplendent rills;
 ' This spacious tract we tend with daily care,
 ' As fits those swains who rural labours share.
 ' But say (and all my service you shall claim),
 ' Say for what cause you here a stranger came:
 ' Would you the king or his attendants see?
 ' I can conduct you; only trust to me.
 ' For such your form, and such your manly grace,
 ' You seem deriv'd from no ignoble race:
 ' Sure thus the gods, that boast celestial birth,
 ' Appear majestic to the sons of earth.' 50
 ' He spoke: and thus Jove's valiant son reply'd:
 ' My wandering steps let some kind shepherd
 ' guide
 ' To king Augéas, whom these realms obey;
 ' To see Augéas am I come this way.
 ' But if fair justice the good monarch draws
 ' To Elis, to administer the laws,
 ' Conduct me to some honourable swain,
 ' Who here presides among his rural train,
 ' That I to him my purpose may disclose,
 ' And follow what his prudence shall propose: 60
 ' For heaven's eternal wisdom has decreed,
 ' That man of man should ever stand in need.'
 ' Thus he: the good old herdsman thus reply'd:
 ' Sure some immortal being is your guide:
 ' For lo! your business is already done;
 ' Last night the king, descendant of the sun,
 ' With royal Phyleus, from the town withdrew,
 ' His flocks unnumber'd, and his herds to view.

' Thus when great kings their own concerns ex-
 ' plore,
 ' By wise attention they augment their store. 70
 ' But let me quick, for time is on the wing,
 ' In yonder tent conduct you to the king.'
 ' This said, he walk'd before his royal guest,
 ' Much wondering, much revolving in his breast,
 ' When at his back the lion's spoils he saw,
 ' And in his hand the club infusing awe.
 ' He wish'd to ask the hero whence he sprung?
 ' The rising query dy'd upon his tongue:
 ' He fear'd the freedom might be deem'd a fault:
 ' 'Tis difficult to know another's thought. 80
 ' The watchful dogs, as near the stalls they went,
 ' Perceiv'd their coming by their tread and scent,
 ' With open mouths from every part they run,
 ' And bay'd incessant great Amphitryon's son;
 ' But round the swain they wagg'd their tails and
 ' play'd,
 ' And gently whining secret joy betray'd.
 ' Loose on the ground the stones that ready lay
 ' Eager he snatch'd, he drives them far away;
 ' With his rough voice he terrified them all, 89
 ' Though pleas'd to find them guardians of his stall.
 ' Ye gods! (the good old herdsman thus began)
 ' What useful animals are dogs to man?
 ' Had Heav'n but sent intelligence to know
 ' On whom to rage, the friendly or the foe,
 ' No creature then could challenge honour more,
 ' But now too furious, and too fierce they roar.'
 ' He spoke; the growling mastiffs ceas'd to bay,
 ' And stole obsequious to their stalls away.
 ' The sun now westward drove his radiant steeds,
 ' And evening mild the noontide heat succeeds;
 ' His orb declining from the pastures calls 101
 ' Sheep to their folds, and oxen to their stalls.
 ' Herd following herd, it joy'd the chief to see
 ' Unnumber'd cattle winding o'er the lea.
 ' Like watery clouds arising thick in heaven,
 ' By the rough south or Thracian Boreas driven;
 ' So fast the shadowy vapours mount on high,
 ' They cover all the region of the sky;
 ' Still more and more the gathering tempest brings,
 ' And weightier burdens on its weary wings. 110
 ' Thus thickening march the cattle o'er the plain,
 ' More than the roads or meadows can contain;
 ' The lusty herds incessant bellowing keep,
 ' The stalls are fill'd with steers, the folds with
 ' sheep.
 ' Though numerous slaves stand round of every kind,
 ' All have their several offices assign'd.
 ' Some tie the cow's hind legs, to make her stand
 ' Still, and obedient to the milker's hand:
 ' Some give to tender calves the swelling teat,
 ' Their sides distend with milky beverage sweet.
 ' Some form fat cheeses with the housewife's art,
 ' Some drive the heifers from the bulls apart. 122
 ' Augéas visited the stalls around,
 ' To see what stores in herds and flocks abound;
 ' With curious eye he mov'd majestic on,
 ' Join'd by Alcides and his royal son.
 ' Here Hercules, of great and steady soul,
 ' Whom mean amazement never could controul,
 ' Admir'd such droves in myriads to behold,
 ' Such spreading flocks that never could be told,

Not one king's wealth he thought them, nor of
ten,

Though greatest of the rulers over men:

The sun his fire this privilege assign'd, [kind:

To be in flocks and herds more rich than all man-

These still increas'd; no plague e'er render'd vain

The gainful labour of the shepherd swain;

Year following year his industry was blest, [best.

More calves were rear'd, and still the last were

No cows e'er cast their young, or e'er declin'd,

The calves were chiefly of the female kind. 140

With these three hundred bulls, a comely sight,

Whose horns were crooked, and whose legs were

white;

And twice an hundred of bright glossy red,

By whom the business of increase was sped:

But twelve, the flower of all, exulting run

In the green pastures, sacred to the sun;

The stately swan was not so silver white,

And in the meads they took ineffable delight:

These, when gaunt lions from the mountain's

brow

Descend terrific on the herds below, 150

Rush to the war, the savage foe they gore,

Their eyes look death, and horribly they roar.

But most majestic these bold bulls among

Stalk'd Phaëton, the sturdy and the strong;

So radiant, so refulgent from afar,

The shepherd swains compar'd him to a star.

When round the shoulders of the chief he spy'd,

Alarming sight! the lion's tawny hide,

Full at his flank he aim'd his iron head,

And proudly doom'd the matchless hero dead: 160

But watchful Hercules, devoid of fear,

Seiz'd his left horn, and stopp'd his mad career;

Prone to the earth his stubborn neck he prest,

Then writh'd him round, and bruise'd his ample

chest,

At one bold push exerted all his strength,

And high in air upheld him at arm's length.

Through all the wondering train amazement ran,

Silent they gaz'd, and thought him more than man.

Phyleus and Hercules (the day far spent)

Left the rich pastures, and to Elis went: 170

The footpath first, which tow'rd the city lay,

Led from the stalls, but narrow was the way:

Through vineyards next it pass'd, and gloomy glades,

Hard to distinguish in the greenwood shades.

The devious way as noble Phyleus led,

To his right shoulder he inclin'd his head,

And slowly marching through the verdant grove,

Thus mild bespoke the progeny of Jove:

'By your last bold achievement it appears,

'Great chief, your fame long since has reach'd

'my ears, 180

'For here arriv'd a youthful Argive swain,

'From Helicé that borders on the main,

'Who for a truth among th' Epæans told,

'That late he saw a Grecian, brave and bold,

'Slay a fell lion, fell to husbandmen,

'That in the Nemean forest made his den:

'Whether the chief from sacred Argos came,

'Or proud Mycené, or Tirynthé claim

'His birth, I heard not: yet he trac'd his line,

'If true my tale, from Perseus the divine. 190

'No Greek but you could such a toil sustain;

'I reason from that mighty monster slain.

'A perilous encounter: whose rough hide

'Protects your shoulders, and adorns your side.

'Say then, if you are he, the Grecian bold,

'Of whom the Argive's wondrous tale was told:

'Say, what dread weapon drunk the monster's

'blood,

'And how he wander'd to the Nemean wood,

'For not in Greece such savages are found,

'No beasts thus huge infest Achaian ground; 200

'She breeds the ravenous wolf, the bear, the boar,

'Pernicious monsters! but she breeds no more.

'Some wonder'd at accounts so strange and new,

'Thought the Greek boastful, and his tale un-

'true.'

Thus Phyleus spoke, and as the path grew wide,

He walk'd attentive by the hero's side,

To hear distinct the toil-sustaining man,

Who thus, obsequious to the prince, began:

"Son of Augéus, what of me you heard

"Is strictly true, nor has the stranger err'd. 210

"But since you wish to know, my tongue shall

"tell, [fell,

"From whence the monster came, and how he

"Though many Greeks have mention'd this affair

"None can the truth with certainty declare.

"'Tis thought some god, by vengeful anger sway'd,

"Sent this sore plague for sacrifice unpaid,

"To punish the Phoroneans: like a flood

"He delug'd the Pisæan fields with blood:

"The Bembinæans, miserable men,

"Felt his chief rage, the neighbours to his den.

"The hardy task, this hideous beast to kill,

"Eurystheus first enjoin'd me to fulfil,

"But hop'd me slain: on the bold conflict bent,

"Arm'd to the field with bow and darts I went,

"A solid club, of rude wild olive made,

"Rough in his rugged rind my right hand sway'd:

"On Helicon's fair hill the tree I found,

"And with the roots I wrench'd it from the

"ground.

"When the close covert I approach'd, where lay

"The lordly lion lurking for his prey, 230

"I bent my bow, firm fix'd the string, and strait

"Notch'd on the nerve the messenger of fate:

"Then circumspect I pry'd with curious eye,

"First, unobserv'd, the ravenous beast to spy.

"Now mid-day reign'd; I neither could explore

"His paw's broad print, nor hear his hideous roar;

"Nor labouring rustic find, nor shepherd swain,

"Nor cowherd tending cattle on the plain,

"To point the lion's lair: fear chill'd them all,

"And kept the herds and herdsmen in the stall. 240

"I search'd the groves and saw my foe at length;

"Then was the moment to exert my strength.

"Long ere dim evening clos'd, he sought his den,

"Gorg'd with the flesh of cattle and of men;

"With slaughter stain'd his squalid mane ap-

"pear'd, [smear'd,

"Stern was his face, his chest with blood be-

"And with his pliant tongue he lick'd his gory

"beard.

"Mid shady shrubs I hide myself with care,

"Expecting he might issue from his lair,

" Full at his flank I sent a shaft, in vain, 250
 " The harmless shaft rebounded on the plain.
 " Stunn'd, at the shock, from earth the savage
 " rais'd
 " His tawny head, and all around him gaz'd :
 " Wondering from whence the feather'd ven-
 " geance flew,
 " He gnash'd his horrid teeth, tremendous to the
 " view.
 " Vex'd that the first had unavailing fled,
 " A second arrow from the nerve I sped :
 " In his broad chest, the mansion of his heart,
 " I launch'd the shaft with ineffectual art ;
 " His hair, his hide the feather'd death repel ;
 " Before his feet it innocently fell. 261
 " Enrag'd, once more, I try'd my bow to draw,
 " Then first his foe the furious monster saw :
 " He lash'd his sturdy sides with stern delight,
 " And rising in his rage prepar'd for fight.
 " With instant ire his main erected grew,
 " His hair look'd horrid, of a brindled hue ;
 " Circling his back, he seem'd in act to bound,
 " And like a bow he bent his body round :
 " As when the fig-tree skilful wheelers take, 270
 " For rolling chariots rapid wheels to make ;
 " The fellies first, in fires that gently glow,
 " Gradual they heat, and like a circle bow ;
 " Awhile in curves the pliant timber stands,
 " Then springs at once elastic from their hands.
 " On me thus from afar, his foe to wound,
 " Sprung the fell lion with impetuous bound.
 " My left hand held my darts direct before,
 " Around my breast a thick strong garb I wore :
 " My right, club guarded, dealt a deadly blow 288
 " Full on the temples of the rushing foe :

" So hard his skull, that with the sturdy stroke,
 " My knotted club of rough wild-olive broke :
 " Yet ere I clos'd, his savage fury fled,
 " With trembling legs he stood, and nodding
 " head ;
 " The forceful onset had confus'd his brain,
 " Dim mists obscur'd his eyes, and agonizing pain.
 " This I perceiv'd ; and now, an easy prey,
 " I threw my arrows and my bow away,
 " And ere the beast recover'd of his wound, 290
 " Seiz'd his thick neck, and pinn'd him to the
 " ground ;
 " With all my might on his broad back I prest,
 " Lest his fell claws should tear my adverse breast ;
 " Then mounting, close my legs in his I twin'd,
 " And with my feet secur'd his paws behind ;
 " My thighs I guarded and with all my strength
 " Heav'd him from earth, and held him at arms
 " length,
 " And strangled thus the fellest of the fell ;
 " His mighty soul descending sunk to hell.
 " The conquest gain'd, fresh doubts my mind
 " divide, 300
 " How shall I strip the monster's shaggy hide ?
 " Hard task ! for the tough skin repell'd the
 " dint
 " Of pointed wood, keen steel, or sharpest flint :
 " Some god inspir'd me, standing still in pause,
 " To slay the lion with the lion's claws.
 " This I accomplish'd, and the spoil now yields
 " A firm security in fighting fields :
 " Thus, Phyleus, was the Nemean monster slain,
 " The terror of the forest and the plain,
 " That flocks and herds devour'd, and many a
 " village swain." 310

NOTES ON IDYLLIUM XXV.

Though this noble Idyllium is by far the longest of any that Theocritus has left us, containing, exclusive of the beginning which is lost, no less than 281 verses, yet the commentators, Scaliger, Casaubon, and D. Heinſius, have not left us one single emendation or note upon it : and therefore I shall trouble the reader with but few observations : yet these gray old critics have been lavish of their remarks upon the 27th Idyllium, infinitely the most obscene of all the pieces that have been attributed to Theocritus. One remark is very obvious, that the first part of this Idyllium, as far as ver. 178 in the translation, is entirely pastoral and bucolic ; containing beautiful descriptions of meadows, pastures, hills, vales, rivers, shepherds, herdsmen, and their stalls and dogs, flocks and herds innumerable : the second part is an account of a famous exploit performed by Hercules, and therefore the whole must surely belong to the Arcadian poetry.

Ver. 6. The ancients erected statues to Mercury in the public roads, as guides to travellers, which they called *Hermæ* ; they were of marble

and four square ; nothing but the head was finished ; thus Juvenal, Sat. 8. 53.

—Truncoque simillimus *Hermæ*.

Nullo quippe alio vincis discrimine, quam quod illi marmoreum caput est, tua vivit imago.

Ver. 13. A river near Elis.

Ver. 14. A famous river of Arcadia near Elis, which the ancients feigned to have sunk under ground, and so passed through the sea, without mixing its streams with the salt waters, till arriving at Sicily, it mingled its current with the fountain *Arethusa* near Syracuse. Thus Virgil, *Æn.* 3. 694. "*Alpheum fama est*," &c.

Hither 'tis said *Alphæus* from his source
 In Elis' realms, directs his watery course :
 Beneath the main he takes his secret way,
 And mounts with *Arethusa* up to day. *Pitt.*

Ver. 15. A city and country of Achaia near Elis, from *Buprasius* its founder.

Those where fair Elis and *Buprasium* join.

Pope's II. B. 2.

Ver. 20.
Non liquidi gregibus fontes, non gramina defunt.
Geor. 2. 200.

There for thy flocks fresh fountains never fail,
Undying verdure clothes the grassy vale. *Warton.*

Ver. 27. This tree was sacred to Apollo, and substituted as a temple where presents were offered to him: Virgil, speaking of an olive tree, *Æn. 12. 766.* says,
Servati ex undis ibi figere dona solebant
Laurenti divo.

The shipwreck'd sailors, on the hallow'd wood,
Hung their devoted vests in honour of the god.
Pitt.

Ver. 33. Virgil says, that the soil for vines,
Quotannis
Terque quaterque solum scindendum. *Geor. B. 2.*
Thrice and four times, the soil, each rolling year,
The ponderous ploughs and heavy drags must bear.
War.

Ver. 46.
Credo equidem, nec vana fides, genus esse deorum.
Virg.

Ver. 55.
Evandrum petimus. *Æn. B. 8.*

Ver. 55. Thus Dido in Virgil,
Jura dabat legesq. viris, operumque laborem
Partibus æquabat justis. *Æn. B. 1. 511.*

Ver. 64.
Dis equidem auspiciis reor, et Junone secundâ,
Huc cursum Iliacas vento tenuisse carinas. *Æn. 4.*

Ver. 81. Here Theocritus imitates Homer; see
Odyf. B. 14. 20.

Soon as Ulysses near th' enclosure drew,
With open mouths the furious mastiffs flew. *Pope.*

On which Mr. Pope observes, 'What Homer speaks of Ulysses, Theocritus applies to Hercules; a demonstration that he thought it to be a picture of nature, and therefore inserted it in that heroic Idyllium.'

Ver. 88. Thus also Eumæus did,
With show'rs of stones he drives them far away,
The scattering dogs around at distance bay. *Pope.*

Ver. 100. Thus the herds in Virgil return home in the evening,

Vesper ubi e pastu vitulos ad tecta reducit.
Geor. 4. 433.

When evening homewards drives the calves and sheep.
Warton.

Ver. 105. This simile finely represents the unnumbered herds of Augéas, and is very like a passage in Homer's *Il. B. 4.* which I shall beg leave to transcribe.

In one firm orb the bands were rang'd around,
A cloud of heroes blacken'd all the ground.
Thus from a lofty promontory's brow,
A swain surveys the gathering storm below;
Slow from the main the heavy vapours rise,
Spread in dim streams, and sail along the skies,

Till black as night the swelling tempest shows
The clouds condensing as the west-wind blows.
Pope.

Ver. 122. Thus Virgil says in regard to the management of bulls,

Aut intus clausos satura ad præsepia servant.
Geor. 3. 214.

Ver. 126. Thus Virgil,
———ibat rex obsitus ævo;
Et comitem Æneam juxta natumque tenebat. *B. 8.*

Ver. 133. We may here observe, that Theocritus makes the great increase of the herds of Augéas, to arise from the gift and influence of the sun, his father.

Ver. 140. This circumstance must occasion a prodigious propagation: thus exceedingly increased the cattle of Jacob, *Genesis xxx. 30—43.* "Thy cattle is now increased to a multitude: and the man increased exceedingly, and had much cattle." And chap. xxxi. 38. Jacob says, "These twenty years have I been with thee; thy ewes and thy she-goats have not cast their young."

Ver. 149. The Greek word is *lions*, and in this place properly signifies *lions*, as it does also in the *Iliad*, *B. 15. ver. 586.*; and the bull Phaëton's being alarmed at seeing the skin of the Nemean lion, *ver. 158.* seems in a very agreeable manner to determine this construction.

Ver. 182. Was once a city of Achaia, three quarters of a league from Corinth, but swallowed up by the sea.

Ver. 186. Thus Virgil,
Tu mactus vastum Nemeâ sub rupe leonem.
Æn. 8. 294.

Beneath thy arm the Nemean monster fell. *Pitt.*

Ver. 188. A city near Argos where Hercules was nursed, whence he is called Tirynthius.

Ver. 190. Was grandfather to Amphitryon, the husband of Alcmena.

Ver. 200. Thus Horace,
Quale portentum neque militaris
Daunia in latis alit esculetis, &c. *B. 1. Od. 22.*

Ver. 202.
At rabidæ tigres absunt, et sæva leonum semina.
Virg. Geor. 2. 151.

Ver. 211.
At si tantus amor casus cognoscere nostros.
Æn. B. 2. 10.

Ver. 217. Inhabitants of a city in Argos: Phoroneus, the son of Inachus, succeeded his father, enlarged his territories, and gathered the people, who were before dispersed about the country into one city, which was called from him Phoronium.
Universal Hist. B. 1. Ch. 16.

Virgil compares Pyrrhus to a flood. *Æn. 2. 496.*
Not half so fierce the foamy deluge bounds,
And bursts resistless o'er the levell'd mounds;
Pours down the vale, and roaring o'er the plain,
Sweeps herds and hinds, and houses to the main.
Pitt.

Ver. 222. — Ut duros mille labores
Reges sub Eurystheo, fatis Junonis iniquæ,
Pertulerit. *Æn. B. 8. 291.*

The thousand labours of the hero's hands,
Enjoin'd by proud Eurystheus' stern commands.

Ver. 224. Virgil says of Hercules :
— Raptit armo manu, nodisque gravatum
Rubor. *Æn. B. 8. 220.*

Ver. 232. Thus Pandarus in Homer, *Il. 4.*
— Couching low,
Fits the sharp arrow to the well-strung bow.

Pope.

Ver. 237. Ovid speaking of the Calydonian
boar, says,
Diffugiunt populi; nec se, nisi mœnibus urbis,
Esse putant tutos. *Met. B. 8. 298.*

Ver. 256. Thus Hector is vexed, that his lance
did not penetrate the armour of Ajax, *Il. B. 14.*
Then back the disappointed Trojan drew,
And curs'd the lance that unavailing flew.

Pope.

Ver. 264. There is an image in Virgil very
similar to this; *B. 12. v. 6.* "Tum demum," &c.
As, pierc'd at distance by the hunter's dart,
The Libyan lion rouses at the smart;
And loudly roaring traverses the plain;
Scourges his sides; and rears his horrid mane;
Tugs furious at the spear; the foe defies,
And grinds his teeth for rage, and to the combat
flies. *Pitt.*

Ver. 270. The Greek is, *αἰνός, caprifera*, a wild
fig-tree: the same word occurs in Homer, *Il. B.*
21, 37, which Mr. Pope renders a sycamore;

As from a sycamore, his sounding steel
Lopp'd the green arms, to spoke a chariot wheel.

Ver. 278. Thus Cadmus encountering with the
dragon;

Instantiaque ora retardat
Cuspide pretentâ. *Ovid. Metam. B. 3.*

Ver. 297. The construction of this passage is
perplexed, but I hope I have hit upon the right,
as the circumstance of Hercules's heaving the lion
from the ground, is exactly the same as happened
to the bull Phaëton,

And high in air upheld him at arm's length.

Ver. 166.

Indeed the words in the original are very similar.

Ver. 298. Thomson in his Seasons, joins this
epithet to the hyena: "The keen hyena, fellest of
the fell."

Ver. 306. Aventinus, the son of Hercules, is
represented by Virgil in the same dress.

Ipsæ pedes tegmen torquens immane leonis, &c.
Æn. B. 7. 666.

He stalk'd before his host; and, wide dispread,
A lion's teeth grin'd horrid o'er his head;
Then sought the palace in this strange attire,
And look'd as stern, and dreadful as his fire.

Pitt.

IDYLLIUM XXVI.

BACCHÆ.

THE ARGUMENT.

THIS Idyllium contains a short account of the death of Pentheus, king of Thebes; who refusing to
own the divinity of Bacchus, and endeavouring to prohibit his orgies, is torn in pieces by his own
mother Agavé, and by his aunts Ino and Autonoe.

AUTONOE, and Agavé, whose rough cheeks
Resembled the ripe apple's ruddy streaks,
With frantic Ino had resolv'd to keep
Three holy revels on the mountain's steep:
Green ivy, and sweet asphodel they took,
And leafy branches from the shagged oak,
With these the madding Bacchanalians made
Twelve verdant altars in an opening glade;
Three to fair Semele they rais'd, and nine
To youthful Bacchus, jolly god of wine. *IO*
From chests they take, and joyful shouting, lay
Their offerings on the fresh erected spray;
Such rites they practis'd, and such offerings
brought,
As pleas'd the god, and what himself had taught.

Lodg'd in a lentisk-tree, conceal'd from sight,
Astonish'd Pentheus saw the mystic rite;
Autonoe first the latent monarch spy'd,
With horrid yellings down the hill she hy'd,
The orgies of the frantic god o'erthrew,
Which no profane, unhallow'd eye must view. *20*
Maddening she rag'd, the rest all rag'd: and dread
Supplied with pinions Pentheus as he fled;
He hop'd by flight their fury to elude:
With robes tuck'd up they eagerly pursu'd:
Then Pentheus thus: "What means this rage?
"forbear;"

Autonoe thus: "You'll feel before you hear."
His mother roar'd, and snatch'd his head away,
Loud as the female lion o'er her prey:

Ino, her foot upon his breast display'd,
Wrench'd off his shoulder, and the shoulder blade;
Autonoë steep'd her hands in royal gore; 31
And all the monarch limb from limb they tore:
Thus drench'd in blood the Theban towers they
fought,
And grief, not Pentheus, from the mountain
brought.

Be warn'd; let none the jolly god offend,
Left sorer penalties the wretch attend;
Let none behold his rites with eyes impure;
Age is not safe, nor blooming youth secure.

For me, the works of righteousness I love,
And may I grateful to the righteous prove! 40
For this is pleasing to almighty Jove.
The pious blessings on their sons derive;
But can the children of the impious thrive?
Hail Bacchus, whom the ruler of the sky,
Great Jove, enclos'd, and foster'd in his thigh!
Hail, with thy sisters, Semele renown'd!
Offspring of Cadmus, with bright praises crown'd,
In hymns of heroines: let none defame
This act: from Bacchus the incentive came:
'Tis not for man the deeds of deities to blame.

NOTES ON IDYLLIUM XXVI.

Mr. Warton observes, "That Euripides, in his *Bacchantes*, has given a very fine description of the Bacchanalian women tearing Pentheus in pieces, for secretly inspecting their mysteries, which is worked up with the greatest fire, and the truest poetical enthusiasm. Theocritus has likewise nobly described this event.

Ver. 1. These were all sisters and the daughters of Cadmus and Harmonia.

Ver. 5. Anacreon, *Epig.* 4. describes three *Bacchæ*, and ivy is one of their oblations to Bacchus:

First *Heliconias* with a thyrsus past,
Xanthippe next, and *Glaucæ* was the last;
Lo dancing down the mountains they repair,
And grateful gifts to jolly Bacchus bear;
Wreaths of the rustling ivy for his head,
With grapes delicious, and a kid well fed. F. F.

Ver. 8. Thus Virgil, *Ecl.* 5.

En quatuor aras:

Ecce duas tibi, *Daphni*, quoque altaria *Phœbo*.

Ver. 15. The story of Pentheus is told by Ovid in the *Metam.* B. 3. in a manner something different, which I shall give in Mr. Addison's translation.

Here the rash Pentheus, with unhallow'd eyes,
The howling dames and mystic orgies spies.
His mother sternly view'd him where he stood,
And kindled into madness as she view'd:
Her leafy javelin at her son she cast,
And cries, "The boar that lays our country
"waste!"

"The boar, my sisters! aim the fatal dart,
"And strike the brindled monster to the heart."
Pentheus astonish'd heard the dismal sound,
And sees the yelling matrons gathering round,
He sees, and weeps at his approaching fate,
And begs for mercy, and repents too late,

"Help! help! my aunt Autonoë, he cry'd;
"Remember how your own *Actæon* dy'd."
Deaf to his cries, the frantic matron crops
One stretch'd-out arm, the other Ino lops.
In vain does Pentheus to his mother sue,
And the raw bleeding stumps presents to view:
His mother howl'd, and heedless of his prayer,
Her trembling hand she twisted in his hair,
"And this, she cry'd, shall be *Agavé's* share;"
When from the neck his struggling head she tore,
And in her hands the ghastly visage bore.
With pleasure all the hideous trunk survey;
Then pull'd and tore the mangled limbs away,
As starting in the pangs of death it lay.
Soon as the wood its leafy honours casts,
Blown off and scatter'd by autumnal blasts,
With such a sudden death lay Pentheus slain,
And in a thousand pieces strew'd the plain.

Ver. 27.

Quid? caput abscissum demens cum portat *Agave*
Nati infelicis, sibi tum furiosa videtur?

Hor. B. 2. Sat. 3.

Ver. 34. There is great beauty in the original. *Εξ ομοιοπνευστίας, και η Πενθηα, φερουσαι*, which, arising from the similarity of the words *πενθηα* and *Πενθηα*, cannot be kept up in the translation.

Ver. 45. Ovid mentions the same thing, *Met.* B. 3. 310.

Imperfectus adhuc infans genetricis ab alvo
Eripitur, patrioque tener (si credere dignum)
Insuitur femori, maternaque tempora complet.

Ver. 46. She was the mother of Bacchus, and sister to Ino, *Agavé*, and Autonoë.

Ver. 50. There is a similar thought in Bion, *Idyl.* 6.

Καμιν ην επαινεσθαι ηγαπα θεοισι.

It ill becomes frail mortals to define
What's best and fittest of the works divine. F. F.

IDYLLIUM XXVII.

Is by the commentators generally attributed to Moschus, and therefore I may well be excused from translating it as the work of Theocritus. Were that not the case, it is of such a nature that it cannot

be admitted into this volume: Scaliger, Casaubon, and Dan. Heinsius, have left more notes upon it in proportion than upon any of the other Idylliums. Creech has *done it* into English; but the spirit is evaporated, and nothing remains but a *caput mortuum*. Dryden generally improves and expatiates upon any subject that is ludicrous, and therefore the tenor of his translation will be found very different. The last five lines in Greek he has expanded into fourteen.

IDYLLIUM XXVIII.

THE DISTAFF.

ARGUMENT.

THEOCRITUS, going to visit his friend Nicias, the Milesian physician, to whom he has addressed the 11th and 13th Idylliums, carries an ivory distaff as a present for Theugenis, his friend's wife, and accompanies it with these verses, in which he modestly commends the matron's industry and virtue:

O DISTAFF, friend to warp and woof,
Minerva's gift in man's behoof,
Whom careful housewives still retain,
And gather to their household's gain;
With me repair, no vulgar prize,
Where the fam'd towers of Nileus rise,
Where Cytherea's swayful power
Is worshipp'd in the reedy bower.
Thither, would Jove kind breezes send,
I steer my course to meet my friend,
Nicias, the graces' honour'd child,
Adorn'd with sweet persuasion mild;
That I his kindness may requite,
May be delighted, and delight.
Thee, ivory distaff I provide,
A present for his blooming bride.
With her thou wilt sweet toil partake,
And aid her various vests to make,
For Theugenis, the shepherds shear
The sheep's soft fleeces twice a-year.

So dearly industry she loves,
And all that wisdom points approves.
I ne'er design'd to bear thee hence
To the dull house of indolence:
For in that city thou wert fram'd
Which Archias built, Corinthian fam'd,
Fair Syracuse, Sicilia's pride,
Where troops of famous men abide.
Dwell thou with him whose art can cure
Each dire disease that men endure;
Thee to Miletus now I give,
Where pleasure-crown'd Ionians live,
That Theugenis by thee may gain
Fair honour with the female train;
And thou renew within her breast
Remembrance of her muse-charm'd guest.
Admiring thee, each maid will call
The favour great, the present small;
For love the smallest gift commends;
All things are valued by our friends.

NOTES ON IDYLLIUM XXVIII.

Ver. 6. That is, Miletus, a famous city of Ionia, lying south of the river Mæander on the sea-coast. It was founded, according to Strabo, by Nilus the son of Codrus, king of Athens, when he first settled in that part of Asia. See Universal History. The fine garments made of Milesian wool were in great esteem with the Roman ladies: Horace has, "Mileti textam chlamydem," B. 1. Ep. 17. and "Virgil, Milesia vellera," Geor. 3.

Ver. 25. Syracuse, once the metropolis of all Sicily, and a most flourishing commonwealth, was,

according to Tully, the greatest and most wealthy of all the cities possessed by the Greeks. Thucydides equals it to Athens, when that city was at the height of its glory; and Strabo calls it one of the most famous cities of the world for its advantageous situation, the stateliness of its buildings, and the immense wealth of its inhabitants. It was built by Archias, one of the Heraclidæ, who came from Corinth into Sicily, in the second year of the eleventh Olympiad. *Univ. Hist.*

Ver. 38. *Inest sua gratia parvis.*

IDYLLIUM XXIX.

THE MISTRESS.

THE ARGUMENT.

THIS is an expostulation with his mistress for her inconstancy in love. In the original it is called *Παιδινα*. I have taken the liberty to make a change in the application of it, which renders it far more obvious and natural.

WINE, lovely maid, and truth agree;
I'm mellow—learn this truth from me;
And hear my secret thoughts; “I find,
“You love me not with all your mind.”
Your beauty life and vigour gives,
In you my half-existence lives;
The other half has sadly sped,
The other half, alas! is dead.
Whene'er you smile auspicious love,
I'm happy as the gods above;
Whene'er your frowns displeasure show,
I'm wretched as the fiends below.
Sure 'tis unmeet with cold disdain
To torture thus a love-sick swain:
But could my words your thoughts engage,
Experience is the boast of age,
Take counsel, and when crown'd with store
Of blessings, then you'll praise me more.

“Build in one tree a single nest,
“Which no curst reptile can infect.”
Fond and unfix'd you wander now
From tree to tree, from bough to bough.
If any youth your charms commends
You rank him with your faithful friends,
Your first true lovers set aside;
This looks like vanity and pride.
Would you live long and happy too,
Love some kind equal that loves you.
This will esteem and favour gain,
Such love will never give you pain;
This wins all hearts, and will controul
The stubborn temper of my soul.
If with my counsel you agree,
Give me sweet kisses for my fee.

NOTES ON IDYLLIUM XXIX.

Ver. 1.

In vino veritas.

Ver. 6. Thus Horace,

*Et servas animæ dimidium meæ.**B. I. Ode. 3.*

Ver. 10.

Decorum vitam adepti sumus. Ter. Heaut. Act. 4. Sc. 3.

Ver. 16.

*—Seris venit usus ab annis:**Consilium ne sperne meum.**Ovid. Met. B. 6.*

IDYLLIUM XXX.

THE DEATH OF ADONIS.

THE ARGUMENT.

VENUS orders the Cupids to bring the boar that had slain Adonis before her: she severely upbraids him with his crime, but being satisfied that it was accidentally done, she orders him to be released. The measure of the verse is Anacreontic.

WHEN Venus saw Adonis dead,
And from his cheeks the roses fled,
His lovely locks distain'd with gore:
She bade her Cupids bring the boar,

The boar that had her lover slain,
The cause of all her grief and pain.
Swift as the pinion'd birds they rove
Through every wood, through every grove;

And when the guilty boar they found,
 With cords they bound him, doubly-bound; 10
 One with a chain, secure and strong,
 Haul'd him unwillingly along;
 One pinch'd his tail to make him go,
 Another beat him with his bow:
 The more they urg'd, the more they dragg'd,
 The more reluctantly he lagg'd.
 Guilt in his conscious looks appear'd;
 He much the angry goddesses fear'd.
 To Venus soon the boar they led—
 "O cruel, cruel beast! she said, 20
 "Durst thou that thigh with blood distain?
 "Hast thou my dearest lover slain?"
 Submissive he replies; "I swear
 "By thee, fair queen; by all that's dear;
 "By thy fond lover; by this chain;
 "And by this numerous hunter-train;
 "I ne'er design'd, with impious tooth,
 "To wound so beautiful a youth:

No; but with love and frenzy warm,
 (So far has beauty power to charm!)
 I long'd, this crime I'll not deny,
 To kiss that fair, that naked thigh.
 These tusks then punish, if you please,
 These are offenders, draw out these.
 Of no more use they now can prove
 To me, the votaries of love!
 My guilty lips, if not content,
 My lips shall share the punishment;
 These words, so movingly express'd,
 Infus'd soft pity in her breast;
 The queen relented at his plea,
 And bade her Cupids set him free:
 But from that day he join'd her train,
 Nor to the woods return'd again;
 And all those teeth he burnt with fire,
 Which glow'd before with keen desire.

NOTES ON IDYLLIUM XXX.

This little poem is a fine imitation of Anacreon: Theocritus had before, in his nineteenth Idyllium, copied that delicate master in every thing but the measure of his verse. Bion has a most beautiful Idyllium on the same subject. Longepierre says of this Ode of Theocritus, "Cette petite pièce m'a toujours paru si jolie, que je croy qu'on me pardonnera aisément si j'en donne icy une traduction."

Ver. 14. Thus Ulysses drives the horses of Rhefus with his bow, ll. B. 10.

Ulysses now the snowy steeds detains,
 And leads them, fasten'd by the silver reins;

These, with his bow unbent, he lash'd along.

Post.

Ver. 23. Thus Sinon in Virgil,

Vos, æterni ignes, &c.

You, the eternal splendours, he exclaims,
 And you divine inviolable flames,
 Ye fatal swords, and altars, which I fled,
 Ye wreaths which circled this devoted head;
 All, all attest.

Pitt.

Ver. 45. The Greek is, *Εκαι τας ισχυας, εαυστη αμορες*, i. e. *amatorios dentes*.

THE EPIGRAMS OF THEOCRITUS.

I. Offerings to the Muses and Apollo.

THIS wild thyme, and these roses, moist with
 dew,
 Are sacred to the Heliconian Muse,
 The bay, Apollo, with dark leaves is thine;
 Thus art thou honour'd at the Delphic shrine;
 And there to thee this shagg'd he-goat I vow,
 That loves to crop the pine-tree's pendant bough.

II. An Offering to Pan.

DAPHNIS the fair, who with bucolic song,
 And pastoral pipe could charm the listening throng,

To Pan presents these emblems of his art,
 A fawn's soft skin, a crook, and pointed dart,
 Three rural pipes, adapted to his lip,
 And for his homely food a leathern scrip.

III. To Daphnis Sleeping.

ON earth's soft lap, with leafy honours spread,
 You, Daphnis, lull to rest your weary head:
 While on the hill your snares for birds are laid,
 Pan hunts your footsteps in the secret shade,
 And rude Priapus, on whose temples wave
 Gold ivy's leaves, resolv'd to find your cave:
 Ah! fly these revellers, at distance keep,
 And instant burst the silken bands of sleep.

IV. *A Vow to Priapus.*

If by those oaks with roving step you wind,
An image fresh of fig-tree form'd you'll find;
Though cloth'd with bark, three legg'd and void
of ears,

Prompt for the pranks of pleasure he appears
Springs gush perennial from the rocky hill, 5
And round the grotto roll their sparkling rill:
Green myrtles, bays, and cypress sweet abound,
And vines diffuse their circling arms around.
The vernal ousels their shrill notes prolong,
And modulate the loudly varied song; 10
Sweet nightingales in soft-opponent strain,
Perch'd on the spray melodiously complain.
Repose you there, and to Priapus pray,
That Daphne may no more my bosom sway:
Grant this, a goat shall at his altar bleed; 15
But if I gain the maid, three victims are decreed;
A stall-fed lamb, a goat, and heifer fair:
Thus may the god propitious hear my prayer.

V. *The Concert.*

SAY wilt thou warble to thy double flute,
And make its melody thy music suit?
Then, by the nymphs I swear, I'll snatch the quill,
And on the rural lyre essay my skill:
The herdsman, Daphnis, on his reed shall play, 5
Whose sprightly numbers make the shepherds gay,
Fast by yon rugged oak our stand, we'll keep,
And rob th' Arcadian deity of sleep.

VI. *Thyrsis has lost his Kid.*

WHAT profit gain you, wretched Thyrsis, say,
Thus, thus to weep and languish life away!
Lost is your favourite kid; the wolf has tore
His tender limbs, and feasted on his gore;
Your very dogs exclaim, and cry, "What gain, 5
When neither bones, nor ashes now remain!"

VII. *On the Statue of Æsculapius.*

AT fam'd Miletus, Pæon's son the wise
Arriv'd, with learned Nicias to advise,
Who to his shrine with daily offerings came,
And rais'd this cedar statue to his fame;
The cedar statue by Eëtion wrought, 5
Illustrious artist! for large sums he bought;
The work is finish'd to the owner's will,
For here the sculptor lavish'd all his skill.

VIII. *Orthon's Epitaph.*

To every toping traveller that lives,
Orthon of Syracuse this warning gives,
With wine o'erheated, and depriv'd of light,
Forbear to travel on a winter's night;
This was my fate; and for my native land, 5
I now lie buried on a foreign strand.

IX. *On the Fate of Cleonicus.*

O STRANGER! spare thy life so short and frail,
Nor, but when time are seasonable, fail.
Poor Cleonicus, innocent of guile,
From Syria hasten'd to rich Thasos' isle;

The Pleiads sunk as he approach'd the shore; 5
With them he sunk, to rise, alas! no more.

X. *On a Monument Erected to the Muses.*

HERE Xenocles hath rais'd this marble shrine,
Skill'd in sweet music to the tuneful nine:
He from his art acquires immortal fame,
And grateful owns the fountain whence it came.

XI. *Epitaph on Eusthenes the Physiognomist.*

To Eusthenes, the first in wisdom's list,
Philosopher and physiognomist,
This tomb is rais'd: he from the eye could scan
The cover'd thought, and read the very man.
By strangers was his decent bier adorn'd, 5
By strangers honour'd, and by poets mourn'd:
Whate'er the sophist merited he gain'd,
And dead, a grave in foreign realms obtain'd.

XII. *On a Tripod dedicated to Bacchus, by Demoteles.*

DEMOTEALES, who near this sacred shrine
This tripod plac'd, with thee, O god of wine!
Whom blithest of the deities we call,
In all things prov'd, was temperate in all;
In manly dance the victory he gain'd, 5
And fair the tenor of his life maintain'd.

XIII. *On the Image of the Heavenly Venus.*

HERE Venus, not the vulgar, you survey;
Style her celestial, and your offering pay:
This in the house of Amphicles was plac'd,
Fair present of Chryfogona the chaste:
With him a sweet and social life she led, 5
And many children bore, and many bred.
Favour'd by thee, O venerable fair,
Each year improv'd upon the happy pair;
For long as men the deities adore,
With large abundance heav'n augments their
store. 10

XIV. *Epitaph on Eurymedon.*

DEAD in thy prime, this tomb contains,
Eurymedon, thy dear remains;
Thou, now with pious men enshrin'd,
Hast left an infant heir behind;
The state due care of him will take, 5
And love him for his father's sake.

XV. *On the same.*

O TRAVELLER, I wish to know
If you an equal praise bestow
On men of honourable fame,
Or to poltroons you give the same:
Then "Fair befall this tomb," you'll cry, 5
As oft you pass attentive by,
"Eurymedon, alas! is dead;
"Light lie the stone upon his head."

XVI. *On Anacreon's Statue.*

WITH curious eye, O traveller, survey
This statue's form, and home-returning say,

"At Teos late with infinite regard,
 "I saw the image of the sweetest bard,
 "Anacreon; who, if ancient poets claim
 "The meed of praise, deserves immortal fame;
 Add this; "He lov'd (for this with truth you can)
 "The fair, the gay, the young," you'll paint the
 very man.

XVII. *On Epicharmus.*

THE style is Doric; Epicharmus he,
 The poet who invented comedy:
 This statue, Bacchus, sacred stands to you;
 Accept a brazen image for the true.
 The finish'd form at Syracuse is plac'd,
 And as is meet, with lasting honours grac'd.
 Far fam'd for wisdom, the preceptive bard
 Taught those, who gave the merited reward;
 Much praise he gains who form'd ingenuous youth,
 And show'd the paths to virtue, and to truth.

XVIII. *Epitaph on Clita, the Nurse of Medeus.*

MEDEUS rais'd, inspir'd by grateful pride,
 This tomb to Clita by the high way side:
 We still commend her for her fostering care;
 And praise the matron when we praise the heir.

XIX. *On Archilochus.*

ARCHILOCHUS, that ancient bard, behold!
 Arm'd with his own iambics keen and bold;

Whose living fame with rapid course has run
 Forth from the rising to the setting sun.
 The muses much their darling son approv'd,
 The muses much, and much Apollo lov'd:
 So terse his style, so regular his fire,
 Composing verse to suit his sounding lyre.

XX. *On the Statue of Pisander, who wrote a Poem styled, The Labours of Hercules.*

THIS statue fam'd Pisander's worth rewards,
 Born at Camirus, first of famous bards
 Who sung of Hercules, the son of Jove,
 How with the lion he victorious strove,
 And all the labours of this hero bold
 The faithful bard in lofty numbers told.
 The state regardful of the poet's name,
 Hath rais'd this brazen statue to his fame.

XXI. *Epitaph on the Poet Hipponax.*

OLD Hipponax the satirist lies here;
 If thou'rt a worthless wretch, approach not near:
 But if well bred, and from all evil pure,
 Repose with confidence, and sleep secure.

XXII. *Theocritus on his own Works.*

A SYRACUSIAN born, no right I claim
 To Chios, and Theocritus my name:
 Praxagoras and fam'd Philina's son;
 All praise I scorn'd but what my numbers won.

NOTES ON THE EPIGRAMS.

These epigrams were never translated into English before. The six that first present themselves, are a true model of the rustic sweetness, and delicate simplicity of the ancient Greek epigram.

I. Ver. 2. That the rose was consecrated to the Muses, appears from Anacreon, Ode 53. *καρπὸν φυτόν τε Μουσίων.*

In fabled song, and tuneful lays,
 Their favourite rose the Muses praise.

And Sappho, Frag. 2.

For thy rude hand ne'er pluck'd the lovely rose,
 That on the mountain of Pieria blows. F. F.

Ver. 5. Virgil and Horace have something similar.

— Illius aram

Sæpe tener nostris ab ovilibus imbuit agnus.

Ecl. 1.

Voveram album Libero caprum. B. 3. Ode 8.

II. Ver. 1. This Daphnis was probably the son of Mercury, the same whose story is sung in the first Idyllium. Diodorus Siculus supposes him to be the author of bucolic poetry; and, agreeable to this, Theon, an old Scholiast on Theocritus, in his note on the first Idyllium, ver. 141. mentioning Daphnis, says, *Καθὸ πρῶτον εὐκατο Βυκολικόν*, Inasmuch as he was the inventor of bucolics; however

that be, probably this Daphnis was the first subject of bucolic songs.

III. Ver. 6. The Greek is, *κροκοῖντα κισσόν*. This is probably the *passens*, or *alba bederas* of Virgil, on which Dr. Martyn observes (see his notes on Ecl. 7. ver. 38.). it is most likely that sort of ivy with yellow berries, which was used in the garlands with which poets used to be crowned, and Ecl. 8. ver. 13. The poetical ivy is that sort with golden berries, or *bedera baccis aureis*.

IV. Ver. 2. The ancients often hewed the image of Priapus out of a fig-tree.

Olim truncus eram ficulnus, &c. Hor. Sat. 8. B. 1.

Ver. 14. I have taken the liberty to address this Epigram to Daphne, instead of Daphnis, *puella et non pastor*.

Ver. 15. Here I follow the ingenious interpretation of Dan. Heinsius.

V. Ver. 8. In the first Idyllium, the shepherds are afraid of disturbing the Arcadian god's repose. See ver. 20.

VII. Ver. 1. Æsculapius, the son of Apollo, was called Pæon or Παιων, because of his art in assuaging and curing diseases.

VIII. Ver. 5. I here follow the ingenious commendation of Heinsius.

IX. In all the editions of Theocritus in the original, there is only the first distich of this Epi-

gram, but in Pierſon's Veriſimilia, I find two more added from a MS. in the Palatine library, which was collated by D. Ruhnkenius; as I have tranſlated, I likewiſe take the liberty to tranſcribe the whole.

Ανθρῶπε ζῶης περιφειδσο, μὴδὲ παρ' ὥραν
Ναυτίλος ἰδί, ὡς ἔ' πολὺς ἀνδρὶ βίος.
Δειλαίη Κλειονική, σὺ δ' εἰς λιπαρὴν Θάσον ἐλ-
θεῖν

Ἡπειγεν κοίτης ἡμπαρὸς ἐκ Συρίας.
Ἐμπορὸς ὦ Κλειονικέ, δύνει δ' ἀπὸ πλειάδος αὐτὴν,
Πορτοπορῶν αὐτῇ πλειάδι συνκατεδύς.

Ver. 4. An island near Thrace, formerly famous for gold, marble, and wine.

XI. Heinſius has rendered this epigram intelligible, whoſe emendations I follow.

XII. Ver. 6. The Greek is,
Καὶ τὸ καλόν, καὶ τὸ προσηκὼν ὄραν.

Thus Horace,

Quid verum, atque decens, curo et rogo, et omnis
in hoc ſum. B. I. Ep. I. II.

XIII. Ver. 1. Plato in *Convivio* ſays, there were two Venuses, one was the daughter of Cælus, which we call *οὐρανίαν* or celestial: the other the daughter of Jupiter and Dione, which we call *παν-
δημον* or popular.

XVII. Ver. 1. Was brought to Sicily when an infant from the island of Cos, and is therefore called a Sicilian; he was the diſciple of Pythagoras, and ſaid to be the firſt inventor of comedy. Plautus imitated him, according to Horace.

Plautus ad exemplar Siculi properare Epicharmi.
B. 2. Ep. I. 58.

Even Plato himſelf borrowed many things from him. He preſented fifty-five, or as ſome ſay, thirty-five plays, which are all loſt. He lived, according to Lucian, 97 years. Laertius has preſerved ſome verſes which were inſcribed on one of his ſtatues, which, as they are a teſtimony of the high eſteem antiquity had for his worth, I ſhall tranſcribe.

Εἰ τι παραλλάσσει φαιδῶν μέγας αἰὼς ἀστρῶν,
Καὶ πόντος ποταμῶν μείζον ἐχει δύναμιν
Φαμι τοσούτον ἐγὼ σοφίᾳ προέχειν Ἐπιχάρμον,
Ὅν πατρίς ἐς ἐφ' ἂν ἴδῃ Συρακοσίων.

As the bright ſun outſhines the ſtarry train,
And ſtreams confeſs the empire of the main;
We firſt in wiſdom Epicharmus own,
On whom fam'd Syracuſe beſtow'd the crown.

Ver. 9. The Greek is,

Πολλὰ γὰρ πτόλιν ζῶαν τοῖς παισὶν ἐπὶ χρεσίμας
Μεγάλα χάρις αὐτῷ.

Mr. Upton, in his obſervations on Shakspeare, inſtead of *παισιν* "children," reads *πανσιν* "all mankind; which is plausible, for the philoſophic comedian ſpoke what was uſeful for all mankind to know, and fitting for common life; and then the tranſlation may run,

Much praiſe, much favour he will ever find,
Whoſe uſeful leſſons mended all mankind.

XIX. Ver. 1. He was a Greek poet, born at Paros, in the third Olympiad. His inveſtives againſt Lycambes (who after having promiſed his daughter in marriage, gave her to another) were ſo keen and ſevere, that they made him hang himſelf. He is ſaid to have been the inventor of iambic verſe.

Thus Horace,

Archilochum proprio rabies armavit iambo.

XX. Piſander was a native of Camirus, a city of Rhodes; he is mentioned by Strabo and Macrobius, as the author of a poem ſtyled *Heraclea*, which comprehended in two books all the exploits of Hercules: he is ſaid to have been the firſt that repreſented Hercules with a club.

Univ. Hiſt. B. 2. Cb. 1.

XXI. Hipponax was a witty poet of Ephesus, but ſo deformed, that the painters drew hideous pictures of him; particularly Bupalus and Anthermus, two brothers, eminent ſtatuarys, made his image ſo ridiculous, that in reſentment he dipped his pen in gall, and wrote ſuch bitter iambics againſt them, that, it is ſaid, they diſpatched themſelves: at leaſt they left Ephesus upon the occaſion. Horace calls Hipponax, *Acer boſſis Bupalus*, Epod. 6.

Alcæus on Hipponax. Antbol. B. 3. Cb. 25.

No vines the tomb of this old bard adorn
With lovely cluſters, but the pointed thorn,
And ſpiry brambles that unſeen will tear
The eyes of paſſengers that walk too near:
Let travellers that ſafely paſs requeſt,
That ſtill the bones of Hipponax may reſt.

Leonidas on the ſame. Ibid.

Softly this tomb approach, a cautious gueſt,
Leſt you ſhould rouse the hornet in his neſt:
Here ſleeps at length old Hipponax's ire,
Who bark'd ſarcaſtic at his harmleſs fire.
Beware; ſtay not on this unhallow'd ground;
His fiery fatires ev'n in death will wound.

Another on the ſame. Ibid.

Fly, ſtranger, nor your weary limbs relax
Near the tempeſtuous tomb of Hipponax,
Whoſe very duſt, depoſited below,
Stings with iambics Bupalus his foe:
Rouse not the ſleeping hornet in his cell:
He loads his limping lines with fatires fell;
His anger is not pacified in hell.

THE COMBAT BETWEEN POLLUX AND AMYCUS*.

FROM APOLLONIUS, BOOK II.

Fast by the beach ox stalls and tents were spread
 By bold Bebrycians, Amycus their head,
 Whom, on the precincts of the winding shore.
 A fair Bithynian Hamadryad bore
 To genial Neptune, in base commerce join'd,
 Proud Amycus, most barbarous of mankind,
 Who made this stern, inequitable law,
 That from his realm no stranger should withdraw,
 Till first with him compell'd in fight to wield
 The dreadful gauntlet in the list'd field: 10
 Unnumber'd guests his matchless prowess flew:
 Stern he accosts swift Argos' valiant crew,
 Curious the reason of their course to scan,
 Who, whence they were: and scornful thus began:
 'Learn what 'tis meet, ye knew, ye vagrant host,
 'None that e'er touches on Bebrycia's coast,
 'Is hence by law permitted to depart,
 'Till match'd with me he prove the boxer's art.
 'Choose then a chief that can the gauntlet wield,
 'And let him try the fortune of the field: 20
 'If thus my edicts ye despise, and me,
 'Yield to the last immutable decree.'
 Thus spoke the chief with insolent disdain,
 And rous'd resentment in the martial train:
 But most his words did Pollux' rage provoke,
 Who thus, a champion for his fellows, spoke:
 "Threat not, whoe'er thou art, the bloody fray;
 "Lo, we obsequious thy decrees obey!
 "Unforc'd this instant to the lists I go,
 "Thy rival I, thy voluntary foe." 30
 Stung to the quick with this severe reply,
 On him he turn'd his fury-flaming eye:
 As the grim lion pierc'd by some keen wound,
 Whom hunters on the mountain top surround;
 Though close hemm'd in, his glaring eye-balls
 glance
 On him alone who threw the pointed lance.
 Then Pollux doff'd his mantle, richly wrought,
 Late from the Lemnian territory brought,
 Which some fair nymph who had her flame avow'd,
 The pledge of hospitable love bestow'd: 40
 His double cloak, with clasps of sable hue,
 Bebrycia's ruler on the greensward threw,
 And his rough shephook of wild olive made,
 Which lately flourish'd in the woodland shade.
 Then sought the heroes for a place at hand
 Commodious for the fight, and on the strand
 They plac'd their friends, who saw, with wonder-
 ing eyes,
 The chiefs how different, both in make and size;
 For Amycus like fell Typhæus stood
 Enormous, or that miscreated brood 50

Of mighty monsters, which the heaving earth,
 Incens'd at Jove, brought forth, a formidable birth.
 But Pollux shone like that mild star on high
 Whose rising ray illumines the evening sky.
 Down spread his cheek, ripe manhood's early sign,
 And in his eye fair beam'd the glance divine:
 Such seem'd Jove's valiant son, supremely bright,
 And equal to the lion in his might.
 His arms he pois'd, advancing in the ring,
 To try if still they kept their pristine spring, 60
 If pliant still and vigorous as before,
 Accustom'd to hard toil, the labour of the oar.
 But Amycus aloof and silent stood,
 Glar'd on his foe, and seem'd athirst for blood:
 With that his squire Lycoreus in full view
 Two pair of gauntlets in the circle threw,
 Of barbarous fashion, harden'd, rough, and dried;
 Then thus the chief, with insolence and pride:
 'Lo, two stout pair, the choice I give to thee;
 'Accuse not fate, the rest belong to me. 70
 'Securely bind them, and hereafter tell
 'Thy friends how much thy prowess I excel:
 'Whether to make the cestus firm and good,
 'Or stain the cheeks of enemies with blood.'
 Thus spoke he boastful; Pollux nought reply'd,
 But smiling chose the pair which lay beside.
 Castor, his brother both by blood and fame,
 And Talaüs, the son of Bias, came;
 Firm round his arms the gloves of death they bind,
 And animate the vigour of his mind. 80
 To Amycus, Aratus, and his friend,
 Bold Ornytus, their kind assistance lend:
 Alas! they little knew, this conflict o'er,
 Those gauntlets never should be buckled more.
 Accoutred thus each ardent hero stands,
 And raises high in air his iron hands;
 With clashing gauntlets fiercely now they close,
 And mutual meditate death-dealing blows.
 First Amycus a furious onset gave,
 Like the rude shock of an impetuous wave, 90
 That, heap'd on high by driving wind and tide,
 Bursts thundering on some gallant vessel's side;
 The wary pilot, by superior skill,
 Foresees the storm, and shuns the menac'd ill.
 Thus threatening Amycus on Pollux prest,
 Nor suffer'd his antagonist to rest:
 But Jove's brave son observes each coming blow,
 Quick leaps aside, and disappoints the foe;
 And where a weak unguarded part he spies,
 There all the thunder of his arms he plies. 100
 As busy shipwrights stoutly labouring strive
 Through sturdy planks the piercing spikes to
 drive,
 From head to stern repeated blows go round,
 And ceaseless hammers send a various sound.

FRANCIS FAWKES, M. A.

THE WORKS

OF ANTONIO

TRANSLATED FROM THE GREEK

BY JAMES M. M.

INTRODUCTION.

It may be necessary to inform the reader that many of the following odes were translated several years ago, at College, for the author's amusement, without any intention of making them public. But being encouraged by the partiality of friends, and allowed to insert those odes * of Anacreon, which are elegantly translated by the late Dr. Broome, and a few others †; he determined to give an entire version of the Teian bard, as no one of this nation had hitherto done it. Mr. John Addison's translation is incomplete, and, excepting a few odes, harsh and crude, and far from being well done. What the late ingenious and learned Mr. West says of Cowley's Pindar, may be applied to his odes of Anacreon: "That they have not the least resemblance to the manner of the author whom they pretend to imitate, or, if any, it is such a resemblance only as is expressed by the Italian word *caricatura*, a monstrous and distorted likeness."

It may be thought a bold undertaking to attempt Sappho, after the high encomiums which Mr. Addison, in the *Spectator*, has passed on Philips's translation of her two odes. But, with

* *Dr. Broome's Odes were printed in the Gentleman's Magazine, under the name of Charles Chester, M. D.*

† *Viz. Odes 2, 11, 45, 49, and 51.*

deference to the authority of so good a judge, besides what the reader will find observed with regard to Mr. Philips's mistaking the true sense of his author, the three first lines are amazingly rough and awkward.

Blest as th' immortal gods is *he*,
The youth who fondly sits by thee,
And hears and sees thee *all the while*, &c.

It is surprising, that such unpoetical expressions, as those here marked should escape the censure of the accurate Mr. Addison, unless we suspect that the partiality of the friend biased the judgment of the critic.

It is equally surprising, that the beautiful Idylliums of Bion and Moschus, which charm every reader in the original, should scarce ever have been attempted in English. The translator, therefore, may justly claim some merit in endeavouring to make these elegant Greek writers speak his native language.

He cannot conclude this short introduction, without returning his thanks to an ingenious and worthy friend (whose name would do honour to the title-page) for his revision and correction of this little work, and for those excellent translations of the Idylliums of Moschus, marked D.

THE LIFE OF ANACREON.

ANACREON was born at Teos, a sea-port town of Ionia. Who were his parents is uncertain, though it is conjectured, from good authority, that his family was noble. The time of his birth, according to Barnes, was in the second year of the 53th Olympiad, about the beginning of the reign of Cyrus, in the year of Rome 194, and the 554th before Christ. According to this account, he was about eighteen years of age, when Harpagus, the general of Cyrus, came with an army against the confederate cities of the Ionians and Æolians. The Teians, finding themselves too weak to withstand

the enemy, rather chose to abandon their country, than their liberty, and therefore transported themselves and their families to the city of Abdera in Thrace; where they had not been long settled, before the Thracians, jealous of their new neighbours, endeavoured to give them disturbance. It is probable, that in these conflicts, Anacreon lost those friends whom he laments in some of his epigrams.

We cannot expect many particulars of the life of this poet, because he seems to have been a professed despiser of business, and the cares of the

world. It is certain, that wine, love, and the muse, had the disposal of all his hours.

From Abdera he went to the court of Polycrates, tyrant of Samos, at that time one of the most gay and flourishing in Asia. A person of Anacreon's character must undoubtedly meet with a welcome reception, wherever wit and pleasure were esteemed: Accordingly we find, that he was so highly honoured by Polycrates, as not only to be admitted into a share of his friendship, but even into his most secret counsels. How long he continued at Samos is uncertain; but it is probable, that the friendship of Polycrates, and the splendour of his court, had influence enough to detain him there the greatest part of his reign. This opinion also seems confirmed by Herodotus, who assures us, that Anacreon was with that prince in his chamber, when he received a message from Orontes, governor of Sardis, by whose treachery Polycrates was soon after betrayed, and inhumanly crucified*.

A little before this remarkable incident, Anacreon left Samos, and removed to Athens, having been invited thither by Hipparchus the eldest son of Pisistratus, one of the most virtuous and learned princes of his time; who, as Plato assures us, sent the most obliging letters, with a vessel of fifty oars, to convey him over the Ægean. The same philosopher who relates this, does Anacreon the honour to style him "the wise Anacreon;" which is the foundation of Monsieur Fontenelle's ingenious dialogue, where he introduces Anacreon and Aristotle disputing the prize of wisdom, and gives the advantage to our poet.

Hipparchus being assassinated, he returned to his native country Teos; for, after the death of Cyrus, the Teians had been suffered to reinhabit their country unmolested. Here he remained, as Suidas informs us, till another commotion in the state obliged him once more to fly to Abdera; where he died in the 85th year of his age.

The manner of his death was very extraordinary; for we are told, that he was choked with a grape-stone, as he was regaling on some new wine: which has afforded Mr. Cowley a subject for a fine elegy, the conclusion of which is very happy:

It grieves me, when I see what fate
Does on the best of mankind wait,
Poets or lovers let them be;
'Tis neither love nor poesy
Can arm against death's smallest dart
The poet's head, or lover's heart.
But when their life in its decline
Touches th' inevitable line,
All the world's mortal to them then,
And wine is aconite to men.
Nay, in death's hand the grape-stone proves
As strong as thunder is in Jove's.

A small part only of his works has escaped the malice of time; for, besides the odes and epigrams that still remain, he composed elegies

* See *Universal History*, vol. 8. 8vo. page 271.

hymns, and iambics. Some writers honour him with the invention of the lyre. How much he was the delight both of the ancients and moderns, appears sufficiently from those extravagant praises which they have bestowed on him. Horace mentions him with honour:

"Nec, si quid olim lusit Anacreon,
Delevit ætas——— Lib. 4. Ode 9.

——blithe Anacreon's sportive lay
Still lives, in spite of time's destructive sway.
Duncombe.

Anacreon had a delicate genius, and there are inexpressible charms and graces in his poetry. "His chief excellence, says Madam Dacier, consists in imitating nature, and following reason: He presents no images to the mind but what are noble and natural." "The odes of Anacreon," says Rapin, "are flowers, beauties, and perpetual graces: it is familiar to him to write what is natural: He has an air so delicate, easy, and graceful, that among all the ancients, there is nothing comparable to the method he took, nor to that kind of writing he followed. He flows soft and easy, every where diffusing the joy and indolence of his mind through all his compositions, and turning his harp to the pleasant and happy temper of his soul."

But no one has given us a juster character of his writings, than that little god who inspired them, as Mr. Cowley has made him speak:

All thy verse is softer far
Than the downy feathers are
Of my wings, or of my arrows,
Of my mother's doves, or sparrows;
Graceful, cleanly, smooth, and round,
All with Venus' girdle bound.

I cannot better conclude this account of Anacreon, than with the following epitaph, as it is translated in the Spectator, No. 551.

ON ANACREON. BY ANTIPATER.

This tomb be thine, Anacreon; all around
Let ivy wreath, let flow'rets deck the ground,
And from its earth, enrich'd by such a prize,
Let wells of milk, and streams of wine arise:
So will thine ashes yet a pleasure know,
If any pleasure reach the shades below.

To which let me add a fine stanza from Dr. Akenfide's Ode on Lyric Poetry, in honour of our poet:

I see Anacreon smile and sing:
His silver tresses breathe perfume;
His cheek displays a second spring
Of roses, taught by wine to bloom.
Away, deceitful cares, away!
And let me listen to his lay,
While flowery dreams my soul employ;
While, turtle-wing'd the laughing hours
Lead hand in hand the festal powers,
Lead youth, and love, and harmless joy.

ODES OF ANACREON.

With roses crown'd, on flowers supinely laid,
Anacreon blithe the sprightly lyre essay'd,
In light fantastic measures beat the ground;
Or dealt the mirth-inspiring juice around:
No care, no thought, the tuneful Teian knew,
But mark'd with bliss each moment as it flew.

PROGRESS OF POETRY. *By a Lady.*

ODE I.

ON HIS LYRE.

WAKE, O lyre, thy silent strings;
Celebrate the brother-kings,
Sons of Atreus, fam'd afar,
Cadmus and the Theban war"—
Rapt I strike the vocal shell—
Hark—the trembling chords rebel;
All averse to arms they prove,
Warbling only strains of love.
Late I strung anew my lyre—
Heavenly muse my breast inspire,
While the swelling notes resound
Hercules for toils renown'd."
Still the chords rebellious prove,
Answering only strains of love!
Farewell heroes, farewell kings!
Love alone shall tune my strings.

ODE II.

By another Hand.

ON WOMEN.

NATURE gives all creatures arms,
Faithful guards from hostile harms;
Jaws, the lion to defend,
Horrid jaws that wide distend!
Horns, the bull, resistless force!
Solid hoofs, the vigorous horse;
Nimble feet, the fearful hare;
Wings to fly, the birds of air;
Fins to swim, the wat'ry kind;
Man, the bold undaunted mind.
Nature lavishing her store,
What for woman had she more?
Helpless woman! to be fair;
Beauty fell to woman's share.
She that'sauteous needs not fear
Sword, or flame, or shield, or spear:

Beauty stronger aid affords,
Stronger far than flames or swords;
Stronger far than swords or shields;
Man himself to beauty yields.

ODE III.

CUPID BENIGHTED.

THE fable night had spread around
This nether world a gloom profound;
No silver moon nor stars appear,
And strong Beotes urg'd the Bear:
The race of man, with toils oppress'd
Enjoy the balmy sweets of rest;
When from the heav'nly court of Jove
Descended swift the god of love,
(Ah me! I tremble to relate)
And loudly thunder'd at my gate.
"Who's there?" I cry'd, "Who breaks my door
At this unseasonable hour?"
The god, with well-dissembled sighs,
And moan insidious thus replies:
"Pray ope the door, dear Sir—'tis I;
A harmless miserable boy;
Benumb'd with cold and rain I stray
A long, uncomfortable way—
The winds with blust'ring horror roar—
'Tis dismal dark—Pray ope the door."
Quite unsuspecting of a foe
I listen'd to the tale of woe,
Compassion touch'd my breast, and strait
I struck a light, unbarr'd the gate;
When, lo! a winged boy I spy'd,
With bow and quiver at his side:
I wonder'd at his strange attire;
Then friendly plac'd him near the fire.
My heart was bounteous and benign,
I warm'd his little hands in mine,
Cheer'd him with kind assiduous care,
And wrung the water from his hair.
Soon as the fraudulent youth was warm,
"Let's try," says he, "if any harm
L iij

"Has chanc'd my bow this stormy night;
 "I fear the wet has spoil'd it quite:"
 With that he bent the fatal yew,
 And to the head an arrow drew:
 Loud twang'd the sounding string, the dart
 Pierc'd through my liver and my heart.
 Then laugh'd amain the wanton boy,
 And, "Friend," he cry'd, "I wish thee joy;
 "Undamag'd is my bow, I see,
 "But what a wretch I've made of thee."

ODE IV.

ON HIMSELF.

RECLIN'D at ease on this soft bed,
 With fragrant leaves of myrtle spread
 And flow'ry lote, I'll now resign
 My cares, and quaff the rosy wine.
 In decent robe behind him bound,
 Cupid shall serve the goblet round:
 For fast away our moments steal,
 Like the swift chariot's rolling wheel:
 The rapid course is quickly done,
 And soon the race of life is run;
 Then, then, alas! we droop, we die,
 And sunk in dissolution die;
 Our frame no symmetry retains;
 Nought but a little dust remains.
 Why on the tomb are odours shed?
 Why pour'd libations to the dead?
 To me far better while I live,
 Rich wines and balmy fragrance give;
 Now, now the rosy wreath prepare,
 And hither call the lovely fair.
 Now, while I draw my vital breath,
 Ere yet I lead the dance of death,
 For joy my sorrows I'll resign,
 And drown my cares in rosy wine.

ODE V.

ON THE ROSE.

To make the beverage divine,
 Mingle sweet roses with the wine;
 Delicious will the liquor prove,
 For roses are the flowers of love:
 And while with wreaths of roses crown'd,
 Let laughter and the cup go round.

Hail, lovely rose! to thee I sing,
 Thou sweetest daughter of the spring:
 All mortals prize thy beauties bright;
 In thee the pow'rs above delight.
 Gay Cupid, with the graces bland,
 When lightly bounding hand in hand,
 With nimble feet he beats the ground,
 Shows his bright locks with roses crown'd.
 Here then the flow'ry garland bring;
 With numbers sweet I'll wake the spring,
 And crown'd with roses, heav'nly flow'rs!
 Admitted, Bacchus, to thy bow'rs,
 With snowy-bosom'd Sappho gay
 I'll dance the feather'd hours away.

ODE VI.

THE PARTY OF PLEASURE.

WHILE roses round our temples twine,
 We'll gayly quaff the sparkling wine:

And, lo! the love alluring fair
 Her Thyrsus brandishes in air,
 With clust'ring ivy wreath'd around,
 Whose branches yield a rustling sound;
 With graceful ease her steps she suits
 To notes of soft Ionian lutes.
 A youth, whose hair luxuriant flows,
 In curls, with breath ambrosial blows
 The well-pair'd pipes, and sweetly clear,
 Pours melting music on the ear.
 Here Cupid too with golden hair,
 And Bacchus, ever young and fair,
 With Cytherea, who inspires
 Delightful thoughts and warm desires,
 Gay-smiling join the festive train,
 And make an old man young again.

ODE VII.

THE POWER OF LOVE.

LOVE waving awful in his hand
 His hyacinth-encircled wand,
 Forc'd me, averse, with him to run;
 In vain I strove the task to shun.
 Swift o'er the plain our course we ply'd,
 Through foaming floods, o'er forests wide,
 O'er hills where rocks impending hung,
 Till me, alas! a serpent stung:
 Sore heav'd my heart with dire dismay,
 My spirits sunk---I dy'd away---
 Pleas'd Cupid caught my trembling hand,
 My face with his soft pinions fann'd,
 And cry'd, 'Since now my pow'r you prove,
 'Dare you still boast, you will not love?'

ODE VIII.

THE DREAM.

As on a purple bed supine,
 Rapt in the pleasing joys of wine,
 I lull'd my weary limbs to rest,
 Methought, with nymphs supremely blest,
 A beauteous band, I urg'd the chase,
 Contending in the rapid race;
 While fairest youths, with envy stung,
 Fair as Lyæus ever young,
 With jealous leer and bitter jest,
 Their keen malevolence express'd.
 Intent on love, I strive to greet
 The gamesome girls with kisses sweet,
 And, as on pleasure's brink I seem,
 Wake, and, behold! 'tis all a dream.
 Vex'd to be thus alone in bed,
 My visionary charmer's fled,
 To dream once more I close my eyes:
 Again, ye soft illusions, rise!

ODE IX.

THE DOVE.

"TELL me, dear, delightful dove,
 "Emblematic bird of love,
 "On your waving wings descending,
 "Whence you come, and whither tending?"

" Tell me whence your snowy plumes
 " Breathe such fragrance of perfumes?
 " And what master you obey,
 " Gentle bird of Venus, say!"
 " Blithe Anacreon, the wife,
 (Thus the feather'd page replies)
 " Sends me o'er the meads and groves
 " To Bathyllus whom he loves,
 " To Bathyllus, beauteous boy,
 " Men's delight, and maidens joy.
 " For a sonnet terse and trim,
 " Which the poets call a hymn,
 " Venus, in her sweet regard,
 " Sold me to the gentle bard:
 " Happy in his easy sway,
 " All his mandates I obey;
 " Often through the fields of air
 " Song or billet-doux I bear.
 " If you serve me well, says he,
 " I will shortly make you free.
 " He may free me, if he will,
 " Yet I'll stay and serve him still:
 " For what comfort can I know
 " On the mountain's barren brow?
 " Or in deserts left alone,
 " There to murmur and to moan?
 " Or in melancholy wood,
 " Pecking berries, nauseous food!
 " Now I eat delicious bread,
 " By my liberal master fed;
 " Now I drink of his own bowl,
 " Rosy wine that cheers my soul;
 " Sometimes dance, and sometimes play,
 " Ever easy, ever gay;
 " Or my fragrant pinions spread,
 " Hovering o'er my master's head:
 " When my limbs begin to tire,
 " Then I perch upon his lyre;
 " Soothing sounds my eye-lids close,
 " Sweetly lulling my repose.
 " Now I've told you all I know,
 " Friend, adieu——'tis time to go;
 " You my speed so long delay,
 " I have chatter'd like a jay."

ODE X.

CUPID IN WAX.

A RUSTIC brought, of curious mold,
 A waxen Cupid to be sold,
 " What price, I cry'd, ingenuous say,
 " For this small image shall I pay?"
 " Small is the price, reply'd the clown,
 " Take it, e'en take it at your own:
 " To tell you all without a lie,
 " I make no images, not I;
 " But dare not in my mansion trust
 " This patron of unbounded lust."
 " If so, then for this little coin,
 " Said I, the deity is mine.
 " And now, great god, my breast inspire,
 " There kindle all thy gentle fire:
 " But, if thou fail'st to favour me,
 " I swear I'll make a fire of thee."

ODE XI.

By another Hand.

ON HIMSELF.

10 OFT, with wanton smiles and jeers,
 Women tell me, I'm in years;
 I, the mirror when I view,
 Find, alas! they tell me true;
 Find my wrinkled forehead bare,
 And regret my falling hair;
 White and few, alas! I find
 All that time has left behind.
 But my hairs, if thus they fall,
 If but few, or none at all,
 20 Asking not, I'll never share
 Fruitless knowledge, fruitless care.
 This important truth I know,
 If indeed in years I grow,
 I must snatch what life can give;
 Not to love, is not to live.

ODE XII.

ON A SWALLOW.

30 SAY, chattering bird, that dar'st invade
 My slumbers with thy serenade,
 And steal'st my visionary bliss,
 How shall I punish thee for this?
 Say, shall I clip thy soaring wing;
 Or, like stern Tereus, Thracian king,
 To swallows name of dire dismay,
 Tear by the roots thy tongue away?
 For, with thy execrable scream,
 Thou wak'st me from a golden dream,
 40 And from my arms had snatch'd away
 Phyllis the fair, the young, the gay.

ODE XIII.

ON ATYS.

As o'er the mountains, o'er the plains,
 Unmanly Atys, in loud strains
 Great Cybele invoking, mourn'd,
 His love to sudden madness turn'd.

Some to the Clarian fountain throng
 Of laurell'd Phœbus, god of song,
 And, with prophetic draughts inspir'd,
 Enraptur'd rave, with frenzy fir'd;
 I too, inspir'd with generous wine,
 While round me breathe perfumes divine,
 10 And with fair Chloe blest, will prove
 The sweetest madness—wine and love.

ODE XIV.

LOVE IRRESISTIBLE.

10 YES, I yield—thy sovereign sway,
 Mighty Cupid, I'll obey.
 Late with soft persuasive art
 Love essay'd to win my heart:
 I, inflam'd with rebel pride,
 His omnipotence defy'd—

With revengeful fury flung,
 Strait his bow he bent, he strung,
 Snatch'd an arrow wing'd for flight,
 And provok'd me to the fight:
 I, disdain'g base retreat,
 Clad in radiant arms complete,
 Like Achilles, boldly wield
 Glittering spear, and ample shield;
 Thus equipt, resolve to prove
 The terrific power of love.

From his bow the arrows sped;
 I, alas! inglorious fled——
 When the quiver at his side
 Feather'd shafts no more supply'd,
 Love, transform'd into a dart,
 Pierc'd, like light'ning, through my heart,
 Of my vitals made his prey,
 And dissolv'd my soul away.
 Now, alas! in vain I wield
 Glittering spear, and ample shield,
 Victory in vain dispute,
 Love, I find is absolute;
 All defence to folly turns
 When within the battle burns.

ODE XV.

By Dr. Broome.

HAPPY LIFE.

THE wealth of Gyges I despise,
 Gems have no charms to tempt the wife;
 Riches I leave, and such vain things,
 To the low aim and pride of kings.

Let my bright hair with unguents flow,
 With rosy garlands crown my brow:
 This sun shall roll in joy away;
 To-morrow is a distant day.

Then while the hour serenely shines,
 Toss the gay die, and quaff thy wines;
 But ever in the genial hour,
 To Bacchus the libation pour,
 Lest death in wrath approach, and cry,
 Man—taste no more the cup of joy.

ODE XVI.

By Dr. Broome.

THE POWER OF BEAUTY.

SOME sing of Thebes, and some employ
 Their numbers on the siege of Troy.
 I mourn, alas! in plaintive strains,
 My own captivity and chains.

No navy, rang'd in proud array,
 No foot, no horseman arm'd to slay,
 My peace alarm: far other foes,
 Far other hosts create my woes;
 Strange dangerous hosts, that ambush'd lie
 In every bright, love-darting eye!
 Such as destroy, when beauty arms,
 To conquer, dreadful in its charms!

ODE XVII.

THE SILVER BOWL.

MULCIBER, this silver take,
 And a curious goblet make,

Let thy utmost skill appear
 Not in radiant armour there;
 Let me there no battles see;
 What are arms or wars to me?
 Form it with a noble sweep,
 Very wide, and very deep.
 Carve not there the Northern Team,
 Nor Orion's dreadful beam;
 Pleiads, Hyads, Bears dispense;
 What have I to do with these?
 Why should flow Boötes roll,
 Why should horrid monsters prowl,
 On the margin of my bowl?
 Draw me, what I value more,
 Vines with purple clusters store,
 Bacchus, ever young and fair,
 Cupid with the golden hair,
 Gay Bathyllus too be there.
 See that, beautiful and bold,
 All these figures rise in gold:
 In the wine-press let them join
 Hand in hand to tread the wine.

ODE XVIII.

ON THE SAME.

CONTRIVE me, artisan, a bowl
 Of silver ample as my soul;
 And in the bright compartments bring
 The sweet profusion of the spring;
 Let that fair season, rich in flowers,
 Shed roses in ambrosial showers;
 Yet simply plain be thy design,
 A festive banqueting of wine;
 No hieroglyphics let it have,
 No foreign mysteries engrave;
 Let no blood-thirsty heroes wield
 Rough armour in the silver field;
 But draw me Jove's delightful boy,
 Bacchus the god of wine and joy:
 Let Venus with light step advance,
 And with gay Hymen lead the dance.
 Beneath the leaf-embellish'd vine,
 Full of young grapes that promise wine,
 Let love, without his armour meet
 The meek-ey'd graces laughing sweet.
 And on the polish'd plain display
 A group of beauteous boys at play;
 But no Apollo, god of day.

ODE XIX.

WE OUGHT TO DRINK,

THE thirsty earth sucks up the showers
 Which from his urn Aquarius pours;
 The trees, which wave their boughs profuse,
 Imbibe the earth's prolific juice;
 The sea, in his prodigious cup,
 Drinks all the rain and rivers up;
 The sun too thirsts, and strives to drain
 The sea, the rivers, and the rain,
 And nightly, when his course is run,
 The merry moon drinks up the sun.

Then give me wine, and tell me why,
My friends, should all things drink but I!

ODE XX.

By Dr. Broome.

TO HIS MISTRESS.

THE gods o'er mortals prove their sway,
And steal them from themselves away.
Transform'd by their almighty hands,
Sad Niobe an image stands;
And Philomel up borne on wings,
Through air her mournful story sings.

Would heaven indulgent to my vow,
The happy change I wish allow;
Thy envy'd mirror I would be,
That thou might'st always gaze on me;
And, could my naked heart appear,
Thoud'st see thyself—for thou art there!
Or were I made thy folding vest,
That thou might'st clasp me to thy breast!
Or, turn'd into a fount, to lave
Thy naked beauties in my wave!
Thy bosom cincture I would grow,
To warm those little hills of snow:
Thy ointment, in such fragrant streams
To wander o'er thy beauteous limbs;
Thy chain of shining pearl, to deck
And close embrace thy graceful neck:
A very scandal I would be,
To tread on—if trod on by thee.

ODE XXI.

SUMMER.

FILL, fill, sweet girls, the foaming bowl,
And let me gratify my soul:
I faint with thirst—the heat of day
Has drank my very life away.

O! lead me to yon cooling bowers,
And give me fresher wreaths of flowers;
For those that now my temples shade,
Scorch'd by my burning forehead, fade:
But O! my heart, what can remove,
What winds, what shades, this heat of love?
These are all vain, alas! I find;
Love is the fever of the mind.

ODE XXII.

By E. G. B. Esq.

THE BOWER.

HERE, my Cloe, charming maid,
Here, beneath the genial shade,
Shielded from each ruder wind,
Lovely Chloe, lie reclin'd!
Lo! for thee the balmy breeze
Gently fans the waving trees!
Streams that whisper through the grove
Whisper low the voice of love,
Sweetly bubbling wanton sport,
Where persuasion holds her court.

Ye who pass th' enamell'd grove
Through the rustling shade who rove,
Sure my bliss your breast must fire!
Can you see, and not admire?

ODE XXIII.

THE VANITY OF RICHES.

If the treasur'd gold could give
Man a longer term to live,
I'd employ my utmost care
Still to keep, and still to spare;
And when death approach'd, would say,
"Take thy fee, and walk away."
But since riches cannot save
Mortals from the gloomy grave,
Why should I myself deceive,
Vainly sigh, and vainly grieve?
Death will surely be my lot,
Whether I am rich or not.

Give me freely while I live
Generous wines, in plenty give
Soothing joys my life to cheer,
Beauty kind, and friends sincere;
Happy! could I ever find
Friends sincere, and beauty kind.

ODE XXIV.

ENJOYMENT.

SINCE I'm born a mortal man,
And my being's but a span;
'Tis a march that I must make;
'Tis a journey I must take:
What is past I know too well;
What is future who can tell?
Teazing care, then set me free,
What have I to do with thee?
Ere I die, for die I must,
Ere this body turns to dust,
Every moment I'll employ
In sweet revelry and joy,
Laugh and sing, and dance and play,
With Lycæus young and gay.

ODE XXV.

WINE BANISHES CARES.

WHEN gay Bacchus cheers my breast,
All my cares are lull'd to rest:
Griefs that weep, and toils that tease,
What have I to do with these?
No solitudes can save
Mortals from the gloomy grave.
Shall I thus myself deceive?
Shall I languish? shall I grieve?
Let us quaff the generous juice;
Bacchus gave it for our use.

For when wine transports the breast,
All our cares are lull'd to rest.

ODE XXVI.

THE TRANSPORTS OF WINE.

WHEN gay Bacchus fills my breast,
All my cares are lull'd to rest,

Rich I seem as Lydia's king,
Merry catch or ballad sing;
Ivy-wreaths my temples shade,
Ivy that will never fade:
Thus I sit in mind elate,
Laughing at the farce of state.
Some delight in fighting fields,
Nobler transports Bacchus yields:
Fill the bowl—I ever said,
'Tis better to lie drunk than dead.

ODE XXVII.

THE PRAISE OF BACCHUS.

BACCHUS, Jove's delightful boy,
Generous god of wine and joy,
Still exhilarates my soul
With the raptures of the bowl;
Then with feather'd feet I bound,
Dancing in a festive round;
Then I feel, in sparkling wine,
Transports delicate, divine;
Then the sprightly music warms,
Song delights and beauty charms:
Debonair, and light, and gay,
Thus I dance the hours away.

ODE XXVIII.

From the Guardian.

HIS MISTRESS'S PICTURE.

BEST and happiest artisan,
Best of painters, if you can,
With your many-colour'd art
Paint the mistress of my heart.
Describe the charms you hear from me
(Her charms you could not paint and see)
And make the absent nymph appear
As if her lovely self were here.
First draw her easy-flowing hair,
As soft and black as she is fair;
And, if your art can rise so high,
Let breathing odours round her fly.
Beneath the shade of flowing jet,
The ivory forehead smoothly set,
With care the fable brows extend,
And in two arches nicely bend;
That fair space which lies between
The meeting shade may scarce be seen.
The eye must be uncommon fire,
Sparkle, languish, and desire;
The flames, unseen, must yet be felt,
Like Pallas kill, like Venus melt.
The rosy cheeks must seem to glow
Amidst the white of new-fall'n snow.
Let her lips persuasion wear,
In silence elegantly fair;
As if the blushing rivals strove,
Breathing and inviting love.
Below her chin be sure to deck
With every grace her polish'd neck;
While all that's pretty, soft, and sweet,
In the swelling bosom meet.
The rest in purple garments veil,
Her body, nor her shape conceal.

Enough!—the lovely work is done,
The breathing paint will speak anon.

THE SAME ODE IMITATED.

IN THE YEAR 1755,

By another Hand.

BEST of painters, show thy art,
10 Draw the charmer of my heart;
Draw her as she shines away
At the rout, or at the play:
Carefully each mode express,
Woman's better part is dress.
Let her cap be mighty small,
Bigger just than none at all,
Pretty, like her sense, and little;
Like her beauty, frail and brittle. 10
Be her shining locks confin'd
In a threefold braid behind;
Let an artificial flower
Set the fissure off before;
Here and there weave ribbon pat in,
Ribbon of the finest satin.
Circling round her ivory neck
10 Frizzle out the smart Vandyke;
Like the ruff that heretofore
Good Queen Bess's maidens wore; 20
Happy maidens, as we read,
Maids of honour, maids indeed.
Let her breast look rich and bold
With a stomacher of gold;
Let it keep her bosom warm,
Amplify stretch'd from arm to arm;
Whimsically travers'd o'er,
Here a knot, and there a flower,
Like her little heart that dances,
Full of maggots, full of fancies. 30
Flowing loosely down her back
Draw with art the graceful sack;
Ornament it well with jimping,
Flounces, furbelows and crimping.
10 Let of ruffles many a row
Guard her elbows, white as snow;
Knots below, and knots above,
Emblems of the ties of love.
Let her hoop, extended wide,
Show what petticoats should hide, 40
Garters of the softest silk,
Stockings whiter than the milk;
Charming part of female dress,
Did it show us more or less.
20 Let a pair of velvet shoes
Gently press her pretty toes,
Gently press, and softly squeeze,
Tottering like the fair Chinese,
Mounted high, and buckled low,
Tott'ring every step they go. 50
Take these hints, and do thy duty,
Fashions are the tests of beauty;
Features vary and perplex,
Mode's the woman and the sex.

ODE XXIX.

BATHYLLUS.

Now, illustrious artisan,
Paint the well proportion'd man;

Once again the tints prepare,
Paint Bathyllus young and fair.
Draw his tresses soft and black,
Flowing graceful down his back,
Auburn be the curl'd extremes,
Glowing like the solar beams;
Let them negligently fall,
Easy, free, and artless all.

Let his bright cerulean brow
Grace his forehead white as snow.

Let his eyes, that glow with fire,
Gentlest, mildest love inspire;
Steal from Mars his radiant mien,
Softness from th' Idalian queen;
This with hope the heart to bless,
That with terror to depress.

Next, his cheeks with roses crown,
And the peach's dubious down;
And, if art can this bestow,
Let the blush ingenuous glow.

But description would be faint,
Teaching you his lips to paint:
There let fair persuasion dwell,
Let them gently, softly swell,
Seem in sweetest sounds to break
Willing air, and silent speak.

Now you've finish'd high the face,
Draw his ivory neck with grace;
All the charms and beauty add,
Such as fair Adonis had.

Let me, next, the bosom see,
And the hands of Mercury.
But I'll not presume to tell,
Artist, you who paint so well,
How the foot should be express'd,
How to finish all the rest.

I the price you ask will give,
For the picture seems to live:
Gold's too little, view this piece,
'Tis the pictur'd pride of Greece;
This divine Apollo take,
And from this Bathyllus make.
When to Samos you repair,
Ask for young Bathyllus there,
Finest figure eye e'er saw,
From Bathyllus Phœbus draw.

ODE XXX.

CUPID TAKEN PRISONER.

LATE the muses Cupid found,
And with wreaths of roses bound,
Bound him fast, as soon as caught,
And to blooming beauty brought.
Venus with large ransom strove
To release the god of love.
Vain is ransom, vain is fee,
Love refuses to be free.
Happy within his rosy chain,
Love with beauty will remain.

ODE XXXI.

THE PLEASING FRENZY.

INDULGE me, Stoics, with the bowl,
And let me gratify my soul;

Your precepts to the schools confine,
For I'll be nobly mad with wine.

Alcmæon and Orestes grew
Quite mad when they their mother's flew;
But I, no man, no mother kill'd,
No blood but that of Bacchus spill'd,
Will prove the virtues of the vine,
And be immensely mad with wine.

When Hercules was mad, we know
He grasp'd the Iphitean bow;
The rattling of his quiver spread
Astonishment around and dread.
Mad Ajax with his sevenfold shield,
Tremenduous stalk'd along the field.
Great Hector's flaming sword he drew,
And hosts of Greeks in fancy flew.

But I with no such fury glow,
No sword I have, nor bend no bow:
My helmet is a flowery crown;
In this bright bowl my cares I'll drown,
And rant in ecstasies divine,
Heroically mad with wine.

ODE XXXII.

THE NUMBER OF HIS MISTRESSES.

WHEN thou can'st fairly number all
The leaves on trees that fade and fall,
Or count the foaming waves that roar,
Or tell the pebbles on the shore:
Then may'st thou reckon up the names
Of all my beauties, all my flames.

At Athens, flames that still survive,
First count me only thirty-five.
At Corinth next tell o'er the fair,
Tell me a whole battalion there.
In Greece the fairest nymphs abound,
And worse than banner'd armies wound.
Count all that make their sweet abodes
At Lesbos, or delightful Rhodes.
Then Carian and Ionian dames,
Write me at least two thousand flames.

What! think'st thou this too large a sum?
Egypt and Syria are to come.
And Crete where Love his sway maintains,
And o'er a hundred cities reigns.
Yet still unnumber'd, still remain
The nymphs of Persia and of Spain,
And Indians, scorch'd by Titan's ray,
Whose charms have burnt my heart away.

ODE XXXIII.

THE SWALLOW.

LOVELY swallow, once a year,
Pleas'd you pay your visit here;
When our clime the sun-beams gild,
Here your airy nest you build;
And, when bright days cease to smile,
Fly to Memphis or the Nile:
But, alas! within my breast
Love for ever makes his nest;
There the little Cupids lie,
Some prepare their wings to fly,

Some unhatch'd, some form'd in part,
Lie close nestling at my heart,
Chirping loud; their ceaseless noise
All my golden peace destroys:
Some, quite fledg'd and fully grown,
Nurse the younglings as their own;
These, when feather'd, others feed,
And thus propagate their breed.
Dreadful torment I sustain,
What, alas! can ease my pain:
The vast flocks of loves that dwell
In my breast no tongue can tell.

ODE XXXIV.

TO HIS MISTRESS.

THOUGH cold winter o'er my brow
Sheds a scatter'd shower of snow,
Waving locks of silver hair;
Fly me not, capricious fair.
Though the spring's enlivening power
Blossoms in your beauty's flower,
Fly me not, nor flight my love;
In this chaplet, lo! are wove
Lucid colours blending bright
Roses red, and lilies white:
We, methinks, resemble those;
I the lily, you the rose.

ODE XXXV.

ON THE PICTURE OF EUROPA.

THIS pictur'd bull is mighty Jove,
Who meditates some prank of love;
On his broad back, with pleasing care,
He safely bears the Tyrian fair:
Lo! buoyant on the foaming tide,
He throws the circling winds aside,
Securely steering through the sea.
No other daring bull but he,
Would leave his heifers on the plain,
To tempt the dangers of the main.

ODE XXXVI.

By Dr. Broome.

LIFE SHOULD BE ENJOYED.

TALK not to me of pedant rules,
I leave debates to learned fools,
Who solemnly in form advise;
At best impertinently wise.
To me more pleasing precepts give,
And teach the science how to live;
To bury in the friendly draught
Sorrows that spring from too much thought;
To learn soft lessons from the fair,
How life may glide exempt from care.
Alas! I'm old—I see my head
With hoary locks by time o'erspread:
Then instant be the goblet brought,
To make me young—at least in thought.
Alas! incessant speeds the day,
When I must mix with common clay;

When I must tread the dismal shore,
And dream of love and wine no more.

ODE XXXVII.

By Dr. Broome.

THE SPRING.

SEE! winter's past; the season's bring
Soft breezes with returning spring;
At whose approach the graces wear.
Fresh honours in their flowing hair;
The raging seas forget to roar,
And smiling, gently kiss the shore;
The sportive duck, in wanton play,
Now dives, now rises into day;
The cranes from freezing skies repair,
And sailing float to warmer air;
Th' enlivening suns in glory rise,
And gayly dance along the skies;
The clouds disperse, or, if in showers
They fall, it is to wake the flowers.
See! verdure clothes the teeming earth;
The olive struggles into birth;
The swelling grapes adorn the vine,
And kindly promise future wine:
Blest juice! already I in thought
Quaff an imaginary draught.

ODE XXXVIII.

ON HIMSELF.

YES, I'm old, I'm old, 'tis true;
What have I with time to do?
With the young and with the gay,
I can drink as much as they.
Let the jovial band advance,
Still I'm ready for the dance:
What's my sceptre, if you ask,
Lo! I sway a mighty flask.
Should some mettled blade delight
In the bloody scenes of fight,
Let him to this stage ascend,
Still I'm ready to contend—
Mix the grape's rich blood, my page,
We in drinking will engage.
Yes, I'm old; yet with the gay
I can be as brisk as they;
Like Silenus 'midst his train,
I can dance along the plain.

ODE XXXIX.

ON HIMSELF.

WHEN I drain the rosy bowl,
Joy exhilarates my soul:
To the nine I raise my song,
Ever fair and ever young.
When full cups my cares expel,
Sober counsels, then farewell:
Let the winds that murmur, sweep
All my sorrows to the deep.
When I drink dull time away,
Jolly Bacchus, ever gay,
Leads me to delightful bowers,
Full of fragrance, full of flowers.

When I quaff the sparkling wine,
And my locks with roses twine,
Then I praise life's rural scene,
Sweet, sequester'd, and serene.

When I sink the bowl profound,
Richest fragrance flowing round,
And some lovely nymph detain,
Venus then inspires the strain. 20

When from goblets deep and wide
I exhaust the generous tide,
All my soul unbends—I play
Gamesome with the young and gay.

When the foaming bowl I drain,
Real blessings are my gain;
Blessings which my own I call:
Death is common to us all.

ODE XL.

CUPID WOUNDED.

ONCE as Cupid, tir'd with play,
On a bed of roses lay,
A rude bee, that flit unseen,
The sweet-breathing buds between,
Stung his finger, cruel chance!
With its little pointed lance.

Strait he fills the air with cries,
Weeps, and sobs, and runs, and flies;
Till the god to Venus came,
Lovely laughter-loving dame; 10
Then he thus began to plain;

"Oh! undone—I die with pain—
"Dear mamma, a serpent small,
"Which a bee the ploughmen call,
"Imp'd with wings, and arm'd with dart,
"Oh!—has stung me to the heart."

Venus thus reply'd, and smil'd;
"Dry those tears, for shame! my child;
"If a bee can wound so deep,
"Causing Cupid thus to weep, 20
"Think, O think! what cruel pains
"He that's stung by thee sustains."

ODE XLI.

THE BANQUET OF WINE.

NOW let us gaily drink, and join
To celebrate the god of wine,
Bacchus, who taught his jovial throng
The dance, and patroniz'd the song;
In heart, in soul, with love the same,
The favourite of the Cyprian dame.

Revelry he nam'd his heir;
The graces are his daughters fair:
Sadness in Lethe's lake he sleeps;
Solicitude before him sleeps. 10

When in large bowls fair boys produce
The heart-exhilarating juice,
Then all our sorrows are resign'd,
They fly and mingle with the wind.
The generous bowl then let us drain,
Dismissing care, forgetting pain:
For life, what pleasure can it give,
If with anxiety we live?

And what hereafter may betide
No living casuist can decide. 20

The days of man are fix'd by fate,
Dark and obscure, though short the date.

Then let me, warm with wine, advance,
And revel in the tipsey dance;
Or, breathing odours, sport and play
Among the fair, among the gay.
As for those stubborn fools that will
Be wretched, be they wretched still.
But let us gaily drink, and join
To celebrate the god of wine. 30

ODE XLII.

ON HIMSELF.

WHEN Bacchus, jolly god, invites,
In sprightly dance my heart delights;
When with blithe youths I drain the bowl,
The lyre can harmonize my soul:
But when, indulging amorous play
I frolic with the fair and gay,
With hyacinthine chaplet crown'd,
Then, then the sweetest joys abound;
My honest heart nor envy bears,
Nor envy's poison'd arrows fears; 10
By rankling malice never stung,
I shun the venom-venting tongue.
And at the jovial banquet hate
Contentions, battles, and debate:
When to the lyre's melodious sound
With Phyllis in the dance I bound,
The blooming fair, the silver lyre,
Should only dance and love inspire:
Then let us pass life's peaceful day
In mirth and innocence away. 20

ODE XLIII.

THE GRASHOPPER.

THEE, sweet grasshopper, we call
Happiest of insects all,
Who from spray to spray canst skip,
And the dew of morning sip:
Little sips inspire to sing;
Then thou'rt happy as a king.
All, whatever thou canst see,
Herbs and flowers belong to thee;
All the various seasons yield,
All the produce of the field. 10
Thou, quite innocent of harm,
Lov'st the farmer and the farm;
Singing sweet when summer's near,
Thou to all mankind art dear;
Dear to all the tuneful nine
Seated round the throne divine;
Dear to Phœbus, god of day,
He inspir'd thy sprightly lay,
And with voice melodious blest,
And in vivid colours drest, 20
Thou from spoil of time art free;
Age can never injure thee.
Wise daughter of the earth!
Fond of song, and full of mirth;

Free from flesh, exempt from pains,
No blood riots in thy veins;
To the blest I equal thee;
Thou'rt a demi-deity.

ODE XLIV.

THE DREAM.

I DREAM'D that late I pinions wore,
And swiftly seem'd through air to soar;
Me fleeter Cupid quick as thought,
Pursu'd, and in an instant caught,
Though at his feet hung weights of lead:
What can this vision mean, I said?
Its mystic sense I thus explain;
I who ere-while have worn the chain
Of many a fair-one for a day,
Then flung the flowery band away,
Am now involv'd and fetter'd fast
In links that will for ever last.

ODE XLV.

By another Hand.

CUPID'S DARTS.

As the god of manual arts
Forg'd at Lemnos missile darts,
Darts of steel for Cupid's bow,
Source of joy, and source of woe;
Venus, fast as Vulcan wrought,
Ting'd them in a honey'd draught:
But her son in bitter gall
Ting'd them, doubly-ting'd them all.
Here, releas'd from wars alarms,
Enters the fierce god of arms;
Whether led by will or chance,
Here he shakes his weighty lance.
Cupid's shafts with scornful eyes
Strait he views, and strait decries:
"This is flight, and that a toy,
"Fit for children to employ."
"These (said Cupid) I admit
"Toys indeed, for children fit:
"But, if I divine aright,
"Take it——this is not so flight."
Mars receives it; Venus smiles
At her son's well-season'd wiles.
Mars with sudden pain possess'd,
Sighs from out his inmost breast:
"Cupid, you aright divine,
"Not so flight this shaft of thine;
"Small of size! but strong of make!
"Take it—I have try'd it—take."
"No, reply'd the wanton boy,
"Keep it, Mars, 'tis but a toy."

ODE XLVI.

THE POWER OF GOLD.

Love's a pain that works our woe;
Not to love, is painful too:
But, alas! the greatest pain
Waits the love that meets disdain.

What avails ingenuous worth,
Sprightly wit, or noble birth?
All these virtues useless prove;
Gold alone engages love.

May he be completely curst,
Who the sleeping mischief first
Wak'd to life, and vile before,
Stamp'd with worth the sordid ore.
Gold creates in brethren strife;
Gold destroys the parent's life;
Gold produces civil jars,
Murders, massacres, and wars:
But the worst effect of gold,
Love, alas! is bought and sold.

ODE XLVII.

YOUNG OLDAGE.

Yes, yes, I own, I love to see
Old men facetious, blithe, and free;
I love the youth that light can bound,
Or graceful swim th' harmonious round:
But when old-age jocosely though gray,
Can dance and frolic with the gay;
'Tis plain to all the jovial throng,
Though hoar the head, the heart is young.

ODE XLVIII.

By Dr. Broome.

GAY LIFE.

GIVE me Homer's tuneful lyre,
Let the sound my breast inspire!
But with no troublesome delight
Of arms, and heroes slain in fight:
Let it play no conquests here,
Or conquests only o'er the fair!
Boy, reach that volume—book divine!
The statutes of the god of wine:
He, legislator, statutes draws.
And I, his judge, enforce his laws;
And, faithful to the weighty trust,
Compel his votaries to be just;
Thus, round the bowl impartial flies,
Till to the sprightly dance we rise;
We frisk it with a lively bound,
Charm'd with the lyre's harmonious sound;
Then pour forth, with an heat divine,
Rapturous songs that breathe of wine.

ODE XLIX.

By another Hand.

TO A PAINTER.

WHILE you my lyre's soft numbers hear,
Ingenious painter, lend an ear,
And, while it charms your ravish'd heart,
Display the wonders of your art.
First draw a nation blithe and gay,
Laughing and sporting life away;
Let them in sprightly dances bound,
While their shrill pipes the Bacchæ sound;

And, if you can perfection give,
 Bid every breathing figure live:
 And then, lest life insipid prove,
 To make them happy, bid them love.

ODE L.

By Dr. Broome.

THE HAPPY EFFECTS OF WINE.

SEE! see! the jolly god appears,
 His hand a mighty goblet bears;
 With sparkling wine full char'd it flows,
 The sov'reign cure of human woes.

Wine gives a kind release from care,
 And courage to subdue the fair;
 Instructs the cheerful to advance,
 Harmonious in the sprightly dance.
 Hail, goblet, rich with generous wines!
 See! round the verge a vine-branch twines. 10
 See! how the mimic clusters roll,
 As ready to refill the bowl.

Wine keeps its happy patients free
 From every painful malady;
 Our best physician all the year;
 Thus guarded, no disease we fear,
 No troublesome disease of mind
 Until another year grows kind,
 And loads again the fruitful vine,
 And brings again our health—new wine. 20

ODE LI.

By another Hand.

ON A DISK, REPRESENTING VENUS.

RARE artist, whose inventive skill
 Could this orb with wonders fill!
 Where the mimic ocean glides
 Soft with the well dissembled tides;
 The waves seem floating, and above
 Shines the beauteous queen of love:
 The workman's fancy mounted high,
 And stole th' idea from the sky.

Transporting sight!—the waves conceal
 But what 'twere impious to reveal! 10
 She, like some flower all blossom'd gay;
 Shines along the smiling way.

The amorous waters, as she swims,
 Crowd to embrace her snowy limbs;
 Then, proudly swelling to be prest,
 Beneath her snowy fragrant breast,
 Ambitiously uprise on high,
 And lift the goddess to the sky:
 And, while her lucid limbs they lave,
 She brightens the transparent wave; 20
 So violets enlighten'd glow,
 Surrounded by the lily's snow.

But see! a lovely smiling train,
 Conspicuous o'er the limpid main,
 The queen attends! in triumph moves
 Gay Cupid with his laughing loves.
 On dolphins borne, in state they ride,
 And beautify the silver tide:

TRANS. II.

Dancing around in shoals they play,
 And humble adoration pay.
 Rare art, that life to phantoms gives!
 See! see! a second Venus lives.

ODE LII.

By Dr. Broome.

GRAPES, OR THE VINTAGE.

Lo! the vintage now is done!
 And purpled with th' autumnal sun:
 The grapes gay youths and virgins bear,
 The sweetest product of the year!
 In vats the heavenly load they lay,
 And swift the damsels trip away:
 The youths alone the wine-press tread,
 For wine's by skilful drunkards made.
 Meantime the mirthful song they raise,
 Lo! Bacchus to thy praise! 10
 And viewing the blest juice in thought,
 Quaff an imaginary draught.

Gaily through wine the old advance,
 And dotingly tremble in the dance:
 In fancy'd youth they chant and play,
 Forgetful that their locks are gray.

Through wine the youth completes his loves;
 He haunts the silence of the groves:
 Where stretch'd beneath th' embowering shade
 He sees some love-inspiring maid; 20
 On beds of rosy sweets she lies,
 Inviting sleep to close her eyes:
 Fast by her side his limbs he throws,
 Her hand he presses—breathes his vows;
 And cries, "My love, my soul, comply
 "This instant, or alas! I die."
 In vain the youth persuasion tries!
 In vain!—her tongue at least denies:
 Then, scorning death through dull despair,
 He storms th' unwilling willing fair; 30
 Blessing the grapes that could dispense
 The happy, happy impudence.

ODE LIII.

By Dr. Broome.

THE ROSE.

COME, lyrist, tune thy harp, and play
 Responsive to my vocal lay;
 Gently touch it, while I sing
 The rose, the glory of the spring.
 To heaven the rose in fragrance flies,
 The sweetest incense of the skies.
 Thee, joy of earth, when vernal hours
 Pour forth a blooming waste of flowers,
 The gaily smiling graces wear
 A trophy in their flowing hair: 10
 Thee Venus, queen of beauty, loves,
 And, crown'd with thee, more graceful moves
 In fabled song, and tuneful lays,
 Their favourite rose the muses praise:
 To pluck the rose the virgin train
 With blood their pretty fingers stain;

M

Nor dread the pointed terrors round,
That threaten and inflict a wound :
See ! how they wave the charming toy,
Now kiss, now snuff the fragrant joy.

The rose the poets strive to praise,
And for it would exchange their bays ;
O ! ever to the sprightly feast
Admitted, welcome, pleasing guest !
But chiefly when the goblet flows,
And rosy wreaths adorn our brows !

Lovely smiling rose, how sweet
All objects where thy beauties meet !
Aurora, with a blushing ray,
And rosy fingers, spreads the day :
The graces more enchanting show,
When rosy blushes paint their snow ;
And every pleas'd beholder seeks
The rose in Cytherea's cheeks.

When pain afflicts, or sickness grieves,
Its juice the drooping heart relieves ;
And, after death, its odours shed
A pleasing fragrance o'er the dead ;
And when its withering charms decay,
And sinking, fading, die away,
Triumphant o'er the rage of time,
It keeps the fragrance of its prime.

Come, lyrist, join to sing the birth
Of this sweet offspring of the earth !

When Venus from the ocean's bed
Rais'd o'er the waves her lovely head ;
When warlike Pallas sprung from Jove,
Tremendous to the powers above,
To grace the world the teeming earth
Gave the fragrant infant birth ;
And, " This," she cry'd, " I this ordain
" My favourite, queen of flowers to reign."

But first, th' assembled gods debate
The future wonder to create ;
Agreed at length, from heaven they threw
A drop of rich nectareous dew :
A bramble-stem the drop receives,
And 'traid the rose adorns the leaves.

The gods to Bacchus gave the flower,
To grace him in the genial hour.

ODE LIV.

By Dr. Broome.

GROWN YOUNG.

WHEN sprightly youth my eyes survey,
I too am young, and I am gay ;
In dance my active body swims,
And sudden pinions lift my limbs.

Haste, crown, Cybeba, crown my brows,
With garlands of the fragrant rose !
Hence, hoary age !—I now am young,
And dance the mirthful youths among.

Come then, my friends, the goblet drain !
Blest juice !—I feel thee in each vein !
See ! how with active bounds I spring !
How strong, and yet how sweet I sing !

How blest am I, who thus excel
In pleasing arts of trifling well !

ODE LV.

By Dr. Broome.

THE MARK.

THE stately steed expressive bears
A mark imprinted on his hairs :
The turban, that adorns the brows
Of Asia's sons, the Parthian shows :
And marks betray the lover's heart,
Deeply engrav'd by Cupid's dart :
I plainly read them in his eyes,
That look too foolish, or too wise.

ODE I.VI.

By Dr. Broome.

OLD AGE.

ALAS ! the powers of life decay !
My hairs are fall'n, or turn'd to gray ;
The smiling bloom, and youthful grace,
Is banish'd from my faded face :
Thus man beholds, with weeping eyes,
Himself half-dead before he dies.

For this, and for the grave I fear,
And pour the never-ceasing tear :
A dreadful prospect strikes my eye,
I soon must sicken, soon must die.

For this the mournful groan I shed,
I dread—alas ! the hour I dread !
What eye can stedfastly survey
Death, and its dark tremendous way ?
For soon as fate has clos'd our eyes,
Man dies—for ever, ever dies !
All pale, all senseless in the urn !
Never, ah ! never to return.

ODE LVII.

THAT WE SHOULD DRINK WITH MODERATION.

BRING hither, boy, a mighty bowl,
And let me quench my thirsty soul ;
Fill two parts water, fill it high,
Add one of wine, for I am dry :
Thus let the limpid stream allay
The jolly god's too potent sway.

Quick, boy, dispatch—My friends, no more,
Thus let us drinking rant and roar ;
Such clamorous riot better suits
Unpolish'd Scythia's barbarous brutes :
Let us, while music tunes the soul,
Mix temperance in the friendly bowl.

ODE LVIII.

THE LOVE-DRAUGHT.

As late of flow'rets fresh and fair
I wove a chaplet for my hair,
Beneath a rose, gay summer's pride,
The wanton god of love I spy'd,
I seiz'd him, resolute of soul,
And plung'd him in my flowing bowl,
Resolv'd to have a draught divine,
And fairly swallow'd him in wine :
E'er since his fluttering wings impart
Strange titillations to my heart.

ODE LIX.

TO A SCORNFUL BEAUTY.

WHY thus with scornful look you fly,
Wild Thracian filly, tell me why?
Think'st thou that I no skill possess,
And want both courage and address?
Know, that whenever I think fit
To tame thee with a galling bit,
Just where I please, with tighten'd rein,
I'll urge thee round the dusty plain,
Now on the flowery turf you feed,
Or lightly bound along the mead,
So wild, so wanton, and untry'd,
You want some youth to mount and ride.

10

ODE LX.

EPITHALAMIUM ON THE MARRIAGE OF STRATO-
CLES AND MYRILLA.

VENUS, fair queen of gods above,
Cupid thou mighty power of love,
And Hymen bland, by heaven design'd
The fruitful source of human kind:
To you, as to the lyre I sing,
Flows honour from the sounding string;
Propitious to the numbers prove,
O, Venus, Hymen, god of love.
View, gentle youth, with rapture view
This blooming bride, ordain'd for you:
Rise quick, and feast on all her charms,
Lest, like a bird, she fly your arms.
O happy youth! by Venus blest,
But happier on Myrilla's breast:
' See how the fair one, sweetly coy,
' All soft confusion, meets the joy,
' Blooming as health, fresh as May-flowers,
' And bright as radiant noon-tide hours.'
Of all the flowers upon the plains,
The rose unmatched in beauty reigns;
Myrilla thus in charms excels,
She shines the rose among the belles.
O may, blest youth, the god of day
The pleasing toils of love survey;
And may a beauteous blooming boy
Crown your soft vows with lasting joy!

10

20

ODE LXI.

ON GOLD.

WHEN gold, that fugitive unkind,
With pinions swifter than the wind,
Flies from my willing arms away,
(For gold with me will never stay)
With careless eyes his flight I view,
Who would perfidious foes pursue?
When from the glittering mischief free,
What mortal can compare with me?
All my inquietudes of mind
I give to murmur with the wind:
Love sweetly tunes my melting lyre
To tender notes of soft desire.

10

But when the vagrant finds I burn
With rage, and flight him in his turn,

He comes, my quiet to destroy,
With the mad family of joy:
Adieu to love, and soft desire!
He steals me from my soothing lyre.

O faithless gold! thou dear deceit!
Say, wilt thou still my fancy cheat?
This lute far sweeter transport brings,
More pleasing these love-warbled strings:
For thou with envy and with wiles
Me of my dearest love beguiles,
Dashing the cup of sweet desire,
And robb'st me of my golden lyre.
Then, for with me thou wilt not stay,
To faithless Phrygians speed'st away,
Proud and assiduous to please
Those sons of perfidy and ease.

20

30

Me from the muse thou would'st detain,
But all thy tempting arts are vain;
Ne'er shall my voice forget to sing,
Nor this right hand to touch the string:
Away to other climes! Farewell!
Leave me to tune the vocal shell.

ODE LXII.

ON THE SPRING.

WHAT bright joy can this exceed,
This of roving o'er the mead?
Where the hand of Flora pours,
Sweetest, voluntary flow'rs:
Where the zephyr's balmy gale
Wantons in the lovely vale.
O! how pleasing to recline
Underneath the spreading vine,
In the close concealment laid
With a love inspiring maid!
Fair, and sweet, and young, and gay;
Chatting all the live-long day.

ODE LXIII.

TO CUPID.

MIGHTY god of flames and darts,
Great controuler of all hearts;
With thee Venus, lovely fair,
Venus with the golden hair,
And the bright-ey'd Dryads play,
Nymphs that on the mountains stray:
Come, propitious to my vow,
Leave the the mountain's rugged brow;
Quick descend into the plain,
Where the object of my pain,
Sweet Eurypyle imparts
Anxious hopes to youthful hearts;
Melt to love the yielding fair,
Teach her not to give despair;
Thou my passion must approve,
Melt the yielding fair to love.

ODE LXIV.

TO THE SAME.

ITALIAN god, with golden hair,
O Cupid, ever young and fair,

Fly to my aid, and safely shroud
Me in a purple-beaming cloud,
And on thy painted wings convey
A faithful lover on his way.
Thy blandishments disturb my rest,
And kindle tumults in my breast;
'The pleasing poison was convey'd
Late from the lovely Lesbian maid;
Her sun-bright eye discharg'd a dart,
That rankling preys upon my heart:
In sparkling wit beyond compare,
She flights, alas! my silver hair,
Regardless of my heart-felt pain,
And fondly loves some happier swain.

ODE LXV.

ON HIMSELF.

I LATELY thought, delightful theme!
Anacreon saw me in a dream,
The Teian sage, the honey'd bard,
Who call'd me with a sweet regard;
I, pleas'd to meet him, ran in haste,
And with a friendly kiss embrac'd.
'Tis true, he seem'd a little old,
But gay and comely to behold;
Still bow'd to Cytherea's shrine,
His lip was redolent of wine:
He reel'd as if he scarce could stand,
But Cupid led him by the hand.
The poet, with a gentle look,
A chaplet from his temples took,
That did of sweet Anacreon breathe,
And smiling gave to me the wreath.
I from his brow the flow'ry crown
Receiv'd, and plac'd it on my own:
Hence all my woes unnumber'd flow,
E'er since with raging love I glow.

ODE LXVI.

By Dr. Broome.

ON APOLLO.

ONCE more, not uninspir'd, the string
I waken and spontaneous sing:
No Pythic laurel-wreath I claim,
That lifts ambition into fame:
My voice unbidden tunes the lay;
Some god impells and I obey.
Attend, ye groves! the muse prepares
A sacred song in Phrygian airs;
Such as the swan expiring sings,
Melodious, by Cayster's springs,
Where listening winds in silence hear,
And to the gods the music bear.
Celestial muse! attend and bring
Thy aid, while I thy Phœbus sing;
To Phœbus and the muse belong
The laurel, lyre, and Delphic song.
Begin, begin the lofty strain!
How Phœbus lov'd, but lov'd in vain!
How Daphne fled his guilty flame,
And scorn'd a god that offer'd shame.
With glorious pride his vows she hears,
And heaven, indulgent to her prayers,

To laurel chang'd the nymph, and gave
Her foliage to reward the brave.

Ah! how, on wings of love convey'd,
He flew to clasp the panting maid!
Now, now o'ertakes!—but heaven deceives
His hope—he seizes only leaves.

Why burns my raptur'd breast? ah! why?

Ah! whither strives my soul to fly;

I feel the pleasing frenzy strong,

Impulsive to some nobler song:

Let, let the wanton fancy play,

But guide it, lest it devious stray.

But, O! in vain—my muse denies

Her aid, a slave to lovely eyes;

Suffice it to rehearse the pains

Of bleeding nymphs and dying swains;

Nor dare to wield the shafts of love

That wound the gods, and conquer Jove.

I yield! Adieu the lofty strain!

Anacreon is himself again:

Again the melting song I play,

Attemper'd to the vocal lay,

See! see! how, with attentive ears,

The youths imbibe the nectar'd airs!

And quaff, in bow'ry shades reclin'd,

My precepts, to regale the mind.

ODE LXVII.

ON LOVE.

To love I wake the silver string,
And of his soft dominion sing:
A wreath of flowers adorns his brow,
The sweetest, fairest flowers that blow:
All mortals own his mighty sway,
And him the gods above obey.

ODE LXVIII.

THE SUPPLICATION.

QUEEN of the woodland chase, whose darts
Unerring pierce the mountain-harts,
Diana chaste, Jove's daughter fair,
Suppliant to thee I breathe my prayer.
Descend, propitious to my vow,
To where the streams of Lethe flow:
In pity aid a hapless race,
Bright goddess of the woodland chase;
With holy awe they own thy sway,
And meek in reverence obey.

ODE LXIX.

ARTEMON.

A Fragment.

Now Artemon, a favourite name,
Inspires Eurypyle with flame:
An upstart of ignoble blood,
Who plodded late in shoes of wood;
And round his waist, instead of vest,
Wore a cow's stinking hide undrest,
Which might, on fit occasion, yield
Rank covering for a rotten shield.

This wretch, with other wretches vile,
Liv'd hard by drudgery and toil;
Oft sentenc'd cruel pains to feel
At whipping-post, or racking-wheel:
But now, conspicuous from afar,
He rides triumphant in his car;
With golden pendants in his ears,
Aloft the silken reins he bears,
Proud, and effeminately gay:
His slaves an ivory skreen display,
To guard him from the solar ray.

ODE LXX.

TO HIS BOY.

Boy, while here I sit supine,
Bring me water, bring me wine;
Bring me, to adorn my brow,
Wreaths of flowers that sweetly blow:
Love invites—O! let me prove
The joys of wine, the sweets of love.

NOTES ON THE ODES.

ODE I.

This ode is, with great reason and propriety, placed at the head of these beautiful little poems: for love, the argument, is in a good measure the argument of all the rest.—The invention of it has been esteemed so happy and gallant, and the turn so delicate, that the best masters of antiquity have copied this excellent original. Horace had it in view, Ode 12. Book 2.

Nolis longa feræ bella Numantiæ,
Nec dirum Hannibalem, nec Siculum mare,
Pæno purpureum sanguine, mollibus
Aptari citharæ modis.

Dire Hannibal, the Roman dread,
Numantian wars which rag'd so long,
And seas with Punic slaughter red,
Suit not the softer lyric song.

Lord Chief Baron Gilbert.

Ovid has imitated it in several of his elegies: In the following distich he seems to have comprehended the substance of the whole ode. *Eleg. 12. Book 3.*

Oum Thebæ, cum Troja forent, cum Cæsaris acta;
Ingenium movit sola Corinna meum.

Though Thebes and Troy remain, and Cæsar's
praise,
Illustrious themes that might my fancy raise,
Corinna only can inspire my lays.

Bion of Smyrna has beautifully imitated this ode at the end of the fourth idyllium.

Ην μὲν γὰρ βροτὸν ἄλλον ἢ ἀθανάτου τινα μέλω,
Καμβάινει μὲν γλῶσσαι, καὶ ὡς παρὸς ἔκ ἐτ' αἰ-
δει.

Ην δ' αὖτ' ἐς τὸν ἔρωτα καὶ ἐς Λυκίδαυ τι μέλι-
σσαι, τοῖα μοι χαίρεισθαι δια σωματός, εἰσι ὡδα.

To praise a hero, when I strike the lyre,
Or nobly daring to some god aspire,
In strains more languid flows the nerveless song,
The fault'ring accents die upon my tongue;

But when with love or Lycidas I glow,
Smooth are my lays, the numbers sweetly flow.

Ver. 3. Agamemnon and Menelaus, the chief commanders at the siege of Troy. By the Atridae the poet means the Trojan, and by Cadmus the Theban war.

Ver. 9. M. Dacier judiciously observes, in his notes on the twenty-sixth ode of the first book of Horace, that the poets, when they would celebrate any extraordinary subject, were wont to say they had new-strung their lyre.

—Hunc fidibus novis,
Hunc Lesbio sacrare plectro,
Teque tuasque decet sorores.

To sound his praise, O muse, is thine,
In concert with the tuneful nine,
On the fam'd Lesbian lyre new-strung,
In numbers sweet, as old Alcæus sung.

Ver. 14. The Greek word, ἀντιφωνεῖν, is very strong and expressive, and means, "to return a contrary sound." To understand this passage clearly, we must imagine that Anacreon is singing and playing upon the lyre; which, instead of answering to his voice in heroic numbers, returned only the sounds of love. Tibullus has a similar expression, *Eleg. 4. Book 3.*

Tunc ego nec cithara poteram gaudere sonora,
Nec similes chordis reddere voce sonos.

No more I tun'd the loud resounding string,
Nor to the lyre's sweet melody could sing.

Ver. 15. —Heroum clara valet
Nomina, non apta est gratia vestra mihi.

Ovid, *Eleg. 1. Book 2.*
Ye heroes of immortal fame, adieu!
Ill suits the warbling of my lyre with you.

ODE II.

Phocylides has copied great part of this ode in his admonitory poem:

Ὅπλον ἰκαίω νείμει θεὸς φύσιν' ἡροφύτον
 ὄρνισι μὲν πολλὰν ταχυΐην ἄλκην τε λίσσι,
 ταυροῖς δ' αὐτοχύτες κέρασσιν, κενέα μελίσσαις
 ἐμφύλον ἀλκαρ ἰδῶκε' λόγος δ' ἐρυμ' ἀνθρώποισι.

Arms to all creatures God's abundant care
 Affords; light pinions to the birds of air;
 The lordly lion boasts his matchless might;
 The bull's bright horns are terrible in fight;
 The sting sharp-pointed is the bee's defence;
 The shield and buckler of mankind is sense.

Ver. 10. The Greek word *φρονήμα* generally signifies prudence; and so Stephens has translated it: But as it would be highly absurd to suppose that nature had forgot that useful ingredient in the composition of the ladies, we must look out for another interpretation. *Φρονήμα* equally signifies magnanimity. It is similar to an expression of Tully, in Off. i. 19.—“*Elatio et magnitudo animi*.” And as Mr John Addison, in his note on this passage observes, “By courage, when applied to man, is properly meant that superiority of mind, which is man's peculiar characteristic and charter of dominion.”

Ver. 14 Coluthus, in his poem on the Rape of Helen, has the same thought, speaking of Venus:

Μῆνη Κυπρίε ἀναλκίς ἐνν' ἔννε. ἡ βασιλῆων
 Κρηναίνῃ ἢ εἶχ' αὐκίον ἡ βίλος ἰλκῶν
 Ἀλλὰ τι δειμαίνω πειρώσιον ἀντι μὲν αἰχμῆς,
 ὣς θύον εἶχ' οὐχ ἔχουσα μίλιφρονά δειμον ἐροῦν.

Of all the god, no regal sway I bear,
 Nor, weak and timid, wield the martial spear;
 Yet great my pow'r, for my resistless darts
 Are smiles and loves that triumph over hearts.

And a little further,

Ἔργα μὲν οὐκ εἶδα' τι γὰρ σακκῶν Ἀφροδίτῃ;
 Ἀγλαΐη πολὺ μάλλον ἀριστύνει γυναῖκες.

No fights I know, averse to war's alarms;
 Idalian Venus has no need of arms:
 The fair are irresistible in charms.

Nonnus introduces Venus speaking after the same manner:

Ἐλχ' οὐκ εἶδα' τι γὰρ σακκῶν Ἀφροδίτῃ;
 Ἀγλαΐη πολὺ μάλλον ἀριστύνει γυναῖκες.

Resistless beauty for a sword I wear,
 And charms more piercing than the pointed spear.

The Romans were so fully convinced of the power of beauty, that the word *fortis*, strong or valiant, signifies likewise fair or handsome; as appears by two passages in Plautus.—Bacchid. Act 2. Sc. 2. 38. “*Sed Bacchis etiam tibi fortis visa est?*” Et Miles Glor. Act. 4. Sc. 3. 13. *Ecquid fortis visa est?*

ODE III.

This, as Longepierre observes, is one of the most beautiful of Anacreon's odes. Nothing can

be more ingenious than the fiction, which is something similar to the fable of the Serpent and the Labourer.

Ver. 4. Two constellations near the northern pole. Bootes is also called Arctophylax, or the Bear-keeper. Aratus, in his Phenomena, has three lines perfectly similar to this passage of Anacreon.

Ἐξοπίθεν δ' ἑλίκης φέρειν εἰλαονί τοικῶς
 Ἀρκτοφυλᾶξ, τὸν ῥ' ἀνὴρ ἐπικλείουσι Βοώτην,
 Οὐνεχ' ἀμαζαῖας ἱταφωμένος εἶδ' αἰ Λαρκῆν.

Behind, and seeming to urge on the Bear,
 Arctophylax, on earth Boötes nam'd,
 Sheds o'er the arctic car his silver light.

Ver. 40. The ancients placed the seat of love in the liver, as might be proved from several passages.

Cum tibi fervens amor et libido,
 Quæ solet matres furiare equorum,
 Sæviet circa jecur ulcerosum.

Hor. B. 1. Ode 2.

And burning love and lothsome lust,
 Such as the madding filthes fires,
 Still in thy canker'd liver rage.

Dunscombe.

Theocritus, Idyll. 11. ver. 16.

—το οἱ ἥπαρ παζὶ βελεμένον.

—She in his liver fix'd a dart.

And in the thirteenth Idyl. ver. 72. speaking of Hercules, he says,

—Χαλεπὸς γὰρ ἴσα' θεὸς ἥπαρ ἀμύσσει.

For in his liver love had fix'd a wound.

There is an epigram in the seventh book of the Anthologia, to the same purpose.

Ἀπὸν, ἔρος, πρᾶξις τε καὶ ἥπατος. εἰ δ' ἐσθύνεται
 Βαλλῶν, ἄλλο τι μὲν τῶν μιλίων μείλας.

Cease, love, to wound my liver and my heart;
 If I must suffer, choose some other part.

ODE IV.

Ver. 2. Madam Dacier observes, that the ancients, by way of indulgence, used to repose themselves on large heaps of fragrant herbs, leaves, and flowers.

Ver. 7. Seneca, in his Hercules Furens, Act 1. Scene 2. Ver. 177. has the same sentiment.

—Properat cursu

Vita citato, volucrique die
 Rota præcipitis vertitur anni.

With rapid motion, never at a stay,
 Life swiftly passes along, and, day by day,
 The year's great wheel incessant rolls away.

Ver. 14. Anthologia, Book 7.

Ἐν ζωῶσι τα πτερυγία τα Κωπρίδος ἐν δ' Ἀχαιοῖς
 Ὅσα καὶ σπέρμα, παρὲν, κείσεται.

Phyllis, while living, let us life employ
In the soft transports of Idalian joy :
For when we die, (and die alas! we must)
All that remains is ashes, bones, or dust.

Nos ubi decidimus
Quo pius Æneas quo Tullus dives, et Ancus,
Pulvis et umbra fumus. *Hor.*

But to the dreary realms below
Who sink, must no return for ever know !
Enroll'd among the mighty dead,
Our body will be dust, our soul a shade.

Duncombe.

There are two epigrams in the second book of the Anthologia, very similar to this passage of Anacreon :

Και πινε, και, τερπνε, Δημοκρατες· & γαρ εις αιει
Πιομεθ', εδ αιει τερψιος εζομεθα.

Και σεφανης κεφαλως πυκασωμεθα, και μυρισωμεν
Αυτας, πριν τυμωσις ταυτα φερει ετερως.

Νυν εν εμοι πιστω μεθυ το πλεον οσια ταμα.

Νεκρα δε Δευκαλιων αυτα κατακλυσεται.

Drink and rejoice, for let us wisely think,
My friend, we must not always laugh and drink :
Our heads we'll crown with flow'rs and rich per-
fumes

Before they're vainly lavish'd on our tombs.
Cares and anxieties I now resign,
Or drown them in a mighty bowl of wine.
When dead, Deucalion may, if he thinks good,
Drench my cold carcase in a wat'ry flood.

Με μυρα, μη σεφανης λιθιναις σηλαιτι χαριζε,
Μηδε το πυρ φλεξης· εις κενον η δαπανη.

Ζητι μοι, εστι θελεις χαρισαι.

On the cold tombs no fragrant unguents shed,
No flow'ry chaplets unavailing spread,
Nor kindle living lamps to light the dead.
Vain are these honours; rather while I live,
To me the sweet, the rich oblation give.

Of these customs of the ancients of pouring sweet unguents on the tombs of the dead, and crowning them with flowers, &c. See Potter's Antiquities.

Ver. 22. The ancients believed, that the happy souls in the Elysian fields enjoyed those pleasures which they most delighted in when living. Thus Virgil,

Pars pedibus plaudunt choreas, et carmina dicunt.
Those raise the song divine, and these advance
In measur'd steps to form the solemn dance. *Pitt.*

Tibullus, Book i. Eleg. 3.
Sed me, quod facilis tenero sum semper amori,
Ipsa Venus campos ducet in Elysios :
Hic choreæ, cantus vigent, &c.

Then love my ghost (for love I still obey'd)
Will grateful usher to th' Elysian shade:
There joy and ceaseless revelry prevail,
There soothing music floats on ev'ry gale;

There painted warblers hop from spray to spray,
And, wildly-pleasing, swell the gen'ral lay :
There ev'ry hedge, untaught, with cassia blooms,
And scents the ambient air with rich perfumes :
There ev'ry mead a various plenty yields ;
There lavish Flora paints the purple fields :
With ceaseless light a brighter Phœbus glows,
No sickness tortures, and no ocean flows :
But youths associate with the gentle fair,
And stung with pleasure, to the shades repair :
With them love wanders wherefoe'er they stray,
Provokes to rapture, and inflames the play :
But chief the constant few, by death betray'd,
Reign, crown'd with myrtle, monarchs of the shade.

Grainger.

I hope the reader will not think this quotation tedious, as the passage is admirably translated, and contains a beautiful description of Elysium.

ODE V.

The Grecians esteemed the rose more than any other flower, and admitted it to all their entertainments, of which there needs no other proof than this ode of Anacreon, and likewise the fifty-third, where he praises this beautiful flower with the greatest address and delicacy. The Romans equally valued it. Horace says,

Hunc vina et unguenta, et nimum breves
Flores amenæ ferra jube rosæ.

Here wine, and oil, and roses bring,
Too short-liv'd daughters of the spring.

Duncombe.

His complaint of the shortness of the rose's duration is an artful and delicate manner of praising that flower.

Ver. 5. The ancients used wreaths of flowers, and perfumes at their entertainments, not only for pleasure, but because they imagined that odours prevented the wine from intoxicating them.

ODE VI.

This ode, in the original bears the same title as the former, *Εις ροδον*, On the Rose. But, as it is universally agreed, to be a mistake of the copyists, the editors of Anacreon have given it various appellations. Barnes calls it *Καμος*, which he translates *Festivium amatoria*, The Festival of Love. Dr. Frapp intitles it *Συμπεσιον*. *Convivium*, The Banquet. Madam Dacier would have it called The Masquerade : but I agree with Longepierre, who thinks it ought to be styled The Party of Pleasure.

Ver. 4. The hyrsus was a spear enriched with wreaths of ivy, and sometimes of vine-leaves : It was used as a weapon by those who attended the revels of Bacchus.

Ver. 10. Mr. Longepierre quotes a most beautiful epigram from the seventh book of the Anthologia, near the end, similar to this passage ; which, I think, cannot have justice done it in an English translation :

M iij

Κερη τις μ' ἐφίλησε ποθησπέρα χεῖλεσιν ὑγροῖς
 Νεκταρ ἐν το Φιλῆμα· το γὰρ σομα νεκταρος ἐπ-
 νεσ.

Νυν μεθυω το Φιλῆμα, πολυν τον ερωτα πεπακως.

Phyllis the gay, in robe of beauty drest,
 Late on my lips a humid kiss imprest;
 The kiss was nectar which the fair bestow'd,
 For in her am'rous breath a gale of nectar flow'd.
 What love, ye gods! what raptures in her kiss!
 My soul was drunk with ecstasy of bliss.

Ver. 12. Προχίων λιγείαν ομφην, "pouring a
 "liquid sound." The expression is very delicate.
 Horace has something like it, Ode 24 B. 1.

Cui liquidam pater vocem cum cithara dedit.
 Who shar'ft from Jove the melting voice and lyre.
 Duncombe

Ver. 14. The ancient poets always represented
 Bacchus young and beautiful. So Ovid, Metam.
 book 4. ver. 17.

—Tibi enim incomsumpta juventas,
 Tu puer æternas, tu formosissimus alto
 Conspiceris cælo: tibi, cum sine cornibus adstas,
 Virgineum caput est—

To thee eternity of youth is giv'n;
 Unrivall'd in thy bloom thou shin'ft in heav'n:
 Conceal thy horns, and ev'ry charming grace
 Of virgin beauty brightens in thy face.

ODE VII.

Ver. 2. Madam Dacier and Barnes thought,
 ὑακινθίνη might signify the colour of the wand or
 rod; but as the hyacinth is no where described to
 be of any colour, the interpretation will not hold
 good. The thought is poetical, and worthy of
 Anacreon, to suppose Cupid's wand adorned with
 little wreaths of that delicate flower tied round it:
 Or perhaps, by ὑακινθίνη ραβδος, the poet meant only
 a single hyacinth; for ραβδος may signify the stalk
 or stem of a flower: and then the moral of this
 charming ode will latently inculcate the irresist-
 ible force of love, in whose hands a flower is as
 powerful as his bow and arrows that are tip't with
 fire.

A late right reverend author, much admired
 for the elegance of his writings, seems to have
 had an eye to this ode when he composed the fol-
 lowing lines on a fan:

Flavia the least and flightest toy
 Can with resistless art employ:
 This fan, in meaner hands, would prove
 An engine of small force in love;
 Yet she, with graceful air and mien,
 Not to be told or safely seen,
 Directs its wanton motions so,
 That it wounds more than Cupid's bow;
 Gives coolness to the matchless dame,
 To every other breast a flame.

Ver. 8. His being stung by a serpent, as Ma-
 dam Dacier observes, was to punish his insensibili-

ty, and to show that love, if he would submit to
 his dominion, would take him under his protec-
 tion.

ODE VIII.

Ver. 8. Lyæus was a name given to Bacchus.
 It is derived from the word λυειν, to loose or free,
 because wine frees the mind from anxieties.

Ver. 15. Madam Dacier commends the de-
 licacy and beauty of this ode, though in her
 translation all the spirit evaporates: The two last
 lines

Μημονωμενος δ' ὁ τλημων Πελιν εβελον καθυδην.

Thus miserably left alone, I wish'd to sleep again;
 she has rendered thus: "Etant donc tout triste de
 "me voir ainsi demeure seul, je ne trouvaï point
 "de meilleure consolation, que de me remettre à
 "dormir." There are some beautiful lines in
 Ovid's Epistle of Sappho to Phaon, as Mr. Pope
 has taught her to speak, which will elucidate this
 passage of Anacreon.

O night more pleasing than the brightest day,
 When fancy gives what absence takes away,
 And drest in all its visionary charms,
 Restores my fair deserter to my arms!
 But when with day the sweet delusions fly,
 And all things wake to life and joy, but I,
 As if once more forsaken, I complain,
 And close my eyes, to dream of you again.

ODE IX.

Faber says of this ode, that it does not seem to
 be the work of one man only, but that the Graces
 joined in concert with the Muses to finish this
 beautiful little piece.

To understand it properly, we must remember,
 that it was a custom among the ancients, when
 they undertook long journeys, and were desirous
 of sending back any news with uncommon expedi-
 tion, to take tame pigeons along with them.
 When they thought proper to write to their
 friends, they let one of these birds loose, with let-
 ters fastened to its neck: The bird, once released,
 would never cease its flight till it arrived at its nest
 and young ones. The same custom still obtains
 among the Turks, and in several eastern countries.
 Longepierre has a quotation from Ælian, book 6.
 chap. 7. which proves that the crow, Κορωνις was
 sometimes employed in this office. The passage
 may be thus translated: "In Egypt, near the lake
 "Myris, the natives show the monument of a
 "crow, of which they give the following ac-
 "count: That it was brought up by one of their
 "kings called Marrhes, whose epistles it carried,
 "wheresoever he pleased, with greater expedi-
 "tion than the swiftest of his messengers: That,
 "when he gave his orders, it immediately under-
 "stood which way to direct its flight, through
 "what country to pass, and where to stop. To
 "recompense these services, when it died, Marrhes
 "honoured it with a monument and an epi-
 "taph."

Ver. 6. 'The Greeks perfumed their birds, as we perfume our lap-dogs.' *Madam Dacier.*

Ver. 12. Bathyllus was a young Samian of great beauty, and admired by Anacreon. See Ode 29th. Horace has taken notice of this passion :

Non aliter Samio dicunt arfisse Bathyllo
Anacreonta Teium,
Qui persæpe carvâ testudine flevit amorem,
Non elaboratum ad pedem. *Epod. 14.*

Such was the fate Anacreon prov'd
So fondly he Bathyllus lov'd,
Accustom'd his complaints to suit
In easy measures to the lute. *Duncombe.*

This youth was also a favourite of Polycrates, who erected a statue to him that represented Apollo playing upon the lyre.

Ver. 15, 16. The poet could not pay himself a more delicate compliment, than by saying that Venus, the mother of the Graces, was glad to purchase a little hymn of his composing at the price of one of her favourite doves. This passage is a proof, that Anacreon wrote hymns in honour of the gods; which are all lost, except, perhaps, part of the 50th and 52d odes to Bacchus, the 58th to Cupid, the 60th to Diana, and the 64th to Apollo. The 62d ode is also an hymeneal hymn.

Ver. 35. The dove praises the liberality of his master for admitting him to drink of the same wine as himself; which was an indulgence the ancients never allowed to any but their favourites. Thus Homer introduces Achilles entertaining Ajax, Ulysses, and Phœnix, Iliad 9. ver. 202.

With that the chiefs beneath his roof he led,
And plac'd in seats with purple carpets spread.
Then thus—Patroclus, crown a larger bowl,
Mix purer wine, and open every soul.
Of all the warriors yonder host can send,
Thy friend most honours these, and these thy friend. *Pope.*

ODE X.

The commentators observe, that Anacreon makes this young country man speak in the Doric dialect, which was the most rustic, to ridicule the unpoliteness of a person who could be so insensible of the charms of love, as to wish to part with his images.

Ver. 11. In the Greek, the price offered is a drachm, an Attic coin, value about sevenpence halfpenny English.

Ver. 16. Barnes observes, that it was usual for the ancient heathens to treat the images of their gods well or ill, just as they fancied they had been used by them. The modern Indians chastise their idols with scourges, whenever any calamity befalls them. There is a passage in the seventh Idyllium of Theocritus, similar to this of our poet, where a person, after having made his supplication to the god Pan, pleasantly enough threatens him :

Εἰ δ' ἄλλως νύσσας, καὶ μὲν χροᾶ πάντα στυγέσσαι
ῥακνομένους πνύσας, κ. τ. λ.

But may'st thou, if thou dar'st my boon deny,
Torn by fell claws on beds of nettles lie;
All the cold winter freeze beneath the pole,
Where Heber's waves down Edon's mountains roll;
And in the scorching heats of summer glow,
Where under Blemyan rocks Nile's boiling waters flow.

ODE XI.

That natural facility of thought, and that sweet simplicity of expression, which are so deservedly admired in the writings of Anacreon, abound in the original of this beautiful ode. Horace gives us his true character, when he tells us he wrote, "non elaboratum ad pedem," in unlaboured verse; verse that flows with so much ease, that it seems to have cost him no care or trouble. He played upon his lyre, and the numbers came; therefore he says of him in another place :

Nec, quid olim lufit Anacreon,
Delevit ætas. *Hor. L. 4. Od. 9.*

— and blithe Anacreon's sportive lay
Still lives, in spite of time's destructive sway. *Duncombe.*

We have an imitation of this ode in an epigram of Palladas, in the 47th chapter of the 2d book of the Anthologia.

Γεραλέον με λυκαίνας ἀποσκαπῆσαι, λειγόντες
Εἰς το κατόπρην ὄραν λειψάνον ἡλικίας.
Ἀλλ' ἐγὼ εἰ λυκάς φορέω τριχάς, εἴτε μιλαινας,
Οὐκ ἀλιγῶ, βίωται πρὸς τίλος ἐρχόμενος
Εὐδομοῖς δὲ μύροισι, καὶ εὐπειθαλοῖς στεφανοῖσι,
Καὶ βρομῶ πᾶντα φρονίδας ἀργαλείας.

To me the wanton girls insulting say,
'Here in this glass thy fading bloom survey :'
Just on the verge of life, 'tis equal quite,
Whether my locks are black, or silver white;
Roses around my fragrant brows I'll twine,
And dissipate anxieties in wine.

Ver. 6. The hair was always esteemed by the ancients the principal ornament of beauty. Apuleius has this remarkable passage in the second book of his Mileticks: "Even Venus herself, if she was destitute of hair, though surrounded by the Graces and Loves, would not have charms to please her own husband Vulcan." Longepierre quotes a passage from Petronius, where Eumolpus calls the hair the chief grace of beauty :

Quod summum formæ decus, cecidere capilli,
Vernantesque comas tristis abegit hyems.
Nunc umbrâ nudata suâ jam tempora mœrunt,
Areaque attritis nidet adusta pilis.
O fallax natura deûm ! quæ prima dedisti
Ærati nostræ gaudia, prima rapis.
Infelix modo crinibus nitebas
Phæbo pulchrior, & sorore Phœbi :
At nunc lævior ære, vel rotundo
Horti tubere, quod creavit unda,
Ridentes fugis & times puellas,

Ut mortem citius venire credas,
Scito jam capitis perisse partem.

Fall'n is thy hair, for woeful winter hoar
Has stol'n thy bloom, and beauty is no more;
Thy temples mourn their shady honours shorn,
Parch'd like the fallow, destitute of corn.
Fallacious gods! whose blessings can betray;
What first ye give us, first ye take away.
Thou, late exulting in thy golden hair,
As bright as Phœbus, or as Cynthia fair,
Now view'st, alas! thy forehead smooth and plain
As the round fungus, daughter of the rain;
Smooth as the surface of well-polish'd brass,
And fly'st with fear each laughter-loving lass.
Death haltes amain; thy wretched fate deplore;
Fall'n is thy hair, and beauty is no more.

ODE XII.

Ver. 6. The poet very judiciously endeavours to terrify the swallow with the mention of Tereus, whose palace, as the ancients have remarked, was carefully avoided by these birds. Pliny says, "Arx Regum Thraciæ, a Terei nefasto crimine invisâ Hirundinibus." See also Solinus. From this passage of Anacreon it should seem, that Philomela was changed into a swallow, and not Progne, as Ovid and others have asserted.

Ver. 10. Madam Dacier says, that this passage, and another in the eight ode—

Intent on love, I strive to greet
The gamefome girls with kisses sweet,
And, as on pleasure's brink I seem,
Wake, and, behold! 'tis all a dream.

undoubtedly furnished Horace with that beautiful sentiment in the first ode of the fourth book:

Nocturnis te ego somniis
Jam captum teneo; jam volucrum sequor
Te per gramina Martii
Campi, te per aquas, dure volubiles.

Which Mr. Pope has admirably imitated:

Thee dress'd in fancy's airy beam,
Absent I follow through th' extended dream;
Now, now I seize, I clasp thy charms,
And now you burst (ah cruel!) from my arms;
And swiftly shoot along the Mall,
Or softly glide by the Canal,
Now shorn by Cynthia's silver ray,
And now on rolling waters snatch'd away,

Argentarius imitates this passage in an epigram, in the first book of the Anthologia, which begins,

Ορνι, τι μοι φίλον ὃ πνον αφηρησας; ἡδὺ δὲ
Πυρρην

Εἰδὼλον κοιτης ἄχρε' αποπταμενον.

Invidious swallow, with thy horrid scream
Why hast thou wak'd me from so sweet a dream?
Stunn'd by thy noise fair Pyrrha, like the wind,
Flew from my arms, just yielding to be kind.

Agathias has also imitated it in an epigram, in the seventh book of the Anthologia.

Παταν εγω την νυκτα κινυρομαι' ευτε δ' επιληθ
Ορθος, ελινυται μικρα χαριζομενος.
Αμφιπεριτρυζουσι χελιδονις' ες δε με δακρυ
Βαλλουσι, γλυκερον κωμα παρωταμιναι.
Ω φθονερα παντασθε λαλητριδες' ε γαρ εγωγε
Την φιλομελειαν γλωτταν απεθρισαμην.
Αλλ' Ιτυλον κλαιοιτε κατ' υβρια, η γομοιτε
Εις αιπος, κραναην αυλιν επιζομεναι,
Βαιον ινα κνωστοιμιν' ισως δε τις ηξει ονειρος
'Ος με Ροδανθειοις πεχετιν αμφιβαλοι.

All night I sigh with cares of love oppress'd,
And when the morn indulges balmy rest,
These twitt'ring birds their noisy martins keep,
Recall my sorrows, and prevent my sleep;
Cease envious birds, your plaintive tales to tell,
I ravish'd not the tongue of Philomel;
In deserts wild, or on some mountain's brow,
Pay all the tributary grief you owe }
To Itys, in an elegy of woe. }
Me leave to sleep: in visionary charms,
Some dream perhaps may bring Rodanthe to my
arms.

ODE XIII.

Ver. 2. A young Phrygian of great beauty, beloved by Cybele the mother of the gods, who made him her priest, on condition that he should live chaste: but he broke his vow, and as a punishment, she afflicted him with madness, in the transports of which he deprived himself of the distinction of his sex, and would have killed himself, had not Cybele, moved with compassion, transformed him into a pine-tree.

Ver. 5. Claros was a city of Ionia near Colophon, rendered famous for a fountain consecrated to Apollo, who from thence was called Clarius. Tacitus gives an account of it in the second book of his Annals, where, speaking of Germanicus, he says, "Apellitque Colophona, ut Clarii Apollinis oraculo uteretur. Non femina illic, ut apud Delphos; sed certis è familiis, & ferme Mileto accersitus sacerdos, numerum modo consultantium & nomina audit: tum in specum degressus, hausta fontis arcani aqua, ignarus plerumque literarum & carminum, edit responsa versibus compositis super rebus quas quis mente concepit.— He landed at Colophon, to consult the oracle of Apollo at Claros. The person that delivers the oracles there, is not a woman, as at Delphos, but a man selected out of certain families, and frequently from Miletus. This priest only inquires the number and names of those that consult the deity. After that, having entered his grotto, and drank of the mysterious water, he answers the question of his inquirers in verse, though he is generally illiterate, and unacquainted with the muses.

Ver. 6. The Greek is δαφνηφορεοιο, laurel-wearing Phœbus; because when Daphne escaped his pursuit by being changed into a laurel, he consecrated that tree to himself. Ovid *Metamorph.*

Cui Deus, At quoniam conjux mea non potes esse,
Arbor eris certe, dixit, mea; semper habebunt
Te coma, te citharæ, te nostræ, Laure, pharetræ.
To whom the God—"Because thou canst not be
"My mistress, I espouse thee for my tree:
"Be thou the prize of honour and renown,
"The deathless poet and the poem crown."

Dryden.

ODE XIV.

The subject of this ode is to show the irresistible nature of love. In this little piece, Anacreon discovers a wonderful delicacy of invention: Nothing can be imagined more entertaining than this combat, the preparation for it, the issue of it, and that natural and admirable reflection with which it concludes.

Ver. 12. Anacreon arms himself with a spear and shield, to contend with love. In an ancient epigram of the Anthologia, book 7. we have an account of a combatant, who put on the breast-plate of reason, to withstand the attacks of this dangerous enemy.

Ὀπλισμαὶ πρὸς ἔρωτα περὶ σέβνοισι λογισμῶν,

Οὐδὲ μὲ νικῆσει, μῦθος ἔων πρὸς ἐνκ.

Θνατός δ' ἀθανάτω συνλευσομαι· ἦν δὲ βοηθόν

Βακχὸν ἔχῃ, τί μόνος πρὸς δὴ ἔγω δυνάμει;

With love I war, and reason is my shield,
Nor ever, match'd thus equally, will yield:
If Bacchus joins his aid, too great the odds;
One mortal cannot combat two such gods.

Ver. 19, 20.

The author of an epigram, in the seventh book of the Anthologia, complains, in like manner, that love had exhausted his quiver by shooting at him.

Μηκέτι τις πτήξει Ποῦς βέλός· ἰσοκλὴν γὰρ

Ἐἰς ἐμὲ λάβρος ἔρως ἐξεκένωσε ὅλην.

No more let Cupid's shafts the world appal,
For in my bosom he has lodg'd them all.

Ver. 21. This thought is very beautiful and ingenious. It is taken from an ancient piece of gallantry, which ought not to be passed over in silence. The heroes of antiquity, when in any desperate engagement they found their darts spent, their strength exhausted, and saw no prospect of surviving long, would collect all their spirits and strength, and rush headlong with amazing impetuosity upon their enemies, that even in death the weight of their bodies, thus violently agitated, might bear down their adversaries. Examples of this kind of heroism are frequent in Lucan. Book 3d, speaking of a brave veteran:

—Tum vulnere multo

Effugientem animam lapsos collegit in artus
Membraque contendit toto, quicumque manebat,
Sanguine, et hostilem, defessis robore membris,
Insiluit solo nociturus pondere puppin.

Æ. 3. Ver. 622.

And, book 6. ver. 204. speaking of Scæva:

—tot munera belli

Solus obit, densamque ferens in pectore sylvam
Jam gradibus fessis, in quem cadat, elegit hostem.

Encumber'd sore with many a painful wound,
Tardy and stiff he treads the hostile round;
Gloomy and fierce his eyes the crowd survey,
Mark where to fix, and single out the prey.

Rome.

ODE XV.

Ver. 1. Gyges was the favourite of Candaules, king of Lydia, whose queen was remarkably beautiful, and passionately admired by her husband. In his vanity, he extolled her charms above measure to Gyges, and to convince him of her beauty, determined to show her to him naked; which he effected, but not without the queen's discovering that affront; who next morning sent privately for Gyges, and resolutely told him, he must either suffer immediate death for what he had done, or dispatch Candaules, and take her and the kingdom of Lydia for his recompense. The choice was difficult, as he greatly valued his master: However, the love of life prevailed—he stabbed Candaules, married the queen, and took possession of the kingdom.

Ver. 8. There is an epigram in the second book of the Anthologia, that has the same turn:

Πίνε, καὶ εὐφραίνε· τί γὰρ αὐριον ἢ τί το, μέλλον,

Οὐδὲς γίνωσκει· μὴ τρέχει, μὴ κοπία.

Ὡς δύνασαι χάρισαι, μεταδός, φάγε, θήητα λογίζε,

Τὸ ζῆν τὰ μὴ ζῆν ἅδεν ὅλως ἀπεχέ.

Πας ὁ βίος τοιοῦδε ἔσπην μόνον ἀν' προλαβὼν τις.

Ἀν' δὲ θάνης, ἕτερος πάντα, σὺ δ' ἅδεν ἔχεις.

Cease from thy cares and toils, be sweetly gay,
And drink—to-morrow is a distant day:
Improve on time; to bliss each moment give;
Not to enjoy this life, is not to live:
Our goods are now our own, but when we die
They come to others, whilst in dust we lie,
And then, alas! have nothing to enjoy.

Horace expresses himself in the same manner, Book 1. Ode 9.

Quid sit futurum cras fuge querere: et

Quem fors dierum cumque dabit, lucro

Appone: nec dulces amores

Sperne puer, neque tu choreas;

Dum virenti canities abest

Morosa——

To-morrow and her works defy;

Lay hold upon the present hour,

And snatch the pleasures passing by,

To put them out of fortune's pow'r

Nor love, nor love's delights, disdain,

Whate'er thou gett'st to-day is gain.

Dryden.

ODE XVI.

Ver. 1. Anacreon alludes to the famous war of the seven captains against Thebes, occasioned

by Eteocles, the son of Œdipus and Jocasta, refusing his brother Polynices his share in the government, though they had previously agreed, after their father's death, to rule alternately year by year. Æschylus wrote a tragedy on this subject.

Ver. 3. Ovid has imitated this passage—*Amor. L. 2. Eleg. 18.*

*Vincor, et ingenium sumptis revocatur ab armis,
Resque domi gestas, et mea bella cano.*

I'm conquer'd, and renounce the glorious strain
Of arms and war, to sing of love again:
My themes are acts which I myself have done,
And my muse sings no battles but my own.

Ver. 9. Nonnus calls the eyes the archers of love, *ακοντισηρις ἰωγταν*: and there is something similar to this in an epigram of the Anthologia, book 7.—which, speaking of love, says,

*Οὐ με λεληθας,
Τοξοτα, Ζηνοφίλας ὀμμασι κρυπτομένης.*

Insidious archer, not unseen you lie,
Though ambush'd close in Zenephelia's eye.

ODE XVII.

This elegant ode is quoted by Gellius, who says it was sung and played upon instruments at an entertainment where he was present.

Ver. 9. The poet alludes to the constellations, which Vulcan described on the shield of Achilles. See Homer's *Iliad*, book 18.

There shone the image of the master-mind:
There earth, there heav'n, there ocean, he design'd;
Th' unweary'd sun, the moon completely round,
The starry lights that heaven's high convex crown'd,
The Pleiads, Hyads, with the Northern Team,
And great Orion's more refulgent beam,
To which, around the axle of the sky,
The Bear revolving points his golden eye,
Still shines exalted on th' ethereal plain,
Nor bathes his blazing forehead in the main.

Pope.

Ver. 10. Anacreon calls Orion, *συγρον*, odious, because he is the forerunner of tempests, and therefore dreadful to mariners. Horace calls him *infestus*, *Epode 15.*

*Dum pecori lupus, et nautis infestus Orion.
As long as wolves pursue the fearful sheep,
And stern Orion rages o'er the deep.*

ODE XVIII.

Ver. 19. It is not without reason that Anacreon, after having mentioned Venus, introduces love among the graces; being sensible, that, though beauty alone might please, yet, without the aid of other charms, it could not long captivate the heart.

*Καλλος ἀνευ χαρίτων τερπεί μοιον ὃ κατεχέει δέ,
Ὡς αἶτερ ἀγκίστρι νηχομένον δάλευρον.*

Beauty without the graces may impart
Charms that will please, not captivate the heart;
As splendid baits without the bearded hook
Invite, not catch, the tenants of the brook.

Ver. 23. The poet desires that Apollo may not be described upon his bowl, because he was so unfortunate as to kill his favourite Hyacinthus, as he was playing with him at quoits.

ODE XIX.

Ver. 5. The original is, *Πίνει θάλασσα δ' αὐροῦς*, 'The sea drinks up the air.' All the commentators are silent here, except Dr. Trapp, who owns he did not understand the expression. Might I venture to make an easy alteration of the text, I would read, *Πίνει θάλασσα ἀναυροῦς*, 'The sea drinks up the rivers.' See Ode vii. *Δια δ' ὀρίων μ' ἀναυροῦς*, 'Through rapid rivers,' or 'torrents.' It is likewise used in the same sense by the best authors. Moschus, *Idyllium 2. 31.* See also Hoelzinus on Apollonius Rhodius, Book 1. 9. This emendation makes the sense full and complete.

Ver. 10. The moon is said to drink up the sun, because she borrows her light from that luminary.

ODE XX.

Ver. 4. Niobe was the daughter of Tantalus, king of Phrygia, and wife of Amphion, king of Thebes, by whom, according to Homer, having six sons and six daughters, she became so proud of her offspring and high birth, that she had the vanity to prefer herself to Latona, the mother of Apollo and Diana, who, to revenge the affront offered to their parent, in one day slew all her children; upon which Niobe was struck dumb with grief, and remained stupid. For that reason, the poets have feigned her to be turned into a stone. The story is told by Ovid in the sixth book of the *Metamorphoses*; but perhaps better by Pope, in his translation of the twenty-fourth book of the *Iliad*, where Achilles is introduced thus speaking to Priam:

Nor thou, O father! thus consum'd with woe,
The common cares that nourish life forego.
Not thus did Niobe, of form divine,
A parent once whose sorrows equall'd thine;
Six youthful sons, as many blooming maids,
In one sad day beheld the Stygian shades;
These by Apollo's silver bow were slain,
Those Cynthia's arrows stretch'd upon the plain:
So was her pride chastis'd by wrath divine,
Who match'd her own with bright Latona's line:
But two the goddess, twelve the queen enjoy'd;
Those boasted twelve the avenging two destroy'd.
Steep'd in their blood, and in the dust outspread,
Nine days neglected lay expos'd the dead;
None by to weep them, to inhumate them none,
(For Jove had turn'd the nation all to stone)
The gods themselves, at length relenting, gave
Th' unhappy race the honours of a grave.
Herself a rock (for such was heaven's high will)
Through deserts wild now pours a weeping rill;

Where, round the bed whence Acheloüs springs,
The watery fairies dance in mazy rings,
There high on Sipylus's shaggy brow
She stands, her own sad monument of woe;
The rock for ever lasts, the tears for ever flow.

Pope.

There are two short epigrams in the Anthologia, which perhaps the reader will be glad to see in English.

Ὁ τυμβὸς ὅτος ἐνδὸν ἔχει νεκρὸν.
Ὁ νεκρὸς ὅτος ἐκτὸς ἔχει ταφὸν.
Ἀλλ' αὐτὸς αὐτὸν νεκρὸς ἐστὶ καὶ ταφὸς.

This weeping tomb within no corse contains;
This weeping corse without a tomb remains:
For, by a strange irrevocable doom,
This image is the carcase and the tomb.

Ἐκ ζωῆς με θροὶ τυφλὸν λίθον· ἐκ δὲ λίθου
Ζωὴν Πραξιτέλης ἐμπαλιν ἐργασάτο.

I once was Niobe, and fill'd a throne,
Till fate severe transform'd me into stone:
Behold the change which mimic art can give!
From stone Praxiteles has made me live.

I cannot conclude my notes on this ode without first observing, that this gallant original has been copied by several masters. I shall produce one example, because it is the shortest, which is an epigram of Dionysius the sophist.

Εἶθ' ἀνέμος γίνεσθαι, σὺ δὲ γὰρ εἰσέχουσα παρ' αὐγὰς,
Στήθεα γυμνωσάης, καὶ με πνέοντα λαβοῖς.
Εἶθε ῥόδον γένεσθαι ὑποπόρφυρον, ὅφρα με χερσὶν
Ἀραμίνῃ, κομισαῖς στήθεσι χιονεῖς.
Εἶθε κρίνον γένεσθαι λευκοχρόον, ὅφρα με χερσὶν
Ἀραμίνῃ, μάλλον σὲς χροτὶς κορίσης.

I wish myself a gentle breeze to blow,
O'er your fair bosom unconfin'd I'd flow,
And wanton on those little hills of snow.
I wish myself a rose in purple drest,
That you might place me on your snowy breast.
I wish myself a lily, lovely fair,
That I might kiss your skin, and gather whiteness there.

ODE XXI.

Ver. 2. The Greek is, πῶν ἀμυσί. Amystis, as Madam Dacier observes, was a manner of drinking among the Thracians, so called from their swallowing down a certain quantity of liquor without fetching breath, or shutting the mouth. Horace takes notice of it in Book 1. Ode 39.

"Neu multi Damalis meri
"Bassum Threiciâ vincat amystide."

Bassus shall Damalis o'ercome,
And drain the goblet at a draught.

Duncombe.

Ver. 9. The reflection the poet here makes is exceedingly natural, beautiful, and strong; "When love has once got possession of the heart, all exterior remedies will have no effect;" agreeably to the conclusion of the fourteenth ode:

All defence to folly turns,
When within the battle burns.

ODE XXII.

This ode is by Anacreon addressed to Bathyllus; but the translator has, with more decency and gallantry, applied it to a lady.

Ver. 10. The original is, Πηγή ρέουσα πειθὺς, a Fountain rolling Persuasion, than which nothing can be more delicate or poetical, as most of the commentators have observed.

Longepierre quotes a beautiful epigram from the Anthologia, book 1. similar to this ode; where the god Pan is supposed to speak.

Ἐρχο καὶ κατ' ἱμᾶν ἴδεν πῖτον, ὃ το μελιχρὸν
Πρὸς μαλακὰς ἔχει κεκλιμένα ζεφυροῦς.
Ἦνι δὲ καὶ κρηνίσμα μελισσῶν, ἐνθα μελισσῶν
Ἦδον ἱερμαίοις ὕπνον ἀγῶ καλαμοῖς.

Rest here beneath my shady pine reclin'd,
Whose tall top sweetly murmurs to the wind;
Here too a brook mellifluous flows along,
And woos me with its ever gurgling song;
Here on my solitary pipe I play,
Or sweetly sleep the tranquil hours away.

ODE XXIII.

One cannot but be surpris'd at the wretched taste of Faber, who has rejected this ode as spurious, and not Anacreon's, when perhaps it is not inferior in beauty to the best of them; as Barnes and Trapp have amply proved by explaining a Greek idiom, with which it is scarce worth while to trouble the English reader.

Ver. 3, 4. These words seem to allude to an anecdote in the history of Anacreon, which I shall explain. Stobæus tell us, that Anacreon, having received a present of five talents of gold from Polycrates, tyrant of Samos, was so embarrassed with cares and solitudes about his treasure, that he could not sleep for two nights successively: Whereupon he sent back the present, with this apology to his patron, "That, however valuable the sum might be, it was not a sufficient price for the trouble and anxiety of keeping it."

ODE XXIV.

Ver. 7. Tibullus says, "Ite procul durum curæ
"genus, ite labores."

Hence all ye troubles, vanish into air,
And all the wrinkled family of care.

Macedonius concludes an epigram with this distich, Anthologia, book 1.

Τὴν γὰρ Ἀνακρέοντες ἐν παρακιδίῳ φυλάσσω
Παρθασίν, ὅτι δὲ φροντίδα μὴ κατεχέιν.

I like Anacreon's counsel wond'rous well,
To let no troubles in my bosom dwell.

Ver. 13, 14. Julian, in an epitaph he composed

on Anacreon, makes him repeat the same lesson after he was dead.

Πολλὰκι μὲν τὸδ' αἶσα, καὶ ἐκ τυμβῶν δὲ βόησω·
Πίνετε, πρὶν ταυτὴν ἀμφιβαλῆσθε κοινῶν.

What oft alive I sung, now dead I cry
Loud from the tomb, "Drink, mortals, ere you
"die."

ODE XXV.

Ver. 1, 2.

Diffipat Evius cutas edaces. *Hor. B. 2. 11.*

'Th' enlivening god will sordid care refine.

Duncombe.

—neque aliter

Mordaces diffugiunt sollicitudines. *Book I. 18.*

'Tis wine, wine alone, that can drown ev'ry care.

Duncombe.

ODE XXVI.

This ode, as Longepierre observes, is in the same style as the two preceding, and the next ensuing. There is a fragment of Bacchylides remaining, which has great affinity to these four, but chiefly to this very ode.

Γλυκεὶ ἀναγκῇ στυομένη κολικῶν
Θαλπησὶ θυμὸν Κυπρίδος·
Ἐλπίς δ' αἰθυσσὶ φρένας
Ἀναμειγνυμένα Διονυσίοισι δαίρει,
Ἀνδράσι δ' ὑψόβηται
Πεμπὰς μερμερῶν.
Αὐτὸς μὲν πολλῶν
Κρηδεύων λυεῖ.
Πᾶσι δ' ἀνθρώποις
Μοναρχήσῃν δοκεῖ.
Χρυσῶ δὲ ἐλεφαντίνῃ τε
Μαρμαίρεσιν οἶκοι.
Πυροφόροι δὲ κατ' αἰγληνῆα
Νηὶς ἀγασσὶν ἀπ' Αἰγυπτοῦ
Μεγίστον πλάθον,
Ὡς πινόντες ὀρμαίνε' κίεαρ.

When the rosy bowl we drain,
Gentle love begins to reign:
Hope, to human hearts benign,
Mingles in the friendly wine,
And with pleasing visions fair
Sweetly dissipates our care.
Warm with wine we win renown,
Conquer hosts, or storm a town,
Reign the mighty lords of all,
And in fancy rule the ball:
Then our villas charm the sight,
All with gold and ivory bright;
Ships with corn from Egypt come,
Bearing foreign treasures home:
Thus each bliss that fills the soul,
Luxuriant rises from the bowl.

Ver. 5, 6.

Pastores hederâ crescentem ornate poetam.

With ivy wreaths your youthful poet crown.

On which passage Servius remarks, that poets are crowned with ivy, as being consecrated to Bacchus; either because they are enthusiasts, like the Bacchanals, or because ivy, being an evergreen, is a symbol of that eternity which they acquire by their compositions. Horace says,

Me doctarum hederæ præmiâ frontium
Dis miscent superis.

An ivy crown ennobles me,
Whose darling joy is poetry.

Duncombe.

ODE XXVII.

Ver. 5, 6. In the forty first ode, Anacreon calls Bacchus, τὸν εφευρίλαν χορείας, The inventor of dancing. So Tibullus,

Ille liquor docuit voces inflectere cantu;
Movit et ad certos nescia membra modos.

L. 1. Eleg. 7.

This as swains quaff'd, spontaneous numbers came,
They prais'd the festal cask, and hymn'd thy name;
All ecstasy! to certain time they bound,
And beat in measur'd awkwardness the ground.

Grainger.

ODE XXVIII.

Ver. 10. Neither the Greeks nor Romans seem to have esteemed one particular colour of the hair more than another; for we find both black and light colour equally admired.

Ver. 19, 20. Baxter, Barnes, and Stephens, trifle ridiculously on this passage. The Greek, ὑγρὸν, is humid. Madam Dacier judiciously observes, 'That eyes, in which there is the least degree of humidity, are uncommonly vivid and full of fire.'

Ver. 25. The ancients, to give us an idea of a mouth perfectly agreeable, generally represented it by the lips of persuasion. Anthol. B. 7.

Καλλὸς ἔχεις Κυπρίδος, Πείθε' ἑοικὸς ἑοικὸς καὶ ἀπμυρῶν
Εἰαρινῶν ὥρων.

Persuasion's lips, and Cyprian charms are your's,
And the fresh beauty of the vernal hours.

Ver. 30. The Greek is, Λυγδῖνον, that is, marble; from Lygdos, a plate in the island of Paros, famous for the finest marble. Trapp.

Ver. 33, 34. Ovid has a similar passage in the first book of the Metamorphoses, V. 500.

—laudat digitosque manusque,
Brachiaque, et nudos mediâ plus parte lacertos;
Si qua latent meliora putat.—

—He view'd
Her taper fingers, and her panting breast;
He praises all he sees, and for the rest,
Believes the beauties yet unseen are best.

Dryden.

ODE XXIX.

Ver. 7, 8. Anacreon describes the hair of Bathyllus black towards the head, but lower down gradually inclining to a yellow. Horace calls

this colour Myrrheus, "Myrrheum nodo cohibere crinem," book 3, ode 14. On which an ancient critic remarks, "Colorem myrrheum in crinibus hodie quoque dicunt qui medius est inter flavum et nigrum."—Even at this day they call that hair of a myrrh colour, which is between black and yellow. Ovid describes the colour of his mistress's hair thus, *Amor. l. i. eleg. 14.*

Nec tamen ater erat, nec erat color aureis illis;
Sed quamvis neuter, mistus uterque color:
Qualem clivosæ madidis in vallibus Idæ
Ardua, direpto cortice, cedrus habet.

Nor of a black, nor of a golden hue
They were, but of a dye between the two:
Such as in rindless cedar we behold,
The black confounded with the dusky gold.

Ver. 9, 10. Petronius says, "Crines ingenio suo flexi, per totos se humeros effuderant:"—Her hair, negligently floating where it pleased, diffused itself over her shoulders.

Ver. 23. Meleager, as Longepierre observes, calls his mistress *ἡδυ γάδον πικρὸν*, *The sweet Rose of Persuasion*. *Anthologia*.

Ver. 43, 44. The poet could not give us a more perfect idea of the beauty of this young Samian: He tells the painter, "If he would draw a good likeness of Bathyllus, he must copy the portrait of Apollo, the most beautiful of the gods; and if he would make a good picture of Apollo, he must paint Bathyllus."

Ver. 45. Bathyllus had a celebrated statue erected to his honour at Samos by Polycrates. See Apuleius.

ODE XXX.

This ode is very fine, and the fiction extremely ingenious. I believe Anacreon would inculcate that beauty alone cannot long secure a conquest; but that when wit and beauty meet, it is impossible for a lover to disengage himself.

Madam Dacier.

Ver. 5, 6. Moschus in his *Run-away Love*, makes Venus offer a reward to any one who should only discover where he was.

—'Ο μανυτὰς γέρας ἔχει
Μισθὸς τοι το φιλάμα το Κυπρίδος.—

Whoe'er shall bring the news, his fee is this,
I Venus will reward him with a kiss.

ODE XXXI.

Ver. 9. Alcmaeon was the son of Amphiaraus and Eriphyle. His father had been put to death by the contrivance of his mother, whom, on that account, he slew. Orestes slew his mother Clytemnestra, to revenge the death of his father Agamemnon, who, at his return from the Trojan war, had been murdered by her and her lover Ægisthus. They were both tormented by the Furies.

Ver. 12. Iphytus was the son of Eurytus king of Oechalia, and slain by Hercules, who carried off his bow.

Ver. 15. When the armour of Achilles was adjudged to Ulysses, Ajax was so enraged at the affront, that he ran mad; and falling upon a flock of sheep, which he took for so many Grecians, first slew them, and then himself. Homer celebrates his shield for its extraordinary size. *Iliad, Book 7.*

Huge was its orb, with seven thick folds o'er-
cast
Of tough bull-hides; of solid brass the last.

Pope.

Ver. 17. Hector and Ajax made an exchange of presents (see *Iliad 7.*) which gave birth to a proverb, 'That the presents of enemies are generally fatal.' For Ajax with this sword afterwards killed himself; and Hector was dragged, by the belt which Ajax gave him, at the chariot of Achilles.

There is an epigram to this purpose, *Anthol. B. 3. C. 14.*

Ἑκτορ Αἰαντὶ ξίφος ὠπασέν Ἑκτορὶ δ' Αἶας
Ζώνην, ἀμφοτέρων ἡ χάρις εἰς θάνατον.

Hector bestowed on Telamon the brave
A sword; the Greek to godlike Hector gave
A radiant belt: each gift was stamp'd with woe,
And prov'd alike destructive to the foe.

ODE XXXII.

Ver. 9. Corinth, the metropolis of Achaia, was so famous for rich courtezans, who would only entertain the wealthy, that it occasioned the proverb, "Non cuivis homini contingit adire Corinthum," 'Every man cannot go to Corinth.' Laïs asked Demosthenes a thousand drachms for one favour; to which he replied, 'I will not buy repentance at so dear a rate.'

Longepierre.

Ver. 19. Anacreon says of Crete, *ἄπαντα ἔχουσα*, 'abounding with all things,' to express its fertility. Virgil says it had an hundred cities:

Creta Jovis magni medio jacet insula ponto,
Centum urbes habitant magnas, uberrima regna.

Fair Crete sublimely towers amid the floods,
Proud nurse of Jove the sovereign of the gods;
A hundred cities the blest isle contains,
And boasts a vast extent of fruitful plains. *Pitt.*

Homer, in the *Iliad*, gives Crete a hundred cities. *B. 2.*

Crete's hundred cities pour forth all her sons.

But, in the *Odyssey*, only ninety;

Crete awes the circling waves, a fruitful soil!
And ninety cities crown the sea-born isle. *B. 19.*

Therefore, it is probable, that in the time of the Trojan war it had no more than ninety cities, but a hundred in the days of Homer.

ODE XXXIII.

Ver. 5. It was an opinion generally received among the ancients, that swallows, and several other birds crossed the sea, on the approach of winter, in search of warmer climates. Thus Virgil, *Æneid* 6. v. 311.

Quàm multæ glomerantur aves, ubi frigidus annus
Trans pontum fugat, et terris immittit apricis.

Thick as the feather'd flocks in close array,
O'er the wide fields of ocean wing their way,
When from the rage of winter they repair,
To warmer suns and more indulgent air. *Pitt.*

Others thought they hid themselves in the clefts of the rocks. Thus Ovid, "Cum glaciantur aquæ, scopulis se condit hirundo."

Pecklinius, in his book "De Aëris et Elementi defectu, et vitâ sub aquis," assures us, that swallows retire to the bottom of the water during the winter; and that it is common for the fishermen on the coasts of the Baltic to take them in their nets in large knots, clinging together by their bills and claws; and that, upon their being brought into a warm room, they will separate, and begin to flutter about as in spring. Kercher, in his book "De mundo subterraneo," affirms the same, and that in the northern countries they hide themselves under ground in the winter, whence they are often dug out. *Longepierre.*

Ver. 6. Memphis was a city situated on the Nile, a little below Delta, and the residence of the kings of Egypt. By the Nile, Anacreon means Ethiopia, whence that river derives its source.

Ver. 8. Anacreon is not singular in representing Cupid as a bird, and with propriety, because he is furnished with wings, and his flight is surprisingly rapid. Bion speaks of love as a bird: See his second Idyllium.

ODE XXXIV.

Ver. 10. Virgil has very happily mixed these two colours, though upon a different occasion, *Æneid*. l. 12. v. 67.

Indum sanguineo veluti violaverit ostro
Si quis ebur, aut mixta rubent ubi lilia multa
Alba rosâ—

So looks the beauteous ivory stain'd with red;
So roses mix'd with lilies in the bed,
Blend their rich hues.— *Pitt.*

ODE XXXV.

This ode was composed on a picture representing the rape of Europa. See an Idyllium of Moschus upon the same subject.

ODE XXXVI.

Ver. 12. A philosopher in Petronius makes the same reflection. "Ego sic semper et ubique vixi, ut ultimam quamque lucem tanquam non redituram

consumerem." "Wherever I am, I always enjoy the present day, as if I never expected to see another."

Ver. 18. Horace says in the same sense,

Jam te premet nox, fabulæque manes,
Et domus exilis Plutonia.—

Too soon cut off from cheerful light,
We must descend to fullen night,
And in the realms of fabled shades below,
Thy pining ghost no joy shall know.

Duncombe.

ODE XXXIV.

Ver. 5. The expression in Greek is extremely delicate and happy. The waves of the sea are mollified into tranquillity: *Απαλυνται γαλήνη*. Every letter, every syllable, is as liquid and smooth as the calm he describes. A famous old Scotch bishop, Gawin Douglas, in his Description of May, seems to have had this passage in view.

For to behald it was an glorie to se
The flabyllit wyndys and the calmyt se,
The soft sessoun, the firmament serene,
The lounne illuminate are, and firth amene.

Or, as it is translated by Mr. Fawkes,

How calm! how still! how pleasing to behold
The sea's broad bosom where no billows roll'd
The season soft, the firmament serene,
Th' illumin'd landscape, and the wat'ry scene!

ODE XXXVIII.

Ver. 7. In the Bacchanalian dances among the ancients, the leader of them bore a rod or sceptre.

Ver. 17. Silenus was the foster-father and tutor of Bacchus, represented by a little, flat-nosed, bald, fat, tun-bellied, old drunken fellow, riding on an ass. Ovid draws his picture thus:

—Bacchæ satyrique sequuntur,
Quique senex ferulâ titubantes ebrius artus
Sustinet, et pando non fortiter hæret asello.

Metamorph. L. 4.

Around the Bacchæ and the Satyrs throng;
Behind, Silenus drunk lags slow along;
On his dull ass he nods from side to side,
Forbears to fall, yet half forgets to ride.

Eusden.

ODE XXXIX.

Ver. 3. Anacreon is not the only one who asserts, that Bacchus is the best friend to the muses. If, as Horace says, you give credit to old Cratinus, the comic Greek poet, "Nulla placere diu, nec vivere carmina possunt. Quæ scribuntur aquæ potioribus." "No verses long can please, or long can live, which water-drinkers write." There is an epigram in the first book of the Anthologia, which begins thus:

οἶνος τοῖς χαριέντι μέγας πάλαι ἵππος αἰδοῖ,
 Ἵδωρ δὲ πινῶν, παλὸν ἢ τέκοις ἴππος.

Wine is the poet's generous horse;
 But water-drinkers works of course
 Are languid, cold, and void of force.

Aristophanes, in his comedy called Peace, humorously tells us, that, when the Lacedemonians came to besiege Athens, Cratinus died of grief on seeing a hoghead broken, and the wine running out.

Ver. 7. Horace has expressed himself in the same manner:

—Tristitiam et metus
 Tradam protervis in mare Creticum
 Portare ventis—

Lov'd by the muses, to the wind
 Be all my fears and griefs resign'd,
 To drown them in the Cretan main. *Duncombe.*

ODE XL.

Theocritus has imitated this beautiful Ode in his nineteenth Idyllium.

Τὸν κλειπῆαν ποτ' ἔρωτα, κ. τ. λ.

As Cupid once, the flyest rogue alive,
 Was stealing fragrant honey from the hive,
 A little bee, inflam'd with rage and grief,
 Pierc'd with his stinging finger of the thief.
 He blew the tortur'd hand, he stamp'd the ground,
 He ran, and to his mother show'd the wound;
 And loud began through anguish to complain,
 That a small bee should cause such racking pain.
 Fair Venus smil'd her sobbing son to see,
 And said, 'Thou too art little, like a bee,
 ' And yet what mighty wounds are made by
 ' thee!'

Ver. 13. Madam Dacier says, that Anacreon makes Cupid speak in this manner, because, according to the Pagan theology, the language of the gods was different from that of men: but, as Longepierre ingeniously observes, to render a passage of this nature learned, is to make it obscure; for nothing can be more natural to imagine, than that an infant, who had heard of the stinging of serpents, when he found himself stung by a little creature, he hardly knew what, should immediately think it one. The labourers might call it a bee, if they pleased; his pain and fright made him persist that it was a serpent.

ODE XLI.

Ver. 3, 4. Tibullus says the same:

Ille liquor docuit voces inflectere cantu;
 Movit et ad certos nescia membra modos.
L. I. Ed. 7.

This as swains quaff'd, spontaneous numbers came,
 They prais'd the festal cask, and hymn'd thy name;
 All ecstasy! to certain time they bound
 And beat in measur'd awkwardness the ground.

TRANS. II.

Granger.

Ver. 8. Madam Dacier supposes this to be the passage on which the opinion, that the graces were the daughters of Bacchus and Venus, was founded.

Ver. 16. Macedonius, in an epigram in the first book of the Anthologia, C. 25. says, that to banish care was a precept of Anacreon's.

Τὴν γὰρ Ἀνακρεόντος ἐνὶ περὶ πιδίσει φυλάσσω
 Παρφασιν, ὅτι διὰ φροντίδα μὴ κατεχεῖν.

For still I hold Anacreon's rule the best,
 To banish care for ever from my breast.

Ver. 19, 20. Anacreon is not singular in enforcing the necessity of enjoying life from the brevity and uncertainty of it. Rufinus has an epigram in the seventh book of the Anthologia, Epigram 143, to this purpose:

Let us, my friend, in joy refine,
 Bathe, crown our brows, and quaff the wine;
 Short is the space for human joys;
 What age prevents not, death destroys.

And Martial,

Non est, crede mihi, sapienti dicere, 'Vicam';
 Sera nimis vita est castina, vive hodie.

"I'll live to-morrow," 'tis not wise to say:
 'Twill be too late to-morrow---live to day.

ODE XLII.

Ver. 13, 14. Thus our poet in his seventh epigram says,

I ne'er can think his conversation good,
 Who o'er the bottle talks of wars and blood;
 But his, whose wit the pleasing talk refines,
 And lovely Venus with the graces joins.

Ver. 19. The Greek is, Βίον ησυχον φιρώμεν. Anacreon esteemed tranquillity the happiest ingredient of life: Thus, Ode 39th, he praises the γαλήνην βίον.

—Life's rural scene,
 Sweet, sequester'd, and serene.

ODE XLIII.

Ver. 4, 5. Dew is the nourishment of grasshoppers. Thus Virgil, Eclogue 5. ver. 77.

Dumque thymo pascentur apes, dum rore cicadae,
 Bees feed on thyme, and grasshoppers on dew.

The Greek poets also describe the grasshopper as a musical insect. Thus Theocritus, Idyll. I.

—Τεττιγὸς αἰεὶ τῷ γειττεινῷ ἀδίζει.

Thy song is sweeter than the grasshopper's.

Antipater, in an epigram of the Anthologia, Book I. says,

Ἀρχαὶ Τεττιγὰς μεθύσαι δρασός, ἀλλὰ πινύτης
 Ἀδίζει κυκλῶν ἡμῶν γηγαναστέροι.

Inspir'd by dew the grasshoppers rejoice,
 Nor boasts the swan so musical a voice.

N

Ver. 15. *Ælian*, writing against those who eat grasshoppers, says, They are ignorant how much they offend the muses, the daughters of Jupiter. Whence it appears, that these animals were esteemed sacred to the muses, and the eating of them accounted an impiety. The following is a translation of an epigram from the first book of the *Anthologia*, chap. 33. containing a beautiful complaint of a grasshopper against that practice.

Τίπτει μὲ τὸν, κ. τ. λ.

Why do ye, swains, a grasshopper pursue,
Content with solitude, and rosy dew?
Me, whose sweet song can o'er the nymphs
prevail;
I charm them in the forest, hill, or dale,
And me they call their summer-nightingale.
See, on your fruits the thrush and blackbird prey!
See, the bold starlings steal your grain away!
Destroy your foes---why should you me pursue
Content with verdant leaves, and rosy dew?

Ver. 23. The Athenians called themselves *τῆρας*, grasshoppers, and some of them wore little grasshoppers of gold in their hair, as badges of honour, to distinguish them from others of later duration; and likewise as a memorial that they were born of the earth like those insects.

Ver. 25, 26. Homer represents the gods as free from blood. Speaking of Venus wounded, book 5. he says,

From the clear vein a stream immortal flow'd,
Such stream as issues from a wounded god;
Pure emanation! uncorrupted flood!
Unlike our gross, diseas'd, terrestrial blood:
(For not the bread of man their life sustains,
Nor wine's inflaming juice supplies their veins.)
Pope.

ODE XLIV.

Nothing can be more politely imagined than this ode, nor more courtly than the turn of it. Behold, says *Madam Dacier*, one of the finest and most gallant odes of antiquity; and if she, for whom it was composed, was as beautiful, all Greece could produce nothing more charming.

ODE XLV.

Monf. Le Fevre was so transported with this ode, that he could not forbear crying out,

Felix, ah! nimium felix, cui carmine tali
Fluxit ab Aoniis vena beata jugis.
Quid melius dictaret amor, risusque jocique,
Et cum germanis gratia juncta suis?

Thrice happy he! to whose enraptur'd soul
Such numbers from th' Aonian mountains roll:
More finish'd what could love or laughter write,
Or what the graces dictate more polite?

John Addison.

Ver. 2. *Lemnos* was an island of the *Ægean Sea* sacred to *Vulcan*, who in the first book of the *Iliad*, gives an account of Jupiter's throwing him down from heaven, and his fall upon that island:

Once in your cause I felt his matchless might,
Hurl'd headlong downward from th' æthereal
height;

Toss'd all the day in rapid circles round;
Nor, till the sun descended, touch'd the ground:
Breathless I fell, in giddy motion lost;
The Sinthians rais'd me on the Lemnian coast.

Pope.

Ver. 6. Horace calls it the nectar of Venus:

—oscula quæ Venus
Quintâ parte sui nectaris imbuit.

Lips, which Venus bath'd for joy
In her celestial dew.

Jeffreys.

Ver. 23, 24. This sentiment is extremely delicate, intimating, that one cannot even touch the darts of Cupid with safety. Moschus concludes his first *Idyllium* with a similar thought:

Perhaps he'll say, 'Alas! no harm I know,
'Here take my darts, my arrows, and my bow.'
Ah! touch them not, fallacious is his aim,
His darts, his arrows all art tipt with flame.

ODE XLVI.

Ver. 6.

Nil tibi nobilitas poterit conducere amanti.

Propertius.

Your noble birth pleads not the cause of love.

Ver. 8. Ovid says the same:

Aurea sunt verè nunc secula: plurimus auro
Venit honos: auro conciliatur amor.

This is the golden age; all worship gold:
Honours are purchas'd, love and beauty sold.
Our iron age is grown an age of gold,
'Tis who bids most, for all men would be sold.

Dryden.

Ver. 13. *Phocylides*, in his *Admonitory Poem*, ver. 38, &c. seems to have imitated this passage.

Ἡ φιλοχρημοσύνη, κ. τ. λ.

On sordid avarice various evils wait,
And gold, false, glittering, is the tempting bait.
O cursed gold! in whom our woes combine,
Why dost thou thus with pleasing ruin shine?
Cause of the parent's curse, of brethren's strife,
Wars, murders, and all miseries of life.

ODE XLVII.

Ver. 8. *Longepierre* quotes a passage from *Guarini*, where the same sentiment is expressed, though in a different manner; and which is translated by *John Addison*.

—O Corisca mia cara,
D'anima Linco e non di forze sono;
E'n questo vecchio tronco
E piu che fosse mai verde il desio.

Yes, my Corisca, Lincus is the same,
Though not in youthful force, in youthful flame;

Though age and wrinkles on my front appear,
My heart is green, and love still blossoms there.

ODE XLVIII.

Ver. 8. It was customary with the ancients, at their entertainments, to choose a king or master of the revels, who both regulated the size of the cups, and the quantity each person was to drink: He was generally chosen by the cast of a die.

Nec regna vini fortiere talis. *Hor.*

No longer by the die's successful cast
Shalt thou controul the gay repast. *Duncombe.*

—Quem Venus arbitrum
Dicet bibendi--- *L. 2. Ode 7.*

Who, nam'd by Venus, at the jovial board
The laws of drinking shall prescribe? *Duncombe.*

ODE XLIX.

Ver. 5. It is probable, that in this ode Anacreon had in view the image of peace, which Vulcan represented upon the shield of Achilles. *Iliad 18.*

Two cities radiant on the shield appear,
The image one of peace, and one of war;
Here sacred pomp and genial feast delight,
And solemn dance, and hymeneal rite;
Along the streets the new-made brides are led,
With torches flaming, to the nuptial bed:
The youthful dancers in a circle bound
To the soft flute and cittern's silver sound;
Through the fair streets the matrons in a row
Stand in the porches, and enjoy the show. *Pope.*

ODE L.

Ver. 4. Homer introduces Helen mixing such a bowl. *Odyssey, B 4.*

Meantime with genial joy to warm the soul,
Bright Helen mix'd a mirth-inspiring bowl;
Temper'd with drugs of sovereign use, t' assuage
The boiling bosom of tumultuous rage;
To clear the cloudy front of wrinkled care,
And dry the tearful fluics of despair. [mind
Charm'd with that virtuous draught, th' exalted
All sense of woe delivers to the wind.
Though on the blazing pile his parent lay,
Or a lov'd brother groan'd his life away;
Or darling son, oppress'd by ruffian force,
Fell breathless at his feet, a mangled corse,
From morn to eve, impassive and serene,
The man entranc'd would view the deathful scene. *Fenton.*

ODE LI.

Ver. 6. There are several epigrams in the fourth book of the Anthologia; on Venus rising from the sea. I shall give a translation of one of them, beginning,

Τὴν ἐκδυγῆσαν, κ. τ. λ.

Apelles, rapt in sweet surprise,
Saw Venus from the ocean rise;

What art before could never give,
He made the breathing picture live.
Her radiant locks luxuriant flow'd;
Her lovely eyes serenely glow'd;
Like two round apples ripe, her breast
Rose, gently suing to be prest.

Ver. 23.
So when bright Venus rises from the flood,
Around in throngs the wondering Nereids crowd;
The Tritons gaze, and tune the vocal shell,
And every grace unsung the waves conceal.

Garth's Disp. B. 6.

As when sweet Venus, so the fable sings,
Awak'd by Nereids, from the ocean springs;
With smiles she sees the threatening billows rise,
Spreads smooth the surge, and clears the louring
skies;
Light o'er the deep, with fluttering Cupids
crown'd,
The pearly * conch and silver turtles bound;
Her tresses shed ambrosial odours round.

Tickell. Prosp. of Peace.

ODE LII.

Ver. 3. Homer, in his beautiful description of the Vintage, book 18. introduces young men and maids employed in the same office.

To this one path-way gently winding leads,
Where march a train with baskets on their heads,
(Fair maids and blooming youths) that smiling
bear
The purple product of th' autumnal year. *Pope.*

ODE LIII.

This ode will be understood by supposing that Anacreon celebrates a rose, and requests a lyrist to play to his voice.

Ver. 13, 14. The rose was consecrated to the muses. See Sappho.

For thy rude hand ne'er pluck'd the lovely rose
That on the mountain of Pieria blows.

Ver. 21. The rose is celebrated in the fifth ode of Anacreon; in a fragment of Sappho; and in the fourteenth Idyllium of Ausonius, in which are the following beautiful lines:

Quam longa una dies, ætos tam longa rosarum,
Quas pubescentes longa senecta premit:
Quam modo nascentem rutilus conspexit Eois,
Hanc veniens sero vespere vidit anum.

See! in the morning blooms the rose!

But soon her transient glories close:

She opens with the rising day,

And with the setting fades away. *Duncombe.*

* In *Dodley's Miscellanies* it is by mistake printed, the pearly conch. Venus, speaking of a beautiful woman, says,

Hæc et cœruleis mecum consurgere digna
Fluctibus; et nostrâ potuit considere conchâ.

Statius.

Ver. 30. *Ῥοδοδάκτυλος*, "rosy finger'd," is an epithet frequently used by Homer, and applied to the morning. Dryden also uses it:

The rosy-finger'd morn appears,
And from her mantle shakes her tears.

Milton's description of the morning is also very beautiful:

—The morn,
Wak'd by the circling hours, with rosy hand
Unbarr'd the gates of light — B. 6. V. 2.

Ver. 35. It is well known, that the rose is used as an ingredient in the composition of several medicines.

Ver. 37. The ancients used roses in embalming their dead. Venus anoints the body of Hector with unguent of roses, to prevent it from corruption, *Iliad*, book 23.

Celestial Venus hover'd o'er his head,
And roscate unguents, heavenly fragrance shed.
Pope.

They also crowned the tombs of their friends with roses and other flowers.

Ver. 41. Nothing preserves its fragrance, when dried, longer than the rose.

—και ε ροδον αυον ολισται. *Theocr. Id. 27.*
Blown roses hold their sweetness to the last.
Dryden.

Ver. 46. Bion tells us, that the blood of Adonis gave birth to the rose. *Αἷμα ροδον τιπτει.*

Both tears and drops of blood were turn'd to flowers;
From these in crimson beauty sprung the rose,
Cærulean-bright anemonies from those.

ODE LIV.

Ver. 5. Cybeba, or Cybele, seems to be the name of a female attendant, taken from Cybele the mother of the gods.

ODE LV.

Ver. 3, 4. The Greek is *τιάρα*, *tiara*, an ornament for the head, like the modern turban. Addison quotes a passage from Dionysius, containing a description of the situation and manners of the Parthians, which he has thus translated:

Beyond the Caspian freights those realms extend,
Where circling bows the martial Parthians bend.
Vers'd only in the rougher arts of war,
No fields they wound, nor urge the shining share.
No ships they boast to stem the rolling tide,
Nor lowing herds o'er flowery meadows guide:
But infants wing the feather'd shaft for flight,
And rein the fiery steed with fond delight.
On every plain the whistling spear alarms,
The neighing courser, and the clang of arms;
For there no food the little heroes taste,
Till warlike sweat has earn'd the short repast.

ODE LVI.

We are indebted for this ode to Henry Stephens. It is also extant in Stobæus, who acknowledges it to be Anacreon's.

Ver. 1, 2. Theocritus finally touches upon the progress which old age makes on the human body.

—απο προταφων περιλαμβα
Παντες γηραλτοι, και επισαχερω ες γυνν ερπει
Λευκαινων δ χρονος. —

First from our temples age begins her race,
Thence whitening time creeps softly o'er the face.
Greek.

Ver. 3.

—fugit retro
Levis juvenas, et decor, aridâ
Pellente lascivos amores
Canitie, facilemque somnum. *Hor. B. 2. O. 14.*

Behold our years! how fast they fly;
Youth vanishes, and beauty fades;
Age drops her snow upon our heads,
And drives sweet slumbers from our eye!
Dunscombe.

Ver. 14. Catullus, speaking of Lesbia's sparrow, says,

Qui nunc et per iter tenebricosum,
Illuc unde negant redire quenquam.

Death has summon'd it to go,
Pensive to the shades below:
Dismal regions! from whose bourn,
Alas! no travellers return.

See also Moschus on the death of Bion:

But we, the great, the brave, the learn'd, the wise,
Soon as the hand of death has clos'd our eyes,
In tombs forgotten lie, no suns restore,
We sleep, for ever sleep, to wake no more.

ODE LVII.

Ver. 3. The ancients usually drank their wine mixed with water. Madam Dacier observes, that Hesiod prescribes three measures of water to one of wine, in summer.

Ver. 10. The Scythians were remarkable for their intemperance in drinking and quarrelling over their cups.

ODE LVIII.

This little ode is extant in the seventh book of the *Anthologia*, and ascribed to Julian, *απο των υπαρχον Αιγυπτου*, a king of Egypt, who wrote several other things with elegance. As its beauty has hitherto procured it a place in most of the editions of Anacreon, it was thought worthy to be retained in this translation.

ODE LIX.

Ver. 9, 10. Horace has imitated this ode at the beginning of the 23d ode of the first book, the 5th of the second; but particularly in the 11th of the third.

Quæ, velut latis equa trima campis
Ludit exultim, metuitque tangi,
Nuptiarum expers, et adhuc protervo
Cruda marito.

She sports along the verdant plain
Like a fleet filly, shuns the rein,
Fears to be touch'd : nor yet will prove,
Wild and untry'd, the pleasing pains of love.
Duncombe.

ODE LX.

Theodorus Prodromus, who wrote the amours of Dosicles and Rodanthe, has preserved this Epithalamium ; which, as Madam Dacier observes, is a sort of poem that used to be sung to a new-married couple on the morning after the ceremony.

Ver. 4. Dionysius of Halicarnassus calls marriage, Σωτηριον τῆ γαμῆς, " The preserver of mankind."

Ver. 12. The Greek is Μη σε φυγή παρδικος αγρα, " Lest the partridge should escape you ;" alluding to the coyness of a young bride.

Ver. 15. These four lines are taken from a translation of this poem, which appeared in the Student.

Ver. 25. The Greek is, Κυπαρισσῶς πεφυκοὶ σιν εὐκηντῶ, " May a cypress grow in your gardens!" that is, ' May a child, as beautiful and as long lived as a cypress, crown your happiness.' Madam Dacier observes, this was a proverbial way of speaking.

ODE LXI.

The Vatican manuscript acknowledges this ode to be Anacreon's.

Ver. 9. 10. Horace has imitated this passage, Book i. Ode 26. which is an argument for the authenticity of this ode. See ode 39th.

Let the winds that murmur, sweep
All my sorrows to the deep.

Ver. 28. The poet calls the Phrygians, faithless, from their king Laomedon's deceiving Apollo and Neptune of the reward he had promised them for building the walls of Troy : and from his defrauding Hercules of his recompence, who had delivered his daughter Hesione from being devoured by a sea-monster. *Madam, Dacier.*

ODE LXII.

This ode has also the authority of the Vatican manuscript to claim Anacreon for its author.

Ver. 7. 8. Madam Dacier remarks, that the vines in Greece were so high as to form a commodious shade.

ODE LXIII.

We owe the preservation of this fragment to Dion Chrysostom.

ODE LXIV.

This fragment is cited by Athenæus. Barnes supposes it to have been written on the poetess Sappho ; and, to confirm his opinion, produces the testimonies of Chamælon and Hermesianax the Colophonian ; the last of which in his third elegy, says,

Καί γὰρ τὸν ὁ μελιχρὸς κ. σ. λ.

For sweet Anacreon lov'd the Lesbian dame ;
The muse-rapt maid inspir'd the brightest flames,
And oft his native isle he would resign
For wit more brilliant, and for better wine.

Ver. 10. The following lines are supposed to be part of the answer which Sappho returned to Anacreon :

Κεῖνον, ὦ χρυσόθρονος Μῦς, ἐνίσπες
Ἕμνον, ἐκ τῆς καλλιγυναικὸς ἐσθλαῆ
Ταῖος χαίρας ὃν αἰεὶ τερπνῶς
Πρὸς βυθὸν ἀγαυός.

Ye muses ever fair and young,
High seated on the golden throne,
Anacreon sent to me a song
In sweetest numbers, not his own ;
For by your sacred raptures fir'd,
The poet warbled what the muse inspir'd.

ODE LXV.

This and the five following odes are not translated by Addison.

Some have imagined that this ode was not written by Anacreon, because he himself is the subject of it : but Barnes endeavours to prove it genuine from the ninth ode and the sixty-sixth, in both which Anacreon makes mention of himself : and from the frequent liberties which the best poets have taken of mentioning themselves in their own compositions.

ODE LXVI.

It is certain, that Anacreon wrote hymns in honour of the gods : this is undoubtedly one of them, and perhaps the most entire of any that remain. See the note on the 16th verse of the ninth ode.

ODE LXVIII.

This is, as Madam Dacier remarks, an entire hymn, or part of one, composed in honour of Diana, in favour of some town situated on the river Lethe, which she supposes to be Magnesia, near Ephesus.

It was probably made on occasion of some battle in which the Magnesians had been defeated. The poet entreats Diana to assist a people in distress, who depended only upon her protection.

ODE LXIX.

The fourth epode of Horace has a great similitude to this ode :

Licet superbus ambules pecuniâ, &c.

Though store of wealth you now possesse,
Condition changes not with dresse.

" Shall he who tir'd the lictor's hand,
" Scourg'd by the magistrate's command.

" With corn a thousand acres load,

" With chariots wear the Appian road,

" And, in contempt of Otho, sit

" With the knight's order in the pit?"

Duncombe.

THE EPIGRAMS OF ANACREON.

EPIGRAM I.

ON TIMOCRITUS.

THE tomb of great Timocritus behold!
Mars spares the base, but slays the brave and bold.

EPIGRAM II.

ON AGATHON.

For Agathon, in fighting fields renown'd,
Abdera mourns his funeral pile around;
For him she mingles tears with bright applause,
Who nobly suffer'd in his country's cause;
No youth so brave, unknowing how to yield,
E'er perish'd in the thunder of the field.

EPIGRAM III.

ON THE SON OF CLEENOR.

THEE, Cleenorides the bold, the brave,
Stern Neptune sunk beneath the whelming wave:
Thy country's love so nobly fill'd thy mind,
Thou dar'dst to trust, too credulous, the wind:
The fair, though faithless, season urg'd thy doom,
And wrapp'd thy beauties in a wat'ry tomb.

EPIGRAM IV.

ON A PICTURE REPRESENTING THREE BACCHÆ.

FIRST, Heliconias with a Thyrsus past,
Xanthippe next, and Glauca is the last;
Lo! dancing down the mountains they repair,
And grateful gifts to jolly Bacchus bear;
Wreaths of the rustling ivy for his head,
With grapes delicious, and a kid well fed.

EPIGRAM V.

ON MYRON'S COW

FEED, gentle swain, thy catæ far away,
Lest they too near the cow of Myron stray,
And thou, if chance fallacious judgment err'd,
Drive home the breathing statue with the herd.

EPIGRAM VI.

ON THE SAME.

THIS heifer is not cast, but rolling years
Harden'd the life to what it now appears:

Myron unjustly would the honour claim,
But nature has prevented him in fame.

The following Epigrams were collected by Barnes, and first added to his Edition of our Poet: The first five on the authority of a Manuscript Anthologia at Paris; the rest on the credit of a Heidelberg Manuscript.

EPIGRAM VII.

ON COMPANY.

I NE'ER can think his conversation good,
Who o'er the bottle talks of wars and blood;
But his whose wit the pleasing talk refines,
And lovely Venus with the Graces joins.

EPIGRAM VIII.

A DEDICATION TO JUPITER, IN THE NAME OF PHIDOLA.

PHIDOLA, as a monument of speed,
This mare, at Corinth bred, to Jove decreed.

EPIGRAM IX.

TO APOLLO IN THE NAME OF NAOCRATES.

GOD of the silver bow, and golden hair,
Hear Naocrates's vows, and grant his prayer!

EPIGRAM X.

ANOTHER DEDICATION.

LYCÆUS' son, Praxagoras, bestow'd
This marble statue to his guardian god:
View well the whole—what artist can surpass
The finish'd work of Anaxagoras?

EPIGRAM XI.

ANOTHER.

MINERVA's grove contains the favour'd shield,
That guarded Python in the bloody field.

EPIGRAM XII.

ANOTHER, BY LEOCRATES.

WHEN Hermes' bust, Leocrates, you rais'd,
The Graces bland the beauteous image prais'd;
The joyful academe extoll'd your name;
The speaking bust shall eternize your fame.

EPIGRAM XIII.

ON THE SON OF ARISTOCLES.

To Aristoclides, the best of friends,
This honorary verse the muse commends:
Bold and adventurous in the martial strife,
He sav'd his country, but he lost his life.

EPIGRAM XIV.

PRAXIDICE this flowery mantle made,
Which fair Dyseris first design'd;
Mark how the lovely damsels have display'd
A pleasing unity of mind.

EPIGRAM XV.

UNDER A STATUE.

CALITILES first fix'd me on this base,
Fair rising to the view:
His sons gave ornament and grace;
To them your thanks are due.

EPIGRAM XVI.

ANOTHER.

THIS trophy Areiphilus's son
To Bacchus consecrates, for battles won.

EPIGRAM XVII.

ANOTHER.

THESSALIA's monarch, Echekratides,
Has fix'd me on this base,
Bacchus, the jolly god of wine, to please,
And give the city grace.

EPIGRAM XVIII.

To Mercury your oraisons address,
That Timonactes meet with wish'd success,
Who fix'd these porticoes, my sweet abode,
And plac'd me sacred to the herald-god.
All who the bright-ey'd sciences revere,
Strangers and citizens, are welcome here.

EPIGRAM XIX.

GREAT Sophocles, for tragic story prais'd,
These altars to the gods immortal rais'd.

EPIGRAM XX.

O MERCURY! for honours paid to thee
May Tlæas live in calm security;
Years of sereneest pleasure may he gain,
And o'er th' Athenian race a long and happy
reign!

NOTES ON THE EPIGRAMS.

EPIGRAM I.

Ver. 2. Priam, speaking of the most valiant of his sons, says,

Τὸς μὲν ἀπώλις' Ἀγῆς—— *Iliad, B. 2. ver. 260.*

All those relentless Mars untimely slew,
And left me these, a soft and servile crew. *Pope.*

EPIGRAM II.

Ver. 2. The Teians, after their expulsion from Iona by Harpagus the general of Cyrus, sailed into Thrace, and settled in the city of Abdera; where they had not been long, before the Thracians, jealous of their new neighbours, endeavoured to give them disturbance. It seems to be in these conflicts that Anacreon lost those friends whom he celebrates in his epigrams. See the first, second, and thirteenth.

EPIGRAM III.

This Cleonorides, as Barnes observes, seems to have been cast away in attempting a voyage from Abdera to his native country Teios, in the winter.

EPIGRAM V.

Myron was the most celebrated artist of his time for casting statues in brass. Petronius speak-

ing of him, says, "Pene hominum animas ferarumque ære comprehenderat:" He had almost found the art to enclose the souls of men and beasts in brass.

Among the many epigrams, which have been composed on Myron's cow, the following from Ausonius deserves commendation:

*Bucula sum, cælo genitoris facta Myronis
Ærea; nec factam me puto, sed genetam.
Sic me taurus init; sic proxima bucula mugit;
Sic vitulus sitiens æbera nostra petit.
Miraris quid fallo gregem? gregis ipse magister
Inter pascentes me numerare solet.*

By Myron's chissel I was form'd of brass;
Not art, but nature, my great mother was.
Bulls court my love; the heifers lowing stand;
And thirsty calves my swelling teat demand.
Nor deem this strange—the herdsman oft has err'd,
And number'd me among the grazing herd.

EPIGRAM VI.

I found this epigram, thus excellently translated, in a paltry edition of Anacreon in English, printed by Curl.

The following epigram on an excellent modern work has expressed the same thought with the same simplicity.

ON CLARISSA.

This work is nature's, every title in't
She wrote, and gave it Richardson to print.

EPIGRAM VIII.

Ver. 2. Pausanias, *Eliac.* l. 2. c. 13. mentions this mare of Phidola's, and tells us she was named Aura, or Air; and that she won the race herself, after her rider was thrown.

EPIGRAM X.

Ver. 4. Anaxagoras, a native of Ægina, was a celebrated statuary. He flourished both before and after the expedition of Xerxes. *Barnes.*

EPIGRAM XI.

When the ancients escaped any imminent danger, it was usual for them to consecrate some memorial of it in the temples of their gods. Thus Horace, l. 1. Ode 5.

Me tabula facer, &c.

For me, the sacred tablet shows,
That I have hung my dripping clothes
At Neptune's shrine——

Duncombe.

EPIGRAM XII.

Ver. 3. The Athenian academy was not far distant from the Areopagus, in a grove without the city.

EPIGRAM XIII.

Nothing among the ancient Greeks and Romans was esteemed a greater act of piety, than to fight for the good of the community; and they, who have greatly fallen in so righteous a cause, are embalmed with immortal honours. Tyrtaeus wrote some noble poems on martial virtue. The follow-

ing lines are translated from a fragment of his: Speaking of the hero that dares to die for his country, he says,

His fair renown shall never fade away,
Nor shall the mention of his name decay,
Who glorious falls beneath the conqueror's hand,
For his dear children, and his native land,
Though to the dust his mortal part we give,
His fame in triumph o'er the grave shall live.

Anon.

EPIGRAM XIV.

Addison quotes a passage from Shakspeare similar to this epigram:

We Hermia, like two artificial gods,
Created with our needles both one flower,
Both on one samplar, sitting on one cushion;
Both warbling of one song, both in one key;
As if our hands, our sides, voices, and minds,
Had been incorporate. So we grew together,
Like to a double cherry, seeming parted,
But yet an union in partition,
Two lovely berries molded on one stem;
Or with two seeming bodies, but one heart.

Midsummer Night's Dream.

EPIGRAM XVIII.

Ver. 1. The ancients esteemed Mercury the general protector of learning; and therefore usually placed his statue in their libraries, and in the porticoes before their public schools and academies.

Addison.

EPIGRAM XIX.

This epigram, notwithstanding what Barnes says to the contrary, is thought not to be Anacreon's; the mention of Sophocles being too repugnant to chronology, to admit it for genuine.

TRANSLATED FROM THE GREEK

BY J. H. M. A.

THE LIFE OF SAPPHO.

SAPPHO was a native of Mitylene in the island of Lesbos. Who was her father is uncertain, there being no less than eight persons who have contended for that honour; but it is universally acknowledged that Cleis was her mother. She flourished, according to Suidas, in the 42d Olympiad; according to Eusebius, in the 44th Olympiad, about 600 years before our Saviour Christ. She was contemporary with Pittacus, the famous tyrant of Mitylene, and the two celebrated poets, Stesichorus and Alcæus. Barnes has endeavoured to prove, from the testimonies of Chamæleon and Hermesianax, that Anacreon was one of her lovers; but this amour has been generally esteemed too repugnant to chronology, to be admitted for any thing but a poetical fiction.

She married one Cercolas, a man of great wealth and power in the island of Andros, by whom she had a daughter named Cleis. He leaving her a widow very young, she renounced all thoughts of a second marriage, but not the pleasures of love; not enduring to confine that passion to one person, which, as the ancients tell us, was too violent in her to be restrained even to one sex.

But no one seems to have been the object of her admiration so much as the accomplished Phaon, a young man of Lesbos; who is said to have been a kind of ferryman, and thence fabled to have carried Venus over the stream in his boat, and to have received from her, as a reward, the favour of becoming the most beautiful man in the world. She fell desperately in love with him, and took a voyage into Sicily in pursuit of him, he having withdrawn himself thither on purpose to avoid her. It was in that island, and on this occasion, that she composed her hymn to Venus.

Her poem was ineffectual for the procuring that happiness which she prayed for in it. Phaon was still obdurate, and Sappho was so transported with the violence of her passion, that she resolved to get rid of it at any rate.

There was a promontory in Acarnania called Leucate, on the top of which was a little temple dedicated to Apollo. In this temple it was usual for despairing lovers to make their vows in secret, and afterwards to fling themselves from the top of the precipice into the sea. For it was an established opinion, that all those who were taken up

alive, would immediately be cured of their former passion. Sappho tried the remedy; but perished in the experiment. The original of this unaccountable humour is not known. Ovid represents Sappho as advised to undertake this strange project by the vision of a sea-nymph, of which she sent the following account to the cruel Phaon:

Hic ego cum lassos, &c.

Here as I lay, and swell'd with tears the flood,
Before my sight a wat'ry virgin stood;
She stood and cry'd, "O you that love in vain!
" Fly hence and seek the fair Leucadian main:
" There stands a rock, from whose impending
" steep
" Apollo's fane surveys the rolling deep;
" There injur'd lovers, leaping from above,
" Their flames extinguish, and forget to love.
" Haste, Sappho, haste, from high Leucadia throw
" Thy wretched weight, nor dread the deeps be-
" low!"

She spoke, and vanish'd with the voice—I rise
And silent tears fall trickling from my eyes.
I go ye, nymphs, those rocks and seas to prove:
How much I fear, but, ah, how much I love!
I go, ye nymphs, where furious love inspires;
Let female fears submit to female fires.

To rocks and seas I fly from Phaon's hate,
And hope from seas and rocks a milder fate.
Ye gentle gales, beneath my body blow,
And softly lay me on the waves below!

And thou, kind love, my sinking limbs sustain,
Spread thy soft wings, and waft me o'er the
main,

Nor let a lover's death the guiltless flood pro-
Pope.

The Romans erected a most noble statue of porphyry to her memory: and the Mitylenians, to express their sense of her worth, and the glory they received from her being born amongst them, paid her sovereign honours after her death, and coined money with her head for the impress.

The best idea we can have of her person, is from her own description of it in Ovid:

Si mihi difficilis formam, &c.

To me what nature has in charms deny'd,
Is well by wit's more lasting charms supply'd.

Though short my stature, yet my name extends
To heaven itself, and earth's remotest ends.
Brown as I am, an Ethiopian dame
Inspir'd young Perseus with a generous flame;
Turtles and doves of differing hues unite,
And glossy jet is pair'd with shining white.
If to no charms thou wilt thy heart resign,
But such as merit, such as equal thine,
By none, alas! by none thou canst be mov'd,
Phaon alone by Phaon must be lov'd.

Pope.

To give the English reader a true notion what opinion the ancients entertained of her works, would be to collect a volume in her praise. She was honoured with the glorious title of the tenth muse. Horace says,

Spirat adhuc amor,
Vivuntque commissi calores
Æoliæ fidibus puellæ.

L. 4. Ode 9.

Enchanting Sappho's lyric muse
In every breast must love infuse;
Love breathes on every tender string,
And still in melting notes we hear her sing.

Duncombs.

On the revival of learning, men of the most refined taste accounted the loss of her writings inestimable, and collected the sacred relics with the utmost assiduity: though Mr Addison (in the Spectator, No. 223.) judiciously observes: "I do not know, by the character that is given of her works, whether it is not for the benefit of mankind that they are lost. They were filled with such bewitching tenderness and rapture, that it might have been dangerous to have given them a reading."

Vossius, in the third book of his Institutiones Poeticæ, says, that none of the Greek poets ex-

celled Sappho in sweetness of verse; and that she made Archilochus the model of her style, but at the same time took great care to soften and temper the severity of his expression.

Hoffman, in his Lexicon, says, "Some authors are of opinion, that the elegy which Ovid made under the name of Sappho, and which is infinitely superior to his other elegies, was all, or at least the most beautiful part of it, stolen from the poems of the elegant Sappho."

She was the inventress of that kind of verse which (from her name) is called the Sapphic. She wrote nine books of Odes, besides Elegies, Epigrams, Iambics, Monodies, and other pieces; of which we have nothing remaining entire, but an Hymn to Venus, an Ode preserved by Longinus (which, however, the learned acknowledge to be imperfect), two Epigrams, and some other little Fragments. I shall conclude my account of this celebrated lady in the words of Mr. Addison, taken from the above-mentioned Spectator.

"Among the mutilated poets of antiquity, there is none whose fragments are so beautiful as those of Sappho. They gave us a taste of her way of writing, which is perfectly conformable with that extraordinary character we find of her in the remarks of those great critics who were conversant with her works when they were entire. One may see, by what is left of them, that she followed nature in all her thoughts, without descending to those little points, conceits, and turns of wit with which many of our modern lyrics are so miserably infected. Her soul seems to have been made up of love and poetry: she felt the passion in all its warmth, and described it in all its symptoms. She is called by ancient authors the tenth muse; and by Plutarch is compared to Cacus the son of Vulcan, who breathed out nothing but flame."

THE WORKS OF SAPPHO.

Mark, muse! the conscious shade and vocal grove,
Where Sappho tun'd her melting voice to love,
While echo each harmonious strain return'd,
And with the soft complaining Lesbian mourn'd.

PROGRESS OF POETRY.

ODES.

ODE I.

AN HYMN TO VENUS.

VENUS, bright goddess of the skies,
To whom unnumber'd temples rise,
Jove's daughter fair, whose wily arts
Delude fond lovers of their hearts;
O! listen gracious to my prayer,
And free my mind from anxious care.

If e'er you heard my ardent vow,
Propitious goddess, hear me now!
And oft my ardent vow you've heard,
By Cupid's kindly aid preferr'd,
Oft left the golden courts of Jove,
To listen to my tales of love.

The radiant car your sparrows drew;
You gave the word, and swift they flew,
Through liquid air they wing'd their way,
I saw their quivering pinions play;
To my plain roof they bore their queen,
Of aspect mild, and look serene.

Soon as you came, by your command,
Back flew the wanton feather'd band,
Then, with a sweet, enchanting look,
Divinely smiling, thus you spoke:

'Why didst thou call me to thy cell?
'Tell me, my gentle Sappho, tell,

'What healing medicine shall I find
'To cure thy love-distemper'd mind?
'Say, shall I lend thee all my charms,
'To win young Phaon to thy arms?
'Or does some other swain subdue
'Thy heart? my Sappho, tell me who?

'Though now, averse, thy charms he flight,
'He soon shall view thee with delight;

'Though now he scorns thy gifts to take,
'He soon to thee shall offerings make;
'Though now thy beauties fail to move,
'He soon shall melt with equal love.'

Once more, O Venus! hear my prayer,
And ease my mind of anxious care;
Again vouchsafe to be my guest,
And calm this tempest in my breast!
To thee, bright queen, my vows aspire;
O grant me all my heart's desire!

ODE II.

Whatever might have been the occasion of this ode, the English reader will enter into the beauties of it, if he supposes it to have been written in the person of a lover sitting by his mistress.

Addison, Spectator, No. 229.

MORE happy than the gods is he
Who, soft-reclining, sits by thee;
His ears thy pleasing talk beguiles,
His eyes thy sweetly dimpled smiles.

This, this, alas! alarm'd my breast,
And robb'd me of my golden rest:
While gazing on thy charms I hung,
My voice died faltering on my tongue.

With subtle flames my bosom glows,
Quick through each vein the poison flows:
Dark, dimming mists my eyes surround;
My ears with hollow murmurs sound.

My limbs with dewy chillness freeze,
On my whole frame pale tremblings seize,
And losing colour, sense and breath,
I seem quite languishing in death.

NOTES ON THE ODES.

ODE I.

We are indebted for this hymn to Dionysius of Halicarnassus, who quotes it as a pattern of perfection. Madam Dacier supposes it to be entirely historical; and that it was written after Phaon, her inconstant lover, had withdrawn himself from the island of Lesbos to Sicily, in order to avoid the importunities of an amorous mistress. It was in Sicily, therefore, and on the abovementioned occasion, that she is supposed to have made this hymn.

Ver. 13. Sappho says, the chariot of Venus was drawn by sparrows, because they are of all birds the most amorous.

Ver. 20. There is something very pretty in this circumstance, wherein Venus is described as sending away her chariot, upon her arrival at Sappho's lodgings, to denote that it was not a short transient visit which she intended to make her.

Madam Dacier.

ODE II.

This beautiful ode is preserved by Longinus, in his treatise of the Sublime.

Ver. 1. There is an epigram in the Anthologia, which seems to be an imitation of this stanza.

Εὐδαιμων ὁ βλεπών σε, προσέχλιος ὅστις ἀκούει,
Ἡμιθεὺς δ' ὀφίλων, ἀθανάτος δ' ὁ συνών.

The youth who sees thee may rejoice,
But blest is he who hears thy voice,
A demigod who shall thee kiss,
Who gains thee is a god in bliss.

Longinus has observed, that "this description of love in Sappho is an exact copy of nature; and that all the circumstances, which follow one another in such a hurry of sentiments, notwithstanding they appear repugnant to each other, are really such as happen in the frenzies of love." He farther says: "Sappho, having ob-

served the anxieties and tortures inseparable to jealous love, has collected and displayed them all with the most lively exactness." And Dr. Pierce judiciously observes, that "in this ode she endeavours to express that wrath, jealousy, and anguish, which distracted her with such a variety of torture. And therefore, in the following verses of Boileau's translation, the true sense is mistaken:

—dans les doux transports, où s'égare mon ame.

"And,

—je tombe en des douces langueurs.

"As the word *doux* will by no means express the rage and distraction of Sappho's mind; it being always used in a contrary sense." There are two lines in Philips's translation of this ode which are liable to the same objection:

For while I gaz'd in transport tost.

And,

My blood with gentle horrors thrill'd.

Mr. Addison, in his Spectator on this ode, relates the following remarkable circumstance from Plutarch: "That author, in the famous story of Antiochus, who fell in love with Stratonice, his mother-in-law, and (not daring to discover his passion) pretended to be confined to his bed by sickness, tells us, that Erasistratus, the physician, found out the nature of his distemper by those symptoms of love which he had learned from Sappho's writings. Stratonice was in the room of the love-sick prince, when these symptoms discovered themselves to his physician; and it is probable, that they were not very different from those which Sappho here describes in a lover sitting by his mistress."

Madam Dacier says, that this ode of Sappho is preserved entire in Longinus, whereas, whoever looks into that author's quotation of it, will find, that there must at least have been another stanza, which is not transmitted to us.

FRAGMENTS.

FRAGMENT I.

THE Pleiads now no more are seen,
Nor shines the silver moon serene,
In dark and dismal clouds o'ercast;
The love appointed hour is past:
Midnight usurps her sable throne,
And yet, alas! I lie alone.

FRAGMENT II.

This seems to have been addressed to an arrogant unlettered lady, vain of her beauty and riches.

WHENE'er the fates resume thy breath,
No bright reversion shalt thou gain;
Unnotic'd shalt thou sink in death,
Nor ev'n thy memory remain;

For thy rude hand ne'er pluck'd the lovely rose,
Which on the mountain of Pieria blows.

To Pluto's mansions shalt thou go,
The stern, inexorable king,
Among th' ignoble shades below
A vain, ignoble thing;
While honour'd Sappho's muse-embellish'd name
Shall flourish in eternity of fame.

FRAGMENT III.

TO VENUS.

VENUS, queen of smiles and love,
Quit, O! quit the skies above,
To my lowly roof descend,
At the mirthful feast attend,
Hand the golden goblet round,
With delicious nectar crown'd:
None but joyous friends you'll see,
Friends of Venus, and of me.

FRAGMENT IV.

CEASE, gentle mother, cease your sharp reproof,
My hands no more can ply the curious woof,
While on my mind the flames of Cupid prey,
And lovely Phaon steals my soul away.

FRAGMENT V.

ON THE ROSE.

WOULD Jove appoint some flower to reign
In matchless beauty on the plain,
The rose (mankind will all agree),
The rose the queen of flowers should be,
The pride of plants, the grace of bowers,
The blush of meads, the eye of flowers:

Its beauties charm the gods above;
Its fragrance is the breath of love;
Its foliage wantons in the air
Luxuriant, like the flowing hair:
It shines in blooming splendour gay,
While zephyrs on its bosom play.

The following is Part of an Ode which Sappho is supposed to have written to Anacreon.—See the Notes on the 64th Ode of Anacreon.

Ye muses, ever fair and young,
High-seated on the golden throne,
Anacreon sent to me a song
In sweetest numbers, not his own;
For, by your sacred raptures fir'd,
The poet warbled what the muse inspir'd.

TWO EPIGRAMS OF SAPPHO.

EPIGRAM I.

MENISCUS, mourning for his hapless son,
The toil-experienc'd fisher, Pelagon,
Has plac'd upon his tomb a net and oar,
The badges of a painful life and poor.

EPIGRAM II.

THE much-lov'd Timas lodges in this tomb,
By death insatiate ravish'd in her bloom;
Ere yet a bride, the beauteous maid was led
To dreary coasts, and Pluto's mournful bed.
Her lov'd companions pay the rites of woe,
All, all, alas! the living can bestow:
From their fair heads the graceful curls they shear,
Place on her tomb, and drop the tender tear.

NOTES ON THE FRAGMENTS.

FRAGMENT I.

Ver. 6. A shepherd, in the idyllium intituled *GAPIETTES* (which is generally ascribed to Theocritus, but by Daniel Heinsius is attributed to Moschus) wishes a city-girl, who had slighted him, the punishment of living and dying an old maid.

—may you ne'er find one
Worthy your love in country or in town,
But, to a virgin bed condemn'd, for ever lie
alone!

Bowles.

FRAGMENT II.

Sappho is not the only good writer, who, from a due sense of the excellence of their works, have promised themselves immortality. Virgil has expressed himself in the same manner at the beginning of the third *Georgic*:—Horace, in several

places, particularly in the ode *Exegi Monumentum*:—But Ovid, in the strongest terms, *Jamque opus exegi, &c.*

I've now compil'd a work, which nor the rage
Of Jove, nor fire, nor sword, nor eating age,
Is able to destroy——

Ver. 5. Pieria was a mountain in Macedonia, dedicated to the muses. By this expression, Sappho seems to hint, that the lady who furnished the occasion of this satire, was not conversant in the politer studies, nor acquainted with the muses.

FRAGMENT III.

This fragment should be joined with the fourth ode of Anacreon; for as Sappho desires Venus to be her cup-bearer, so Anacreon appoints Cupid the same office:

In decent robe, behind him bound,
Cupid shall serve the goblet round.

FRAGMENT IV.

Hephæstion produces this fragment from the seventh book of Sappho's Odes. Horace seems to have had it in view, Book 3. Ode 12.

Tibi qualem Cytheræ puer ales
Tibi tales, operosæque Minervæ
Studium aufert, Neobule, Liparæi nitor Hebri.

The winged boy, in wanton play,
Thy work and basket steals away:
Thy web and Pallas' curious toils
Are now become fair Hebrus' spoils. *Duncombe.*

FRAGMENT V.

We are indebted to Achilles Tatius for this fragment, which is generally ascribed to Sappho. In the beginning of the second book of that romancer, Clitophon tells us, his mistress sung this eulogy on the rose at an entertainment. If the reader turns back to the fifth and fifty-third odes of Anacreon, he will find other encomiums on this beautiful flower.

NOTES ON THE EPIGRAMS.

EPIGRAM I.

Longepierre observes, that it was usual among the ancients to place on the tombs of their friends the instruments peculiar to the art or mystery which they exercised when alive. Of this we have examples in Homer and Virgil. In the eleventh book of the Odyssey, ver. 75. Elpenor makes this request to Ulysses in hell:

Σημα τε μοι χυμαι, &c.

A tomb along the wat'ry margin raise,
The tomb with manly arms and trophies grace,
To show posterity Elpenor was:
There high in air, memorial of my name,
Fix the smooth oar, and bid me live to fame. *Broome.*

In the beginning of the twelfth book we find the suit was granted:

A rising tomb, the silent dead to grace,
Fast by the roarings of the main we place;
The rising tomb a lofty column bore,
And high above it rose the tapering oar. *Pope.*

In the sixth book of the Æneid, ver. 232. Æneas places on the tomb of Misenus,

—suaque arma viro, remumque, tubamque.

This done; to solemnize the warrior's doom,
The pious hero rais'd a lofty tomb;
The towering top his well-known ensigns bore,
His arms, his once-lov'd trump, and tapering oar. *Pitt.*

These sort of epitaphs were more general, concise, and instructive, than those which afterwards prevailed. *Longepierre.*

Madam Dacier also observes, that emblems of the humours of the deceased were sometimes placed on their monuments, as in this epigram on a woman named Myro:

Μη θαμβει μασιγα Μυρος επι σημάτι λυσσαν,
Γλαυκα, βιον, χαροπαν χηνα, θοαν σκυλακα.

O'er Myro see the emblems of her soul,
A whip, a bow, a goose, a dog, an owl.

The whip denoted, that she used to chastise her servants; the bow, that her mind was always bent on the care of her family; the goose, that she loved to stay at home; the dog, that she was fond of her children; and the owl, that she was assiduous in spinning and tapestry, which were the works of Pallas, to whom the owl was consecrated. *Dacier.*

At the Earl of Holderness's, at Alke in Yorkshire, is an old picture, with a device which seems to be borrowed from this. It is supposed to be drawn by Hans Holbein, and represents a woman (said to be Queen Elizabeth's housekeeper) standing on a tortoise, with a bunch of keys by her side, her finger on her lips, and a dove on her head. Under it is this inscription:

Uxor amet, fileat, fervet, nec ubique vagetur;
Hoc testudo docet, claves, labra, junctaque turtur.

Which has been thus translated:

Be frugal, ye wives, live in silence and love,
Nor abroad ever gossip and roam,
This learn from the keys, the lips, and the dove,
And tortoise, still dwelling at home!

EPIGRAM II.

Ver. 7. The ceremony of cutting off the hair among the ancients, in honour of the dead, was a token of a violent affection. Thus Achilles, in the twenty-third book of the Iliad, offers his to Patroclus. And the little Cupids tear their hair for grief at the death of Adonis: See *Bion*. Herodotus tells us, that Mardonius cut off his, after his defeat. Many more instances of this extraordinary custom might be produced; but these will, probably, be thought sufficient. I shall finish my observations on this excellent poetess, with an ingenious surmise in regard to the above-mentioned ceremony: it was practised, perhaps, not only in token of sorrow, but might also have a concealed meaning, that, as the hair was cut from the head, and was never more to be joined to it, so was the dead for ever cut off from the living, never more to return.

TRANSLATED FROM THE GREEK,

BY

FRANCIS FAWKES, M. A.

THE TWO X'S

NO. 1

TRANSLATED FROM THE GREEK

FRANCIS T. M. M.

THE LIVES OF BION AND MOSCHUS.

WE know little relating to these two celebrated pastoral poets: And therefore their history may be comprised in few words.

Bion was born at Smyrna, a famous city of Asia Minor, which also has the fairest title to the birth of Homer: For this father of poets is said to have been the son of the river Meles, which flows not far from its walls; and therefore he is called Melesigenes. To this river Moschus, in his *Idyllium* on the death of Bion, addresses himself; and makes that fine comparison between these two poets:

Ταυτο τοι, ω ποταμὸν λιγυρωτάτῃ, κ. τ. λ.

Meles! of streams in melody the chief,
Now heaves thy bosom with another grief;
Thy Homer died, great master of the song,
Thy Homer died, the muses sweetest tongue;
Then did thy waves in plaintive murmurs weep,
And roll'd thy swelling sorrows to the deep.
Another son demands the meed of woe,
Again thy waters weep in long-drawn murmurs flow.

Dear to the fountains was each tuneful son,
This drank of Arethuse, that Helicon.
He sung Atrides' and Achilles' ire,
And the fair dame that set the world on fire:
This form'd his numbers on a softer plan,
And chanted shepherds loves, and peaceful Pan.

We are not informed in what part of the world he lived, though it is evident that he spent much of his time in Sicily; and there it was, probably, that the wonderful sweetness of his compositions drew together great numbers of admirers and disciples; among whom was Moschus, as may be deduced from the above-mentioned poem:

I too, with tears, from Italy have brought
Such plain bucolics as my master taught;
Which, if at all, with tuneful ease they flow,
To thy learn'd precepts, and thy art I owe.
To other heirs thy riches may belong;
I claim thy pastoral pipe and Deric song.

These two last verses prove, that he was not in necessitous circumstances. From the same *Idyllium*, it appears, that he died by poison, not accidentally, but by the appointment of some great man:

O hapless Bion! poison was thy fate;
The baneful potion circumscrib'd thy date,
How could fell poison cause effect so strange,
Touch thy sweet lips, and not to honey change?
Which probably was not unpunished:

But soon just vengeance will the wretch pursue.

It is likewise evident from the above-mentioned authority, that he was contemporary with Theocritus. And this famous Syracusan flourished under Ptolemy Philadelphus, who began his reign in the fourth year of the 123d Olympiad, that is, about 285 years before Christ.

Moschus was born at Syracuse, and was the disciple of Bion, as was before observed. Suidas will have him to have been a professor of grammar at Syracuse: but it is certain, that when he wrote his beautiful elegy on the death of his master, his residence was among the Italians, (though perhaps in those parts that lie over against Sicily, called Great Greece); and probably he succeeded him in governing the poetic school. Some critics have formerly asserted, that Moschus and Theocritus are the same person; but they are sufficiently confuted by a passage in the elegy, where Moschus introduces Theocritus bewailing the same misfortune in another country which he was lamenting in Italy.

"The few remains of these two poets," says Kennet, "are reckoned among the sweetest pieces of the ancient delicacy. They seem, in a great measure, to have neglected that blunt rusticity and plainness, which was so admired an art of their great rival Theocritus; for they always aim at something more polite and genteel, though equally natural, in their compositions." Mr. Longepierre observes, that "the beauty of these *Idylliums* can never be sufficiently admired. If I dare not, says he, affirm, that these two poets are superior to Theocritus himself; yet, I may safely aver, that in general they are more correspondent to the taste of the present age; which can never be brought to relish that extreme simplicity, which abounds in Theocritus. Bion and Moschus are not less natural than he is; but though their simplicity is pure nature, it is less rustic, and more elegant; and their poems, having a more pleasing and agreeable air, one may with justice affirm, that Bion has more grace, sweetness, and delicacy, and less rusticity (if I may be allowed the expression) than Theocritus; and that Moschus keeps the middle-track between them both. However, if their works are not admitted among some for such true pastorals, they will certainly pass among the best judges for better poems."

There is a remarkable paper in the *Guardian*, No. 40. containing a parallel between the pastorals of Mr. Pope and Mr. Phillips (by the way written by Pope himself, though the former papers on pastoral poetry were composed by Mr. Tickell). It abounds with the finest sarcastic irony, which Phillips not having penetration enough to see through, made an apology to Pope on the occasion, declaring that he had no hand in it, nor knew the author. It concludes thus: "After all that has been said, I hope none can think it any injustice to Mr. Pope, that I forbore to mention him as a pastoral writer; since, upon the whole, he is of the same class with Moschus and Bion, whom we have excluded that rank; and on whose eclogues, as well as some of Virgil's, it may be said, that they are by no means pastorals, but something better."

THE WORKS OF BION.

Begin, Sicilian Muse, the mournful lay—
Alas! the Muses will no longer stay,
No longer on these lovely coasts abide;
With him they warbled, and with him they died:
With Bion perish'd all the grace of song,
And all the kisses of the fair and young:
The little Loves, lamenting at his doom,
Beat their fair breasts, and weep around his tomb.

MOSCHUS ON THE DEATH OF BION.

IDYLLIUMS.

IDYLLIUM I.

ON THE DEATH OF ADONIS.

THE death of fair Adonis I deplore;
The lovely youth Adonis is no more:
The cruel fates have cut his vital thread,
And all the Loves lament Adonis dead.
Ah Venus! never more in purple rest,
For mournful fable change thy flow'ry vest;
Thy beauteous bosom beat, thy loss deplore
Aloud with sighs, Adonis is no more!
For the lov'd youth these copious tears I shed,
And all the Cupids mourn Adonis dead 10
Methinks I see him on the mountain lie,
The boar's keen tusk has pierc'd his tender thigh;
Weltering he lies, expiring on the ground,
And near him Venus all in sorrow drown'd;
I see the crimson flood fast trickling flow
Down his white skin that vies with winter snow;
I see the lustre of his eyes decay,
And on his lips the roses fade away:
Yet who can Venus from those lips divide,
Though their sweet kisses with Adonis dy'd? 20
To Venus sweet, ev'n now his breath is fled,
Yet all her kisses cannot warm the dead.
The fate of fair Adonis I deplore;
The Loves lament, Adonis is no more!
A deep wide wound is in his thigh impress'd,
But Venus bears a deeper in her breast.
His beagles round a mournful howling keep;
And all the Dryads of the mountains weep:
But Venus quite abandon'd to despair,
Her locks dishevell'd, and her feet all bare, 30

Flies through the thorny brake, the bri'ry wood,
And stains the thickets with her sacred blood:
With piercing cries Adonis she bewails,
Her darling youth, along the winding vales;
While the blood starting from his wounded thigh,
Streams on his breast, and leaves a crimson dye.
Ah me! what tears fair Cytherea shed,
And how the Loves deplo'd Adonis dead!
The Queen of Love no longer now a bride,
Has lost her beauty since Adonis dy'd; 40
Though bright the radiance of her charms before,
Her lover and her beauty are no more!
The mountains mourn, the waving woods bewail,
And rivers roll lamenting through the vale;
The silver springs descend in streams of woe
Down the high hills, and murmur as they flow:
And every flower in drooping grief appears
Depress'd, and languishingly drown'd in tears:
While Venus o'er the hills and vallies flies,
And, "Ah! Adonis is no more," she cries. 50
Along the hills and vales, and vocal shore,
Echo repeats, "Adonis is no more"
Who could unmov'd these piteous wailings hear,
Or view the love-lorn queen without a tear?
Soon as she saw him wounded on the plain,
His thigh discolour'd with the crimson stain,
Sighing she said, and clasp'd him as he lay,
"O stay, dear hapless youth! for Venus stay!
"Our breasts once more let close embraces join,
"And let me press my glowing lips to thine, 60
"Raise, lov'd Adonis, raise thy drooping head,
"And kiss me ere thy parting breath be fled,
"The last fond token of affection give,
"O! kiss thy Venus, while the kisses live;

" Till in my breast I draw thy lingering breath,
 " And with my lips imbibe thy love in death.
 " This farewell kiss, which sorrowing thus I take,
 " I'll keep for ever for Adonis' sake.
 " Thee to the shades the Fates untimely bring
 " Before the drear, inexorable king;
 " Yet still I live unhappy and forlorn;
 " How hard my lot to be a goddess born!
 " Take, cruel Proserpine, my lovely boy,
 " Since all that's form'd for beauty, or for joy,
 " Descends to thee, while I indulge my grief,
 " By fruitless tears soliciting relief.
 " Thou dy'st, Adonis, and thy fate I weep,
 " Thy love now leaves me like a dream in sleep,
 " Leaves me bereav'd no more a blooming bride,
 " With unavailing Cupids at my side. 80
 " With thee my zone, which coldest hearts could
 " warm,

" Lost every grace, and all its power to charm.
 " Why didst thou urge the chase, and rashly dare
 " T' encounter beasts, thyself so wond'rous fair!"
 Thus Venus mourn'd, and tears incessant shed,
 And all the Loves bewail'd Adonis dead;
 Sighing they cry'd, " Ah! wretched queen,
 " deplore

" Thy joys all fled, Adonis is no more."
 As many drops of blood as from the wound
 Of fair Adonis trickled on the ground, 90
 So many tears she shed in copious showers:
 Both tears and drops of blood were turn'd to
 flowers.

From these in crimson beauty sprung the rose,
 Cerulean-bright anemones from those.
 The death of fair Adonis I deplore,
 The lovely youth Adonis is no more.

No longer in lone woods lament the dead,
 O Queen of Love! behold the stately bed,
 On which Adonis, now depriv'd of breath,
 Seems sunk in slumbers, beauteous ev'n in death.
 Dress him, fair goddess, in the softest vest, 101
 In which he oft with thee dissolv'd to rest;
 On golden pillow be his head reclin'd,
 And let past joys be imagin'd in thy mind.
 Though death the beauty of his bloom devours,
 Crown him with chaplets of the fairest flowers;
 Alas! the flowers have lost their gaudy pride,
 With him they flourish'd, and with him they dy'd.
 With odorous myrtle deck his drooping head,
 And o'er his limbs the sweetest essence shed: 110
 Ah! rather perish every rich perfume,
 The sweet Adonis perish'd in his bloom.

Clad in a purple robe Adonis lies;
 Surrounding Cupids heave their breasts with sighs,
 Their locks they shear, excess of grief to show,
 They spurn the quiver, and they break the bow.
 Some loose his sandals with officious care,
 Some in capacious golden vessels bear
 The cleansing water from the crystal springs;
 This bathes his wound, that fans him with his
 wings. 120

For Venus' sake the pitying Cupids shed
 A shower of tears, and mourn Adonis dead.
 Already has the nuptial god dismay'd,
 Quench'd his bright torch, for all his garlands fade.
 No more are joyful hymenæals sung,
 But notes of sorrow dwell on ev'ry tongue;

While all around the general grief partake
 For lov'd Adonis, and for Hymen's sake.
 With loud laments the Graces all deplore,
 And cry, 'the fair Adonis is no more.' 130
 The Muses wailing the wild woods among,
 Strive to recal him with harmonious song:
 Alas! no sounds of harmony he hears,
 For cruel Proserpine has clos'd his ears.
 Cease, Venus, cease, thy soft complaints forbear,
 Reserve thy sorrows for the mournful year.

IDYLLIUM II.

CUPID AND THE FOWLER.

A YOUTH, once fowling in a shady grove,
 On a tall box-tree spy'd the God of Love,
 Perch'd like a beauteous bird; with sudden joy
 At sight so noble leap'd the simple boy.
 With eager expedition he prepares
 His choicest twigs, his bird-lime, and his snares,
 And in a neighb'ring covert smil'd to see
 How here and there he skipt, and hopt from tree
 to tree.

When long in vain he waited to betray
 The god, enrag'd he flung his twigs away, 10
 And to a ploughman near, an ancient man,
 Of whom he learnt his art, the youngster ran,
 Told the strange story, while he held his plough,
 And show'd the bird then perch'd upon a bough,
 The grave old ploughman archly shook his head,
 Smil'd at the simple boy, and thus he said:
 " Cease, cease, my son, this dangerous sport give
 " o'er,

" Fly far away, and chase that bird no more:
 " Blest, should you fail to catch him!—Hence,
 " away!
 " That bird, believe me, is a bird of prey; 20
 " Though now he seems to shun you all he can,
 " Yet soon as time shall lead you up to man,
 " He'll spread his flutt'ring pinions o'er your
 " breast,
 " Perch on your brow, and in your bosom nest."

IDYLLIUM III.

THE TEACHER TAUGHT.

As late I slumbering lay, before my sight
 Bright Venus rose in visions of the night:
 She led young Cupid; as in thought profound
 His modest eyes were fix'd upon the ground;
 And thus she spoke: "To thee, dear swain, I
 " bring
 " My little son; instruct the boy to sing."
 No more she said; but vanish'd into air,
 And left the wily pupil to my care:
 I, sure I was an idiot for my pains,
 Began to teach him old bucolic strains; 10
 How Pan the pipe, how Pallas form'd the flute,
 Phœbus the lyre, and Mercury the lute:
 Love, to my lessons quite regardless grown,
 Sung lighter lays, and sonnets of his own,
 Th' amours of men below, and gods above,
 And all the triumphs of the Queen of Love,
 I, sure the simplest of all shepherd swains,
 Full soon forgot my old bucolic strains:

The lighter lays of love my fancy caught,
And I remember'd all that Cupid taught. 20

IDYLLIUM IV.

THE POWER OF LOVE.

THE sacred nine delight in cruel love,
Tread in his steps, and all his ways approve :
Should some rude swain whom love could ne'er
refine,

Woo the fair Muses, they his suit decline ;
But if the love-sick shepherd sweetly sing,
The tuneful choir attending in a ring,
Catch the soft sounds, and tune the vocal shell ;
This truth by frequent precedent I tell :
For when I praise some hero on my lyre,
Or, nobly daring to a god aspire, 10
In strains more languid flows the nerveless song,
Or dies in faltering accents on my tongue :
But when with love or Lycidas I glow,
Smooth are my lays, the numbers sweetly flow.

IDYLLIUM V.

LIFE TO BE ENJOYED.

If merit only stamps my former lays,
And those alone shall give me deathless praise,
But if ev'n those have lost their bright applause,
Why should I labour thus without a cause ?
For if great Jove or Fate would stretch our span,
And give of life a double share to man,
One part to pleasures and to joy ordain,
And vex the other with hard toil and pain ;
With sweet complacence we might then employ
Our hours, for labour still enhances joy. 10
But since of life we have but one small share, }
A pittance scant which daily toils impair,
Why should we waste it in pursuit of care ?
Why do we labour to augment our store,
The more we gain, still coveting the more ?
Alas, alas ! we quite forget that man
Is a mere mortal, and his life a span.

IDYLLIUM VI.

CLEODAMUS AND MYRSON.

Cleodamus.

SAY, in their courses, circling as they tend,
What season is most grateful to my friend ?
Summer, whose suns mature the teeming ground,
Or golden Autumn, with full harvests crown'd ?
Or Winter hoar, when soft reclin'd at ease,
The fire fair blazing, and sweet leisure please ?
Or genial Spring, in blooming beauty gay ?
Speak, Myrson, while around the lambkins play.

Myrson.

It ill becomes frail mortals to define
What's best and fittest of the world divine ; 10
The works of nature all are grateful found,
And all the seasons in their various round.
But since my friend demands my private voice,
Then learn the season that is Myrson's choice.
Me the hot Summer's sultry heats displease ;
Fell Autumn teems with pestilent disease ;
Tempestuous Winter's chilling frosts I fear ;
But wish for purple Spring through all the year.

Then neither cold nor heat molests the morn ;
But rosy plenty fills her copious horn ; 20
Then bursting buds their odorous blooms display,
And Spring makes equal night and equal day.

IDYLLIUM VII.

THE EPITHALAMIUM OF ACHILLES AND DEIDAMIA.

MYRSON AND LYCIDAS.

Myrson.

SAY, wilt thou, Lycidas, sweet shepherd swain,
Begin some soothing, soft Sicilian strain,
Such as the Cyclops, on a rock reclin'd,
Sung to the sea-nymph, to compose his mind, }
And sent it in the whispers of the wind ?

Lycidas.

What can I sing that Myrson will commend ?
With pleasure I would gratify my friend.

Myrson.

Repeat the song which most my taste approves,
Achilles' stol'n embrace, and hidden loves ;
How the bold hero laid his arms aside, 10
A woman's robe the manly sex belied, }
And Deidamia soon became his bride.

Lycidas.

When with fair Helen Paris cross'd the deep,
Brought her to Troy and made Oenone weep ;
The injur'd states of Greece were all alarm'd,
Spartans, Mycenians, and Laonians arm'd : }
The treachery stung their souls, and bloody
vengeance warm'd ;
In close disguise his life Achilles led,
Among the daughters of King Lycomed :
Instead of arms the hero learn'd to cull 20
The snowy fleece, and weave the twisted wool.
Like theirs, his cheeks a rosy bloom display'd,
Like them he seem'd a fair and lovely maid ;
As soft his air, as delicate his tread,
Like them he cover'd with a veil his head ;
But in his veins the tides of courage flow'd,
And love's soft passion in his bosom glow'd ;
By Deidamia's side from morn to night
He sat, and with ineffable delight
Oft kiss'd her snow-white hand, or gently press'd
The blooming virgin to his glowing breast. 30
His soul was all enraptur'd with her charms,
Ardent he long'd to clasp her in his arms ;
Oft in her ear these words enamour'd said,
" By pairs your sisters press the downy bed ;
" But we, two maids of equal age and bloom,
" Still sleep divided in a separate room.
" Why should the night, more cruel than the day,
" Steal the sweet virgin whom I love away ?"

IDYLLIUM VIII.

LOVE RESISTLESS.

SWEET Venus, daughter of the main,
Why are you pleas'd with mortals pain ?
What mighty trespass have they done,
That thus you scourge them with your son ?
A guileful boy, a cruel foe,
Whose chief delight is human woe.
You gave him wing, alas ! and darts,
To range the world and shoot at hearts ;

For man no safety thus is found—
His flight o'ertakes, his arrows wound.

IDYLLIUM IX.

FRIENDSHIP.

THRICE happy they! whose friendly hearts can
burn
With purest flame, and meet a kind return.

With dear Pirithoüs, as poets tell,
Theseus was happy in the shades of hell:
Orestes' soul no fears, no woes deprest;
'Midst Scythians he with Pylades was blest.
Blest was Achilles while his friend surviv'd,
Blest was Patroclus every hour he liv'd;
Blest when in battle he resign'd his breath,
For his unconquer'd friend reveng'd his death. 10

NOTES ON THE IDYLLIUMS.

IDYLLIUM I.

All the beauties and graces that can possibly embellish a poem of this nature, are united in this delicate Idyllium. And, therefore, the most polite scholars, and the best critics of every age, have deservedly esteemed it one of the finest and most perfect remains of antiquity.

Ver. 20. See Moschus, ver. 97, &c.

See Venus too her beauteous bosom beat!
She lov'd her shepherd more than kisses sweet,
More than those last dear kisses which in death
She gave Adonis, and imbib'd his breath.

Ver. 43. Virgil, Eclogue 5.

Daphni, tuum interitum, montes sylvæque lo-
quunter.

The death of Daphnis woods and hills deplore.
Dryden.

And Eclogue 10.

Illum etiam lauri illum etiam flevire myricæ,
Pinifer illum etiam solâ sub rupe jacentem
Mænalaus, & gelidi flevērunt saxa Lycæi.

For him the lofty laurel stands in tears,
And hung with humid pearls the lowly shrub
appears.

Mænalian pines the godlike swain bemoan,
When spread beneath a rock he sigh'd alone;
And cold Lycæus wept from every dropping
stone. Dryden.

Ver. 44. See the beginning of Moschus's Idyl-
lium on the death of Bion.

Ver. 47.

Ye drooping flowers, diffuse a languid breath,
And die with sorrow at sweet Bion's death.
Moschus.

Ver. 55. There is a similar beautiful description
in Ovid's Metamorphoses, Book 4.

But when her view her bleeding love confess'd,
She shriek'd, she tore her hair, she beat her breast:
She rais'd the body, and embrac'd it round,
And bath'd with tears unfeign'd the gaping
wound:

Then her warm lips to the cold face apply'd,
"And is it thus, ah! thus we meet?" she cry'd!
"My Pyramus! whence sprung thy cruel fate?
My Pyramus! ah! speak, ere 'tis too late:"

"I, thy own Thisbe, but one word implore,
"One word thy Thisbe never ask'd before."
At Thisbe's name awak'd, he open'd wide
His dying eyes; with dying eyes he try'd
On her to dwell, but clos'd them flow, and dy'd. }
Addison.

Ver. 69. Virgil says of Orpheus, Georg. B. 4.

—Manesque adiit, regemque tremendum,
Nesciaque humanis precibus mansuescere corda.

Ev'n to the dark dominions of the night
He took his way, through forests void of light;
And dar'd amidst the trembling ghosts to sing,
And stood before th' inexorable king. Dryden.

Ver. 72. Thus Spenser, Faery Queen, B. 3.
C. 4. St. 38.

O! what avails it of immortal seed
To been ybred, and never born to die?
For better I it deem to die with speed,
Than waste in woe, and wailful miserie.

Ver. 74. Thus Catullus,
At vobis malè sit malæ tenebræ
Orci, quæ omnia Bella devoratis.
Ah! death, relentless to destroy
All that's form'd for love or joy.

Ver. 81. The Cestus of Venus is thus described
by Homer.

Η, καὶ ἀπὸ ἐνὶ στήθεσιν ἐλυσσάτο κισσόν, κ. τ. λ.

Iliad 14. ver. 214.

She from her fragrant breast the zone unbrac'd,
With various skill and high embroidery grac'd;
In this was every art, and every charm,
To win the wisest, and the coldest warm:
Fond love, the gentle vow, the gay desire,
The kind deceit, the still surviving fire,
Persuasive speech, and more persuasive sighs,
Silence that spoke, and eloquence of eyes. Pope.

Ver. 93. Some authors say, that anemonies, and
not roses, sprung from the blood of Adonis. See
Ovid's Metamorph. Book 10. at the end.

—Where the blood was shed,
A flower began to rear its purple head:
Such as on Punic apples is reveal'd,
Or in the filmy rind, but half conceal'd.
Still here the fate of lovely forms we see,
So sudden fades the sweet anemony.

O iiiij

The feeble stems to stormy blasts a prey,
Their sickly beauties droop, and pine away.
The winds forbid the flow'rs to flourish long,
Which owe to winds their name in Grecian song.

Eusden.

Ver. 114. Moschus imitates this in his poem on the death of Bion:

The little loves, lamenting at his doom,
Beat their fair breasts, and weep around his tomb.

Thus Ovid,

Ecce puer Veneris fert everfamque pharetram,
Et fractos arcus, & sine luce facem.
Aspice demissis ut eat miserabilis alis,
Pectoraque infesta tundit aperta manu.
Excipiunt lacrymas sparsi per colla capilli,
Oraque singultu concutiente sonant.

Amor. B. 3. El. 9.

See Venus' son his torch extinguish'd brings,
His quiver all revers'd, and broke his bow;
See, pensive how he droops with flagging wings,
And strikes his bared bosom many a blow.
Loose and neglected, scatter'd o'er his neck,
His golden locks drink many a falling tear:
What piteous sobs, as if his heart would break,
Shake his swoln cheek? Ah sorrow too severe!

Anon.

Ver. 115. For the ceremony of cutting off the hair in honour of the dead, see the Notes on the second Epigram of Sappho.

Ver. 118. The custom of washing the dead is very ancient. At the latter end of the fourth book of the *Æneid*, Anna says of the body of her sister Dido,

—date vulnera lymphis

Abluam, & extremus si quis super halitus errat,
Ore legam—

Bring, bring me water; let me bathe in death
Her bleeding wounds, and catch her parting breath.

Pitt.

The custom of catching the parting breath may be compared with the 65th and 66 verses above, "Till in my breast," &c. See a beautiful complaint made by the mother of Euryalus, in the *Æneid*, book 9. ver. 486.

—nec te tua funera mater

Produxit, pressive oculos, aut vulnera lavi, &c.

Nor did thy mother close thy eyes in death,
Compose thy limbs, nor catch thy parting breath;
Nor bathe thy gaping wounds, nor cleanse the gore,

Nor throw the rich embroider'd mantle o'er. *Pitt.*

Ver. 120.

—Cupid caught my trembling hand,
And with his wings my face he fann'd.

Ver. 136. The time appointed for mourning for the dead, among the ancients, was ten months which was originally the year both of the Greeks and Romans.

The anniversary of the death of Adonis was celebrated through the whole Pagan world. The

ancients differ greatly in their accounts of this divinity. Plutarch maintains, that he and Bacchus are the same; and that the Jews abstained from swine's flesh, because Adonis was killed by a boar. Ausonius, in Epigram 30. affirms, that Bacchus, Osiris, and Adonis, are one and the same.

Langborne.

Ovid makes Venus institute this festival, *Metamorph. book 10* at the end.

—luctus monumenta manebunt

Semper, Adoni, mei repetitaque mortis imago
Annua plangoris peraget simulamina nostri.

For thee, lost youth, my tears and restless pain,
Shall in immortal monuments remain:

With solemn pomp, in annual rites return'd,

Be thou for ever, my Adonis mourn'd. *Eusden.*

IDYLLIUM II.

Spenser has imitated this Idyllium in his *Shepherd's Calendar* for the month of March, but in a language too harsh for modern ears.

Ver. 8. The original Greek, *Τα καὶ τὰ τοῦ Εἰωτά μεταλμῖνον*, admirably describes a bird, hopping about from bough to bough, which the translator has endeavoured to imitate.

IDYLLIUM III.

This beautiful Idyllium, which in a pleasing fiction describes the power of love, is preserved by Stobæus.

IDYLLIUM IV.

Ver. 12. Sappho's situation is much the same, though on a different occasion. See stanza 2d.

While gazing on thy charms I hung,
My voice died faltering on my tongue.

Anacreon's first Ode bears a great similitude to this Idyllium.

IDYLLIUM V.

This fragment is preserved by Stobæus.

Ver. 11.

Vitæ summa brevis spem nos vetat inchoare longam.

Hor. L. 1. Ode 4.

—Life's short, fleeting span

Allows no long protracted plan.

Duncombe.

Non semper idem floribus est honos, &c.

—quid æternis

Consiliis animum fatigas? *L. 2. Ode 11.*

Not always vernal flowers their pride retain,

And full orb'd moons are sure to wane:

Why tire we then the narrow mind,

For cares eternal too confin'd? *Duncombe.*

Thus Manilius,

Quid tam sollicitis vitam consummimus annis,
Torquemurque metu, cæcæque cupidine rerum,
Æternisque senes curis, dum quærimus ævum
Perdimus; & nullo votorum fine beati,
Victuros agimus semper, nec vivimus unquam?

Why do we thus consume our years
In blind desires and anxious fears?
For in the search, grow gray with pain,
We lose the bliss we strive to gain:
And thus, absorb'd by distant views,
In thoughts of living life we lose.

D.

IDYLLIUM VI.

Ver. 18.

Et nunc omnis ager, nunc omnis parturit arbos,
Nunc frondent sylvæ, nunc formosissimus annus.

Virg. Ecl. 3.

The trees are cloth'd with leaves, the fields with
grafs;

The blossoms blow; the birds on bushes sing;
And nature has accomplish'd all the spring.

Dryden.

IDYLLIUM VII.

Ver. 3. The fable of Polyphemus and Galatea has furnished matter for several poets, particularly Theocritus in his 6th and 11th Idylliums, and Ovid in the 13th book of the Metamorphoses, Fable 8th; who has borrowed freely from Theocritus. See also Bion's 6th Fragment.

Ver. 9. The story of Achilles and Deidamia is told at large by Statius in the Achilleid.

IDYLLIUM VIII.

Ver. 7. There is a similar thought in a Greek epigram:

Φιγναι δὲ τὸν ἔρωτα κενὸς πόνος ἔστι γὰρ ἀλυσθῆναι
Πεζὸς ἀπὸ πλὴν πονεῖν διωκομένης.

Of shunning love 'tis vain to talk,
When he can fly, and I but walk.

IDYLLIUM IX.

Ver. 9. Longepierre and Laurentius Gambara have given the same interpretation of this passage; and it seems to be confirmed by what Patroclus says to Hector, in the 16th book of the Iliad, when he is just expiring:

Insulting man! thou shalt be soon as I;
Black fate hangs o'er thee, and thy hour draws
nigh;
Ev'n now on life's last verge I see thee stand,
I see thee fall, and by Achilles' hand. *Pope.*

EPIGRAMS.

FRAGMENT I.

ON HYACINTHUS.

Desponding sorrow seiz'd Apollo's heart;
All cures he try'd, and practis'd every art;
With nectar and ambrosia dress'd the wound:
Useless, alas! all remedies are found,
When fate with cruel shears encompasses around.

FRAGMENT II.

Thus to the smith, It is not fair,
My friend, for ever to repair,
And still another's aid to ask:
Make your own pipe; 'tis no such arduous task.

FRAGMENT III.

Invite the Muses, Love, and in your train,
Ye sacred Muses bring me Love again!
And ever grant, my wishes to complete,
The gift of song—no remedy so sweet!

FRAGMENT IV.

Incessant drops, as proverbs say,
Will wear the hardest stones away.

FRAGMENT V.

On a steep cliff, beside the sandy beach,
Sudden I stop, and, whispering soft, beseech
Relentless Galatea; even in age
Love still shall bloom, and still my hopes engage!

FRAGMENT VI.

Let me not pass without reward!
For Phœbus on each tuneful bard
Some gift bestows: the noblest lays
Are owing to the thirst of praise.

FRAGMENT VII.

In beauty boasts fair womankind;
Man, in a firm, undaunted mind.

NOTES ON THE FRAGMENTS.

FRAGMENT I.

This is a small fragment of an Idyllium on the death of Hyacinthus, whom Apollo unfortunately flew as he was playing with him at quoits.

Ver. 2. Apollo is said to have invented physick. He tells Daphne, Ovid Metamorph. book 1.

Inventum medicina meum est, opiferque per orbem
Dicor, et herborum subjecta potentia nobis,

Medicine is mine; what herbs and simples grow
In fields and forests, all their powers I know;
And am the great physician call'd below.

Dryden.

FRAGMENT II.

I have always thought, that this fragment should be understood, allegorically, of those who, though they have riches (or talents) in abundance, yet make no use of them.

Longepierre.

FRAGMENT III.

Thus Apollo, in Ovid, Metamorph. Book 1.
Hei mihi, quod nullis amor est medicabilis herbis!
To cure the pains of love, no plant avails.

Dryden.

FRAGMENT IV.

This proverb is common almost to every nation.
Thus Ovid,

Quid magis est durum faxo, quid mollius undâ?
Dura tamen molli saxa cavantur aquâ.

And,

Gutta cavat lapidem non vi, sed sæpe cadendo.

FRAGMENT V.

This seems to have been part of a speech of Polyphemus, in an Idyllium on the subject of Acis and Galatea; which Ovid probably imitated in his Metamorph. Book 13. For, similar to this fragment, are the following lines;

—gradiens ingenti littora passu

Degravat—

—with stalking pace he strode,

And stamp'd the margin of the briny flood.

And,

Prominet in pontum, &c.

A promontory, sharpening by degrees,
Ends in a wedge, and overlooks the seas:
On either side, below, the water flows;
This airy walk the giant lover chose.

Dryden.

FRAGMENT VII.

Similar to this is the second Ode of Anacreon.

THE WORKS
OF
M O S C H U S.

TRANSLATED FROM THE GREEK,

FRANCIS FAWKES, M. A.

THE WORKS

M O S C H U S

FRANCIS LAWRENCE M.A.

THE WORKS OF MOSCHUS.

O Solitude, on me bestow
The heart-felt harmony of woe,
Such, such as on th' Ausonian shore
Sweet Dorian Moschus trill'd of yore!

GRAINGER'S ODE ON SOLITUDE.

IDYLLIUMS.

IDYLLIUM I.

IN search of her son, to the listening crowd,
'T' other day lovely Venus thus cry'd him aloud :
' Whoever may chance a stray Cupid to meet,
' My vagabond boy, as he strolls in the street,
' And will bring me the news, his reward shall
' be this,
' He may freely demand of fair Venus a kiss;
' But if to my arms he the boy can restore,
' He's welcome to kisses, and something still more.
' His marks are so plain, and so many, you'll own
' That among twenty others he's easily known. 10
' His skin is not white, but the colour of flame;
' His eyes are most cruel, his heart is the same:
' His delicate lips with persuasion are hung;
' But, ah! how they differ, his mind and his
' tongue! [troul,
' His voice sweet as honey; but nought can con-
' Whene'er he's provok'd, his implacable soul.
' He never speaks truth, full of fraud is the boy;
' And woe is his pastime, and sorrow his joy.
' His head is embellish'd with bright curling hair;
' He has confident looks, and an insolent air. 20
' Though his hands are but little, yet darts they
' can fling
' To the regions below, and their terrible king.
' His body quite naked to view is reveal'd,
' But he covers his mind, and his thoughts are
' conceal'd.
' Like a bird light of feather, the branches among,
' He skips here and there, to the old, to the young,
' From the men to the maids on a sudden he strays,
' And hid in their hearts on their vitals he preys.
' The bow which he carries is little and light,
' On the nerve is an arrow wing'd ready for
' flight,
' A little short arrow, yet swiftly it flies
' Through regions of ether, and pierces the skies.

' A quiver of gold on his shoulders is bound,
' Stor'd with darts, that alike friends and enemies
' wound :
' Ev'n I, his own mother, in vain strive to shun
' His arrows—so fell and so cruel my son,
' His torch is but small, yet so ardent its ray,
' It scorches the sun, and extinguishes day.
' O you, who perchance may the fugitive find,
' Secure first his hands, and with manacles bind; 40
' Show the rogue no compassion, though oft he
' appears
' To weep—his are all hypocritical tears.
' With caution conduct him, nor let him beguile
' Your vigilant care with a treacherous smile.
' Perhaps with a laugh kisses sweet he will proffer;
' His kisses are poison, ah! shun the vile offer.
' Perhaps he'll say, sobbing, "No mischief I know;
' Here take all my arrows, my darts, and my
' "bow!" [aim;
' Ah! beware, touch them not—deceitful his aim;
' His darts and his arrows are all tipt with flame.'

IDYLLIUM II.

EUROPA.

THE Queen of Love, on amorous wiles intent,
A pleasing dream to fair Europa sent.
What time still night had roll'd the hours away,
And the fresh dawn began to promise day,
When balmy slumbers, and composing rest,
Close every eye, and sooth the pensive breast,
When dreams and visions fill the busy brain,
Prophetic dreams, that never rise in vain :
'Twas then Europa, as she sleeping lay,
Chaste as Diana, sister of the day, 10
Saw in her cause the adverse shore engag'd
In war with Asia; terribly they rag'd :
Each seem'd a woman; that in foreign guise,
A native this, and claim'd the lovely prize

With louder zeal: 'The beauteous nymph, she
' said,

' Her daughter was, and in her bosom bred.'
But she, who as a stranger was array'd,
Forc'd to her arms the unresisting maid;
Call'd her her right, by all the powers above,
Giv'n her by Fate, and Ægis-bearing Jove. 20

The fair Europa, struck with sudden dread,
All pale and trembling started from her bed;
Silent she sat, and thought the vision true,
Still seem'd their forms to strive before her view:
At length she utter'd thus the voice of fear;

" Ye gods, what spectres to my sight appear?

" What dreams are these, in fancy's livery drest,

" That haunt my sleep, and break my golden rest?

" And who that form that seem'd so wond'rous
" kind?

" The dear idea still delights my mind. 30

" She, like a mother, press'd me in her arms:

" But, O ye gods! that send such strange a-
" larms,

" Preserve these visionary scenes from harms."

She said, and lightly from her couch she sprung,
Then sought her comrades, beautiful and young,
Her social mates; with them she lov'd to lave
Her limbs unblemish'd in the crystal wave:

With them on lawns the sprightly dance to lead,

Or pluck sweet lilies in the flowery mead.

The nymphs assembled soon, a beauteous band! 40

With each a curious basket in her hand;

Then reach'd those fields where oft they play'd
before,

The fragrant fields along the sea-beat shore,
To gather flowers, and hear the billows roar. }

Europa's basket, radiant to behold,

The work of Vulcan, was compos'd of gold;

He gave it Lybia, mighty Neptune's bride,

She Telephassa, next in blood ally'd;

From her bequeath'd to fair Europa came

This splendid basket of celestial frame.

Fair in the work the milk-white Iö stood

In roughen'd gold, and lowing paw'd the flood,

(For Vulcan there had pour'd the azure main)

A heifer still, nor yet transform'd again.

Two men stood figur'd on the ocean's brim,

Who watch'd the cow, that seem'd inclin'd to
swim.

Jove too appear'd enamour'd on the strand,

And strok'd the lovely heifer with his hand:

Till, on the banks of Nile again array'd,

In native beauty shone the blooming maid: 60

The seven-mouth'd Nile in silver currents roll'd,

And Jove was sculptur'd in refulgent gold.

Near piping Hermes sleepless Argus lies,

Watching the heifer with his hundred eyes:

From Argus slain a painted peacock grew,

Fluttering his feathers stain'd with various hue,

And, as a ship expands her swelling sail,

He round the basket spread his starry tail.

Such were the scenes the Lemnian god display'd,

And such the basket of the Tyrian maid. 70

The lovely damsels gather'd flow'rets bright,

Sweet to the smell, and beauteous to the sight;

The fragrant hyacinth of purple hue,

Narcissus, wild thyme, and the violet blue;

Some the gilt crocus or pale lily chose,
But fair Europa cropp'd the blooming rose;
And all her mates excell'd in radiant mien,
As 'midst the graces shines the Cyprian queen.
Not long, alas! in these fair fields she shone,
Nor long unloos'd preserv'd her virgin zone; 80

Saturnian Jove beheld the matchless maid,

And sudden transports the rapt god invade;

He glows with all the fervid shame of love;

For Cupid's arrows pierce the breast of Jove.

But, best his amorous intent to screen,

And shun the jealous anger of his queen,

He laid his immortality aside,

And a bull's form th' intriguing god bely'd;

But not of earthly shape, or mortal breed,

Such as at large in flowery pastures feed; 90

Whose stubborn necks beneath the yoke we bow,

Break to the wain, or harness to the plough.

His golden hue distinguish'd him afar;

Full in his forehead beam'd a silver star:

His large blue eyes that shone serenely bright,

Languish'd with love, and sparkled with delight:

On his broad temples rose two equal horns,

Like that fair crescent which the skies adorns.

Gently he moves with peaceful look and bland,

And spreads no terror in the virgin band: 100

Nearer they drew, with eager longing led

To stroke his sides, and pat his comely head:

His breath divine ambrosial odours yields,

Sweeter than fragrance of the flowery fields.

At fair Europa's feet with joy he stands,

And prints sweet kisses on her lily hands.

His foamy lips she wipes, unaw'd by dread,

And strokes his sides, and pats his comely head.

Gently he low'd, as musical and clear

As notes soft warbled on the raptur'd ear: 110

And, as on earth his pliant knees he bent,

Show'd his broad back, that hinted what he

meant; [maid;

Then turn'd his suppliant eyes, and view'd the

Who thus, astonish'd to her comrades said:

" Say dearest mates, what can this beast in-

" tend?

" Let us (for lo! he floops) his back ascend,

" And ride in sportive gambols round the mead;

" This lovely bull is sure of gentlest breed;

" So meek his manner, so benign his mind,

" He wants but voice to equal human kind." 120

So spoke the fair, and up she rose to ride,

And call'd her lingering partners to her side:

Soon as the bull his pleasing burden bore,

Vigorous he sprung, and hasten'd to the shore.

The nymph dismay'd invok'd the virgin band

For help, and wav'd her unavailing hand.

On the soft bosom of the azure flood

With his fair prize the bull triumphant rode:

Up-rose the Nereids to attend his train,

And all the mighty monsters of the main. 130

Cerulean Neptune was the Thunderer's guide,

And for the passing pomp he smooth'd the tide:

The Tritons hail'd him as he steer'd along,

And sounded on their conchs the nuptial song.

On Jove's broad back the lovely damsel borne,

Grasp'd with her fair right hand his polish'd

horn,

Her left essay'd her purple robe to save,
That lightly brush'd the surface of the wave :
Around her head soft breath'd the gentle gale,
And fill'd her garment like a swelling sail. 140
Europa's heart throb'd quick with chilling fear,
Far from her much-lov'd home, and comrades
dear ;

No sea-beat shore she saw, nor mountain's brow,
Nor aught but sky above, and waves below.

Then with a mournful look the damsel said :

" Ah ! whither wilt thou bear a wretched maid ?
" Who, and whence art thou, wond'rous creature,
" say ?

" How can'st thou fearless tread the wat'ry way ?

" On the broad ocean safely sails the ship,

" But bulls avoid, and dread the stormy deep. 150

" Say, can a bull on sea-born viands feed ?

" Or, if descended from celestial breed,

" Thy acts are inconsistent with a god : [flood ;

" Bulls rove the meads, and dolphins swim the

" But earth and ocean are alike to thee. [sea.

" Thy hoofs are oars that row thee through the

" Perhaps, like airy birds, thou soon wilt fly,

" And soar amidst the regions of the sky.

" Ah ! wretched maid, to leave my native home,

" And simply dare with bulls in meads to roam !

" And now on seas I ride—ah ! wretched maid ! 161

" But, O ! I trust, great Neptune, in thy aid ;

" Soon let my eyes my great conductor hail,

" For not without a deity I fail."

Thus spoke the nymph, and thus the bull reply'd :

" Courage, fair maid, nor fear the foaming tide :

" Though now a bull I seem to mortal eyes,

" Thou soon shalt see me ruler of the skies.

" What shape I please, at will I take and keep,

" And now a bull I cross the boundless deep ; 170

" For thy bright charms inspire my breast with
" love :

" But soon shall Crete's fair isle, the nurse of Jove,

" Receive Europa on its friendly strand,

" To join with me in Hymen's blissful band :

" From thee shall kings arise in long array,

" To rule the world with delegated sway."

Thus spoke the god ; and what he spoke prov'd
true :

For soon Crete's lofty shore appear'd in view :

Jove strait assum'd another form and air,

And loos'd her zone ; the Hours the couch pre-
pare,

The nymph Europa thus, through powerful love,

Became the bride of cloud-compelling Jove :

From her sprung mighty kings in long array,

Who rul'd the world with delegated sway.

IDYLLIUM III.

ON THE DEATH OF BION

YE woods, with grief your waving summits bow,
Ye Dorian fountains, murmur as ye flow,
From weeping urns your copious sorrows shed,
And bid the rivers mourn for Bion dead :
Ye shady groves, in robe of sable hue
Bewail ; ye plants, in pearly drops of dew :
Ye drooping flowers, diffuse a languid breath,
And die with sorrow at sweet Bion's death :

Ye roses change from red to sickly pale,

And, all ye bright anemonies, bewail : 10

Now, hyacinth, thy doleful letters show

Inscrib'd in larger characters of woe

For Bion dead, the sweetest shepherd swain.

Begin, Sicilian Muse, begin the mournful strain !

Ye nightingales, that perch among the sprays,

Tune to melodious elegy your lays,

And bid the streams of Arethuse deplore

Bion's sad fate ; lov'd Bion is no more :

Nor verse nor music could his life prolong,

He died, and with him died the Doric song. 20

Begin, Sicilian Muse, the mournful strain !

Ye swans of Strymon, in loud notes complain,

Pensive, yet sweet, and droop the sickly wing,

As when your own sad elegy ye sing.

All the fair damsels of Oëagria tell,

And all the nymphs that in Bistonia dwell,

That Doric Orpheus charms no more the plains.

Begin, Sicilian Muse, begin the mournful strains !

No more he sooths his oxen at the yoke,

No more he chants beneath the lonely oak. 30

Compell'd, alas ! a doleful dirge to sing

To the grim god, the deaf Tartarean king.

And now each straggling heifer strays alone,

And to the silent mountains makes her moan ;

The bulls loud bellowing o'er the forests rove,

For sake their pasture, and forget their love.

Begin, Sicilian Muse, the mournful lay !

Thy fate, O Bion, wept the god of day ;

Pan griev'd ; the dancing Satyrs and the Fauns

March'd flow and sad, and sigh'd along the lawns :

Then wail'd the Nymphs, that o'er the streams

preside, 41

Fast flow'd their tears, and swell'd the crystal
tide,

Mute Echo now laments the rocks among,

Griev'd she no more can imitate thy song.

The flow'rets fade, and wither'd are the trees,

Those lose their beauty, and their verdure these.

The ewes no more with milky udders thrive,

No more drops honey from the fragrant hive ;

The bees, alas ! have lost their little store,

And what avails it now to work for more, 50

When from thy lips the honey's stol'n away ?

Begin, Sicilian Muse, begin the mournful lay !

Ne'er did the dolphin on the azure main

In such pathetic energy complain ;

Nor Philomel with such melodious woe,

E'er wail'd, nor swallow on the mountains brow ;

Nor did Alcyone transf'rm'd deplore

So loud her lover dash'd upon the shore.

Not Memnon's birds such signs of sorrow gave,

When, screaming round, they hover'd o'er his
grave ; 60

As now in melancholy mood they shed

Their plaintive tears, lamenting Bion dead.

Begin, Sicilian Muse, the mournful lay !

The nightingales, that perch upon the spray,

The swallows shrill, and all the feather'd throng,

Whom Bion taught, and ravish'd with his song,

Now sunk in grief their pensive music ply,

And strive to sing their master's elegy ;

And all the birds in all the groves around

Strain their sweet throats to emulate the sound : 70

Ye turtles too, the gentle bard deplore,
And with deep murmurs fill the sounding shore.

Begin, Sicilian Muse, the mournful lay!
Who now, lov'd shepherd, on thy pipe shall play?
Still, still, methinks, the melting notes I hear,
But ah! more faint they die upon my ear.
Echo, still listening, roves the meads along,
Or near the rocks still meditates thy song.
To Pan I'll give thy tuneful pipe, though he
Will fear, perchance, to be surpass'd by thee. 80

Begin, Sicilian Muse, the mournful strain!
Thee Galatea weeps, sweet shepherd-swain;
For oft thy graceful form her bosom warm'd,
Thy song delighted, and thy music charm'd:
She shunn'd the Cyclops, and his numbers rude,
But thee with ardent love the nymph pursu'd:
She left the sea, her element, and seeds,
Forlorn, thy cattle on the flowery meads.

Begin, Sicilian Muse, the mournful lay!
Alas! the muses will no longer stay, 90
No longer on these lonely coasts abide;
With thee they warbled, and with thee they died:
With Bion perish'd all the grace of song,
And all the kisses of the fair and young.
The little Loves, lamenting at his doom,
Strike their fair breasts, and weep around his tomb.
See Venus too her beauteous bosom beat?
She lov'd her shepherd more than kisses sweet,
More than those last dear kisses, which in death
She gave Adonis, and imbib'd his breath. 100
Meles! of streams in melody the chief,
Now heaves thy bosom with another grief;
Thy Homer died, great master of the song,
Thy Homer died, the Muses sweetest tongue:
Then did thy waves in plaintive murmurs weep,
And roll'd thy swelling sorrows to the deep:
Another son demands the meed of woe,
Again thy waters weep in long-drawn murmurs
flow.

Dear to the fountains was each tuneful son,
This drank of Arethuse, that Helicon: 110
He sung Atrides' and Achilles' ire,
And the fair dame that set the world on fire:
This form'd his numbers on a softer plan,
And chaunted shepherds loves, and peaceful Pan;
His flock he tended on the flowery meads,
And milk'd his kine, or join'd with wax the reeds;
Oft in his bosom he would Cupid take,
And Venus lov'd him for her Cupid's sake.

Begin, Sicilian Muse, the mournful strains!
Thee all the cities of the hills and plains, 120
Illustrious bard, in silent grief deplore;
Aspera for Hesiód ne'er lamented more;
Not thus Boeotia mourn'd her Theban swan,
Nor thus the tears for bold Alcæus ran;
Not Ceos for Simonides, nor thus
Griev'd Paros for her bard Archilocus:
The shepherds of the Lesbian isle have long
Neglected Sappho's for thy sweeter song:
And all that breathe the past'ral reed rehearse
Thy fate, O Bion, in harmonious verse. 130
Sicelidas, the Samian shepherd sweet,
And Lycidas, the blithest bard of Crete,
Whose sprightly looks erst spoke their hearts elate,
Now forrowing mourn thy sad untimely fate;

Mourns to Philetas' elegiac muse,
And sweet Theocritus of Syracuse:
I too, with tears, from Italy have brought
Such plain bucolics as my master taught;
Which, if at all with tuneful ease they flow,
To thy learn'd precepts and thy art I owe, 140
To other heirs thy riches may belong,
I claim thy past'ral pipe and Doric song;
In Doric song my pensive boon I pay:

Begin, Sicilian Muse, begin the mournful lay!
Alas! the meanest flowers which gardens yield,
The vilest weeds that flourish in the field,
Which dead in wint'ry sepulchres appear,
Revive in spring, and bloom another year:
But we, the great, the brave, the learn'd, the
wise,

Soon as the hand of death has clos'd our eyes, 150
In tombs forgotten lie, no suns restore,
We sleep, for ever sleep, to wake no more.
Thou too liest buried with the silent dead:
Fate spares the witlings, but thy vital thread
Snapp'd cruel chance! and now its my hard lot
To hear the dull bards (but I envy not)

Grate their harsh sonnets flashly, rude, and vain:
Begin, Sicilian Muse, begin the mournful strain!
O hapless Bion! poison was thy fate;
The baneful potion circumscrib'd thy date: 160
How could fell poison cause effect so strange,
Touch thy sweet lips, and not to honey change?
How could the savage wretch, that mix'd the
draught,

Hear heavenly music with a murderous thought?
Could not thy songs his hellish purpose sway?

Begin, Sicilian Muse, begin the mournful lay!
But soon just vengeance will his crime pursue,
While I with pious tears thy tomb bedew.
Could I like Orpheus, as old poets tell, 170
Or mighty Hercules, descend to hell;
To Pluto's dreary mansion I would go,
To hear what music Bion plays below.
Lift to my counsel gentle shepherd swain,
And softly warble some Sicilian strain,
(Such as, when living, gave divine delight)
To sooth the empress of the realms of night:
For she, ere Pluto seiz'd the trembling maid,
Sung Dorian lays, and in these meadows play'd.
Not unrewarded shall thy numbers prove,
The dame will pity, though she cannot love: 180
At once she heard the Thracian's tuneful prayer,
And gave him back Eurydice the fair,
She'll pity now thy more melodious strain,
And send thee to thy hills and woods again.
Could I in powerful harmony excel, [hell.
For thee my pipe should charm the rigid king of

IDYLLIUM IV.

MEGARA.

Megara.

"Why these complaints, and whence that dread-
ful sigh?"

"Why on thy cheek do thus the roses die?"

"Is it to see thy glorious sun sustain,

"From worthless hands, pre-eminence of pain?"

"A lion tortur'd by a fawn—Great Jove!

"Why such injurious treatment must I prove?"

" Why with such adverse omens was I born ?
 " Wretch that I am ! E'er since the nuptial morn
 " When to my arms my matchless lord was given,
 " Dear have I priz'd him as the light of heaven ; 10
 " And prize him still — Sure none has suffer'd
 " more,
 " Or drank such draughts of sorrow's cup before.
 " With Phœbus' gift, his bow, he pierc'd the
 " hearts
 " Of his own sons ; or rather arm'd with darts
 " Which fates or furies furnish'd, every child
 " In his own house he slew, with frenzy wild.
 " Than dreams more dreadful, with these stream-
 " ing eyes,
 " (While to their mother, with incessant cries,
 " Their helpless mother, they exclaim'd in vain)
 " By their own fire I saw the children slain. 20
 " But as a bird bewails her callow brood,
 " While in the brake a serpent drains their
 " blood,
 " And all too weak the wish'd relief to bring,
 " Twittering her shrill complaints, on feeble wing
 " At distance hovers, nor will venture near
 " The fell destroyer, chill'd with conscious fear ;
 " So I, all frantic, the wide mansion o'er,
 " Unhappy mother, my lost sons deplore.
 " O blest Diana, goddess of the chase, 29
 " Tyrant confess'd o'er woman's helpless race,
 " With my dear sons, had thy envenom'd dart
 " Kindly transfix'd their mother's bleeding heart,
 " Then my sad parents might with friendly care,
 " Have seen one pile our breathless bodies bear,
 " At once with many a tear, to every shade
 " The decent rites of sepulture have paid,
 " And in one golden urn that sacred earth
 " Our ashes have receiv'd, which gave us birth.
 " But Thebes they now inhabit fam'd for steeds,
 " Or toilsome till Aônia's fruitful meads : 40
 " While to my sorrows no relief is given,
 " At Tiryns, sacred to the queen of heaven,
 " In tears unnumber'd wasting life away,
 " To joy a stranger, to despair a prey.
 " But soon my lord will bliss my eyes again,
 " For various labours he must yet sustain
 " By land and sea, like iron or a rock
 " Unmov'd, and still superior to the shock :
 " While like a stream thy sorrows ever flow,
 " By day, by night, alike dissolv'd in woe. 50
 " Of all to me by ties of kindred join'd,
 " Thou only now canst cheer my anxious mind :
 " Far from this mansion, though in blood ally'd,
 " Beyond the pine-clad isthmus they reside.
 " Not one remains who can console my grief,
 " Or to a wretched woman give relief,
 " Except my sister Pyrrha ; all the day
 " She too bewails her husband snatch'd away,
 " Thy Iphiclus : wretched all thy line,
 " Whether their fire be mortal or divine !"
 Fast while she spoke, th' o'erflowing tears di-
 still'd
 Adown her cheeks, and her fair bosom fill'd ;
 Her sons, her parents rising to her view :
 In sad society, Alcmæna too
 Roll'd the big tear ; and from her heaving breast,
 In accents sage, her daughter thus address'd :
 TRAN. II.

" Why, hapless parent, should thine eyes o'er-
 " flow ?
 " Why should remembrance thus renew thy woe ?
 " Why thus afflict us both ? or why once more
 " Repeat the loss we oft have wept before ? 70
 " Sure each sad day sufficient sorrow bears ;
 " And none but wretches would recount our cares !
 " Be cheer'd, my daughter, and, these ills forgot,
 " Think that the gods a happier doom allot.
 " And though on grief thy thoughts are all em-
 " ploy'd,
 " I no excuse require, with pleasure cloy'd.
 " Much I lament, that thou so vast a weight
 " Of woe shouldst share in our disastrous fate.
 " For, O blest Proserpine and Ceres, know,
 " (Powers justly dreaded by the perjur'd foe) 80
 " That I not more could love thee, if my womb
 " With thee had teem'd, or had thy virgin-bloom
 " Alone remain'd a parent's hope to crown :
 " A truth, Megara, not to thee unknown !
 " Then think I view thee with no careless eye ;
 " No, though in grief with Niobe I vie :
 " Grief for a son indulgence sure may gain,
 " To me endear'd by ten long months of pain ;
 " And, ere I brought him to the realms of day,
 " My life by pangs was nearly snatch'd away,
 " Sent on new toils he to a distant shore 91
 " Now roams, and I may ne'er behold him more :
 " Besides, I lately saw, with wild affright,
 " A direful vision in the dead of night :
 " Some great impending ill, if right I deem,
 " Awaits my sons, from this mysterious dream.
 " In sleep, methought, my Hercules I spy'd,
 " His garments like a labourer, thrown aside,
 " And, spade in hand, employ'd, with arduous toil,
 " To delve a ditch in some well cultur'd soil, 100
 " But when his task the wish'd success had crown'd,
 " And his wide fence had girt the vineyard round,
 " He left his spade fix'd deeply in the plain,
 " And trait prepar'd to clothe his limbs again ;
 " When, quick as thought, above the trench,
 " behold
 " Destructive flames, which round the hero roll'd !
 " From these resistless foes alarm'd he flew,
 " With footsteps swift, as swiftly they pursue :
 " While, like a shield, the spade now serves to
 " guard 109
 " His half-scorch'd body, and the fire to ward.
 " At length Iphiclus, running to his aid,
 " (Such was my vision) by his feet betray'd,
 " Before he reach'd him, fell with headlong force,
 " And there unable to resume his course,
 " Lay stiff and prostrate, like a feeble sage,
 " Who falling to the ground through helpless age,
 " There fix'd remains, till by some stranger rear'd,
 " Pitying his hoary hairs, and silver beard :
 " So on the plain was brave Iphiclus thrown.
 " To see my sons unaided and alone, 120
 " Fast flow'd my tears, till morn with roseate ray
 " Dispell'd my slumbers, and restor'd the day.
 " Such were the visions of this night of dread !
 " Far from our house, on curs'd Eurystheus' head
 " These omens turn ! Be my presages true,
 " And him, O fate, with vengeance just pursue !"
 D.

IDYLLIUM V.

THE CHOICE.

WHEN zephyrs gently curl the azure main,
On land, impatient, I can scarce sustain
At ease to dwell; a calm yields more delight:
But when old ocean to a mountain's height
Rolls, with tremendous roar, his foaming floods,
I lothe the sea, and sigh for fields and woods.
Safe is the land; then piny forests please, [trees:
Though hoarse winds whistle through the bending
Hapless the fisher's life! the sea his toil,
His house a bark, and faithless fish his spoil. 10
But O! to me how sweet are slumbers, laid
Beneath a lofty plane's embowering shade;
And thence the tinkling of a rill to hear,
Whose sound gives pleasure unallay'd by fear! D.

IDYLLIUM VI.

CAPRICIOUS LOVE.

PAN sighs for Echo o'er the lawn:
Sweet Echo loves the dancing Faun;
The dancing Faun fair Lyda charms;
As Echo Pan's soft bosom warms,
So for the Faun sweet Echo burns;
Thus all, inconstant in their turns,
Both fondly woo, are fondly woo'd,
Pursue, and are themselves pursu'd.
As much as all slight those that woo,
So those that slight are slighted too:
Thus rages by capricious fate,
Alternate love, alternate hate.
Ye scornful nymphs and swains, I tell
This truth to you, pray, mark it well:
"If to your lovers kind you prove,
"You'll gain the hearts of those you love."

IDYLLIUM VII.

TO THE EVENING STAR.

HAIL, golden star! of ray serene
Thou fav'rite of the Cyprian queen,
O Hesper! glory of the night,
Diffusing through the gloom delight;
Whose beams all other stars outshine,
As much as silver Cynthia thine;
O! guide me, speeding o'er the plain,
To him I love, my shepherd swain;
He keeps the mirthful feast, and soon
Dark shades will cloud the splendid moon.
Of lambs I never robb'd the fold,
Nor the lone traveller of gold:
Love is my crime: O lend thy ray
To guide a lover on her way!
May the bright star of Venus prove
The gentle harbinger of love!

IDYLLIUM VIII.

ALPHEUS.

FROM Pisa where the sea his flood receives,
Alpheus, olive-crown'd, the gift of leaves,

And flowers, and sacred dust is known to bring,
With secret course to Arethusa's spring;
For, plunging deep beneath the briny tide,
Unmix'd, and unperceiv'd his waters glide.
Thus wonder-working love, with mischief fraught
The art of diving to the river taught.

D.

IDYLLIUM IX.

EUNICA; OR THE HERDSMAN.

WHEN lately I offer'd Eunica to kiss,
She flew'd and she flouted, and took it amiss;
"Be gone, you great booby, she cry'd with a
frown, [clown!
"Do you think that I long for your kisses, you
"The sparks of the city my favours esteem—
"You never shall kiss me; no, not in a dream.
"How pleasing you look! and how gently you
"play! [you say!
"How soft is your voice! and what fine things
"So neat is your beard, and so comely your hair!
"And your lips, to be sure, are a delicate pair. 10
"But on your dear person I never shall doat;
"So pray keep your distance—you smell like a
"goat."

Thus spoke the proud huffey, and view'd me all
round, [ground;

With an eye of disdain, and thrice spit on the
Then mimick'd my voice with satirical sneer,
And sent me away with a flea in my ear.
10 My blood quickly boil'd, in a violent pique,
And, red as a rose, passion glow'd on my cheek;
For it vex'd me, that thus in derision she jeer'd
My looks, and my voice, and my hair, and my
beard. 20

But, am I not handsome, ye shepherds, say true?
Or has any god alter'd my person anew?
For lately, on oaks like the ivy, with grace
My hair and my beard added charms to my face;
My brows were coal-black, and my forehead milk-
white,

And my eyes like Minerva's were azure and
bright; [flow

My lips sweet as cream, and from them would
Words sweeter than honey, and softer than snow.
My songs are enchanting: nor aught can exceed
The tunes of my pipe, or the notes of my reed.

The girls of the country, if they had their wills, 30
Would kiss me, and press me to stay on the hills;
For they say that I'm fair, but this minx of the
town

Refus'd my sweet kisses, and call'd me a clown.
Alas! she forgot, or perhaps did not know,
That Bacchus fed herds in the valley below;
That beauty's fair queen fell in love with a swain,
And help'd him his cattle to tend on the plain;
Adonis, while living, in groves she ador'd,
And when dead, she in groves and on mountains
deplor'd. 40

If right my conjecture, Endymion, I ween,
Like me, too, once tended his steers on the green;
Yet the moon in this herdsman took such a delight,
That she met him at Latmos, and kiss'd him all
night.

Ev'n Cybele mourn'd for a herdsman; and Jove
Snatch'd a boy from his flock to be waiter above.

But Eunice disdains me, nor lifts to my vow;
Is she better than Cynthia or Venus, I trow?
May she never find lovers in city or plain,
But lie always alone, yet still wishing in vain! 50

CUPID TURN'D PLOUGHMAN.

AN EPIGRAM.

Disguis'd like a ploughman, Love stole from the
sky, [by;
His torch, and his bow, and his quiver, thrown

And with pouch at his shoulder, and goad in his
hand,

Began with yok'd oxen to furrow the land:
And, "O Jove, be propitious, he cry'd, or I vow,
"That I'll yoke thee, Europa's fam'd bull, to my
"plough."

This justly-admired epigram makes us regret that Moschus has left us no more. Tibullus, as Broekhusius observes, probably alludes to this epigram in the beginning of his Elegy 3. Book 2. particularly in this verse.

Verbaque aratoris rustica discit amor.

Now Cupid joys to learn the ploughman's phrase,
And, clad a peasant, o'er the fallow strays. *Grainger.*

NOTES ON THE IDYLLIUMS.

IDYLLIUM I.

This beautiful Idyllium is imitated by Spenser, in his Faery Queen, B. 3. c. 6. st. 11.

It fortun'd, fair Venus having lost
Her little son, the winged god of love,
Who for some light displeasure, which him crost,
Was from her fled, as flit as airy dove,
And left her blissful bower of joy above;
(So from her often he had fled away,
When she for aught him sharply did reprove,
And wander'd in the world in strange array,
Disguis'd in thousand shapes, that none might him
bewray.)

Him for to seek, she left her heavenly house,
And searched every way through which his
wings

Had borne him, or his tract she mote detect:
She promis'd kisses sweet, and sweeter things,
Unto the man that of him tidings to her brings.

Meleager also has copied this fine original of Moschus, and given us a picture of Cupid much in the same manner. See Anthologia, B. 7. Epig. 16.

Κηρύσσω τον Ερωτα, κ. τ. λ.

I'm in search of a Cupid that late went astray,
And stole from my bed with the dawn of the day.
His aspect is bold, his tongue never lies still,
And yet he can whine, and has tears at his will.
At human misfortunes he laughs and he sneers;
On his shoulders a quiver and pinions he wears:
'Tis unknown from what fire he deduces his birth;
'Tis not from the air, nor the sea, nor the earth;
For he's hated by all—but, good people, beware;
Perhaps for a heart he's now laying a snare—
Ha, ha, cunning Cupid, I see where you lie,
With your bow ready bent.—In Zenophila's eye.

Ver. 13, 14. Thus the royal Psalmist, Psalm lv. ver. 22. "The words of his mouth are softer than butter, having war in his heart; his words were smoother than oil, and yet be they very swords." And Solomon, Proverbs, chap. v.

ver. 3. "For the lips of a strange woman drop as an honey-comb, and her mouth is smoother than oil."

Ver. 41. There is an epigram of Crinagoras, Anthol. B. 4. chap. 12. which may illustrate this passage: It is on an image of Cupid bound.

Και πλασσε κατιναζει, κ. τ. λ.

Perfidious wretch, you now may cry,
And wring your hands, and sob, and sigh:
Who now your advocate will be?
Who now from chains will set you free?
You oft, by causeless doubts and fears,
From other eyes have forc'd the tears,
And, by your bitter biting darts,
Instill'd love's poison into hearts.
O love, who laugh'd at human bail,
Now all your arts elusive fail,
And justice will at last prevail.

Ver. 46. Thus Virgil, *Æneid*, Book I. ver. 687.

Cum dabit amplexus, atque oscula dulcia figet,
Occultum inspires ignem, falsaque veneno.

And when the queen shall strain thee in her arms,
The gentle passion by degrees inspire
Through all her breast, then fan the rising fire,
And kindle all her soul— *Pitt.*

IDYLLIUM II.

This poem has been printed in some of the most ancient editions of Theocritus; and therefore some critics have taken it for granted that he was the author, without recollecting, that, in the time of the later Grecians, all the ancient Idylliums were collected together in one volume, and the name of Theocritus prefixed to the whole; on which occasion there is an epigram in the Anthologia, ascribed to Artemidorus:

Βυκολικας μυσας σκοραδες ποικα, νυν δ' αμα πασαι
Εντι μιας μανδρας, εντι μιας αγιλας.

The past'ral muses, scatter'd o'er the plains,
A single flock, a single fold contains.

This is one of those Idylliums which has been adjudged to Moschus: Besides, Urfinus tells us (as we are informed by Mr. Heskin) "that in two very ancient manuscripts which he had seen, one belonging to the Vatican, the other to the Medicean Library, he observed, that the Idyllium intituled Europa, was ascribed to Moschus."

Ver. 8.

Post mediam noctem, cum somnia vera.

Hor. B. 1. Sat. 10.

— at dead of night,

When dreams are real— Duncombe.

Ver. 51. The fable of Iö is told at large by Ovid, in the first book of the Metamorphoses, and finely translated by Mr. Dryden; to whom I refer the curious reader, the story being too long to insert here.

Ver. 81. Ovid has told the story of the Rape of Europa, in the second book of the Metamorphoses; which, to prevent the trouble of referring to the particular similar passages, I shall give all together under this note, in the language of Mr. Addison. The English reader will see at one view, even through the medium of translation, how closely the Roman has copied the Sicilian bard.

The dignity of empire laid aside,
The ruler of the skies, the thundering god,
Who shakes the world's foundations with a nod,
Among a herd of lowing heifers ran,
Frisk'd in a bull, and bellow'd o'er the plain.
Large rolls of fat about his shoulder clung,
And from his neck the double dewlap hung.
His skin was whiter than the snow that lies
Upsullied by the breath of southern skies;
Small shining horns on his curl'd forehead stand,
As turn'd and polish'd by the workman's hand;
His eye balls roll'd, not formidably bright,
But gaz'd, and languish'd with a gentle light.
His every look was peaceful, and express'd
The softness of the lover in the beast.

Agenor's royal daughter, as she play'd
Among the fields, the milk-white bull survey'd,
And view'd his spotless body with delight,
And at a distance kept him in her sight:
At length she pluck'd the rising flowers, and fed
The gentle beast, and fondly strok'd his head.
He stood well pleas'd to touch the charming fair,
But hardly could confine his pleasure there.
And now he wantons on the neighb'ring strand,
Now rolls his body on the yellow sand;
And now, perceiving all her fears decay'd,
Comes tossing forward to the royal maid;
Gives her his breast to stroke, and downward turns
His grisly brow, and gently stoops his horns.
In flowery wreaths the royal virgin drest
His bending horns, and kindly clapp'd his breast.
Till now grown wanton, and devoid of fear,
Not knowing that she press'd the thunderer,
She plac'd herself upon his back, and rode
O'er fields and meadows, seated on the god.

He gently march'd along, and by degrees
Left the dry meadow, and approach'd the seas;

Where he now dips his hoofs, and wets his thighs,
Now plunges in, and carries off the prize.

The frighted nymph looks backward on the shore,
And hears the tumbling billows round her roar;
But still she holds him fast. One hand is borne
Upon his back, the other grasps a horn;
Her train of rustling garments flies behind,
Swells in the air, and hovers in the wind.

Through storms and tempests he the virgin bore,
And lands her safe on the Dictæan shore;
Where now, in his divinest form array'd,
In his true shape he captivates the maid.

Ver. 93. Horace imitates this passage, and describes a young bullock in the same manner:

Fronte curvatos imitatos ignes
Tertium lunæ referentis ortum,
Quà notam duxit, niveus videri;
Cætera fulvus.

B. 4. Ode 2.

— on whose brows,

Full in the front a star its lustre shows;
A gloss of fallow hue adorns
His skin; the crescent of his horns,
So sharply turn'd, salutes the sight,
Like Cynthia's fires, the third revolving night.

J. Duncombe.

Ver. 129. See a similar description in Virgil's Æneid, B. 5. near the end.

A thousand forms attend the glorious god,
Enormous whales, and monsters of the flood;
Here the long train of hoary Glaucus rides;
Here the swift Tritons shoot along the tides;
There rode Palæmon o'er the wat'ry plain,
With aged Phorcus, and his azure train;
And beauteous Thetis led the daughters of the
main.

Pitt.

See also the latter end of the fifty-first ode of Anacreon.

Ver. 143. Thus Virgil, Æneid, Book 3. ver. 192.

Postquam altum tenuere rates, nec jam amplius
ullæ

[tus.

Apparent terræ, cælum undique, et undique pon-

Now vanish'd from our eyes the lessening
ground;

And all the wide horizon stretching round,
Above was sky, beneath was sea profound.

Pitt.

Which he has borrowed from Homer, Odyss. Book 12. ver. 403.

Past sight of shore, along the surge we bound,
And all above is sky, and ocean all around.

Pope.

Horace has in a masterly manner imitated this whole Idyllium, but particularly this passage, Book 3. Od. 27.

Sic et Europe niveum doloso
Credidit tauro latus, et scatentem
Belluis pontum, mediasque fraudes
Palluit audax.

Nuper in pratis studiosa florum, et
Debitæ nymphis opifex coronæ,
Nocte sublustri, nihil astra præter
Vidit et undas.

Europa thus the bull carefs'd,
And his broad back advent'rous prefs'd;
But when the monsters of the main
She saw, her heart was fill'd with throbbing pain.
She, who, along the flowery meads,
Wove wreaths for her companions heads,
Now in the gloom sees nought around
But twinkling stars, and ocean's waves profound.
W. Duncombe.

IDYLLIUM III.

Some have been so absurd as to ascribe this beautiful Idyllium to Theocritus, because it was originally inserted in the collection that went under his name; but that he is not the author of it, is plain from a passage in this very Idyllium, which mentions Theocritus as bewailing the death of Bion.

Moschus, in this Idyllium, so frequently alludes to Bion's on the death of Adonis, that it will be unnecessary to point out all the resembling places.

Ver. 11. The story of the transformation of Hyacinthus is told by Ovid, in the tenth book of the *Metamorphoses*:

*Ipsæ suos gemitus foliis inscribit, et αἱ, αἱ,
Flos habet inscriptum, funestaque litera ducta est.*

—the god upon its leaves
The sad expression of his sorrow weaves;
And to this hour the mournful purple wears
Αἱ, αἱ, inscrib'd in funeral characters. *Ozell.*

Ver. 33. See a similar passage in Virgil's fifth eclogue, as translated by Dryden:

The swains forgot their sheep, nor near the brink
Of running waters, brought their herds to drink.
The thirty cattle, of themselves, abstain'd
From water, and their grassy fare disdain'd:
The death of Daphnis woods and hills deplore.

Ver. 41. Thus Ovid on the death of Orpheus, *Metamorph. B. 11.*

—lacrymis quoque flumina dicunt
Increvisse suis, obscuraque carbasa pullo
Naiades et dryades, passosque habuere capillos,

Naiads and dryads with dishevell'd hair
Promiscuous weep, and scarfs of sable wear;
Nor could the river gods conceal their moan,
But with new floods of tears augment their own.

Ver. 53. Dolphins are said to utter a mournful cry, like a man in distress, and to be wonderfully fond of harmony; witness the fable of Arion. Longepierre thinks this passage alludes to the story of Hesiod; who (as Plutarch relates) being assassinated, his body was thrown into the sea, and received by a shoal of dolphins, and, on the very day when the feast of Neptune was celebrated, brought by them ashore near the city of Mo-

licria; by which means the murderers were discovered, and suffered the punishment due to their crime.

Ver. 57. Alcyone is fabled to have been the wife of Ceyx, a king of Thrace. They were remarkable for their conjugal affection. On his being drowned, she endeavoured to cast herself into the sea, but was immediately transformed into a king's-fisher, as was likewise the body of her husband. The story is told by Ovid, in the eleventh book of the *Metamorphoses*, and admirably translated by Dryden.

Ver. 59. For Memnon's birds, see Ovid's *Metamorphoses*, Book 13.

Ver. 101. The river Meles washes the walls of Smyrna, a city of Asia Minor, where Bion was born. It is also supposed to have been the birth-place of Homer, and therefore that river is said to have been his father; whence he is called *Melissigenes*.

Ver. 123. Pindar.

Ver. 129. This and the six following lines are a translation of six Greek verses which were wanting in the ancient editions of our poets. They are supposed to be supplied by Marcus Musurus of Crete, though Scaliger affirms that they were wrote by Moschus.

Ver. 131. Sicelidas, Lycidas, and Philetas, are mentioned by Theocritus in his seventh Idyllium.

Ver. 145. This fine sentiment has been embellished by several authors. Thus Spenser:

Whence is it that the flowret of the field doth
fade,
And lieth buried long in winter's blade?
Yet, soon as spring his mantle hath display'd,
It flow'reth fresh, as it should never fail.
But thing on earth that is of most avail,
As virtue's branch and beauty's bud,
Reliven not for any good.

And Catullus:

*Soles occidere et redire possunt:
Nobis, cum semel occidit brevis lux,
Nox est perpetua una dormienda.*

The sun, that sinks into the main,
Sets, with fresh light to rise again:
But we, when once our breath is fled,
Die, and are number'd with the dead;
With endless night we close our day,
And sleep eternity away.

Admirable is that of Job, chap. 14. "Man cometh forth as a flower, and is cut down.—" "There is hope of a tree, if it be cut down, that it will sprout again, and that the tender branch thereof will not cease; but man dieth, and wasteth away; yea, man giveth up the ghost, and where is he? He lieth down, and riseth not, till the heavens be no more."

Ver. 178. Pluto carried away Proserpine from the fields of Enna in Sicily. Thus Milton, *Paradise Lost*, Book 4. ver. 209.

—not that fair field
Of Enna, where Proserpine gathering flowers,
P iii

Herself a fairer flower, by gloomy Dis
Was gather'd, which cost Ceres all that pain
To seek her through the world——

See also Ovid's *Metamorphoses*, Book 5.

IDYLLIUM IV.

This poem contains a dialogue between Megara, the wife of Hercules, and Alcmena his mother, wherein they recapitulate their mutual misfortunes. This famous hero gave great umbrage to Eurystheus, king of Mycenæ; who, fearing he would in time dispossess him of his crown, tried all methods to destroy him. Hercules, sensible of his dangerous situation, consulted the Oracle: and being answered that it was the will of the gods that he should serve Eurystheus twelve years, was thrown into so deep a melancholy, that it turned at length into a furious frenzy; during which he put away his wife Megara, and murdered all the children he had by her, which are supposed to have been twelve, because the king imposed on him the same number of labours, as in expiation for their murder, after he had recovered his senses. Hercules is supposed to have been absent on one of these expeditions when this dialogue commences.

Ver. 21. Virgil has happily imitated this beautiful simile in his *Georgics*, Book 4. ver. 511.

Qualis populeâ mœrens Philomela sub umbra
Amisissos queritur fœtus; quos durus arator
Observans nido implumes detraxit: at illa
Flet noctem, ramoque sedens miserabile carmen
Integrat, et mœstis late loca questibus implet.

Which is as happily translated by Dryden.

So, close in poplar shades, her children gone,
The mother nightingale laments alone:
Whose nest some prying churl had found, and
thence,

By stealth, convey'd the feather'd innocence.
But she supplies the night with mournful strains,
And melancholy music fills the plains.

Ver. 33. Megara was the daughter of Creon, king of Thebes, a city of Bœotia. It may not be improper to remark, that Moschus, contrary to the common opinion, supposes the parents of Megara to have been living when Hercules slew his children; whereas Euripides and Seneca assure us, that Lycus, a Theban exile, murdered Creon and his sons, to obtain the crown; and that Hercules did not kill his children, till he had punished Lycus. *Longepierre*.

Ver. 42. A city of Peloponnesus near Argos, where Hercules dwelt; and from thence was styled 'the Tirynthian hero.'

Ver. 59. Iphiclus was the son of Amphitryon and Alcmena, and the twin-brother of Hercules.

Ver. 71. Thus St. Matthew, chap. vi. ver. 34.
"Sufficient unto the day is the evil thereof."

Ver. 86. For the story of Niobe, see Ovid's *Metam.* book 6. See also the notes on the twentieth Ode of Anacreon.

Ver. 88. That is, ten lunar months, St. Augustine explains it thus: "Quod dicuntur decem

"mensēs pregnantis, novem sunt pleni; sed initium decimi pro toto accipitur."

Ver. 90. The birth of Hercules was attended with the most excruciating pains to Alcmena, owing to the jealousy and hatred of Juno; from which she was delivered by the address of Galanthus. See Ovid's *Metam.* book 9.

Ver. 105. These were probably intended to be emblems of those flames in which this hero was afterwards consumed on Mount Cæta. See Ovid's *Metam.* book 9.

Ver. 108. This circumstance of the flames pursuing Hercules is very similar to a passage in the *Iliad*, book 21. where the rivers Simois and Scamander unite, pursue, and attack Achilles with all their waves:

Now here, now there, he turns on every side,
And winds his course before the following tide;
The waves flow after, wheresoe'er he wheels,
And gather fast, and murmur at his heels. *Pope*.

IDYLLIUM V.

Ver. 4. Moschus perhaps in this passage had Homer in his view, *Iliad*, Book 2.

As when the winds, ascending by degrees,
First move the whitening surface of the seas,
The billows float in order to the shore,
The wave behind rolls on the wave before;
Till, with the growing storm the deeps arise,
Foam o'er the rocks, and thunder to the skies.

Pope.

Ver. 8. In the original it is, ἀ πινυς ἀδελ, the pine-tree sings. Thus Theocritus *Idyll.* I. ver. 1.
—α πινυς μελίσσεται.

—that pine-tree's boughs, by yonder spring,
In pleasing murmurs mix, and sweetly sing.

Greeks.

IDYLLIUM VI.

The following modern ballad is closely copied from this *Idyllium*.

CROSS PURPOSES.

Tom loves Mary passing well,
But Mary she loves Harry;
While Harry sighs for bonny Bell,
And finds his love miscarry.
For bonny Bell for Thomas burns,
While Thomas flights her passion:
So very freakish are the turns
Of human inclination!

As much as Mary Thomas grieves,
Proud Hal despises Mary,
And all the flouts that Bell receives
From Tom, she vents on Harry.
Thus all by turns are woo'd and woo,
No turtles can be truer;
Each loves the object they pursue,
But hates the kind pursuer.

Mol gave Hal a wreath of flowers,
Which he, in amorous folly,
Consign'd to Bell, and in few hours
It came again to Molly.

If one of all the four had frown'd
You ne'er saw people glummer,
But if one smiles, it catches round,
And all are in good humour.

Then, lovers, hence this lesson learn,
Throughout the British nation,
How much 'tis every one's concern
To smile a reformation :

And still through life this rule pursue,
Whatever objects strike you,
" Be kind to them that fancy you,
" That those you love may like you."

Ver. 10. Thus Theocritus, Idyllium 6.

—φιῦγει τοὺς φίλους, καὶ φίλους διώκει.

She, driven still by an unlucky fate,
Flies those that love, and follows those that hate.

Greech.

And Horace, Book 1. Ode 33.

Insignem tenui fronte Lycorida
Cyri torret amor : Cyrus in asperam
Declinat Pholoen—

For Cyrus, see ! Lycoris, grac'd
With slender forehead burns ;

For Pholoe, he—

Duncombe.

Ver. 15. Thus Theocritus, Idyll. 23.

Lovers, farewell ; revenge has reach'd my scorn ;
Thus warn'd, be wise, and love for love return.

Dryden.

IDYLLIUM VII.

This Idyllium has given occasion to the following ode to Cynthia, by a lady of Huntingdon ; which must be allowed to have surpassed the original.

Sister of Phœbus, gentle queen,
Of aspect mild and ray serene,
Whose friendly beams by night appear,
The lonely traveller to cheer !
Attractive Power ! whose mighty sway
The ocean's swelling waves obey,
And, mounting upward, seem to raise
A liquid altar to thy praise :
The wither'd hags, at midnight hour,
Invoke to their infernal bower :
But I to no such horrid rite,
Sweet queen, implore thy sacred light ;

5

Nor seek, while all but lovers sleep,
To rob the miser's treasur'd heap ;
Thy kindly beams alone impart,
To find the youth who stole my heart,
And guide me from thy silver throne,
To steal his heart, or find my own !

Ver. 3. Thus Homer, Iliad, Book 22, speaking of the same star :

Οἷος δ' ἀστὴρ, κ. τ. λ.

As radiant Hesper shines with keener light,
Far beaming o'er the silver host of night. *Pope.*

IDYLLIUM VIII.

The story of Alpheus and Arethusa, is related at large by Ovid, in his Metamorp. Book 5. Virgil also mentions it in his Æneid, Book 3.

Sicanio prætenta sinu jacet insula contra
Plemmyrium undosum ; nomen dixere priores
Ortygiam. Alpheum fama est huc, Elidis amnem,
Occultas egisse vitas subter mare ; qui nunc
Ore, Arethusa, tuo Siculo confunditur undis.

An isle, once call'd Ortygia, fronts the sides
Of rough Plemmyrium, and Sicilian tides.
Hither, 'tis said, Alpheus, from his source
In Elis' realms, directs his wat'ry course ;
Beneath the main, he takes his secret way,
And mounts with Arethusa's streams to day.

Pitt.

Ver. 3. Moschus calls the dust sacred, because the Olympic games, which constituted no small part of the religion of the ancients, were celebrated at Elis, from whence Alpheus flowed.

IDYLLIUM IX.

This Idyllium, though uncommonly inserted in the works of Theocritus, has, by Daniel Heinsius and other critics, been adjudged to Moschus ; and, therefore, is here translated. There is another Idyllium, of which Moschus is supposed to have been the author, containing a dialogue between Daphnis and a shepherdess ; but that is thought too loose to be here inserted. The curious reader may see it translated by Dryden.

P iiiij

The first of the four Idylls is a description of the life of a peasant in the country. The second is a description of the life of a peasant in the city. The third is a description of the life of a peasant in the country. The fourth is a description of the life of a peasant in the city.

THE FIRST IDYLL

The first Idyll is a description of the life of a peasant in the country. It is a simple, unadorned, and unadorned. It is a simple, unadorned, and unadorned. It is a simple, unadorned, and unadorned. It is a simple, unadorned, and unadorned.

THE WORKS OF MUSÆUS.

THE LOVES OF HERO AND LEANDER,

Oft, by the covert of night's shade,
Leander woo'd the Thracian maid;
Through foaming seas his passion bore,
Nor fear'd the ocean's thundering roar.
The conscious virgin, from the sea-girt tower,
Hung out the faithful torch, to guide him to her bower.

DODSLEY'S MISCELL. Vol. iv. p. 308.

ADVERTISEMENT.

THIS celebrated poem on the Loves of Hero and Leander has been admired by the politest scholars for many ages: And though Mr. Waller, and several other writers of the finest taste, have conjectured it to be one of the stories

Which old Musæus so divinely sung,

yet many convincing arguments might be brought to prove it to have been the work of a later author, a grammarian of that name, who lived in the fifth century.

Nor let the English reader look upon the title of grammarian as a term of reproach, though now frequently used as such. The profession styled by the ancients *Γραμματικη*, was the same with the belles lettres among the moderns: And the appellation of grammarian was particularly applied to those who excelled in every kind of polite writing.

The first English translation of the following poem appeared in the year 1647, by Sir Robert Stapylton. It has since that time been frequently attempted; but with what success, is left to the judgment of others.

SING, muse! the conscious torch, whose nightly
ray
Led the bold lover through the wat'ry way,
To share those joys which mutual faith hath seal'd,
Joys to divine Aurora unreveal'd.
Abydos, Sestos, ancient towns, proclaim,
Where gentlest bosoms glow'd with purest flame.
I hear Leander dash the foaming tide!
Fix'd high in air, I see the glimmering guide!
The genial flame, the love-enkindling light,
Signal of joy that burn'd serenely bright: 10
Whose beams, in fair effulgency display'd,
Adorn'd the nuptials of the Sestian maid:
Which Jove, its friendly office to repay,
Should plant, all-glorious, in the realms of day,
To blaze for ever 'midst the stars above,
And style it gentle harbinger of love:
For sure on earth it shone supremely kind,
To sooth the anguish of the love-sick mind,

Till cloth'd in terrors rose the wint'ry blast,
Impetuous howling o'er the wat'ry waste: 20
And, O! inspire me, goddess, to resound
The torch extinguish'd, and the lover drown'd,
Against Abydos sea-beat Sestos flood,
Two neighb'ring towns, divided by the flood:
Here Cupid prov'd his bow's unerring art,
And gain'd two conquests with a single dart:
On two fond hearts the sweet infection prey'd,
A youth engaging, and a beauteous maid:
Of Sestos she, fair Hero was her name;
The youth, Leander, from Abydos came. 30
Their forms divine a bright resemblance bore,
Each was the radiant star of either shore.
Thou, whom the fates commission here to
fray,
Awhile the turret's eminence survey;
Thence Hero held the blazing torch, to guide,
Her lover rolling on the boisterous tide;

The roaring Hellespont, whose wave-worn strait
Still in loud murmurs mourns Leander's fate.
Say, heav'nly muse, had Hero charms to move,
And melt the Abydinian into love? 40
Say, with what wiles the amorous youth inspir'd,
Obtain'd the virgin whom his soul admir'd?

Fair Hero, priestess to th' Idalian queen,
Of birth illustrious, as of graceful mien,
Dwelt on a high sequester'd tower, that stood
Firm on the ramparts, and o'erlook'd the flood:
Chaste, and unconscious of love's pleasing pain,
She seem'd a new-born Venus of the main;
But, nice of conduct, prudently withdrew
Far from the follies of the female crew: 50
Blest in retreat, she shunn'd the vain delight
Of daily visits, and the dance at night,
Content in sweet tranquillity to screen
Her blooming beauty from malignant spleen;
For where superior beauty shines confest,
It kindles envy in each female breast.
To soften Venus oft with prayer she strove,
Oft pour'd libations to the god of love;
Taught by th' example of the heavenly dame,
To dread those arrows that were tip'd with flame.
Vain all her caution, fruitless prov'd her prayer;
Love gains an easy conquest o'er the fair. 62

For now the sacred festival appear'd,
By pious Sestians annually rever'd,
At Venus' fane to pay the rites divine,
And offer incense at Adonis' shrine.
Vast crowds from all the sea-girt isles repair,
The day to rev'rence, and the feast to share.
From flowery Cyprus, circled by the main,
And high Hæmenia, hastes the youthful train;
Not one remain'd of all the female race 71
Thy towns, Cythera, and thy groves to grace;
Afar from spicy Libanus advance
The throngs unnumber'd, skill'd to lead the dance;
From Phrygian plains they haste in shoals away,
And all Abydos celebrates the day.
To Sestos all the mirthful youths repair,
All that admire the gay, the young, the fair;
For amorous swains, when rumour'd feasts invite,
Joy at the news, and follow with delight, 80
Not to the gods to pay the rites divine,
Or offer incense at some sacred shrine;
Few are their offerings, and concise their prayer,
Who give their whole devotion to the fair.

As through the temple pass'd the Sestian maid,
Her face a soften'd dignity display'd;
Thus silver Cynthia's milder glories rise,
To glad the pale dominion of the skies.
Her lovely cheeks a pure vermillion shed,
Like roses beautifully streak'd with red: 90
A flowery mead her well-turn'd limbs disclose,
Fraught with the blushing beauties of the rose:
But when she mov'd, in radiant mantle drest,
Flowers half unveil'd adorn'd her flowing vest,
And numerous graces wanton'd on her breast. }
The ancient sages made a false decree,
Who said, the graces were no more than three;
When Hero smiles, a thousand graces rise,
Sport on her cheek, and revel in her eyes.
Such various beauties sure conspir'd to prove 100
The priestess worthy of the queen of love.

Thus as she shone superior to the rest,
In the sweet bloom of youth and beauty drest,
Such softness temper'd with majestic mien,
The earthly priestess match'd the heav'nly queen.
The wondering crowds the radiant nymph ad-
mire,

And every bosom kindles with desire;
Eager each longs, transported with her charms,
To clasp the lovely virgin in his arms;
Where'er she turns, their eyes, their thoughts
pursue, 110

They sigh, and send their souls at every view.
Then thus some ardent youth bespoke the rest,
Cast a fond look, and open'd all his breast:

"I oft at Sparta wondering have beheld
"Young maids contending in the list'd field,
"Sparta, that boasts the emulated prize
"Of fairest virgins, and of brightest eyes;
"Yet ne'er till now beheld a nymph so fair,
"Such beauty blended with such graceful air:
"Perhaps (for sure immortal is her race) 120
"Beneath the priestess Venus hides a grace.
"My dazzled eyes with constant gazing tire,
"But my fond fancy ever could admire.
"O! make me, Venus, partner of her bed,
"Though fate that instant strike the lover dead:
"Let but my love the heavenly Hero crown,
"I on the gods will look superior down.
"Should you this boon deny, O queen! decree,
"To bless my days, a nymph as fair as she!"

Thus spoke the general voice; the train apart
Conceal the wound deep rankling in the heart.
But when Leander saw the blooming fair, 133
Love seiz'd his soul instead of dumb despair;
Resolv'd the lucky moments to improve,
He sought occasion to reveal his love;
The glorious prize determin'd to obtain,
Or perish for those joys he could not gain.
Her sparkling eyes instilling fond desire,
Entranc'd his soul, and kindled amorous fire.
Such radiant beauty, like the pointed dart, 140
With piercing anguish stings th' unguarded heart:
For on the eye the wound is first impress'd,
Till by degrees it rankles in the breast.
Now hope and confidence invade his soul;
Then fear and shame alternately controul:
For through his bosom thrill'd: a conscious shame
Confess'd the passion which it seem'd to blame:
Her beauties fix'd him in a wild amaze;
Love made him bold, and not afraid to gaze.
With step ambiguous, and affected air, 150
The youth advancing fac'd the charming fair:
Each amorous glance he cast, though form'd by
art,

Yet sometimes spoke the language of his heart;
With nods and becks he kept the nymph in play,
And tried all wiles to steal her soul away.
Soon as she saw the fraudulent youth beguil'd,
Fair Hero, conscious of her beauty, smil'd;
Oft in her veil conceal'd her glowing face,
Sweetly vermillion'd with the rosy grace;
Yet all in vain to hide her passion tries, 160
She owns it with her love-consenting eyes.
Joy touch'd the bosom of the gentle swain,
To find his love was not indulg'd in vain.

Then, while he chid the tedious lingering day,
Down to the west declin'd the solar ray;
And dewy Hesper shone serenely bright,
In shadowy silence leading on the night.
Soon as he saw the dark involving shade,
Th' embolden'd youth approach'd the blooming
maid,

Her lily hand he seiz'd, and gently prest, 170
And softly sigh'd the passion of his breast:
Joy touch'd the damsel, though she seem'd dis-
pleas'd,

And soon withdrew the lily hand he seiz'd.
The youth perceiv'd, through well dissembled
wiles,

A heart just yielding by consenting smiles;
Then to the temple's last recess convey'd
The unreluctant, unresisting maid:
Her lovely feet, that seem'd to lag behind,
But ill conceal'd her voluntary mind.

She feign'd resentment with an angry look, 180
And, sweetly chiding, thus indignant spoke:

"Stranger, what madness has possess'd thy
brain,

"To drag me thus along the sacred fane?

"Go—to your native habitation go——

"'Tis quite unkind to pull my garments so.

"Rich are my parents—urge not here your fate,

"Left their just vengeance you repent too late:

"If not of me, of Venus stand afraid,

"In her own fane soliciting a maid:

"Hence speed your flight; and Venus' anger
dread; 190

"'Tis bold aspiring to a virgin's bed."

Thus chid the maid, as maids are wont to do,
And show'd her anger, and her fondness too:
The wily youth, as thus the fair complain'd,
Too well perceiv'd the victory was gain'd:
For nymphs enrag'd the more complying prove,
And chidings are the harbingers of love.

He kiss'd her snowy neck, her fragrant breast:
And thus the transport of his soul express'd: 199

"O lovely fair, in whom combin'd are seen

"The charms of Venus, and Minerva's mien!

"For sure no virgin of terrestrial race

"Can vie with Hero in the blooms of face:

"I deem your lineage from the gods above,

"And style you daughter of Saturnian Jove.

"Blest is the father from whose loins you sprung,

"Blest is the mother at whose breast you hung,

"Blest, doubly blest, the fruitful womb that bore

"This heavenly form for mortals to adore.

"Yet, beauteous Hero, grant a lover's prayer,

"And to my wishes prove as kind as fair: 211

"As Venus' priestess just to Venus prove,

"Nor shun the gentle offices of love.

"O let us, while the happy hour invites,

"Propitious, celebrate the nuptial rites.

"No maid can serve in Cytherea's fane;

"Her eyes delight not in the virgin train.

"But would fair Hero's secret rites explore,

"The laws of Venus, and her pleasing lore,

"Those rites are practis'd in the bridal bed, 220

"And there must Hero, yet a maid, be led:

"Then as you fear the goddess to offend,

"In me behold your husband and your friend,

"Ordain'd by Cupid, greatest god above,

"To teach you all the mysteries of love:

"As winged Mercury, with golden wand,

"Made Hercules, with distaff in his hand,

"To every task of Omphale submit;

"Thus love, more powerful than the god of wit,

"Sent me to you. 'Tis needless to relate 230

"The chaste Arcadian Atalanta's fate;

"Who from th' embraces of Milanion fled,

"Her faithful lover, and the nuptial bed:

"But vengeful Venus caus'd the nymph to burn

"With equal flame, and languish in her turn.

"O let example warn you to revere

"The wrathful goddess, and your lover hear!"

Thus spoke the youth—his magic words con-
troul

Her wavering breast, and soften all her soul.

Silent she stood, and, rapt in thought profound,

Her modest eyes were fix'd upon the ground:

Her cheeks she hid, in rosy blushes drest, 242

And veil'd her lily shoulders with her vest:

On the rich floor, with Parian marble laid,

Her nimble foot involuntary play'd.

By secret signs a yielding mind is meant;

And silence speaks the willing maid's consent.

Now had the wily god's envenom'd dart

Diffus'd the pleasing poison to her heart;

Leander's form, instilling soft desire, 250

Woo'd her pleas'd eyes, and set her soul on fire.

While on the ground fair Hero fix'd her sight,

Leander view'd, with exquisite delight,

Her swelling breast, and neck as ivory white. }

At length her face with lovely blushes spread

She rais'd, and thus in sweet confusion said:

"Stranger, thy words such magic sounds con-
vey

"With soft compassion rocks would melt away.

"Who form'd thy tongue with such persuasive

"art

"To pour delightful ruin on the heart? 260

"Ah! tell me, who thus taught thee to explore

"My lone retirement on the Thracian shore?

"Thy speech, though pleasing, flow'd to me in

"vain:

"How can a stranger Hero's love obtain?

"Should I in public give to thee my hand,

"My parents would forbid the nuptial band;

"And should'st thou here in close concealment

"Our secret passion would itself betray: [stay

"For soon the voice of scandal-spreading fame

"The deed of silence would aloud proclaim 270

"But, gentle youth, thy name, thy country tell;

"For mine, alas! by thee are known too well.

"In yon high tower, which close to Sestos stands,

"And all the roaring Hellespont commands,

"With one attending damsel I remain;

"For so my parents and the fates ordain!

"No nymphs coeval to sweet music's sound

"Lead the smooth dance, or lightly beat the

"ground;

"But stormy winds eternal discord keep,

"And blustering bellow through the boundless

"deep." 280

Thus spoke the priestess; and with modest grace,

Conceal'd the new-born beauties of her face:

For on her cheeks the roseate blush that hung
Seem'd to condemn the language of her tongue.

Meanwhile Leander feeds the hidden fire,
Glow's in each vein, and burns with fierce desire:
But anxious doubt his melting breast alarms;
How shall he gain admittance to her charms?
Nor long he paus'd, for love in wiles abounds,
Well pleas'd to heal the bosoms which he wounds;
'Twas he, whose arrows men and gods controul,
That heal'd Leander's love-afflicted soul:
Who thus, while sighs upheav'd his anxious breast,
The nymph with artful eloquence address'd:

"For thee, dear object of my fond desire,
"I'll cross the ocean though it flame with fire:
"Nor would I fear the billow's loud alarms,
"While every billow bore me to thy arms;
"Uncheck'd, undaunted by the boisterous main,
"Tempestuous winds should round me roar in
"vain: 300

"But oft as night her sable pinions spread,
"I through the storm would swim to Hero's bed:
"For rich Abydos is the home I boast,
"Not far divided from the Thracian coast.
"Let but my fair a kindly torch display,
"From the high turret to direct my way;
"Then shall thy daring swain securely glide,
"The bark of Cupid o'er the yielding tide,
"Thyself my haven, and thy torch my guide: }
"And while I view the genial blaze afar, 320
"I'll swim regardless of Boötes' car,
"Of fell Orion, and the Northern Wain
"That never bathes his brightness in the main:
"Thy star, more eminently bright than they,
"Shall lead the lover to his blissful bay.
"But let the torch, O nymph divinely fair!
"My only safety be thy only care!
"Guard well its light when wint'ry tempests roar,
"And hoarse waves break tumultuous on the
"shore,

"Lest the dire storms that blacken all the sky,
"The flame extinguish, and the lover die. 321
"More would'st thou know? Leander is my name,
"The happiest husband of the fairest dame."

Thus mutual vow'd the lovers to employ
The nights in raptures of mysterious joy;
Her task, secure th' extended torch to keep,
And his, to cross th' unfathomable deep:
On promis'd bliss their fruitful fancies fed,
Ecstatic pleasures of the nuptial bed;
Till the fond nymph, when decency requir'd, 321
Back to her tower unwillingly retir'd:

Leander ere he left his lovely bride,
Mark'd well the station of the blazing guide, }
Then sought Abydos cross the founding tide.

What now but amorous scenes their thoughts
employ,

Confus'd ideas of the genial joy?
Slow rose on leaden wings the morning light,
Slow noon came on—the lovers wish'd it night.
At length dark gloom a dusky mantle spread;
Sleep o'er the world his balmy influence shed. 340
All but Leander lay dissolv'd in rest,
Love kept a ceaseless vigil in his breast.
Silent he wander'd on the winding shore,
The deep resounded with tremendous roar:

Wide o'er the foaming waves his anxious sight
Explor'd the torch's love-proclaiming light:
He little deem'd, alas! its flame would prove
The blaze of death, though meant the torch of
love.

Soon as fair Hero from her tower survey'd
Th' horizon darken'd in the sable shade, 350
The torch on high she fix'd: its flames inspire
Leander's bosom with the kindred fire:
Quick through his frame the bright contagion ran,
And with the glowing signal glow'd th' enamour'd
man.

But when he heard the hoarse-refounding roar
Of thundering billows breaking on the shore,
Aghast he stood, he shrunk, and thus address'd
These words of courage to his trembling breast:

"Ah cruel love! whose woe the waves conspire!
"The waves are water, but I burn with fire;
"Be bold my heart, the foaming billows brave,
"Nor fear the threat'nings of the wint'ry wave.
"Fair Venus rose propitious from the main;
"She calms the ocean's rage, and soothes the lo-
"ver's pain."

He spoke, and straight his lovely limbs undress'd,
And folded round his head the various vest;
Then, dauntless, plunging in the foaming tide,
Dash'd with his arms th' intruding waves aside:
Full in his view he kept the shining mark,
Himself the pilot, passenger, and bark. 370

While faithful Hero, to her promise true,
Watch'd on the turret every wind that blew;
Oft with her robe she screen'd the torch's blaze
From dangerous blasts that blew a thousand ways:
Till the tir'd youth, on rolling surges tost,
Securely landed on the Sestian coast.

Soon as she saw her lover safe on shore,
Eager she ran, and led him to her tower,
Welcom'd with open arms her panting guest,
And, sweetly smiling, to her bosom prest: 380
Then dumb with joy the shivering youth she led,
Still wet and weary to the genial bed,
Wip'd his fair limbs, and fragrant oils apply'd,
To cleanse his body from the oozy tide;
Then clasp'd him close, still panting, to her breast,
And thus with fond endearing words address'd:

"My life, my lover, thou hast suffer'd more
"Than fondest bridegroom e'er endur'd before:
"Destin'd, alas! dread troubles to sustain
"On the rough bosom of the briny main; 390
"Now let sweet joy succeed in sorrow's place,
"And lull thy labours in my warm embrace."

She spoke: He loos'd her virgin zone to prove
The sacred rites and mysteries of love. [crown'd,
No youths with measur'd dance the nuptials
Nor tuneful Hymen's congratulating sound:
No bard invoc'd the heavenly queen with prayer,
To smile propitious on the wedded pair:
No nuptial torch its golden lustre shed,
Bright torch of love to grace the bridal bed! 400
No lō Pæans musically rung;
No greeting parents Hymeneals sung:
But all was gloom, and silence all around,
Instead of music's love-inspiring sound.
Beneath the covert of the night conceal'd,
They tasted pleasures mutual faith had seal'd;

In close embraces all entranc'd they lay,
In raptures never usher'd to the day :
Till the fond youth reluctant left his bride,
Still breathing love, and cross'd the foaming tide.
Thus Hero liv'd unnotted, unbetray'd, 411
Each night a woman, and each day a maid.
Both wish'd the hours on swiftest wings would fly,
And hail'd the evening, not the morning sky.

Thus rapt in hidden joys, each blissful night
They past in ecstasies of full delight :
But soon, alas! those dear-bought pleasures fled,
And short the transports of that bridal bed !

For now relentless winter, that deforms
With frost the forest, and the sea with storms, 400
Bade the wild winds o'er all the ocean reign,
And raise the rapid whirlpools of the main;
The hoarse wild winds obey, and, with harsh sound,
Roar o'er the surface of the vast profound,
Rouze from their beds the scatter'd storms that
sleep

In the dark caverns of the dreary deep :
The trembling sailor hears the dreadful roar, }
Nor dares the wint'ry turbulence explore, }
But drags his vessel to the safer shore. }

But thee, bold youth, no wint'ry storms restrain,
Nor all the deathful dangers of the main. 431
For when thou saw'st the torch's blaze from far,
(Of nuptial bliss the bright prophetic star)

Thee not the furious tempest could controul,
Nor calm the glowing raptures of the soul.
Yet sure fair Hero, when the gloomy sky
With gathering clouds proclaim'd rough winter
nigh,

Without her lover should have pass'd the night,
Nor from the tower, ill-omen'd, shown the light,
But she, ah hapless! burns with fond desire, 440
'Tis love inflames her while the fates conspire :
The torch of death now glimmer'd from above,
No more the gentle harbinger of love.

'Twas night, and angry Æolus had hurl'd
The winds tempestuous o'er the wat'ry world;
The bellowing winds with rage impetuous roar,
And dash the foaming billows on the shore :
Ev'n then the youth, with pleasing visions fed,
Glows with remembrance of the bridal bed ;

And while fierce tempests howl on every side,
Float on the bosom of the briny tide. 450

Waves roll'd on waves, in hideous heaps are driven,
Swell'd into mountains, and upheav'd to heaven :
Bleak-blasts, loud roaring, the vex'd ocean sweep,
Foam the dash'd billows, and resounds the deep.

From every part the blustering terrors fly,
Rage o'er the main, and battle in the sky.
The growling thunder of the vast profound
The rocks rebellow, and the shores rebound.

Amidst the wat'ry war, with toils oppress'd 460
O'erwhelm'd with billows, and in gulfs distress'd,
Leander oft with suppliant prayer implor'd

The sea-sprung goddess, and old ocean's lord :
Thee, Boreas, too, he summon'd to his aid,
Nor was unmindful of th' Athenian maid ;
But prayers are fruitless, and petitions vain ;
Love must submit to what the fates ordain.

From wave to wave the hapless youth is tost,
Now heav'd on high, and now in whirlpools lost ;
His weary'd feet no more his will obey, 470
His arms hang useless, and forget to play.

Borne on the surge supine, and void of breath
He drinks the briny wave, and draws in death.
Thus while in fatal rage each wind conspires, }
Exinct at once the flame, and lovers fires, }

Fainting he sinks, and with the torch expires.
While on the turret Hero mourn'd his stay,
And fondly sighing, chid his long delay,
Perplexing anguish in her bosom rose,
Nor knew her eyes the blessings of repose. 480

Now rose the morn, in russet vest array'd,
Still from th' impatient fair the lover stay'd :
Watchful she stood, and cast her eyes around
O'er the wide beach, and o'er the depths profound,
Haply to spy her-lover should he stray,
The light extinguish'd 'midst the wat'ry way :
But when she saw him breathless on the sand,
Stretch'd, ghastly pale, by death's relentless hand,
She shriek'd aloud ; and from her throbbing breast
Rent the gay honours of her flowery vest ; 490
Then from the tower her beauteous body cast,
And on her lover's bosom breath'd her last :
Nor could the fates this faithful pair divide
They liv'd united, and united died.

NOTES ON HERO AND LEANDER.

Ver. 23. Abydos was a city of Asia, situated on the Hellespont, over-against Scyros, a city in the Thracian Chersonnesus. Geographers are of opinion, that the castles of the Dardanelles were built on the ruins of these two places: But they are manifestly mistaken; for there are no remains of antiquity to be seen near those castles, but very remarkable ones three miles farther, where the channel is considerably narrower. Le Brun assures us, that the strait at these ruins is only half a mile over, and that one of them is still called *Scyros*, and the other *Abydos* or *Avido*. Pliny

and Herodotus say, the narrowest part of the channel is about seven stadia, or furlongs.

Ver. 60. In the first Idyllium of Moschus, Venus complains of Cupid, that

His darts and arrows are all tipp'd with flame.

Ver. 144. Virgil finely describes the conflict of various passions in the breast of Turnus, *Æneid*, book 12. ver. 666.

—æstuat ingens
Imo in cordepudor, mixtoque insania luctu,
Et furis agitatus antor, et conscia virtus.

A thousand various thoughts confound the chief,
He stood, he gaz'd his bosom swell'd with grief;
Pride, conscious valour, fury, love and shame,
At once set all the hero in a flame. *Pitt*

Ver. 383. Thus in the third book of the *Odyfsey*, Polycaſte, the daughter of Neſtor, bathes and anoints Telemachus.

Sweet Polycaſte took the pleaſing toil
To bathe the prince, and pour the fragrant oil.

On which Dr. Broome remarks, that the practice of women bathing and anointing men frequently occurs in the *Odyſſey*: neither is this done by women of inferior quality; but we have here a young princeſs bathing, anointing, and clothing the naked Telemachus.

Ver. 494. "They were lovely and pleaſant in their lives, and in their death they were not divided."

2 Sam. chap. I. ver. 23.

FAWKES'S APOLLONIUS RHODIUS.

PREFACE.

THE author of this poem was the son of Silleus and Illeus. He was born at Alexandria in Egypt, and educated under Callimachus: He received the name of Rhodius, or the Rhodian, either from his mother, whose name was Rhoda, or, more probably, from the city Rhodes. During his stay in this place, he finished his Argonautic poem, and founded a school of rhetoric. Ptolemy Euergetes, in whose reign our poet flourished, two hundred and forty-four years before Christ, recalled him from his retirement at Rhodes, and appointed him successor to Eratosthenes in the care of the Alexandrian library. The favours which had been conferred on Callimachus in the court of Ptolemy Philadelphus, were continued to him by his successor Ptolemy Euergetes. So that Callimachus, no less than his scholar, was protected and patronized by his prince. This circumstance, among others, gave occasion to those jealousies and dissensions which subsisted between these rival poets. Callimachus is supposed to have alluded, in the following lines, to that invidious spirit which prevailed in his scholar.

Ὁ φθόνος Ἀπόλλωνος ἐπ' ἄτα λάθριος ἔστιν,
οὐκ ἄγαμαι τὸν αἰδὸν, ὅς ᾗδ', ὅσα Πόντος, αἰεῖται.

Call. Hymn. ad Ap. v. 105.

For Apollonius, anxious to establish his own reputation, and jealous of his master's, had depreciated those more numerous, but lighter productions, in which the muse of Callimachus excelled; epigrams, hymns, and elegies.

It will be no improper introduction to the following poem, to trace the subject of it to its source: nor can we expect to be guided through its intricacies by a safer clue, than that which the ancients have afforded us.

Ino was the wife of Athamas, king of Orchomenos: from whom he was soon after divorced, and married Nephele. But she incurring his displeasure, he restored the repudiated Ino to his bed. By her he had two children, Learchus and Melicerta; by Nephele he had Phrixus and Helle. Ino beheld the children of her rival with a jealous eye. For they, being the eldest, had a prior

claim to their father's inheritance. Resolved on their destruction, she concerted the following plan, as most likely to effect it. A grievous famine laying waste the country, it was judged expedient to consult the oracle about the means of suppressing it. Ino having gained over the priests to her interest, prevailed on them to return this answer; that the ravages of famine could no otherwise be suppressed, than by the sacrifice of Nephele's children. Phrixus, who was made acquainted with the cruel purpose of Ino, freighted his vessel with his father's treasures, and embarked with his sister Helle for Colchis. The voyage proved fatal to her; and the sea, into which she fell, was named from her the Hellespont. But Phrixus arrived safe at Colchis; and was protected from the cruelties of his step-mother Ino, at the court of Æetes his kinsman, who bestowed on him his daughter Chalciope in marriage. Upon his arrival, he consecrated his ship to Mars; on whose prow was represented the figure of a ram. This embellishment, it is supposed by some of the historians, gave rise to the fiction, of his having swam to Colchis on the back of that animal, of his having sacrificed it to Mars, and hung up its fleece in the temple of that god. It is this imaginary fleece which is celebrated by the poets for having given birth to the expedition of the Argonauts. A variety of whimsical conjectures have been formed concerning it. Some are of opinion, that it was a book of sheep-skins, containing the mysteries of the chemic art. Others have assured us, that it signified the riches of the country; with which their rivers, that abounded in gold, supplied its inhabitants: and that, from the sheep-skins made use of in collecting the golden dust, it was called the Golden Fleece.

For a further illustration of the subject of this poem, it will be necessary to insert the following history.

Tyro, the daughter of Salmoneus, had two sons by Neptune, Neleus and Pelias: by Cretheus she had Æson, Pheres and Amithaon. The city of Iolcos in Thessaly, which Cretheus built, was the capital of his dominions. He left his

kingdom at his death to Æson his eldest son; but made no provision for Pelias. Pelias, however, growing every day more powerful, at length dethroned Æson. And hearing that his wife Alcimeda was delivered of a son, he was resolutely bent on his destruction. For he had been forewarned by the oracle, that he must be dethroned by a prince, descended from Æolus, and who should appear before him with one foot bare. Æson and Alcimeda being informed of the tyrant's intention, conveyed their son to mount Pelion, where he was educated by Chiron. Having attained to maturity, he consulted the oracle; who encouraged him to repair to the court of Iolcos. Pelias, hearing of the arrival of this stranger, and of the circumstance of his appearance with only one sandal, concluded that this must be the person, whom the oracle had foretold. Having made himself and his situation known to his uncle, Jason demanded of him the crown, which he had so unjustly usurped. Pelias was greatly alarmed at this requisition. But knowing that a thirst for glory is the darling passion of youth, he contrived to appease his nephew's resentment by disclosing to him the means of gratifying his ambition. He assured him, that Phrixus, when he sailed from Orchomenos, had carried with him a fleece of gold, the possession of which would at the same time enrich and immortalize him. The proposal had its desired effect. Jason signified his acceptance of it, and collected speedily the most illustrious princes of Greece, who were eager to embark in a cause, that was at once advantageous and honourable. Who these heroes were, the route they took, the dangers with which they encountered, and the success they met with, are particulars recorded by Apollonius, and on which he has lavished all the graces of poetry.

Such is the history of the Golden Fleece, as delivered down to us by the ancient poets and historians. This celebrated expedition is generally supposed to be the first era of true history. Sir Isaac Newton places it about forty-three years after the death of Solomon, and nine hundred and thirty-seven years before the birth of Christ. He apprehends, that the Greeks, hearing of the distractions of Egypt, sent the most renowned heroes of their country in the ship *Argo*, to persuade the nations on the coast of the Euxine sea to throw off the Egyptian yoke, as the Lybians, Ethiopians, and Jews had before done. But Mr. Bryant has given us a far different account of this matter in his very learned system of mythology: whose sentiments on this head I have endeavoured to collect, and have ventured to give them a place in this preface. For the novelty of his hypothesis, and the learning and ingenuity with which it is supported, cannot fail to entertain and instruct us.

The main plot, says the learned and ingenious mythologist, as it is transmitted to us, is certainly a fable, and replete with inconsistencies and contradictions. Yet many writers, ancient and modern, have taken the account in gross; and with-

out hesitation, or exception to any particular part, have presumed to fix the time of this transaction. And having satisfied themselves in this point, they have presumed to make use of it for a stated era. Mr. Bryant is of opinion, that this history, upon which Sir Isaac Newton built so much, did certainly not relate to Greece; though adopted by the people of that country. He contends, that Sir Isaac's calculation rested upon a weak foundation. That it is doubtful, whether such persons as Chiron or Musæus ever existed; and still more doubtful, whether they formed a sphere for the Argonauts. He produces many arguments to convince us, that the expedition itself was not a Grecian operation; and that this sphere at any rate was not a Grecian work: and if not from Greece, it must certainly be the produce of Egypt. For the astronomy of Greece confessedly came from that country: consequently the history to which it alludes, must have been from the same quarter. Many of the constellations, says our author, are of Egyptian original. The zodiac, which Sir Isaac Newton supposed to relate to the Argonautic expedition, was, he asserts, an assemblage of Egyptian hieroglyphics.

After having enumerated all the particulars of their voyage, the different routes they are supposed to have taken, and the many inconsistencies with which the whole story abounds, Mr. Bryant proceeds to observe, that the mythology, as well as the rites of Greece, was borrowed from Egypt, and that it was founded upon ancient histories, which had been transmitted in hieroglyphical representations. These, by length of time, became obscure; and the sign was taken for the reality, and accordingly explained. Hence arose the fable about the bull of Europa, and the like. In all these is the same history under a different allegory and emblem. In the wanderings of Rhea, Isis, Astarte, Iona and Damater, is figured out the separation of mankind by their families, and their journeying to their places of allotment. At the same time, the dispersion of one particular race of men, and their flight over the face of the earth, is principally described. Of this family were the persons, who preserved the chief memorials of the ark in the Gentile world. They represented it under different emblems, and called it Demeter, Pyrrha, Selene, Meen, Argo, Argus, Archas, and Archaius, or Archite. The Grecians, proceeds the learned writer, by taking this story of the *Argo* to themselves, have plunged into numberless difficulties. In the account of the *Argo*, we have undeniably the history of a sacred ship, the first that was ever constructed. This truth the best writers among the Grecians confess, though the merit of the performance they would fain take to themselves. Yet after all their prejudices, they continually betray the truth, and show that the history was derived to them from Egypt. The cause of all the mistakes in this curious piece of mythology arose from hence. The Arkites, who came into Greece, settled in many parts, but especially in Argolis and Thessalia; where they introduced their rites and worship. In the former of these re-

gions, they were commemorated under a notion of the arrival of Da-naus, or Danaus. It is supposed to have been a person, who fled from his brother Ægyptus, and came over in a sacred ship given him by Minerva. This ship, like the Argo, is said to have been the first ship constructed; and he was assisted in the building of it by the same Deity, Divine Wisdom. Both histories relate to the same event. Danaus, upon his arrival, built a temple, called Argus, to Iona, or Juno; of which he made his daughters priestesses. The people of the place had an obscure tradition of a deluge, in which most perished, some few only escaping. The principal of these was Deucalion, who took refuge in the acropolis, or temple. Those who settled in Thessaly, carried with them the same memorials concerning Deucalion, and his deliverance; which they appropriated to their own country. They must have had traditions of this great event strongly impressed upon their minds; as every place, to which they gave name, had some reference to that history. In process of time, these impressions grew more and more faint, and their emblematical worship became very obscure and unintelligible. Hence they confined the history of this event to their own country; and the Argo was supposed to have been built, where it was originally enshrined. As it was revered under the symbol of the moon, called Man or Mon, the people from this circumstance named their country Ai-mona, in after times rendered Aimonia.

This extract from the ingenious and learned mythologist, will enable the reader to form some idea of his sentiments on this subject.

But whatever disgust the grave historian may have conceived at this unsightly mixture of the marvellous and the probable, the poet needs not be offended at it. Fiction is his province. He may be allowed to expatiate in the regions of fancy without controul, and to introduce his fiery bulls and sleepless dragons without the dread of censure.

The Argonautic expedition has been the admired subject of the Greek and Roman poets from Orpheus, or rather from Onomacritus, who lived in the times of Pisistratus, to those of our author's imitators, who lived in the decline of the Roman empire. To weigh the merits of these ancient poets in the just scale of criticism, and to appropriate to each his due share of praise, is a task too arduous and assuming for an humble editor to engage in. Yet such is the partiality of translators and editors to their favourite poets, that they wish either to find them seated above their rivals and contemporaries, on the summits of Parnassus, or, if possible, to fix them there. But vain are these wishes, unless the testimonies of the first writers of antiquity concur to gratify them. The reputation of Apollonius can neither be impaired nor enhanced by the strictures of Scaliger and Rapin: the judgment of Quintilian and Longinus may, indeed, more materially affect it. They have delivered their opinions on our author in the following words:

Ἐπίτοι γὰρ καὶ ἀπλωτος ὁ Ἀπολλώνιος, ὁ τῶν Ἀργοναυτικῶν ποιητῆς ἄρ' ὅν "Ὀμηρὸς ἂν μαλλον, ἢ Ἀπολλώνιος ἰδέσθαι γινώσκει. Sect. κκxiii. Longin. de Sublim.

Non contemnendum edidit opus æquali quadam mediocritate.

Quintil. Inst. Orat. l. x c. 1.

Unfortunately, as it should seem, for the Rhodian, these celebrated strictures wear the double face of approbation and censure. The praise that is conveyed under the term ἀπλωτος, that he no where sinks, is lost in the implication, that he is no where elevated. The expression *non contemnendum opus*, apparently a flattering meiosis, is limited to its lowest sense by the subsequent observation; *æquali quadam, mediocritate*. But we must not desert our poet even in this extremity; for if imitation implies esteem and admiration, Apollonius's noblest eulogy will be found in the writings of Virgil. Those applauded passages in this poet, which are confessedly imitated from our author, may serve as a counterpoise to the sentence of the critics. Apollonius was Virgil's favourite author. He has incorporated into his Æneid his similes and his episodes; and has shown the superiority of his judgment by his just application and arrangement of them.

But it is not the Mantuan poet only, who has fetched from this storehouse the most precious materials. Valerius Flaccus, who has made choice of the same subject with the Rhodian, has discovered through every part of his work a singular predilection for him. He is allowed to have imitated the style of Virgil with tolerable success; but he is indebted for the conduct of his poem chiefly to Apollonius. It is remarkable, that Quintilian, who has objected mediocrity to our author, has mentioned this his closest imitator in terms of the highest respect. Yet must it be confessed that the genius of Flaccus seldom soars so high, as when it is invigorated and enlightened by the muse of Apollonius.

But the admiration in which this writer has been held by the Roman poets, did not expire with them. The rage of imitation, far from ceasing, has caught congenial spirits in every succeeding period; and the most approved passages in this elegant poem have been diffused through the works of the most admired moderns. It were needless to mention any other than Milton and Camoens. Milton's imitations of Apollonius are, many of them, specified in the notes inserted in Bishop Newton's valuable edition of all that writer's poetical works. Camoens, who has hitherto been known to the English reader only through the obscure and crude version of Fanshawe, has appeared of late greatly to advantage in the very animated translation of Mr. Mickle. That the refined taste of Camoens was formed on the model of the Greek and Roman poets, is evident throughout the Lusiad; which abounds in allusions to the pagan mythology, and is enriched with a profusion of graces drawn from the ancient classics. In the number of these it can be no disparagement to his poem to reckon Apollonius Rhodius; to the merit of whose work Camoens, if I misjudge not,

was no stranger. The subject of the Portuguese poem bears a striking resemblance to that which our author has chosen. For the heroes both of Portugal and Greece traversed unknown seas, in pursuit of the wealth with which an unknown country was expected to supply them. Camoens not only alludes to Argo and her demigods, but seems particularly fond of drawing a comparison betwixt the heroes of his country and those of Thessaly.

Here view thine Argonauts, in seas unknown, &c.
B. i. p. 9.

With such bold rage the youth of Mynia glow'd,
When the first keel the Euxine surges plough'd;
When bravely venturous for the golden fleece,
Orac'lous Argo sail'd from wond'ring Greece.
B. iv. p. 172.

And soon after;

While each presag'd that great as Argo's fame,
Our fleet should give some starry band a name.

"The solemnity of the night spent in devotion, the affecting grief their friends and fellow-citizens, whom they were never more to behold; and the angry exclamations of the venerable old man, give a dignity and interesting pathos to the departure of the fleet of Gama, unborrowed from any of the classics. See the concluding note to *B. iv.*

Apollonius has admitted into his first book, on a similar occasion, most of the abovementioned particulars, and many others equally interesting. The prayer of Jason, and the sacrifices previous to their embarkation, are circumstantially related. The lamentations of Alcimeda at the loss of her son, the silent grief of Æson his father, and the tears of his friends, contribute to make this parting scene the most pathetic imaginable. Through the whole of this affecting interview, Camoens seems not to have lost sight of Apollonius. Put, lest it should be said, that a similarity of situations naturally produces a similarity of sentiments, and that we ought not to interpret a resemblance like this, which might be casual only, to be the effect of studied imitation; another passage may be selected from the *Lusiad*, which is universally admired for its genuine sublimity, and is affirmed to be the happiest effort of unassisted genius. "The apparition, which in night hovers athwart the Cape of Good Hope, is the grandest fiction in human composition; the invention his own!" See the Dissertation prefixed to Mr. Mickle's Translation of the *Lusiad*.

There is a passage in the third book of Apollonius, to which the description of the apparition at the Cape bears a striking resemblance: I mean the appearance of the ghost of Sthenelus, standing on his tomb, and surveying the Argonauts as they sail beside him. The description of Camoens is indeed heightened by many additional circumstances, and enriched with a profusion of the boldest images. The colouring is his own; but the first design and outlines of the piece appear to be taken from our poet.

But it is time to quit the imitators of Apollonius, and to give some account of his translators.

Dr. Broome, well known in the literary world for the part he took in the translation of the *Odyssey*, and for his notes annexed to it, has given an elegant version of the Loves of Jason and Medea, and of the story of Talaus; which are published with his original poems. Mr. West, who has transfused into his version of the Odes of Pindar, much of the spirit of his sublime original, has presented us, in an English dress, with one or two detached pieces from our author. Mr. Ekins has translated the third book, and about two hundred lines of the fourth. Had this gentleman undertaken a version of the whole poem, Mr. Fawkes, I am confident, would have desisted from the attempt. The public has long been in possession of several translations of this latter writer. Those of Anacreon and Theocritus are acknowledged to have considerable merit. The work before us was undertaken at the request of Mr. Fawkes's particular friends; and the increasing number of his subscribers encouraged him to persevere in his design; but the completion of it was prevented by the premature stroke of fate. What part the editor has taken in this work, is a matter of too small importance to need an explanation. But lest his motive should be mistaken, and vanity should be supposed to have instigated what friendship only suggested, he begs leave to add, as the best apology he can offer for engaging in this work, that with no other ambition than to assist his friend, did he comply with his solicitations to become his coadjutor; and with no other motive does he now appear as his editor, than to enable the widow to avail herself of those generous subscriptions, for which she takes occasion here to make her thankful acknowledgments.

March 27. 1780.

THE ARGONAUTICS.

IN FOUR BOOKS.

BOOK I.

THE ARGUMENT.

This book commences with the list and character of the Argonauts. Before they embark, two of the chiefs quarrel, but are pacified by the harmony of Orpheus. They set sail, and land at Lemnos, an island inhabited by female warriors; who, though they had slain their husbands, and turned Amazons, are so charmed with these heroes, that they admit them to their beds. Thence they sail to the country of the Dolions, and are kindly received by their king Cyzicus. Loosing from thence in the night, and being driven back by contrary winds, they are mistaken for Pelasgians, with whom the Dolions were then at war. A battle ensues, in which Cyzicus and many of his men are slain. The morning discovers the unhappy mistake. Thence they sail to Mysia. Hercules breaks his oar; and while he is gone into a wood to make a new one, Hylas is stolen by a nymph, as he is stooping for water at a fountain. Hercules and Polyphemus go in search of him. Meanwhile the Argonauts leave them behind, and sail to Bithynia.

INSPIR'D by thee, O Phœbus, I resound
The glorious deeds of heroes long renown'd,
Whom Pelias urg'd the golden fleece to gain,
And well-built Argo waited o'er the main,
Through the Cyanean rocks. The voice divine
Pronounc'd this sentence from the sacred shrine:
'Erelong and dreadful woes, foredoom'd by fate,
'Through that man's counsels shall on Pelias
'wait,
'Whom he, before the altar of his god,
'Shall view in public with one sandal shod.' 10
And, lo! as by this oracle foretold,
What time adventurous Jason, brave and bold,
Anaurus past, high swoln with winter's flood,
He left one sandal rooted in the mud.
To Pelias, thus, the hasty prince repair'd,
And the rich banquet at his altar shar'd.
The stately altar, with oblations stor'd,
Was to his fire erected, ocean's lord,
And every power that in Olympus reigns,
Save Juno, regent of Thessalia's plains. 20
Pelias, whose looks his latent fears express'd,
Fir'd with a bold adventure Jason's breast;
That, sunk in ocean, or on some rude shore
Prostrate, he ne'er might view his country more.
Old bards affirm this warlike ship was made
By skilful Argus, with Minerva's aid.
'Tis mine to sing the chiefs, their names and race,
Their tedious wanderings on the main to trace,

And all their great achievements to rehearse:
Deign, ye propitious nine, to aid my verse. 30
First in the list, to join the princely bands,
The tuneful bard, enchanting Orpheus, stands;
Whom fair Calliope, on Thracia's shore,
Near Pimpla's mount, to bold Œagrus bore.
Hard rocks he soften'd with persuasive song,
And sooth'd the rivers as they roll'd along.
Yon beeches tall, that bloom near Zona, still
Remain memorials of his vocal skill:
His lays Piera's listening trees admire,
And move in measures to his melting lyre. 40
Thus Orpheus charm'd, who o'er the Bistons
reign'd,
By Chiron's art to Jason's interest gain'd.
Asterion next; whose fire rejoic'd to till
Pirenean vallies by Phylleion's hill,
Born near Apidanus, who sportive leads
His winding waters through the fertile meads;
There where, from far, Enipeus, stream divine,
And wide Apidanus their currents join.
The son of Elatus, of deathless fame,
From fair Larissa, Polyphemus came. 50
Long since, when in the vigour of his might,
He join'd the hardy Lapithæ in fight
Against the Centaurs; now his strength reclin'd
Through age, yet young and martial was his mind.
Not long at Phylace Iphiclus staid,
Great Jason's uncle; pleas'd he join'd his aid,

And march'd to meet th' adventurous band from
 far,
 Urg'd by affinity and love of war.
 Nor long Admetus, who at Pheræ reign'd,
 Near high Chalcodon's bleating fields remain'd.
 Echion, Erytus, for wiles renown'd, 61
 Left Alope, with golden harvests crown'd;
 The gainful sons of Mercury: with these
 Their brother came, the bold Æthalides;
 Whom fair Eupolema, the Phthian, bore
 Where smooth Amphrysos rolls his watery store:
 Those, Menetus, from thy fair daughter sprung,
 Antianira, beautiful and young.
 Coronus came, from Gyrton's wealthy town,
 Great as his fire in valour and renown, 70
 Cæneus his fire; who, as old bards relate,
 Receiv'd from Centaurs his untimely fate.
 Alone, unaided, with transcendent might,
 Boldly he fac'd, and put his foes to flight.
 But they, reviving soon, regain'd their ground;
 Yet fail'd to vanquish, and they could not wound.
 Unbroke, unmov'd, the chief his breath resigns,
 O'erwhelm'd beneath a monument of pines.
 From Titaresus Mopsus bent his way,
 Inspir'd an augur by the god of day, 80
 Eurydamas, to share fair honour's crown,
 Forsook near Xynia's lake his native town,
 Nam'd Ctimenta: Menæti join'd the band,
 Dismiss'd from Opuns by his fire's command.
 Next came Eurytion, Irus' valiant son,
 And Eribotes, seed of Teleon.
 Oileus join'd these heroes, fam'd afar
 For stratagems and fortitude in war;
 Well skill'd the hostile squadrons to subdue,
 Bold in attack, and ardent to pursue. 90
 Next by Canethus, son of Abans, sent,
 Ambitious Canthus from Eubœa went;
 Doom'd ne'er again to reach his native shore,
 Nor view the towers of proud Cerinthus more.
 For thus decreed the destinies severe,
 That he and Mopsus, venerable seer,
 After long toils and various wanderings past,
 On Afric's dreary coast should breathe their last.
 How short the term assign'd to human woe,
 Cloth'd as it is by death's decisive blow! 100
 On Afric's dreary coast their graves were made,
 From Phasis distant far their bones were laid,
 Far as the east and western limits run,
 Far as the rising from the setting sun.
 Clytius and Iphitus unite their aid,
 Who all the country round Æchalia sway'd;
 These were the sons of Eurytus the proud,
 On whom his bow the god of day bestow'd;
 But he, devoid of gratitude, defy'd,
 And challeng'd Phœbus with a rival's pride. 110
 The sons of Æacus, intrepid race!
 Separate advanc'd, and from a different place.
 For when their brother unawares they slew,
 From fair Ægina diverse they withdrew.
 Fair Salamis king Telamon obey'd,
 And valiant Peleus Phthia's sceptre sway'd.
 Next Butes came from fam'd Cecropia far,
 Brave Teleon's son, a chief renown'd in war.
 To wield the deadly lance Phalerus boasts,
 Who, by his fire commission'd, joins the hosts. 120

No son, save this, e'er blest'd the hoary sage;
 And this Heaven gave him in declining age:
 Yet him he sent, disdaining abject fears,
 To shine conspicuous 'midst his gallant peers.
 Theseus, far more than all his race renown'd,
 Fast in the cave of Tænarus was bound
 With adamantine fetters, (dire abode)!
 E'er since he trod th' irremovable road
 With his belov'd Pirithoüs: had they fail'd,
 Much had their might, their courag'd much a-
 vail'd. 130
 Boeotian Tiphys came, experienc'd well
 Old ocean's foaming surges to foretel,
 Experienc'd well the stormy winds to shun,
 And steer his vessel by the stars or sun.
 Minerva urg'd him by her high command,
 A welcome mate to join the princely band.
 For she the ship had form'd with heav'nly skill,
 Though Argus wrought the dictates of her will.
 Thus plann'd, thus fashion'd, this fam'd ship ex-
 cell'd
 The noblest ships by oar or sail impell'd. 140
 From Aræthyrea, that near Corinth lay,
 Phlias, the son of Bacchus, bent his way;
 Blest'd by his fire, his splendid mansion stood
 Fast by the fountains of Asopus' flood.
 From Argos next the sons of Bias came,
 Areius, Talaus, candidates for fame,
 With bold Leodocus, whom Pero bore,
 Neleus' fair daughter, on the Argive shore;
 For whom Melampus various woes sustain'd,
 In a deep dungeon by Iphiclus chain'd. 150
 Next Hercules, endued with dauntless mind,
 At Jason's summons stay'd not long behind.
 For warn'd of this adventurous band, when last
 The chief to Argos from Arcadia past,
 (What time in chains he brought the living boar,
 The dread, the bane of Erymanthia's moor,
 And at the gates of proud Mycenæ's town,
 From his broad shoulders hurl'd the monster
 down):
 Unask'd the stern Mycenian king's consent,
 Instant to join the warlike host he went. 160
 Young Hylas waited with obsequious care,
 The hero's quiver and his bow to bear.
 Next came the list of demigods to grace,
 He who from Danaüs deriv'd his race,
 Nauplius; of whom fam'd Prætus was the son
 Of Prætus Lernus; thus the lineage run:
 From Lernus Naubolus his being claim'd,
 Whose valiant son was Clytoneüs nam'd.
 In navigation's various arts confess'd
 Shone Nauplius' skill, superior to the rest: 170
 Him to the sea's dread lord, in days of yore,
 Danaüs' fair daughter, Amymone bore.
 Last of those chiefs who left the Grecian coast,
 Prophetic Idmon join'd the gallant host;
 (Full well he knew what cruel fate ordain'd;
 But dreaded more than death his honour stain'd)
 The son of Phœbus by some stol'n embrace,
 And number'd too with Æolus's race.
 He learn'd his art prophetic from his fire,
 Omens from birds, and prodigies from fire. 180
 Illustrious Pollox, fam'd for martial force,
 And Castor, skill'd to guide the rapid horse,

Ætolian Leda sent from Sparta's shore :
 Both at one birth in Tyndarus house she bore.
 No boding fears her generous mind depress'd ;
 She thought like them whom Jove's embrace had
 blest'd.
 Lynceus and Idas, from Arene's wall,
 Heard fame's loud summons, and obey'd her call :
 The sons of Aphareus, of matchless might,
 But Lynceus stands renown'd for piercing sight :
 So keen his beam that ancient fables tell, 291
 He saw through earth the wondrous depths of hell.
 With these bold Periclymenus appears,
 The son of Neleus, most advanc'd in years
 Of all his race ; his fire's unconquer'd pride :
 Him with vast strength old ocean's lord supply'd,
 And gave the power when hard in battle prels'd,
 To take whatever form might suit him best.
 From Tegea's towers where bore Aphidas sway,
 Amphidamas and Cepheus took their way, 200
 The sons of Aleus both ; and with them went
 Anceus, by his fire Lycurgus sent.
 Of those the brother, and by birth the first,
 Was good Lycurgus ; tenderly he nurs'd
 His fire at home ; but bade his gallant son
 With the bold chiefs the race of glory run.
 On his broad back a bear's rough spoils he wore,
 And in his hand a two-edg'd pole-ax bore,
 Which, that the youth might in no danger share,
 Were safe secreted by his grandfire's care. 210
 Angeas, too, lord of the Elean coast,
 Sail'd, brave associate, with the warlike host.
 Rich in possessions, of his riches proud,
 Fame says his being to the sun he ow'd.
 Ardent he wish'd to see the Colchian shore,
 And old Æeta who the sceptre bore.
 Asterius and Amphion, urg'd by fame,
 The valiant sons of Hyperasius came
 From fair Pellene, built in days of yore
 By Pelle's grandfire on the lofty shore. 220
 From Tænarus, that yawns with gulf profound,
 Euphemus came, for rapid race renown'd.
 By Neptune forc'd, Europa gave him birth,
 Daughter to Tityus, hugest son of earth.
 Whene'er he skimm'd along the watery plain,
 With feet unbath'd he swept the surging main,
 Scarce brush'd the surface of the briny dew,
 And light along the liquid level flew.
 Two other sons of Neptune join'd the host,
 This from Miletus on th' Ionian coast, 230
 Erginus nam'd, but that from Samos came,
 Juno's lov'd isle, Anceus was his name ;
 Illustrious chiefs, and both renown'd afar
 For the joint arts of sailing and of war.
 Young Meleager, Æneus' warlike son,
 And sage Laocoon march'd from Calydon.
 From the same father he and Æneus sprung ;
 But on the breasts of different mothers hung.
 Him Æneus purpos'd with his son to send,
 A wise companion, and a faithful friend. 240
 Thus to the royal chiefs his name he gave,
 And, green in years, was number'd with the brave.
 Had he continu'd but one summer more
 A martial pupil on th' Ætolian shore,
 First on the lists of fame the youth had shone,
 Or own'd superior Hercules alone.

His uncle too, well-skill'd the dart to throw,
 And in th' embattled plain resist the foe,
 Iphiclus, venerable Thestius' son,
 Join'd the young chief and boldly led him on,
 The son of Lernus, Palæmonius, came, 251
 Olenian Lernus ; but the voice of fame
 Whispers that Vulcan was the hero's fire,
 And, therefore, limps he like the god of fire.
 Of nobler port or valour none could boast ;
 He added grace to Jason's godlike host.
 From Phocis Ipithus with ardour press'd
 To join the chiefs ; great Jason was his guest,
 When to the Delphic oracle he went,
 Consulting fate, and anxious for th' event. 260
 Zetes and Calais of royal race,
 Whom Orithyia bore in wint'ry Thrace,
 To blustering Boreas in his airy hall,
 Heard fame's loud summons, and obey'd the call.
 Erectheus, who th' Athenian sceptre sway'd,
 Was parent of the violated maid,
 Whom dancing with her mates rude Boreas stole,
 Where the sam'd waters of Ilissus roll ;
 And to his rock-fenc'd Sarpedonian cave
 Convey'd her, where Erginus pours his wave : 270
 There, circumfus'd in gloom and grateful shade,
 The god of tempests woo'd the gentle maid.
 They, when on tip-toe rais'd, in act to fly,
 Like the light-pinion'd vagrants of the sky,
 Wav'd their dark wings, and, wondrous to behold !
 Display'd each plume distinct with drops of gold ;
 While down their backs, of bright cerulean hue,
 Loose in the wind their wanton tresses flew.
 Not long with Pelias young Acastus stay'd ;
 He left his fire to lend the Grecians aid. 280
 Argus, whom Pallas with her gifts inspir'd,
 Follow'd his friend, with equal glory fir'd.
 Such the compeers of Jason highly fam'd ;
 And all these demigods were Minyans nam'd.
 The most illustrious heroes of the host
 Their lineage from the seed of Minyas boast :
 For Minyas' daughter, Clymena the fair,
 Alcmeda, great Jason's mother bare.
 When all was furnish'd by the busy band
 Which vessels destin'd for the main demand ; 290
 The heroes from Iolcos bent their way
 To the sam'd port, the Pagasæan bay,
 And deep-environ'd with thick gathering crowds,
 They shone like stars resplendent through the
 clouds.
 Then thus among the rout, with wondering look,
 Some swain survey'd the bright-arm'd chiefs and
 spoke :
 ' Say, what can Pelias, mighty Jove, intend,
 ' Far, far from Greece so great a force to send !
 ' Sure, should Æeta spurn the sons of Greece,
 ' And to their claims refuse the golden fleece, 300
 ' That self-same day shall see his palace crown'd
 ' With glittering turrets, levell'd to the ground.
 ' But endless toils pursue them as they go,
 ' And fate has mark'd their desperate steps with
 ' woe.'
 Thus, when he saw the delegated bands,
 Spoke the rude swain with heaven-uplifted hands :
 The gentler females thus the gods implore,
 " Safe may they reach again their native shore : "

And thus some matron mild her mind express'd ;
(Tears in her eye, and terrors at her breast) 310

' Unfortunate Alcimeda, thy fate
' Now frowns malignant, though it frowns so
' Nor wills the tenor of thy life to run [late ;
' Serene and peaceful, as it first begun.
' On Æson too attend unnumber'd woes ;
' Far, better far, a lingering life to close,
' And bury all his sorrows in the tomb,
' Unconscious of calamities to come.
' Oh ! had both Phrixus and the ram been drown'd
' When Helle perish'd in the gulf profound : 320
' But the dire monster was with voice endu'd,
' And human accents from his mouth ensu'd,
' To sad Alcimeda denouncing strife,
' And woes to cloud the evening of her life.'
Thus spoke some matron as the heroes went ;
Around their lords the menial train lament :
Alcimeda embrac'd her son with tears,
Each breast was chill'd with sad presaging fears.
Age-drooping Æson heard the general moan,
Wrapp'd in soft robes, and answer'd groan for
groan. 330

But Jason soothes their fears, their bosom warms,
And bids his servants bring the burnish'd arms.
They, with a downcast look and lowly bow,
Obey their chief with silent steps and slow.
The pensive queen, while tears bedew her face,
Her son still circles with a fond embrace.
Thus to her nurse an infant orphan springs,
And weeps unceasing as she closely clings ;
Experienc'd insults make her loath to stay
Beneath a stepdame's proud, oppressive sway.
Thus in her royal breast the sorrows pent 341
Forc'd sighs and tears, and struggled for a vent.
Still in her arms she held her favourite son,
And comfortless with faltering speech begun :
' Oh had I died on that detested day,
' And with my sorrows sigh'd my soul away,
' When Pelias publish'd his severe decree,
' Severe and fatal to my son and me !
' Thyself had then my aged eyelids clos'd, [pos'd ;
' And those dear hands my decent limbs com-
' This boon alone I wish'd thee to impart, 351
' This wish alone lay dormant at my heart.
' But now, alas ! though first of Grecian names,
' Admir'd and envy'd by Thessalian dames,
' I, like an handmaid, now am left behind,
' Bereav'd of all tranquillity of mind.
' By thee rever'd, in dignity I shone,
' And first and last for thee unloos'd my zone.
' For unrelenting hate Lucina bore,
' Thee, one lov'd son, she gave, but gave no more.
' Alas ! not ev'n the visions of the night 560
' Foretold such fatal woes from Phrixus' flight.'

Thus mourn'd Alcimeda ; her handmaids hear,
Sigh back her sighs, and answer tear with tear.
Then Jason these consoling words address'd,
To sooth the rising anguish of her breast :
' Cease, mother, cease excess of grief to show,
' Oh ! cease this wild extravagance of woe.
' Tears cannot make one dire disaster less ;
' They cherish grief, and aggravate distress. 370
' Wisely and justly have the gods assign'd
' Unthought-of miseries to all mankind.

' The lot they give you, though perchance severe
' Confiding in Minerva, bravely bear.

' Minerva first this bold adventure mov'd,
' Apollo, and the oracles approv'd.
' These calls of heaven our confidence command,
' Join'd with the valour of this princely band.
' Haste, royal mother, to your native tow'rs,
' Pass with your handmaids there the peaceful
" hours. 380

' Forbode not here calamities to come :
' Your female train will re-conduct you home.'

He spoke ; and from the palace bent his way,
Graceful of port ; so moves the god of day
At Delos, from his odour-breathing fanes,
Or Claros situate on Ionian plains,
Or Lycia's ample shores, where Xanthus leads
His winding waters through irriguous meads.
Thus Jason march'd majestic through the crowd,
And fame auspicious rais'd her voice aloud : 390
When lo ! the priestesses of Diana came,
Their guardian goddess, Iphias was her name,
Bending with age, and kiss'd the chief's right
hand ;

In vain she wish'd to speak ; the hasty band
With speedy footsteps from the dame withdrew,
And Jason mingled with his valiant crew.
Then from the tower-fenc'd town he bent his way,
And reach'd ere long the Pagasæan bay ;
There join'd his comrades waiting on the coast,
And there saluted his confederate host. 400

When from Iolcos, lo, the wondering train
Observe Acastus hastening o'er the plain,
And with him Argus, his compeer and friend ;
Unknown to Pelias, to the ship they tend.
Argus around his brawny shoulders flung
A bull's black spoils that to his ankles hung.
Acastus wore a mantle rich and gay,
Wrought by his sister lovely Pelopa.
Thus rob'd, the chiefs approach'd the crowded
shore :

Illustrious Jason stay'd not to explore 410
What cause so long detain'd them, but commands
To council all the delegated bands.
On shrouds and sails that cover'd half the beach,
And the tall, tapering mast, in order each,
The heroes sat ; then rising o'er the rest,
His bold associates Jason thus address'd :

' Since now the itores lie ready on the strand,
' And since our chiefs and arms are all at hand,
' No longer let us waste the golden day,
' But the first summons of the breeze obey. 420
' And, since we all with equal ardour burn
' For Colchian spoils, and hope a safe return,
' Impartial choose some hero fam'd afar
' To guide the vessel, and conduct the war,
' Let him, your sovereign chief, with foreign foes
' The terms of treaty, and of fight propose.'

He spoke ; with earnest eyes the youthful band
Mark bold Alcides for supreme command ;
On him with voice unanimous they call,
Own him their leader, and the lord of all. 430

In the mid circle sat the godlike man,
His broad right hand he wav'd, and thus began :
' Let none to me this arduous task assign,
' For I the glory with the charge decline.

"Jason alone shall lead this valiant band,
"The chief who rais'd it, let that chief com-
mand."

Thus briefly spoke th' unconquerable man;
Loud approbation through the circle ran:
Then Jason rose (complacence fill'd his breast),
And thus the pleas'd attentive throng address'd:
'Friends and associates, since your wills decree
'This great, this honourable trust to me, 442
'No longer be our enterprise delay'd:
'To Phœbus first be due oblations paid;
'Let then a short repast our strength renew:
'And, till my herdsman to our gallant crew
'With beeves return, the best my stalls contain,
'Strive we to launch our vessel in the main.
'And when close stow'd our military stores,
'Each take his post, and ply the nimble oars.
'To Phœbus first, Embasian Phœbus, raise, 451
'The smoking altar; let the victims blaze.
'He promis'd, if due rites to him I pay, [way.
'To point through ocean's paths our dubious
He said, and instant to the task he flew;
Example fir'd his emulative crew.

They heap'd their vestments on a rock, that stood
Far from the insults of the roaring flood, 458
But, in times past, when win'try storms prevail'd,
Th' encroaching waves its towering top assail'd.
As Argus counsel'd, with strong ropes they bound,
Compacting close, the vessel round and round;
Then with stout nails the sturdy planks they
join'd,
To brave the fury of the waves or wind:
Next delv'd with spades a channel deep and wide,
Through which the ship might launch into the
tide.

Near to the water deeper was the way,
Where wooden cylinders transversely lay;
On these they heav'd the vessel from the plain,
To roll her, smoothly-gliding, to the main. 470
Then to the benches, tapering oars they fix'd;
A cubit's measure was the space betwixt:
This was the station for the labouring bands,
To tug with bending breasts, and out-stretch'd
hands.

First Tiphys mounted on th' aerial prow
To issue orders to the train below,
That at his word, their strength uniting, all
Might join together, and together haul.
With eager look th' attentive heroes stand,
And wait impatient till he gave command; 480
Then all at once, with full exerted sway,
They move her from the station where she lay,
And pushing instant, as the pilot guides,
On smooth round rollers Pelian Argo glides;
Glibly she glides; loud shouts the jovial band;
They haul, they pull, they push her from the
strand.

Beneath the huge hulk groan the rollers strong;
Black smoke arises as she moves along;
With swift descent she rushes to the main:
Coercive ropes her rapid race restrain. 490
Then, next, their sails they hoisted, fix'd their oars,
The mast erected, and embark'd the stores.
By lots on benches were the heroes plac'd,
And with two heroes every bench was grac'd.

On great Alcides, formidable name,
And on Ancæus, who from Tegea came,
With voice unanimous, the martial host
Bestow'd the centre's honourable post.
To watchful Tiphys was the helm assign'd, 499
To stem the waves, and catch the favouring wind.
This done, with stones beside the shore which lay,
They rear'd an altar to the god of day,
Embasian Phœbus, and the surface round
With the dry branches of an olive crown'd.
Meanwhile the herdsman drove two beeves well
fed

From Jason's stalls; youths to the altar led
The victims; some brought water from the lake;
Some the due offering of the salted cake.
Jason, while these the sacrifice prepare,
Thus to his parent god prefers his pray'r: 510
'Patron of Pagasæ, thine ear we claim,
'Guard of the city grac'd with Æson's name:
'When to consult thine oracle I went,
'It promis'd to reveal this great event,
'The final issue of our bold emprise:
'On thee, chief author, all our hope relies.
'Conduct my comrades to the far-fam'd fleece,
'Then safe restore them to the realms of Greece.
'And here I vow, whatever chiefs return,
'So many bulls shall on thine altar burn; 520
'A sacrifice at Delphos is decreed,
'And in Ortygia shall the victims bleed.
'But now these humble offerings which we pay,
'Gracious accept, far-darting god of day.
'Be thou, O father, our auspicious guide,
'When hence we sail across the sounding tide.
'Smooth the rough billows, and let breezes bland
'Propitious waft us to the Colchian land.'

Thus pray'd he suppliant, and prepar'd to make
The sacred offering of the salted cake. 430
Alcides, fam'd for manly strength and sway,
And bold Ancæus rose the beeves to slay.
Alcides' club impress'd a deadly wound
On the steer's front, and fell'd him to the ground.
Thy axe, Ancæus, at one sturdy stroke,
The steer's skull fractur'd, and the neck-bone
broke,
Down fell the victim, floundering with the blow,
Prone on his horns, and plough'd the sand below.
The ready train, that round in order stood,
Stab the fallen beeves, and shed the life-warm
blood; 540

Then from the body strip the smoking hide,
The beasts they quarter, and the joints divide;
The thighs devoted to the gods they part,
On these the fat, involv'd in cawls, with art
They spread, and as the lambent flame devours,
The Grecian chief the pure libation pours.
Joy fill'd the breast of Idmon to behold,
How from the thighs the flame reluctant roll'd
In purple volumes, and propitious smoke;
And thus the seer, inspir'd by Phœbus, spoke:
'Though various perils your attempt oppose,
'And toils unnumber'd bring unnumber'd woes;
'Yet shall ye safe return, ye sons of Greece, 553
'Adorn'd with conquest, and the golden fleece.
'Me cruel fate ordains on Asia's shore
'To die, nor ne'er behold my country more.

'And though my destiny long fix'd I knew,
 'Yet, still resolv'd, I join'd the martial crew;
 'Inflam'd with glory to the host I came,
 'Of life regardless, emulous of fame.' 560
 Thus he: the host the fate of Idmon mourn,
 But joy transports them for their wish'd return.
 The sun, remitting now his fiercer ray,
 Pours from the west the faint remains of day:
 Low as he sinks, the lofty rocks expand
 Their lengthen'd shadows o'er the distant land.
 On leafy couches now the warlike train
 Repose along the beach that skirts the main.
 Before the chiefs are savoury viands plac'd,
 And generous wines, delicious to the taste. 570
 The hours in mutual converse they employ,
 In festive songs, and undissembled joy.
 Thus at the banquet sport the young and gay,
 When mirth breaks in, and envy skulks away.
 But not unmark'd was Jason's pensive look;
 Idas beheld him, and licentious spoke:

'What doubts, what fears, do Æson's son perplex?
 'What dangers fright him, and what sorrows
 'Proclaim thy thoughts: or is thy dubious mind
 'Dismay'd with terrors of the dastard kind? 580
 'Now by this stout, unconquer'd lance, I swear,
 'On which in war victorious wreaths I bear,
 'Scorning from Jove's assistance to receive
 'Those palms, which this resistless lance can give)
 'No foes shall brave, no wiles of war withstand,
 'Though Jove frown adverse, this impetuous hand.
 'Such Idas is, for prowess fam'd afar,
 'Arene's boast, the thunderbolt of war.'

This said, the boaster seiz'd a goblet, fill'd
 With racy wine, and to the bottom swill'd. 590
 O'er his black beard and cheeks the liquor flow'd:
 Th' assembled host with indignation glow'd.
 Then Idmon rose, and boldly thus reply'd:

"Vain wretch! to brand our leader and our
 "guide; [wine,
 "And more irreverent still, thus flush'd with
 "To dare reproach superior powers divine.
 "Far different speech must cheer the social train;
 "Thy words are brutish, and thy boasts are
 "vain.

"Thus, fame reports, the Aloïdæ strove
 "Long since to irritate the powers above 600
 "By vile aspersions, infamously free;
 "Yet they in valour far exceeded thee.
 "Slain by the shafts of Phœbus, down they fell,
 "Though high aspiring, to the depths of hell."

He said; but Idas, with sarcastic sneer,
 Laughing, provok'd the venerable seer:
 'Declare, wise augur, if the gods decree,
 'The same perdition shall be hurl'd on me,
 'Which fam'd Aloëus' impious sons beset 609
 'When slain by Phœbus, and condemn'd to hell.
 'Meantime escape, or manfully withstand,
 'Vain seer, the fury of this vengeful hand.'

Thus Idas spoke, impatient of controul,
 And rising rage inflam'd his fiery soul;
 Nor had they here ceas'd fiercely to contest,
 But Jason and his friends their wrath repress'd.
 'Twas then, the jarring heroes to compose,
 Th' enchanting bard, Oeagrian Orpheus rose,

And thus, attuning to the trembling strings
 His soothing voice, of harmony he sings: 620

"How at the first, beneath chaotic sway,
 "Heaven, earth, and sea, in wild disorder lay;
 "Till nature parted the conflicting foes,
 "And beauteous order from confusion rose.
 "How in yon bright ethereal fields above
 "The lucid stars in constant orbits move;
 "How the pale queen of night, and golden sun,
 "Through months and years their radiant jour-
 neys run: [woods,

"Whence rose the mountains, clad with waving
 "The crystal founts; and hoarse-responding floods,
 "With all their nymphs; from what celestial seed
 "Springs the vast species of the serpent breed:
 "How o'er the new-created world below, 633
 "On high Olympus' summits crown'd with snow,
 "Ophion, and, from ocean sprung of old,
 "The fair Eurynome reign'd uncontroll'd:
 "How haughty Saturn, with superior sway,
 "Exil'd Ophion from the realms of day;
 "Eurynome before proud Rhea fled, 639
 "And how both sunk in ocean's billowy bed.
 "Long time they rul'd the blest Titanian gods,
 "While infant Jove possess'd the dark abodes
 "Of Dictæ's cave; yet uninform'd his mind
 "With heavenly wisdom, and his hand confin'd.
 "Forg'd by earth's giant sons, with livid rays
 "Flam'd not as yet the lightning's piercing blaze;
 "Nor roar'd the thunder through the realms
 "above,

"The strength and glory of almighty Jove."

Here the sweet bard his tuneful lyre unstrung,
 And ceas'd the heavenly music of his tongue; 650
 But, with the sound entranc'd, the listening ear
 Still thought him singing, and still seem'd to
 hear:

In silent rapture every chief remains,
 And feels within his heart the thrilling strains.
 Forthwith the bowl they crown with rosy wine,
 And pay due honours to the powers divine;
 Then on the flaming tongues libations pour,
 And wait salubrious sleep's composing hour.
 Soon as the bright-ey'd morning's splendid ray
 On Pelion's summit pour'd the welcome day, 660
 Light skimm'd the breezes o'er the liquid plain,
 And gently swell'd the fluctuating main;
 Then Tiphys rose, and, summon'd by his care,
 Embark the heroes, and their oars prepare.
 Portentous now along the winding shores
 Hoarse sounding Pagasæan Neptune roars:
 From Pelion Argo's keel loud murmurs broke,
 Urgent to sail; the keel of sacred oak,
 Endu'd with voice, and marvellously wrought,
 Itonian Pallas from Dodona brought. 670

Now on their destin'd posts, arrang'd along,
 In seemly order sat the princely throng;
 Fast by each chief his glittering armour flames:
 The midmost station bold Ancæus claims,
 With great Alcides (whose enormous might
 Arm'd with a massy club provokes the fight),
 Close plac'd beside him: in the yielding flood
 The keel deep-sinking owns the demigod.

Their hausers now they loose, and on the brine
 To Neptune pour the consecrated wine: 680

Then from his native shore sad Jason turns
His oft-reverted eye, and silent mourns.
As in Ortygia, or the Delphic fane,
Or where Ismenus laves Æotia's plain,
Apollo's altar round, the youthful choir,
The dance according with the sounding lyre,
The hallow'd ground with equal cadence beat,
And move in measure their alternate feet;
Together so Thessalia's princes sweep
With well-tim'd oars the silver-curling deep: 690
While, raising high the Thracian harp, presides
Melodious Orpheus, and the movement guides.
Dash'd by their oars, the foaming billows broke,
And loud remurmur'd to each mighty stroke.
Swift sail'd the ship, the sun refulgent beam'd,
And bright as flame their glittering armour
gleam'd,

While to their outstretch'd oars the heroes bow,
The parted ocean whitening foams below.
So shines the path, along some grassy plain,
Worn by the footsteps of the village swain. 700
Th' immortal powers that Jove's proud palace
crown,

All on that memorable day look'd down,
The godlike chiefs and Argo to survey,
As through the deep they urg'd their daring way.
Then too on Pelion's cloud-capt summit stood
The nymphs that wander in that sacred wood;
Wondering they view'd below the sailing pine,
(Itonian Pallas fram'd the work divine)
And bold Thessalia's labouring heroes sweep
With stretching oars the navigable deep. 710
Lo! from the mountain's topmost cliff descends
The Centaur Chiron; to the shore he bends
His hasty footsteps: on the beach he stood,
And dipp'd his fetlocks in the hoary flood.
He hail'd the heroes with his big broad hand,
And wish'd them safe to gain their native land.
With Chiron came Chariclo to the shore;
The young Achilles in her arms she bore.
Peleus, his fire, with secret pleasure smil'd,
As high in air she rais'd the royal child. 720
And now the winding bay's safe precincts past,
Thessalian Argo plough'd the watery waste;
On Tiphys' care the valiant chiefs rely'd,
To steer the vessel o'er the foaming tide,
The smooth well-modell'd rudder to command,
Obsequious to the movement of his hand.
And next inserting in the keel below
The mast tall-tapering, to the stern and prow,
With ropes that through the rolling pulleys glide,
They rear upright, and firm on every side. 730
Then high in air the swelling sails they raise,
While on their bosoms buxom Zephyr plays.
With favouring gales their steady course they
keep

To where Tifæum frowns upon the deep.
Meanwhile sweet Orpheus, as they sail'd along,
Rais'd to Diana the melodious song, [sides,
Who sav'd them, where her guardian power pre-
From treacherous rocks that lurk beneath the tides.
The fish in shoals, attentive to his lay,
Pursu'd the poet o'er the watery way; 740
And oft emerging from their liquid sphere,
Sgrove more distinct his heavenly notes to hear.

As sheep in flocks thick-pasturing on the plain
Attend the footsteps of the shepherd-swain,
His well-known call they hear, and fully fed,
Pace slowly on, their leader at their head;
Who pipes melodious, as he moves along,
On sprightly reeds his modulated song:
Thus charm'd with tuneful sounds the scaly train
Pursu'd the flying vessel o'er the main. 750

And now the winds with favouring breezes blew,
Corn crown'd Thessalia lessen'd to the view,
The Grecian heroes pass by Pelion's steep,
Whose rocky summit nodded o'er the deep.
Now Sepias' cliffs beneath the waves subside,
And sea-girt Sciathos surmounts the tide.
Next, but far distant, was Pirefæ seen,
(Built on Magnesia's continent serene)
And Dolops' tomb, for this pacific shore,
Blest with mild evening's soften'd gales, they bore.
To him with victims was an altar crown'd, 760
While night prevail'd, and ocean roar'd around.
Two days they tarried, till propitious gales
Rose with the third, and bellied all their sails.
Assiduous then, the well-known shore they fill,
The shore call'd Aphetæ of Argo still.
Next Melibœa, on Thessalia's shore,
They pass, where winds and thundering tempests
roar.

At early dawn, incumbent o'er the deep,
They view high Omole's aspiring steep. 770
Next by the streams of Amyrus they steer,
And where thy vales, Eurymena, appear,
And Ossa and Olympus' shady brow;
Loud from deep caverns gush the waves below.
By night beside Pellene's heights they sail,
And rough Oanastra frowning o'er the vale.
But when the morn display'd her orient light,
Tall Athos rose conspicuous to the sight;
Which though from Lemnos far remov'd it lay,
As far as ships can sail till noon of day, 780
Yet the proud mountain's high-exalted head,
A gloom umbrageous o'er Myrina spread.
All day till eve the soft indulgent gales
Their succour lent, and fill'd the swelling sails.
But when with eve the breezes ceas'd to blow,
The mariners to Sintian Lemnos row,
Ill-fated island! where the female train
Had all the males, the year preceding, slain.
For, deep-enamour'd with the nymphs of Thrace,
The men declin'd the conjugal embrace; 790
Their wives they slighted, and unwary led
War's pleasing spoils, fair captives, to their bed.
For angry Venus robb'd of love's delights
The Lemnian females, for neglected rites.
Ah miserable train! with envy curs'd,
And jealousy, of passions far the worst!
One fatal night this unrelenting crew
Their mates and all the lovely captives slew,
And every male, left in the course of time
Should rise some hero to revenge the crime. 800
Hypsipyla alone, illustrious maid,
Spar'd her sire Thoas, who the sceptre sway'd.
With pious care, in reverence to his age,
In a capacious ark she plac'd the sage,
Confiding in the mercy of the wave
The monarch from the massacre to save.

Some faithful fishers, to their mandate just,
 Convey'd with care the delegated trust
 Safe to a neighbouring sea-surrounded shore,
 Cēnea nam'd, so nam'd in days of yore, 810
 Now Sicinum; from Sicinus it takes
 Its title, whom a Naiad of the lakes,
 The nymph Cēnea, beautiful and fair,
 Compress'd by Thoas, to the monarch bare.
 The widow'd Lemnians, though by waves se-
 cur'd,

Oft shone in arms, to martial toils inur'd.
 To feed their cattle was their daily care,
 Or cleave the furrow with the crooked share:
 Expert at these, Minerva's arts they scorn'd,
 Which once employ'd them, and which once
 adorn'd. 820

Oft to the main, oppress'd with dire alarms,
 They look'd; for much they fear'd the Thracian
 arms.

And when Thessalian Argo caught their view,
 Quick from Myrina to the shore they flew.
 All clad in glittering arms they press'd the strand,
 Impetuous; (like the Bacchanalian band,
 When with raw flesh their horrid feasts they
 close): [foes.]

They deem'd the vessel stor'd with Thracian
 Hypsipyla advanc'd among the rest,
 In the bright armour of her father dress'd; 830
 Anxious, astonish'd all the dames appear,
 And by their silence testified their fear.

Meanwhile Æthalides the heroes send;
 To him their peaceful mandates they commend.
 Invested with the office of the god,
 They grace their herald too with Hermes' rod,
 Hermes his fire; who bless'd his favourite heir
 With memory nor time, nor place impair.
 In vain around him Acheron's waters roll;
 They pour no dull oblivion o'er his soul. 840

To him the fates this privilege bestow,
 By turns to wander with the shades below:
 By turns with men to view the golden day,
 And feel the sun's invigorating ray.
 But why expatiate on such themes as these?
 Why tell the fame of great Æthalides?

The herald to Hypsipyla address'd,
 With mild benevolence, this joint request:
 That now, at evening-close, the friendly land
 Might hospitably treat this gallant band, 850
 Who fear'd at morn to hoist their swelling sails,
 For Boreas blew with unpropitious gales.

The queen had summon'd to the council-hall
 The Lemnian dames, the dames obey'd her call:
 Who mildly, with persuasion in her look,
 In order rang'd, the heroines bespoke:

'Let us, my mates, and ye my words attend,
 Commodious presents to these strangers send;
 Such as their friends to mariners consign,
 Salubrious viands, and delicious wine: 860
 So will they peaceful on our borders stay,
 Nor need compel them to the town to stray.
 Here will they learn the story of our guilt,
 The vows we broke, the kindred blood we
 spilt;

'And sure a tale, thus horrid, must appear
 Cruel and impious to a foreign ear.

'These are the counsels of your faithful friend,
 Prompt to advise, and steady to defend.
 She who can furnish counsel more discreet,
 Now let her offer—for this cause we meet.' 870
 Thus spoke the queen, and press'd her father's
 throne,

A royal seat, compos'd of solid stone.
 Then rose Polyxo, venerable dame,
 Once the queen's nurse, oppress'd with age, and
 lame;

A staff sustain'd her (for her limbs were weak)
 Tottering with age, yet vehement to speak.
 Near her four damsels, blooming, fresh and fair,
 Sat crown'd with ringlets of the whitest hair.
 Full in the midst she stood, then rais'd her head,
 Her back was bent with years, and thus she
 said: 880

'The queen's advice I greatly must commend,
 Commodious presents to our guests to send.
 And what more saving counsel shall I give
 To those my friends who shall hereafter live;
 Whene'er the sons of Thrace, or hostile hosts
 From other kingdoms shall infest our coasts;
 Which well may happen, we must all allow,
 As this invasion that alarms us now?

'But should some god avert th' impending ill,
 Yet greater evils may befall, and will. 890

'For when the oldest die, as die they must,
 And our wise matrons be transform'd to dust,
 And you, now young, oppress'd at last with
 age,

'Shall unprolific tread life's irksome stage:
 What wretched mortals ye, who then survive!
 Who to their labour, then, the steers shall drive?
 Will oxen then their necks spontaneous bow
 Beneath the yoke, and drag the ponderous
 plough?

'Or will they reap the harvest on the plain,
 And every autumn house the golden grain? 900
 I, though preserv'd to this important day,
 (For death from me abhorrent turns away),
 Yet, ere the sun completes his annual round,
 If right I judge, shall mingle with the ground,
 Lodg'd in the lap of earth, at nature's call,
 And 'scape the ruin that involves you all.

'Hear then, young damsels, what my years ad-
 vise;

'Before you now the fair occasion lies:
 Commit your city to these strangers' care, 909
 Let them your mansions and possessions share.'

She spoke, pleas'd murmurs fill'd the spacious
 hall:

Polyxo's counsel was approv'd by all.

From her sire's throne Hypsipyla arose,
 Thus in few words the conference to close:

'My mates, since all this sage advice commend,
 An instant message to the ship I send.'

She said, and to Iphinoë gave command;

'Haste, find the leader of yon martial band,

'Invite him (of our amity a proof

'To lodge beneath my hospitable roof: 920

'There time will furnish leisure to relate

'The genius and the manners of our state.

'But let his comrades rove, as pleasure leads,

'And pitch their tents along the fertile meads;

" Or to the tower-defended town repair,
" Assur'd of safety and our royal care."

Th' assembly rose, as thus the princess spoke,
Then to the regal dome her way she took.
Iphinoë, mindful of the queen's command,
Approach'd the Minyans scatter'd o'er the strand,
Who throng'd around her, eager to explore 931
Wherefore she came, and what commands she bore.

Then thus she said: " Strangers, to you as friends
" Hypsipyla, the seed of Thoas, sends
" Her faithful herald with this strict command,
" To find the leader of your martial band;
" Him she invites (of amity a proof)
" To lodge beneath her hospitable roof:
" There time will furnish leisure to relate
" The genius and the manners of our state. 940
" But let his comrades rove, as pleasure leads,
" And pitch their tents along the fertile meads;
" Or to the tower-defended town repair,
" Assur'd of safety, and the royal care."

These words were grateful to the warlike band;
From her they learn'd whose sceptre rul'd the land;

Instant they urg'd their chief's assent, and all
Prepar'd obsequious to accept the call.
A mantle doubly lin'd, of purple hue,
The son of Æson o'er his shoulders threw. 950
This Pallas gave him, when, with wond'rous art,
She plann'd his ship, and measur'd every part.
'Twere safer to survey the radiant globe
Of rising Phœbus, than this splendid robe.
Full in the middle beam'd a crimson blaze,
The verge surrounding darted purple rays.
In every part historic scenes were wrought;
The moving figures seem'd inform'd with thought.

Here, on their work intent, the Cyclops strove
Eager to forge a thunderbolt for Jove; 960
Half-rough, half-form'd the glowing engine lay,
And only wanted the fire-darting ray;
And this they hammer'd out on anvils dire;
At each collision flash'd the fatal fire.
Not distant far, in lively colours plann'd,
Two brothers, Zethus and Amphion stand,
Sons of Antiopa: no turrets crown'd
Thy city, Thebes, but walls were rising round.
A mountain's rocky summit Zethus bore—
On his broad back, but seem'd to labour sore. 970
Behind, Amphion tun'd his golden shell,
Amphion, deem'd in music to excel:
Rocks still pursu'd him as he mov'd along,
Charm'd by the music of his magic song.
Crown'd with soft tresses, in a fairer field,
Gay Venus toy'd with Mars's splendid shield.
Down from her shoulder her expanded vest
Display'd the swelling beauties of her breast.
She in the brazen buckler, glittering bright,
Beheld her lovely image with delight. 980
On a rich plain appear, not distant far,
The Taphians, and Electryon's sons at war;
Fat steers the prize for which the swains contend,
Those strive to plunder, these their herds defend;
The meads were moist with blood and rosy dew:
The powerful many triumph'd o'er the few.

Two chariots next roll'd lightly o'er the plains,
This Pelops drove, and shook the sounding reins;

Hippodamia at his side he view'd:
In the next chariot, Myrtilus pursu'd, 990
And with him Oenomas; approaching near,
At Pelops' back he aim'd the vengeful spear;
The faithless axle, as the wheels whirl'd round,
Snapp'd short, and left him stretch'd along the ground.

Here young Apollo stood, in act to throw
The whirring arrow from the twanging bow,
At mighty Tityrus aim'd, who basely strove
To force his mother, erst belov'd by Jove:
He from fair Elara deriv'd his birth,
Though fed and nourish'd by prolific earth. 1000
There Phryxus stoop'd to listen to the ram,
On whose broad back the Hellespont he swam.
The beast look'd speaking: earnest could you gaze,

The lively piece would charmingly amaze.
Long might you feast your eye, and lend an ear,
With pleasing hope the conference to hear.

Such was the present of the blue-ey'd maid—
In his right hand a missile lance he sway'd,
Which Atalanta, to reward the brave,
Sure pledge of friendship, to the hero gave, 1010
When on the breezy Mænalus she rovd,
And wish'd the company of him she lov'd;
But he, of suitors' amorous strife afraid,
Repress'd the fond intention of the maid.
Thus robb'd, thus arm'd, he to the city went,
Bright as a star that gilds the firmament,
Which maids assembled view with eager eyes
High o'er their roof in orient beauty rise.
On the bright signal, as it darts its rays,
Attentive they with silent transport gaze. 1020
Each, with this omen charm'd, expects, though late,

Return'd from distant climes her destin'd mate.
Thus shone the chief, for high achievements known,
Majestic as he mov'd to Lemnos' town.
The noble heroines his footsteps meet,
With courteous joy the Grecian guest to greet,
Whose downcast eye ne'er wander'd, till he came

To the proud palace of the royal dame;
Obsequious damsels at the portal wait,
And quick unbar the double-folding gate: 1030
Then through the various courts extending wide,
And stately rooms, Iphinoë was his guide;
On a bright throne, with rich embroidery grac'd,
Fronting her sovereign she the hero plac'd.
Th' embarrass'd queen, her face with blushes spread,

In courteous terms address'd the prince, and said:
" Why, gentle stranger, should your warlike train
" At distance far, without the walls remain?
" The men who till'd these ample fields before,
" Now turn with furrows on the Thracian shore.
" But hear, while I our matchless woes relate;
" So shall you know the story of our fate. 1040
" When o'er this realm my father Thoas reign'd,
" The Lemnian youth, to fraud and rapine train'd,

" On Thracian borders seiz'd the trembling prey,
 " And brought those flocks, and lovely maids
 away.
 " This Venus plann'd, with mischievous intent,
 " And fierce among them fatal discord sent.
 " Their wives they loath'd, and vainly impious
 led 1049
 " War's spoils, fair captives, to the lawless bed.
 " Long we endur'd, forgiving insults past,
 " And hop'd the faithless would reform at last.
 " In vain; each day but doubled our disgrace,
 " Our children yielded to a spurious race.
 " The widow'd mother, the discarded maid,
 " Forlorn, neglected through the city stray'd.
 " No tender pity touch'd the parent's breast,
 " To see his darling child abus'd, oppress'd
 " Beneath a stepdame's proud, imperious sway:
 " No sons would then maternal duty pay, 1060
 " Nor, as before, their mother's cause defend;
 " No sister then to sister prov'd a friend:
 " But the gay troops of Thracian captives fair
 " Enthrall'd the men, and challeng'd all their
 care;
 " At home, abroad, the first, at pleasure's call,
 " To share the banquet, and conduct the ball.
 " At length, but strange! some favouring power
 divine
 " In female minds inspir'd this bold design,
 " That, when return'd from Thracia's hateful
 shore,
 " Our roofs these traitors might protect no more;
 " That, thus constrain'd, they might forego their
 crimes, 1071
 " Or with their captives fly to distant climes.
 " They sail, return, the few remaining males
 " Demand, then quit us with auspicious gales;
 " And now the frigid fields of Thrace they
 plough,
 " And countries whiten'd with Sithonian snow,
 " Haste then, conduct your comrades to the
 town:
 " Here fix your seat, and Lemnos is your own.
 " And if to high dominion you aspire, 1079
 " Reign here, and wield the sceptre of my fire.
 " You must approve; for not so fair a coast,
 " Or isle so fertile can the Ægean boast.
 " Haste to your friends, and make my pleasures
 known,
 " Nor let them longer lodge without the town."
 Artful she spoke, forbearing to relate
 How in one night each woman slew her mate.
 Then Jason thus: " Whate'er your bounty
 grants,
 " Stores for our voyage, or our present wants,
 " Pleas'd we accept: I to my valiant bands
 " Will speed to signify your kind commands, 1900
 " Then soon conduct my comrades to the town:
 " But still, O queen, still wear your father's
 crown.
 " Not from disdain I shun imperial sway,
 " But great achievements call me hence away."
 He spoke, and gently press'd her fair right hand,
 Then sought his comrades scatter'd o'er the strand,
 Unnumber'd damsels round the hero wait,
 Gazing with joy, and follow to the gate;

Then grateful presents in swift cars convey 1099
 To the land's margin, where the warriors lay.
 When Jason now to his adventurous bands
 Had signified Hypsipyla's commands,
 With eager joy the Minyans haste to share
 Her friendly roofs, and hospitable fare.
 The queen of love Thessalia's chiefs inspires,
 For Vulcan's sake, with amorous desires;
 That Lemnos, Vulcan's sacred isle, agen
 May flourish, peopled with a race of men.
 Great Jason hastens to the regal walls; 1109
 The rest proceed where chance or pleasure calls,
 Save great Alcides: with a chosen train,
 Ambitious he in Argo to remain.
 Eager with joy the jolly crowds advance
 To share the genial feast, or lead the dance;
 To Venus' and to Vulcan's fane they throng,
 And crown the day with victims and with song.
 Sunk in soft ease th' enamour'd heroes lay,
 (Their voyage still deferr'd from day to day)
 And longer still, and longer had declin'd,
 Full loth to leave the lovely place behind, 1120
 Had not Alcides, the fair dames apart,
 Thus spoke incens'd the language of his heart:
 " Mistaken comrades, does our kindred, say,
 " From our own country drive us far away?
 " Or are we fondly thus enamour'd grown
 " Of foreign damsels, and despise our own?
 " Here shall we stay to till the Lemnian fields?
 " Small fame to heroes this base commerce yields.
 " No god, propitious to the sons of Greece, 1129
 " Without our toil, will grant the golden fleece.
 " Our course pursue we; for the breeze invites;
 " And let him revel in love's soft delights,
 " Who here but stays to propagate his kind,
 " And leave a memorable name behind."
 Alcides thus: none dar'd to lift his eye,
 To breathe a murmur, or to make reply;
 But keenly stung with this sarcastic style,
 They haste to leave the lov'd Vulcanian isle.
 Soon as the damsels their fix'd purpose knew,
 Around the chiefs in busy crowds they flew. 1140
 As bees from some deep-cavern'd rock proceed,
 Buzz o'er the lilies of the laughing mead,
 The sweets of all ambrosial herbs devour,
 And suck the soul of every fragrant flow'r;
 Thus they in swarms the parting Greeks address,
 With hands salute, with soothing words caress;
 Then to the pow'rs above with fervour pray,
 Safe to their arms the heroes to convey.
 Hypsipyla the hand of Jason press'd, 1149
 And thus with tears the parting chief address'd:
 " Adieu!—and may you with the sons of Greece
 " Return triumphant with the golden fleece.
 " Here shall you then my father's sceptre sway,
 " And his domains your sovereign will obey.
 " The neighbouring states will furnish large sup-
 plies,
 " And a vast empire by your wisdom rise.
 " But if on nobler plans your thoughts are bent,
 " And vainly I presage the wish'd event;
 " Absent or present, to my memory kind,
 " Still let Hypsipyla possess your mind. 1160
 " And if with offspring Heaven should bless me, say,
 " How shall I then my Jason's will obey?"

The prince beheld the queen with rapturous look,

And thus with mild benevolence bespoke :

' May these events, foredoom'd by heaven's decree,

' Successful prove, Hypsipyla, to thee.

' But still of Jason nobler thoughts retain :

' Enough for me o'er my own realms to reign ;

' May but the powers of heaven (I ask no more)

' Safe reconvey me to my native shore. 1170

' If that's denied, and you, my source of joy,

' Bear, the soft token of our loves, a boy ;

' Him, when mature, in kindness to your friend,

' My parents' solace, to Iolchos send ;

' If then perchance the venerable pair

' Survive their woes, and breathe this vital air,

' There may he live, from Pelias far remov'd,

' By Grecians honour'd, who his father lov'd.'

He spoke his last farewell : then first ascends
The ship, and with him his illustrious friends. 1180

In their due stations plac'd, each seiz'd an oar,

While Argus loos'd the cable from the shore.

With active strokes the vigorous heroes sweep

The sounding bosom of the billowy deep.

As Orpheus counsell'd, and mild evening near,

To Samothrace, Electra's isle, they steer,

That there initiated in rites divine,

Safe might they sail the navigable brine.

But, muse, presume not of these rites to tell :

Farewell, dread isle ! dire deities, farewell ! 1190

Let not my verse these mysteries explain ;

To name is impious, to reveal profane.

Thence the black main they lash'd with all their
might,

Thrace on their left, and Imbros on the right ;

And safely, with the now-declining sun,

To far-projecting Chersonesus run.

Then stemm'd they, aided by the southern gales,

The stormy Hellespont with swelling sails,

Left the high-furging sea with morning light,

And reach'd Sigæum with approaching night.

Dardania past, and high-exalted Ide, 1201

They saw Abydos on the stormy tide.

Thence sail'd they by Percote's pasture lands,

Pityæa's meadows, and Abarnis' sands :

And nightly, favour'd by the friendly blast,

The purple-foaming Hellespont they past.

An ancient island in Propontis lies,

That towering lifts its summit to the skies ;

Near Phrygia's corn-abounding coast it stands,

And far-projecting all the main commands ; 1210

An island this, save where the isthmus' chain

Connects both lands, and curbs the boisterous
main. [roar,

Round its rough sides the thundering tempests
And a safe bay is form'd on either shore.

Æsepus' waters near this isthmus fall :

And bordering tribes the mountain Arcton call.

On this rough mountain, barbarous, fierce, and
bold,

Dwell mighty giants, hideous to behold ;

And, wonderful to tell ! each monster stands

With six huge arms, and six rapacious hands ; 1220

Two pendent on their shaggy shoulders grow,

And four deform their horrid sides below.

TRANS. II.

The lowland isthmus, verging to the main,

The Dolian's till'd, and all the fertile plain.

O'er these reign'd Cyzicus, the brave, the young,

Who from the gallant warrior, Æneus, sprung.

The daughter of Euforus, first in fame,

Bore Cyzicus, Æneta was her name.

Secure they liv'd, and free from war's alarms,

Though earth's huge sons were terrible in arms.

Sprung from the monarch of the hoary tide, 1231

On Neptune's aid the Dolian race rely'd.

To this fair port, with gentle-breathing gales,

This friendly shore, Thessalian Argo sails.

Here the rope-fasten'd stone they heave on shore,

Which serv'd as anchor to the ship before,

But now too light, so Typhis bids, they bring,

And leave it at the pure Artacian spring ;

Then choose another on the rocky bay, 1239

More ponderous far, the rolling ship to stay.

There the first stone unnumber'd years remain'd,

Till, as Apollo's oracle ordain'd,

Th' Ionians found, with rites mysterious grac'd,

And sacred to Jasonian Pallas plac'd.

Soon as the Dolians, near approaching, knew

Thessalian Argo, and the godlike crew,

Led on by Cyzicus they haste to meet

The princely band, and amicably greet ;

Invite them down the winding bay to fall,

And fix their cable near the city-wall. 1250

Thus friendly treated, the Pelasgic train

Strive with their oars th' interior port to gain.

Then first Ecbaſian Phœbus they adore,

And rear an altar on the sounding shore.

To them the king dispatch'd, with heart benign,

Fat sheep, and strong exhilarating wine.

For thus the sacred oracle foretold,

' When here arrives a band of heroes bold,

' With kind complacence treat the godlike crew,

' Meet not in arms, but pay them honours due !'

Scarce had the down the monarch's cheeks o'er-

spread ; 1261

No children yet had blest'd the nuptial bed.

Clita, his lovely queen, the young, the fair,

Renown'd for beauty, and her golden hair,

Sprung from Percosian Merops, still remains

A stranger to Lucina's cruel pains.

Late from her father's court the king convey'd,

With ample dower enrich'd, the blameless maid ;

Yet he neglects the genial bed, and feasts,

All fears far banishing, with foreign guests. 1270

Oft he inquires of Pelias' stern command,

And why the heroes left their native land.

As oft they ask'd what cities neighbouring lay,

And in Propontis which the safest bay.

But scanty knowledge could the king bestow,

Though it behov'd them much these truths to

know.

When morning rose, the Dindymean steep

Some mount, to view the navigable deep,

And all its winding bays ; the road they came

They honour'd with illustrious Jason's name. 1280

The chiefs, who chose aboard the ship to stay,

Remov'd her from the moorings where she

lay.

Meanwhile the sons of earth, a numerous train,

From their bleak mountains rush into the plain,

R

Besiege the pervious bay, and strive to block
 Its mouth with massy fragments from the rock;
 Intending there Thessalia's pine to keep
 Hemm'd up, like some huge monster of the deep.
 But Hercules remain'd: his bow he drew,
 And heaps of giants with his arrows flew. 1290
 The rest enrag'd, rough, rocky fragments tore,
 Hurl'd high in air, and thunder'd from the shore.
 (This labour still for Hercules remain'd,
 By Juno, Jove's imperial queen, ordain'd)
 And fiercely now the glowing battle burn'd,
 When lo! the chiefs from Dindymus return'd,
 Attack'd the desperate giants in the rear,
 And dealt destruction with the dart and spear;
 Till earth's fierce sons, defil'd with wounds and
 gore,

Dropp'd dead: their bodies cover'd half the
 shore. 1300

As near the sea's broad brink, with stardy strokes,
 Assiduous woodmen fell aspiring oaks;
 Then draw them in due order from the flood,
 And thus well drench'd they cleave with ease the
 wood:

Thus at the entrance of the hoary bay,
 The frequent corse of many a giant lay;
 Some, tumbled headlong, made the sea their grave,
 While their legs rose above the briny wave;
 Some o'er the sands their horrid visage show,
 Their feet deep-rooted in the mud below. 1310
 Thus their huge trunks afford abundant fane
 To Neptune's fishes, and the birds of air.
 Soon as concluded was the bloody fray,
 And favouring breezes call'd the chiefs away,
 They loos'd; o'er swelling ocean southern gales
 Breath'd all day long, and fill'd their bellying
 sails.

Night rose, the favouring gales no longer last,
 The ship drives backward with the stormy blast.
 Again they harbour on the friendly coast,
 Where late the Dolians entertain'd the host; 1320
 And round the rock the steady cable bind,
 The rock ev'n now to sacred fame consign'd.
 Here through the gloom of night again they came,
 And knew not that the country was the same.
 Nor knew the Dolians, so dark night prevail'd,
 That back to Cyzicum the Greeks had sail'd;
 But deem'd the chiefs a band of Macrian foes:
 To arms they call, and force to force oppose.

A gleamy lustre glanc'd along the field,
 While spear met spear, and shield encounter'd
 shield. 1330

In sun-scorch'd bushes thus the bickering blaze
 Flames forth, and crackling on the branches
 preys.

Dire was the conflict; on the fatal plain
 Their prince, alas! was number'd with the slain,
 His queen and bridal bed beheld he ne'er again. }
 For Jason spy'd the prince advancing near,
 And through his bosom plung'd the furious spear;
 The ribs it broke, and circumscrib'd his date,
 Wing'd with th' inevitable will of fate.
 Fate, like a wall, devoted man surrounds, 1340
 And fast confines him in its circling bounds.
 Himself he deem'd, in that disorder'd fight,
 Vainly he deem'd: protect'd by the night;

The favouring night, alas! produc'd his bane,
 And chiefs unnumber'd with their prince were
 For Hercules, with his all-conquering bow, [slain.
 Dispatch'd Telecles to the shades below,
 And Megabrontes: by Acastus' hand
 Pale Sphodris lay extended on the strand.
 Peleus to Pluto's dark dominions gave 1350
 Zelys the hardy, and Gephyrus brave.
 Bold Telamon, well-skill'd the lance to wield,
 Left Basiueus expiring on the field.
 Next Idas vanquish'd Prometheus by his side;
 By warlike Clytius Hyacinthus dy'd.
 Fair Leda's sons, in bloody combat skill'd,
 Fierce Megaloffacus and Phlogius kill'd.
 And Meleager added two to these,
 Itymoneus and valiant Artaces.

These all were chiefs in fighting fields approv'd,
 Deplor'd as heroes, and as brothers lov'd. 1361

The rest for safety on their flight rely
 (As trembling doves before the falcon fly);
 Then to the city-gates tumultuous press,
 And raise the piercing cry of deep distress:
 The city mourn'd: they deem'd, return'd from
 That hostile Macrians had renew'd the war. [far,

But when the rosy morn began to wake,
 All found their irretrievable mistake.
 Heart-rending grief oppress'd the Grecian train,
 To see the hospitable monarch slain, 1371
 A clay-cold corse, extended on the shore,
 Deform'd with dust, and all besmear'd with gore.
 The Greeks and Dolians, sunk in deep despair,
 Mourn three long days, and rend their graceful
 hair.

A tomb they rear upon the rising ground,
 And clad in brazen arms thrice march around;
 Then for the monarch, on Limonia's plain,
 Of rites observant, funeral-games ordain.
 There stands the tomb, adorn'd with honours
 due, 1380

Which distant ages will with sorrow view.
 When the sad news at Clita's ear arriv'd,
 Not long the queen her monarch's fate surviv'd;
 But woe augmenting, round her neck she tied
 The noose dishonest, and unseemly died.
 Her mournful dirge the weeping dryads sung,
 While Dindymus with lamentations rung;
 And all the tears that from their eye-lids fell,
 The gods transform'd in pity to a well;
 In crystal streams it murmurs still, and weeps, 1390
 And still the name of wretched Clita keeps.

A day so dismal, so replete with woes,
 Till this sad day, to Dolians never rose.
 Deep, deep immers'd in sorrow they remain'd,
 And all from life-supporting food abstain'd;
 Save such poor pittance as man's needs require,
 Of corn unground, or unprepar'd by fire.
 And annual, on this day, the Dolians still
 Sift coarsest meal, and at the public mill.

Thenceforth twelve days and nights dire storms
 prevail, 1400

Nor could the chiefs unfurl the swelling sail.
 The following night, by sleep's soft power op-
 Once more in Cyzicum the heroes rest; [press'd,
 Mopsus alone and brave Acastus keep
 The watch nocturnal, while their comrades sleep,

When, lo! a Halcyon, of cerulean hue,
O'er the fair head of slumbering Jason flew,
In airy circles, wond'rous to behold,
And, screaming loud, the ceasing storm foretold.
The grateful sound attentive Mopsus heard, 1410
And mark'd the meaning of the sea-bred bird;
(Which gently rising from the deck below,
Perch'd on the summit of th' aerial prow)
Then rous'd he Jason from his fleecy bed,
Of sheeps' soft skins compos'd, and thus he said;
"O son of Æson hear! be this thy care,
"Haste, to the fane of Dindymus repair;
"There Cybele with sacrifice implore,
"So will the winds tempestuous cease to roar.
"For this proclaim'd the boding Halcyon true,
"As round thee sunk in deep repose she flew. 1421
"By Cybele's dread power the vast profound,
"And all the winds in harmony are bound.
"By her subsists prolific earth below,
"And high Olympus, ever crown'd with snow.
"Jove yields when she ascends the courts of day,
"And all the powers immortal own her sway."

To Jason thus the venerable seer;
And welcome came the tidings to his ear.
Instant the chief, exulting with a bound, 1430
Sprung from the bed, and wak'd his comrades round.

Elate with joy his looks, his words unfold
The glad presage which Mopsus had foretold.
Then from the stalls the youths appointed drove
Selected oxen to the heights above.
Some from the rock unloos'd the corded stay,
And with fleet oars approach'd the Thracian bay.
From thence the top of Dindymus they gain'd;
Few were the heroes that aboard remain'd: 1439
By those the Macrian rocks, and Thracian land
Directly opposite, appear'd at hand;
The Thracian Bosphorus here, involv'd in shade,
And Mysia's rising mountains were survey'd;
There where his waters black Æsepus pours,
Nepea's plain, and Adrasteia's tow'rs,
A vine's vast trunk adorn'd with branches stood,
Though old, yet sound, and long had grac'd the wood:

This trunk they hew'd, and made by Argus' skill,
An image of the goddess of the hill;
Which on the rocky eminence they plac'd, 1450
With the thick boughs of circling beeches grac'd.
They rear an altar then on rising ground,
Of stones that readiest lay, and wide around
Dispose the branches of the sacred oak,
And Dindymus's deity invoke,
The guardian power of Phrygia's hills and woods,
The venerable mother of the gods.
On Tityas and Cyllenus too they call,
Of all her priests most lov'd, and honour'd most
of all:

For skill prophetic they alone are fam'd; 1460
Idean Dactyli these priests are nam'd;
Both whom Anchiala in Diète's cave
Brought forth, where chill Oaxis roll his wave.
While on the burning victims Jason pours
Libations due, the goddess he implores
To smile propitious on the Grecian train,
And still the tempests of the roaring main.

Then Orpheus call'd, and youthful chiefs advance,
All clad in arms, to lead the martial dance;
With flashing swords they clatter'd on their
shields, 1470

And fill'd with festive sounds th' aerial fields.
Lost in these sounds was every doleful strain,
And their loud wailings for their monarch slain.
The Phrygians still their goddess' favour win,
By the revolving wheel and timbril's din.
Of these pure rites the mighty mother show'd
Her mind approving, by these signs bestow'd:
Boughs bend with fruit, each from her bosom
pours

Herbs ever green, and voluntary flow'rs.
Fierce forest beasts forsake the lonely den, 1480
Approach with gentleness, and fawn on men.
A pleasing omen, and more wond'rous still
The goddess gave: the Dindymean hill,
That ne'er knew water on its airy brow,
Bursts into streams, and founts perennial flow.
This wonder still the Phrygian shepherds sing,
And give the name of Jason to the spring.

Then on the mount the chiefs the feast prolong,
And praise the venerable queen in song. 1489
But when the morning rose they plied their oars,
And the wind ceasing, left the Phrygian shores.
Then fair contention fir'd the princely train,
Who best the toil of rowing could sustain.

For now the howling storm was lull'd to sleep;
Ethereal mildness had compos'd the deep.
On the calm sea the labouring chiefs rely'd;
Fleet flew the ship along the yielding tide;
Not Neptune's steeds so swift, with loosen'd reins,
Skim the light level of the liquid plains.
But when with even-tide the blustering breeze
Brush'd the broad bosom of the swelling seas,
The wearied chiefs their toilsome course repress'd,
And all, save great Alcides, sunk to rest.

Swift through the waves his arm unaided drew
The ship, deep-laden with the drowsy crew.
Through all her planks the well-compacted pine
Shook, as his oars dispers'd the foamy brine.
But soon the heroes view'd the Mysian shore,
As by the mouth of Ryndacus they bore.

On Phrygia's fields a wishful look they cast, 1510
And huge Ægæon's promontory pass'd,
When great Alcides, at one luckless stroke,
His oar, hard straining, near the middle broke.
One part was swallow'd in the whelming main;
One, though he fell, his grasping hands retain;
Backward he fell, but soon his seat regain'd,
And lothing rest in mute amaze remain'd.

What time the weary labourer, wanting rest,
Hies to his cot with pining fast oppress'd;
Ev'n in the entrance of his rural door 1520
His tottering knees he bends, and moves no
more;

His dusty limbs he views, and callous hands,
And curses hunger's insolent demands:
Then, not till then, the chiefs to Chius row,
Chius, whose streams around Arganthon flow.
The friendly Mysians on their peaceful coast
Receive with hospitality the host;
Abundant stores they send, with hearts benign,
Fat sheep, and strong exhilarating wine. 1529

Some bring dry wood, and some in order spread
Soft leaves and herbage for a spacious bed :
Some from the flint elicit living fire ;
Some mix the wines that generous deeds inspire :
The feast they crown, and rites to Phœbus pay,
Ecbaſian Phœbus at the cloſe of day.
But Hercules the genial feaſt declin'd,
And fought the wood a fitting oar to find.
Nor long he fought before a fir he found ;
Few leaves adorn'd it, and few branches crown'd ;
Yet as the poplar's ſtem aſpires on high, 1540
This fir, ſo ſtout and tall, attracts his eye.
On the green graſs his bow he laid aſide,
His arrowy quiver, and the lion's hide.
Firſt with his club the ſolid ſoil he ſhook,
Then in both arms, aſſur'd, the fir-tree took ;
Firm on his feet he ſtood with bended knee ;
His big broad ſhoulder lean'd againſt the tree ;
Then heav'd it up, deep-rooted in the ground,
Clogg'd with the ſoil's impediments around.
As when beneath Orion's wint'ry reign, 1550
The ſudden tempeſt ruſhes from the main,
Some tall ſhip's maſt it tears, and every ſtay,
And all the cordage, all the ſails away :
Thus he the trunk ; then took, in haſte to go,
The hide, the club, his arrows, and his bow.

Meanwhile, preparing for his friend's return
A ready ſupper, with his brazen urn
Alone rov'd Hylas o'er the fields to bring
The pureſt water from the ſacred ſpring.
For to ſuch tasks Alcides train'd his ſquire, 1560
Whom firſt he took an infant from his ſire
Theodamas ; but him with ſword ſevere
He ſlew, who churliſh had refus'd a ſteer.
For when Theodamas, oppreſs'd with care,
Turn'd the freſh furrow with his ſhining ſhare,
He diſobey'd, ah wretch ! the chief's command,
Who claim'd the labouring ox that till'd the land.
But know, Alcides fought for cauſe to bring
War on Dryopia's kingdom and the king, 1569
For barbarous acts, and rights neglected long.

But rove not, Muſe, digreſſive from the ſong.
Soon faithful Hylas to the fountain came,
Which Myſian ſhepherds cryſtal Pegæ name ;
It chanc'd the nymphs, in neighbouring ſtreams
that dwell,

Then kept a concert at the ſacred well.
In Dian's praiſe they rais'd the nightly ſong,
All who to high, ærial hills belong ;
All who in caverns hide, or devious rove
The mountain-foreſt, or the ſhady grove.
When from her ſpring, unſullied with a ſtain, 1580
Roſe Ephydatia, to attend the train,
The form of Hylas ruſh'd upon her ſight,
In every grace of bluſhing beauty bright :
For the full moon a beamy luſtre ſhed,
And heighten'd all the honours of his head.
Fir'd with love's ſudden flame, by Venus rais'd,
The frantic naiad languish'd as ſhe gaz'd :
And ſoon as, ſtooping to receive the tide,
He to the ſtream his brazen urn apply'd,
In guſh'd the foaming waves ; the nymph with joy
Sprung from the deep to kiſs the charming boy. 1591
Her left arm round his lovely neck ſhe threw,
And with her right hand to the bottom drew.

Firſt Polyphemus heard, as wandering nigh
This fatal ſount, the youth's diſtreſſful cry,
(In ſearch of Hercules he rov'd the wood)
And hied with haſty footſteps to the flood.
As when a lion from his cavern'd rock,
At diſtance hears the bleatings of the flock,
To ſeize his prey he ſprings, with hunger bold, 1600
But faithful ſhepherds had ſecur'd the fold ;
Deſeated of his prize, he roars amain,
Rends his hoarſe throat, and terrifies the ſwain :
Thus Polyphemus call'd with voice profound,
And vainly anxious rov'd the foreſt round.
At length retreating, he the path explor'd
Through which he came, and drew his truſty ſword,
Leſt ſavage beaſts ſhould ſeize him for their prey,
Or nightly robbers intercept his way.
And as he brandiſh'd the bright burniſh'd blade,
He met Alcides in the gloomy ſhade, 1611
Unknown at firſt, but as he nearer drew,
His friend returning to the ſhip he knew.
Though his breath falters, and his ſpirits fail,
He thus reveals the melancholy tale :

" Hard is my lot, and much averſe my will,
" To be the firſt ſad meſſenger of ill ;
" Young Hylas went to fetch freſh water late,
" Not yet return'd ; I tremble for his fate :
" By robbers ſeiz'd or beaſts, 'tis hard to gueſs ;
" I heard his cry, the ſignal of diſtreſs : " 1621
Thus he : the ſweat from great Alcides flow'd,
And the black blood through all his body glow'd ;
Enrag'd, the fir-tree on the ground he threw,
And, where his feet, or frenzy hurried, flew.

As when a bull, whom galling gadflies wound,
Forſakes the meadows, and the marſhy ground,
The flowery food, the herd and herdsman ſhuns,
Now ſtands ſtock-ſtill, and reſtleſs now he runs ;
Stung by the breeze, he maddens with the pain,
Tosſes aloft his head, and roars amain : 1631
Thus ran the raging chief with matchleſs force,
Then ſudden ſtopp'd he, wearied with the courſe.
Anxious in vain, he rov'd the foreſt round,
The diſtant hills and vales his voice rebound.
Now o'er the lofty mountains roſe in view,
The morning-ſtar, and mildeſt breezes blew :
That inſtant Tiphys bade the heroes ſail,
Aſcend the veſſel, and enjoy the gale.

The ready crew obey the pilot's word, 1640
Their anchor weigh, and haul the cords aboard ;
Then give the ſtretching canvails to the wind
And leave the Poſidean rocks behind.
When from the roſy orient, beaming bright,
Aurora tipp'd the foot-worn paths with light ;
And o'er moiſt meads the glittering dew-drops
ſhin'd,

They miſs'd thoſe friends their folly left behind.
Then roſe contention keen, and pungent grief,
For thus abandoning their braveſt chief.
In ſilence Jaſon ſat, and long ſuppreſs'd, 1650
Though griev'd, the labouring anguiſh of his
breath.

Brave Telamon, with anger kindling, ſpoke :

" Mute is thy tongue, and unconcern'd thy
" look :

" To leave unconquer'd Hercules behind

" Was a baſe project, and by thee deſign'd ;

" Left, when to Greece we steer the sailing pine,
 " His brighter glories should out-dazzle thine.
 " But words avail not—I renounce the band,
 " Whose selfish wiles this stratagem have plann'd."

Thus spoke Æacides, inflam'd with ire, 1660
 His eye-balls sparkling like the burning fire;
 On Tiphys then, by rage impell'd, he flew:
 And once more Mysia had receiv'd the crew;
 Again the heroes the same course had sail'd,
 Though roaring winds and raging waves pre-

vail'd,
 Had not bold Boreas' sons the chief address'd,
 And, nobly daring, his rough rage repress'd.
 (Ill fated youths: for that heroic deed
 Doom'd by the hands of Hercules to bleed. 1669
 For when returning home their course they sped,
 From funeral games perform'd for Pelias dead,
 In sea-girt Tenos he the brothers flew,
 And o'er their graves in heapy hillocks threw
 The crumbling mould; then with two columns

crown'd,
 Erected high the death-devoted ground;
 And one still moves, how marvellous the tale!
 With every motion of the northern gale—
 But these are facts reserv'd for future years)
 Lo! sudden, Glaucus to their sight appears,
 Prophet of Nereus, rising from the main, 1680
 Most skill'd of all his fate-foretelling train.

High o'er the waves he rear'd his shaggy head,
 With his strong hand the rudder seiz'd, and said:

" Why strive ye thus, though Jove's high will
 " withstands,

" To bear Alcides to the Colchian lands?
 " He must at Argos, so the fates ordain,
 " And so Eurystheus has decreed, sustain
 " Twelve mighty labours, thence be rais'd above,
 " To high Olympus, and the court of Jove.

" Cease for Amphytrion's son, your murmurs
 " cease,

" And lull the sorrows of your souls to peace. 1691

" In Mysia, where meandering Chius strays,

" Must Polyphemus a proud city raise:

" Then, mid the Calybes, a desperate clan,

" Expires on Scythian plains the gallant man.

" But strange is Hylas' fate: his youthful charms

" Entic'd a nymph, who clasp'd him in her arms.

" Now the blest pair the bands of Hymen bind;

" In search of him the chiefs are left behind."

This said, he plung'd into the gulf profound,

The purple ocean foam'd in eddies round. 1701

The god descending with resistless sway,
 Impell'd the hollow vessel on her way.

The chiefs rejoic'd this prodigy to view,

And instant Telamon to Jason flew

In friendly sort, and in his right he took

The prince's hand, and thus embracing spoke:

" Illustrious chief, let not thine anger rise

" At aught I said impetuous and unwise.

" Grief for my friend has made me indiscreet, 1710

" And utter words for Jason's ear unmeet;

" Those to the winds wide scattering let us give,

" And, as before, in friendly concord live."

Then Jason thus: " Thy censures wound my

" mind,

" Which say, I left the bravest Greek behind.

" Yet though thy words reproachful guilt suggest,

" Rage dwells not long in Jason's generous breast;

" Since not for flocks or riches we contend,

" But a bold hero, and a faithful friend.

" And thou, I trust, if reason calls, wilt be 1720

" As firm and warm an advocate for me."

He spoke; and now, the hateful contest o'er,

The chiefs resum'd the seats they held before.

But for those heroes, whom they left behind,

By Jove's decree are various cares design'd.

Nam'd from its stream, the boast of future days,

Must one on Mysian plains a city raise:

One (great Alcides) other toils must share,

And learn Eurystheus' stern commands to bear.

Long time he threaten'd, for his Hylas lost, 1730

Instant destruction to the Mysian coast,

Unless the Mysians to his arms restor'd,

Alive or dead, the partner of his board.

Of all their bands the choicest youths they chose,

And them as pledges of their faith propose;

Then swore they all, their search would never end,

Till haply they had found the hero's friend.

Still to this day the fond Cians seek

(All who at Trachin dwell) the lovely Greek.

For beauteous youths, to Trachin's walls con-

vey'd, 1740

Were there as pledges to Alcides paid.

Meanwhile all day and night brisk breezes blew,

Fleet o'er the foaming flood the vessel flew;

But when the dawn gave promise of the day,

The winds expiring gently died away.

A land projecting o'er the bay below

The chiefs discover'd, and to this they row;

This peaceful port a while the Minyans chose,

And, as they reach'd it, grateful morning rose.

NOTES ON BOOK I.

Ver. 1. Thus begins Homer's *Batrachomyachia*, the 17th Id. of Theocritus, and Aratus's poem.

See also on these words the Gr. Schol. and Hoelzlinus's note.

Ver. 3. For Pelias, Æson, &c. see the preface.

Colchos, now called Mengrelia, is bounded on the north by part of Sarmatia, on the west by so much of the Euxine sea, as extends from the river

Corax to the mouth of the river Phasis, on the south by part of Cappadocia, and on the east by Iberia.

Ver. 5.

—when Argo pass'd
Through Bosphorus betwixt the jutting rocks.
Milt. Par. Lost. B. ii. 1017.

Two rocks at the entrance of the Euxine sea, called *Symplegades* by the Grecians, by Juvenal *Concurrentia saxa*; because they were so near, that, as a ship varied its course, they seemed to open and shut; or, as Milton expresses it, to *juggle* one another. They were also called *Cyanean*, from their dark colour.

Ver. 13. A river in Thessaly, according to Apollonius, Callimachus, and others. But some are of opinion, that Anaurus, as its etymology implies, is the general name of any torrent. Valerius Flaccus, relating the same story, mentions the river Enipeus.

Ver. 33. The Pæonians of Thrace lived upon the Hebrus; and all the people of that region were at one time great in science. The Grecians acknowledged they were greatly indebted to them; and the muses are said to have come from those parts. The Pierians were as famed for poetry and music, as the Pæonians were for physic. Thamyrras, Eumolpus, Linus, Thymætes and Musæus, were supposed to have been of this country. Orpheus also is ascribed to Thrace; who is said to have soothed the savage rage, and to have animated the very rocks to harmony. *Bryant's Myth.*

Ver. 35.

Mulcentem tigres et agentem carmine quercus.
Virg. Georg. iv. 510.

Ver. 42. Orpheus, in the Argonautic poem ascribed to him, gives the same account of himself.

Καὶ μ' ἔκλεχεν κιδάρην πολυδαίδαλον ἐνὶ νύμφῃ,
Ὅφρα καὶ τοὶ μέλπων προχέω μελιγέρον ᾠοῖδην,
Κηλήσω δὲ τε θῆρας ἰδ' ἐρεσιτὰ καὶ πετεινά.
Orph. Arg. 71.

Ver. 71. It is fabled that this person was a Thessalian virgin, the daughter of Elatus, one of the Lapithæ; who, having been violated by Neptune, obtained of him, as the reward of her prostitution, that she might be transformed into a man, and rendered invulnerable. Thus changing her sex, she changed her name into Cæneus, being before called Cænis. See *Ovid's Metam.* and *Virg. Æn. vi. 448.*

Ver. 79. Mopsus was surnamed the Titaresian, from Titaresus, the name of a place and river in Thessaly. Thus Hesiod in *Scut. Herc. l. 181.*

Μόψοντ' Ἀμπευκίδην Τιταρήσιον—

Ver. 125. Theseus, by the help of his friend Pirithoüs, had stolen Helen from the Temple of Diana, and carried her off: in return for this service, he assisted Pirithoüs in the rape of Proserpine. In order to accomplish this design, they went down

to the infernal regions together: but Pluto, having discovered their intentions, exposed Pirithoüs to the dog Cerberus, who devoured him, and chained Theseus to the mountain Tænarus.

Plutarch's Life of Theseus.

Ver. 138. Apollonius calls him *Ἄργος ἀεισογίδης*, the son of Arestor. But Banier remarks that we ought to read (as Meziriac has recommended) *ἄλκιυρογίδης*, the son of Alektor. For, Argus the son of Arestor, preceded the time of the Argonauts eight or nine generations: but most of the ancients agree, that the ship Argo was built by Argus the son of Alektor, who lived in the time of the Argonauts. *Banier's Myth. Vol. iv.*

Ver. 147. Iphiclus had seized upon the oxen of Tyro, the mother of Neleus. These Neleus demands, but is denied by Iphiclus. Pero, the daughter of Neleus was promised in marriage to him who recovered these oxen from Iphiclus. Melampus undertakes the recovery; but being vanquished, is thrown into prison. See *Homer's Odyssey. B. xi. 290.*

Ibid. He is mentioned in the same manner by Orpheus and Valerius Flaccus.

—Ἀθανῆος παῖς νόθος ἦλυθε κάρτερος Ἴδμων,
τόν γ' ὑποκυνοσάμην τίκειν Ἀπόλλωνι ἀναπῆ
ἀμείροσιον παρὰ χεῖμα φρητιάς Ἀντιάουρα,
τῷ καὶ μαντοσύνην ἴσσοι καὶ διεφάνον ὄμφην
Φοῖβος.
Orph. Arg. 185.

Phæbus Idmon,
Curi genitor tribuit monita prænoscere Divum,
Omnia, seu flammæ, seu lubrica cominus exta,
Seu plenum certis interroget æra pennis.
Val. Flac. B. i. 228.

Ver. 180. There were two grand divisions of the religious ceremonies of the ancients, viz. into *ἱμπύρα* and *ἄστυρα*, i. e. those where fire was heaped upon the altar, and those which were not accompanied with fire. The *σήματα ἱμπύρα* were observations made from the victims at the time they were burning; which was the province of the Haruspices: the *σήματα ἄστυρα* referred to the flight of birds, and such observations as the augurs collected from them. Thus Euripides, in *Bacchæ*, ver. 257.

Σκοπιῖν πῆραντες, καμπύρων μοῖδ' ἀφίγειν

Thus Ovid:

—cui posse figuras
Sumere quas vellet, rursusque reponere sumptas,
Neptunus dederat, Nelei sanguinis auctor.
Met. xii. 555.

And Seneca:

Sumere innumeras solitum figuras. *Med. 635.*

Ver. 222. The text has Polyphemus; which is undoubtedly a false reading, as Valerius Flaccus and Pausanias seem to confirm. The annotator to Mr. Pope's *Odyssey*, not suspecting this, was led into a pleasant mistake. "If Polyphemy (says he, *Od. ix. 569*), had really this quality of running upon the waves, he might have destroyed Ulysses without throwing this mountain: but Apollonius is undoubtedly guilty of an absurdity, and one

might rather believe that he would sink the earth at every step, than run upon the waters with such lightness as not to wet his feet." As this description of the swiftness of Euphemus is originally taken from Homer's account of the mares of Erichonius, of Virgil's description of Camillus's swiftness, seems copied from these beautiful lines of Apollonius. See *Pope's Il. B. xx. 270*.

Theslightly skimming, when they swept the plain,
Nor ply'd the grass, nor bent the tender grain:
And when along the level seas they flew,
Scarce on the surface curl'd the briny dew.

*Illa vel intactæ segetis per summa volaret
Gramina, nec teneres cursu læsisset aristas:
Vel mare per medium, fluctu suspensa tumentis,
Ferret iter, celeres nec tingeret æquore plantas.*

Ver. 251. Our poet, in his account of this hero, follows Orpheus very closely. Valerius Flaccus makes no mention of him.

Ver. 273. Milton's description of Raphael is similar to this:

————— like Maia's son he stood,
And shook his plumes, that heavenly fragrance
fill'd
The circuit wide; &c. *Par. Lost, B. v. 285.*

Apollonius in this beautiful description, has far exceeded his venerable master; who says only,

————— τασσοῖσιν ὑπακτίοις πεπλόηντο
Ζήσης καὶ Κάλαις, δέμας εἰκίλοι ἀθανάτοισιν.
Orph. Arg. 219.

Ver. 287. The Argonauts were distinguished by the appellation of Minyæ; a title which they took as being descended from the daughters of Minyas, a Boeotian prince, the son of Orchomenus, who built a city of that name in Boeotia.

Ver. 291. A city of Thessaly, and the birth-place of Jason. It was also called Larissa (as Pomponius Mela asserts); hence Larissæus Achilles.

Virg.

Ver. 292. Pagasæ is a town and promontory of Thessaly. Here Argo was built; and from that circumstance, ἀπότῃς ναυπηγίας, the bay is supposed to have derived its name.

Ver. 319. For an account of Phrixus see the preface.

Ver. 327. This affecting scene is extremely natural, and drawn by our poet in a manner the most masterly. He is no where happier than in the execution of these pathetic pieces. This parting interview, the episode of Hypsipyla, and the loves of Medea and Jason, have been admired and imitated by the poets of ancient and modern times.

Ver. 379. Thus Telemachus addresses his mother in Homer, and Turnus in Virgil.

Tears and apprehensions of danger were deemed bad presages, when the people were going to war,

Ne, quæso, ne me lacrymis, neve omine tanto
Prosequere, in duri certamina martis euntem.
Virg. Æn. xii. 72.

————— O royal mother, cease your fears,
Nor send me to the fight with boding tears. *Pitt.*

Ver. 384. Virgil has manifestly borrowed this comparison, and applied it to Æneas. *B. iv. 143.*

As when from Lycia, bound in wint'ry frost,
Where Xanthus' streams enrich the smiling coast,
The beauteous Phæbus in high pomp retires,
And hears in Delos, &c. *Pitt.*

Ver. 447. It was requisite to reserve the best of the flocks and herds for the altar: they must be sound and perfect in all their limbs, or they would be deemed a very unfit offering for the gods. Thus Achilles in Homer, offers up to Apollo—ἀρνῶν καὶ σσην ἀγῶντι τέλειαν τὰς θεοῖς ὡς τέλειοις προσάγειν χρὴ τέλειαν, says Eustathius on this passage. It is the precept of Virgil, that the cattle which are designed for the plough, for breeding and sacrifices, should be distinguished by particular marks, and separated from the rest.

Continuoque notas, et nomina gentis inurunt.

Georg. iii. 158.

Ver. 456. The poet through this whole description is agreeably circumstantial. He paints the busy scene before us in the liveliest colours. We are present to all the labours of his heroes. We see them constructing, launching and manning their ship, choosing their seats, erecting their altar, and offering sacrifice. We feel ourselves already interested, and cannot help joining with Jason in his prayer, that success may crown their enterprise.

Ver. 503. Embasian and Ecbasian are epithets which they applied to their tutelar god at the instant of their embarkation, and when they were about to land.

Ver. 551. This speech of Idmon is calculated to excite our admiration and pity. We cannot but admire the courage and calmness of the hero, when he discloses to his comrades the purpose of Apollo. He tells them, in a prophetic strain, that they would be exposed to dangers, but successful at last; that, as to himself, he knew his doom, which was, that he must die in a distant country long before their return. Homer represents his hero weeping at his fate, Ως ἄρ' ἔφη δακρυχίων: our poet reserves the tears of sorrow for them, from whom they fall with a better grace:

————— the host the fate, of Idmon mourn.

Ver. 581. This circumstance seems to be borrowed from that noble one of Achilles swearing by his sceptre, in Homer; which passage both Virgil and Valerius Flaccus have closely imitated.

Ver. 599. Iphimedia, the daughter of Triopas, and wife of Alceus, fell in love with Neptune, by whom she had two sons, Ephaltes and Otus. Presuming on their gigantic strength, they attempted to dethrone Jupiter; but were slain (as Homer and Pindar relate, and after them Apollonius) by Apollo at Naxos, and thrown into Tartarus by Pluto.

Ver. 617. The following lines, to v. 720. are taken from Mr. West's translation of the song of R. iij

Orpheus, and the setting out of the Argonauts; but many passages are much altered.

Ver. 621.

Namque canebat, uti magnum per inane coacta
Semina terrarumque animæque marisque fuissent,
&c. *Virg. Ec.*

For a full illustration of the propriety and beauty of this song, which Scaliger condemns, I beg leave to subjoin Mr. Wharton's judicious criticism, in his Observations on Spenser's Faery Queene. "Scaliger finds great fault with the subject of this song, and prefers to it the subject of Orpheus's song in Valerius Flaccus. By this piece of criticism he has betrayed his ignorance of the nature of ancient poesy, and of the character of Orpheus. But the propriety of the subject of this song is easily to be defended, without considering the character of Orpheus. The occasion of it was a quarrel among the Argonauts, whom Orpheus endeavours to pacify with the united powers of music and verse. To this it may be added, that a song, whose subject is religious, and which asserts the right of Jupiter to the possession of Olympus, was even expedient, as one of the chiefs had but just before spoken blasphemy against him. Nor were the auditors of so mean a rank as Scaliger would represent them: he terms them *viri militares*; but it should be considered, that they were princes and demigods. There is one circumstance belonging to the song of Orpheus in Apollonius, which gives it a manifest superiority to that of Orpheus in Valerius Flaccus, I mean the design of it, which was to express the vehemence of the passion, at once so agreeable to the well-known character of Orpheus, and so expressive of the irresistible influence of music. In the Latin poet, Orpheus sings upon no occasion, and to no end, unless to make the night pass away more pleasantly."

Ver. 636. Milton has undoubtedly copied this passage, *Par. L. B. x. 580.*

— how the serpent whom they call'd
Ophion with Eurynome, the wide
Encroaching Eve perhaps, had first the rule
Of high Olympus, &c.

Apollonius, as well as Milton, has hinted that Ophion was of the serpent race. — the vast species of the serpent breed.

The upper part of Eurynome was a perfect figure of a woman; the lower part, from the thighs downward, terminated in the tail of a fish.

Lucian.

Ver. 649. The effect which the harp and voice of Orpheus had upon the Argonauts, is here elegantly described. When the poet had ended his song, they, intent and bending towards him, still listened, and imagined him still singing. Milton follows Apollonius very close:

The angel ended, and in Adam's ear
So charming left his voice, that he a while
Thought him still speaking, still stood fix'd to
hear. *Par. Lost, B. viii. 1.*

Ver. 657. It was the custom of the ancients at their solemn festivals, before they went to rest, to sacrifice the tongues of the victims to Mercury, the god of eloquence, pouring on them a libation of wine. This was done, either with a design to make an expiation for any indecent language that had been spoken (as was the case about fifty lines above), or to signify, that what had been there spoken, ought not to be divulged or remembered afterward.

Ver. 669. The ancient writers, as well historians as poets, are full of these wonders. The speech of Achilles's horse to his master is well known. Among the many prodigies which are said to have appeared at the death of Julius Cæsar, this, Virgil informs us, was one, — *pecudesque locuta*. Appian expressly says that an ox spoke with an human voice. Livy has given us the speech of one of these animals on a certain occasion:

Quod maximè terrebat Consulem Cn. Domitium, bovem locutum, "Roma tibi cave." *Lib. xxxv.*

This ship was indeed built out of some sacred timber from the grove of Dodona, which was sacred to Jupiter Tomarias; and on this account it was said to have been oracular, and to have given verbal responses.

Ver. 670. Minerva was so called from Itonis, a city of Thessaly, where she was worshipped.

Ver. 698. The poets are fond of expressing the activity of the rowers, and the velocity of the ship, by the effect which the stroke of their oars and the track of the keel produce on the waters.

— λίσσασιν ὕδαρ ἕρως ἰλάττειν. *Od. μ'. 172.*

Totaque remigio spumis incanuit unda. *Catull.*

Et freta canescunt, fulcam ducente carinâ. *Manil.*

Ver. 701. Apollonius, anxious to impress on his readers a just idea of the importance of his subject, has, in the true spirit of Homer, represented all the gods looking down upon Argo, as if interested in the success of her voyage.

Ver. 717. Achilles was educated under Chiron. The circumstance of Chariclo's raising up young Achilles in her arms, to show him his father Peleus, is exceedingly beautiful and striking. From this action we may also fairly conjecture, that this famous expedition preceded the siege of Troy, probably about thirty years, viz. from the infancy of Achilles to his arrival at perfect manhood.

Ver. 752. On the epithet *ἡσίοη*, which the poet here applies to Thessaly, and which seems to have perplexed the commentators, Mr. Bryant makes the following ingenious remark: "The Pelasgi settled very early in Thessaly, to which they gave the name Aëria. This was the ancient name of Egypt, from whence this people came. They likewise called the same country Ai Monah, Regio Lunaris; which the poets changed to Harmonia."

Ver. 759. The Scholiast tells us, this Dolops was the son of Hermes, and slain at Magnesia;

where they erected a monument near the shore to his memory.

Ver. 766. The place from which they set sail was named from that event Aphetæ. It is a town and port of Magnesia in Thessaly.

Ver. 788. Plutarch and Pliny assert that this mountain is so high as to project its shade, when the sun is in the summer solstice, on the marketplace of the city Myrina. *Univ. Hist.*

———— ingenti tellurem proximus umbrâ
Vestit Athos, nemorumque obscurat imagine pontum. *Stat. Theb.*

Ver. 793. "The description of Venus enraged against the men of Lemnos for neglecting her temple, represents her (says Mr. Spence in his *Polymetis*) rather as the goddess of jealousy than of love. There is no figure of her under this character, nor any description in any of the Roman poets before the third age." Had the learned author consulted Apollonius, he would have seen to whom Valerius was indebted for this description of Venus as the goddess of jealousy. The passage is indisputably borrowed from our poet. So true is it what Mr. Gray has observed of this writer, that had he consulted the Greek authors, they would have afforded him more instruction on the very heads he professes to treat, than all the other writers put together. See *Gray's 5th Letter to Mr. Walpole*.

Ver. 826. The Lemnian women are here represented as savage as the Thyades, who delighted in bloody banquets. Upon this the Scholiast observes, that the Mænades and Bacchæ used to devour the raw limbs of animals which they had cut or torn asunder. In the island of Chios it was a religious custom, to tear a man limb from limb by way of sacrifice to Dionusus: the same in Tenedos. Hence we may learn one sad truth, that there is scarce any thing so impious and unnatural, as not at times to have prevailed. *Bryant's Myth. vol. ii. p. 13.*

Ver. 852. There is a judicious note on this passage, inserted in an elegant edition of our poet, lately published at Oxford; which I shall venture to give the reader: "Licet Ventus Boreas Argonautis ad cursum continuandum secundus esset, non tamen solverunt." Mihi perspectum est nihil veri his inesse. Non enim ventus Aquilo secundus est tendentibus in Pontum sed adversum tenet. Hoc ergo Apollonius indicat. Minyas non solvissse illo mane, ex insulâ Lemno, quod Aquilo, qui ipsis in Pontum porrecturis adversus erat, flaret. *Wesseling. Observ. p. 130.*

This observation appears to be just. Yet is it no unusual thing with the poets to put one wind for another. The most judicious and accurate of the Roman poets is not exempt from errors of this kind. "The description of the departure of Æneas from Carthage is not only inconsistent with truth and probability in this respect, but contradictory to itself. He sails in the morning with a west wind, which is very improperly called favourable; but before he is out of sight of Carthage, we find him pursuing his course with a

north wind, which is still more contrary to his intended course." See an *Essay on the original Genius and Writings of Homer*.

Ver. 913. Dido is the Hypsipyla of Virgil. The latter, as Hoelzelinus speaks, is the archetype of the former.

Ver. 949. This mantle, which Pallas gave to Jason, and the simile of the star, to which he is compared, are beautiful specimens of our poet's talent for description. We shall find him in the more descriptive parts of his poem, rising greatly above that equal mediocrity which some critics have ascribed to him.

Ver. 971. The fable of Thebes being built by the power of music is not in Homer, and therefore may be supposed to be of later invention. See *Pope's Od. B. xi. 320.*

Ver. 982. The Teleboans, or Taphians (so called from the island Taphos which they inhabited) coming to Argos, stole the oxen of Electryon, the father of Alcmena: a battle ensued, in which himself and sons were slain.

Ver. 988. Hippodamia was the daughter of Cœnomæus, king of Elis and Pisa. She was a princess of great beauty and had many admirers. Cœnomæus having been informed by the oracle, that he should be slain by his son-in-law, endeavoured to deter the suitors from paying their addresses to his daughter, by proposing a chariot-race. The terms were; that he who conquered him in the race should obtain his daughter, but that he who proved unsuccessful should be put to death. Pelops, whom Hippodamia was most attached to, accepted the dangerous conditions, and contended with Cœnomæus. The plan which his daughter had concerted with Myrtilus, the charioteer, of loosening the pin of the wheel, succeeded to her wish. The pin flew out, the chariot was overthrown, and victorious Pelops claimed the lady as his prize.

Ver. 997. Elara being pregnant by Jupiter, he, to avoid the jealousy of Juno, concealed her in a cavern of the earth, where Tityus was born: who, from his being immersed in worldly cares, and from his centering all his affections on the earth, as if he had sprung from it, is fabled to be the son of the earth.

Ver. 1132. This is an oblique, but very severe sarcasm on Jason.

Ver. 1161. That there was offspring appears from Homer's *Il. B. vii.*

And now the fleet arriv'd from Lemnos' sands,
With Bacchus' blessings cheer'd the generous
bands.

Of fragrant wines the rich Eunæus sent
A thousand measures to the royal tent;
Eunæus, whom Hypsipyle of yore
To Jason, shepherd of his people bore.

These verses, says Mr. Pope, afford us the knowledge of some points of history and antiquity; as that Jason had a son by Hypsipyle; who succeeded his mother in the kingdom of Lemnos: that Samos was anciently famous for its wines; and that coined money was not in use at the time of

the Trojan war; but the trade of the countries carried on by exchange in brags, oxen, slaves, &c. as appears by two lines farther:

Each, in exchange, proportion'd treasures gave,
Some brags, or iron, some an ox, or slave.

Ver. 1187. All that were initiated into the Cabaritic mysteries were thought effectually secured from storms at sea, and all other dangers: and the influence of the Cabirian priests was particularly implored by mariners for success in their voyages. *Potter. Bryant.*

Ver. 1193. So named from a bay, which lies west of the Thracian Chersonesus; called Melas, from a river of that name.

Ver. 1207. Cyzicus, or Cyzicum, according to Strabo, is an island in the Propontis, joined by two bridges to the continent. The strait, over which these bridges were thrown, being in a course of years filled up, an isthmus was formed, and the island became a peninsula: to this isthmus the poet alludes. *Strabo. Hoelz.*

Ver. 1235. It is observable that the name of an anchor does nowhere occur in Homer. The ships of which he speaks had only a rudder and ballast. Neither was there any metal employed in the construction of them; the timbers were fastened together with pegs.

We must not therefore wonder at the rude expedients to which the Argonauts had recourse, in these still earlier times.

Ver. 1299.

Ac veluti magnâ juvenum cum densa securi
Silva labat; cuneisque gemit grave robur adaëtis;
Jamque abies, picæque suunt; sic dura sub icu
Ossa virûm malæque sonant, sparsusque cerebro
Albet ager. *Val. Flac. L. iii. 163.*

Ver. 1380. The most ancient tombs were very simple: they were nothing more than hillocks of earth heaped up over the grave. This the Romans called Tumulus. Sometimes we find an oar, or pillar erected over it in honour of the deceased. Thus we read in Homer:

Τύμβον χεύαντες, καὶ ἐπὶ σπλὴν ἐρύσαντες,
Πήξαμεν ἀπρόταπτον τύμβον ἐνὶ στήθεσσι.

Bp. Lowth's note on Isaiah lii. 9.

Ver. 1384. Some nicer critics may be offended that Clita should die in so vulgar a manner: but this objection is owing to a want of considering the notions and manners of different ages and countries. Amata, the mother of Turnus, in the 12th book of the Æneid, hangs herself. In the 11th book of the Odyssey, Jocasta dies in like manner, and likewise in the Œdipus of Sophocles.

Ver. 1399. It was customary for families to grind their own corn. For this purpose they made use of handmills. Wind and water mills were a later invention. They employed their slaves at this work; and sometimes it was inflicted on them as the heaviest punishment.

Molendum in pistrino, vapulandum, habendæ
compedes. *Ter. Phorm.*

See Bishop Lowth's Isaiah, p. 217.

Here we find not a single family, but a whole people, annually, in token of mortification and sorrow, labouring together at one common mill, and partaking of the bread of affliction, which is of the coarser kind, and unbaked.

Ver. 1406. Ceyx, king of Thrace, married Alcoyne, the daughter of Æolus. On a voyage to consult the Delphic oracle, he was shipwrecked. His corpse was thrown ashore in sight of his wife, who, in the agonies of love and despair, threw herself into the sea. The gods, in pity to her fidelity, changed her and her husband into the birds which bear her name. The halcyons very seldom appear but in the finest weather: whence they are fabled to build their nests on the waves. The female is no less remarkable than the turtle for her conjugal affection. When the halcyons are surprised by a tempest, they fly about as in the utmost terrors, and with the most lamentable cries.

Ver. 1418. The worship of Cybele was famous in Phrygia. Her priests, sounding their tabrets, and striking their bucklers with spears, danced and distorted their whole bodies. To these dances and distortions they add shrieks and howlings; whence they were called Corybantes. Thus it was that they deplored the loss of their goddess's favourite Atys. Thus they drowned the cries of Jupiter, concealed among the Curetes in Crete; and thus they stifled the grief of these Dolians for their slaughtered monarch. *See Banier's Myth.*

Ver. 1422. Orpheus, in his hymn to this goddess, has ascribed to her the same unlimited dominion:

Μήτηρ μὲντε θεῶν ἢ δὲ θνητῶν ἀνθρώπων,
Ἐκ σὲ γὰρ καὶ γαῖα καὶ ἕρως ἐνὶ στήθεσσι,
Καὶ πόντος, ποιοῦσιν. *Orph. Hymn 13.*

Ver. 1448. It sometimes happens, that the roots and branches of aged trees bear a faint likeness to the human fabric. The ancients seem to have taken advantage of this fancied similitude, which they improved by a little art; and their first efforts towards imagery were from these rude and rotten materials. *Bryant's Mythol. vol. i.*

Ver. 1461. The Dactyli were the priests of Cybele: they first inhabited mount Ida in Phrygia; hence they were styled Idæi. They were originally five in number, as their name, derived from the fingers of the hand, imports.

Ver. 1463. There is a river of this name, not only in Mesopotamia, but in Crete.

Thus Virgil, *Ecl. i.*

Et rapidem Cretæ veniemus Oaxem.

Ver. 1469. Called also the Pyrrhic dance, from fire with which it was accompanied. It was esteemed a martial exercise, and was performed by persons in armour, who gave it the name of Berarmus, from the temple of the deity, where it was probably first practised; or from the regularity of their movements in dancing. *Schol. Bryant.*

Ver. 1478. It was the general opinion of the ancients, that when they had appeased their deities by sacrifice and prayer, the tokens of reconciliation would appear by an uncommon fertility of the soil.

The poets have not failed to avail themselves of this popular opinion. It is customary with them to represent fruits and flowers of every kind, as springing up and coming to perfection, in a manner that seemed to indicate the immediate agency of some propitious deity.

Besides, Cybele was taken for the earth; on which account she was called the mother of the gods; for the earth gives birth to all things. Hence her worship was blended with several circumstances which bore a relation to the earth. Its fertility, therefore, at the instant of the celebration of her festival, is something more than a poetical embellishment.

Ver. 1509. A river of Mysia, which empties itself into the Propontis. Near its banks, as some assert, stood the tomb of Ægeus or Briareus.

Ver. 1525. A mountain near Cios. Cios is the name of a river, and of a city in Mysia.

Ver. 1530. Thus Theocritus, speaking of the employments of the Argonauts, when they landed in the country of the Bebrycians, says,

Ἐυνας τ' ἰσθόρνυτο, κ. τ. λ. *Id.* 22.

On the dry beach they rais'd the leafy bed,
The fires they kindled, and the tables spread.

Ver. 1556. This story is told with great simplicity and elegance by our poet's rival and contemporary, Theocritus, *Id.* 13. Nor has his faithful imitator, Valerius Flaccus, neglected to embellish his poem with the same story. The learned editor of Theocritus published in 2 vols. at Oxford, portions out to each poet his share of merit in the following words: "Egregiè quidè Valerius Flaccus Herculis vehementem & repentinam perturbationem depingit: qui, vesperi reversus, Hylam ad sociorum mensas, in littore constructas, non deprehendit. Nihil nisi dictionem Virgilianum castam, teretem, simplicem, pro turgidulâ illâ, & duriusculâ, desidero. Conferatur & Hercules Apollonii Rhodii: quem credibile est omnes intendisse nervos, ut in simili materiâ poetam cœvum superaret. Pulchrum profectò illud Herculis, a manu abietem abjicientis. At fortassis, ad summum, simpliciora Theocriti & luculentiora fatebere, & minus frequentata circumstantiis & elaborata."

Not. ad V. lv. Id. 13.

Ver. 1568. Hercules arriving at the country of the Dryopians, a people of Epirus, applied to their prince Theodamas for refreshment. Upon his refusal, he unyoked one of the oxen with which he was ploughing, and sacrificed it. Theodamas attempting to redress this grievance by force of arms, was killed, and his son Hylas was carried off by the conqueror. Some attribute this exploit to the rapacity of Hercules, others to his desire of civilizing an inhospitable people. Callimachus, speaking of the rapacity of Hercules, says,

Ὁ γὰρ ὄγε Φρυγίῃ περ ὑπὸ δρυὶ γυνὴ Διωθεῖς
Πάυσας ἀδελφὰς ἐπὶ οἷσιν ἄρα νηδὺς ἱκίνη
τῇ ποτ' ἀρετρίωνι συνήντητο Θεοδάμαντι.

In Dian. 159.

Ver. 1576. Thus Callimachus, in his hymn to Diana, celebrates her as encircled with a choir of nymphs:

— αἱ νύμφαι σε χορῶν ἐνὶ κυκλώσανται
Ἀγχοῖσι πηγῶν.

In Dian. 170.

Ver. 1598. Virgil has closely imitated this simile in the following lines, where, speaking of the impetuosity of Turnus, he thus compares him;

Ac veluti pleno lupus insidiatus ovili,
Cum fremit ad caulas, ventos perpeffuset imbres,
Nocte super mediâ: tuti sub matribus agni
Balatum exercent: ille asper et improbus irâ,
Sævit in absentes: collecta fatigat edendi
Ex longo rabies, et siccæ sanguine fauces.

Æn. B. ix. 59.

Ver. 1626. Apollonius, within the compass of a very few lines, makes use of two different words to express the same animal, μύων οἶσρος. The former, he tells us, is the more general appellation: ὅν [οἶσρον] μύωπα βοῶν κλείουσι νομήεις. *B. iii.* 276.

The correspondent names in Latin are *asilus* and *tabanus*: *asilus* vulgò *tabanus* vocatur, says Servius.

— cui nomen asilo
Romanum est, æstron Græci vertere vocantes.
Arcebis gravido pecori. *Virg. Georg. iii.*

Homer also speaks of this fly as being very pernicious to cattle:

Οἱ δ' ἐφίεθ' ἰσθόρνυτο, βόας ὡς ἀγέλαϊς,
τὸς μὲντ αἰόλος οἶσρος ἐφορμηθεὶς ἰδόντησιν. *Od. xxii.* 299.

Confus'd, distracted through the rooms they fling,
Like oxen madden'd by the breeze's sting.

This simile is common to the poets: Virgil, Coluthus, and Tryphiodorus have made use of it.

Ver. 1676. It was usual with the ancients to place one vast stone upon another for a religious memorial. The stones thus placed they poised so equally, that they were effected with the least external force! a breath or wind would sometimes make them vibrate. These were called rocking stones. Of such an one Apollonius is here speaking, as being moved by the wind, and the admiration of spectators. *Bryant.*

Ver. 1746. The coast of Bebrycia: the ancient name of Bithynia, a country of Asia Minor, near Troas, bounded on the north by the Euxine sea.

Orpheus has given us, at the beginning of his poem, a catalogue of the heroes that accompanied Jason to Colchis. Apollonius has followed his example. And he has shown himself a judicious imitator of Homer, by diversifying and enlivening his narration with an account of the family, character, and birth-place of his Argonauts. He constantly inserts some little history or anecdote, which may serve to impress their names on our memory, and to interest us in their future fortunes. He has contrived to throw the utmost variety into the voyage, by describing particularly the situation of the coasts, and the customs and manners of the inhabitants. The launching of Argo, the episode of Hypsipyla, the night-adventure of the Dolians, the story of Hylas, the sacrifices and similes, are severally possessed of such distinguished merit, as cannot fail to give the reader a favourable idea of our poet's taste and genius.

BOOK II.

THE ARGUMENT.

This book contains the combat between Amycus and Pollux; the former of whom is slain. A battle ensues between the Argonauts and Bebrycians, in which the Argonauts come off conquerors. They sail to Salmydessus, a city of Thrace, where they consult Phineus, a soothsayer, on the success of their expedition. He promises, if they would deliver him from the Harpies, to direct them safely to Colchos. His request is granted, and he gives them instructions. The story of Paræbius, Cyrene and Aristæus. They sail through the Symplegades, and thence to the island Thynia, where they land. Apollo, who here appears to them, is rendered propitious by sacrifice. The course of the river Acheron is described. They land on the coast of the Mariandyni, and are hospitably entertained by Lycus, the king of that country. Here Idmon is killed by a wild boar, and here Tiphys dies. Ancæus is appointed pilot in his stead. They sail by the monument of Sthenelus, whose ghost is released by Proserpine, and gratified with the sight of the Argonauts. At the island of Mars they meet the sons of Phrixus, who had just before been shipwrecked. They are kindly received by the Argonauts, who take them on board. Sailing by Mount Caucasus they come in sight of the eagle that preys on the entrails of Prometheus. The end of their voyage.

TENTS o'er the beach Bebrycia's king had spread,
And stalls erected where fat oxen fed.
To genial Neptune a Bithynian dame
Bore the fierce tyrant, Amycus his name,
Proudest of men; who this hard law decreed,
That from his realm no stranger should recede,
Till first with him compell'd in fight to wield
The dreadful gauntlet in the list'd field.
Unnumber'd guests his matchless prowess slew:
Stern he accosts swift Argo's valiant crew, 10
Curious the reason of their course to scan,
Who, whence they were; and scornful thus began:
"Learn what 'tis meet ye knew, ye vagrant host;
"None that e'er touches on Bebrycia's coast,
"Is thence by law permitted to depart,
"Till match'd with me he prove the boxer's art.
"Choose then a chief who can the gauntlet wield,
"And let him try the fortune of the field:
"Should ye contemptuous scorn my fix'd decree,
"Know, your proud hearts shall yield to fate and
"me." 20
Thus spoke the chief with insolent disdain,
And rous'd resentment in the martial train;
But Pollux most his vaunting words provoke,
Who thus a champion for his fellows, spoke:
"Threat not, whoe'er thou art, the bloody fray;
"Lo, we obsequious thy decrees obey!
"Unfore'd, this instant, to the lists I go,
"Thy rival I, thy voluntary foe."
Stung to the heart with this severe reply,
On him he turn'd his fury-flaming eye: 30
As the grim lion, pierc'd by some keen wound,
Whom hunters on the mountain-top surround;
Though close hemm'd in, his glaring eye-balls
glance
On him alone who threw the pointed lance.
The Greek stript off his mantle richly wrought,
Late from the Lemnian territory brought,

Which some fair nymph, who had her flame avow'd,
The pledge of hospitable love bestow'd:
His double cloak, with clasps of fable hue,
Bebrycia's ruler on the greensward threw, 40
And his rough sheep-hook of wild olive shade,
Which lately flourish'd in the woodland spade.
Then sought the heroes for a place at hand
Commodious for the fight, and on the strand
They plac'd their friends, who saw, with wonder-
ing eyes,
The chiefs how different, both in make and size;
For like Typhæus' race the tyrant stood
Enormous, or that miscreated brood
Of mighty monsters, which parturient earth,
Incens'd at Jove, brought forth, a hideous birth. 50
But Pollux shone like that mild star on high,
Whose rising ray illumines fair evening's sky.
Down spread his cheek, ripe manhood's early sign,
And in his eye-balls beam'd the glance divine.
But like a lion, glorying in his might,
Stood Jove's puissant son, prepar'd for fight.
His arms he pois'd, advancing in the ring,
To try if still they kept their pristine spring;
If pliant still, and vigorous as before,
Nor rigid grown with labouring at the oar. 60
Trial like this the haughty king disdain'd:
Aloof and silent Amycus remain'd.
Full on his foe his vengeful eyes he turn'd,
For blood he thirsted, and for conquest burn'd.
With that his squire Lycoreus, full in view,
Two pair of gauntlets in the circle threw,
Of barbarous fashion, harden'd, rough and dry'd.
Then thus the king with insolence and pride:
"Lo, two stout pair; the choice I leave to thee;
"(No lot appoints them) choose, and blame not
"me. 70
"Bind them secure, and after trial tell,
"How greatly I in either art excel,

" Whether to form the cestus firm and good,
 " Or stain the cheeks of mighty men with blood."
 He spoke : brave Pollux nothing deign'd to say,
 But smiling chose the pair which nearest lay,
 To cheer their champion, Castor, honour'd name !
 And Talaüs, the son of Bias, came ;
 Firm round his arms the gloves of death they
 bind,

And animate the vigour of his mind. 80

Aratus, and bold Ornytus his friend,
 To Amycus their kind assistance lend :
 Fools! for they knew not, this one conflict o'er,
 Those gauntlets never should be buckled more.
 Accoutred thus each ardent hero stands,
 And raises high in air his iron hands ;
 With clashing gauntlets fiercely now they close,
 And mutual meditate death-dealing blows.

First Amycus a furious onset gave

Like the rude insult of the battering wave, 90

That heap'd on high by driving wind and tide,
 Bursts thundering on some gallant vessel's side ;

The wary pilot by superior skill,
 Foresees the storm, and shuns the menac'd ill.

Thus threatening Amycus on Pollux press'd,

Nor suffer'd his antagonist to rest :

But Jove's brave son observes each coming blow,
 Quick leaps aside, and disappoints the foe ;

And where a weak unguarded part he spies,
 There all the thunder of his arms he plies. 110

As busy shipwrights stoutly labouring strive

Through sturdy planks the piercing spikes to drive,
 From head to stern repeated blows go round,

And ceaseless hammers send a various sound ;

Thus from their batter'd cheeks loud echoes
 sprung, [rung :

Their dash'd teeth crackled, and their jaw-bones
 Nor ceas'd they from the strokes that threaten'd
 death,

Till tir'd with toil they faintly gasp'd for breath :
 A while they then remit the bloody fray,

And panting wipe the copious sweat away. 100

But adverse soon they meet, with rage they glow,
 Like bulls fierce fighting for some fav'rite cow.

Then Amycus, collecting all his might,

Rose to the stroke, resolv'd his foe to smite,

And by one blow the dubious war conclude :

The wary prince, his ruin to elude,

Bent back his head ; defeated of its aim,

The blow impetuous on his shoulder came.

Then Pollux with firm steps approaching near,
 Vindictive struck his adversary's ear ; 120

Th' interior bones his ponderous gauntlet broke,
 Flat fell the chief beneath his dreadful stroke ;

The Grecians shouted, with wild rapture fir'd,

And, deeply groaning, Amycus expir'd.

The griev'd Bebrycians saw their monarch
 slain,

And big with vengeance rush'd into the plain ;

With season'd clubs and javelins arm'd they ran,

And aim'd their fury at the conquering man.

Their keen-edg'd swords the friends of Pollux
 drew,

And to the succour of their comrade flew. 130

First Castor slaughter'd with victorious hand,

A hero of the bold Bebrycian band,

The griding sword at once his head divides,

And on his shoulders hang the parted sides.

Mimans, Itymoneus of giant size,

Each by the arm of conquering Pollux dies.

On this his foot impress'd a deadly wound

Full on his side, and stretch'd him on the ground :

His right hand dash'd with unresisted sway,

Mimans' left eye, and tore the ball away. 140

Orcides, Amycus's proud compeer,

Then launch'd at Talaüs his brazen spear ;

Just near his flank the point he lightly felt,

That ras'd the skin beneath his broider'd belt.

Aratus, with his club of harden'd oak,

Aim'd at brave Iphitus a deadly stroke :

Vain thought ! too soon, alas ! it is decreed,

The hero by his brother's sword must bleed.

Then rush'd to succour the Theffalian band,

Ancæus, with his pole-ax in his hand ; 150

O'er his broad back a bear's dark spoils he threw,

And boldly mingled with the hostile crew.

The sons of Æacus, renown'd for might,

And Jason join'd them in the fields of fight.

As when, what time both dogs and shepherds
 keep

Close in warm cots, neglected of their sheep,

Wolves, pinch'd with hunger and bleak winter's
 cold,

Leap o'er the fence, and terrify the fold,

With ravening eyes the crowded sheep survey, 159

And doubt where first to rend the trembling prey ;

Thus the bold Greeks, as near their foes they
 drew,

Intimidate the congregated crew.

As swains with smoke, of honey studious, strive

From some rocks cleft the swarming bees to drive,

Alarm'd and trembling, with a murmuring sound ;

They crowd to all their waxen rooms around ;

But if the fumes prevail, their wings they ply,

And rove uncertain through the various sky :

Dispersing thus, the wild Bebrycians fled, 169

And loud proclaim'd that Amycus was dead.

Ah, hapless race of men ! they little knew,

That soon far greater evils must ensue :

Soon must they see, their monarch now no more,

Their lands a drear depopulated shore ;

Their vineyards spoil'd, and wasted all their coast

By Lycus, and the Mariandine host :

For 'twas their fate, with spear and steely brand,

Hard lot ! to battle for an iron land.

The Greeks then seiz'd their herds, an easy prey,

And from the sheep-folds drove the flocks away ;

The live provision to the ship they sent : 181

Then thus some sailor gave his boasting vent ;

' What had these miscreants done, with fears
 ' dismay'd,

' Had heaven indulg'd us with Alcides' aid ?

' No fierce contention then, I judge had been,

' No bloody boxing on the list'd green :

' The chief's stout club had tam'd the tyrant's
 ' pride,

' And set his execrable laws aside.

' But now impell'd by swelling waves and wind,

' We leave at land the matchless chief behind ; 190

' Whose loss distresses to every Greek will prove.'

He said ;—but all things own the will of Jove.

All night the heroes on the coast remain,
To heal the bruises of the wounded train.
First to the gods they give the honour due,
And next, a banquet to the princely crew.
Nor can night's shades the chiefs to sleep incline,
Or o'er the sacrifice, or o'er the wine;
Mirthful they sit, their brows with laurel crown'd:
To a green laurel was the cable bound. 200

While Orpheus strikes the lyre, the hymn they raise,

And Jove's fam'd offspring, mighty Pollux, praise:
Soft breathes the breeze, the billows cease to roar,
And festive joy exhilarates the shore.

But when the sun illum'd the hills and plains,
Dank with the dew, and rous'd the shepherd-swains,

They sent abundant flocks and herds aboard,
And from the laurel-stem unloos'd the cord;
And while the favourable winds prevail'd,
Through the rough rolling Bosphorus they sail'd.
When, lo! a wave by gathering surges driven, 211
Swoln big for bursting, is up-heav'd to heaven,
Still rises higher, and still wider spreads,
And hangs a watery mountain o'er their heads;
Like a black cloud it frowns, prepar'd to fall,
And threatens quick destruction to them all.
Yet the train'd pilot, by superior skill,
Well knows to 'scape, this last impending ill;
Safe through the storm the vessel Tiphys steer'd,
And sav'd the heroes from the fate they fear'd. 220

Fronting Bithynia's coast, next morn, they reach

New land, and fix their halbers on the beach.
There on the margin of the beating flood,
The mournful mansions of sad Phineus stood.
Agenor's son, whom heaven ordain'd to bear
The grievous burden of unequall'd care.
For, taught by wise Apollo to descry
Unborn events of dark futurity,
Vain of his science, the presumptuous seer
Deign'd not Jove's awful secrets to revere; 230
But wantonly divulg'd to frail mankind
The sacred purpose of th' omniscient mind:
Hence Jove indignant gave him length of days,
But dimm'd in endless night his visual rays,
Nor would the vengeful god indulge his taste
With the sweet blessings of a pure repast,
Though (for they learn'd his fate) the country round

Their prophet's board with every dainty crown'd.
For, lo! descending sudden from the sky,
Round the pil'd banquet shrieking harpies fly, 240
Whose beaks rapacious, and whose talons rear,
Quick from his famish'd lips th' untasted fare.
Yet would some slender pittance oft remain,
Life to support, and to perpetuate pain.
Such odours still the nauseous scraps exhal'd,
That with the stench the loathing stomach fail'd.
Aloof the guest amaz'd and hungry stood,
While their sick hearts abhor'd the putrid food.

But now the princely crew approaching near,
The welcome sound invades the prophet's ear; 250
Taught by almighty Jove, that now was come
The long-wish'd period of heaven's vengeful doom;

When, by these heroes' destin'd aid restor'd,
Peace should hereafter bless his feastful board.
Then heaves he from his couch his haggard head,
(Like some pale, lifeless, visionary shade)
Prop'd on his staff his way explores, and crawls
With lingering step along the lonely walls,
Diseas'd, enfeebled, and by age unbrac'd,
Through every limb he trembled as he pass'd;
Shrunk was his form, with want adust and thin,
The pointed bones seem bursting through his skin; 262

But faint and breathless as he reach'd the gate,
Down on the threshold, tir'd with toil he fate.
In dizzy fumes involv'd, his brain runs round,
And swims beneath his feet the solid ground;
No more their functions the frail senses keep,
But speechless sinks he in a deathlike sleep.

This saw the chiefs amaz'd, and gather'd round;
When from his labouring lungs a hollow sound
(His breath and utterance scarce recover'd) broke,
And thus th' enlighten'd seer prophetic spoke:

' Princes of Greece, attend, if ye be they
' Whom o'er the main Thessalia's pines convey,
' And Jason leads to Colchos' magic land;
' Such is your cruel tyrant's stern command.
' Yes, ye are they, for yet my mental eye
' Undimm'd, past, present, future, can descry:
' Thanks to thy son, Latona, who bestows
' This grace, this only solace of my woes. 280
' By Jove, to whom the suppliant's cause belongs,
' Who hates the cruel, and avenges wrongs,
' By Phœbus and by Juno, from on high
' Who marks your progress with compassion's eye,
' Aid me, and, oh! a sufferer's pangs assuage,
' And bid corrosive famine cease to rage;
' Leave me not thus, unpitied and unblest'd,
' But ere you fail, ah! pity the distress'd.
' For not these orbs alone depriv'd of sight,
' Vindictive heaven hath veil'd in doleful night;
' But to extreme old age his cruel law 291
' Dooms me th' unwasting thread of life to draw.
' Still weightier woes from sorrows lengthen'd
' chain

' Depend, and pain is ever link'd to pain.
' From secret haunts, aerial, unexplor'd,
' Flights of devouring harpies vex my board;
' Swift, instantaneous, sudden they descend,
' And from my mouth the tasteful morsel rend.
' Meanwhile, my troubled soul, with woe oppress'd,
' No means of aid, no comfort can suggest. 300
' For when the feast I purpose to prepare,
' They see that purpose, and prevent my care:
' But cloy'd, and glutted with the luscious spoil,
' With noisome ordure parting they defile
' Whate'er remains, if aught perchance remain,
' That none approaching may the stench sustain,
' Though his strong heart were wrapp'd in plated mail,
' The filthy fragments such dire steams exhale,
' Yet me fell hunger's all subduing pain
' Compels reluctant, lothing to remain; 310
' Compels the deadly odours to endure,
' And gorge my craving maw with food impure.

' From these invaders (so hath fate decreed)
 ' By Boreas' offspring shall my board be freed.
 ' Nor on a stranger to your house and blood,
 ' O sons of Boreas! is your aid bestow'd.
 ' Phineus behold, Agenor's hapless son,
 ' Once for prophetic skill and riches known;
 ' Who, while I sway'd the Thracian sceptre, led
 ' Your portion'd sister to my spousal bed.' 320
 Here Phineus ceas'd, and touch'd each pitying
 chief:

But Boreas' sons were pierc'd with double grief;
 Compassion kind was kindled in their breast:
 Their tears abating, friendly Zetes press'd
 His trembling hand, and thus the seer address'd:

" O most disastrous of all human kind,
 " Whence spring these evils that o'erwhelm thy
 " mind?
 " Hast thou, intrusted with the book of fate,
 " By folly merited celestial hate?
 " Hence falls this indignation on thy head? 330
 " Fain would the sons of Boreas grant thee aid;
 " Fain would they execute what heaven ordains,
 " But awful dread their willing hands restrains.
 " To frighted mortals well thy sufferings prove
 " How fierce the vengeance of the gods above.
 " Swear, or we dare not, as we wish, essay
 " To drive these hateful harpies far away:
 " Swear that the succours, which our arms intend
 " Shall no superior deity offend."

He spoke; and straight to heaven disclosing
 wide 340

His sightless eye-balls, thus the seer reply'd;
 ' My son, th' injustice of thy tongue restrain,
 ' Nor let such thoughts thy pious soul profane.
 ' By Phœbus, heavenly augur, who inspires
 ' My conscious bosom with prophetic fires;
 ' By every woe fate destines me to bear,
 ' And by these eyes, involv'd in night, I swear;
 ' By the fell demons of the realms below,
 ' (Whom ever unpropitious may I know,
 ' From their resentment not in death secure, 350
 ' If falsely their dread godheads I adjure);
 ' That, should a captive by your arms be freed,
 ' No god vindictive will avenge the deed.'

Then acquiescing in the solemn pray'r,
 To aid the prophet Boreas' sons prepare.
 The youthful train a banquet spread; the last
 Which those fell harpies were decreed to taste.
 Nigh stand the brothers, ardent to oppose
 With glittering falchions their invading foes.
 But scarce the first sweet morsel Phineus took,
 When from the clouds with swift pervention
 broke, 361

(Swift as the lightning's glance, or stormy blast,
 Whose rapid fury lays the forest waste)
 Shrill-clamouring for their prey, the birds obscene;
 The watchful heroes shouting rush'd between;
 But they with speediest rage the cates devour'd,
 And round intolerable odours pour'd;
 Then o'er th' Ægean far away they flew; 369
 The sons of Boreas arm'd with swords pursue;
 Close they pursue; for Jove, that signal day,
 Their strength proportion'd to the desperate fray;
 The strength he gave, had Jove, that day, deny'd,
 In vain their pinions had the brothers plied,

For when to Phineus furious they repair,
 Or quitting Phineus seek the fields of air,
 The light-wing'd monsters, fleetier than the wind,
 Leave the careering zephyrs far behind.
 As when swift hounds, experienc'd in the chase,
 Through some wide forest, o'er the scented grass
 The bounding hind, or horned goat pursue, 380
 Near, and more near their panting prey they view;
 And eager stretching, the short space to gain,
 They snap, and grind their gnashing fangs in vain:

Thus ever near, the rapid chiefs pursu'd,
 The harpies thus their grasping hands elude.
 But now far off in the Sicilian main,
 By the wing'd brothers, sons of Boreas, slain,
 The harpy-race, though every god withstood,
 Had stain'd the Plotian isles with sacred blood;
 Their sore distress had Iris not survey'd, 390
 And darting from the skies the heroes staid:

' O sons of Boreas, the dread laws above
 ' Permit you not to wound the dogs of Jove:
 ' And, lo! my oath I pledge, that never more
 ' Shall these fell dogs approach the Thracian
 ' shore.'

This said, adjuring the tremendous floods,
 Most fear'd, most honour'd by immortal gods;
 By the slow-dripping urn of Styx she swore;
 The prophet's peaceful mansions on the shore
 For ever from those spoilers should be free;
 Such was the fatal sisters' fix'd decree. 401

The goddesses swore, the brothers straight obey,
 And back to Argo wing their airy way:
 The Strophades from thence derive their name,
 The Plotian islands styl'd by ancient fame.
 Disparting then, to different regions flew
 The maid celestial and the monster-crew.
 Those to the grotts retir'd, the dark retreat
 Of Dicte's caverns in Minoian Crete;
 While the gay goddesses of the watery bow 410
 Soar'd on fleet pinions to Olympus' brow.

Meanwhile the princes, with unwearied pains,
 Wash from their feet the harpies' filthy stains:
 Next from the spoils, which on Bebrycia's shore
 From vanquish'd Amycus brave Pollux bore,
 The fleecy victims they select with care;
 And sooth the gods with sacrifice and pray'r.
 Then in the palace each heroic guest
 Partakes the pleasures of the sumptuous feast:
 With them sat Phineus, and refresh'd his soul 420
 With savoury viands, and the cheering bowl:
 While yet he feasts, insatiate still he seems,
 And shares a bliss beyond the bliss of dreams.

Though now the rage of hunger was repress'd,
 And generous wine had open'd every breast;
 Yet still the chiefs prolong the banquet late,
 And for the feather'd sons of Boreas wait.
 Plac'd in the midst, before the cheerful fire,
 Thus of their voyage spoke the sacred fire:

' Hear what the gods permit me to relate; 430
 ' For 'tis profane to publish all your fate.
 ' Unnumber'd woes I felt, and feel them still,
 ' For erst divulging Jove's almighty will:
 ' To man he gives fate's dark events to scan
 ' In part, but always leaves dependent man.
 ' When hence your destin'd voyage ye pursue,
 ' Two rocks will rise, tremendous to the view,

' Just in the entrance of the watery waste,
 ' Which never mortal yet in safety past :
 ' Not firmly fix'd ; for oft with hideous shock 440
 ' Adverse they meet, and rock encounters rock :
 ' The boiling billows dash their airy brow,
 ' Loud thundering round the ragged shore below.
 ' Safe if ye hope to pass, my counsel hear,
 ' Be rul'd by prudence, and the gods revere ;
 ' Nor on your unexperienc'd youth depend,
 ' The want of caution brings you to your end.
 ' First from your ship a nimble dove let fly,
 ' And on the sure prognostic bird rely ;
 ' Safe through the rocks if she pursue her way,
 ' No longer ye the destin'd course delay ; 451
 ' Steer for the strait, and let the rowers sweep
 ' With stretching oars the close-contracted deep :
 ' For not in prayers alone your safety stands ;
 ' But nervous vigour, and the strength of hands.
 ' Ply then your oars, and strain at every stroke ;
 ' But first with prayer the deities invoke.
 ' The dove's sad fate should you desponding view,
 ' Crush'd by the closing fragments as she flew,
 ' Steer back, lest you against those rocks be driv'n,
 ' Steer back ; 'tis safest to submit to Heav'n. 461
 ' 'Twere death through them to force the foam-
 ' ing keel, [steel.
 ' Though heav'n-built Argo were compos'd of
 ' O friends, be warn'd by me, nor rashly dare
 ' To venture farther than my words declare ;
 ' Me though ye deem the righteous gods pursue
 ' With direful vengeance, threefold more than
 ' due ; [strait,
 ' Tempt not without the dove this dangerous
 ' For man must suffer what's ordain'd by fate.
 ' But if with active oars ye safely gain, 470
 ' Through these tremendous rocks, the distant
 ' main ;
 ' Close to Bithynia let your vessel run,
 ' And on the left the dangerous shallows shun ;
 ' Till Rhebas, rapid-rolling stream, ye reach,
 ' The gloomy shore, and Thynia's sheltering
 ' beach. [strand,
 ' Thence o'er the billows fronting Thynia's
 ' Soon will ye gain the Mariandine land.
 ' Here lies the path to Pluto's dreary caves,
 ' Here Acherusia frowns above the waves,
 ' Whose skirts the gulfy Acheron divides, 480
 ' And from deep whirlpools disembogues his
 ' tides.
 ' Thence, not far distant, with the western gale,
 ' Near Paphlagonia's towering heights ye sail,
 ' The hardy sons of which inclement coast
 ' Enetean Pelops for their founder boast.
 ' Full to the north a promontory fam'd
 ' Lifts the high head in air, Carambis nam'd ;
 ' The northern winds below its summit sweep,
 ' So loftily it rises o'er the deep.
 ' This point once doubled, a new coast expands
 ' Its ample plains, and on the limit stands
 ' A cape far-jutting, from whose rocky shores
 ' The rapid Halys in old ocean roars.
 ' Near him clear Iris draws his humbler train,
 ' In silver torrents foaming to the main.
 ' Beyond projects an headland tall and steep,
 ' And forms a peaceful harbour in the deep.

' Here o'er extensive fields Thermodon pours,
 ' Near Themiscyria's heights, his watery stores.
 ' Next lie the spacious Dcean plains, and near 500
 ' Three cities of the Amazons appear :
 ' And next the Chalybes, inur'd to toil,
 ' Work at the forge, and turn the stubborn soil.
 ' Near these the wealthy Tiberenians till,
 ' Sacred to Jove, the Genetæan hill.
 ' The Mossynæcians, next, the country round
 ' Possess, with mountains and with forests crown'd.
 ' In towers they live of solid timber fram'd,
 ' Mossynes call'd, and thence the nation nam'd.
 ' When these are past, an island bleak and bare
 ' Lies full in view, there guide your ship with
 ' care, 511
 ' And thence with care those noxious birds expel,
 ' Which on the desert shore unnumber'd dwell.
 ' Here form'd of solid stone, and seen from far,
 ' Stands the rough temple of the God of war.
 ' Two Amazonian queens, renown'd for arms,
 ' Had rais'd the fane, when stunn'd with war's
 ' alarms.
 ' Steer to this island through the stormy main,
 ' And, all that mariners can wish, ye gain. 519
 ' But why should I each circumstance disclose,
 ' And make again the powers of heaven my foes ?
 ' Beyond that isle, but on the fronting shores,
 ' The Philyreans feed their fleecy stores :
 ' The brave Macronians till the neighbouring
 ' coast ;
 ' Next these the numerous Bechirian host :
 ' Near them Sapirians and Byzerians dwell,
 ' And next the Colchians, who in arms excel.
 ' But ye, your steady course in Argo keep,
 ' Shun the false shores, and plough secure the
 ' deep,
 ' Till that rich coast ye reach, where Phasis leads
 ' From Amarantine hills o'er Colchian meads 531
 ' His liquid stores, and through fam'd Circe's
 ' plain ;
 ' Then rolls his widening current to the main.
 ' To this fam'd stream pursue your watery way,
 ' Soon will your eyes Æeta's towers survey,
 ' And Mars's grove, where, wondrous to behold !
 ' Hangs on a spreading oak the fleecy gold.
 ' A hideous dragon of enormous size
 ' Turns all around his circumspective eyes :
 ' O'er the bright spoil the strictest watch he
 ' keeps ; 540
 ' He never slumbers, and he never sleeps.
 ' He spoke, and terror curdled all their blood ;
 ' Deep fix'd in silence long the warriors stood.
 ' At length thus Jason, though possess'd with fear :
 ' Tell us, O tell us, venerable seer,
 ' Th' event of all our toils ; the sign explain
 ' How safely we may pass into the main [say,
 ' Through those dire rocks : and, O ! indulgent,
 ' Shall we once more our native land survey ?
 ' Unskill'd am I, unskill'd our martial train ; 550
 ' How shall I act, how measure back the main ?
 ' For far as ever flying sails were furl'd
 ' Lies Colchos, on the limits of the world."
 ' Thus Jason spoke ; and thus the prophet old :
 ' Those dangerous rocks once pass'd, my son, be
 ' bold.

' Some god from Æa shall through seas untry'd,
 ' Skirted by other coasts, your vessel guide,
 ' But you, to Æa sailing, on your crew confide.
 ' But, friends, to Venus be due honours paid;
 ' Still in remembrance keep her secret aid. 560
 ' On all your toils she kindly will bestow
 ' A glorious end—expect no more to know."

Scarce had he spoke, when speeding back repair
 The sons of Boreas through the fields of air;
 At the seer's door with nimble feet they light:
 Up rose the chiefs, rejoicing at the sight.
 When Zetes trembling, and with toils oppress'd,
 While thick short sobs incessant heav'd his chest,
 Tells how they drove the harpies far away,
 How Iris screen'd them, and forbade to stay, 570
 And pledg'd her solemn oath; while they retreat
 To the huge caves of mountain-cover'd Crete.
 These joyful tidings cheer'd the hearts of all,
 But most the prophet's, in the feastful hall;
 Whom Jason thus: "Sure from his heavenly state
 " Some god look'd down, and wail'd thy woeful
 " fate,

" And fore-decreed from far our bands to send,
 " That Boreas' sons might their assistance lend.
 " Should the same god restore the long-lost sight,
 " My gladden'd soul would feel as great delight,
 " As even my native country could bestow." 581
 Then thus sage Phineus, with dejected brow:
 ' My eyes, alas! shall ne'er behold the day; [ray:
 ' Shrunk are these balls, and quench'd the visual
 ' Heaven round me soon death's gloomy shade
 ' shall spread,

' And every honour will await me dead.' [cheer'd,
 With converse thus the fleeting hours they
 When rosy morning beaming bright appear'd.
 The neighbouring peasants round, with early day,
 Flock to the seer, their due regards to pay: 590
 This daily custom love and reverence taught;
 And some provision for the sage they brought.
 All came to learn by his prophetic lore:

He to the rich divin'd, and to the poor:
 For numerous votaries he reliev'd from dread,
 Who dearly lov'd him, and who daily fed.
 With these his steady friend Paræbius came,
 Who saw with joy these gallant sons of fame.
 To him prophetic Phineus had foretold,
 That a young band of Grecians, brave and bold,
 Should, in their voyage to the Colchian shore, 601
 In Thynia's bay their well-built vessel moor,
 And from these coasts those ravenous birds of prey
 The harpies drive, though sent by Jove away.
 The seer, well pleas'd, dismiss'd his friendly train,
 But bade Paræbius with the Greeks remain,
 And fetch him instant from his numerous stock
 A sheep, the best and fairest of the flock.

The willing swain obey'd the seer's request,
 And Phineus thus the mariners address'd: 610
 ' We are not all unciviliz'd and rude,
 ' My friends, nor guilty of ingratitude.
 ' That shepherd to my mansion came of late,
 ' To learn from me the colour of his fate;
 ' For the more labours and fatigues he bore,
 ' Pale, pining want oppress'd him still the more;
 ' New woes succeeded to the woes that past,
 ' And every day was darker than the last:

TRANS. II.

' And yet no crime had poor Paræbius wrought,
 ' Alas! he suffer'd for his father's fault: 620
 ' Who, when alone, and on the mountain's brow,
 ' With cruel axe he laid the forest low,
 ' Deaf to a doleful hamadryad's pray'r,
 ' The nymph neglected, and refus'd to spare,
 ' Though oft she urg'd this lamentable plea;
 " Pity, ah, pity my coeval tree,
 " Where I so many blissful ages dwelt!" 628
 ' But his hard heart no soft compassion felt:
 ' The tree he fell'd; and, for this foul disgrace,
 ' The nymph ordain'd him woes, and all his race
 ' To me Paræbius came, oppress'd with fear:
 ' The cause I found, and counsell'd him to rear
 ' An altar to the goddess of the shore,
 ' And pardon for his father's crimes implore.
 ' Thus was the guilt aton'd: e'er since, the man
 ' Pays all regards that grateful mortal can:
 ' For ever at my side he loves to stay,
 ' And always goes unwillingly away." 638

Thus Phineus spoke, when from his fleecy flock
 His friend brought two, the lairest of the flock.
 Then Jason rose, and, urg'd by Phineus blind,
 Rose the bold offspring of the northern wind:
 Their sacred offerings on the flames they lay,
 Invoking Phæbus at the dawn of day,
 The choicest viands with assiduous care
 The younger heroes for their friends prepare.
 Thus feasted, some their vessel's cordage press'd,
 Some in the prophet's mansion sunk to rest.
 Etesian breezes with the morning blow, 649
 Which, sent by Jove, o'er every region flow.

The nymph Cyrene, in old times, 'tis said,
 Her flocks beside Thessalian Peneus fed,
 Pleas'd with the honours of her virgin name,
 Till day's bright god seduc'd the rural dame.
 Far from Hæmonia he convey'd the fair,
 Brought to the nymphs, and trusted to their care,
 The mountain-nymphs that in parch'd Libya keep
 Their airy mansions on Myrtosia's steep.
 Cyrene there, along the winding shore,
 Thee, Aristæus, to Apollo bore; 660
 To whom rich swains, who in Thessalia live,
 The names of Agreus and of Nomius give.
 With length of days the god her love repaid,
 And fix'd her huntress of the woodland shade;
 But the young boy to Chiron's care he gave,
 To reap instruction in his learned cave.
 To him, when blooming in the prime of life,
 The muses gave Autosœ to wife;
 And taught their favourite pupil to excel
 In arts of healing, and divining well. 670
 To him they gave their numerous flocks to
 feed,

Which, Phthia's athenantine pastures breed;
 And those that stray on Othrys' lofty brow,
 Or where Apidanus' fam'd waters flow.
 But when fierce Sirius scorch'd the Cyclades,
 The realms of Minos, in th' Ægean seas,
 Nought could the burning malarv ailay;
 The islanders implor'd the god of day,
 Who sent young Aristæus to their aid,
 By whom the fatal pestilence was staid. 680
 At his fire's call he left fair Phthia's land,
 Attended by a bold Arcadian band,

Who from *Lycæon* their extraction boast,
 And sail'd to *Ceos* with his numerous host.
 He there an altar rais'd to showery *Jove*,
 And made oblation on the heights above
 To the red star that desolates the land,
 And to heaven's king; at whose supreme command
 Th' *Etesian* winds, while forty days they blow,
 Refresh with balmy gales the soil below. 690
 Ev'n now the *Cean* priests pay rites divine
 Before the burning stars begin to shine.
 Thus fame reports; and by these winds detain'd,
 With *Phineus* still the *Argonauts* remain'd.
 The grateful *Thynians* daily, while they staid,
 To their lov'd seer abundant stores convey'd.
 Yet, ere they leave this hospitable land,
 To the twelve gods erect they on the strand
 An altar, and with sacrifice and pray'r
 Appease the powers of heaven, and to their ship
 repair, 700
 Eager their long neglected oars to prove;
 Yet not unmindful of the timorous dove,
 Which safely fasten'd by a slender band
Euphemus carry'd trembling in his hand. [cord :
 Quick from the stay they lopp'd the double
Minerva saw the heroes haste aboard :
 On a thin cloud she lighted from above,
 (The cloud upheld the mighty seed of *Jove*)
 And sped her voyage to the *Euxine* main,
 For much she lov'd the delegated train. 710
 So when some shepherd quits his native home,
 (As men adventurous much delight to roam)
 No roads too distant or too long appear,
 In thought he sees, and thinks his mansion near;
 O'er sea, o'er land, with keen inquiring eyes
 He views all ways, and in idea flies :
 Thus to the *Thynian* shore, from heaven above,
 Swift flew the daughter of imperial *Jove*. 718
 When now the heroes through the vast pro-
 found [round,
 Reach the dire straits with rocks encompass'd
 Though boiling gulfs the sailing pine detain'd,
 Still on their way the labouring *Grecians* gain'd,
 When the loud-justling rocks increas'd their fears :
 The shores resounding thunder'd in their ears.
 High on the prow *Euphemus* took his stand,
 And held the dove that trembled in his hand.
 The rest with *Tiphys* on their strength rely'd,
 To shun the rocks, and stem the roaring tide.
 Soon, one sharp angle past, the joyful train
 Saw the cleft crags wide opening to the main.
Euphemus loos'd the dove, the heroes stood 731
 Erect to see her skim the foaming flood.
 She through the rocks a ready passage found :
 The dire rocks met, and gave a dreadful sound.
 The salt sea spray in clouds began to rise;
 Old ocean thunder'd; the cerulean skies
 Rebellow'd loudly with the fearful din;
 The caves below remurmur'd from within. [o'er
 O'er wave-worn cliffs, the coast's high margin
 Boil'd the light foam, and whiten'd all the shore.
 Round whirl'd the ship; the rocks with rapid
 sway 741
 Lopp'd from the dove her steering tail away;
 Yet still securely through the straits she flew :
 Loud joy inspir'd the circumspective crew.

But *Tiphys* urg'd the chiefs their oars to ply,
 For the rocks yawn'd tremendous to the eye.
 Then terror seiz'd them, when with sudden shock
 The reflux billows forc'd them on the rock :
 With chilling fears was every nerve unstrung,
 While o'er their heads impending ruin hung. 750
 Before, behind, they saw the spacious deep,
 When instant, lo ! a billow, vast and steep,
 Still rises higher, and still wider spreads,
 And hangs a wat'ry mountain o'er their heads.
 The heroes stoop'd, expecting by its fall
 That mighty billow would o'erwhelm them all;
 But *Tiphys*' art reliev'd the labouring oars :
 On *Argo's* keel the impetuous torrent pours,
 Which rais'd the ship above the rocks so high,
 She seem'd sublimely sailing in the sky. 760
Euphemus hastening urg'd the valiant crew
 Their course with all their vigour to pursue.
 Shouting they ply'd their oars, but ply'd in vain;
 For the rough billows beat them back again.
 And as the heroes unremitting row,
 Their labouring oars were bent into a bow.
 Swift down the mountainous billows *Argo* glides,
 Like a huge cylinder along the tides,
 Entangled with thick, craggy rocks around,
 Her seams all bursting, and her planks unbound.
 In that nice moment the *Tritonian* maid 771
 To sacred *Argo* lent the timely aid.
 Her left hand heav'd her from the craggy steep,
 Her right dismiss'd her gently to the deep :
 Then like an arrow from th' elastic yew,
 Swift o'er the foaming waves the vessel flew.
 Yet had the clashing rocks with adverse sway
 Torn the tall prow's embellishments away.
 When thus the Greeks had safely reach'd the main,
 To heaven *Minerva* wing'd her flight again. 780
 The parted rocks at once concurrent stood,
 Fix'd on one firm foundation in the flood :
 This had been long determin'd by the fates,
 If mortal ever past those dangerous straits.
 Now freed from fears, the Greeks with eager eyes
 View the broad ocean and serener skies :
 Their anxious doubts for *Argo* they dispel,
 And deem her rescued from the jaws of hell.
 Then *Tiphys* thus : ' Sure to this ship we owe
 ' That fearless safety we experience now. 790
 ' For though wise *Argus* with ingenious art
 ' Form'd the fair ship compact in every part,
 ' Vigour divine propitious *Pallas* gave,
 ' And pow'r assign'd her o'er the wind and wave.
 ' All now is safe : fear not thy haughty lord,
 ' But mark, illustrious chief, the prophet's word ;
 ' The rocks escap'd, no future fears remain,
 ' Your toils are easy, and your voyage plain."
 Thus he; and steering through the spacious sea,
 Near fair *Bithynia* plow'd the liquid way. 800
 Then *Jason* mild the pilot thus address'd :
 " Why, *Tiphys*, this to me with grief oppress'd ?
 " Yes I have err'd—my faults afflict my soul :
 " When *Pelias* gave command without controul,
 " 'Twas mine to've shunned this wild-projected
 " plot,
 " Though instant death had been my certain lot:
 " Now fears and cares my tortur'd bosom rend ;
 " I dread those ills that from the deep impend,

" I dread the savage coast, and every place
 " Where dwells the bloody or the barbarous race.
 " No peace by day, no sleep at night I take, 811
 " Since these brave chiefs assembled for my sake.
 " With cold indifference may'st thou now look down,
 " For no man's safety anxious but thy own;
 " But I, the least solicitous for mine,
 " Feel for this friend's, that comrade's, and for
 " thine.

" Much shall I feel for all this martial band,
 " Unless they safe regain their native land."
 Thus spoke the prince, his gallant host to try:
 With animating sounds they rend the sky. 820

The loud acclaim was grateful to his ears,
 And thus he boldly hails his brave compeers:
 " Your valour, friends, encourages my soul:
 " And since no fears your gallant hearts controul,
 " Boldly will I each coward thought repel,
 " Though doom'd to enter the abyss of hell.
 " For these rocks past, no dangers can dismay,
 " If we the counsel of the seer obey."

The Greeks applauding what their leader spoke,
 Ply their stout oars, and bend to every stroke;
 And first by Rhebas rapid stream they fly, 831
 And where Colona's rocks invade the sky,
 And where the black-brow'd promontory low'rs,
 And where lov'd Phillis his broad current pours.
 There Dipsacus receiv'd, in days of yore,
 Young Phryxus landing on his friendly shore,
 When, exil'd from Orchomenos, he swam
 On the broad shoulders of the gold-fleec'd ram.
 For to that stream a nymph of rural race
 Bore Dipsacus, who, fearful of disgrace, 840
 Dwelt with his mother, and along the mead
 Chose, near his father's stream, his fleecy flocks to
 feed.

The chiefs soon pass'd his celebrated fane,
 The river Calpis, and th' extended plain;
 And all the night, along the tranquil tide,
 And all the day their oars incessant ply'd.
 As when laborious steers, inur'd to toil,
 With the bright plough-share turn the stubborn
 soil,

Sweat from their sides distils in foamy smoke;
 Their eyes obliquely roll beneath the yoke; 850
 Their scorching breath heaves quick with panting
 sound,

While all day long they tread the weary ground:
 So toil'd the Greeks: nor yet the morning light
 Had pass'd the doubtful confines of the night,
 But, faintly glimmering on this earthly ball,
 Produc'd what mortals morning-twilight call.
 To Thynia's neighbouring isle their course they
 bore,

And safely landed on the desert shore,
 When bright Apollo show'd his radiant face,
 From Lycia hastening to the Scythian race, 860
 His golden locks, that flow'd with grace divine,
 Hung clustering like the branches of the vine:
 In his left hand his bow unbent he bore,
 His quiver pendent at his back he wore:
 The conscious island trembled as he trod,
 And the big rolling waves confess'd the god.
 Nor dar'd the heroes, seiz'd with dire dismay,
 The splendours of his countenance survey,

But on the ground their downward eyes they
 cast:

Meanwhile Apollo o'er the watery waste, 870
 And through thin ether on his journey flew.

Then thus spoke Orpheus to the martial crew:

" Let us, my honour'd chiefs, with joint acclaim

" This island sacred to bright Phœbus name,

" Who early here to all this host appear'd;

" Here let an altar on the shore be rear'd,

" And paid the rites divine: and if he deign

" That safe we reach our native land again,

" Young horned goats shall on his altars bleed,

" And the choice thighs to Phœbus be decreed.

" Now, comrades, due libations let us pay: 881

" Be gracious, O be gracious, god of day!"

Thus he: and some the stony altar raise,
 And some explore the forest's devious maze;
 Haply within its lone retreats to find

A kid wild wandering, or a bounding hind:

Latona's son soon led them to the prey;

Then on the altar, blazing bright, they lay

The choicest parts involv'd in sacred smoke,

And fair Apollo, early god, invoke. 890

Around the flame in sprightly dance they spring,

And lö Pæan, lö Pæan sing.

Then on the Thracian harp Oeager's son

In soothing strains his tuneful tale begun:

How once beneath Parnassus' rocky brow

He launch'd an arrow from his deadly bow,

And the fell serpent flew; though young and
 fair,

And beardless yet, but grac'd with golden hair:

O prove propitious, thou whose radiant head

Is deck'd with curls unclip'd, that never shed, 900

Worthy thyself! (Latona only knows

With nicest art those ringlets to dispose)

Corycian nymphs their joys in rapture show'd,

And lö, lö Pæan call'd aloud:

Encomium grateful to the god of day.

Thus having prais'd him in the solemn lay;

They swear devoutly, due libations made,

To league for ever, and lend mutual aid;

Then touch the hallow'd altar with their hands

Concordant; and ev'n now a temple stands 910

Sacred to Concord, by the Grecians rais'd,

When here that mighty deity they prais'd

Now the third morn began on earth to smile,

When with fresh gales they left the lofty isle.

The foaming Sangar at a distance seen,

The Mariandine meads for ever green,

And Lycus' winding waters they forsake

All on the right, and Anthemoisia's lake,

So fast before the wind the vessel went, 919

Crack'd was the cordage, and the canvass rent:

But the gale ceasing with the dawning day,

Joyful they reach the Acherusian bay,

Begirt with rocks so towering tall and steep,

The frown tremendous on Bithynia's deep;

And yet so firmly founded in the main,

The raging billows round them roar in vain:

Above, upon the promontory's brow,

Umbrageous planes in beauteous order grow.

Thence, downward, through a deep and dreary
 dell,

Descends the path-way to the cave of hell, 930

With woods and shaggy rocks obscure; from
 whence
 Exhaling vapours, chilly, damp, and dense,
 Scatter hoar frost along the whitening way,
 Which melts before the sun's meridian ray.
 On these rough cliffs, which many a storm mo-
 lests,
 The pleasing power of silence never rests.
 From hollow caverns through the leafy boughs,
 Above, the whistling wind for ever blows;
 And while mad billows lash the founding shores,
 Below, the raging main for ever roars. 940
 There, bursting from the promontory's sides,
 Sad Acheron along the valley glides;
 Deep-hollow'd beds his turbid streams convey,
 As eastward to the main he winds his way.
 This sable flood, in ancient story sam'd,
 The Megarensians Soönautes nam'd
 In after ages, when their course they bore
 By ocean to the Mariandine shore: 948
 For when the deep in deathful billows heav'd,
 This peaceful port their shatter'd ships receiv'd.
 To this the labouring Grecians bent their way,
 Row'd round the cape, and anchor'd in the bay.
 When Lycus and his Mariandine host,
 Lycus, the mighty monarch of the coast,
 Knew these brave Greeks who Amycus had slain,
 They welcom'd Jason and his conquering train:
 But most on Pollux fix'd their wondering eyes,
 And view'd him as a hero from the skies:
 For long the fierce Bebrycian's rude alarms
 Had rous'd the Mariandyni to arms. 960
 That day, the Grecian band with one consent
 To the king's hospitable palace went:
 Cheerful they there on choicest dainties din'd,
 And there with converse sweet regal'd the mind.
 Then Jason to the king recounts the name
 And race of all these chosen sons of fame,
 Who lent their aid at Pelias' dire command;
 Their strange adventures on the Lemnian land;
 What griefs, what woes at Cyzicus they bore;
 And how they landed on the Mysian shore, 970
 Where Hercules, distress'd his friend to find,
 They left at land, unwillingly behind.
 What Glaucus spoke prophetic from the main,
 How with his subjects Amycus was slain,
 The prince relates: what Phineus poor and old,
 Worn out with sufferings to the chiefs foretold;
 How through Cyanean rocks they safely steer'd,
 And in what isle the god of day appear'd.
 The king rejoic'd his guests so well had sped.
 But griev'd that Hercules was left, and said: 980
 'Think how, my friends, this hero's aid deny'd,
 'Rashly ye tempt a length of seas untry'd.
 'Full well I knew that valiant son of fame,
 'When here on foot through Lydia's coast he
 'came
 '(For here my hospitable father dwelt)
 'To fetch Hippolita's embroider'd belt.
 'The hero found me then a beardless swain,
 'Mourning my brother by the Mysians slain;
 '(The nation dearly lov'd the blooming chief,
 'And still lament in elegies of grief) 990
 'Then at the funeral games he prov'd his might,
 'And vanquish'd Titias in the gauntlet-fight

'Though young and stout, and eager for the fray,
 'From his bruise'd jaws he dash'd the teeth away,
 'The Mysian country, and the Phrygian plains,
 'The conqueror added to my fire's domains;
 'And the rude nations that Bithynia till,
 'To foaming Rhebas and Colona's hill;
 'And Paphlagonia to its utmost bounds,
 'Which sable Billis with his waves surrounds.
 'But now proud Amycus, and all his host, 1001
 'Since Hercules has left the neighbouring coast,
 'Have spoil'd my realms, and spread their hostile
 'bands
 'Wide as where Hipias' streams enrich the lands.
 'At length their lawless insolence they rue,
 'And by your hands have suffer'd vengeance due.
 'And sure some god afforded his relief
 'When Pollux slew that proud Bebrycian chief.
 'I for this deed my due regard will show;
 'Tis what the meanest to the mighty owe. 1010
 'My son, your comrade, shall at my command
 'Attend o'er distant seas your gallant band:
 'O'er distant seas, with Dascylus your guide,
 'You still with faithful friends shall be sup- }
 'ply'd,
 'Far as Thermodon rolls his foaming tide.
 'Meanwhile on yon bold cape that mates the
 'skies
 'To Leda's sons a sacred fane shall rise,
 'Admir'd by all that cross the boundless main,
 'For all shall venerate the sacred fane:
 'To them will I, as to the powers divine, 1020
 'Some fruitful acres near the town assign.
 'Conversing thus, the genial feast they share,
 'And to the ship at early day repair:
 'With his brave son the friendly Lycus went,
 'Who store of viands to the ship had sent.
 'Twas here the cruel destinies decreed
 'That Idmon, fam'd for augury, should bleed:
 'The fate of others he had oft foreshown,
 'But fail'd, unhappy! to prevent his own.
 'Here, in a covert near the reedy flood, 1030
 'A fell wild boar lay deep immers'd in mud.
 'With horrid tusks so dreadful he appear'd,
 'The fountain-nymphs the savage monster fear'd:
 'No living wight in miry marsh or moor
 'E'er saw so fierce, so horrible a boar.
 'On the lake's verge as luckless Idmon stood,
 'From his close covert, in the reedy mud,
 'Up sprung the furious beast with might and main,
 'Tore the chief's thigh, and snapp'd the bone in
 'twain;
 'He groans, he falls, and on the bank he lies, 1040
 'His griev'd companions answer to his cries;
 'When Peleus instantly approaching near,
 'Launch'd at the boar his unavailing spear:
 'But Idas aim'd his pointed dart so well,
 'Low in the marsh the dying monster fell.
 'The chiefs with Idmon to the ship retir'd,
 'Who deeply groaning in their arms expir'd.
 'Immers'd in grief, they now neglect to sail;
 'For three whole days their comrade they bewail;
 'But on the fourth, with pensive sorrow, paid 1050
 'The last sad honours due to Idmon's shade.
 'The king, the people join'd the mournful crew,
 'And, loud lamenting, numerous victims slew:

They dug the grave, and on the greenward raise
A tomb on which posterity will gaze :
For near the tomb a tall wild olive grows,
Beneath the cape, and beautifully blows.
Me would the nine commission to unfold
This truth, which Phœbus had long since fore-
told,

This, this is he, the tutelary lord, 1060
Henceforth to be by mighty states ador'd :
For here Eœotians and Megarians join'd,
Near the wild olive wavering in the wind,
To build a city ; though due honours they
To Agamestor, not to Idmon, pay.

Who fell beside ? for, lo ! the chiefs intend
Another tomb for some lamented friend.
Ev'n now two mournful monuments appear :
Tiphys, fame says, was stretch'd upon the bier.
Him cruel fate ordain'd no more to roam ; 1070
He died far distant from his native home.

For while to Idmon funeral rites they pay,
Untimely sickness snatch'd the chief away.
Then heart-felt sadness seiz'd the pensive train,
Who, prostrate on the margin of the main,
Forgetful of their necessary food,
Mourn'd in sad silence to the roaring flood.
For they, now skilful Tiphys is no more,
Despair'd returning to their native shore ; 1079
And here had staid, with bitter grief oppress'd,

Had not Saturnia in Ancæus' breast
Breath'd courage : him Aſtypalæa bore,
Near winding Imbracus on Samos' shore,
To ocean's god ; a chief expert to guide
The flying vessel o'er the foaming tide.
Then thus to Peleus, Neptune's valiant son,
By heaven inspir'd, in cheering terms begun :

' Ill suits the brave in foreign climes to stay,
' And waste, O Peleus, precious time away.
' I left not Samos less for failing skill'd 1090
' Than fierce contention, in the fighting field.
' For Argo cherish not one abject fear,
' Since many skill'd, besides myself, are here.
' And he, to whom the steerage we ordain,
' Will safely guide the vessel o'er the main.
' 'Tis then to stimulate the fainting crew
' With ready oars their voyage to pursue.'
He spoke, and transport touch'd the Phthian's
breast,

Instant he rose, and thus the host address'd : 1100

" Why are we here by fruitless grief detain'd ?
" Two friends are dead, and this the fates or-
dain'd ;

" Yet many pilots in this host remain,
" To steer firm Argo o'er the watery plain,
" To sorrows unavailing bid adieu !

" Let us, bold peers, our destin'd course pursue."

He said, and Jason anxious thus reply'd :

' Where are those pilots, say, our course to guide ?

' For those whom late we boasted as the best

' And ablest chiefs, are most with grief oppress'd,

' I therefore deem a like sad fate attends 1110

' On us, as on our late departed friends,

' If neither in Æeta's ports we moor,

' Nor through those rocks regain our native shore.

' But here inactive and inglorious stay,

' Years following years, and linger life away.'

He spoke ; Ancæus seiz'd the steerage, driv'n
By power instinctive from the queen of heav'n.
Erginus next the glorious charge desir'd ;
Euphemus, Nauplius to the helm aspir'd.
But these the congregated chiefs declin'd, 1120
And bold Ancæus to the post assign'd.

With the twelfth rising morn the heroes sail ;
Favonius breath'd a favourable gale :
And soon they leave sad Acheron behind,
Then give the swelling canvass to the wind :
On the smooth sea the ship serenely rides,
And light along the liquid level guides.
Ere long with stretching sails the coast they
gain,

Where broad Callichorus augments the main.
To Thebes returning from his Indian fights, 1130
Here Bacchus solemniz'd mysterious rites,
The dance before the sacred cave ordain'd,
And here full many a doleful night remain'd.
This name the country to the river gave,
Callichorus ; and Aulion to the cave.

Still as their course the daring Greeks pursue,
The monument of Sthenelus they view.
With honours grac'd, obtain'd in realms afar,
Returning from the Amazonian war,
On the bleak shore (Alcides at his side) 1140
Pierc'd by a fatal dart the hero died.
Slow sail'd they on, for, eager to survey
His kindred warriors on the watery way,
At his request, from her infernal coast
Pluto's grim queen releas'd the pensive ghost.
The pensive ghost beheld with eager ken
From the tall monument the ship and men.
As arm'd for war the martial phantom seem'd ;
Four crests high-towering on his helmet beam'd,
With purple rays intolerably bright ; 1150
Then soon it sunk beneath the shades of night.
In mute amazement stood the Grecian host
But Mopsus counsel'd to appease the ghost
With offerings due ; the chiefs approach the
strand,

And round the tomb of Sthenelus they stand.
They pour libations, and the victims slay,
And on the fire the destin'd offerings lay.
Apart, to guardian Phœbus next they raise
An altar meet, and bid the victim blaze. 1159
Here Orpheus plac'd his lyre for music fam'd ;
Apollo's altar hence was Lyra nam'd.

And now, invited by the favouring gales,
They climb the ship and spread their swelling
sails ;

Swift o'er the deep the winged vessel flies,
Swift as the rapid hawk that cleaves the skies,
And lightly through the liquid ether springs,
Nor moves, self-poiz'd, his wide expanded wings.
Thence by Parthenius sail'd the social train,
The gentlest stream that mingles with the main.
Fatigued with traversing the mazy grove, 1170
Here, ere she re-ascends the courts of Jove,
The chaste Diana, huntress of the wood,
Bathes her fair limbs, and gambols in the flood.
Then during night by Sesamus they sail,
And Erythrus rising o'er the vale ;
By Cromna and Crobrialus, and where
Thy grove, Cyturus, ever green appear.

Thence with the rising sun they stoutly row
Near where Carambis lifts his rocky brow.
All day, all night with unremitted oar 1180
They coast along Ægialus's shore.
Then to the Syrian clime the heroes sped,
Where Jove, by hasty promises misled
Sinope plac'd, and, all she wish'd to claim,
Gave her the honours of a virgin's name.
For, know, the god, by love's strong power op-

press'd,
Promis'd to grant what'er she might request:
And this request th' insidious damsel made,
That her virginity might never fade. 1189
Hence Phæbus foil'd could no one wish obtain;
Hence winding Alys woo'd the maid in vain.
No mortal force such virtue could o'ercome.
Defeat Jove's promise, and impair her bloom.
Here dwelt Deïmachus's off-spring fam'd,
Deileon Autolycus and Phlogius nam'd,
What time they ceas'd with Hercules to roam,
And at Sinope found a settled home.
They, when they saw the bold Thessalian band,
Met them on shore and welcom'd them to land;
And loathing longer in these climes to stay, 1200
Join'd the brave crew, and with them sail'd away.
Bless'd with the zephyr's breeze that briskly blew.
Near Halys' stream and Ilis' sail'd the crew;
Near Syria's coast, and, e'er night's shades abound,
Near th' Amazonian cape, for many a bay re-

noun'd.
Where Hercules surpris'd in days of yore,
Bold Menalippe wandering on the shore:
A belt Hippolyta her sister paid,
And for this ransom he restor'd the maid. 1210
Here in Thermodon's bay firm Argo moor'd:
For lash'd with tempests the vex'd ocean roar'd.
No river like the fam'd Thermodon leads
Such numerous currents o'er the fertile meads:
A hundred streams to him their waters owe;
Yet from one source, one only source they flow.
On Amazonian hills, that reach the skies,
The great Thermodon first begins to rise;
Hence soon emerging many a course he takes,
Sinks but to mount, and various channels makes.
The different streams from different founts distil,
In soft meanders wandering down the hill; 1221
Some public notice and fair titles claim,
Some flow obscurely, and without a name;
But confluent soon, along the winding plain,
He rolls his waves, and foams o'er half the main.

Had the Greeks landed on the hostile coast,
War would have soon pursu'd the gallant host:
(For the fierce Amazons regard not right,
Strife is the r sport, and battles their delight:
From Mars and harmony these warlike maids 1230
Sprung where Acmonius spreads his bowery
shades!

But favour'd with the soft Favonian wind,
The heroes left the crooked shore behind,
Where the bold Amazons, perceiv'd from far,
Stood sheath'd in arms, prepar'd for speedy war.
Not in one city dwelt this martial band,
But in three parties scatter'd o'er the land:
The first tribe at Themiscyra remain'd,
O'er this Hippolyta, their empress, reign'd;

There dwelt the fair Lycæstian dames apart, 1240
Here the Chadesians, skill'd to lance the dart.
Th' ensuing day the delegated band
Approach'd with oars the rough Chalybian land;
Whose sons ne'er yoke their oxen to the plough,
Nor healing plants, nor fruits delicious know:
Nor aught delight they in th' irriguous mead,
Retir'd and still, their fleecy flocks to feed;
But they dig iron from the mountain's side,
And by this ore are nature's wants supply'd.
Devoid of toil ne'er beam'd Aurora's ray, 1250
And dust and smoke obscur'd the dismal day.

From thence they pass where Tibarenians till,
Sacred to Jove, the Genetæan hill.
Here, when the teeming wives, are brought to
bed,
Their groaning husbands hang the drooping
head;

Equal attendance with their wives they claim;
The same their diet, and their baths the same.
Next by the sacred hill their oars impel,
Firm Argo, where the Mossynæcians dwell.
In towers they live, of solid timber fram'd, 1260
Mossynes call'd, and thence the nation nam'd:
Of manners strange; for they with care conceal
Those deeds which others openly reveal;
And actions, that in secret should be done,
Perform in public and before the sun:
For like the monsters of the bristly drove,
In public they perform the feats of love.

Exalted in his tower that mates the sky,
The monarch here dispenses law from high:
But if his judgment err, this rigid state 1270
Condemns their chief, and starving is his fate.
These nations past, with unremitting oar
They reach, Aretias, thy sea-girt shore.
Then sunk the breezes with the closing day,
When down the sky descending they survey
A winged monster of enormous might
Which toward the ship precipitates her flight.
Her wings she shook, and from her pinions flung,
A dart-like quill, which on Oileus hung;
Down his left shoulder swift it fell: no more,
Faint and enfeebled, could he hold his oar. 1281
In silence long the Grecian heroes gaze,
And view the feathery javelin with amaze.
But Erybotes, soon approaching near,
Extracted from the chief the winged spear;
Then from his side his pendent belt unbound,
And wrapp'd that bandage o'er the gaping wound.
When, lo! a second bird appear'd in view,
But ready Clytius first had bent his yew;
By his keen shaft the feather'd monster slain 1290
Fast by the ship fell headlong in the main.
Then thus Amphidamus: 'My friends, ye know,
'And these obscene voracious fiends foreshow
'Aretias near: then list to what I say,
'Fruitless are shafts to drive these pests away;
'But, would you here a fit reception find,
'Recal th' advice of Phineus to your mind.
'For when Alcides to Arcadia went
'Well arm'd with arrows, on his toils intent,
'From the Stymphæan lake he sail'd to
'fright 1300
'These ravenous harpies (I beheld the sight)

' But when he rung a cymbal with his spear;
 ' The clanging cymbal fill'd the birds with fear;
 ' In wild confusion far away they fly,
 ' And with shrill clamours pierce the distant sky.
 ' 'Tis ours to practise this expulsive art;
 ' But hear ye first the counsel I impart:
 ' Let half our crew in glittering armour dress'd,
 ' Nod, as by turns they row the high-plum'd crest;
 ' The rest bright spears and swords and shields
 ' provide, 1310

' And meet dispose them round the vessel's side.
 ' Then all at once your voices raise on high,
 ' And with loud pealing shouts assail the sky;
 ' The deafening clamours, the protended spears,
 ' And nodding crests will fill the birds with fears.
 ' And when Aretia's barren isle ye gain,
 ' Ring your broad bucklers, and all shout amain.'

He spoke, the chiefs approv'd the wise design;
 High on their heads the brazen helmets shine,
 Whose purple crests wav'd dreadful in the wind;
 To these alternate were stout oars assign'd; 1321
 The rest with care their vessel's side conceal'd
 With glittering spears, and many a shining shield.
 As when industrious builders cover o'er
 With tiles the walls their hands had rais'd before;
 In chequer'd squares they decorate the roof,
 And make it fair to view, and tempest proof:
 Thus they with shields dispos'd in order due,
 Shelter'd their vessel, and adorn'd it too.

As when embattled hosts their foes assail, 1330
 Tumultuous shouts, and martial sounds prevail;
 So from the ship loud clamours pierc'd the sky;
 No more the Greeks their feather'd foes descry:
 Rattling their bucklers, near the land they drew,
 And far away the winged furies flew.

So when great Jove on close-throng'd cities pours
 From hyperborean clouds his haily showers;
 Within, the dwellers sit in peace profound,
 Nor heed the rattling storms that rage around;
 In vain the hail descends, the tempests roar, 1340
 Their roofs from harm were well secur'd before:
 Thus on their shields the furies shot their quills,
 Then clamouring vanish'd to far distant hills.

Say, Muse, why Phineus counsel'd here to land,
 On Mars's isle, this delegated band?
 And what advantage could the Grecians gain
 From all the toils and perils of the main?

To fam'd Orchomenos, with favourite gale,
 From Æa's walls the sons of Phrixus sail,
 Their grandfire's vast inheritance to share, 1350
 Who dying left this voyage to their care.

Near Mar's island on this signal day
 The sons of Phrixus plow'd the liquid way;
 But Jove ordain'd that Boreas blasts should blow,
 While moist Arcturus soak'd the vales below.
 First on the mountains, rising by degrees,
 All day rough Boreas shook the trembling trees;
 Then, night approaching, he with hideous sound
 Roll'd the big waves, and heav'd the vast profound.
 No stars appear translucent through the clouds,
 But gloomy darkness every object shrouds. 1361
 The son of Phrixus, tost by whelming waves,
 With horror shudder'd at the watery graves;
 For the fierce blast, impell'd with might and main,
 Tore all their canvass, split the ship in twain

And dash'd to pieces; but by heaven's kind aid
 On a large fragment of the wreck convey'd,
 The winds and waves the trembling brothers bore
 Aghast, and half expiring to the shore.

Instant in floods descended copious rain, 1370
 Drench'd the whole island, and increas'd the main;
 (These shores, the neighbouring coast, and sacred
 hill,

The rude, the barbarous Mossynœcians till)
 Borne on a broken plank, the forceful blast
 The sons of Phrixus on this island cast,
 Who met the Grecians with the rising sun;
 Ceas'd was the rain, and Argus thus begun:

' Adjur'd by Jove, whose circumspective ken
 ' Surveys the conduct and the cares of men,
 ' Whate'er your name or race, our tale attend,
 ' And to the wretched your assistance lend. 1381

' The raging storms that Neptune's empire sweep,
 ' Have wreck'd our luckless vessel in the deep;
 ' To you we pray, if pity touch your heart,
 ' Some scanty raiment for our wants impart;
 ' The sons of misery for mercy call;
 ' To one low level sorrow sinks us all.

' They who to prostrate suppliants lend an ear,
 ' The laws of hospitable Jove revere.

' All-present he hath listen'd to our pray'r, 1390
 ' And sinking sav'd us with a parent's care.'

Then Æsus son (fulfilling Phineus' plan)
 Thus question'd mild the miserable man;

" But first, of truth observant, frankly tell,
 " In what far region of the world ye dwell;

" What business call'd you from your native
 " coast, [boast."

" What race ye sprung from, and what names ye
 Then Argus thus: ' Ye, sure, have heard the
 " fame

' Of Phrixus, who from Greece to Æa came.
 ' To great Æeta's citadel he swam 1400

' Supported on the shoulders of the ram,
 ' Whose fleece now high-suspended ye behold,

' By Hermes metamorphos'd into gold.
 ' On the tall oak's high top it hangs in view,

' The ram to Jove, propitious, Phrixus flew.
 ' The generous king receiv'd him as his guest,

' And with undower'd Chalciope he blest'd.
 ' From these we sprung; but Phrixus breathes no
 ' more,

' His bones lie buried on the Colchian shore.
 ' We now to fam'd Orchomenos repair, 1410

' The wide domains of Athamas to share;
 ' Such were the last injunctions of our sire:

' Our business this—if ye our names require,
 ' This Cytisorus, that will Phrontis claim,

' He surnam'd Melas, Argus is my name.'
 He spoke: the Argonauts with still amaze,

And secret transport on the strangers gaze.
 Then Jason mark'd the much enduring man,

And thus with mild benevolence began:
 " Friends as ye are, and near relations too, 1420

" To us for succour not in vain ye sue.
 " Cretheus and Athamas their sire the same;

" And Cretheus was my honour'd grandfire's
 " name: [Greece

" With these companions join'd, I sail'd from
 " To Colchos, famous for the golden fleece—

" Some distant day, at ease may we relate
 " These strange events, and all our various fate.
 " Now shall warm robes to clothe your limbs be
 " giv'n,
 " We meet conducted by the hand of heav'n."
 He said, and from the ship rich vestments sent;
 Then to the sacred fane of Mars they went. 1431
 From fleecy flocks they drain'd the life-warm
 blood,
 And all devoutly round the altar stood;
 This, of small stones compos'd, was plac'd before
 The lofty temple's double-folding door:
 (Within the fane a stone of fable hue
 Stood, where the Amazons their victims slew;
 Who held it lawless, when they sojourn'd here,
 To slay the sheep, or sacrifice the steer;
 Instead of these the full-fed, pamper'd steed 1440
 Was doom'd, a victim at this fane, to bleed.)
 These rites dispatch'd, and hunger's rage repress'd,
 Thus Æson's son the listening host address'd:
 " Impartial Jove the race of man regards;
 " The bad he punishes, the just rewards:
 " As from a bloody stepdame's rage of yore
 " He sav'd your fire, and blest with ample store,
 " So he preserv'd you from the whelming deep,
 " And in this vessel will securely keep;
 " Whether for Æa in our ship ye sail, 1450
 " Or to far Phthia court the favouring gale.
 " For this fam'd ship of Pelion's pines was made,
 " And form'd by Argus, with Minerva's aid;
 " But storms had lash'd her, ere, with hideous
 " shock, [rock.
 " She reach'd those straits, where rock encounters
 " Then lend your aid to gain the golden fleece,
 " And be our guides to bring it back to Greece.
 " Jove seems incens'd, and we this voyage take,
 " To soothe his anger, and for Phrixus' sake."
 Ardent he spoke; but they despair'd to find,
 Æeta of so tractable a mind, 1461
 To yield the fleece: then Argus thus replies,
 Alarm'd and troubled at their bold emprise;
 " Whate'er our powers can grant, or wishes
 " gain,
 " The sons of Greece shall never ask in vain.
 " But proud Æeta, cruel and severe,
 " Hates the tyrant, and his power I fear;
 " The son his fire, so fame relates, he boasts;
 " Unnumber'd subjects guard his ample coasts;
 " For mighty strength he stands renown'd afar,
 " And voice terrific as the god of war. 1471
 " The golden prize a monstrous dragon keeps:
 " Hard task to seize it, for he never sleeps.
 " Earth on rough Caucasus a being gave
 " To this fierce beast near Typhaonia's cave,
 " Where huge Typhæus, as old stories prove,
 " Was struck by lightning from almighty Jove,
 " When fierce in arms against heaven's king he
 " stood;
 " From his head issu'd warm corrupted blood;
 " To Nyssa's hills, to Nyssa's plains he flies, 1480
 " And now beneath Serbonian marshes lies."
 He said; distress'd so sad a tale to hear,
 On every countenance sat pallid fear;
 When Peleus thus with confidence reply'd,
 And gave that courage which their fears deny'd:

" Despair not, friend; for we disdain to yield,
 " Nor dread to meet Æeta in the field.
 " We too are skill'd in war, and draw our line
 " From godlike chiefs, and origin divine.
 " Incens'd should he the fleecy gold detain, 1490
 " He'll ask, I trust, the Colchians aid in vain."
 Conversing thus the chiefs their thoughts ex-
 press'd,
 And, satiated with repast, reclin'd to rest.
 With rising morn the gently breathing gales
 Play'd round the pine, and fill'd the swelling sails;
 The swelling sails, expanded by the wind,
 Soon left Aretias' barren shore behind;
 And, swiftly skimming o'er the watery vast,
 The Philyraean isle at eve they past;
 Where Saturn first fair Philyra survey'd, 1500
 When on Olympus he the Titans sway'd.
 (Nurs'd by the fierce Curetes, yet a child,
 Young Jove was hid in Cretan caverns wild)
 Unknown to Rhea he the maid compress'd;
 But soon to Rhea was the crime confess'd;
 Detected Saturn left his bed with speed,
 And sprung all-vigorous as a mane-crown'd steed.
 Swift fled fair Philyra, abash'd with shame,
 And to the hills of Thessaly she came:
 Fam'd Chiron sprung from this embrace so odd,
 Ambiguous, half a horse, and half a god. 1511
 From thence they sail by long Macronian strands,
 And where Bechira's ample coast expands;
 Shores where Byzerians wander far and wide,
 And fierce Sapirians, stigmatiz'd for pride;
 And, favour'd by the soft impelling wind,
 Leave numerous coasts and lands unnam'd be-
 hind:
 And, sailing swiftly o'er the waves, survey,
 Far on the Pontic main, an opening bay;
 Then, Caucasus, thy hills were seen on high, 1520
 That rear their rocky summits in the sky;
 Fix'd to these rocks Prometheus still remains,
 For ever bound in adamantine chains:
 On the rude cliffs a ravenous eagle breeds,
 That on the wretch's entrails ever feeds.
 The Grecians saw him, ere th' approach of night,
 Soar high in air, loud hissing in his flight:
 Around the ship he flew in airy rings,
 The sails all shivering as he shook his wings:
 Not as a light aerial bird he soars, 1530
 But moves his pinions like well-polish'd oars.
 The ravenous bird now rushing from the skies,
 Sudden they heard Prometheus' piercing cries:
 The heavens re-echoed to the doleful sound,
 While the fell eagle gnaw'd the recent wound.
 Till gorg'd with flesh the bird of Jove they spy'd
 Again descending from the mountain's side.
 Night now approaching, near the land they
 drew,
 And Argus well his native country knew;
 For, Phasis, thy wide-spreading flood they gain,
 And the last limits of the Pontic main. 1541
 At length arriv'd, so many dangers past,
 They furl the mainsail, and they lower the mast:
 Their bending oars the mighty stream divide;
 The stream receives them on his foaming tide.
 All on the left, in ancient rolls renown'd,
 Rise Æa's walls, with glittering turrets crown'd;

And on the right the field, not distant far,
 And grove, both sacred to the god of war;
 Where on an oak the fleece, suspended high, 1550
 A dragon guards with ever-watchful eye.
 Then Jason hastes, impatient to consign
 To the pure stream the unpolluted wine,
 And from a golden vase fulfils the rite divine,
 Sacred to earth, to gods that guard the coasts,
 And ancient heroes' long-departed ghosts:
 For their protection he preferr'd his pray'r,
 To keep the ship with tutelary care.

Then thus Ancæus: 'Numerous perils past,
 'Colchos and Phasis we behold at last; 1560
 'Behoves you now your sage advice to lend,
 'Whether to treat Æeta as a friend,
 'With speech accordant, and compliance bland,
 'Or in rough terms the golden prize demand.'
 Thus he; but Jason urg'd, at Argus' call,
 High up the sedge stream the ship to haul;
 Which, undisturb'd, might there at anchor ride,
 In the calm bosom of the peaceful tide:
 There sought the chiefs the blessings of repose,
 And slept secure till grateful morning rose.

NOTES ON BOOK II.

Ver. 16. THIS encounter between Amycus and Pollux is described likewise by Theocritus, who, in the opinion of Casaubon, far surpasses Apollonius; but Scaliger gives the preference to our author, who has certainly furnished Virgil with many circumstances in his description of the contest between Dares and Entellus. See *Æn. B. v.*

Neither Apollonius nor Theocritus have lost sight of Homer's description of the combat of the cæstus, *Il. xxiii. 683.*

Mr. Warton, in his valuable edition of Theocritus, delivers his opinion of the description of this combat, by the three poets, Apollonius, Theocritus, and Valerius, in the following words: "Apollonio sane, auctore suo, Flaccum inferiorem censeo; quippe quod Flaccus minus simplex sit et omnia, sublimitatis affectato studio, magnificentius efferat et inflatus. Utroque præstantior Theocritus, quod utroque simplicior. Tantum illi cedit Apollonius, quantum Flaccus Apollonio."

Ver. 112. This simile is borrowed by Virgil, *Æn. xii. 715.*

With frowning front two mighty bulls engage,
 A dreadful war the bellowing rivals wage, &c.
Pitt.

Ver. 163. Virgil has also taken this simile from Apollonius: a poet, as Catrou observes, very rich in beautiful comparisons. See *Pitt's Virg. Æn. xii. 832.*

So when the swain invades with stifling smoke
 The bees, close-cluster'd in a cavern'd rock,
 They rise; &c.

It was the custom of the ancients to force bees out of their hives by fumigation. To this practice the poets frequently allude. Thus Ovid de rem. amor. L. i. 185.

Quid, cum suppositos fugiunt examina fumos,
 Ut relevent dempti vimina curva fagi?

— τῷφι πολλὰ τῷ καπνῷ. *Arist. in vesp.*

Ver. 178. The land of the Chalybes, which bordered upon that of the Mariandyni.

Ver. 199. Crowns and garlands were thought so necessary to the gods, and were so anciently

used, that some have derived the custom of putting them on at feasts, from the primitive entertainments, at which the gods were thought to be present. *Potter.*

Ver. 221. The storm drove them to Salmydessus, a city on the coast of Thrace, opposite to Bithynia.

The Scholiast speaks of more than one Bithynia. There is a country of that name, he tells us, both on the coast of Europe and of Asia. The storm drove the Argonauts to Salmydessus, which is opposite to the Asiatic Bithynia.

Ver. 224. Phineus was a king of Thrace, or, as some say, of Arcadia. He ordered the eyes of his two sons to be torn out, to satisfy their mother-in-law. The gods punished his cruelty: they struck him with blindness, and sent the harpies to him, who took the meat from his mouth: so that he would have perished with hunger, if Zeres and Calais had not delivered him from them, and pursued them to the Strophades, where they gave over the chase. These harpies were called out of hell, and seem to be of the number of the furies. A permission was given them to dwell upon earth to punish the wicked: by which the poets would represent to us the remorse of a bad conscience. *Catrou.*

Ver. 237. Apollonius has furnished Virgil with many hints on this subject of the harpies. *Æn. B. iii. 225.*

At subitæ horrido lapsu de montibus adfunt
 Harpyiæ; &c.

When from the mountains, terrible to view,
 On sounding wings the monster-harpies flew.

Pitt.

The harpies were a kind of birds which had the faces of women, and soul long claws. When the table was furnished for Phineus, they flew in, and either devoured or carried away the greater part of his repast, or polluted what they left. *Raleigh.*

Ver. 256. The person and distresses of this old man are represented to us in a manner the most striking and pathetic. Virgil had this description in view, when, speaking of Achemenides, he says,

Cum subito e silvis, macie confecta suprema,
Ignoti nova forma viri, miserandaque cultu
Procedit, supplexque manus ad litora tendit,
Respicimus : dira illuvies, immisque barba,
Confertum tegmen spinis.— *Æn.* iii. 590.

Ver. 346, 347. Thus Telemachus swears, not only by Jupiter, but by the sorrows of his father.

By great Ulysses, and his woes I swear.

See Pope's Odyssey. xx. 406.

Adjurations of this sort are frequently to be met with in the Greek tragedians.

Ver. 377. Virgil has closely copied the conclusion of this comparison : the eager hound, says he,

Hærat hians, jamque tenet, similisque tenenti
Increpuit malis, morsuque clusis inani est.

Æn. xii. 754.

They snap, and grind their gnashing teeth in vain.

Ver. 393. The ancient name of a priest was *cāhen*, rendered mistakenly, *κυν* and *canis*. Hence the harpies, who were priests of Ur, are styled by Apollonius, the dogs of Jove. Iris, accosting Calais and Zetes, tells them, it would be a profanation to offer any injury to those personages. The sirens and harpies were of the same vocation. *Bryant's Myth.* vol. ii.

Ver. 404. The word Strophades is derived from a Greek verb that signifies to turn. These islands therefore were named Strophades, because near them the sons of Boreas left off pursuing the harpies, and turned back to the house of Phineus.

Ver. 437. This is very similar to a passage in the *Odyssey*, B. xii. v. 71.

High o'er the main two rocks exalt their brow,
The boiling billows thundering roll below ;
Through the vast waves the dreadful wonders move,

Hence nam'd erratic by the gods above.—

Scarce the fam'd Argo pass'd these rapid floods,
The sacred Argo, fill'd with demigods !

Ev'n she had sunk, but Jove's imperial bride

Wing'd her fleet sail, and push'd her o'er the tide.

Pope.

It is observed in the note on this passage, "that Homer, to render his poetry more marvellous, joins what has been related of the Symplegades to the description of Scylla and Charybdis.—The story of the dove being reported of the Symplegades might give him the hint of applying the crushing of the doves to Scylla and Charybdis." But we must remember that Argo passed, in her return, through Scylla and Charybdis, and that Apollonius, as well as Homer, has mentioned these rocks by the name *πλαγυαί*, erratic, which is supposed to be more strictly applicable to the Symplegades. If the Cyanean rocks were called Symplegades from their jussling together, and

that appearance was occasioned by the different views in which they were seen, sometimes in a direct line, and sometimes obliquely, why might not Scylla and Charybdis, for the same reason, be said to jussle together, and consequently without impropriety be called *πλαγυαί*, or erratic? Minerva, according to Apollonius, guided Argo through the Symplegades; but her course through Scylla and Charybdis was directed by Thetis, at the intercession of Juno, agreeable to what Homer here mentions.

Ver. 448. The dove which returned to Noah with a leaf of olive, and brought the first tidings that the waters of the deep were assuaged, was held in many nations as particularly sacred : it was looked upon as a peculiar messenger of the Deity, an emblem of peace and good fortune. Among mariners it was thought to be particularly auspicious ; who, as they sailed, used to let a dove fly from their ships, to judge of the success of their voyage. The most favourable season for setting sail was at the Heliacal rising of the seven stars, near the head of Taurus ; and they are, in consequence of it, called Pleiades. It was at their appearance that the Argonautics set out upon their expedition. "*Ἄμμος δ' ἀντίλλωνι πειλίσιας.*" — *Theoc.* Id. xiii. 25. When first the pleasing Pleiades appear. And this was thought a fortunate time for navigation in general. The Argonauts, in a time of difficulty and danger, made the experiment of letting a dove fly, and formed from it a fortunate presage. *Bryant's Myth.* vol. ii. 285.

It is indeed the opinion of many learned men, that the science of augury, or of predicting future events by the flight of birds, arose from the dismissal of the raven and the dove from Noah's ark at the time of the deluge. This species of divination is undoubtedly very ancient : it is mentioned in many places of the Old Testament, and made a considerable part of the religion of the heathen world.

Ver. 479. *Acherusia.*] Is a cave, through which, according to the fable, is a passage to the regions below. Hercules is said to have descended through it to bring up Cerberus. Tokens of which exploit they show, says Xenophon, even to this day. Near this spot stands the principal city of the Mariandyni, named from Hercules, Heraclea. Here, as our poet informs us, runs the river Acheron, so called from the abovementioned lake.

Ver. 493. This river, which rises in Cappadocia, and empties itself into the Euxine, took its name from the beds of salt through which it runs. *Strabo.* Tournefort says, this country is so full of fossil salt, that it is to be found in the high roads and ploughed lands.

Ver. 498. This river, says Strabo, after having received many others, runs through Themiscyra, formerly inhabited by the Amazons, and then falls into the Euxine sea.

Ver. 502. It is commonly believed, that the ancient Chalybes were the descendants of Tubal ; for they are celebrated by the ancients for their extraordinary skill in working of iron, and mak-

ing of steel armour; whence they are said to have had their name. *Univ. Hist.*

Strabo is of opinion, that they are the same whom Homer mentions by the name of *ἄλκυες*. For he joins them with the Paphlagonians, and characterizes them thus, *ὅσιν ἀργύρεα ἱστὶ γυνίβλην*.

Chalybes nudi ferrum—

Ver. 505. A promontory, so named from Genetes, a neighbouring river which ran through the country of the Chalybes. A temple was erected here to Jupiter the Hospitable.

Ver. 530. Pliny informs us, that the bird called the Pheasant, derives its name from this river, whose banks they frequented in great abundance: and that they were first brought over into Greece by the Argonauts.

Argivâ primum sunt transportata carinâ;

Ante mihi notum nil nisi nomen erat.

Mart.

Ver. 535. Tarchon, which, according to the learned and ingenious Mr. Bryant, signifies a hill with a tower, or temple on it, was in later times rendered Trachon; from whence the region Trachonitis received its name. This word, it seems, was still further sophisticated by the Greeks, and expressed *Δρακον*, Dragon: from whence, in a great measure, arose the notion of treasures being guarded by dragons. The gardens of the Hesperides, and the golden fleece at Colchis, were intrusted to a sleepless serpent. The dragons are represented as sleepless; because in towers there were commonly lamps burning, and a watch maintained. The eyes of the dragon were windows in the uppermost part of the building, through which the fire appeared. *Bryant's Myth.*

Ver. 553. All the countries which lie on the north and north-east parts of the Euxine, the region of the Colchis, and the country at the foot of Caucasus, were of old esteemed Scythia, and these the Greeks looked upon to be the boundaries, northward, of the habitable world.

Ver. 556. The region termed *Αἶα*, above Colchis, was a name peculiarly given by the Amoni-ans to the places where they resided. Among the Greeks the word grew general; and *Αἶα* was made to signify any land. But among the Egyptians, as well as among those of Colchis Pontica, it was used for a proper name of their country.

It was owing to this, that the name given to the chief person of the country was Aïates. *Bryant's Myth.*

Ver. 646. It was the common opinion of the ancients, that the Hamadryads lived and died together with their trees, and therefore were extremely grateful to those, who at any time preserved them. The Scholiast tells a remarkable story to this purpose: A person called Rhæcus, observing a beautiful oak ready to fall, ordered it to be set upright and supported. The nymph of the tree appeared to him, and bade him, in return, ask whatever he pleased. She being exceedingly handsome, Rhæcus desired he might be entertained as her lover: which she promised, and accordingly sent a bee to summon him. But the

young man, happening to be playing at dice when the bee came, was so offended with its buzzing, that he drove it from him. The nymph, provoked at this uncivil treatment of her ambassador, in revenge deprived Rhæcus of the use of his limbs. He also speaks of another nymph, who was grateful to the man that preserved her oak.

—τότε δρύϊς ἠνίκα νόμφαι.

Call. Hymn. in Del. v. 83.

Ver. 662. Thus Callimachus:

Φοῖβον καὶ Νόμιον κικλήσκομεν, ἐξ ἑτὶ κείνῃ
Ἐξού' ἐπ' Ἀμφυρσῶ ζευγῆτιδ' ἔτριφεν ἴππας,
Ἡδὲν ἔσ' ἔρωτι κεκαυμένον Ἀδμήτοιο.

Hymn. ad Ap. 47.

Ἀγρεύς and Νόμιος were undoubtedly the names of Apollo: but they are also bestowed on his son Aristæus, on account of his fondness for a country life, and his many useful discoveries.

Ἀνδράσι χάριμα φίλοις,

Ἀγχεῖον ἐπάνα μῆλ' ὄν,

Ἀγρεῖα καὶ Νόμιον

Τοῖς δ' Ἀρεῖαιον καλεῖν.

Pynd. Pyth. ix. 115.

Ver. 671. Almost all the principal persons, whose names occur in the mythology of Greece and Italy, are represented as shepherds. It is reported of the muses, that they were of shepherd-extraction, and tended flocks, which they intrusted to their favourite Aristæus; the same whom Virgil styles Pastor Aristæus. *Bryant.*

Ver. 685. Jupiter is frequently represented under the character of Pluvius, or the dispenser of rain, both by poets, painters, and statuaries. For it was his province, as chief ruler of the air, to direct not only the thunders and lightnings, but the rain. Virgil has given us a noble description of the Jupiter Pluvius in the following description:

—cum Jupiter, horridus austris,
Torquet aquotam hiamem, et cælo cava nubila
rumpit. *Æn. ix. 670.—Spence's Polym.*

Ver. 693. For these Etesian winds, the history of which the poet has just given us, blew north-east, and consequently in a direction the most unfavourable for them who were sailing up the Euxine.

Ver. 735. This storm seems to have been copied by Virgil. *Æn. i.* by Lucan, Ovid, and Valerius Flaccus.

Ver. 813. The great outlines of Jason's character are piety, humanity, and valour. The sentiment before us is replete with philanthropy, and prejudices us highly in favour of the hero of the poem.

Ver. 861. Milton thus describes Adam's hair:

—hyacinthine locks
Round from his parted forelock manly hung
Clust'ring. *B. iv. 303.*

The circumstance of the hair hanging like bunches of grapes has been justly admired. But it is literally translated from the description of Apollo's hair in the Greek poet.

χρύσοι δὲ παρειῶν ἱκατέρῃς
Πλοχμοὶ ΒΟΤΡΥΟΕΝΤΕΣ ἐπερρώοντο κρόνῳ.

The word *βοτρύοντες* could hardly be rendered into English by any other word than by clustering. *Warton's Observ.*

Ver. 857. Thus Hesiod in *Scuto*, speaking of Hercules,

ὅδ' ἔτι τις αὐτοῦ
ἔτλη ἰς ἀνὰ ἰδὼν χερδὸν ἰλθῖν.

There was probably, in the old pictures of Apollo, a certain brightness beaming from his eyes, and perhaps diffused all over his face; in the same manner, as the body of the principal figure is all luminous and resplendent in the famous nativity of Correggio, of the transfiguration by Raphael. What made me then suspect this, was the ancient poets speaking so often of the brightness of Apollo's face, and the beaming splendours of his eyes. Virgil does not only compare his *Æneas* (under whom is generally supposed to be meant Augustus) to Apollo for beauty; but, in another place, he seems to call Augustus himself (who was really very beautiful) by the name of this god. *Spence's Polym.*

Ver. 771. Virgil has adopted this comparison, where he represents Cloanthus's ship as moved forward by Portunus:

Et pater ipse manu Portunus euntem
Impulit: illa noto citius volucrique sagittâ
Ad terram fugit, et portu se condidit alto.

Æn. v. 241.

Ver. 900. Nothing was deemed by the ancients more essential to the beauty of a young person (and Apollo was always represented a youth) than fine long hair. Hence the epithets *erinitus* and *incensus* are so often given to Apollo.

crinitus Apollo,
Nube sedens. *Virg. Æn. ix. 638.*

sic tibi sint intonsi, Phœbe, capilli. *Tibull.*

Ver. 946. They are called by our poet in this place, and by Theocritus, *Id. xii. 27. Νισαῖοι Μεγαρήναι*; from Nisa, which, as the Scholiast informs us, was the name of their dock. It was so named from Nisus, son of Pandion, and king of this people.

The Megarensians, going out to plant a colony in Heraclea, were driven by distress of weather into the river Acheron, which from the protection it afforded them, they called *Soönautes*.

Ver. 1028.
Sed non augurio potuit depellare pestem.
Æn. ix. 328.

The fate of others he had oft foreshewn,
But fail'd, unhappy! to prevent his own. *Pitt.*

Ver. 1029. This description of a boar hid among the rushes, and the terror of the neighbourhood, reminds us of the following beautiful lines of Ovid, who is describing the Caledonian boar:

Concava vallis erat, quo se demittere rivi
Affuerant pluvialis aquæ: tenet ima lacunæ
Lenta falix, ulvæque leves, juncique palustres,
Viminaque, et longæ parvâ sub arundine cannæ:
Hinc aper excitus, medios violentus in hostes
Featur, ut excussis elifus nubibus ignis.

Ov. Met. L. viii.

Ver. 1167. This river rises in Paphlagonia, and derives its name from the cheerful meadows through which it flows. *Strabo.*

Ver. 1176.
Thy groves of box, Cyturus, ever green.

Pope's Il. B. ii.

Hence things made of box were called *Cytoriaca*.

Sæpe Cytoriaco deducit pectine crines.

Ver. 1204. The Greeks, who would fain deduce every thing from their own language, imagined, that by the term *Amazon* was signified a person without a breast. From this wrong etymology proceed all the absurdities with which the history of this extraordinary people abounds. They were in general Cuthite colonies from Egypt and Syria; and as they worshipped the sun, they were called *Azones*, *Amazones*, *Alazones*, which are names of the same import. The most noted were those, who settled near the river *Thermodon*, in the region of *Pontus*.

Quales Theïciæ, cum flumina Thermodontis
Pulsant, et pietis bellantur Amazones armis.

Æn. xi. 658.

Ver. 1229. The Amazons worshipped the deity from whom they received their name; viz. *Azon* and *Amazon*, the same as *Ares*, the sun. They worshipped also *Harmen*, the moon; which the Grecians changed to a feminine, *Harmonia*. So that by γυνή "Ἄρως καὶ Ἀρμένιος is meant the children of the sun and moon. *Bryant's Myth.*

Ver. 1251. It is remarked of this people, that they are uncommonly addicted to laughter and buffoonery. Some have accounted for the absurd custom, here alluded to, from this cause. But it is difficult to assign a reason for the many absurd customs which different nations have adopted. It has been recorded by grave historians, that the ancient Spaniards and the Americans follow the practice of the *Tibareneans*.

Ver. 1260. *Xenophon* gives us the most authentic accounts of this people in the fifth book of his *Anabasis*. He tells us, that they do those things in private, which others do in public: that they talk to themselves, laugh by themselves, and dance alone, as if they were showing their skill in public. Savage and indecent as the custom, alluded to by our poet, may seem, *Strabo* ascribes the same barbarities to the *Irish*, and *Cæsar* makes the same observations on the ancient *Britons*.

Ver. 1269. Thus *Pomponius Mela*, l. i. c. 19. *Reges suffrageo deligunt, vinculisque et arctissimâ custodia tenent; atque ubi culpam pravè quid imperando meruere, inedia totius diei afficiunt.*

Ver. 1301. This cymbal, or crotalum, was made, the Scholiast tells us, by *Vulcan*; *Hercules*,

received it from Pallas. The description of this instrument is differently given by different authors. Our poet tells us it was made of brass; others represent it as formed of a rod or reed cut in two; both parts of which, when struck together, emitted a sound after the manner of castanets. This latter description agrees with the opinion of Suidas, and the Scholiast of Aristophanes.

Ver. 1386. Thus Virgil, *Æn.* i. 784.

Jupiter (hospitibus nam te dare jura loquuntur).

Almighty Jove! who pleads the stranger's cause;
Great guardian god of hospitable laws. *Pitt*

And Homer, in the words of Mr. Pope, *Od.* B. ix.

The poor and stranger are Jove's constant care;
To Jove their cause and their revenge belongs,
He wanders with them, and he feels their wrongs.

Ver. 1430. The tombs, of which frequent mention is made by the ancient writers, were in reality high altars or pillars, and not, as has been

supposed, monuments erected in honour of the dead. Such an one the Argonauts are said to have found in the temple of Mars, when they landed upon the coast of Pontus. This was the express object to which the Amazonians paid their adoration; as they lived in an age when statues were not known. *Bryant's Myth.*

Ver. 1472. Apollonius mentions an ancient Typhonian Petra in the hollows of the mountain. It was an Ophite temple, where the deity was probably worshipped under the figure of a serpent. Hence the poet supposes the serpent, with which Jason engages, to have been produced in those parts. *Bryant's Myth.*

Ver. 1497. Saturn, to avoid being discovered by his wife Ops, while he was engaged with Philyra his mistress, turned himself into a beautiful horse.

Chiron, the famous centaur, was the son of this nymph Philyra.

Ver. 1547. The Greek here, and at v. 1399, is *δρυός*; but at v. 534 the word is *φρυγίος*, a beech; both which trees bearing mast, they may perhaps be indiscriminately used.

BOOK III.

THE ARGUMENT.

Juno and Pallas intercede with Venus. They request that she would persuade Cupid to inspire Medea with love for Jason. Venus consents; and the shafts of Cupid, at her suit, have their desired effect. Jason, Augeas, and Telamon, proceed to the court of Ætæa, where they are hospitably entertained. But having heard the occasion of their voyage, Ætæa is incensed, and refuses to bestow the golden fleece on Jason, unless on such terms as he presumed he durst not comply with. The passion of Medea for Jason is described with great simplicity and delicacy. Medea early in the morning repairs to the temple of Hecate: thither Jason, at the suggestion of Mopsus, follows her. The poet dwells particularly on their interview and conference. Medea instructs him how to subdue the brazen bulls and armies of giants. With Jason's combat, and the success of it, the book concludes.

COME, heavenly maid, thy timely succour bring,
And teach thy poet, Erato, to sing,
How Jason, favour'd by the Colchian maid,
To Grecian realms the golden prize convey'd.
Thy songs the rites of Cyprian bliss proclaim,
And in young virgins raise the melting flame;
For the soft passion thy behests approve,
And Erato's the kindred name of love.

Conceal'd in sedges as the heroes lie,
Juno and Pallas mark'd them from the sky; 10
Apart from all the gods their seats they took
In heaven's high hall, and thus Saturnia spoke:
"Daughter of Jove, thy sage advice impart,
"By what nice fraud, what well-dissembled art,
"These venturous chiefs shall gain the golden
"fleece,

"And safe convey it to the realms of Greece.
"Say, shall they call entreaties to their aid?
"Will soft address the wayward king persuade,

"So fam'd for fierce barbarity and pride?
"No art, no effort, must be left untry'd." 20

She said; and Pallas thus: "O queen, I find

"The same ideas rising in my mind:

"To lend assistance to the Grecian train

"My heart is willing, but my counsel vain."

This said, their minds on various projects ran,
On earth their eyes were fix'd, when Juno thus
began:

"To Venus instant let us speed our way,

"(Her soft persuasions Cupid will obey)

"Entreat her that the wily god inspire

"Medea's soul with love's unconquer'd fire, 30

"Love for great Æson's son; applauding Greece

"Will by her aid regain the glorious fleece."

She said; Minerva patronis'd the plan,

And thus with mild benevolence began:

"I, who arose from Jove's immortal brain,

"Stranger to love, his pleasure or his pain,

' Thy sage proposal from my soul approve ;
 ' Do thou explain it to the queen of love.'
 This said, with speed the two immortals came,
 To the grand mansion of the Cyprian dame. 40
 Which crippled Vulcan rais'd when first he led
 The Paphian goddess to his nuptial bed.
 The gate they pass, and to the dome retire
 Where Venus oft regales the god of fire :
 (He to his forge had gone at early day,
 A floating isle contain'd it on the bay,
 Here wond'rous works by fire's fierce power he
 wrought,
 And on his anvil to perfection brought).
 Fronting the door, all lovely and alone,
 Sat Cytherea on a polish'd throne. 50
 Adown the shoulders of the heavenly fair,
 In easy ringlets flow'd her flaxen hair ;
 And with a golden comb, in matchless grace,
 She taught each lock its most becoming place.
 She saw the deities approach her dome,
 And from her hand dismiss'd the golden comb ;
 Then rose respectful, all with beauty grac'd,
 And on rich thrones the great immortals plac'd ;
 Resum'd her seat, and with a ready hand 59
 Bound her loose ringlets, and thus question'd bland :
 ' What cause, ye visitants from heaven, relate,
 ' Has brought such guests to Cytherea's gate ?
 ' Ye who excel in high Olympus' sphere,
 ' Such mighty deities, and strangers here ?'
 Then thus Saturnia : " Wantonly you jest,
 " When pressing grief sits heavy on our breast.
 " Now in the Phasis, with his warlike train,
 " Great Jason moors, the golden fleece to gain :
 " For that fam'd chief, and for his martial host,
 " Dire fears alarm us, but for Jason most : 70
 " This potent arm, whate'er our prowess can,
 " Shall snatch from misery the gallant man,
 " Though far as hell he, rash adventurer ! go,
 " To free Ixion, link'd in chains of woe ;
 " Left Pelias proudly heaven's decrees deride,
 " Who on my altars sacrifice deny'd.
 " Nay more, young Jason claims my love and
 " grace,
 " Whom late I met returning from the chase,
 " Returning met, as o'er the world I stray'd,
 " And human kind, and human works survey'd :
 " Hard by Aurarus I beheld the man, 81
 " Wide o'er its banks whose rapid currents ran ;
 " From snow-clad hills, in torrents loud and
 " strong, [mong).
 " Roar'd the twoln streams the rugged rocks a-
 " He on his back, though like a crone I stood,
 " Securely brought me o'er the foaming flood ;
 " This won my love, a love for ever true,
 " Nor will the haughty-minded Pelias rue
 " His flagrant crimes, till you propitious deign
 " To speed my Jason to his Greece again." 90
 She spoke, and Venus stood amaz'd to find
 The queen of heaven to humble prayer inclin'd ;
 Then thus familiar said : " O wife of Jove,
 " Safest of beings call the queen of love,
 " Unless her every word and work conspire
 " To give you all the succour you require :
 " All that my hand, my feeble hand, can do,
 " Shall unrewarded be perform'd for you."

Then Juno thus : " Not difficult the task ;
 " No mighty force, no strength of arm I ask. 100
 " Bid gentle love the Colchian maid inspire,
 " And for my Jason fan the rising fire ;
 " If kind she prove, he gains the golden fleece,
 " And by her subtle aid conducts it safe to
 " Greece."
 Love's queen replied : " Cupid, ye powers divine,
 ' Will reverence your injunctions more than mine :
 ' Your looks will awe him, though, devoid of
 ' shame,
 ' Of me the urchin makes eternal game,
 ' Oft he provokes my spleen, and then I vow
 ' Enrag'd, I'll break his arrows and his bow : 110
 " Restrain your ire," exclaims the sneering elf,
 " Lest you find reason to upbraid yourself."
 At this the powers with smiles each other
 view'd,
 And Venus thus her woeful tale pursu'd :
 ' Others may ridicule the pains I feel,
 ' Nor boots it all my sufferings to reveal.
 ' But since ye jointly importune my aid,
 ' Cupid shall yield, and Venus be obey'd.'
 She said ; and Juno press'd her hand and smil'd,
 Then answer'd thus, benevolent and mild : 120
 " O grant this boon ; do instant as you say ;
 " Chide not the boy, and he will soon obey."
 This said, both hasten'd to the realms above,
 And left the mansions of the queen of love :
 The Cyprian goddess o'er Olympus flies,
 To find her son in every dale she pries,
 Through heaven's gay meads the queen pursu'd
 her way,
 And found him there with Ganymede at play.
 Him Jove translated to the blest abodes, 129
 And, fam'd for beauty, plac'd among the gods.
 With golden dice, like boon compeers they play'd :
 Love in his hollow hand some cubes convey'd,
 Resolv'd to cheat young Ganymede with those,
 While on his cheeks the conscious crimson rose.
 The Phrygian boy was vanquish'd to his cost,
 Two dice alone remain'd, and those he lost.
 Silent he sat in dull dejected state,
 Enrag'd that Cupid should deride his fate :
 His loss increasing with protracted play,
 He went a wretch with empty hands away, 140
 Nor saw he Venus : she her Cupid took
 Fast by the cheek, and thus upbraiding spoke :
 ' And can you laugh, you fly, deceitful elf ?
 ' Such tricks will bring a scandal on yourself,
 ' But haste, my Cupid, my commands obey,
 ' And a nice plaything shall your toils repay,
 ' What once to Jove dear Adrastæa gave,
 ' When Jove was nourish'd in the Cretan cave,
 ' A sweet round ball ; oh ! keep it for my sake,
 ' A finer ball not Vulcan's hands can make. 150
 ' Gold are the circles, beauteous to behold,
 ' And all the finish'd seams are wrought in
 ' gold ;
 ' But all so close, they scarcely can be found :
 ' And the pale ivy winds its wreaths around.
 ' If high in air you fling this ball afar,
 ' It shines and glimmers like a radiant star.
 ' This prize I'll give, if you propitious prove,
 ' And lure Medea to the toils of love ;

" Fire all her soul for Jason : haste, away ;
 " The favour is diminish'd by delay." 160
 She said, and Cupid listening long'd to hear,
 For her sweet words are music to his ear.
 He ceas'd his pastime, and with both his hands
 Hangs on the goddess, and the ball demands.
 She kiss'd her boy, and press'd him to her cheek,
 And fondly smiling, thus she answer'd meek :
 " By thee, my son, and by myself I swear,
 " By all that's sacred, and by all that's dear,
 " This ball I'll give thee, if thy fatal dart
 " Thou fix unerring in Medea's heart." 170

This said, he gather'd all his dice with haste,
 And in his mother's splendid lap he plac'd.
 Then snatch'd his bow and quiver from the
 ground,

And to his back with golden girdle bound.
 From Jove's all-fertile plains he swift withdrew,
 And through Olympus' golden portals flew.

Thence the descent is easy from the sky,
 Where the two poles erect their heads on high,
 Where the tall mountains their rough tops display,
 And where the sun first gives the radiant day.

Hence you behold the fertile earth below, 181
 The winding streams, the cliffs' aerial brow,
 Cities extended on the distant plain,
 And through the vast expanse the roaring main.

On the broad Phasis, in a sedgy bay,
 Stretch'd on the deck the Grecian heroes lay ;
 Till call'd to council rose each godlike man,
 And Jason thus the conference began :

" To you, my comrades, be my counsel known,
 " 'Tis yours that counsel with success to crown.
 " One common cause our great emprise is made ;
 " The common cause demands the common aid.
 " He who unutter'd can his counsel keep,
 " Stays our refailing o'er the sounding deep.
 " I to Æeta's court will speed my way,
 " The rest well-arm'd shall in the vessel stay ;
 " With me shall go, the palace to explore,
 " Phrixus' brave sons and two associates more.
 " First will I prove the power of soft address
 " To gain the fleece ; complacence wins success.
 " If in his arms he sternly should confide, 201
 " And spurn our claims with insolence and pride,
 " Consult we whether, when such powers oppress,
 " By arms or arts to free us from distress.
 " Be force the last alternative we take,
 " For soothing speeches deep impressions make ;
 " And oft, where force and martial prowess fail,
 " The milder powers of eloquence prevail.
 " Once king Æeta kind reception gave
 " To blameless Phrixus, when escap'd the wave
 " He fled from Ino's unrelenting hate, 211
 " And the dire altars that denounc'd his fate
 " Savage or social, all alike approve
 " The sacred rites of hospitable Jove."

He said ; the Greeks his sage advice rever'd ;
 No voice dissentient through the host was heard :
 Augeas then, and Telamon attends,
 And with them Phrixus' sons, his faithful friends ;
 Jason they follow : he thy peaceful wand,
 All-sapient Hermes, brandish'd in his hand. 220
 Soon from the ship they gain the rising ground,
 Mount every steep, and o'er the marshes bound,

Till Circe's plain they reach ; in many a row
 Here humble shrubs and lonely willows grow ;
 On whose tall branches wavering o'er the fen,
 Suspended hang the carcases of men.

At Colchos still this barbarous rite prevails :
 They never burn the bodies of the males,
 Nor deep in earth their decent limbs compose,
 And with sepulchral dust the dead enclose ; 230
 But in raw hides they hang them high in air :
 And yet, that earth may equal portions share,
 Departed females to the grave they doom,
 (Such are their rites) and close them in the tomb.

The chiefs advance ; but friendly Juno shrouds
 Her favourite heroes in a veil of clouds,
 That none, too curious, might their steps delay,
 While to the regal dome they bent their way :
 But when unseen they pass'd the vulgar crowd,
 The same kind deity dissolv'd the cloud. 240

Full in the court they stand with fix'd amaze,
 On the proud gates, strong walls and columns
 gaze,

Which, rear'd in rows, erect their heads on high
 And lift the brazen cornice to the sky.

The portal past, young branching vines appear,
 And high in air their verdant honours rear :
 Beneath whose boughs, by matchless Vulcan made,
 Four copious fountains in four currents play'd ;
 The first with milk, with wine the second glow'd,
 Ambrosial oil the third, the fourth with water
 flow'd ;

This, as by turns the Pleiads set or rose, 250
 Dissolv'd in summer, and in winter froze.

Such were the wonders which the chiefs admire,
 All highly finish'd by the god of fire.
 With these were brass-hoof'd bulls of curious
 frame,

From brazen nostrils breathing living flame.
 And near a plough of burnish'd steel was laid,
 Which for the god of day great Vulcan made,
 When Phœbus brought him in his friendly car,
 Sore harass'd in the fierce Phlegrean war. 260

The midmost court they reach ; on either side
 Large folding doors the various rooms divide.
 Two painted porticoes salute their eyes,
 And high in air transverse two turrets rise ;
 In this, which far in stately height excels,
 Æeta with his royal consort dwells :

Absyrtus that contains, his royal heir,
 Descended from Asterode the fair,
 A Scythian nymph, ere yet Æeta led,
 Idya Ocean's daughter to his bed. 270

Him Phaëton the youthful Colchians call,
 For he in beauty far surpass'd them all.
 The proud apartments that remain'd contain
 Chalciope, Medea, and their train.

Ordain'd a priestess to the Stygian queen,
 She at the palace now was seldom seen :
 But artful Juno, on this signal day,
 Within the regal court decreed her stay.

Here now, from room to room, the pensive maid,
 To find Chalcione her sister, stray'd. 280

Soon as she spied them in the spacious hall,
 Aloud she call'd, her sister heard her call,
 And with her maidens sallied from the door ;
 Their growing webs were scatter'd on the floor.

Well-pleas'd her sons she sees, and raptur'd stands,
While high to heaven she rears her greeting
With equal joy to her embrace they fly. [hands;
Then thus Chalciopé with plaintive cry :

' Here though you left me, heedless of my cries,
' See! fate hath frown'd upon your bold emprise;
' Hath check'd your voyage o'er the distant main,
' And soon restor'd you to these arms again.

' Wretch that I was, when, by your fire's com-
' mand,

' Ye fought in evil hour the Grecian land!
' Sad was the task your dying fire enjoin'd,
' Sad and distressful to a mother's mind.
' Ah! whence the wish Orchomenos to see,
' His city visit, and abandon me?
' Yes, Athamas's fancied wealth to gain,
' Ye left me sorrowing, and ye fought the main.'

Rous'd by her cries, at length Ætæa came,
And to the hall repair'd his royal dame.
With busy crowds the spacious hall is fill'd;
The steer is chosen, and the victim kill'd.
Some heat the bath, some cleave the knotty wood,
And all attentive round their monarch stood.

Cupid, meantime, through liquid air serene,
Speeds to the Colchian court, his flight unseen;
Like that large fly, which breeze the shepherds
call,

That hastes to sting the heifers in the stall. 310

The nimble god unseen the porch ascends,
And there his bow behind a pillar bends;

A fatal arrow from his quiver took,
And, quick advancing with insidious look,
Behind great Æson's son, conceal'd from sight,
He fits the arrow, fatal in its flight;

Bends the tough bow with all his strength and art,
And deep he hides it in Medea's heart.

A sudden transport seiz'd the melting maid:
The god, exulting now, no longer staid. 320

The glowing shaft the virgin's heart inspires,
And in her bosom kindles amorous fires.

On Jason beam'd the splendour of her eyes;
Her swollen breast heav'd with unremitting sighs:
The frantic maid had all remembrance lost,
And the soft pain her sickening soul engross'd.

As some good house-wife, who, to labour born,
Fresh to her loom must rise with early morn;
Studious to gain what human wants require,
In embers heap'd preserves the seeds of fire; 330

Renew'd by these the brand rekindling burns,
And all the glowing heap to ashes turns:

Thus, kindling slow, love's secret flames invade,
And torture, as they rise, the troubled maid:
Her changeful cheeks the heart-felt anguish show,
Now pale they turn, now like the ruby glow.

The rich repast by seneschals prepar'd,
Fresh from their baths return'd, the strangers
shar'd;

And when the rage of hunger was suppress'd, 339
His grandsons thus the Colchian king address'd:

' Sons of my child, and Phrixus, honour'd most
' Of all the guests that reach'd the Colchian coast,
' Say, why so soon return'd? what loss constrains
' This speedy visit to your native plains?

' In vain, with terrors for your safety fraught,
' I urg'd the distance of the climes ye fought;

' Warn'd, since of old my fire's bright chariot
bore

' Me and fair Circe to Hesperia's shore, 348

' Where now o'er Tuscan realms my sister reigns,

' A long, long distance from the Colchian plains.

' But what of this? come now, the cause declare

' That brought you back, and who these heroes
' are.'

Then Argus, anxious for the Grecian band,
By birthright eldest, rose and answer'd bland:

" Our ship, O king, by nightly tempests tost,

" On Mars's isle, a dreary coast, was lost;

" We, on the wreck by furious surges driv'n,

" Were sav'd at last by kind protecting heav'n.

" Nor did those birds then desolate the shore,

" Dire harpies that infested it before; 360

" For these brave warriors the preceding day,

" Had driv'n the curst, infernal fiends away.

" Sure to our prayer some god inclin'd his ear;

" For when of Phrixus and your name they

" hear,

" Food for our wants, and raiment they convey,

" And to your city now they bend their way.

" But would you know, I'll tell their purpos'd

" plan:

" Lo! sprung from Æolus the godlike man,

" Whom a fierce tyrant's stern decree constrains

" To quit his country and his rich domains: 370

" Nor can he 'scape Jove's rage, unless the fleece,

" Base theft of Phrixus, be restor'd to Greece,

" Their ship was fashion'd by Minerva's aid;

" How different are the Colchian vessels made!

" Ours, far the worst that ever rear'd a mast,

" Split with the tempest's desolating blast;

" Theirs, firm-compacted, and of fittest wood,

" Defied each storm that heav'd the troubled

" flood:

" With equal speed their nimble vessel sails,

" Impell'd by oars alone, or favouring gales, 380

" In this their chief, with chosen Greek explores

" Unnumber'd seas, and towns, and wide extend-

" ed shores.

" And now he sues the golden fleece to gain;

" But that as best your princely will ordain—

" Nor hostile comes he; as a friend he brings

" Large gifts proportion'd to the state of kings.

" Inform'd the fierce Sarmatians waste your lands,

" He vows destruction to their barbarous bands.

" Their names and lineage would you wish to

" hear,

" Lend to my narrative a listening ear, 390

" He, in whose cause the Grecian chiefs conspire

" Is valiant Jason, Æson is his sire,

" The son of Cretheus: thus are we ally'd

" By blood, relations on the father's side:

" The sons of Æolus were Cretheus fam'd,

" And Athemas, whose heir was Phrixus nam'd.

" 'Mid your brave chiefs, Augeus you survey,

" Illustrious offspring of the god of day,

" And Telamon, who high his birth can prove,

" His sire is Æacus, his grandfire Jove: 400

" The rest, that visit your august abodes,

" Are all the sons or grandsons of the gods."

This said, the king with indignation swell'd,

But chief enrag'd his grandsons he beheld;

Through them he deem'd the Greeks to Colchus
came :

His eyeballs redden'd with avenging flame,
While thus he spoke : ' Hence from my sight
' away,

' Nor longer, traitors, in my kingdom stay :
' Back, back to Greece your speedy course pursue,
' Nor idly hope the golden fleece to view. 410
' Not for that fleece (vain pretext ye must own)
' But for my sceptre came ye, and my crown.
' Had ye not first my feast partook to-day,
' Your tongues and hands, torn out and lopp'd
' away,

' Should for your bold atrocious crimes atone :
' My just revenge had spar'd your feet alone,
' To bear you hastily to Greece again, }
' Dreading to visit more my just domain, }
' And with your perjuries the gods profane.' }

He said : bold Telamon with fury burn'd, 420
And to the king stern answer had return'd,
But Jason check'd his warmth, and mild reply'd :
" Let not Æeta falsely thus decide.

" Nor crowns, nor empires, come we here to
" gain; [main ?

" Who for such wealth would measure half the
" But fate, and Pelias' more severe command,
" Have forc'd the suppliant on your friendly
" land.

" Aid us, and Greece your praises shall record,
" And thank you, sovereign, with their conquer-
" ing sword ;

" Whether the fierce Sarmatians to enthrall 430
" Or realms more barbarous for your vengeance
" call."

While Jason thus in gentlest terms reply'd,
The tyrant's breast distracting thoughts divide,
Whether with vengeance on the foe to fly,
Or in the field of Mars his courage try.

On this resolv'd, ' What need (he thus begun)
' With tedious tales my harass'd ears to stun ?

' For whether from immortals ye descend,
' Or match'd in might ye dare with me contend,

' Soon will I prove ; that proof must thou display ;
' Then, if victorious, bear the fleece away ; 441

' Nor shall my hand the golden prize withhold :
' Like your proud lord, I envy not the bold.

' This nervous arm shall now sustain the fight,
' Which calls to speedy proof thy boasted might,

' Two bulls in Mars's field your wonder claim,
' Their hoofs of brass, their nostrils breathing
' flame.

' These oft I seize, and to the yoke constrain
' To plough four acres of the stubborn plain.

' No seeds I sow, but scatter o'er the land 450
' A dragon's teeth ; when, lo ! an armed band
' Of chiefs spring up ; but, soon as they appear,
' I slay th' embattled squadrons with my spear.

' Each morn I yoke the bulls, at eve resign :
' Perform this labour, and the fleece is thine.

' These are the terms ; on these the prize I quit :
' The weaker to the stronger must submit.'

He said ; and Jason, sunk in thought profound,
Sat mute, his eyes fast fix'd upon the ground ;

Long time he ponder'd o'er the vast design, 460
Nor dar'd with confidence the battle join,

He said ; and Jason, sunk in thought profound,
Sat mute, his eyes fast fix'd upon the ground ;

Long time he ponder'd o'er the vast design, 460
Nor dar'd with confidence the battle join,

He said ; and Jason, sunk in thought profound,
Sat mute, his eyes fast fix'd upon the ground ;

So hard the task, he stood embarrass'd long,
At last these words dropp'd cautious from his
tongue :

" Cruel thy terms, but just : my strength I'll try
" In this dread conflict, though ordain'd to die.

" For, say, what law so rigorous can there be
" As the hard law of fix'd necessity ?

" That law which forc'd me from my native
" home,

" And bade me thus in search of dangers roam ?"

Perplex'd he spoke ; then thus the king in
rage : 470

' Rejoin thy comrades, since thou dar'st engage.
' But if the bulls constrain thy heart to yield,

' Or the dread dangers of the martial field,
' Be mine the toil ; that hence the coward slave

' May dread to combat with the bold and brave.'

Imperious thus the haughty king replies :
And from their seats incens'd the heroes rise.

To warn his brothers here, at home, to wait,
Argus stopp'd short awhile ; then rush'd they
through the gate. 479

Far o'er the rest, in grace unmatched alone,
And charms superior, youthful Jason shone.

Him through her veil the love-distracted maid
With melting eyes and glance oblique survey'd :

Her mind, as in a dream, bewilder'd ran,
And trac'd the footsteps of the godlike man.

Sorrowing they went : to shun the monarch's ire,
With fond Chalciope her sons retire :

Medea follow'd, but with cares oppress'd ;
Such cares as love had rais'd within her breast.

His graceful image in her mind she bore, 490
His gait, his manner, and the robe he wore,

His pointed words : through earth's remotest
bound [crown'd :

No prince she deem'd with such perfections
His tuneful voice, still still she seems to hear,

Still the sweet accents charm her listening ear.
The bulls and wrathful king excite her dread :

She mourns his fate, as if already dead.
From her bright eyes the shower of anguish breaks,

And thus, o'erwhelm'd with woe, Medea speaks :
" Why fall the tears of sorrow from my eyes,

" Though he the first or last of heroes dies ? 501
" Perish the man !—no, safely let him sail ;

" And may my prayer, kind Hecate, prevail !
" Safe sail he home ; but, ah ! if doom'd to bleed,

" Teach him, that I rejoice not in the deed."

Thus mourn'd the maid : meantime, to join
their train,

The chiefs pursue their course along the plain ;
Then Argus thus : ' Though, Jason you may
' blame,

' And spurn the counsel which I now proclaim ;
' Yet sure for us, with threatening dangers press'd,

' To try some safe expedient must be best. 511
' A maid there is whose wond'rous art excels,
' Long taught by Hecate, in magic spells :

' If she propitious to our wishes yield,
' Thou com'st victorious from the martial field ;

' But if Chalciope decline her aid,
' Be mine with tenderest motives to persuade.

' Instant I'll go, on her for succour call ;
' For lo ! one general ruin threatens all.

Humane he spoke, and Jason thus rejoin'd; 520
 " Much I admire the purpose of thy mind.
 " Go, friend, to thy Chalciope repair,
 " Sue her with soft entreaty and with pray'r :
 " But, ah ! vain hopes our vacant minds must fill,
 " Who trust for conquest to a woman's skill."
 He said ; and soon they join'd their social train,
 Rejoic'd to meet their princely peers again.
 Then Jason thus began his mournful tale :
 " With proud Æeta soft entreaties fail ;
 " Our purpos'd end unable to attain, 530
 " Vain are my words, and your inquiries vain.
 " Two monstrous bulls the tyrant bid me tame ;
 " Their hoofs of brass, their nostrils breathing
 " flame ;
 " These must my prowess to the yoke constrain,
 " To plough four acres of the stubborn plain ;
 " My seed a dragon's teeth, to sow the land ;
 " When lo ! up springs a formidable band
 " Of bright-arm'd giants ; soon as they appear,
 " Poiz'd by this arm, my well-directed spear
 " Must pierce the foe : intrepid I accede 540
 " To the hard terms, nor future dangers heed." }
 He said : they deem'd it all a desperate deed ;
 Silent they stood, with sad dejected look
 Each gaz'd on other, till bold Peleus spoke :
 " Time calls for our resolves ; our safety stands
 " No more in counsel, but in strength of hands.
 " If, Jason, eager of the honour, thou
 " Wilt yoke these fiery monsters to the plough,
 " Haste to the charge ; but if thy soul relent,
 " Sunk in sad bodings of the dire event, 550
 " Nor dar'st thou go ; then go not, nor look round,
 " If haply here some fitter man be found :
 " Myself will go, and risk my dearest breath ;
 " No greater evil can befall than death."
 He spoke ; and Telamon with rage inspir'd
 Starts up, and Idas with like fury fir'd ;
 Next the twin-race of Tyndarus arise ;
 Last Ceneus' son, who with the bravest vies ;
 Though o'er his cheeks scarce spreads the calow
 down,
 His heart beats high for honour and renown. 560
 And while the rest in mute attention stand,
 Argus bespeaks the emulative band :
 " Though hard the task, O chiefs, I still portend
 " My parent will assist, and prove a friend.
 " Still in your ship a while with patience wait ;
 " For rashness will accelerate your fate.
 " Know, at Æeta's court a maiden dwells,
 " Deep skill'd by Hecate in magic spells : [steep,
 " All plants she knows that grow on mountains
 " On vales, on meads, or in the boundless deep :
 " By these she quells the fire's relentless force, 571
 " Stops the mad torrent in its headlong course,
 " Retards the planets as they roll on high,
 " And draws the moon reluctant from the sky.
 " As from the palace o'er the plain we came
 " We mention'd oft my mother's honour'd name ;
 " If she perchance her sister could persuade,
 " And fix our interest in the magic maid.
 " Back, if you bid, my ready steps I bend ;
 " Fortune may smile, and fair success attend."
 He said ; when, lo ! this signal of their love,
 Was kindly given them by the powers above ;
 For, by the falcon chas'd, a trembling dove, }

Far from his foe, to Jason's bosom flies ;
 Stunn'd on the deck the felon falcon lies.
 Then Mopsus thus divin'd : " The powers of
 ' heav'n,
 ' They, they alone this gracious sign have giv'n,
 ' Be then the maid in mildest terms address'd ;
 ' She'll listen friendly to our joint request, 589
 ' I ween she will ; if Phineus could foreknow
 ' That we to Venus must our safety owe.
 ' For, lo ! her bird escapes : oh ! may we
 ' prove
 ' With safety crown'd, like her auspicious dove.
 ' Entreat we now for Citherea's aid,
 ' And let th' advice of Argus be obey'd.'
 Thus he ; the chiefs approv'd, remembering
 well
 What Phineus deign'd prophetic to foretel :
 Idas alone with indignation burn'd,
 And with loud voice thus insolent return'd :
 " Gods ! what a crew hath Argo wasted o'er ! 600
 " Women, not heroes throng the hostile shore.
 " Women, who still to Venus' altars fly,
 " Nor dare but only on her aid rely.
 " No warlike deeds your dastard souls inflame :
 " To you is Mars an unregarded name.
 " As doves or falcons but direct your flight,
 " You flinch at danger, and you dread the fight.
 " Go ; and all manly martial toils forbear,
 " Sue to weak women, and deceive the fair."
 Furious he spoke ; a general murmur ran 610
 Through the whole train ; yet none oppos'd the
 man ;
 Indignant then he sat. Of dauntless breast
 Thus Æeson's son the listening train address'd :
 " This instant Argus to the town I send,
 " For thus the general suffrages intend :
 " Meanwhile approach we nearer to the land,
 " And fix, in sight, our halbers to the strand :
 " Ill suits us longer thus to lie conceal'd ;
 " We neither shun, nor dread the fighting field."
 He said, and Argus went without delay, 620
 And to the city backward sped his way ;
 At Jason's call they ply the labouring oar,
 And land their beds and couches on the shore.
 Meantime the king a council call'd, and sat,
 (So were they wont) without the palace-gate.
 Assembled there, unceasing toils they plann'd,
 And wiles destructive to the Grecian band.
 Thus he ordain'd, that when the bulls had slain
 And stretch'd this dauntless hero on the plain,
 Himself would lay the lofty forest low, 630
 And for the funeral pile prepare the bough :
 Their boasted ship should be consum'd with fire,
 And every traitor in the flames expire.
 No hospitable rites had Phrixus shar'd,
 Though much he wish'd and merited regard,
 Had not Jove hasten'd Hermes from above
 To win his favour and bespeak his love.
 Were these invaders of his native soil
 To thrive unpunish'd by rapacious spoil,
 Soon would they make his lowing herds a prey,
 And drive the shepherds and their flocks away.
 But Phrixus' sons, who join'd the lawless crew,
 He vow'd with double vengeance to pursue : 643
 Base plunderers ! come to spoil him of his crown,
 So had the sun, his sapient fire, foreshewn ;

Who warr'd him to suspect his faithless race,
And dread from them destruction and disgrace.
Therefore dismiss'd he, by his sire's command,
The youths far distant, ev'n to Grecian land.
His daughters gave him no perplexing care, 650
Nor young Absyrtus, his adopted heir;
But from Chalciopé's detested race
He look'd for injuries, and fear'd disgrace.
Thus stern denouncing, as with rage he swells,
Death on each daring subject that rebels;
His guards he charg'd, and threaten'd vengeance
due,

If either escap'd, the vessel or the crew.
Swift to the palace Argus now repairs,
And to his pitying mother pours his pray'rs,
That she might importune Medea's aid : 660
Nor had the queen her son's request delay'd,
But boding fears her willing mind restrain,
Lest all her fond entreaties should be vain;
And should the project be disclos'd to view,
Her father's ire the magic maid must rue.
As on her couch reclin'd the virgin lay,
Soft slumbers chas'd her anxious cares away;
But frantic dreams, which love-sick maids infest,
Present false terrors, and disturb her rest.
Her hero seem'd the task to undertake, 670
But not for honour or the fleece's sake;
For her alone he risk'd the glorious strife,
To gain her love, and win her for his wife.
She then in dreams her utmost succour lends,
And with the bulls herself in fight contends.
Her parents she, in fancied rage, averr'd
False and regardless of their promis'd word,
Who Jason doom'd the brazen bulls to foil,
But made her not a partner of the toil. 679
Then warm disputes and fierce contentions reign
Between Æeta and the Grecian train:
On her decision both the parties wait,
And deem what she determines to be fate.
In spite of parents, the fond maid express'd
Her choice in favour of her godlike guest.
Rage wrung their souls, and grief, and dire dismay,
Till the loud clamour chas'd her sleep away,
Trembling she starts; pale fears confus'd her
look;

Her soul reviv'd, and thus the virgin spoke : 689
" Alas ! what fruitful dreams alarm my breast
For these fam'd chiefs, but most the royal
guest ?

" I fear, some mighty mischief will ensue
From this bold leader and his gallant crew.
Yes, let him wed far off some Grecian dame;
Be mine my parents' house, my virgin's fame.
If from my headstrong purpose I refrain,
My sister's counsel might relieve my pain :
Oh ! for her sons would she my aid implore,
My griefs would cease, my sorrows be no more !"

She said, and rose, nor longer deign'd to wait,
But past the threshold of her sister's gate, 701
Barefoot, undrest; long time she there remain'd,
(For modest fears her passing step restrain'd);
Then back retreats; new courage soon acquires;
Again advances, and again retires :
Passions so various sway'd the virgin's breast,
That when fierce love impell'd her, fear repress'd :

Thrice she essay'd, and thrice retreating fled;
Then on the pillow sunk her drooping head :
As some young damsel, whom her friend had
join'd 710

In marriage to the darling of her mind,
Conceal'd in secret, mourns her blooming mate
Snatch'd from her arms by some untimely fate,
Ere yet kind heaven indulg'd them to employ
The golden moments in connubial joy :
In silence she, though stung with torturing grief,
Seeks on the widow'd bed the wish'd relief;
Looks eager round, then sheds the trembling tear,
Screen'd from the female eye, and tongue severe.
Thus mourn'd Medea, not unseen; her pain
Was mark'd by one, the youngest of her train;
Who told Chalciopé Medea's grief : 722
And the sad tale exceeded her belief;
Her sons consulting, she with them essay'd
To sooth the sorrows of the love-sick maid.
Instant she rose, and trembling with dismay
Came to the chamber where her sister lay;
Torn were her cheeks, the tears her grief con-
fess : 730

And thus Chalciopé the maid address'd :

" Say, why those tears that thus incessant fall ?
What mighty ills your feeble mind appal;
Say, does some heaven-sent woe your grief in-
spire ?
Or in your bosom dwells Æeta's ire,
My sons and I the cause ? Oh ! far from home,
On the world's utmost limits may I roam,
Nor see my parents, nor my native shore.
Nor hear the hated name of Colchos more."

She said : Medea's cheeks the crimson stain'd;
She strove to speak, but shame her words re-
strain'd.

Now on her lips the ready accents hung, 740
Now stifled in her breast : her faltering tongue
Long time the purpose of her soul with-held,
Artful at length she spoke, by love impell'd :

" Dire fears, Chalciopé, my soul dismay, [flay,
Lest with these guests my sire thy children
My frightful dreams such horrid scenes present;
May some kind deity these woes prevent !
Lest for thy sons the tears eternal flow :"

Thus spoke the maid, inquisitive in woe,
If haply for her children's fate afraid, 750
Chalciopé might first solicit aid.

Mix'd grief and terror all the mother shook,
At last, impassion'd, thus she trembling spoke :

" 'Tis for their sakes I now before thee stand;
Lend me, O lend thy salutary hand !
But swear by earth and heaven what I unfold
Rests in thy bosom, never to be told :
By the great gods, and all that's dear I call,
Swear thou wilt never see my children fall,
Lest I too perish, and in fell despight 760
Rise a dread fury from the shades of night."

Earnest she spoke, and tears incessant shed,
Then on her sister's breast reclin'd her head,
And mix'd their mutual sighs; groan answer'd
groan,

And the wide palace echo'd to their moan.

Medea thus in mournful terms replies :

" Alas ! what succour can my thoughts devise,

" Thus with thy cruel menaces oppress'd ?
 " Oh, still uninjur'd may thine offspring rest !
 " By heaven above I swear, and earth below, 770
 " Earth, the great mother of the gods, I vow,
 " (If aught my power can do, or words persuade)
 " To give thee counsel, and to lend my aid."
 Thus spoke the maid ; and thus Chalciopé ;
 " Perhaps, in favour of my sons and me,
 " Thy mind, to save the hero, might impart
 " Some secret counsel, some mysterious art.
 " From Jason Argus comes, imploring aid ;
 " They rest their safety on the magic maid."

Thus she ; with joy exults the virgin's heart,
 And rising blushes rosy charms impart ; 781
 But soon o'ercast with grief she thus reply'd :
 " To serve thee, sister, be no art untry'd.
 " Ne'er may I see with pleasurable eyes
 " In yon bright orient cheerful morning rise,
 " If aught on earth be half so dear to me
 " As is the welfare of thy sons and thee.
 " As brethren, they my fond regard engage,
 " By blood related, and the same our age.
 " My sister, most esteem'd, and ever dear, 790
 " Thee with a daughter's love I still revere.
 " For with thy children, nurs'd by thee, I shar'd
 " (So fame reports) a mother's fond regard.
 " Go then, and from my prying parents hide
 " The means of succour which I now provide.
 " All-potent spells will I, at dawn of day,
 " To Hecate's mysterious shrine convey."
 Pleas'd with the tale, Chalciopé departs,
 And with the proffer'd aid transports her children's hearts.

Fear mix'd with shame now seiz'd the lonely maid, 800

Who dare, her fire reluctant, lend her aid.

Now rising shades a solemn scene display
 O'er the wide earth, and o'er th' ethereal way ;
 All night the sailer marks the Northern Team,
 And golden circlet of Orion's beam :
 A deep repose the weary watchman shares,
 And the faint wanderer sleeps away his cares ;
 Ev'n the fond maid, while yet all breathless lies
 Her child of love, in slumber seals her eyes :
 No sound of village-dog, no noise invades 810
 The death-like silence of the midnight shades ;
 Alone Medea wakes : to love a prey,
 Restless she rolls, and groans the night away :
 For lovely Jason cares on cares succeed,
 Lest vanquish'd by the bulls her hero bleed ;
 In sad review dire scenes of horrors rise,
 Quick beats her heart, from thought to thought
 she flies :

As from the stream-stor'd vase with dubious ray
 The sun-beams dancing from the surface play ;
 Now here, now there the trembling radiance falls, 820
 Alternate flashing round th' illumin'd walls :
 Thus fluttering bounds the trembling virgin's blood,

And from her eyes descends a pearly flood.
 Now raving with resistless flames she glows,
 Now sick with love she melts with softer woes :
 The tyrant god, of every thought possess'd,
 Beats in each pulse, and stings and racks her breast :

Now she resolves the magic to betray—
 To tame the bulls—now yield him up a prey.
 Again the drugs disdaining to supply, 830
 She lothes the light, and meditates to die :
 Anon, repelling with a brave disdain
 The coward thought, she nourishes the pain.
 Then pausing this : " Ah wretched me ! she cries,
 " Where'er I turn what varied sorrows rise !
 " Tost in a giddy whirl of strong desire,
 " I glow, I burn, yet blest the pleasing fire :
 " Oh ! had this spirit from its prison fled,
 " By Dian sent to wander with the dead,
 " Ere the proud Grecians view'd the Colchian
 " skies, 840
 " Ere Jason, lovely Jason, met these eyes !
 " Hell gave the shining mischief to our coast,
 " Medea saw him, and Medea's lost—
 " But why these sorrows ? if the powers on high
 " His death decree,—die, wretched Jason, die !
 " Shall I elude my fire ? my art betray ?
 " Ah me ! what words shall purge the guilt away !
 " But could I yield—O whither must I run
 " To find the chief—whom virtue bids me shun ?
 " Shall I, all lost to shame, to Jason fly ? 850
 " And yet I must—if Jason bleeds I die !
 " Honour farewell ! adieu for ever shame !
 " Hail black disgrace ! and branded be my fame !
 " Live, Jason, live ! enjoy the vital air !
 " Live through my aid ! and fly where winds can
 " bear.

" But when he flies, cords, poisons lend your
 " powers :
 " That day Medea treads th' infernal shores !
 " Yet what reproach will after death be cast ?
 " The maids of Colchos will my honour blast—
 " I hear them cry—the false Medea's dead, 860
 " Through guilty passion for a stranger's bed ;
 " Medea, careless of her virgin fame,
 " Preferr'd a stranger to a father's name !
 " O may I rather yield this vital breath,
 " Than bear that base dishonour worse than
 " death !"

Thus wail'd the fair, and seiz'd, with horrid joy,
 Drugs foes to life, and potent to destroy ;
 A magazine of death ! again she pours
 From her swollen eye-lids tears in shining show'rs.
 With grief insatiate, comfortless she stands, 870
 And opes the casket, but with trembling hands.
 A sudden fear her labouring soul invades,
 Struck with the horrors of th' infernal shades :
 She stands deep-musing with a faded brow,
 Absorb'd in thought, a monument of woe !
 While all the comforts that on life attend,
 The cheerful converse, and the faithful friend,
 By thought deep-imag'd in her bosom play,
 Endearing life, and charm despair away.
 Enlivening suns with sweeter light arise, 880
 And every object brightens to her eyes.
 Then from her hand the baneful drugs she throws,
 Consents to live, recover'd from her woes ;
 Resolv'd the magic virtue to betray,
 She waits the dawn, and calls the lazy day :
 Time seems to stand, or backward drive his
 wheels ;
 The hours she chides, and eyes the eastern hills :

At length the morn displays her rosy light,
And the whole town stands pictur'd to her sight.
Back to the ship (his brothers left behind 890
To mark the motions of Medea's mind)
Argus return'd; meanwhile her golden hair,
That flow'd diffusive in the wanton air,
The virgin binds; then wipes the tears away,
And from her eyes bids living lightning play;
On every limb refreshing unguents pours,
Unguents that breathe of heaven, in copious
show'rs.

Her robe she next assumes, bright clasps of gold
Close to the lessening waist the robe infold: 899
Down from her swelling loins the rest unbound
Floats in rich waves redundant o'er the ground:
Then takes her veil, and stately treads the room
With graceful ease, regardless of her doom.

Thus forward moves the fairest of her kind,
Blind to the future, to the present blind.
Twelve maids, attendants on her virgin bow'r,
Alike unconscious of the bridal hour,
Join to the car her mules; dire rites to pay,
To Hecate's fair fane she bends her way.
A juice she bears, whose magic virtue tames 910
(Through fell Persephone) the rage of flames;
For one whole day it gives the hero might,
To stand secure of harms in mortal fight;
It mocks the sword; the sword without a wound
Leaps as from marble shiver'd to the ground.
This plant, which rough Caucasian mountains
bore,

Sprung from the venom of Prometheus' gore,
(While on the wretch the savage eagle storm'd)
In colour like Corycian crocus form'd:
On two tall stems up springs the flowery shoot,
A cubit high; like red raw flesh its root. 921
From this root's juice, as black as that distill'd
From mountain beeches, the fair maid had fill'd
A Caspian conch; but first, as best beseems,
Array'd in black seven times in living streams
She bath'd; and call'd seven times on Brimo's
name;

At midnight hour, the ghost-compelling dame.
She pluck'd the root, earth murmur'd from below,
And sad Prometheus groan'd with agonizing
woe.

This root the Colchian maid selecting plac'd 930
In the rich zone that bound her slender waist:
Then issuing mounts the car, but not alone,
On either side two lovely damsels shone:
Her hand with skill th' embroider'd rein con-
trouls,

Back fly the streets as swift the chariot rolls.
Along the wheel-worn road they speed their way,
The domes retreat, the sinking towers decay:
Bare to the knee succinct a damsel-train
Close throng behind them, hastening to the plain.

As when her limbs divine Diana laves 940
In fair Parthenius, or th' Amnesian waves,
Sublime in royal state the bounding roes
Whirl her bright car along the mountain brows:
Swift to some sacred feast the goddess moves,
The nymphs attend that haunt the shady groves;
Th' Amnesian fount, or silver-streaming rills
Nymphs of the vales, or Oreads of the hills;

The fawning beasts before the goddess play,
Or, trembling, savage adoration pay: 949

Thus on her car sublime the nymph appears,
The crowd falls back, and, as she moves, reverts:
Swift to the fane aloft her course she bends,
The fane she reaches, and on earth descends:

Then to her train — "Ah me! I fear we stray,
" Missed by folly to this lonely way!

" Alas! should Jason with his Greeks appear,

" Where should we fly? I fear, alas, I fear!

" No more the Colchian youths, and virgin train,

" Haunt the cool shade, or tread in dance the
" plain. 959

" But since alone—with sports beguile your hours,

" Collect sweet herbs, and pluck the fairest
" flow'rs:

" If due attention to my words ye pay,

" With richest spoils ye shall return to-day.

" For Argus and Chalciope require,

" (But sacred keep this secret from my fire)

" That for large presents, for my succour paid,

" To this rash stranger I should lend my aid.

" I pass'd my word, and soon without his train

" The Grecian will attend me at the fane:

" In equal portions we the spoil will share— 970

" For him a dose more fatal I prepare—

" But when he comes, ye nymphs, retire apart."

She spoke; the nymphs approv'd the virgin's art.

When Argus heard the maid with early day

To Hecate's fair fane would speed her way,

He beckon'd Jason from his bold compeers

Apart, and Mopsus most renown'd of seers;

For prescient Mopsus every omen knew

Of birds that parting or approaching flew.

No mortal ever of the first-born race 980

Display'd like Jason such superior grace,

Whether from demigods he trac'd his line,

Or Jove himself immortal and divine,

As grac'd by Juno, Jove's imperial queen,

With soft address, and dignity of mien.

His comrades gaz'd with wonder as he went;

Mopsus foresaw, and hail'd the blest event.

Hard by the path, and near the temple, stands

A poplar tall, that wide its arms expands;

Here frequent rooks their airy pastime take, 990

And on the boughs their spray-form'd mansions
make:

One shook its pinions (louder than the rest),

And croaking, thus Saturnia's mind express'd:

" Vain seer! whose divinations fail to tell

" Those plain events which children know so well;

" That maids will not, with comrades in the train,

" Tell the soft love-tale to their favour'd swain.

" False prophet, hence! for thee nor love inspires,

" Nor Venus gratifies with soft desires." 999

Then Mopsus laugh'd, as scoffing thus she spoke,

To hear the bird her dark predictions croak;

And thus: "Hence, Jason, to the fane and find

" The maiden to thy warmest wishes kind;

" Venus approves, and fortune will ensue,

" If what prophetic Phineus said prove true.

" Myself and Argus here will wait apart,

" Go and unfold the secrets of thy heart;

" Be every mode of soft persuasion try'd."

He counsel'd wisely, and the chief comply'd.

Meanwhile the maid her secret thoughts enjoy'd, 1010

And one dear object all her soul employ'd:
Her train's gay sports no pleasure can restore,
Vain was the dance, and music charm'd no more;
She hates each object, every face offends,
In every wish her soul to Jason sends;
With sharpen'd eyes the distant lawn explores,
To find the hero whom her soul adores;
At every whisper of the passing air,
She starts, she turns, and hopes her Jason there:
Again the fondly looks, nor looks in vain, 1020
He comes, her Jason shines along the plain.
As when, emerging from the watery way,
Refulgent Sirius lifts his golden ray,
He shines terrific, for his burning breath,
Taints the red air with fevers, plagues, and death;
Such to the nymph approaching Jason shows,
Bright author of unutterable woes;
Before her eyes a swimming darkness spread,
Her flush'd cheeks glow'd, her very heart was
dead: 1029

No more her knees their wonted office knew,
Fix'd, without motion, as to earth they grew.
Her train recedes—the meeting lovers gaze
In silent wonder, and in still amaze.
As two fair cedars on the mountain's brow,
Pride of the groves, with roots adjoining grow;
Erect and motionless the stately trees
Short time remain, while sleeps each fanning
breeze,

Till from th' Æolian caves a blast unbound
Bend their proud tops, and bids their boughs re-
sound: 1030

Thus gazing they; till by the breath of love,
Strongly at last inspir'd, they speak, they move;
With smiles the love-sick virgin he survey'd,
And fondly thus address'd the blooming maid:

'Dismiss, my fair, my love, thy virgin fear;
'Tis Jason speaks, no enemy is here!
'Dread not in me a haughty heart to find,
'In Greece I bore no proud inhuman mind.
'Whom wouldst thou fly? stay, lovely virgin,
'stay!

'Speak every thought! far hence be fears away!
'Speak! and be truth in every accent found! 1050
'Scorn to deceive! we tread on hallow'd ground.
'By the stern power who guards this sacred place,
'By the fam'd authors of thy royal race;
'By Jove, to whom the stranger's cause belongs,
'To whom the suppliant, and who feels their
'wrongs:

'O guard me, save me, in the needful hour!
'Without thy aid thy Jason is no more.
'To thee a suppliant in distress I bend,
'To thee a stranger, one who wants a friend!
'Then, when between us seas and mountains
'rise, 1060

'Medea's name shall sound in distant skies;
'All Greece to thee shall owe her hero's fates,
'And bless Medea through her hundred states.
'The mother and the wife who now in vain
'Roll their sad eyes fast streaming o'er the main
'Shall stay their tears: the mother and the wife,
'Shall bless thee for a son's or husband's life!

'Fair Ariadne, sprung from Minos' bed,
'Sav'd valiant Theseus, and with Theseus fled.
'Forsook her father, and her native plain, 1070
'And stemm'd the tumults of the surging main;
'Yet the stern fire relented, and forgave
'The maid, whose only crime it was to save;
'Ev'n the just gods forgave: and now on high
'A star she shines, and beautifies the sky:
'What blessings then shall righteous heaven de-
'cree

'For all our heroes sav'd, and sav'd by thee?
'Heaven gave thee not to kill, so soft an air;
'And cruelty sure never look'd so fair!"

He ceas'd, but left so charming on her ear 1080
His voice, that listening still she seem'd to hear;
Her eyes to earth she bends with modest grace,
And heaven in smiles is open'd on her face.
A look she steals; but rosy blushes spread
O'er her fair cheek, and then she hangs her head.
A thousand words at once to speak she tries;
In vain—but speaks a thousand with her eyes;
Trembling the shining casket she expands,
Then gives the magic virtue to his hands;
And had the power been granted to convey 1090
Her heart—had given her very heart away.
For Jason beam'd in beauty's charms so bright,
The maid admiring, languish'd with delight.
Thus, when the rising sun appears in view,
On the fair rose dissolves the radiant dew.
Now on the ground both cast their bashful eyes,
Both view each other now with mild surprise.
The rosy smiles now dimpling on their cheeks,
The fair at length in faltering accents speaks:

"Observant thou to my advice attend, 1100

"And here what succour I propose to lend,
"Soon as my sire Æeta shall bestow
"The dragon's teeth in Mars's field to sow,
"The following night in equal shares divide;
"Bathe well thy limbs in some perennial tide;
"Then all retir'd, thyself in black array,
"Dig the round fofs, and there a victim slay,
"A female lamb; the carcase place entire
"Above the fofs, then light the sacred pyre,
"And Perseus daughter, Hecate, appease 1110
"With honey, sweetest labour of the bees;
"This done, retreat, nor while the relics burn,
"Let howling dogs provoke thee to return.
"Nor human footsteps; lest thou render vain
"The charm, and with dishonour join thy train,
"Next morn, the whole enchantment to fulfil,
"This magic unguent on thy limbs distil:
"Then thou with ease wilt strong and graceful
"move,

"Not like a mortal, but the gods above.
"Forget not with this unguent to besmear 1120
"Thy sword, thy buckler, and tremendous spear:
"No giant's faulchions then can harm thy frame,
"Nor the fell rage of bulls expiring flame.
"One day, nor longer, wilt thou keep the field;
"Nor thou to perils, nor to labour yield.
"But mark my words; when thou with ceaseless
"toil, [soil;
"Hast yok'd the bulls and plough'd the stubborn
"And seest up-springing on the teeth-sown land
"Of giant foes a formidable band,

" Hurl flily midst their ranks a rough hard stone,
 " And they, like dogs contending for a bone, 1131
 " Will flay each other : thou with fpeed renew
 " The glowing fight, and conquest will enfue.
 " Thus fhalt thou bear from Æa's realms to
 " Greece,

" If fuch thy fix'd refolve, the golden fleece."
 This faid, her eyes were fix'd upon the ground,
 And her fair cheeks with ftreaming frowns
 drown'd;

Defponding anguifh feiz'd her gentle mind,
 Left he fhould leave her comfortlefs behind.
 Embolden'd thus, him by the hand fhe prefs'd,
 And in the language of her foul address'd: 1141

" If fafely hence thou fail'ft, O, think of me!
 " As I for ever fhall remember thee!
 " And freely tell me, to relieve my pain,
 " Where lies thy home beyond the boundlefs
 " main?

" Say, is Orchomenos thy native foil?
 " Or dwell'ft thou nearer on th' Ææan ifle?
 " Let me that far-fam'd virgin's name inquire,
 " Who boafts the fame high lineage with my
 " fire."

She faid; her tears his foft compaffion won, 1150
 And thus the chief, by love inspir'd, begun:

" While on my fancy bright ideas play,
 " Thy image never from my foul fhall ftay,
 " If fafe I fail, preferv'd by thee, to Greece,
 " Nor heavier labours interrupt my peace.
 " But if the diftant country where I dwell
 " Thy will demands, my ready tongue fhall tell.
 " A land there is which lofty hills furround,
 " For fertile paftures and rich herds renown'd,
 " Where from Prometheus good Deucalion came,
 " His royal heir, Hæmonia is the name. 1161
 " Deucalion here the firft foundations laid
 " Of towns, built fanes, and men by empire fway'd;
 " There my Iolcos ftands, and many more
 " Fair ample cities, that adorn the fhore.
 " What time, as rumour'd by the voice of fame,
 " Æolian Minyas to that country came,
 " He built, clofe bordering on the Theban ground,
 " Orchomenos, a city far renown'd. 1169
 " But why your wonder fhould I vainly raife?
 " My birth-place tell, and Ariadne's praife?
 " For this the virgin's name you now inquire,
 " A lovely maid, and Minos is her fire.
 " Oh! may, like her's, your fire propitious prove,
 " Who honour'd Thefeus with his daughter's love!"

Complacent thus he ftooth'd her forrowing foul;
 Yet anxious cares within her bofom roll.

" Perchance in Greece" (the pensive maid re-
 join'd)

" Oaths are rever'd, and folemn compacts bind.
 " But Minos greatly differs from my fire, 1180
 " Nor I to Ariadne's charms afpire.
 " Then mention hofpitality no more;
 " But, fafe conducted to thy native fhore,
 " Grant this, 'tis all I afk, Oh! think of me,
 " As I for ever fhall remember thee,
 " In my great fire, the Colchian king's defpite:
 " But if thy pride my ardent paffion flight,
 " Fame, or fome bird the hateful news will bring;
 " Then will I chafe thee on the tempeft's wing,

" Brand thy falfe heart, thy curs'd familiar
 " be, 1190

" And prove thou ow'ft thy life, thy all to me."
 Medea thus, and tears abundant fhed;

And mildly thus the fon of Æfon faid: [foar
 " In vain, dear nymph, thy miffive bird fhall
 " Through air fublime, in vain the tempeft roar.
 " But if towards Greece thou deign'ft thy courfe
 " to bear,

" Immortal honours fhall attend thee there;
 " There husbands, brothers, fons, fo long deplor'd,
 " Safe to their native land by thee reftor'd,
 " Shall as a goddefs reverence thy name, 1200
 " And pay thee rites which only gods can claim.
 " But would'ft thou grace my bed with bridal
 " ftate,

" Our love can only be diffolv'd by fate."
 His words with raptures all her foul fubdue;
 Yet gloomy objects rife before her view,
 Ordain'd, ere long, Theffalia's realms to fee;
 For fuch was Juno's abfolute decree,
 That foon to Greece the Colchian maid fhould go,
 To Pelias fource of unremitting woe.

Meanwhile apart her anxious handmaids ftay,
 In f Silence waiting till the clofe of day: 1211
 Such pleafing tranfports in her bofom roll,
 His form, his words fo captivate her foul,
 On feather'd feet the hours unheeded fled,
 Which warn'd her home: " Hence (cautious Jafon
 " faid),

" Hence let us haften unperceiv'd away,
 " And here enraptur'd pafs fome future day."
 Thus the bleft hours in converfe fweet they
 fpent,

And both unwilling from the temple went;
 He to his comrades bordering on the main, 1220
 The fair Medea to her virgin train.
 Her train approach'd, but flood unnotic'd by:
 Her foul fublime expatiates in the fky.
 Her rapid car fhe mounts; this hand fuf tains
 The polifh'd thong, and that the flowing reins.
 Fleet o'er the plain the nimble mules convey'd
 To Æa's walls the love-transported maid.
 Meanwhile Chalciopé astonifh'd ftands,
 And instant tidings of her fons demands;
 In vain: fad cares had clos'd Medea's ears, 1230
 No answers gives fhe, and no questions hears;
 But on a footftool low, befide her bed,
 All bath'd in tears fhe fits; her hand fuf tains her
 head.

There fits fhe pondering, in a pensive ftate,
 What dire diftreffes on her counfels wait.
 But Jafon, eager to return, withdrew
 With his two friends, and join'd his focial crew,
 Who throng'd impatient round, while he difplay'd
 The fecret counfels of the Colchian maid,
 And fhew'd the potent herbs: Idas apart 1240
 Conceal'd the choler rankling in his heart.
 Meanwhile the reft, when glimmering day-light
 clos'd,

Wrapp'd in the mantle of the night repos'd.
 Next morn they fent Æthalides the fon
 Of Mercury, and valiant Telamon,
 (For thus in council had the Greeks decreed)
 Of fierce Æeta to demand the feed,

The serpent's teeth, whose ever-wakeful sight
 Watch'd o'er the fountain of the god of fight.
 This baneful monster was by Cadmus slain, 1250
 Seeking Europa o'er the Theban plain;
 An heifer to his seat of regal sway,
 So will'd prophetic Phœbus, led the way.
 These teeth Minerva from the monster rent,
 And part to Cadmus and Æeta sent:
 Sow'd on Boeotia's ample plains, from those
 A hardy race of earth-born giants rose.
 To Jason these he gave, a precious spoil;
 Nor, though his matchless arm the bulls might
 foil, 1259 }
 Deem'd he, that victory would crown his toil.
 The sun now sinking with a feeble ray
 To distant Ethiopians stop'd his way;
 Night yok'd her steeds; the Grecian heroes spread
 Around the halbers and the sails their bed.
 The northern Bear was sunk beneath the hills,
 And all the air a solemn silence fills:
 Jason to lonely haunts pursu'd his way;
 (All rites adjusted the preceding day):
 'Twas Argus' care a lambkin to provide,
 And milk, the rest the ready ship supply'd. 1270
 A sweet sequester'd spot the hero found,
 Where silence reigns, and swelling streams a-
 bound;
 And here, observant of due rites, he laves,
 His limbs immersing in the cleansing waves:
 Then o'er his shoulders, pledge of favours past,
 The gift of fair Hypsipyla he cast,
 A sable robe: a deep round soss he made,
 And on the kindling wood the victim laid:
 The mix'd libation pouring o'er the flame,
 Loud he invok'd infernal Brimo's name; 1280
 Then back retires: his call her ears invades,
 And up she rises from the land of shades:
 Snakes, wreath'd in oaken boughs, curl'd round
 her hair,
 And gleaming torches cast a dismal glare.
 To guard their queen the hideous dogs of hell
 Rend the dark welken with incessant yell;
 The heaving ground beneath her footsteps shakes;
 Loud shriek the Naiads of the neighbouring lakes,
 And all the fountain-nymphs astonish'd flood
 Where Amaranthine Phasis rolls his flood. 1290
 Fear seiz'd the chief, yet backward he withdrew,
 Nor till he join'd his comrades, turn'd his view.
 And now on Caucasus with snow o'er-spread,
 The rising morn her silver radiance shed,
 When proud Æeta, earlier than the rest,
 The fencing corslet buckled to his breast,
 The spoils of Mimas of gigantic race,
 Whom Mars had vanquish'd on the plains of
 Thrace:
 His golden helmet to his head he bound,
 With four fair crests of glittering plumage crown'd,
 Bright as the sun new rising from the main; 1301
 His nervous arm a mighty spear sustain:
 From his broad shoulder beams his sevenfold shield,
 Which not a chief of all the Greeks could wield,
 Since great Alcides, of his friend bereft,
 Was (sad mischance! on Myra's borders left,
 His son hard by with ready chariot stands;
 The king ascends; the reins adorn his hands;

Fierce to the field he hastes in regal state,
 And crowds of Colchians round their monarch
 wait. 1310

As ocean's god, when drawn by rapid steeds,
 To Isthmian games, or Calauria speeds,
 To Tænarus, or rocky Petra roves,
 Or where Geræstus boasts her oaken groves,
 Onchestus' woods, or Lerna's limpid spring;
 So to the combat drives the Colchian king.

Meanwhile, instructed by the magic maid,
 The chief his shield, his spear and trenchant blade
 With unguents smear'd: the Greeks approaching
 nigh

In vain their efforts on his armour try; 1320

But chief the spear such magic charms attend,
 No force can break it, and no onset bend.
 Idas enrag'd deals many a furious wound,
 But, as hard hammers from an anvil bound,
 So from the spear his sword recoiling sprung:
 The distant vales with loud applauses rung.
 Next, with the potent charm the chief anoints
 His well-turn'd limbs, and supples all his joints.
 And, lo! new powers invigorate his hands,
 And arm'd with strength intrepidly he stands. 1330

As the proud steed, exulting in his might,
 Erects his ears, impatient for the fight,
 And pawing snuffs the battle from afar;
 So pants the hero for the promis'd war.
 Firmly he moves, incapable of fear;
 One hand his shield sustains, and one the spear.
 Thus, when black clouds obscure the darken-
 ing day,

And rains descend, the living lightnings play.

And now the fight draws near; the Grecian
 train

Sail up the Phasis to the martial plain; 1340

Which from as far the towers of Æa stand,
 As when the chieftans, who the games command
 For some dead king, the bounding barriers place
 For steeds or men contending in the race.
 Æeta there they found, of mind elate;
 On Phasis' banks his chariot rolls in state.
 On the Caucasian summits, that command
 The field of Mars, the crowded Colchians stand.
 Now Argo moor'd, the prince invades the field,
 Arm'd with his magic spear, and ample shield; 1350
 With serpents' teeth his brazen helm was stor'd,
 And cross his shoulder gleam'd his glittering
 sword:

Like Mars the chief enormous power display'd,
 Or Phœbus brandishing his golden blade.
 O'er the rough tilth he cast his eyes around,
 And soon the plough of adamant he found,
 And yokes of brass: his helm (approaching near)
 He plac'd on earth and upright fix'd his spear.
 To find the bulls he farther went afield,
 And trac'd their steps, arm'd only with his shield.
 In a dark cave which smoky mists surround, 1361
 Horrid and huge their safe retreat he found.
 With rage impetuous forth the monsters came,
 And from their nostrils issued streams of flame.
 Fear seiz'd the Greeks, but he their fury braves;
 Firm as a rock, defies the roaring waves;
 Screen'd by his shield, intrepidly he scorns
 The bulls loud-bellowing, and their butting horns;

Collected firm he wards each threatening blow.
 As at the forge where melting metals glow, 1370
 While now the bellows heave, now sink by turns,
 The flame subsides, or with fresh fury burns;
 Stirr'd to the bottom roars the raging fire:
 So roar the bulls and living flame respire,
 That fierce as lightning round the hero play'd,
 In vain, now shelter'd by the magic maid.
 One bull he seiz'd, that aim'd a deadly stroke,
 Seiz'd by the horns, and dragg'd him to the yoke;
 Then hurl'd the roaring monster on the ground;
 An equal fate his fellow-captive found. 1380
 Loos'd from his arm he flung his shield aside,
 And the two monsters manfully he ply'd,
 Dragg'd on their knees his fiery foes o'ercame,
 And shifting artfully escap'd the flame.
 Æeta view'd him with astonish'd eyes;
 When lo! the sons of Tyndarus arise,
 As erst it was decreed, and from the land
 Heav'd the strong yokes and gave them to his
 hand:
 These o'er the bulls' low-bended necks he flung;
 The brazen beams by rings suspended hung. 1391
 The youths retreating from the burning field,
 The chief resum'd his loaded helm, his shield
 Behind him thrown; then grasp'd his massy spear,
 (Thus arm'd the hinds of Theffaly appear,
 With long sharp goads to prick their bullocks'
 sides)
 And the firm plough of adamant he guides.
 The restiff bulls with indignation fir'd,
 From their broad nostrils living flames expir'd,
 Loud as the blasts when wint'ry winds prevail,
 And trembling sailors furl the folding sail. 1400
 Urg'd by his spear the bulls their task fulfil,
 Prove their own prowess, and the ploughman's
 skill.
 As the sharp coulter cleft the clodded ground,
 The roughen'd ridges sent a rattling sound.
 Firm o'er the field undaunted Jason treads,
 And scattering wide the serpent's teeth he spread:
 Yet oft looks back, suspecting he should find
 A legion rising up in arms behind:
 Unwearied still the bulls their toil pursue;
 Their brazen hoofs the stubborn soil subdue. 1410
 When now three portions of the day were spent,
 And weary hinds at evening homeward went,
 The chief had till'd four acres of the soil;
 He then releas'd the monsters from their toil,
 Away they scamper'd wildly o'er the plain;
 Himself rejoin'd his delegated train,
 Till on the field his earth-born foes appear:
 The Greeks their animated hero cheer.
 He in his helm, replenish'd at the springs,
 To slake his burning thirst fresh water brings. 1420
 His limbs renew'd with forceful vigour play,
 His heart beats boldly and demands the fray.

Thus the fell boar disdains the hunter-bands,
 Foams, whets his tusks, and in defiance stands.
 Now rose th' embattled squadron in the field,
 In glittering helms array'd, with spear and shield,
 Bright o'er the martial train the splendors rise,
 And dart in streams of radiance to the skies.
 Thus, when thick snow the face of nature shrouds,
 And nightly winds dispel the wint'ry clouds, 1430
 The stars again their splendid beams display;
 So shone the warriors in the face of day.
 But Jason, mindful of the maid's command,
 Seiz'd a vast rock, and rais'd it from the land:
 Not four stout youths, for strength of limbs re-
 nown'd,
 Could lift a weight so ponderous from the ground:
 This 'midst his foes, embattled on the field,
 He hurl'd, and safe retir'd behind his shield.
 The Colchians shout, as when the raging main
 Roars round tremendous rocks, but roars in vain.
 In silence fix'd, Æeta stands aghast 1441
 To see the fragment with such fury cast.
 The host, like dogs contending o'er their prey,
 With curs'd ferocity their comrades slay,
 Then leave on earth their mangled trunks be-
 hind,
 Like pines of oaks uprooted by the wind.
 As shoots a star from heaven's ethereal brow,
 Portending vengeance to the world below,
 Who through dark clouds descry its radiant light:
 Thus Jason rush'd, in glittering armour bright.
 His brandish'd falchion fell'd the rising foes:
 Succinct in arms, some half their lengths disclose,
 Some scarce their shoulders; others feebly stand,
 While others, treading firm, the fight demand.
 As on the bounds which separates hostile
 Eternal source of battle and debates, [states,
 The cautious hind the cruel spoiler fears,
 And reaps his wheat with yet unripen'd ears;
 Ere yet the spikes their wonted growth attain,
 Ere yet the sun-beams have matur'd the grain:
 So Jason's arms the rising squadrons mow'd; 1461
 Their blood profusely in the furrows flow'd.
 Some sidelong fall on earth, and some supine,
 Some prone lie grovelling and their lives resign,
 Like whales incumbent on the buoyant main;
 Some wounded perish ere they tread the plain;
 As late in air they held their heads on high,
 So lowly humbled in the dust they lie.
 Thus tender plants, by copious torrents drown'd,
 Strew their fresh leaves uprooted from the
 ground; 1470
 The tiller views with heart-corroding pain
 His fostering care, and all his labours vain.
 Æeta thus with wild vexation burn'd,
 And with his Colchians to the town return'd,
 Some weightier task revolving in his mind:
 Thus clos'd the combat, and the day declin'd.

NOTES ON BOOK III.

Ver. 2. Apollonius, with great propriety, in-
 vokes Erato, the muse who presided over love af-

fairs. For this book contains the loves of Medea
 and Jason, and abounds with the most beautiful

sentiments descriptive of the tender passion. Virgil's invocation of Erato, *Nunc age, qui reges, Erato*. &c. is a transcript of Apollonius, *Εἰ δ' ἄντι νῦν Ἐρατώ* &c. Virgil seems to have copied our poet in this instance, at the expence of his judgment; for it is difficult to assign a reason for his invocation of this muse, when he was about to sing, as he informs us, *reges et tempora rerum*.

The fourth book of Virgil, Servius tells us, is borrowed from this of Apollonius Rhodius. Virgil's *Æneid*, says Hoelzelinus, would not have been enriched with the episode of Dido, had not the amours of Hypsipyla and Medea been worked up ready to his hand by Apollonius.

Ver. 10. Having conducted his heroes to the banks of the Phasis, our poet shifts the scene, and takes occasion to introduce the two goddesses, Juno and Pallas, consulting for the safety of Jason. There is a necessity for such machinery, in order to preserve the dignity of epic poetry. And the propriety of its introduction in this place will be acknowledged, if we recollect, that on the successful application of these goddesses to Venus, the future fortunes of Jason depend. There needs no greater proof of the beauty of this passage, than that it has been imitated by Virgil in that part of his first book, where Cupid is commissioned by his mother to kindle in Dido's breast a passion for *Æneas*.

Ver. 46. The Greek is *Νήσοιο πλαγκτῆς*. Homer has a similar expression, *Πλωτῆ ἰνὶ νήσῳ*. *Odyss.* x. 3.

A floating isle, high rais'd by toil divine. *Pope.*

Ver. 50. This whole passage is imitated by Claudian, who, speaking of Venus, says,

*Cæsariem tunc forte Venus subnixâ corusco
Fingebat solis: dextrâ lævâque sorores
Stabant Idaliæ: largos hæc nectaris imbres
Irrigat; hæc morsu numerosi dentis eburno
Multifidum discrimen arat: sed tertia retro
Dat varios nexus, et iusto dividit orbes
Ordine, neglectam partem studiosa relinquens.*

Ver. 74. He, for making love to Juno, and boasting afterwards that he had dishonoured Jupiter, was hurled headlong by him into Tartarus, and bound to a wheel, which he was doomed to turn without intermission.

Ver. 79. It was the opinion of the ancients, that the gods frequently assumed the human shape. Thus Homer, *Odyss.* xvii. v. 485.

They (curious oft of mortal actions) deign
In forms like these to round the earth and main,
Just and unjust recording in their mind,
And with sure eyes inspecting all mankind.

Pope.

— summo delabor Olympo,
Et Deus humanâ lustro sub imagine terras.

Ov. Met. l. i.

Ver. 131. The Greek is, *ἀπ' ἀράγλοις*. Homer has the same expression, *Il.* xxiii. 88. but it is omitted in Pope's translation.

Ver. 141. She was nurse to Jove when an infant. Thus Callimachus:

— σὲ δὲ καίμισιν Ἀδότησαι
Αἰκνὸν ἐνὶ χροστέῳ. *Hym. ad Jov. v. 47.*

Ver. 149. It is partly from the wanton and playful character of these little Cupids, that they are almost always given us under the figure of children.

Thus Ovid:

*Et puer es, nec te quicquam nisi ludere oportet:
Lude, decent annos mollia regna tuos.*

Ov. Rem. Am.

In conformity to this puerile character, Venus promises to reward her favourite boy with playthings.

Ver. 210. See the preface.

Ver. 227. These extraordinary rites of the Colchians are mentioned by *Ælian*, in his fourth book. The earth and air are said to be the principal objects of their worship. *Hoelz. and Schol.*

Ver. 237. Thus Pallas spreads a veil of air around Ulysses, and renders him invisible:

Propitious Pallas, to secure her care,
Around him threw a veil of thicken'd air.

Homer's Odyss. B. vii.

Thus Venus conceals *Æneas* and his companions:

At Venus obscuro gradientes ære seplit.

Virg. Æn. l. i.

Ver. 251. The Pleiades are said to be daughters of Atlas by the nymph Pleione. They were seven in number. Their name is derived, either from their mother, or from their number; or, more probably, from the Greek word, which signifies *to sail*. They are called in Latin *Vergilia*, from the vernal season when they rise. They rise about the vernal equinox, and set in autumn. See a further account of them in the note on ver. 448. B. ii.

Ver. 260. The battle between the gods and giants is supposed to have been fought at Phlegra, near Pallene, in Thessaly.

Ver. 299. These sons of Phrixus and Chalciope had sailed from Colchis to Orchomenos, a city of Bœotia, to receive the inheritance of their grandfather Athamus.

Ver. 327. Virgil seems to have copied this simile from Apollonius. *Æn.* viii. 408.

What time the poor, laborious, frugal dame,
Who plies her distaff, stirs the dying flame:
Employs her handmaids by the winking light,
And lengthens out their tasks with half the night;
Thus to her children she divides the bread,
And guards the honours of her homely bed. *Pitt.*

Ver. 356. One of those islands called the Strophades, in the Ionian sea.

Ver. 387. The Sarmatians, or Sauramata, were Scythians, who dwelt in the country that lies between the river Tanais and the Borysthenes.

Ver. 413. The table was looked upon by the ancients as a sacred thing; and a violation of the laws of hospitality was esteemed the highest profanation imaginable.

Ver. 562. Virgil's description of the Massylian priestess is taken from this passage:

Hæc se carminibus promittit—
Sistere aquam fluviis, et vertere sidere retro!
Nocternosque ciet manes: mugire videbis
Sub pedibus terram, et descendere montibus oras.
Æn. L. iv. 487.

Ver. 705. The chief power of disposing of their daughters in marriage, even among the heathens, was in their parents, without whose consent it was not held lawful. This Hermione in Euripides

Ναμφιρμάπων δὲ τῶν ἱμῶν πατὴρ ἰμὸς
Μυρμιρῶν ἔχει κ' ἐκ ἱμῶν κρήνῃν τὰδ'.

Ver. 797. Here Dr. Broome's translation begins, and continues to ver. 1087; but not without considerable omissions which are supplied. Virgil has copied this exquisite description from our author. Both the poets describe minutely the profound calm and stillness of the night, in order to render the agonies of the restless heroines more affecting by such a contrast. It is impossible to give us a more lively idea of their restless situation, than by representing it in opposition to that general tranquillity which prevails through the whole creation. The silence of the night, which disposes others to rest, serves to increase but their anguish, and to swell the tumult of their passion.

'Twas night; and weary with the toils of day,
In soft repose the whole creation lay,
The murmurs of the groves and furies die,
The stars roll solemn, through the glowing sky;
Wide o'er the fields a brooding silence reigns,
The flocks lie stretch'd along the flowery plains:
The furious savages that haunt the woods,
The painted birds, the fishes of the floods;
All, all, beneath the general darkness share
In sleep a sweet forgetfulness of care;
All but the hapless queen.

Pitt.

That sudden and beautiful transition at the close of the description, *At non infelix animi Phænissa*, is copied with the utmost exactness from the correspondent line in our poet,

Ἀλλὰ μάλ' ἔ Μήδεϊαν ἐπὶ γλυκερὸς λάβαν ὕπνος.

Ver. 813. Virgil has imitated this simile, *Æn. viii. 22.*

Sicut aquæ tremulum, &c.

So from a brazen vase the trembling stream
Reflects the lunar, or the solar beam:
Swift and elusive of the dazzled eyes,
From wall to wall the dancing glory flies:
Thence to the cieling shoot the dancing rays,
And o'er the roof the quivering splendor plays.

Pitt.

Ver. 911. Caucasus is called by Propertius, B. i. El. 12. the Promethean mountain; because the

magic herbs, for which it was famous, were said to have sprung out of the blood of Prometheus.

—An quæ

Lecta Prometheis dividet herba jugis. *Potter.*

Ver. 935. We meet with this simile in the sixth book of Homer's *Odyssey*, who applies it to Nausicaa sporting with her fair attendants in the meads. Virgil applies the same simile to Dido, walking in the midst of the city, with the Tyrian princes. See Pope's note on *Od. 6. ver. 117.* Some of the critics have thought that no passage has been more unhappily copied by Virgil from Homer, than this comparison. But, it should seem from some circumstances in his simile, that the Roman poet rather imitated this passage of Apollonius, than that of Homer.

Ver. 936. Or rather Amnisian, according to Callimachus:

—Ἀμνισιδας ἱεροσι νόμφας.

They were so named from Amnisus, a city and river of Crete.

Ver. 988. Some birds were of use in divination by the manner and direction of their flight; others by the sounds they uttered; these were called *oscines*, of which kind were crows.

Oscinem corvum prece suscitabo

Solis ab ortu. *Hor. Od. xxvii. l. 3.*

Ver. 1005. No poet has succeeded better in any description than Apollonius has in the following. The anxiety with which Medea expects the arrival of Jason, expressed by her inattention and aversion to every other object, by her directing her eyes every way in search of him, and by her trembling at every breeze, are admirable strokes of nature. The appearance of Jason, flushed with all the bloom of youth, advancing hastily towards her, like the star, to which he is compared, rising from the ocean; the embarrassment which his presence occasions, the silent admiration in which they stand gazing at each other, like two tall trees in a calm, are particulars which none but the imagination of a real poet could have put together, and can never be sufficiently admired.

Ver. 1099. We have here a curious account of the ceremonies made use of in their sacrifices to the infernal deities. Hecate the same with the moon or Diana, was so called, either from her being appeased by hecatombs, or from the power she possessed of obliging those who were unburies to wander an hundred years. Virgil applies to her the epithet of *ter geminam*, and Horace that of *triformis*. She was called in heaven Luna, or the Moon, on earth Diana, and in hell Proserpina. Hecate, and Brimo, from her terrifying appearance.

It seems extraordinary that Diana, who is the goddess of chastity, should be represented as dispensing her favourable influence in illicit amours. But the mythologists inform us, that Diana and Venus are but one and the same divinity. The Scholiast on Theocritus, *Id. ii.* says, that it was customary, among the ancients, for the men to

implore the sun, and women the moon in their amours. Cicero, speaking of three Dianas, observes, that the first was thought to be the mother of winged Cupid. *De Nat. Deor. l. 3.*

Ver. 1095. Honey was a favourite ingredient with the ancients, in their oblations to the gods, whether of heaven or hell. Homer, in his hymn to Mercury, calls it

— *Σύν ἡδείαν ἰδωδὴν.*

Bees and honey are subjects which the Greek poets are particularly fond of introducing; and their country was plentifully supplied with these commodities.

Ver. 1115. Apollonius Rhodius, according to the common opinion, supposes Deucalion to have been a native of Greece, the son of Prometheus, the son of Japetus: but in these ancient mythological accounts, all genealogy must be entirely disregarded. He represents him as the first of men, through whom religious rites were renewed, cities built, and civil polity established in the world; none of which circumstances are applicable to any king of Greece. We are assured by Philo, that Deucalion was Noah. *Bryant.*

Ver. 1245. Upon the report of the rape of Europa, her father, Agenor, sent every where in search of her, and ordered his son Cadmus not to return home till he had found her. Cadmus having traversed a part of Greece without gaining any

information of her, settled in Bœotia, where he built the city Thebes. Having sent his associates into a grove, consecrated to Mars, to fetch water, a serpent, which guarded the place, devoured them. Cadmus, to revenge their death, slew the monster; from whose teeth, which he had sown, a body of armed men sprung up. This is the fabulous account to which Apollonius alludes.

No colony, says Mr. Bryant, could settle any where, and build an orphite or serpent temple, but there was supposed to have been a contention betwixt a hero and a dragon. Cadmus was described in conflict with such an one at Thebes.

Ver. 1247. *Πομπαῖος* relates properly to divine influence, and *πομπή* is an oracle. An ox or cow was by the Amonians esteemed very sacred and oracular. Cadmus was accordingly said to be directed *πομπῇ βοῶς.* *Bryant.*

Ver. 1285. This river is supposed to have derived its source from a nation of that name. The poet, in describing the effects of this infernal evocation, has heaped together with great judgment, and in the true spirit of poetry, every circumstance that is capable of exciting terror and astonishment.

Ver. 1288. Apollonius introduces his heroes on the plains of Mars with the utmost pomp and magnificence, thus artfully preparing us for the solemnities of the ensuing combat, on which the fate of Jason depends.

BOOK IV.

THE ARGUMENT.

Jason obtains the Golden Fleece by the assistance of Medea. She embarks with the Argonauts for Greece. Æta pursues them. Having crossed the Euxine sea, they sail up the Ister; and by an arm of that river enter the Adriatic. Absyrtus is treacherously murdered by Jason. They sail into the Sardinian sea by the way of Eridanus and the Rhone. The murder of Absyrtus is expiated by Circe, at whose island they land. Thetis and her nymphs conduct the heroes through the straits of Scylla and Charybdis. They sail by the island infested with the Syrens, from whose enchantments Orpheus delivers them. At Corcyra, once called Drepane, they meet with the Colchians that pursued them through the Symplegades; who request Alcinous, king of the island, to deliver up Medea. He agrees to send her back to her father, if unmarried; but if married to Jason he refuses to separate them. Upon this determination, her nuptials are immediately celebrated. They again put to sea, and are driven upon the quicksands of Africa. The tutelary deities of the country extricate them from their distresses. They bear Argo on their shoulders as far as the lake Tritonis. The Hesperides, who were bewailing the death of the serpent, slain the preceding day by Hercules, give some account of that hero. The death of Canthus and Mopsus, two of their comrades, is related. Triton, whose figure is particularly described, gives them directions about their voyage. They sail near Crete. The story of Talus. At Hippuris they sacrifice to Phœbus, who, standing on the top of an hill, enlightens their way. The clod of earth, given by Triton to Euphemus, becomes an island, called Calliste. They anchor at Ægina; and loosing from thence, arrive without further interruption at Thessaly.

O goddess, daughter of th' eternal King,
Medea's various cares and counsels sing:
Far from my mind the sad suspense remove,
Whether to celebrate her lawless love,

Or whether her base flight from Colchis' bay,
Best claims the tribute of my tuneful lay.
In solemn council to his faithful chiefs
The vengeful king disclos'd his bosom griefs:

Some disconcerted at the recent fight,
 He spent in long debate the doleful night; 10
 Mistrusting still, these schemes, so deeply laid,
 Were all conducted by his daughter's aid.
 Meanwhile the imperial queen of heaven had shed
 O'er the fair virgin's breast despondent dread.
 She starts, she trembles, as, pursu'd by hounds,
 The fawn light skipping o'er the meadow bounds.
 She fears the secrets of her soul betray'd,
 And her fire's vengeance for her proffer'd aid.
 Her handmaids, conscious of her crimes, she fears;
 Her eyes fierce flames emit, loud murmurs fill her
 ears. 20

Her death she meditates in wild despair,
 And, sadly sighing, tears her golden hair.
 Now fate imbibing from the poison'd bowl,
 Soon had she freed her voluntary soul,
 And Juno's projects all been render'd vain,
 But, kindly pitying a lover's pain,
 The goddess urg'd with Phrixus' sons her flight,
 And eas'd her bosom of its sorrow's weight.
 Forth from her casket every drug she pours,
 And to her lap consigns the magic stores. 30
 Then with a parting kiss her bed she press'd,
 Clung round each door, and ev'n the walls ca-
 rels'd.

A lock she tore of loosely-flowing hair,
 And safe consign'd it to her mother's care,
 The sacred relic of her virgin-fame;
 And, wailing thus, invok'd Idya's name:

' This lock, O mother, at my hand receive,
 ' Which I, far-distant roaming, with thee leave.
 ' Farewell, Chalciopé; far hence I roam! 39
 ' And thou farewell, my first, my dearest home!
 ' Oh! hadst thou stranger, in deep ocean drown'd,
 ' Perish'd, and never trod on Colchian ground!"

She spoke, and tears her heartfelt woe be-
 tray'd;

Then fled she instant. Thus the captive maid,
 When, from her friends and country banish'd far,
 She shares the miserable fate of war,
 Disus'd to toil beneath a tyrant's sway,
 Flies from oppression's rod with speed away.
 With speed like her's the weeping fair with-
 drew:

The doors spontaneous open'd as she flew, 50
 Shook by her magic song; barefoot she strays
 Through winding paths and unfrequented ways.
 Before her face one hand her vesture holds,
 And one confines its border's flowing folds.
 Beyond the city walls with trembling haste,
 Unseen of all the centinels, she pass'd,
 Then by accus'tom'd paths explor'd the fane,
 Where spectres rise, and plants diffuse their bane;
 (Thus practise magic maids their mystic art)
 Fears ill portending flutter round her heart. 60
 Her frenzy Cynthia, rising bright, survey'd,
 And this soliloquy in triumph made:

' Yes, with Endymion's heavenly charms o'er-
 come.

' I to the cave at Latmos once could roam,
 ' Of love regardful, when your potent lay
 ' Had from the starry spheres seduc'd my ray,
 ' That you, protected by the gloom of night,
 ' Might celebrate unseen the mystic rite,

' Your lov'd employ: now Cupid's shafts subdue,
 ' Not Cynthia only, but, fair forcerefs you. 70
 ' For you his toils the wily god hath wove,
 ' And all your heart inflam'd with Jason's love.
 ' Come then, those pangs which love ordains en-
 ' dure,

' And bear with courage what you cannot cure."

She said: impetuous hastening to the flood,
 Soon on its lofty banks Medea stood.

A fire, which midnight's deadly gloom dispell'd,
 Signal of conquest gain'd, she here beheld.

Involv'd in shade, the solitary dame

Rais'd her shrill voice, and call'd on Phrontis' 80
 name.

Known was her voice to Phrixus' sons, who bear
 The grateful tidings to their leader's ear.

The truth discover'd, the confederate host

All silent stood, in wild amazement lost.

Loud call'd she thrice; and with responsive cries

His friends requesting, Phrontis thrice replies.

Quick at her call they ply the bending oar;

Nor were their halbers fasten'd to the shore,

When Æson's son at one decisive bound

Leaps from the lofty deck upon the ground; 90

Phrontis and Argus hasten to her aid,

Whose knees embracing, thus Medea pray'd:

' Oh! save me, friends, from my offended fire,

' Oh! save yourselves from dread Æeta's ire.

' Known are our projects: fail we hence afar,

' Ere Æa's monarch mounts his rapid car.

' My magic charms shall close the dragon's eyes,

' And soon reward you with the golden prize.

' But thou, lov'd guest, continue faithful still,

' And swear whate'er thou promis'd to fulfil:

' Ah! leave me not to infamy a scorn, 101

' By all my friends abandon'd and forlorn."

Plaintive she spoke: his arms around her waist
 Rapturous he threw, then rais'd her and embrac'd,
 And solac'd thus in terms of tenderest love:

" By heaven's high king I swear, Olympian

" Jove,

" By Juno goddess of the nuptial rite,

" Soon as my native land transports my sight,

" Thou, lovely virgin, shalt be duly led,

" Adorn'd with honours to my bridal bed." 110

This said, in her's he clos'd his plighted hand;

To Mars's grove Medea gave command,

Spite of her fire, the vessel to convey,

And bear by night the golden fleece away.

Swift at the word they sprung; the Colchian maid

Embark'd, and instant was their anchor weigh'd,

Their crashing oars resound: she oft to land

Reverts her eye, and waves her trembling hand:

But Æson's son his ready aid affords,

And soothes her sorrows with consoling words.

Wak'd by their hounds, what time the hunt-
 men rise, 121

And shake the balm of slumber from their eyes,

At twilight, ere Aurora's dreaded ray

Efface the tracks, and waft the scent away:

Jason then landing with the fair, attains,

With flowers diversified, the verdant plains,

Where first the ram, with Phrixus' weight op-
 press'd,

His wearied knee inclin'd, and sunk to rest.

Hard by, an altar's stately structure stands, 129
 To favouring George first rais'd by Phrixus' hands,
 Where he the golden monster doom'd to bleed;
 So his conductor Hermes had decreed.
 Here, as by Argus taught, the chiefs withdrew,
 While their lone course the regal pair pursue
 Through the thick grove, impatient to behold
 The spreading beech that bears the fleecy gold.
 Suspended here, it darts a beamy blaze,
 Like a cloud tipp'd with Phœbus' orient rays.
 With high arch'd neck, in front the dragon lies,
 And towards the strangers turns his sleepless eyes;
 Aloud he hisses, the wide woods around. 141
 And Phasis' banks return the doleful sound.
 Colchians far distant from Titanus' shore,
 Heard ev'n to Lycus' streams the hideous roar;
 Lycus, who, sever'd from Araxis' tides,
 A boisterous flood with gentle Phasis glides:
 One common course their streams united keep,
 And roll united to the Caspian deep.
 The mother, starting from her bed of rest,
 Fears for her babe reclining on her breast, 150
 And closely clasping to her fondling arms,
 Protects her trembling infant from alarms.
 As from some wood, involv'd in raging fires,
 Clouds following clouds ascend in curling spires:
 The smoky wreaths in long succession climb,
 And from the bottom rise in air sublime;
 The dragon thus his scaly volumes roll'd,
 Wreath'd his huge length, and gather'd fold in
 fold.
 Him, winding flow, beheld the magic dame,
 And sleep invok'd the monster's rage to tame 160
 With potent song the drowsy god she sway'd
 To summon all his succour to her aid;
 And Hecate from Pluto's coasts she drew,
 To lull the dauntless monster, and subdue.
 Jason advanc'd with awe, with awe beheld
 The dreaded dragon by her magic quell'd.
 Lifeless he lay, each languid fold unbound,
 And his vast spine extended on the ground.
 Thus when the boisterous wave forbears to roar,
 It sinks recumbent on the peaceful shore. 170
 Still strove the monster his huge head to heave,
 And in his deadly jaws his foe receive.
 A branch of juniper the maid applies,
 Steep'd in a baneful potion to his eyes:
 Its odours strong the branch diffus'd around,
 And sunk th' enormous beast in sleep profound.
 Supine he sunk! his jaws forgot to move,
 And his unnumber'd folds are spread o'er half the
 grove.
 Then Jason to the beech his hand applies,
 And grasps, at her command, the golden prize.
 Still she persists to ply the potent spell, 181
 And the last vigour of the monster quell,
 Till he advis'd her to rejoin the crew;
 Then from the grove of Mars the maid withdrew.
 As some fair dame, when Cynthia rises bright,
 Beholds the beamy splendours with delight,
 Which from her vestment strong-reflected rise;
 Thus gloried Jason in the glistening prize.
 The flaming rays that from its surface flow'd,
 Beam'd on his cheeks, and on his forehead glow'd.
 Large as the heifer's hide, or as the hind's, 191
 Which in Achaia's plains the hunter finds,

Shone the thick, ponderous fleece, whose golden
 Far o'er the land diffus'd a beamy blaze. [rays
 He on his shoulders now the spoil suspends,
 Low at his feet the flowing train descends;
 Collecting now within its ponderous folds,
 His grasping hand the costly capture holds.
 Fearful he moves, with circumspect survey,
 Lest men or gods should snatch the prize away.

Now as returning morn illumines the land, 201
 The royal pair rejoin the gallant band.

The gallant band beheld with wondering eyes,
 Fierce as Jove's fiery bolt, the radiant prize.
 Their hands extending as they flock around,
 All wish to heave the trophy from the ground.
 But Jason, interdicting, singly threw
 O'er the broad fleece a covering rich and new;
 Then in the ship he plac'd the virgin-guest,
 And thus the listening demigods address'd: 210

' No longer doubt ye, comrades, to regain
 ' Far o'er a length of seas your lov'd domain.
 ' For see, the end of all our glorious toil,
 ' Won by Medea's aid, this precious spoil!
 ' Her, not reluctant, I to Greece will bear,
 ' And with connubial honours crown her there.
 ' Guard your fair patroness, ye gallant crew,
 ' Who sav'd your country when she succour'd you.
 ' Soon will Æeta with his Colchian train
 ' Preclude, I ween, our passage to the main. 220
 ' Some with your oars resume your destin'd feat;
 ' Some with your shields secure your wish'd re-
 ' treat;
 ' This rampire forming, we their darts defy,
 ' Nor home returning unreveng'd will die.
 ' Lo! on our prowess all we love depends,
 ' Our children, parents, country, and our friends.
 ' Greece, as we speed, through future times shall
 ' boast

' Her empire fix'd, or wail her glory lost.'
 He said, and arm'd; the heroes shout applause:
 Then from its pendent sheath his sword he draws,
 Severs the halber, and, in arms array'd, 231
 His station fixes near the magic maid,
 And where Ancæus' hand the pilot's art dis-
 play'd.

Keen emulation fir'd the labouring crew,
 As down the stream of Phasis Argo flew.
 Medea's flight now reach'd Æeta's ear,
 And all her crimes in all their guilt appear.
 To council call'd, in arms the Colchian train
 Rush thick as billows on the roaring main,
 Thick as the leaves that flutter from above, 240
 When blasting autumn strips the faded grove;
 So thick the shouting Colchians rush to war,
 Led by Æeta in his splendid car,
 Glorifying in Phœbus' gifts, his rapid steeds,
 Whose swiftness far the speed of winds exceeds.
 His left a buckler's wide circumference rais'd;
 In his extended right a flambeau blaz'd;
 His girded belt a mighty spear sustains;
 His son Absyrtus grasps the flowing reins. 249
 Now by tough oars impell'd and prosperous tides,
 The vessel glibly down the river glides.
 Th' indignant king invok'd the powers above,
 His parent Phœbus, and almighty Jove,
 His wrongs to witness: and to sudden fate
 Doom'd in his fury the devoted state.

Who dar'd delay the guilty maid to bring,
From land or ocean to their injur'd king,
On their rebellious heads his wrath should fall,
And vengeance merited o'ertake them all. 259

Thus menac'd he; and, lo! the Colchian train
Launch'd on that day their vessels in the main;
Swift, on that day, unfurl'd their bellying sails,
And all embarking caught the balmy gales.
Nor deem ye this a well-train'd naval host;
Like flocks of birds they scream around the coast.

Juno, propitious to her favourite crew,
Inspir'd the breezes that serenely blew,
That soon on Grecian land the fair might tread,
And pour destruction down on Pelia's head.

With the third morn, on Paphlagonia's shore, 270
Where Halys rolls his stream, the heroes moor,
Medea here ordain'd a solemn rite

To Hecate, the magic queen of night.

But what, or how she form'd the potent spell
Let none inquire, nor shall my numbers tell:

Fear holds me silent. Here the pious band
Erect a sacred temple on the strand,

Sacred to Hecate, night's awful queen!

And still beside the beech the holy fane is seen.

And now the words of Phineus, old and blind,

Recurr'd to Jason, and each hero's mind, 281

From Æa he advis'd them to pursue

A different course, a course no pilot knew,

Which Argus thus delineates to the crew: }

'When towards Orchomenos our course we bent,

'We took that route th' instructive prophet meant.

'For in times past a different road was known,

'And this thy priests Egyptian Thebes have shown.

'Before the stars adorn'd the sapphire sphere,

'Or Danus' race had reach'd th' inquirer's ear:

'In Greece the bold Arcadians reign'd alone, 291

'And ere bright Cynthia deck'd her silver throne,

'On acorns liv'd, the food of savage man;

'Before Deucalion's sons their reign began;

'With harvests then was fertile Egypt crown'd,

'Mother of mighty chiefs, of old renown'd;

'Then the broad Triton, beauteous to behold,

'His streams prolific o'er the country roll'd.

'For Jove descends not there in beauteous rains,

'But inundations fertilize the plains. 300

'Hence rose the matchless chief (if fame says true),

'Who conquer'd Europe's realms and Asia's too;

'His hardy troops embattled at his side,

'He on his valour and those troops rely'd.

'He built and peopled with superior skill

'Unnumber'd cities, some remaining still.

'Though many ages now have pass'd away,

'Yet Æa stands, nor hastens to decay;

'Peopled at first by his adventurous train, 309

'Whose long-continued race ev'n now remain.

'With care they still recording tablets keep

'Of all the limits of the land and deep,

'Wherever rivers flow, or storms prevail,

'Wherever men can march, or ships can sail.

'A river, stately-winding, deep and wide,

'From far far distant mountains rolls its tide;

'Where ships of burden sure protection claim:

'Long is its course, and Ister is its name.

'Far o'er Riphæan hills where Boreas reigns,

'He undivided flows through various plains; 320

'But when through Thrace and Scythian clim^c
'he glides,

'In two broad streams his rapid flood divides:

'This to th' Ionian sea its circuit sweeps,

'That wider stretches to Trinacria's deeps,

'Whose lofty shores your Grecian coast command,

'If Achelöus flow through Grecian land.'

He said; a favouring sign the goddess gave,

Which with new courage animates the brave.

Celestial fires emit a living ray,

And beams of glory point the certain way. 330

Here, leaving Lycus' valiant son behind,

They spread with joy their canvass to the wind.

Afar the Paphlagonian hills appear;

And from Carambis' cape remote they steer;

Led by the heavenly light and kindly gales,

Till in broad Ister's flood the vessel sails.

Where the Cyanean rocks o'erlook the main,

Part of the Colchians steer their course in vain;

While they, whose counsels sage, Absyrtus guides,

Cut through the mouth call'd Calon Ister's tides.

Outsailing thus yon tardy ships, they sweep 341

With skilful oars the wide Ionian deep.

An isle, which Ister's branching streams com-

prise,

Peuce, triangular, before them lies:

Wide o'er the beach its ample base extends,

And in the flood its pointed angle ends.

The two broad streams, that round the island

flow,

They by Arecos' name and Calon know,

Below this isle Absyrtus and his crew

Through the wide Calon their swift course pur-

sue: 350

Above it sailing Jason's comrades stray,

And through Arecos wind their distant way.

Such naval force dismay'd the neighbouring

swains;

They left their fleecy flocks and verdant plains:

The ships in view, with terror struck they stood,

And deem'd them monsters rising from the flood:

Never beheld they from their native shore

Ships proudly sailing on the seas before.

For the fierce Scythians and Sigynnian race

Maintain'd no commerce with the sons of

Thrace: 360

Nor Sindians e'er, who roam the desert plain,

Nor e'er Graucenians cross'd the seas for gain.

When Argo's crew the mount Angurus pass'd,

And reach'd the rock Cauliacus at last,

(Ister, near which his stately stream divides

And mingles with the deep his sever'd tides):

And distant left the wide Taurian plain,

Then had the Colchians plough'd the Chronian

main.

Here, lest the vessel 'scape, they cautious stay,

And strive to intercept her in her way, 370

At length appears to their expecting view

On Ister's flood the enterprising crew.

Two lovely sea girt isles their notice claim'd,

Dear to Diana, and the Burgi nam'd.

Superb in one a sacred temple rose,

And one secur'd them from their Colchian foes.

Her power revering whom these isles obey,

The foe had quitted them without delay.

Each isle beside was throng'd with Colchian hosts,
Who, guarding every pass, protect the coasts. 380
For troops of enemies embattled stood,
Far ev'n as Nestis and Salango's flood.

Their numbers few, the Mynian chiefs for-
bear

To wage with numerous foes unequal war,
Preventive of debate, this truce was seal'd;
That, since the king propos'd the fleece to yield,
Whether by open force, or arts unknown,
Conquest the daring combatant might crown,
He, though reluctant, must resign his right, 389
And the contested prize the victor's toil requite.
That, from the crowd with secrecy convey'd,
Diana's fane should guard the magic maid,
Till mid' the sceptred princes one arose
To fix their vague opinions, and propose,
Or to restore her to her fire's embrace,
Or in Orchomenos's city place,
Or freely grant her to embark in peace,
And with the Grecian heroes visit Greece.

When now long pondering, the suspicious
maid 399

Had learn'd, and all their secret counsels weigh'd,
Tormenting cares disturb her mind's repose,
And keen reflection added woes to woes.
Aside she then, from all th' assembled crew,
With cautious secrecy her Jason drew:
Him, thus withdrawn, th' impassion'd maid
address'd,

And told the secret sorrows of her breast:

' Say, what the cause that hostile hosts are
join'd,

' And leagues, destructive of my peace combin'd?

' Say, have these charms, with rapture once ex-
plor'd,

' Lull'd to forgetfulness my faithless lord? 410

' Hath time effac'd the promises he made,

' When in the needful hour he ask'd mine aid?

' Where now thine oaths, preferr'd to mighty
' Jove?

' Where now thy tenders of unalter'd love?

' Curs'd oaths! which bade me all I love dis-
claim, [name!

' Friends, parents, country, every honour'd

' Forlorn and vex'd lest thou should'st toil in vain,

' I with the plaintive halcyon sought the main,

' I follow'd but to shield thee from alarms,

' When bulls breath'd fire, and giants rose in
' arms. 420

' Now is the fleece, for which ye sail'd, possess'd,

' And by my foolish fondness thou art bless'd.

' Bless'd thou; but me what secret sorrows vex,

' Whose deeds reflect dishonour on my sex!

' Me as thy daughter, sister, wife they brand,

' Who dare attend thee to a distant land.

' But stay, protect me, ease my weight of woe,

' Nor to my royal fire without me go.

' Oh! think on justice, and revere thine oath,

' Which both consented to, which bound us
' both: 430

' Or instant, should'st thou every tie evade,

' In this frail bosom plunge the pointed blade.

' Thus frantic love its due deserts shall see,

' And death come grateful to a wretch like me.

' Think, should the king exert his sovereign sway
' And with my brother destine me to stay,
' (That king with whom ye both with treache-
' rous aim

' Have form'd a league, subversive of my fame);

' Oh! how shall I behold my father's face? 439

' With courage I! not shrinking at disgrace?

' No; stung by conscience, I forestall my fate,

' And feel the horrors which my crimes create.

' Back o'er the seas, mid' raging tempests borne,

' Long may'st thou wander joyless and forlorn.

' Ne'er may thy boasted patroness and friend,

' Juno, to thee her wonted aid extend.

' Stern fate may still severer toils ordain,

' And thou, false wretch, remember me in vain.

' Oh! may the fleece deceive thy ravish'd sight,

' And, like a vision, vanish into night. 450

' Rise may my furies, vengeance to demand,

' And distant drive thee from thy native land.

' From thee, their guilty source, my sorrows flow:

' Share now thy part, and suffer woe for woe.

' Thine oaths no more a slighted maid shall
' wrong,

' Nor this perfidious truce protect thee long.'

Stung with despair, she utter'd thus her grief,

Thus to her angry spirit gave relief.

To burn the ship forth rush'd th' impetuous
dame, 460

And wrap its heaven-built sides in sudden flame;

Resolv'd in thought, as now the vessel blaz'd,

To perish dauntless in the flame she rais'd:

But Jason thus, with boding fears impress'd,

Sooth'd the mad tumults of Medea's breast: [ear

" Cease, heavenly maid, nor wound a lover's

" With words unwelcome, and unfit to hear.

" The common safety bids us all unite

" To gain a timely respite from the fight.

" See, fair protectress, to restore thee lost, 469

" What clouds of enemies surround the coast.

" The country arms thy brother's cause to aid,

" And bear thee to thy fire a captive maid.

" Against such force should we our arms oppose,

" Perish might all our host, o'erpower'd by
" foes:

" Then, sad to think! if, every hero slain,

" In long captivity must thou remain.

" Our arts perfidious will this truce conceal,

" Whose baneful influence must thy brother feel.

" Berav'd of him, the Colchians' cause to aid,

" And to recover thee, a captive maid, 480

" No more the neighbouring forces will unite:

" Instant will I renew the desperate fight,

" Secure my wish'd return, and vindicate my
" right."

Thus spoke he mild: the mischief-brooding
maid

Told her dark purpose, and, ' O think,' she said,

' Think, Jason, now: oppose we, as befits,

' To their destructive deeds destructive schemes.

' Urg'd first by love, in error's maze I stray'd,

' And through that god is every lust obey'd.

' Decline the fight, till I the youth betray, 490

' And to your hands consign, an easy prey.

' With presents be the heedless stripling lur'd:

' Heralds, of faith approv'd, by me procur'd,

Ere long a secret audience shall obtain,
 And to my purposes Absyrtus gain.
 My plan (I reckon not) if it please, pursue:
 Go, slay my brother, and the fight renew.
 Such were the snares the treacherous lovers
 laid;

And by large presents was the prince betray'd.
 The heralds with these specious presents bore 500
 The veil Hypsipyle so lately wore.
 Each grace in Naxos isle, with art divine,
 Wrought the rich raiment for the god of wine;
 He gave it Thoas, his illustrious heir,
 And Thoas to Hypsipyle the fair;
 She gave it Jason; wondering you behold
 And with new transport trace th' embroider'd
 gold.

What time with large nectareous draughts oppress'd,
 On the soft vesture Bacchus sunk to rest,
 Close by his side the Cretan maid reclin'd, 510
 At Naxos isle whom Theseus left behind;
 From that blest'd hour the robe, with odours
 fill'd,

Ambrosial fragrance wide around distill'd.

Her guileful purposes the magic maid
 In order thus before the heralds laid:
 That soon as night her sable shade had spread,
 And to the temple was Medea led,
 Thither Absyrtus should repair and hear
 A project pleasing to a brother's ear:
 How she, the golden fleece in triumph borne,
 Would to Ætæa speed her wish'd return; 521
 How Phrixus' treacherous sons prolong'd her
 stay,

And her to cruel foes consign'd a prey.
 Then far she flung her potent spells in air,
 Which lur'd the distant savage from his lair.
 Curse of mankind! from thee contentions flow,
 Disastrous love! and every heart-felt woe:
 Thy darts the children of thy foes infect,
 As now they rankle in Medea's breast.
 How vanquish'd by her wiles, Absyrtus fell, 530
 In seemly order now my muse must tell.

Medea now secur'd in Dian's fane,
 The Colchians hasten to their ships again.
 Jason meanwhile lies in close ambush bent,
 Absyrtus and his friends to circumvent.
 Him, yet unpractis'd in his sister's guile,
 His ready ship had wafted to the isle:
 Conceal'd in night they tugg'd their toilsome oars,
 Till in the bay secure the vessel moors.
 Alone, in confidence, the stripling came, 540
 And at Diana's porch approach'd the dame,
 (She like a torrent look'd, when swoln with rain,
 Which foaming terrifies the village-swain);
 To learn what snare her wily art could lay,
 To drive these bold adventurers away.

And all was plann'd; when from his ambushade
 Sprung Æson's son, and shook his lifted blade.
 The conscious sister, stung with secret dread,
 Lest her own eyes should view Absyrtus dead,
 Turn'd from the murderous scene aside distress'd,
 And veil'd her guilty face beneath her vest. 551
 As falls an ox beneath the striker's blow,
 So was Absyrtus laid by Jason low.

TRANS. II.

Near that bright fane the neighbouring Brugi
 built,

He eyes his victim, and completes his guilt.
 Here sunk he low; and to his bleeding side,
 Compressing both his hands the hero died.
 Medea's veil receiv'd the purple flood,
 And her fair vesture blush'd with brother's
 blood.

Hell's blackest fury the dire scene survey'd, 560
 And mark'd with sidelong eye the reeking blade.
 The pious rite for blood in secret spilt,
 Jason fulfils, and expiates his guilt.
 The skin he rases from the body slain,
 Thrice licks the blood, thrice spits it out again.
 Then with collected earth the corse he press'd;
 And still his bones with Absyrteans rest.

When in full prospect the bright flambeau
 blaz'd,

Which to conduct the chiefs Medea rais'd,
 Elate with hope the radiant guide they view, 750
 And near the Colchian vessel Argo drew.
 As lions fierce the timorous flocks dismay,
 Leap o'er the folds, and drive them far away;
 As trembling doves before the kite retreat,
 So before Argo flies the Colchian fleet,
 Furious as flame, on all the host they prey'd,
 And low in death was each assailant laid.

Jason at length, to aid his valiant crew,
 Who little need his aid, appear'd in view.
 For not a fear their gallant hearts oppress'd, 580
 Save what their Jason's safety might suggest.

The chiefs assembled with Medea sat,
 And on their future voyage thus debate;
 Peletis began: 'Now, ere Aurora rise,
 A speedy embarkation I advise:
 A different course with caution let us choose;
 From that far different which the foe pursues.
 For (such my sanguine hope) when morning-
 light

'Yon slaughter'd heaps discloses to their sight,
 No words will win them to pursue us far, 590
 No tongue entice them to renew the war.
 Sedition soon, their prince Absyrtus dead,
 Will, like a pest, o'er all the navy spread:
 Secure and free shall we recross the main,
 Their forces scatter'd, and their sovereign slain.'

He said: the chiefs consented, and with haste
 Re-enter'd Argo, and their oars embrac'd.
 Hard by Electris, last of isles, they row,
 Near which, Eridanus, thy waters flow. 599

Soon as their leader's fate the Colchians knew,
 They vow'd destruction to the Grecian crew;
 And eager to o'ertake the Mynian train,
 Had travers'd in their wrath the boundless main,
 But Juno, as her thunder awful roll'd,
 Presag'd her vengeance, and their pride controul'd.

Dreading Ætæa's ire, the vanquish'd host
 Far distant voyag'd from the Colchian coast.
 Unnumber'd ports the scatter'd fleet explor'd:
 Some to those isles repair'd where Jason moor'd,
 Nam'd from Absyrtus: some where stately flows
 The flood Illyricum, expect repose;
 Beside whose bank a lofty tower they rear'd,
 Where Cadmus' and Harmonia's tomb appear'd;

U

Here with the natives dwell they. Others roam
Till midst Ceraunian rocks they find a home;
Ceraunian nam'd, since Jove's red thunder tore
Their ships that anchor'd on the neighbouring shore.

But towards the Hyllean port the heroes bear,
And fortune smiling, fix their halbers there.
For many an isle projected o'er the tide, 620
Near which no vessel could with safety ride.
No hostile arts the Hylleans now devise:
They teach the Mynians where their voyage lies;
And for their friendly intercourse obtain
The largest tripod from Apollo's fane.
For, doubtful of the fleece, when Jason came
To hear responses from the Pythian dame,
Enrich'd and honour'd from the shrine he trod
With two bright tripods given by Delphi's god.
'Twas doom'd no power should lay the country
waste, 630

Within whose confines were these tripods plac'd.
Hid, for this cause, in earth the sumptuous prize
Hard by the fair Hyllean city lies;
Deep, deep it lies, with ponderous earth oppress'd,
That there unseen it might for ever rest.
King Hyllus, whom in fam'd Phœacia's shore
Fair Melite to great Alcides bore, }
To mortal view as manifest no more.
Nausthoüs, to youthful Hyllus kind,
The heedless stripling in his courts confin'd; 640
(For, when to Macris' isle Alcides fled,
That far-fam'd isle, which infant Bacchus fed,
To expiate his guilt, and wash the stain
Of blood yet streaming from his children slain,
Here as beside his favourite beach he rov'd,
The naiad Melite he saw and lov'd,
The daughter of Ægeüs fair and young,
From whose caresses hopeful Hyllus sprung.)
But he, to manhood ripening, wish'd to roam
Far from his sovereign's eye and regal home:
The native islanders augment his train, 651
And with their leader tempt the Chronian main.
Nausthoüs complied with each demand,
And Hyllus settled on th' Illyric strand:
But as he strove his scatter'd herd to shield,
A boor's rude weapon stretch'd him on the field.

How cross these seas, how round th' Ausonian
shores,
And the Ligurian isles they plied their oars,
Ye muses tell: what tokens still remain
Of Argo's voyage, what her feats explain: 660
Say, to what end, by what impelling gales
She o'er remotest seas unfurl'd her sails.

All-seeing Jove their perfidy discern'd,
And for Absyrtus slain with anger burn'd.
By Circe's mystic rites heaven's fire decreed
The guilt to expiate of so base a deed.
To sufferings dire, but what no mortal knew,
He, ere they safe return'd, foredoom'd the crew.

Beyond the Hyllean land their course they
steer'd:
Remote the vast Liburnian isles appear'd, 670
Late fill'd with Colchians; Pitya fair,
And rocky Issa, are the names they bear.
These islands past, Cercyra's cliffs they greet,
Where dwelt (for here had Neptune chose her seat)

Cercyra; he, by tender passions sway'd.
From distant Phliuns fetch'd the black-ey'd maid;
Melaine her admiring sailor's name,
As through dark groves they view the swarthy
dame.

Fleet as the vessel sails before the wind,
Ceroßus, Melite they leave behind. 680
Soon on Nymphæa, though remote, she gains,
Where Atlas daughter, queen Calypso, reigns.
The crew conjectur'd, through far distant skies
They saw the tall Ceraunian mountains rise.
And now Jove's purposes and vengeful rage
Propitious Juno's anxious thoughts engage.
That every toil with glory might be crown'd,
And no disastrous rocks their ship surround,
She wak'd the brisker gales in Argo's aid,
Till in Electris' isle she rode embay'd. 690
Sudden, the vessel, as she sail'd along,
Spoke, wondrous portent! as with human tongue:
Her sturdy keel of Dodonean oak,
By Pallas vocal made, prophetic spoke.
This solemn voice shook every heart with fear:
They deem'd the thunderer's threaten'd vengeance
near.

'Expect,' says Argo, 'storms and wint'ry seas,
'Till Circe's rites the wrath of Jove appease.
'Ye guardian twins, who aid our great design,
'By humble pray'r the heavenly powers incline
'To steer me safe to each Ausonian bay, 701
'And to the haunts of Circe point my way.'

Thus Argo spoke, as night her shades display'd:
The sons of Leda listen'd and obey'd.
Before th' immortal powers their hands they
spread; [dread.
All, save these chiefs, were struck with silent
The canvass, wide-distended by the gales,
Swift down Eridanus the galley sails.
Here Jove's dread bolt transfix'd the stripling's
side, 709

Who greatly dar'd the car of Phœbus guide.
This flood receiv'd him; and the flaming wound
Still steams, and spreads offensive vapours round.
The feathery race, as o'er the flood they fly,
Wrapp'd in sulphureous exhalations die.
The poplar's winding bark around them spread,
Apollo's daughters wail their brother dead.
Down their fair cheeks bright tears of amber
run,

Sink in the sand, and harden by the sun.
When boisterous winds the troubled waters urge,
And o'er its bank ascends the swelling surge, 720
These amber gems, swept by the tide away,
Their pearly tribute to the river pay.
But, down the stream, as Celtic legends tell,
The tears of Phœbus floated as they fell
In amber drops, what time from angry Jove
The god withdrew, and left the realms above:
To the fair Hyperborean race he fled,
Griev'd for his favourite, Æsculapius dead.
From fair Coronis sprung this godlike son,
Where Amyros' streams near Lacera run. 730

Strangers to mirth, the pensive Mynians muse
On their hard lot, and strengthening food refuse.
Loathing the stench these putrid streams emit,
Sickening and spiritless whole days they sit;

Whole nights they hear the sorrowing sisters tell,
How by the bolts of Jove their brother fell.
Their mingled tears, as o'er the stream they weep,
Like drops of oil float down the rapid deep.

The Rhone's broad channel Argo's keel divides,
Which mingles with Eridanus its tides : 740
There, where the confluent floods unite their force,
Boisterous they foam. The Rhone derives its
source

From caverns deep, which, far from mortal sight,
Lead to the portals and the realms of night.

One stream its tribute to th' Ionian pays,
One to the wide Sardinian ocean strays ;
Through seven wide mouths it disembogues its
tides,

Where foaming to the sea its streams divides.
This winding stream transmits th' adventurous
train

To lakes that delug'd all the Celtic plain. 750

Disastrous fate had here their labour foil'd,
And of her boasted prowess Argo spoil'd,
(For through a creek to ocean's depths convey'd,
'To sure destruction had the heroes stray'd) ;
But Juno hasten'd from on high, and stood
On a tall rock, and shouted o'er the flood.

All heard, and all with sudden terror shook :
For loud around them bursts of thunder broke.

Admonish'd thus, submissive they return,
And steering back their better course discern. 760

Mid' Celtæ and Lugurians long they stray'd,
But reach'd the sea-beat shore by Juno's aid :

O'er them each day her cloudy veil she drew,
And thus from human sight conceal'd the crew ;
Whose ship had now the broad mid channel pass'd,
And rode amid the Stœchades at last : [vain.

For Jove's twin sons had pray'd, nor pray'd in
Hence rear they altars, and due rites ordain
'To these kind powers, whose influential aid
Not only Argo's bold adventurers sway'd ;
But later voyagers, by Jove's decree.

Have own'd their happy influence o'er the sea.

The Stœchades now lessening from their view,
Swift to Æthalia's isle the vessel flew, [shore,
With chalks, that, as they cover'd, ting'd the
'The heroes rubb'd their wearied bodies o'er.

Here are their quoits and wond'rous armour
fram'd,

Here is their port display'd, Argoüs nam'd.

Hence sailing, they the Tyrrhene shore survey,
As through Ausonia's deeps they cleave their li-
quid way.

Æeas' celebrated port they reach, 781

And fasten here their halbers to the beach.

Here saw they Circe, as in ocean's bed,
Dismay'd with nightly dreams, she plung'd her
head. [gore

For thus the sorceress dream'd ; that blood and
Had smear'd her walls, and flow'd around her
floor :

That all her treasur'd stores were wrapp'd in flame,
With which she lur'd each passenger that came.

That copious streams of blood her hand apply'd,
And her fears vanish'd as the flames subside. 690

For this the magic dame, as morning rose,
Wash'd in the cleansing wave her locks and clothes,

Monsters, unlike the savage, bestial race,
Unlike to humankind in gait or face,
Limbs not their own support whose hideous frame.
As sheep their shepherd follow, these their dame.
Such monsters once the pregnant earth disclos'd,
Of heterogeneous shape and limbs compos'd :

No drying winds had then the soil condens'd,
No solar rays their genial warmth dispens'd ; 800
But time perfection to each creature gave :

Monsters like these were seen in Circe's cave,
All, stedfast gazing on her form and face,
Pronounc'd the sorceress of Æeta's race.

Those terrors vanish'd, which her dream inspir'd,
Back to her gloomy cell the dame retir'd.

Close in her guileful hand she grasp'd each guest,
And bade them follow where her footsteps press'd.

The crowd aloof at Jason's mandate stay'd,
While he accompanied the Colchian maid. 810

Together thus they Circe's steps pursue,
Till her enchanting cave arose in view.

Their visit's cause her troubled mind distress'd ;
On downy seats she plac'd each princely guest.

They round her hearth sat motionless and mute :
(With plaintive suppliants such manners suit)

Her folded hands her blushing face conceal ;
Deep in the ground he fix'd the murderous steel ;

Nor dare they once, in equal sorrow drown'd,
Lift their dejected eyelids from the ground. 820

Circe beheld their guilt : she saw they fled
From vengeance hanging o'er the murderer's head.

The holy rites, approv'd of Jove, she pays :
(Jove, thus pleas'd, his hasty vengeance stays)

These rites from guilty stains the culprits clear,
Who lowly suppliant at her cell appear.

To expiate their crime in order due,
First to her shrine a sucking pig she drew,

Whose nipples from its birth distended stood :
Its neck she struck, and bath'd her hands in
blood. 830

Next with libations meet and prayer she ply'd
Jove, who acquits the suppliant homicide

Without her door a train of naiads stand,
Administering whate'er her rites demand ;

Within, the flames, that round the hearth arise,
Waste, as she prays, the kneaded sacrifice :

That thus the furies' vengeful wrath might cease,
And Jove pleas'd, dismiss' them both in peace,

Whether they came to expiate the guilt
Of friends or strangers blood by treachery spilt.

Circe arose, her mystic rites complete, 841

And plac'd the princes on a splendid seat.

Near them she sat and urg'd them to explain
Their plan and progress o'er the dangerous main :

Whence rose the wish to visit Circe's isle,
And thus beneath her roof converse a while.

For still on every thought the vision press'd,
And its remembrance still disturb'd her rest.

Soon as the sorceress saw Meæa raise 849

From earth those eyes which shot a beamy blaze,
Anxious she wish'd to hear her native tongue,

Conjecturing from her features whence she sprung,
For all Sol's race are beauteous as their fire ;

Their radiant eyes emit celestial fire.
The willing maid complied with each demand,
And in the language, of her native land

Her story told; each strange event declar'd,
 What countries they had seen, what dangers shar'd;
 Her sister's counsels, how they sway'd her breast,
 How with the sons of Phrixus she transgres'd,
 How from her father fled, his threats disdain'd:
 But still untold her brother's fate remain'd. 862
 His fate th' enchantress knew; no arts could

hide
 The murderous deed: she pitied and reply'd:
 ' Ah! wretch, dire mischiefs thy return await.

' Hope not to shun thy father's vengeful hate;
 ' Resolv'd on right, he to the realms of Greece
 ' Will close pursue thee, nor his fury cease,
 ' Till he avenge the murder of his son: 869
 ' For deeds of blackest darkness hast thou done.
 ' But go, at once my kin and suppliant free,
 ' Nor fear additional distress from me.

' Thy lover hence, far hence thyself remove,
 ' Who scorn'dst a father's for a vagrant's love.
 ' Here supplicate no more: my heart disclaims
 ' Thy guilty wanderings and sinister aims.'

She spoke: the maid lamented; o'er her head
 Her veil she cast, and many a tear she shed.
 Her trembling hand the hero rais'd with speed,
 And from the cave of Circe both recede. 880

By watchful Iris taught, Saturnia knew
 What time from Circe's cave they both withdrew.
 To mark their steps commission'd Iris staid,
 On whom these fresh injunctions Juno laid:

' Haste, Iris, now; thy pinions now expand,
 ' And bear once more Saturnia's dread command,
 ' Go, Thetis rouse from ocean's dark retreat;
 ' Her potent aid my projects will complete.

' Spread then towards Vulcan's shores thy speedy
 ' wing, 889

' Where round his anvils ceaseless hammers ring.
 ' Bid him no more his boisterous bellows ply,
 ' Till heaven-built Argo sail securely by.

' Then to the deity, whose sovereign sway
 ' Controuls the winds, whom raging storms obey,
 ' Haste; and request that every rising gale
 ' Be hush'd, and silence o'er the seas prevail:

' That round the waves serenest zephyrs play,
 ' Till Argo anchors in Phæacia's bay.'

She said: and Iris, pois'd on airy wings,
 From the bright summit of Olympus springs: 900
 Descends impetuous down the Ægean deeps,
 Where in his watery caverns Nereus sleeps.

To Thetis first repairs the winged maid;
 Solicits and obtains her potent aid.

Vulcan she next in humble prayer address'd;
 The god of fire complied with her request:

His bellows heave their windy sides no more,
 Nor his shrill anvils shake the distant shore.

Her wants to Æolus she next disclos'd:

And while her wearied limbs she here repos'd,
 Thetis from all her naiad train withdrew, 911
 And from her Nereus to Olympus flew.

Juno with transport hail'd her sea-born guest,
 Whom near her throne she seated, and address'd:

' O, hear my tale, bright goddess of the main:

' Thou know'st my care for Jason and his train;

' Thou know'st how Juno's arm alone upheld,

' And through the jutting rocks their ship im-
 ' pell'd:

' Around whose sides fierce, fiery tempests rave,
 ' And the huge crag is whiten'd by the wave. 920

' Now must they sail near Scylla's awful height,

' And where the rock Charbydis forms a streight.

' Thee yet an infant in my arms I press'd,

' And more than all thy sister-nymphs carest'd.

' Revering me, the wife of sovereign Jove,

' Thou scorn'dst the tenders of his lawless love.

' (For him a mortal beauty now inflames,

' And now he revels with celestial dames),

' And Jove, in vengeance for his slighted bed,

' Swore not a deity should Thetis wed. 930

' Nor could the fervour of his love abate,

' Till Themis thus disclos'd the will of fate;

' That from thy womb in future times should

' spring,

' Superior to his sire, an infant king.

' Dreading th' event, lest in some future day

' This infant king should claim celestial sway,

' Thee Jove abandon'd to secure his throne,

' And reign unrivall'd ever and alone.

' But, lo! I gave, thy bridal bed to grace,

' A mortal husband worthy thy embrace; 940

' I made thee mother of a happy line,

' And to thy nuptials call'd the powers divine.

' Myself, in honour to the godlike pair,

' Deign'd on that day the bridal torch to bear.

' Soon as thy son (believe the truths you hear)

' Shall in Elysium's blissful plains appear,

' Whom kindly now the fostering naiads guard

' In Chiron's mansion, of thy milk debar'd,

' In Hymen's silken chains the hero led,

' Must share the honours of Medea's bed. 950

' Oh! be a mother's tenderest care display'd,

' Succour thy Peleus, and thy daughter aid,

' Hath he transgres'd? thy rising wrath subdue;

' For Ate's dire effects th' immortals rue.

' Vulcan, I ween obsequious to my will

' His fires will stifle, and his bellows still;

' His boisterous wave will Æolus restrain,

' And zephyrs only fan the curling main,

' Till Argo anchors in Phæacia's bay.

' But shelves and stormy seas obstruct her way;

' These, these I dread; but with my train expert,

' Be thine the care these mischiefs to avert. 962

' Safe from Charybdis' gulf the vessel guide,

' Safe from loud Scylla's all-absorbing tide;

' Scylla, the terror of Ausonia's shore,

' Whom Phorcus to infernal Hecat bore,

' Crataeis nam'd. Oh! summon all thy pow'r,

' Lest her voracious jaws my chiefs devour.

' Hope's cheerly dawn if haply thou discern,

' Snatch from the watery grave the sinking stern.

' "If 'tis resolv'd," replies th' assenting queen,

' Tempests to curb, and oceans to serene, 972

' Fear not; but in my proffer'd aid confide:

' This arm shall convoy Argo o'er the tide.

' The surge subsiding shall confess my sway,

' While harmless zephyrs round the canvass play.

' Now must I traverse the wide fields of air,

' And to my sister's crystal grotts repair;

' Request their aid, and hasten to the shores,

' Where anchor'd Argo unmolested moors: 980

' That each brave comrade, at the dawn of day,

' With heart elate may cleave the liquid way."

She spoke; and through th' ærial regions sped,
Then in the pools of ocean plung'd her head.

At Thetis' call the sister nereids came,
And flock'd obedient round their oozy dame.
Juno's commands she bade the sisters heed,
And to th' Ausonian deep descend with speed.

Swifter than lightning, or than Phœbus' beams,
The goddess darted through the yielding streams;
Till, gliding smooth beside the Tyrrhene strand,
Her speedy footsteps press'd th' Ææn land. 992

Along the winding beach the Mynians stray,
And while with quoits and darts their hours away.
Here Thetis singled from the gallant band
Peleus her spouse, and press'd the hero's hand:
Unseen by all the host, his hand she press'd;
By all, save Peleus, whom she thus address'd:

' Loiter not here; but with returning light
' Unfurl your sails, nor Juno's counsels flight. 1000
' Safe through th' Erratic rocks your ship to guide,
' Which frown tremendous o'er the tossing tide.
' For this the sea-green sisters join their force,
' And smooth through dangerous seas your def-

' tin'd course.
' My form, what time we urge the foaming keel,
' By you not unobserv'd, to none reveal;
' Lest, as before, your folly I chastise, [rise.
' And to more desperate heights my vengeance
She said, and vanish'd to the deeps below.
The wondering chief was pierc'd with keenest
woe. 1010

For since the dame, with indignation fir'd,
Had from her Peleus' hated bed retir'd,
Unseen till now she lurk'd: the strife begun
From this unweeting cause, her infant son.
For, soon as night diffus'd its darkest shade,
Her young Achilles o'er the flame she laid,
And, at return of day, with ceaseless toil
Apply'd to all his limbs ambrosial oil,
That youth might triumph o'er th' attacks of
time, 1019

Nor creeping age impair his vigorous prime.
The father saw, as from his bed he rose,
Pierce, ambient flames his infant's limbs enclose;
And, as he gaz'd, his rueful cries confess'd
The boding sorrows of a parent's breast.
Fool! for his queen, who heard her lord deplore,
Dash'd in a rage her infant on the floor.
Then fleet as air, or like a dream of night,
She vanish'd sudden from his odious sight,
Plung'd in her fury down the whelming main,
Nor e'er emerg'd she from the waves again. 1030
For this he sorrow'd: but each sage command
Which Thetis gave, he told his gallant band.
They heard, and from their sports retir'd in haste;
Then shar'd recumbent, in a short repast.
Sated, they catch the comforts of repose,
Till, every toil renewing, morn arose.

Soon as her radiant light illumin'd heav'n,
And to their wish were breezy zephyrs giv'n,
Quitting the land, they climb with nimble feet
The lofty decks, and reassume their seat. 1040
Each to his toil returns alert and bold:
They tear the griping anchor from its hold;
They hoist the yard, their bracing ropes unbind,
And give the flapping canvass to the wind.

Swift sails the ship: soon to th' expecting crew
Anthemoeffa's isle arose in view.

The syrens here, from Acheloüs sprung,
Allure the loitering sailors with their tongue,
Who, fastening to the beach the corded stay,
Neglect their voyage, and attend the lay. 1050

What time to Acheloüs' longing arms
The muse Terpsichore resign'd her charms,
Their mutual love these wily songsters crown'd;
Who lur'd, in times remote, with tempting sound,
Ceres' fair daughter, and fallacious show
A virgin-face, while wing'd like fowls they flew.
On a bright eminence the charmers stand,
And watch the vessels as they tug to land.
Full many a mariner their songs betray,
Who lists and lingers till he pines away. 1060

As Argo sail'd they rais'd their tuneful tongue;
And here their halbers had the heroes hung,
But Thracian Orpheus wak'd his wonted fire,
And sung responsive to his heavenly lyre,
That each resounding chord might pierce their ear,
And none the music of the syrens hear.
Yet still they sung: still briskly, with the breeze,
The vessel tilted o'er the curling seas.

Butes alone became an easy prey,
Who all enraptur'd listen'd to their lay. 1070
Erect, above the rowing chiefs, he stood,
And frantic sprung into the faithless flood.
His helpless hands he rais'd, the ship to gain,
And, but for Venus' aid, had rais'd in vain:
She Eryx' honour'd queen, the wretch descry'd,
And snatch'd him floundering from the foaming
tide,

His kind protectress, as her course she bends
Where Lilybæum's ample cape extends.
This dire mishap dishearten'd all the band, 1079
Who row with vigour from the traitorous strand.

But other pests, more fatal to their freight,
Threaten their progress to that dangerous streight,
Where Scylla's rock projects its wave-worn side,
And where Charybdis' gulf absorbs the tide.
Dash'd by the driven waves the Planctæ roar'd,
From whose cleft summits flames sulphureous
pour'd.

Thick dusky clouds involve the darken'd skies,
And hid are Phœbus' splendours from their eyes.
Though Vulcan ceas'd from his assiduous toils,
The fires flash thick, and fervid ocean boils. 1090
Here o'er the sailing pine the nymphs preside,
While Thetis' forceful hands the rudder guide.
As oft in shoals the sportive dolphins throng,
Circling the vessel as she sails along,
Whose playful gambols round the prow and stern
The much delighted mariners discern;
Round Argo thus the toiling nymphs attend,
And, led by Thetis, their assistance lend.

O'erhanging black the rock's bleak brow they see,
And gird their azure vestures to their knee. 1100
Now here, now there, as danger warns, they glide,
And stem mid' crushing crags the troubled tide.
Pendent on mountain waves the vessel hung,
That pierc'd her solid planks, and foam'd the
rocks among.

Above these rocks, here now the nereids rise,
And float on billows hid amidst the skies:

Descending now to ocean's secret bed,
They in his gulfy deeps conceal their head.

As when along the beech, succinct for play,
To tofs the flying ball the nereids stray, 1110
From hand to hand the sphere unerring flies,
Nor ever on the ground inglorious lies;
The sisters thus, with coadjutant force,
High o'er the surge impel the vessel's course:
From secret shelves her wave-dash'd sides they
shove,

Though sturdy billows strong against them strove.
On a tall fragment that o'erlook'd the flood,
His shoulder resting on his hammer, stood
The sooty god: and from her starry skies
Juno beheld the scene with stedfast eyes. 1120
Her hand around Minerva's neck she threw;
For much Saturnia trembled at the view.

Long as the vernal suns protract the light,
So long in Argo's cause the nymphs unite.
Propitious to their labours sprung the breeze,
And the free vessel shot across the seas.
Trinacria's verdant meads they soon survey,
Where graze thy herds, illustrious god of day.
Juno's commands obey'd, the watery train,
Like diving mews, explore the deeps again. 1130
Coasting along, the bleating flocks they hear,
And herds loud bellowing strike their listening
ear.

Sol's youngest daughter, Phaëthusa, leads
The bleating flocks along the dewy meads;
Propp'd on her silver crook the maid reclin'd;
A stouter staff, with brazen ringlets join'd,
Lampetie takes; whose herds the heroes see
Slunk to the brook, or browsing on the lea.
Of fable hue no cattle you behold;
Milkwhite are all, and tipp'd their horns with
gold. 1140

They pass'd these meads by day; at day's decline
They brush'd with pliant oars the yielding brine.
At length Aurora's all-reviving ray
Redden'd the waves, and show their certain way.

A fertile isle towers o'er the Ionian tide,
Ceraunia nam'd; the land two bays divide.
Fame says, (forgive me, muse, while I unveil,
Reluctant too, a legendary tale),
A sickle lies conceal'd within this land,
With which rash Saturn's mutilating hand 1150
His father castrated: for Ceres' aid
Others assert this rural sickle made,
For Ceres once, with love of Macris fir'd,
To this fam'd isle, her favourite seat, retir'd.
The Titans here she taught her arms to wield,
And crop the bearded harvest of the field.
This island hence, nurse of Phæacian swains,
Th' expressive name of Drepane obtains.
From mangled Uranus's blood they trace
The source inglorious of Phæacia's race. 1160

Trinacria left, and numerous perils past,
Her heaven-protected Argo moors at last,
The heroes disembark'd Alcinoüs hails,
And at their festive sacrifice regales.
Mirth unremitted through the city runs,
As though they welcom'd home their darling sons.
The godlike guests their social part sustain,
Joyous as though they press'd Hæmonia's plain:

But ere that distant plain delights their view,
The chiefs must buckle on their arms anew. 1170
For, lo! those Colchians who adventurous stray'd
Through deeps unknown, had enter'd undismay'd
The dire Cyanean rocks, here throng the coast,
And wait th' arrival of the Grecian host.
The forfeit maid should Argo's crew refuse,
War in each sad disastrous shape ensues.
Arm'd and resolv'd they threaten instant fight,
And future fleets t' assert their monarch's right.
But king Alcinoüs interpos'd his aid,
And, ere they rush'd to fight, their wrath allay'd.
Arete's knee the suppliant virgin press'd, 1181
And thus th' associate band and queen address'd:
'O queen,' exclaim'd she, 'lend thy timely aid
'To save from Colchian hands a suffering maid.
'With ruffian rage to bear me hence they come,
'And to my wrathful fire conduct me home.
'Thou know'st, if one, like me, of human kind,
'How prone to err is man's unstable mind.
'Deem me no slave to lust's usurping pow'r;
'Prudence forsook me in the needful hour. 1190
'Be witness sun, and thou, whose every rite
'Is wrapp'd, dire Hecate, in fable night,
'How I reluctant left my native home,
'And with rude foreigners abhor'd to roam.
'Fear wing'd my flight; and, having once trans-
'gress'd,

'To flee I judg'd my last resource and best.
'Still have I liv'd, as with my father, chaste,
'My spotless zone fast girded to my waist.
'Oh! may my tale, fair princess, claim thy tears;
'Oh! teach thy lord compassion as he hears. 1200
'On thee may all th' immortal gods bestow
'Beauty and life, exempt from age and woe;
'Cities, that need no bold invaders dread,
'And a fair progeny to crown thy bed.'

In tears she spoke: then to each gallant chief
Told in these plaintive strains her tale of grief:
'Low at your feet, ye warriors, suppliant view
'A princess doom'd to wretchedness for you.
'Yok'd were the bulls, and, desperate as they
'rose, 1209
'Crush'd by my aid were hosts of giant-foes.
'Yes, soon Hæmonia the rich prize will see,
'And boast of conquests which she owes to me.
'My country I, my parents, palace left,
'To pine through life, of all its joys bereft;
'But gave to you, a base ungrateful train,
'To see your country and your friends again.
'Spoil'd of my beauty's bloom by fate severe,
'In endless exile must I languish here.
'Revere your oaths; Erynnis' vengeance dread,
'Who heaps her curses on the perjurd head:
'Dread heaven's sure wrath, if, to my fire re-
'stor'd, 1221

'My shame or ruin wait his desperate word.
'No sheltering shrine, no fortress near, I fly
'To you alone, on your defence rely.
'Yet why on you? who, merciless and mute,
'Have heard my cries, nor seconded my suit;
'Unmov'd have seen me lift my suppliant hand
'To the kind princess of this foreign land.
'Elate with hope the golden fleece to gain,
'Colchos oppos'd you, and her king in vain:

But fearful now the battle to renew, 1231
 Ye dread detachments, nor will fight with few.
 She said; and all who heard her suppliant
 moan.

Cheer'd her sad heart, and check'd the rising groan.
 Each gallant man his brandish'd spear display'd,
 And vow'd assistance to the suffering maid,
 Shook his drawn sword, a prelude to the fight,
 Resolv'd on vengeance, and resolv'd on right.

Night now dispers'd the faint remains of day,
 And all the slumbering world confess'd its sway:
 Grateful its gloom to men with toils oppress'd;
 Grateful to all but her, with sleep unblest'd. 1242
 She, hapless fair, her painful vigils kept;
 Revolving still her griefs, she watch'd and wept.

As at the distaff toils th' industrious dame,
 Whose frequent tears her orphan children claim.
 All night she toils, while clinging round they
 stand,

Wail their lost fire, and his return demand.
 Swift down her cheek descends the silent tear:
 So hard the lot fate destines her to bear! 1250

Like her's Medea's copious tears descend,
 Such agonizing griefs her tortur'd bosom rend.
 The royal pair retire with wonted state
 From the throng'd city to their palace-gate.
 On their soft couch reclin'd, at evening's close,
 Long conference held they on Medea's woes.
 Thus to Alcinoüs the queen express'd
 The kind suggestions of her pitying breast:

'Oh! may the Minyans, prince, thy favours
 share: 1259

'Oh! shield from Colchian foes an injur'd fair.
 Not distant far Hæmonia's plains extend,
 And near our island Argo's frontiers end.
 But far remote Æeta reigns; his name
 Unknown to us, or faintly known by fame.
 She, in whose sorrows now I bear a part,
 Hath to redress them, open'd all my heart.
 Let no rude Colchian bear her hence away,
 To her fire's vengeance a devoted prey.
 Her error this: the fiery bulls to quell,
 Fond and officious she prepar'd the spell. 1270
 Augmenting then (as oft offenders will)
 Her first with future errors, ill with ill,
 Far from her native home, impress'd with dread,
 Far from her angry fire the damsel fled.
 But bound is Jason by strong ties, says fame,
 To wed the wanderer, and retrieve from shame.
 Urge him not then, with many an added threat,
 His faith to violate, his oaths forget;
 Nor stimulate Æeta's wrath to rise: 1279
 Their daughters parents rigorously chastise.
 Thus Pycteus, with parental zeal o'ercome,
 Compell'd his child Antiope to roam.
 Thus Danaë, by her wrathful fire secur'd,
 Toss'd in the troubled deep distress endur'd.
 Nor long since Echetus, a wretch accurs'd,
 With brazen pins his daughter's eye-balls
 pierc'd:

Pent in a dungeon's awful gloom she pin'd,
 Doom'd by her savage fire obdurate brass to
 grind. [breast,

She said: soft pity touch'd the sovereign's
 Who thus his supplicating queen address'd: 1290

"In me, O queen, these heroes should descry,
 For the fair sufferer's sake, a firm ally;
 Soon should my arms the Colchian foes remove,
 But I revere the just decrees of Jove.

Unsafe I deem Æeta to deride,
 Who sways the sceptre with a monarch's pride;
 Able, though distant, if averse from peace,
 To scatter discord through the realms of Greece.
 Hear my proposal then; which you, I trust,
 And all who hear it, will applaud as just: 1300
 If still a virgin's spotless name she bear,
 Safe to her fire's domains conduct the fair:
 But if one bed the wedded pair contain,
 I will not sever Hymen's silken chain.
 Forbid it, Heaven! that I in wrath expose
 Her sinless offspring to insulting foes."

He said, and sunk to rest: his sage resolves
 Anxious and oft the wakeful queen revolves.
 She rose: their princess' footstep heard, arise
 Her female train, and each her wants supplies.

'Go,' to her page apart Arete said,
 Bid Æson's valiant son the virgin wed.
 Bid him no more Alcinoüs' ears assail
 With long entreaties, and a well-known tale.
 Himself, unask'd, his advocate will go,
 And tender these conditions to the foe:
 If still the fair a spotless maid remain,
 Soon shall she view her father's courts again:
 But, if a matron's honour'd name she bear,
 He will not separate the wedded pair.' 1320

She said: her herald, eager to convey
 The royal message, sped without delay;
 To Æson's son he told Arete's word,
 And the kind counsels of her sovereign lord.
 Hard by their ship, in glistering arms array'd,
 Deep in the port of Hyllicus embay'd,
 He spies the chiefs, his embassy repeats,
 And every gallant heart with transport beats.
 They crown the goblets to the powers divine,
 And drag th' accustom'd victims to the shrine:
 Then for the pensive fair officious spread 1331
 In a sequester'd grot the bridal bed.

Hither, in days of yore, fair Macris came,
 Daughter of Aristæus, honour'd name!
 He taught mankind the virtues and the use
 Of the bee's labours, and the olive's juice.
 For, know, when Hermes infant Bacchus bore,
 Snatch'd from the flames, to fair Eubœa's shore,
 Macris embrac'd him with a mother's love,
 And there, awhile, she nurs'd the seed of Jove,
 And there with honey fed; till Juno's spite 1341
 Far from Eubœa's isle compell'd her flight.
 At length, of this Phæacian grot possess'd,
 She with vast opulence the natives blest'd.

To deck with honours due the bridal bed,
 Around it wide the golden fleece was spread.
 With sweetest flowers, that deck or dale or hill,
 Th' assiduous nymphs their snowy bosoms fill.
 The golden fleece emits so bright a ray,
 They shone all radiant as the star of day, 1350
 Inspiring love: the prize though strong desire,
 Prompts them to touch, with reverence they
 retire.

These are the daughters of the Ægean flood,
 Those, Meletæum, haunt thy lofty wood.

From groves, from streams, at Juno's call they
To grace the nuptials of this godlike man. [ran,
The sacred grot, recorded still by fame,
Bears to this day Medea's honour'd name.
For here the nymphs, their veils around them
spread,

To nuptial joys the happy lovers led : 1360

And every chief, to guard the blissful spot,
Clad in bright armour, stood before the grot,
Lest hostile troops, with rude tumultuous noise,
Should force an entrance, and distract their joys.
Thus station'd, they protect the hallow'd ground,
Their festive brows with leafy chaplets crown'd.
As Orpheus struck his tuneful lyre, they sung,
And Hymeneals round the grotto rung.

But in Alcinoüs' court the fair to wed,

O'er Jason's anxious mind disquiet spread : 1370

Full oft he wish'd Iolcos' coast to gain,
And wed the virgin in his fire's domain ;
Such too Medea's wish : but fate severe
Forc'd him to celebrate his nuptials here.
For pleasure unalloy'd we look in vain ;
Pleasure to suffering man is mix'd with pain.

Whether the Colchian foe had scorn'd or clos'd
With the just terms Phæacia's prince propos'd,
Of this they doubted : mid' the mirthful scene
Fears, which these doubts suggested, intervene.

Aurora now her orient beams display'd, 1381
And pierc'd the sullen night's surrounding
shade.

The circling shores and new bespangled ground
Reflect her rays : the streets with noise resound.

The citizens and Colchians, who possess'd
The distant coast, awake from balmy rest.

Impatient now his purpose to disclose,

To plead Medea's cause the monarch rose.

His hand sustain'd a sceptre's massy gold, 1389

Which kings deciding right were wont to hold.

Around their prince, in glistening arms array'd,

Phæacia's peers a seemly pomp display'd.

Eager on each adventurous chief to gaze,

A female troop beyond the city strays.

In festive bands the distant swains unite :

(For Juno had divulg'd the nuptial rite)

One from his fold a ram selected brought,

An heifer one, to feel the yoke untaught ;

Flagons of wine some for libation bear :

The smoke of victims blacken'd all the air. 1400

As women wont, the female train select

Their costly veils, with gay embroidery deck'd :

Such golden toys, such trinkets they provide,

As on a nuptial day adorn the bride.

The comely chiefs their admiration won ;

But more than all Æager's tuneful son,

As lightly to the lyre's melodious sound

Tripp'd the brisk dancer o'er the measur'd ground.

In concert full the virgin-choir prolong

The happy day with Hymeneal song. 1410

Here a fair band, collected in a ring,

Praises to thee, auspicious Juno, sing.

By thee inspir'd, disclos'd the royal dame

The friendly terms her prince was pleas'd to name.

Nor are the terms Alcinoüs nam'd disown'd :

(For now their faithful loves hath Hymen
crown'd)

True to his oath, he heard with fix'd disdain
And deem'd Æeta's vengeful fury vain.

Soon as the Colchians saw their purpose cross'd,
Defeated all their schemes, their labour lost ; 1420

That to the sovereign's terms they must accede,
Or quit his ports, and sail away with speed ;

Dreading the monarch's wrath, submit they try

To win his friendship, and commence ally.

Settling at last, long time the Colchian host

Dwelt with the natives on Phæacia's coast :

Till Bacchus' hated race from Corinth fled,

Exil'd these Colchians, and the isle o'erspread.

They fought the neighbouring shores : in times
to come

Their sons emigrating explor'd a home, 1430

Where far and wide extends th' Illyric coast,

And the Ceraunian hills in clouds are lost.

But these events, which now my muse engage,

Were late fulfill'd in some succeeding age.

Yet still, in Phæbus fane, uninjur'd stand

The altars rais'd by fair Medea's hand :

Some to the fates are pil'd with victims due,

Some to the nymphs their annual rites renew.

Towards the parting train the royal pair

Their generous love by costly gifts declare. 1440

Twelve fair Phæacians, at the queen's command,

Conduct Medea to the sea-beat strand.

On the seventh morn with gently breathing
gales

Propitious Jove expanded Argo's sails ;

Argo decreed fresh dangers to sustain,

Ere Greece beholds her gallant sons again.

Ambracia's bay had open'd to their view,

Besides Curetes' land the galley flew,

The clustering isles, Echidanes, they pass'd,

And Pelops' distant realm beheld at last. 1450

Nine tedious nights and days the vessel sweeps

The troubled surface of the Libyan deeps ;

Till, driven by rapid tides and storms astray,

She near the Syrtes' quicksands plow'd her way :

Whirl'd in whose gulfy pools, their destin'd grave,

Nor sails nor oars the sinking galleys save.

Burst from its black abyss, the boiling flood

Up-heaves its shaggy weeds, involv'd in shelves
of mud.

With the far-spreading spray the sands arise ;

But nought discern they here that creeps or flies.

The tide (which now retreats into the main, 1460

And now returns upon the beach again) ;

Far o'er the shore, impell'd with fury, show

All Argo's slimy keel expos'd to view.

They disembark, and gaze with aching eyes

On ridgy mountains lost amid the skies.

No grateful streams, no beaten paths appear,

No rural cot discern they far or near ;

A death-like silence reign'd : around dismay'd

His comrade each interrogating said : 1470

' What country this ? on what bleak clime at
' last

' Have the rude tempests heaven-built Argo cast ?

' Oh ! had we dar'd, devoid of vulgar fear,

' Our course undaunted through those fragments
' steer,

' Like heroes then (though Jove success deny'd)

' We in the bold attempt had bravely died.

‘ What can our skill devise? the least delay
 ‘ Is fatal here; the winds forbid our stay.
 ‘ How bleak and barren is the coast we tread!
 ‘ And what a desert waste is wide around us
 ‘ spread!’

He said; and, joining in the loud lament, 1481
 Ancaeus thus forboded the event;

‘ What dire mishaps our gallant host befall!
 ‘ Thus by stern fate’s decree we perish all!
 ‘ What woes await us on this desert cast,
 ‘ If from the land awakes the furious blast!
 ‘ For slimy seas my sight far off commands,
 ‘ And whitening billows bursting o’er the sands.
 ‘ And dreadfully had Argo’s yawning sides, 1489
 ‘ Remote from shore, receiv’d the gushing tides,
 ‘ Had not the surge which lifted her to heav’n,
 ‘ Full on the pebbly beach the vessel driv’n.
 ‘ But now the tide retiring quits the strand,
 ‘ And waves unfaithful skim the levell’d sand.
 ‘ Our projects baffled, and hope’s cheerly dawn
 ‘ From our expecting sight thus soon withdrawn,
 ‘ Let other hands the pilot’s art display,
 ‘ And they who fear not danger steer the way.
 ‘ But our joint labours Jove decrees to foil,
 ‘ Nor will our native home reward our toil.’ 1500

He said; and all renown’d for naval skill,
 Close with his words, and wait th’ impending ill.
 From every heart the vital motion fled,
 O’er every face a deadly paleness spread.

As when from street to street, in wild dismay,
 Affrighted mortals like pale spectres stray;
 Expecting wars, or plagues, or bursting rains,
 That deluge all the harvest of the plains:
 Or, as when statues drops of blood distil,
 And fancied bellowings the temples fill; 1510
 The noon-day sun eclips’d involves in night
 Th’ astonish’d world, and stars emit their light:
 Thus on the beach they stalk’d, a heartless clan!
 Like sweating statues, or like spectres wan.
 His feeble arm each round his comrade cast,
 Then sunk into the sand to breathe his last,
 Resolv’d, as now the star of Hesper rose,
 To share the solace of united woes.
 Some here, some there select their clay-cold bed,
 And round their shivering limbs their garments
 spread: 1520

Resign’d to death, in midnight’s fullen shade
 And at mid-day, here languishing they laid.
 Remote, Medea’s fair attendants moan, [groan.
 Cling round their queen, and groan return for

As when a nest, furcharg’d with callow young,
 Falls from the lofty cliff to which it clung,
 Th’ unfeather’d brood by shrillest cries attest
 Their far-flown mother, and their ruin’d nest:
 As on the banks Pactolus’ streams bedew,
 Melodious swans their dying notes renew;
 The rivers gliding the rich vales among,
 Bear on their silver streams the soothing song:
 Thus they, their golden locks besmear’d with
 gore,

All night in plaintive elegies deplore.
 Their toils yet incomplete the godlike band
 Had now ignobly perish’d on the sand,
 But the bold heroines, who guard the coast,
 Beheld with pitying eye the drooping host;

Those nymphs, who, when in glistening arms ar-
 ray’d, [maid,
 Rush’d from the thunderer’s brain the martial
 In needful hour their kind assistance gave, 1541
 And cleans’d her infant-limbs in Triton’s wave.

‘Twas noon: o’er Libya’s sands the god of day
 Darted the splendours of his fiercest ray.

Full before Jason stood the nymphs confess’d,
 And gently from his head withdrew the vest.
 Sudden he starts, impress’d with silent dread,
 And from his fair protectors turns his head.
 They in compassion’s mild address began
 To free from terrors vain the hopeless man: 1550

‘ Why griev’st thou thus? Oh! bid thy sorrows
 ‘ cease:

‘ We know thy coming’s cause, the Golden Fleece.
 ‘ We know the various toils by land you bore;
 ‘ How toss’d on ocean, how distress’d on shore.
 ‘ Terrestrial powers, for acts of friendship known,
 ‘ We make the shepherd’s rural cares our own.
 ‘ We, Libya’s daughters and avengers, boast
 ‘ Our sway extended o’er the Libyan coast.
 ‘ Arise, nor sink beneath thy sorrow’s weight;
 ‘ But rouse thy fellows from their drooping state.
 ‘ When Amphitrite with officious speed
 ‘ Unreins from Neptune’s car the fiery steed,
 ‘ Thy mother then with duteous care repay,
 ‘ Whose womb hath borne thee many a toilsome
 ‘ day.’

‘ Discharge this duty, and refail to Greece,
 ‘ Safe and triumphant with the Golden Fleece.’
 They spoke, and vanish’d: from his sandy bed
 Jason arose, and looking round he said;

‘ Ye godlike powers, the desert plains who rove,
 ‘ Ye fair, who tend the flocks, propitious prove.
 ‘ Those dark mysterious truths your tongues fore-
 ‘ told, 1571

‘ I go, if haply can my friends unfold.
 ‘ Conven’d, may they some prudent scheme devise,
 ‘ For in th’ advice of numbers safety lies.’

He said: and, wading through the driven sand,
 Rous’d with loud voice the sad desponding band.
 Thus while the lion his lost mate explores,
 The forests ring, earth trembles as he roars:
 Herdsmen and herds, o’erwhelm’d with equal fear,
 All mute and trembling deem destruction near.
 But grateful to the host was Jason’s call;
 No fears it cherish’d, but gave hope to all.
 Yet with dejected looks the heroes meet.
 Beside the female train to each his seat
 He near the shore assign’d; in order due
 His wondrous tale relates, and cheers the pensive
 crew:

‘ Attend, my friends: three virgin forms, who
 ‘ claim [came.

‘ From heaven their race, to sooth my sorrows
 ‘ Their shoulders round were shaggy goat-skins
 ‘ cast, 1589

‘ Which, low descending, girt their slender waist.
 ‘ High o’er my head they stood; with gentle hand
 ‘ My vesture rais’d, and gave this dread command:
 ‘ That I with speed my piteous bed forsake,
 ‘ And, risen, haste my comrades to awake.
 ‘ That mindful we our mother’s cares repay,
 ‘ Whose womb sustain’d us many a toilsome day,

* When Amphitrite with officious speed
 * Unreins from Neptune's car the fiery steed.
 * Long have I sought this wonder to explain,
 * And still revolving I revolve in vain. 1600
 * In the bold name of heroines they boast,
 * Daughters and guardians they of Lybia's coast.
 * Known to these nymphs are all the toils we bore
 * On the rough ocean and the faithless shore.
 * Nor staid they long; but, sudden from my view
 * Their radiant forms an ambient cloud withdrew.

He said: on every face sat boding fears;

When, lo! a portent greater far appears.

Fierce from the foamy deep, of wondrous size,
 Springs an huge horse; his mane expanded flies.
 From his strong sides he shakes th' adherent
 spray, 1611

Then towards the coast directs his rapid way.

Skill'd in whate'er this prodigy portends,

With pleasure Peleus thus consoles his friends:

' Now by his consort's hand releas'd I see
 * The car of Neptune, and his horses free.
 * A mother's name (or I predict in vain)
 * Argo may boast; she feels a mother's pain.
 * Her pregnant womb a troop of heroes bears,
 * And endless perils for their safety shares. 1620
 * Come, let us now our boasted strength display,
 * And on our shoulders bear our ship away.
 * Steer we through depths of sand our dangerous
 course,

* Led by the steps of this portentous horse.

* His steps reluctant press the dusty plain,

* But rapid bear him to his kindred main;

* Thither attend his flight.' Thus spoke the seer:
His pleasing counsels gratify'd their ear.

This wondrous tale the tuneful nine recite,
 And as the muses dictate I must write. 1630

This have I heard, and this as truth proclaim,
 That you, O princely peers, of deathless fame,
 By the joint efforts of united hands, [sands,
 Twelve days and nights through Lybia's burning
 High on your shoulders rais'd the vessel's weight,
 All that its womb contain'd, a mighty freight.

What woes o'ertook them, and what toils befell,
 No verse can celebrate, no tongue can tell.

Such brave exploits proclaim'd their godlike line,
 For, as their lineage, were their deeds divine. 1640

But when Tritonis' lake the chiefs attain,
 They eas'd their shoulders, and embark'd again.

Doom'd to acuter griefs they now are curs'd

With all the miseries of burning thirst;

Like dogs they run its fury to assuage,

And at a fountain's head suppress its rage.

Nor wander'd they in vain; but soon explor'd

The sacred spot with golden apples stor'd,

In Atlas' realm: the serpent's wakeful eyes

Watch'd till but yesterday the golden prize. 1650

The fair Hesperides with kind survey

Tended the serpent as they tun'd their lay.

But, lo! the monster by Alcides slain,

Beneath a branching pear-tree press'd the plain.

His tail still vibrates, though his ghastly head

And spine immense lie motionless and dead,

Flies in thick swarms his gory sides surround,

Drink his black blood, and dry the dripping
wound,

Made by the darts, whose poison'd tips detain
 The deadly venom of the Hydra slain. 1660

As Ladon's fate the pensive maids deplore, [tore;

Their hands they wrung, their golden locks they

But, sudden as the heroes hasten'd near,

They to the dust descend and disappear.

Struck with the prodigy his eyes survey'd,

Thus to the nymphs observant Orpheus pray'd:

' Ye goddesses, with blooming beauty blest'd,

* Look with benevolence on men distress'd.

* Whether ye grace the splendid courts of Jove,

* Or on this humble earth auspicious move; 1670

* Whether to flowery pastures ye repair,

* And the lov'd name of shepherdesses bear;

* Illustrious nymphs, from ocean sprung, arise,

* Bless with a recent view our longing eyes.

* Bid from the thirsty soil a torrent burst,

* Or open some hard rock to flake our thirst.

* Should we again our tatter'd sails expand,

* And greet at last the dear Achaian land,

* Grateful we then these favours will repay,

* And choicest offerings on your altars lay: 1680

* No goddess who frequents the court of Jove,

* Shall greater honour share, or greater love.'

Thus Orpheus pray'd, with feeble voice and
low:

The listening nymphs commiserate their woe.

First tender grass they bade the soil disclose;

Then high above it verdant branches rose,

Erect and strong, the spreading boughs display'd

Wide o'er the barren soil an ample shade.

A poplar's trunk fair Hespera receives,

And in a weeping willow Ægle grieves. 1690

But Erytheis in an elm remains:

Each in her tree her proper shape retains;

Stupendous sight! first Ægle silence broke,

And kindly thus the suppliant band bespoke:

' Hither some lawless plunderer came of late,

* Who will reverse the colour of your fate.

* Yon beast he slew for whom we sorrow now,

* And tore the golden apples from their bough.

* But yesterday the desperate giant came;

* From his black eye-brows flash'd the livid flame:

* A lion's shaggy skin, besmear'd with gore, 1701

* Wide o'er his shoulders spread the monster wore.

* On his stout staff his fearless step rely'd,

* And by his deadly dart the serpent died.

* He like a sturdy traveller stalk'd along,

* Seeking some fount to cool his fiery tongue.

* With eager haste he trod the dusty plain,

* And still for water look'd, but look'd in vain.

* To this tall rock, hard by Titonis' lake,

* Some god conducted him his thirst to slake. 1710

* Struck by his heel its deep foundation shook,

* And from the yawning clefts a torrent broke.

* Prone on the ground the limpid streams he swills;

* And, groveling like a beast, his belly fills.'

Elated with the tale, they speed their course,

To find as Ægle told, the fountain's source.

As when assembled ants with joint essay

Strive in some chink their lifted grain to lay:

Or as when flies some liquid sweet explore,

They hang in clusters round the honied store;

Like them the Mynians: such their numbers seem,

And such their haste to gather round the stream.

Conjecturing thus some grateful hero said,
As from the rill refresh'd he rais'd his head :
' Ye gods ! though absent, great Alcides gives
' These limpid streams ; by him each hero lives.
' Come, haste we now the country to explore,
' And the lost wanderer to our host restore.'

Instant to council rose th' associate band,
Selecting heroes to explore the land. 1730

For nightly winds dispersing o'er the plains
The light loose sands no step impress'd remains.
Boreas' fleet sons, who wing their airy flight,
Sagacious Lynceus blest'd with keenest sight,
Euphemus swift of foot, and Canthus speed :
Him his brave spirit urg'd, and heaven decreed
To ask Alcides, on what fatal coast
He left his comrade, Polyphemus lost.

When this bold chief had rear'd on Mysian ground,
And fenc'd with circling walls a city round, 1740
Wide o'er the country Argo's fate to learn,
He roam'd, with Argo anxious to return.
Scarce had his feet Calybian frontiers press'd,
Ere fate consign'd him to eternal rest.

Along the beech with stately poplars spread,
They rear'd a tomb in honour of the dead.
But Lynceus deems, that, o'er the distant lands
His sight the long-lost Hercules commands.
Thus sees the clown, or thinks he can descry 1749
The new moon breaking through a cloudy sky.
Back to his comrades hastes the joyous chief,
Precludes their further search, and gives their
mind relief.

Euphemus soon, and Boreas' sons his friends,
Whose search in empty expectation ends,
Rejoin'd the host : but thee, brave Canthus, slain
Stern fate foredoom'd to press the Libyan plain.
To feast his comrades with the grateful prey,
He forc'd through scatter'd flocks his desperate
way.

Sudden his flock to guard the shepherd flew,
And with a rock's huge fragment Canthus flew.
This sturdy villager, Capharus nam'd, 1761
His lofty lineage from Apollo claim'd,
And Acacallis : conscious of his might,
He fear'd no rival, nor declin'd the fight.
Minos her sire, to Libya's coast remov'd
Fair Acacallis, by the god belov'd.

To Phœbus here a hopeful son she gave,
Amphithemis or Garamans the brave.
Thy love, Amphithemis, Tritonis crown'd,
And grac'd thy bed with Nafamon renown'd,
And bold Caphaurus ; whose decisive blow 1771
Transmitted Canthus to the shades below.
The bloody deed divulg'd to all the host,
Not long his conquest could Caphaurus boast.
They to its sepulchre the corse convey,
Weeping ; and make the shepherd's flocks their
prey.

To Pluto's realms prophetic Mopsus fled,
And join'd on that sad day the mighty dead.
With fate's decrees must mortal man comply,
And the wise seer in spite of prescience die. 1780
For, shelter'd from the fierce meridian ray,
Beneath a sandy bank a serpent lay.
Innoxious till incens'd, he ne'er annoy'd
But strove th' affrighted traveller to avoid.

But all whome'er the foodful earth contains,
Who feel his darted venom in their veins,
Nor long, nor distant deem the dreary road,
That leads direct to Pluto's dark abode.

His fangs infix'd when once the wretches feel,
In vain would medicine's god attempt to heal.
For when brave Perseus (this her godlike son 1791
His mother oftener nam'd Eurymedon)

O'er Libya flew, the Gorgon's head to bring,
Fresh slain and dripping, to th' expecting king,
From every drop that dyed the soil with blood,
A serpent sprung, and thus increas'd the brood.
The monster's spiry tail rash Mopsus press'd
With his unheeding foot : his tortur'd breast
Upward he turn'd, and writh'd his spires around,
Then with his venom'd fang infix'd a deadly
wound. 1800

Medea trembled and her female train :
Fearless he bathes the wound, nor heeds the pain.
But now, lost wretch ! each sense is clos'd and
dead, [spread.

And o'er his sinking eyes death's gloomy shade is
Prone to the dust he falls : his cold remains
Press with unwieldy weight the desert plains.
His faithful friends, and Jason with the rest,
Weep o'er the corse, with heart-felt grief im-
press'd.

His flesh all putrid from the taint within, 1809
And hanging round him loose his flabby skin,
The burning sun unable long to bear,
His busy comrades, with officious care,
Deep in the soil conceal their delving spade,
And soon a decent sepulchre was made.

Men, matrons, all, as round the grave they flock,
Lamenting loud select the sacred lock :
His corse the bright-arm'd heroes thrice surround,
And raise in seemly form the hallow'd mound,
Then hasten to their ship : the southern breeze
Curl'd, as it blew, the surface of the seas. 1820

In sad suspense, still wishing to forsake,
And cross with favouring gales Tritonis' lake,
They loiter long, and waste the useful day
In idle contest, and in vain delay.

A serpent thus, long scorch'd with summer's
heat,

Winds to some secret chink, his cool retreat.
Enrag'd he hisses, rears his crest on high,
And furious darts his fire-emitting eye,
Till haply he the wish'd-for chink pervade,
And in its cool recess secure a shade. 1830

Uncertain thus, the ship explor'd in vain
The lake's wide mouth that open'd to the main.
With pious care, as Orpheus gives command,
They place Apollo's tripod on the strand ;
That those auspicious powers the coast who guard,
Pleas'd with th' oblation, may their toils reward.

Clad like a youth, before them stood confess'd
The mighty Triton : in his hands he press'd
The gather'd foil ; this amicable sign
He to the heroes held, and spoke benign : 1840

' The hospitable pledge my hand extends,
' The best I now can give, accept, my friends.
' Would you o'er ocean's paths your course dis-
' cern, [learn,
' And learn the tracks which strangers wish to

" Hear! from my fire, the monarch of the main,
 " I boast my science; o'er these seas I reign.
 " Perchance ev'n you, though distant far you
 ' came, 1847
 " May recognise Eurypylus's name,
 " In Libya born.' He said: Euphemus took
 The proffer'd foil, and thus responsive spoke:
 " If such thy knowledge, friendly chief, explain
 " Where Atthis lies, where rolls the Cretan main.
 " Reluctant sail'd we towards the Libyan coast,
 " By angry heaven and adverse tempests tost:
 " By land, with Argo o'er our shoulders cast,
 " We toil'd, and launch'd her in this lake at last.
 " Nor can we yet our certain course devise, 1857
 " Where full in prospect Pelops' realms will rise."
 He said: his hand out-stretching, Triton show
 The lake's wide mouth, and sea expos'd to view.
 ' Where the lake blackens, and its waters sleep,
 ' Expect,' he cries, ' a passage to the deep.
 ' Observe the cliffs high towering on each side,
 ' And through the streight they form your vessel
 ' guide. [skies,
 ' There, above Crete, where, mingling with the
 ' Yon ocean spreads, the land of Pelops' lies.
 ' When to the right th' expanded lake ye leave,
 ' And the safe seas your mighty freight receive,
 ' Still cautious coast along the winding strand,
 ' Till you the cape's projecting sides command:
 ' Your course, that cape once doubled, safe pur-
 ' sue, 1871
 ' Your ship uninjur'd, and undaunted you.
 ' Thus gladden'd, go; nor let your vigorous arms
 ' Droop with fatigue, and shake with vain alarms.'
 Heartening he spoke: the decks they reascend,
 And, rowing brisk, to cross the lake contend.
 The proffer'd tripod friendly Triton takes,
 And hides his head beneath the dimpling lakes.
 Thus with the costly prize the god withdrew,
 Instant invisible to mortal view. 1880
 Inspir'd with joy, that some superior guest
 Had comfort given them, and with counsel blest'd,
 The choicest sheep they bade their leader slay,
 And to the power benign due honours pay.
 He to the galley's poop with speed convey'd
 The choicest sheep, and, as he offer'd, pray'd:
 ' Dread deity, who late conspicuous stood
 ' On the clear margin of this rolling flood,
 ' Whether great Triton's name delight thine ear,
 ' Triton, whom all the watery gods revere: 1890
 ' Or ocean's daughters, as they found thy fame,
 ' Thee mighty Nereus, or thee Phorcus name,
 ' Be bounteous still: bid all our labours cease,
 ' And reinstate us in our native Greece.'
 Thus pray'd the chief, as on the poop he stood,
 And sunk the slaughter'd victim in the flood.
 His head above the billows Triton rear'd,
 And in his proper shape the god appear'd.
 As when, intent his fiery steed to train,
 The horseman leads him to the dusty plain, 1900
 His floating mane firm twisted in his hand,
 He runs, yet holds him subject to command:
 Superb he paces, by his master led,
 Curvetting still, and tossing high his head.
 His bits, all white with gather'd foam around,
 Craunch'd by his restless jaw, aloud resound:

Thus Triton's hands the vessel's head sustain,
 And safely guide her to the seas again.
 His every limb, down to his swelling loin,
 Proclaims his likeness to the powers divine. 1910
 Below his loin his tapering tail extends;
 Arch'd like a whale's, on either side it bends.
 Two pointed fins, projecting from his side,
 Cleave, as he scuds along th' opposing tide.
 Acute and tapering, these indented thorns
 A semblance bear to Phœbe's budding horns.
 His arm conducts her, till, from danger free,
 She rides embosom'd in the open sea.
 This prodigy the shouting warriors saw,
 Impress'd at once with gratitude and awe. 1920
 Here shatter'd ships Argous' port receives,
 Here tokens of her voyage Argo leaves:
 To Triton here, high-towering o'er the strand,
 And here to Neptune stately altars stand.
 For here they linger'd out one useless day;
 But with fresh breezes sail'd at morn away.
 Far to the right they leave the desert land,
 And the stretch'd canvass to the winds expand.
 Gaining mid ocean with returning light, 1929
 The doubled cape diminish'd from their sight.
 The zephyr's ceasing, rose the southern gale,
 And cheer'd the shouting heroes as they sail.
 † The evening star now lifts, as daylight fades,
 † His golden circlet in the deepening shades;
 † Stretch'd at his ease the weary labourer shares
 † A sweet forgetfulness of human cares:
 † At once in silence sleep the sinking gales,
 † The mast they drop, and furl the flapping
 fails; 1939
 † All night, all day, they ply their bending oars
 † Towards Carpathus, and reach the rocky shores;
 † Thence Crete they view, emerging from the
 main,
 † The queen of isles; but Crete they view in vain,
 † There Tagus mountains hurls with all their
 woods;
 † Whole seas roll back, and tossing swell in floods.
 † Amaz'd the towering monster they survey,
 † And trembling view the interdicted bay.
 † His birth he drew from giants sprung from oak,
 † Or the hard entrails of the stubborn rock:
 † Fierce guard of Crete! who thrice each year
 explores [shores,
 † The trembling isle, and strides from shores to
 † A form of living brass! one part beneath 1951
 † Alone he bears, a part to let in death,
 † Where o'er the ankle swells the turgid vein,
 † Soft to the stroke, and sensible of pain.†
 Pining with want, and sunk in deep dismay,
 From Crete far distant had they sail'd away,
 But the fair forcerefs their speed represt'd,
 And thus the crew disconsolate address'd:
 ' Attend. This monster, ribb'd with brass a-
 round,
 ' My art, I ween, will level to the ground. 1960
 ' Whate'er his name, his strength however great,
 ' Still, not immortal, must he yield to fate.

§ The lines thus marked † are Broome's, who has
 translated the story of Talus; not without several omis-
 sions, which are here supplied.

‘ But from the far-thrown fragments safe retreat,
‘ Till prostrate fall the giant at my feet.’

She said : retiring at her sage command,
They wait the movement of her magic hand.
Wide o’er her face her purple veil she spread,
And climb’d the lofty decks, by Jason led.

‡ And now her magic arts Medea tries;
‡ Bids the red furies, dogs of Orcus, rise, 1970
‡ That, starting dreadful from th’ infernal shade,
‡ Ride heaven in storms, and all that breathes
invade.

‡ Thrice she applies the power of magic pray’r,
‡ Thrice, hellward bending, mutters charms in
air; [fly,

‡ Then, turning towards the foe, bids mischief
‡ And looks destruction, as she points her eye.

‡ Then spectres, rising from Tartarean bow’rs,
‡ Howl round in air, or grin along the shores. ‡
Father Supreme ! what fears my breast annoy,
Since not disease alone can life destroy, 1980

Or wounds inflicted fate’s decrees fulfil,
But magic’s secret arts have pow’r to kill !

For, by Medea’s incantations plied,
Enfeebled soon the brazen monster died.

‡ While rending up the earth in wrath he throws
‡ Rock after rock against th’ aerial foes,
‡ Lo ! frantic as he strides, a sudden wound
‡ Bursts the life-vein, and blood o’erspreads the
ground.

‡ As from a furnace, in a burning flood
‡ Pours melting lead, so pours in streams his
blood : 1990

‡ And now he staggers, as the spirit flies,
‡ He faints, he sinks, he tumbles, and he dies.

‡ As some huge cedar on a mountain’s brow,
‡ Pierc’d by the steel, expects a final blow,

‡ Awhile it totters with alternate sway,
‡ Till freshening breezes through the branches
play ; [sound,

‡ Then tumbling downward with a thundering
‡ Headlong it falls, and spreads a length of
ground :

‡ So, as the giant falls, the ocean roars,
‡ Outstretch’d he lies, and covers half the shores. ‡

Crete thus deliver’d from this baneful pest,
The Minyans unmolested sunk to rest. 2002

Soon as Aurora’s orient beams appear,
A temple they to Cretan Pallas rear.

With water stor’d, once more the busy train
Embark, and lash the foamy brine again.

Affiduous all with equal ardour glow
Distant to leave Salmonis’ lofty brow.

As o’er the Cretan deep the galley flew,
Around them night her sable mantle threw ;

Pernicious night, whose all-investing shade
Nor stars nor Phœbe’s brighter rays pervade.

Thick darkness, or from heaven or hell pro-
found,

Spread, as it rose, its rueful shades around.

Uncertain whether, on huge billows tost,

Sublime they sail, or sink to Pluto’s coast,

Uncertain where the bursting wave may throw,

They to the sea commit their weal or woe.

Jason aloud, with lifted hands, address’d

The god of day to succour the distress’d. 2020

The tears fast trickling down his sorrowing face,
He vow’d with gifts the Delphic shrine to grace,
He vow’d with choicest gifts, an ample store,
To load Amyclæ and Ortygia’s shore.
Attentive to his tears and meek request,
Phœbus from heaven descends, and stands con-
fess’d,

Where, frowning hideous o’er the deeps below,
The rocks of Melans lift their shaggy brow.

Awhile on one of these he takes his stand,
His golden bow high lifting in his hand ; 2030

Affixed by whose far-reflected light,
An isle of small extent attracts their sight,

Amid the Sporades ; against it stood
Hippuris, circled by the rolling flood.

Their anchors here they drop. Aurora’s ray
Glimmer’d, and sunk before the light of day.

A temple here o’er-arch’d with woods, they raise,
And bid an altar to Apollo blaze,

On whom the name Æglete they bestow ;

For here the god display’d his beamy bow. 2040
Here, since on Argo’s crew all bright he shone,

By the name Anaphe the isle is known.

The scanty produce of this barren isle

To Phœbus they on humble altars pile.

Each fair Phæacian in Medea’s train,

Who oft had seen the fatted oxen slain

In king Alcinoüs’ court, in laughter joins

At sight of waters pour’d on burning pines.

With well-dissembled wrath the chiefs reprove

The laughing damsels, and the mirth they love.

A wordy altercation soon began, 2051

And pleasant raillery through the circle ran.

Hence, to Æglete, on this festive day,

All who in Anaphe due honours pay,

Maidens and men, a mix’d assembly, join

In friendly contests and debates benign.

The halbers now were loosen’d from their hold,

And unrestrain’d in ocean Argo roll’d,

When thus the dream of night, yet uneffac’d,

Revering Maia’s son, Euphemus trac’d. 2060

How, with close grasp the sacred clod compress’d,
Stream’d with a milky current at his breast.

And from this clod, though small, his wondering
eyes

Beheld a lovely female form arise.

Charm’d with the beauteous fair, he soon resign’d

To nuptial joys his love-devoted mind,

Lamenting still that he the maid should wed,

Whom at his fostering breast with milk he fed.

“ Thy children’s nurse am I,” (the fair began,
Accosting mild the disconcerted man) ; 2070

“ But not thy daughter : I from Triton came ;

“ (Triton and Libya my parents’ name)

“ He fix’d near Anaphe my watery cell, [dwell.

“ And bade me here with Nereus’ daughters

“ But now I hasten towards the sun’s bright ray,

“ And to thy race the choicest boon convey.”

This dream recurring to his mind again,

He told the leader of the gallant train,

Who, long revolving, thus at length reveal’d

Those mystic truths the Pythic shrine conceal’d :

“ Ye gods ! what glory waits thy valorous
deeds,

“ What fame, Euphemus, to thy toil succeeds !

' For, when in ocean's bed this earth you fling,
 ' Thence (so the gods ordain) an isle shall spring;
 ' Here shall thy children's children late repose.
 ' Triton this hospitable gift bestows:
 ' He tore from Afric's coast the treasure'd soil;
 ' To him, of all the gods, ascribe the isle.'

Thus spoke he prescient, nor in vain divin'd:
 Euphemus heard him with attentive mind: 2090
 Transported with the presage, forth he sprung,
 And the mysterious clod in ocean flung.
 Instant emerging from the refluxing tides,
 Calliste's isle display'd its wave-wash'd sides,
 Nurse of Euphemus' race: in days of yore,
 They dwelt on Sintian Lemnos' footy shore.
 Exil'd from Lemnos by Etrurian force,
 To Sparta's friendly walls they bent their course:
 Ejected thence, Theras, Autefion's heir,
 Bade him to fam'd Calliste's isle repair; 2100
 His name it took: th' events we now display
 Were unaccustom'd in Euphemus' day.

Vast tracts of ocean pass'd, the joyous host
 Steer'd towards, and anchor'd on Ægina's coast.
 They here propose a trial of their skill;
 What chief can first the weighty bucket fill,

And, ere his fellows intercept his way,
 First to the ship the watery store convey.
 For parching thirst, and winds that briskly blew,
 To the fleet course inclin'd the gallant crew. 2110
 His bucket now, replenish'd at the springs,
 Each stout Theffalian on his shoulder brings;
 Intent the palm of conquest to obtain,
 He scours with speedy foot across the plain.

Hail, happy race of heroes, and repay
 With tributary praise my tuneful lay!
 With pleasure still may distant times rehearse
 And added years on years exalt my verse!
 For here I fix the period of your woes, 2119
 And with your glorious toils my numbers close.
 Your galley loosen'd from Ægina's shore,
 Waves discompos'd, and winds detain'd no more.
 Serene he sail'd beside th' Achaian strand,
 Where Cecrops' towers the subject main com-
 mand,
 Where opposite Eubœa Aulis lies,
 And where the Locrian cities lofty rise,
 Till Pagasæ her friendly port display'd,
 Where rode triumphant Argo safe embay'd.

NOTES ON BOOK IV.

VER. 1. THE first and second books contain, as we have seen, the voyage of the Argonauts to Colchis. In the book we are now entering upon, the poet has given us an account of the route they took on their return. And, in order to throw the utmost variety into his poem, he has conducted them to Greece by a way altogether new and unknown. He makes them sail up the Ister, and by an arm of that river, to the Eridanus, and from thence to the Rhone. Apollonius's geography is, in many instances, very exceptionable. The licence which poets are allowed, *quidlibet audenti*, is his best excuse for inaccuracies of this kind. Scaliger, who seldom spares our author, does not scruple to assert, that, "quod attinet ad situm orbis terrarum, sanè imperitus regionum fuit Apollonius. De Istro, dii boni! quas nugas." But let it be remembered, that not only poets have trifled in their descriptions of this river, but that historians and geographers, who have attempted to explain its course, have given very different and inconsistent accounts of it. Many curious traditions, and entertaining pieces of ancient Greek history are interspersed throughout this book. The speeches of Medea can never be enough admired. Her sentiments are admirably suited to her condition; they are simple, unaffected, and calculated to raise our pity. Our poet has displayed a luxuriant fancy in his description of the nuptials of Jason and Medea; and he has painted the distresses of his Argonauts, on the coast

of Africa, in the most glowing colours. This book appears, indeed, in every view of it, equal, if not superior, to any of the foregoing. We meet with some obscurities. The translator confesses his inability to ascertain the true sense of every intricate passage. Let it, however, be some alleviation of his errors, that his guides have been but few, and they not always the most intelligent; and that no part of this book, except only the story of Talus, has appeared in an English dress, before the present version was published.

VER. 32. The custom of kissing beds, columns, and doors, before they were obliged to quit them, occurs frequently in the Greek tragedians.

VER. 33. It was customary for young women, before the nuptial ceremony was performed, to present their hair to some deity, to whom they had particular obligations. Medea, therefore, previous to her departure and marriage with Jason, presents a lock of hair to her mother, to be deposited by her in the temple of some deity to whom it was consecrated.

VER. 64. Latmos was a mountain in Caria, in whose cave the moon was said by the poets to visit Endymion. Thus, in Valerius Flaccus, who seems to have had this passage in his eye, we read;

Latmius æstivâ residet venator in umbrâ,
 Dignus amore deæ; velatis cornibus et jam
 Luna venit. Lib. viii. 29.

Ver. 92. Several parts of the body were considered by the ancients as the seats of virtues and vices, of good and bad qualities. Modesty was assigned to the eyes, sagacity and derision to the nose, pride and disdain to the eye-brows, and pity to the knees; which, it was customary for suppliants, when they made their requests, to touch and embrace with reverence.

Ver. 123. Xenophon, de Venatione, makes the same observation, ἱεναὶ προσωί, *exire diluculo*. The same remark is made by Oppian and others.

Ver. 143. This noble hyperbole was copied by Virgil, B. vii. v. 515. where, speaking of Alecto, he says,

With her full force a mighty horn she winds;
Th' infernal strain alarms the gathering hinds,
The dreadful summons the deep forest took;
The woods all thunder'd, and the mountains shook.
The lake of Trivia heard the note profound;
The Veline fountains trembled at the sound;
The thick sulphureous floods of hoary Nar
Shook at the blast that blew the flames of war:
Pale at the piercing call, the mothers prest
With shrieks their starting infants to the breast.

Pitt.

This circumstance of the mothers clasping their infants to their breasts, is a very tender and affecting one. The poets seem particularly fond of it. We meet with it in the Troades of Euripides; and Camoens, in his imitation of these striking passages in Apollonius and Virgil, was too sensible of its beauty to omit it.

Such was the tempest of the dread alarms,
The babes that prattled in their nurses' arms
Shriek'd at the sounds: with sudden cold imprest,
The mothers strain'd the infants to the breast,
And shook with horror.—

The Lusiad, B. iv. p. 124.

Ver. 203. Mr. Warton is of opinion, that Virgil had this beautiful passage in his eye in the following lines:

Expleri nequit, atque oculis per singula voluit,
Miraturque, interque manus et brachia versat.

Æn. viii. v. 618.

And thus Spenser, in his Faery Queene:

But Tristram then despoiling that dead knight
Of all those goodly ornaments of praise,
Long fed his greedy eyes with the fair light
Of the bright metal, shining like sun-rays;
Handling and turning them a thousand ways.

B. vi. c. 2. ft. 39.

Ver. 292. By Selene, and Selenia, is meant the ark, of which the moon was only an emblem; and from thence the Arcades, or Arkites, had the appellation of Selenitæ. When, therefore, it is said that the Arcades were prior to the moon, it means only, that they were constituted into a nation before the worship of the ark prevailed, and before the first war upon earth commenced. *Bryant*. This boast of the Arcadians, that they were a nation before the moon gave light to the world, is also thus accounted for by some ingenious writers:

the Greeks generally ordered their affairs according to the appearance of the moon, especially those two of the new and full moon. The Spartans held it criminal to begin any great design till after they had considered the moon, as she appeared when new and at the full. The Arcadians, contrary to this general custom of the Greeks, transacted all their business of importance before the appearance of the new moon, or that of the full; and were, therefore, called in derision, *προσέληνοι*, for their neglect of this religious ceremony. Which term of reproach the Arcadians applied to their commendation, and shrewdly affirmed, that they were entitled to this epithet, because their nation was more ancient than the moon.

Ver. 301. Sesostris not only overran the countries which Alexander afterwards invaded; but crossed both the Indus and the Ganges; and thence penetrated into the eastern ocean. He then turned to the north, and attacked the nations of Scythia; till he at last arrived at the Tanais, which divides Europe and Asia. Here he founded a colony; leaving behind him some of his people, as he had just before done at Colchis. He subdued Asia Minor, and all the regions of Europe; where he erected pillars with hieroglyphical inscriptions, denoting, that these parts of the world had been subdued by the great Sesostris or Sesoosis. *Diodorus Sic.* L. i. p. 49. Apollonius Rhodius, who is thought to have been a native of Egypt, speaks of the exploits of this prince, but mentions no name; not knowing, perhaps, by which properly to distinguish him, as he was represented under so many. He represents him as conquering all Asia and Europe; and this in times so remote, that many of the cities which he built, were in ruins before the era of the Argonauts. *Bryant*.

Ver. 311. The Colchians, says the Scholiast, still retain the laws and customs of their forefathers; and they have pillars of stone, upon which are engraved maps of the continent and of the ocean. The poet calls these pillars *πύργους*; which, we are told, were of a square figure, like obelisks. These delineations had been made of old, and transmitted to the Colchians by their forefathers; which forefathers were from Egypt. The Egyptians were very famous for geometrical knowledge. All the flat part of this country being overflowed, it is reasonable to suppose, that they made use of this science to determine their lands, and to make out their several claims at the retreat of the waters. *Bryant*.

Ver. 451. Thus Dido, in a fit of despondency and rage, threatens Æneas:

Et cum frigida mors anima seduxerit artus;

Omnibus umbra locis adero.

Æn. iv. 385.

Ver. 526. Our poet, whenever he introduces moral sentences, which is but seldom, takes care to do it with the utmost propriety; at a time when the occasion warrants the use of them, and gives additional force and lustre to the truths which they convey. Virgil has adopted this sentiment of Apollonius on a similar occasion:

Improbe amor, quid non mortalia pectora cogis!

Æn. iv. 412.

Ver. 412. From the Greek word *Ερως*, in the original, Mr. Bryant has taken occasion to give us the following curious account of Cupid and his emblems: Iris, the rainbow, seems to have been expressed *Eiras*, by the Egyptians. Out of *Eiras* the Greeks formed *Eros*, a god of love; whom they annexed to Venus, and made her son. And finding that the bow was his symbol, instead of the Iris, they gave him a material bow, with the addition of a quiver and arrows. Being furnished with these implements of mischief, he was supposed to be the bane of the world.

Ver. 350. The remorse and concern of Medea are very strongly expressed by this simple action, of turning aside and concealing her face from the scene of barbarity. Signs are sometimes more significant than words, however eloquent and pathetic; and silence is often the surest indication of heart-felt sorrow.

Ver. 613. Cadmus settling in Bœotia, married Harmonia, or Hermione, the daughter of Venus by Mars. A conspiracy being formed against him, he was obliged to quit Bœotia, and retire with his wife into Illyricum. They are said by the poets to have been transformed into serpents. Of this transformation, and of the tomb, which the people of Illyricum erected to their memory, Dionysius thus speaks:

Ἰδοὺς περικυδία τύμβον,
Τύμβον, ὃν Ἀρμονίης Καδμοῖδ' τε φῆμις ἐνίσπει.
Κιῖδι γὰρ εἰς ὀφίων σκολιὸν γένος ἠλλάξαντο,
Ὅπποτ' ἀπ' Ἰσμηνοῦ λιπαρὸν μετὰ γῆρας ἴκοντο.

Ver. 649. By Megara, the daughter of Creon king of Thebes, Hercules had several sons, whom he slew in a fit of madness. Soon after this slaughter he left Thebes, and received expiation for the murder at Athens, according to some; but according to our poet, at Macris.

Ver. 689. In the original,

Μηδομένη δ' ἄνυσιν τοῖο πλόα, ὤρεσιν ἀέλλας
Ἀντικρύ.

Juno, anxious for the safety of her crew, and knowing they must visit Circe's isle, raised a storm for that purpose; which drove them back, up the Chronian sea, as far as the island *Electris*. By thus changing their direction, she shortened their voyage, and hastened their approach to the island of Circe.

Ver. 727. There are so many inconsistent fables among the ancients, respecting the country and situation of the Hyperboreans, that modern geographers have not been able to reconcile them. See *Gesner de Navigationibus extra columnas Herculis*, *Præf.* 2.

Callimachus, in his hymn to Delos, speaks of them as a people of high antiquity, Pindar places them near the Isles of the Blest, which were supposed to have been opposite to Mauritania, and celebrates their rites. See *Olymp. Od.* iii. and *Pyth.* x.

Ver. 728. Jupiter, incensed that *Æsculapius* had restored Hippolitus to life, destroyed him with his thunder. Apollo, willing to revenge the death of his son, directed his darts against the Cyclops, by whose hands the thunder of Jupiter was formed. The god, for this offence, banished him from heaven. See *Virg. Æn.* vii. v. 764.

Ver. 775. In the original,

ἵνα ψηφίσιν ἀπωμόρξαντο καμόντας
Ἰδρῶ ἄλκις· χροῖῃ δὲ κατ' αἰγιαλοῖο κίχυνται
Εἰκίλοι.

The first line is obscure; for it may either mean, that they made use of the *ψῆφαι* as *επιγγίσματα*, or *strigiles*, for rubbing; or that, in rubbing, the sweat dropped on the stones, *ψηφίσιν*, and discoloured them. If this sense be the true one, the following lines may, perhaps, be somewhat less exceptionable than those already given:

To cleanse their sides from copious sweat they
toil,
Which, trickling down, distain'd the chalky soil.

This passage will receive some illustration from Aristotle, *περὶ θαυμασίων ἀκρωμάτων*; who asserts, that among other monuments of the Argonautic expedition this was one, τὸ ἐπὶ τῶν ψῆφων λεγόμενον, παρὰ τὸν αἰγιαλὸν ψήφους φασὶν εἶναι ποικίλας. ταύτας δὲ οἱ Ἕλληνες, οἱ τὴν νῆσον οἰκῶντες, λίγουσι, τὴν χροῖαν λαβὼν ἀπὸ τῶν ἐπιγγισμάτων, ὧν ἰποῖντο ἀλειφόμενοι.

Ver. 783. We have the fullest description of Circe and her habitation in the 10th *Odys.* of Homer: from which book succeeding poets have been supplied with ample materials, to assist them in dressing out this entertaining fiction.

It is entertaining to observe, how different poets have written on the same or similar subjects. And according as they have acquitted themselves in working them up, we may form a judgment of their taste and genius.

Ver. 932. Others ascribe this discovery to Prometheus, for which Jupiter promised to release him from his chains.

Ver. 946. The story here alluded to, is mentioned by several of the ancient mythologists. Medea, when in Elysium, or the Fortunate Islands, gained the affections of Achilles, who then dwelt in those regions and married her. The ancients are by no means consistent in their accounts of these Elysian fields. Some affirm them to be in the moon, others in the milky way. But it is more generally supposed, that they are situated in some fertile and pleasant region on earth. See *Homer's Odys.* B. iv. and the note to v. 765 of *Pope's Trans.* and *Gesner de Insulis Beat.* *Præf.* 2.

Ver. 1016. Thus Ceres, when she undertook to bring up Triptolemus, in order to render him immortal, fed him all day with celestial food, and covered him all night with burning embers. His father Eleusinus, observing this, expressed his fears for his child. Ceres, displeased with the behaviour, struck him dead, but conferred immortality on his son.

Ver. 1047. The Syrens were Cuthite and Canaanitish priests, who had founded temples, which were rendered more than ordinary famous on account of the women, who officiated. With their music they enticed strangers into the purlieus of their temples, and then put them to death. The female part of their choirs were maintained for a twofold purpose; both on account of their voices and their beauty. They were said to be the children of the muse Terpsichore; by which is meant only, that they were the daughters of harmony. *Bryant.*

Orpheus, in the Argonautics ascribed to him, has not only mentioned these syrens, but given us the song, alluded to by Apollonius, which was so efficacious as to prevent the ill effects of the syrens' music. We have the most particular description of these enchantresses in the 12th book of Homer's *Odyssey*.

Ver. 1054. Among others, whom Ceres sent in search of her daughter Proserpine, were the syrens. She is said to have given them wings, to enable them to explore the country with greater ease and expedition.

Ver. 1086. These flaming billows, must have been very alarming to the sailors, who were ignorant of the cause of them. The poet has therefore, in his description of Scylla and Charybdis, with great judgment selected these remarkable appearances, which could not fail to excite terror and astonishment.

Ver. 1091. Virgil, in his 1st *Æneid*, has made use of the assistance of the sea-nymphs on a similar occasion.

*Cymothoe simul et Triton adnixus, acuto
Detudunt naves scopulo.*

And Camoens, who seems to have been particularly pleased with this description, has, in imitation of it, summoned together a vast number of sea-nymphs to rescue the navy from destruction. See B. ii. p. 48.

Ver. 1151. One would not expect to find in so grave a writer as Hesiod any thing like that low kind of wit, which the double sense of words gives rise to. The taste of the ancients, it has been said, was too good for these fooleries. Yet his learned annotator is of opinion, that Hesiod has availed himself of the ambiguity of the word *μηδός*. He thus discusses this curious subject in a note on ver. 180 in *Theog.*

Omnino existimo Hesiodum, et qui eum hac in re antecesserunt, aut sequuti sunt, lusisse in ambiguo. Vox *μηδός* duo significabat, pudenda et consilium, cumque audissent Saturnum patri *ἀποτιμᾶν μηδός*, datâ operâ ita rem acceperunt, quasi narraretur ei pudenda rescuisse, ut *τραυτολογίαίς*, quas hac de re habent, locus daretur, quamvis probè scirent consilium seu consiliarios intelligi, quorum suâsu Thessaliâ excedere coactus fuerat Saturnus. Hosce consiliarios fugavit, et navibus in Asiam redire coegit.

Ver. 1281. *Thus Pycteus.* (Note, it ought to be *Nycteus*). Antiope, the daughter of Nycteus, was disflowered by Jupiter in the form of a satyr. To

avoid the anger of her father, she fled to Sicyon, a city in Peloponnesus: where she was protected by Epops. Nycteus at his death requested his brother Lycus to lay siege to Sicyon, but to show no compassion to Antiope. He, willing to comply with the request of Nycteus, besieged the city, killed Epops, and took Antiope prisoner.

Ver. 1283. Danaë was the daughter of Acrisius. Having been informed by the oracle, that his grandson should bereave him of his life and crown, he shut her up in a tower of brass. But Jupiter, according to the fable, made his way through the roof in a shower of gold. The meaning of which fable is; Pretus, who was surnamed Jupiter, bribed the keepers, and having thus gained access to the prisoner, made her the mother of Perseus. Acrisius being apprized of this illicit commerce, and the fruits of it, ordered the mother and her son to be locked up in a chest, and thrown into the sea.

Ver. 1338. Jupiter being in love with Semele, Juno concerted the following scheme for the destruction of her rival. She appeared to Semele in the shape of Beroë, a nurse, and insinuated to her, that if her lover were really Jupiter, he would not disguise himself like a mortal: and that the certainty of his divinity could no otherwise be ascertained, than by his appearing before her with the same majesty, which he assumed when he visited Juno. Semele followed her advice; and Jupiter having sworn by Styx to grant her whatever she might ask, approached her in the full blaze of his glory, and Semele was consumed by his lightning. Jupiter being desirous to preserve the infant Bacchus, of whom Semele had been for some time pregnant, commissioned Mercury to deliver him from the flames, by taking him out of her womb, and conveying him to Eubœa. Here he was committed to the care of Macris. But Juno's resentment being not yet subsided, she forbade her favourite island Eubœa to give protection to the nurse of Bacchus; who now fled for refuge to Phœacia.

Ver. 1505. "The principal image, (says Pope, *ll. xiv.* in a note on v. 457.) is more strongly impressed on the mind by a multitude of similes, which are the natural product of an imagination labouring to express something very fast: but finding no single idea sufficient to answer its conception, it endeavours, by redoubling the comparisons, to supply this defect." Since then the heaping together of similes, when occasion requires, is considered as a proof of true poetical enthusiasm, it must be allowed that our poet, in this instance, as well as in many others, has shown himself capable of rising above that uniform mediocrity, which has, perhaps too hastily, been ascribed to him. For we have here an accumulation of comparisons the most elegant and apposite. The despondent heroes are likened to spectres and statues distilling drops of blood. Medea's fair attendants, lamenting their misfortunes, are compared to swallows bereaved of their nests, and screaming for their mother; and, immediately after, to the plaintive notes of dying swans.

This simile of the swallow is copied by Virgil, *Æn.* xii. 473.

Ver. 1649. In Africa, where, according to Virgil, Atlas reigns :

Ultimus Æthiopum locus est, ubi maximus Atlas—

Ver. 1651. They were the daughters of Hesperus, the brother of Atlas, and shepherdesses. Hercules carried off their sheep (which, for their exquisite beauty, were called golden), and slew the shepherd, whose name was Draco. The Greek word *μηλα* which signifies apples as well as sheep, is supposed to have given rise to the fiction.

Some are of opinion, that the fable of the serpent who guarded the golden apples, and was said to have been slain by Hercules, derives its origin from the Moian account of the fall.

Ver. 1749. Translated by Virgil, *Æn.* vi. 453.

—qualem primo qui surgere mense
Aut videt aut vidisse putat per nubila lunam.

Ver. 1791. It has been already remarked, that Danaë was enclosed in a chest by the command of her father Acrisius, and thrown into the sea. This chest was cast upon the island Seripus, one of the Cyclades in the Ægean sea. It was found by a fisherman, who brought it to Polydectes, king of the island. He received the mother and child with great tenderness: but falling in love with Danaë, and fearing the resentment of Perseus, now grown to manhood, he planned the following scheme for his destruction. Having invited the neighbouring princes to an entertainment, he desired each of them to bring with him some rarities for the feast. Perseus was required to bring on this occasion the head of Medusa, one of the Gorgons: an enterprise which the king imagined would prove fatal to him; but by the assistance of Minerva, he cut off the Gorgon's head; which, when he carried it to the island, turned its inhabitants into stone, and among the rest, their king, Polydectes, who had sent him out on the expedition.

See Pindar's Pyth. Od. xii.

Ver. 1817. Virgil takes occasion to mention the same custom in the following words :

Ter circum accensos cincti fulgentibus armis
Decurrere rogos: ter mactum funeris ignem
Lustravare in equis, ululatuque ore dederunt.

Æn. xi.

Ver. 1870. It would contribute towards clearing this obscure passage, if, instead of *ἰδὼς*, we read *ὄψις*. This conjecture may the more readily be admitted, as we meet with the same expression, *ἀγκῶνος ὄψις πρὸς χοντρος*, at v. 1626.

Ver. 1943. The following is Broome's note, prefixed to his translation of the story of Talus.

The following verses from Apollonius will appear very extravagant, unless we have recourse to their allegorical meaning. Plato in his *Minos* writes thus:

Talus and Rhadamanthus were the assistants of Minos in the execution of his laws. It was the office of Talus to visit all parts of Crete thrice every year, to enforce them with the utmost severity. The poet alludes to this custom in these words:

Fierce guard of Crete! who thrice each year explores

The trembling isle, and strides from shores to shores.

Talus is fabled to be formed of brass, because the laws, which he carried with him in his circuit, were engraven upon brazen tables. It is not improbable but the fable of the bursting the vein above the ankle of Talus, by which he died, arose from the manner of punishment practised by him; which was, by the opening of a vein above the ankles of criminals, by which they bled to death.

Ver. 2093. See on this subject Pindar's *Pyth. Od.* iv. towards the beginning.

Ver. 2096. The Sintians were originally Thracians; but settled afterwards at Lemnos.

Ver. 2118. It was customary with the Greeks, not only to sing hymns, but to recite heroic poems in honour of the gods and heroes at their festive meetings.

C-----'S COLUTHUS LYCOPOLITES.

THE RAPE OF HELEN, &c.

Ye nymphs of Troy, for beauty fam'd, who
trace

From Xanthus' fertile streams your ancient race,
Oft on whose sandy banks your tires are laid,
And many a trinket which your hands have made;
What time to Ida's hallow'd mount ye throng,
To join the festive choir in dance and song;
No longer on your favourite banks repose,
But come, the judgment of the swain disclose:
Say from what hills, to trackless deeps unknown,
Rush'd with impetuous zeal the daring clown; 10
Say to what end, with future ills replete,
O'er distant oceans sail'd a mighty fleet;
What seas could this adventurous youth embroil,
Sow discord's seeds, o'er what disastrous soil?
Say from what source arose the dire debate,
Which swains could end and goddesses create.
What his decision? Of the Grecian dame
Who to the shepherd's ear convey'd the name?
Speak, for ye saw, on Ida's still retreat,
Judicial Paris fill his shepherd's seat; 20
Venus ye saw, the graces' darling queen,
As on her judge approv'd she smil'd serene.

What time Hæmonia's lofty mountains rung
With hymeneal songs for Peleus sung,
Officious Ganymede, at Jove's request,
Supplied with sparkling wine each welcome guest;
And all the gods to Thetis' nuptials came,
Sister of Amphitrite, honour'd dame.
Earth-shaking Neptune left his azure main,
And Jove supreme forsook his starry plain: 30
From Helicon, with odorous shrubs o'erspread,
The muses' tuneful choir Apollo led.
Him Juno follow'd, wife of sovereign Jove:
With harmony the smiling queen of love
Hasten'd to join the gods of Chiron's festive
grove.

Cupid's full quiver o'er her shoulder thrown,
Persuasion follow'd with a bridal crown.
Minerva, though to nuptial rites a foe,
Came; but no helmet nodded o'er her brow.
Diana to the Centaur's grove resorts, 40
And for one day forgets her rural sports.
His loose locks shaking as the zephyrs play'd,
Not long behind convivial Bacchus stay'd.
War's god, as when to Vulcan's dome he sped,
No spear his hand sustain'd, no casque his head,

Such how, without his helmet or his lance,
Smiling he look'd, and led the bridal dance.
But from these blissful scenes was discord warn'd;
Peleus rejected her, and Chiron scorn'd.

And by the gadfly stung, the heifer strays 50
Far from its fields, through every devious maze;
Thus, stung with envy, discord roam'd, nor ceas'd
Her baneful arts to interrupt the feast.
Oft from her flinty bed she rush'd amain,
Then flood, then sunk into her seat again:
With desperate hand she tore her snaky head,
And with a serpent-scourge she lash'd her flinty
bed.

To dart the forky lightning, and command
From hell's abyfs the Titans' impious band,
Jove from his throne with rebel-arm to wrest, 60
Were projects form'd within the fury's breast.
But, though incens'd she dreaded Vulcan's ire,
Who forms Jove's bolt, and checks the raging
fire,

Her purpose changing, she with rattling arms
Diffention meditates and dire alarms;
If haply clattering shields can strike dismay,
And from the nuptials drive the gods away.
But Mars she dreaded, oft in arms array'd,
And this new project with complacence weigh'd.
The burnish'd apples, rich with golden rind, 70
Growth of Hesperian gardens struck her mind.
Resolv'd contention's baneful seeds to sow,
She tore the blushing apple from its bough,
Grasp'd the dire source whence future battles
sprung,

And midst the gods the golden mischief flung.
The stately wife of Jove with wondering eyes
Beheld and wish'd to grasp the golden prize.
Beauty's fair queen to catch the apple strove;
For 'tis the prize of beauty and of love.

Jove mark'd the contest, and, to crush debate, 80
Thus counsel'd Hermes, who beside him sat:

' Paris, perchance, from Priam sprung, you
' know:

' His herds he grazes on mount Ida's brow,
' And oft conducts them to the dewy meads,
' Through which his streams the Phrygian Xan-
' thus leads:

' Show him yon prize, and urge him to declare
' Which of these goddesses he deems most fair:

' In whom, of all his matchless skill can trace
 ' The close arch'd eyebrow and the roundest face,
 ' On such a face, where bends the circling bow,
 ' The golden apple, beauty's prize, bestow.' 91
 Thus spoke the fire: the willing son obey'd,
 And to their judge the deities convey'd.
 Each anxious fair her charms to heighten tries,
 And dart new lustre from her sparkling eyes.
 Her veil aside insidious Venus flung;
 Loose from the clasp her fragrant ringlets hung;
 She then in golden cauls each curl compress'd,
 Summon'd her little loves, and thus address'd:
 ' Behold, my sons, the hour of trial near! 100
 ' Embrace, my loves, and bid me banish fear.
 ' This day's decision will enhance my fame,
 ' Crown beauty's queen, or sink in endless shame.
 ' Doubting I stand, to whom the swain may say,
 ' Bear thou, most fair, the golden prize away.
 ' Nurs'd was each grace by Juno's fostering hand;
 ' And crowns and sceptres shift at her com-
 ' mand.
 ' Minerva dictates in th' embattled field;
 ' And heroes tremble when she shakes her shield.
 ' Of all the goddesses that rule above, 110
 ' Far most defenceless is the queen of love.
 ' Without or spear or shield must Venus live;
 ' And crowns and sceptres she has none to give.
 ' Yet why despair? Though with no falchion
 ' grac'd,
 ' Love's filken chain surrounds my slender waist.
 ' My bow this cestus, this the dart I fling,
 ' And with this cestus I infix my sting.
 ' My sting infix'd renews the lover's pain,
 ' And virgins languish but revive again.'
 Thus to her loves the rosy-finger'd queen 120
 Told all her fears, and vented all her spleen:
 To every word they lent a willing ear,
 Round their fond mother clung, and strove to
 cheer.

And now they reach mount Ida's grassy steep,
 Where youthful Paris feeds his father's sheep:
 What time he tends them in the plains below,
 Through which the waters of Anaurus flow,
 Apart he counts his cattle's numerous flock,
 Apart he numbers all his fleecy flock.
 A wild goat's skin, around his shoulders cast, 130
 Loose fell and flow'd below his girded waist.
 A pastoral staff, which swains delight to hold,
 His roving herds protected and controll'd.
 Accoutred thus, and warbling o'er his song,
 He to his pipe melodious pac'd along.
 Unnoted oft, while he renews his lay,
 His flocks desert him, and his oxen stray.
 Swift to his bower retires the tuneful man,
 To pipe the praise of Hermes and of Pan.
 Sunk is each animal in dead repose;
 No dog around him barks, no heifer lows:
 Echo alone rebounds through Ida's hills,
 And all the air with sounds imperfect fills.
 The cattle, sunk upon their verdant bed,
 Close by their piping lord repose their head.
 Beneath the shades which sheltering thickets blend,
 When Paris' eye approaching Hermes ken'd,
 Back he retires, with sudden fear impress'd,
 And shuns the presence of the heavenly guest;

To the thick shrubs his tuneful reed conveys, 150
 And all unfinish'd leaves his warbled lays.
 Thus winged Hermes to the shepherd said,
 Who mark'd the gods approach with silent dread:
 ' Dismiss thy fears, nor with thy flocks adide;
 ' A mighty contest Paris must decide.
 ' Haste, judge announc'd; for whose decision wait
 ' Three lovely females, of celestial state.
 ' Haste, and the triumph of that face declare,
 ' Which sweetest looks, and fairest midst the fair:
 ' Let her, whose form thy critic eye prefers, 160
 ' Claim beauty's prize, and be this apple hers.
 Thus Hermes spoke; the ready swain obey'd,
 And to decide the mighty cause essay'd.
 With keenest look he mark'd the heavenly dames;
 Their eyes, quick flashing as the lightning's flames,
 Their snowy necks, their garments fring'd with
 gold,
 And rich embroidery wrought in every fold;
 Their gait he mark'd, as gracefully they mov'd,
 And round their feet his eye sagacious rov'd.
 But, ere the smiling swain his thoughts express'd,
 Grasping his hand him Pallas thus address'd; 171
 ' Regard not Phrygian youth, the wife of Jove,
 ' Nor Venus heed the queen of wedded love:
 ' But martial prowess if thy wisdom prize,
 ' Know, I possess it; praise me to the skies.
 ' Thee, same reports, puissant states obey,
 ' And Troy's proud city owns thy sovereign sway:
 ' Her suffering sons thy conquering arm shall
 ' shield,
 ' And stern Bellona shall to Paris yield.
 ' Comply; her succour will Minerva lend, 180
 ' Teach thee war's science, and in fight defend.'
 Thus Pallas strove to influence the swain,
 Whose favour Juno thus attempts to gain:
 ' Should'st thou with beauty's prize my charms
 ' reward,
 ' All Asia's realms shall own thee for their lord.
 ' Say, what from battles but contention springs?
 ' Such contests shun; for what are wars to kings?
 ' But him, whose hands the rod of empire sway,
 ' Cowards revere, and conquerors obey.
 ' Minerva's friends are oft Bellona's slaves, 190
 ' And the fiend slaughters whom the goddess
 ' saves.'
 Proffers of boundless sway thus Juno made;
 And Venus thus, contemptuous smiling, said:
 But first her floating veil aloft she threw,
 And all her graces to the shepherd shew;
 Loosen'd her little loves' attractive chain,
 And tried each art to captivate the swain.
 ' Accept my boon' (thus spoke the smiling
 dame),
 ' Battles forget, and dread Bellona's name.
 ' Beauty's rich meed at Venus' hand receive,
 ' And Asia's wide domain to tyrants leave. 201
 ' The deathful fight, the din of arms I fear;
 ' Can Venus' hand direct the martial spear?
 ' Women with beauty stoutest hearts assail,
 ' Beauty, their best defence, their strongest mail,
 ' Prefer domestic ease to martial strife,
 ' And to exploits of war a pleasing wife,
 ' To realms extensive Helen's bed prefer,
 ' And scoff at kingdoms, when oppos'd to her,

'Thy prize with envy Sparta shall survey, 210
'And Troy to Paris tune the bridal lay.'

The shepherd, who astonish'd stood and mute,
Consign'd to Venus the Hesperian fruit,
The claim of beauty, and the source of woes;
For dire debates from this decision rose.
Uplifting in her hand the glowing prize,
She rallied thus the vanquish'd deities:

'To me, ye martial dames, the prize resign;
'Beauty I court, and beauty's prize is mine.
'Mother of mighty Mars and Vulcan too, 220
'Fame says, the choir of graces sprung from
'you:

'Yet distant far, this day, your daughters stray'd,
'And no one grace appear'd to lend you aid.
'Mars too declin'd t' assert his mother's right,
'Though oft his brandish'd sword decides the
'fight.

'His boasted flames why could not Vulcan cast,
'And at one blaze his mother's rivals blast?
'Vain are thy triumphs, Pallas, vain thy scorn;
'Thou, not in wedlock, nor of woman born.
Jove's teeming head the monstrous birth con-
'rains, 230

'And the barb'd iron ripp'd thee from his brains.
'Brac'd with th' unyielding plaits of ruthless
'mail,

'She curses Cupid and the silken veil.
'Connubial bliss and concord she abhors,
'In discord glories, and delights in wars.
'Yet know, virago, not in feats of arms
'Triumph weak women, but in beauty's charms.
'Nor men nor women are those mungrels base,
'Like you, equivocal in form and face.' 239

In terms like these the laughter-loving queen
Rallied her rivals, and increas'd their spleen,
As, lifting high, she view'd with secret joy
Her beauty's triumphs, and the bane of Troy.
Inspir'd with love for her, the fair unknown,
By beauty's conquering queen pronounc'd his
own,

Ill-fated Paris to the forest's maze
Men vers'd in Pallas' various arts conveys.
At Pericles' command they give the blow,
And lay the glories of the forest low.
He, artist fam'd, his frantic prince obey'd, 250
And burden'd ocean with the ships he made.
From Ida's summits rush'd the daring swain,
And to its bowery shades preferr'd the boisterous
main.

Th' extended beach with choice oblations stor'd,
And his protectress Venus oft implor'd,
The billowy deep his furrowing keel divides,
And in the Hellespont his vessel rides.
But prodigies announce approaching ill,
And with presages sad each bosom fill. 259

Up-heaving waves heaven's starry concave shroud,
And round each Bear is cast a circling cloud.
Clouds and big waves discharge their watery
stores;

Full on the deck the bursting torrent pours.
Their sturdy oars with unabating sweep
Far whitening agitate the angry deep.
Dardanus pass'd, and Ilion's fertile plains,
The mouth of Ismarus' lake th' adventurer gains.

Now, far remote, they view Pangræa's height:
Now Phillis' rising tomb attracts their sight,
And the dull round she nine times trod in vain,
To view the faithless wanderer again. 271

Hæmonia's meads remote, the Trojan spies
Th' Achaian cities unexpected rise:
Phthia, with heroes far renown'd replete;
Mycenæ, fam'd for many a spacious street.
Beside the meads, where Erymanthus glides,
Sparta aspires, that boasts her beauteous brides;
Sparta with joy th' expecting swain survey'd,
Lav'd by Eurotas, by Atreides sway'd.

Nor distant far, o'er-shaded by a wood, 280
Beneath a mountain's brow Therapnæ stood.
Short was their voyage now: the bending oar
Was heard to lash the foamy surge no more.
The sailors, safe embosom'd in the bay,
Firm to the beach confine the corded stay.

In purifying waters plung'd the swain,
And, rising thence, pac'd slowly o'er the plain;
For much he fear'd, lest his incautious tread
O'er his wash'd feet the spatter'd mire should
spread:

Or lest his hair, beneath his casque confin'd, 290
Should, if he ran, be ruffled with the wind.
The city's splendour Paris' eye detains,
The citizen's abodes, and glistering fanes.
Here Pallas' form, in mimic gold pourtray'd,
Here Hyacinthus' image he survey'd.

Him with delight the Amiclæans view'd,
Pursuing Phœbus, and by him pursu'd;
But, sore displeas'd at jealous Zephyr's spite,
They urg'd the stripling to unequal fight;
For Phœbus' efforts ineffectual prov'd, 300
To save from Zephyr's rage the youth he lov'd.

Earth with compassion heard Apollo's cries,
And from her bosom bade a flower arise,
His favourite's name, impress'd upon whose
leaf,

Still, as the god contemplates, soothes his grief.
Now Priam's son before Atreides' dome
Exulting stood in beauty's purple bloom.
Not Semele, by Jove's caresses won,
On Jove bestow'd so beautiful a son:

(Forgive me, Bacchus, seed of Jove supreme)
Such peerless graces round his person beam. 311
Touch'd by fair Helen's hand, the bolts recede;
She to the spacious hall repair'd with speed:
Her form distinct th' unfolded portals show;
She lock'd, she ponder'd, and again withdrew.

Then on a radiant seat she bade him rest,
And, still insatiate, gaz'd upon her guest.
Awhile she likens him in graceful mien
To love, attendant on the Cyprian queen.
But 'tis not love, she recollects again; 320

Nor bow nor quiver deck this gallant swain.
'Tis Bacchus sure, the god of wine, she said;
For o'er his cheeks a rosy bloom is spread.
Daring at length her faltering voice to raise,
She thus express'd her wonder and her praise:

'Whence art thou, stranger? whence thy
'comely race?

'Thy country tell me, and thy natal place.
'In thee I mark the majesty of kings:
But not from Greece thy lofty lineage springs;

' Not sandy Pyle thine origin can show; 330
 ' I know not thee, though Nestor's son I know.
 ' Phthia, the nurse of heroes, train'd not thee;
 ' For known are all th' Æacidæ to me,
 ' Peleus, and Telamon renown'd in fight,
 ' Patroclus' courtesy, Achilles' might.'

Inspir'd by love, thus spoke the gentle dame;
 And he thus answering, fann'd the rising flame:
 " If e'er recording fame, illustrious maid, 338
 " Hath to thine ear great Ilion's name convey'd,
 " Ilion, whose walls on Phrygian frontiers stand,
 " Rear'd by Apollo's and by Neptune's hand;
 " Him if thou know'st, most opulent of kings,
 " Who reigns o'er Ilion, and from Saturn springs;
 " I to hereditary worth aspire;
 " The wealthy Priam is my honour'd sire.
 " My high descent from Dardanus I prove;
 " And ancient Dardanus descends from Jove.
 " Th' immortals thus forsake the realms of light,
 " And mix with mortals in the social rite.
 " Neptune and Phœbus thus forsook the sphere,
 " Firm on its base my native Troy to rear. 351
 " But know, on three fair goddesses, of late,
 " Sentence I pass'd, and clos'd the long debate.
 " On Venus, who with charms superior shone,
 " I lavish'd praises, and conferr'd my boon.
 " The Cyprian goddess, pleas'd with my decree,
 " Reserv'd this recompence, O queen, for me;
 " Some faithful fair, possess'd of heavenly charms,
 " Should, she protested, bless my longing arms;
 " Helen her name, to beauty's queen ally'd; 360
 " Helen, for thee I stemm'd the troubled tide.
 " Unite we now in Hymen's mystic bands:
 " Thus love inspires, and Venus thus commands.
 " Scorn not my suit, nor beauty's queen despise:
 " More need I add to influence the wise?
 " For well thou know'st, how dastardly or base
 " Is Menelaus's degenerate race.
 " And well I know, that Græcia's ample coast
 " No fair like thee, for beauty fam'd, can boast."

He said: on earth her sparkling eyes she cast,
 Embarrass'd paus'd awhile, and spoke at last: 371
 ' To visit Ilion, and her towers survey,
 ' Rear'd by the god of ocean and of day,
 ' (Stupendous labours by celestials wrought)
 ' Hath oft, illustrious guest, employ'd my thought,
 ' Oft have I wish'd to saunter o'er the vales,
 ' Whose flowery pasture Phœbus' flocks regales;
 ' Where, beneath Ilion's walls, along the meads,
 ' The shepherd-god his lowing oxen feeds.
 ' To Ilion I'll attend thee: haste, away; 380
 ' For beauty's queen forbids our long delay.
 ' No husband's threats, no husband's search I
 ' dread,

' Though he to Troy suspect his Helen fled.'
 The Spartan dame, of matchless charms possess'd,
 Proffer'd these terms to her consenting guest.
 Night, which relieves our toils, when the bright
 sun,

In ocean sunk, his daily course has run,
 Now gives her softest slumbers, ere the ray
 Of rising morn proclaims th' approach of day.
 Two gates of airy dreams she opens wide; 390
 Of polish'd horn is this, where truths abide:

Voices divine through this mysterious gate
 Proclaim th' unalterable will of fate.
 But through the ivory-gate incessant troop
 Of vain, delusive dreams, a faithless group.
 Helen, seduc'd from Menelaus' bed,
 Th' adventurous shepherd to his navy led:
 To Troy with speed he bears the fatal freight;
 For Venus' proffers confidence create.

At morning's dawn Hermione appears, 400
 With tresses discompos'd and bath'd in tears;
 She rous'd her menial train, and thus express'd
 The boding sorrows of her troubled breast:
 ' Where, fair attendants, is my mother fled,
 ' Who left me sleeping in her lonely bed?
 ' For yesternight she took her trusty key,
 ' Turn'd the strong bolt, and slept secure with me.'
 Her hapless fate the pensive train deplore,
 And in thick circles gather round the door;
 Here all contend to moderate her grief, 410
 And by their kind condolence give relief:
 ' Unhappy princess, check the rising tear;
 ' Thy mother, absent now, will soon appear.
 ' Soon as thy sorrow's bitter source she knows,
 ' Her speedy presence will dispel thy woes.
 ' The virgin-check, with sorrow's weight o'er-

' come,
 ' Sinks languid down, and loses half its bloom.
 ' Deep in the head the tearful eye retires,
 ' There fullen sits, nor darts its wonted fires. 419
 ' Eager, perchance, the band of nymphs to meet,
 ' She saunters devious from her favourite seat,
 ' And, of some flowery mead at length possess'd,
 ' Sinks on the dew-bespangled lawn to rest.
 ' Or to some kindred stream perchance she strays,
 ' Bathes in Eurotas' streams, and round its mar-

' gin plays.'
 ' Why talk ye thus?' (the pensive maid replies,
 The tears of anguish trickling from her eyes)
 ' She knows each roseate bower, each vale and
 ' hill,
 ' She knows the course of every winding rill.
 ' The stars are set; on rugged rocks she lies: 430
 ' The stars are up; nor does my mother rise.
 ' What hills, what dales thy devious steps detain?
 ' Hath some relentless beast my mother slain?
 ' But beasts, which lawless round the forest rove,
 ' Revere the sacred progeny of Jove. [brow,
 ' Or art thou fall'n from some steep mountain's
 ' Thy corse conceal'd in dreary dells below?
 ' But through the groves, with thickest foliage
 ' crown'd, [ground,
 ' Beneath each shrivell'd leaf that strews the
 ' Assiduous have I sought thy corse in vain: 440
 ' Why should we then the guiltless grove arraign?
 ' But have Eurotas' streams, which rapid flow,
 ' O'erwhelm'd thee bathing in its deeps below?
 ' Yet in the deeps below the Naiads live,
 ' And they to womankind protection give.'

Thus spoke she sorrowing, and reclin'd her
 head,
 And sleeping seem'd to mingle with the dead;
 For sleep his elder brother's aspect wears,
 Lies mute like him, and undisturb'd by cares.
 Hence the swollen eyes of females, deep distress'd,
 Oft, when the tear is trickling, sink to rest. 451

In this delusive dream the sleeping maid
Her mother saw, or thought she saw, portray'd.
Aloud she shriek'd, distracted and amaz'd,
And utter'd thus her anguish as she gaz'd:

' Last night far distant from your daughter fled.
' You left me slumbering in my father's bed.
' What dangerous sleeps have not I strove to
 ' gain?
' And stroll'd o'er hills and dales for thee in vain?"
 " Condemn me not (replied the wandering
 " dame):

460

" Pity my sufferings, nor augment my shame.
" Me yesterday, a lawless guest beguil'd,
" And distant tore me from my darling child.
" At Cytherea's high command I rove;
" And once more revel in the walks of love."
She said: her voice the sleeping maid alarms;
She springs to clasp her mother in her arms.

In vain: no mother meets her wistful eyes;
And now her tears redouble and her cries:

' Ye feathered race, inhabitants of light, 470
' To Crete's fam'd isle direct your rapid flight.
' There to my sire th' unwelcome truth proclaim,
' How yesterday a desperate vagrant came,
' Tore all he dotes on from his bridal bed,
' And with his beauteous queen abruptly fled."

The restless fair, her mother to regain,
Thus to the winds bewail'd and wept in vain.
The Thracian town diminish'd from their view,
And fleet o'er Helle's strait the vessel flew.
The bridegroom now his natal coast descry'd, 480
And to the Trojan port conducts his bride.
Cassandra from her tower beheld them sail,
And tore her locks, and rent her golden veil.
But hospitable Troy unbars her gate,
Receives her citizen and seals her fate.

NOTES ON THE RAPE OF HELEN.

COLUTHUS LYCOPOLITES, a Theban poet, flourished in the reign of the emperor Anastasius, about five hundred years after Christ. He is said to have been the author of several poems; none of which have come down to us except this, which in many passages is corrupt and mutilated. There is an excellent edition of this poem by Lennep. There is also an old translation of it by Sir Edward Sherburne; to whom I acknowledge myself indebted for some of his useful annotations.

Did the insertion of this little poem stand in need of an apology, it might be made by observing, that the subjects of the two poems are not wholly dissimilar. In the one is celebrated the rape of Medea, in the other the rape of Helen; two events of equal celebrity in ancient story.

On the title of this poem Sir Edward Sherburne makes the following not unpleasant remark: "The word *rape* must not be taken in the common acceptation of the expression. For Paris was more courtly than to offer, and Helen more kind-hearted than to suffer such a violence. It must be taken rather for a transporting of her with her consent from her own country to Troy: which Virgil seems to insinuate in the first book of his *Æneid*, where, speaking of Helen, he says,

" Pergama cum peteret.——"

The word *peteret* implies that the quitting of her country, and going along with Paris, was an act she desired, as well as consented to; and thus much the ensuing poem makes good.

Ver. 2. The most celebrated river in Troas: it derived its source from mount Ida.

Ver. 10. The ancients esteemed the art of husbandry to be of all others the most honourable. The hands of princes sustained at the same time the crook and the sceptre. Paris the son of Priam,

king of Troy, is represented in this poem under the character of a shepherd. In our times the care of flocks and herds is committed to the lowest orders of the people. Shepherd and clown are terms with us nearly synonymous. But we must endeavour to separate from them the ideas of churlishness and ill-breeding, when applied, as the ancients applied them, to heroes and kings.

Ver. 24. It was a fiction of the poets, that Peleus, the son of Æacus, and pupil of Chiron, married Thetis the daughter of Nereus; and that all the gods attended at their nuptials on mount Pelion, except Eris or Discord, in whose presence agreement and harmony could not long subsist. See on this subject, *Catullus de Nupt. Pel. & Thet.* and *Valerius Placcus*, L. i. v. 129.

Ver. 42. The correspondent lines in the original ought to be placed after v. 33. as Lennep rightly observes: to that place (immediately after the poet's mention of Diana) the translator has restored them.

Ver. 56. The conjectural reading of Vossius is here preferred; as it seems to contain more sense and more poetry than any other. He reads,

χειρὶ δὲ λαίῃ
"Οὐ δὲ τὰ πολλὰ ἔρυσσε καὶ ἦν ἰφουράσαστο πύρην.

Ver. 79. Apples were esteemed the symbol of love, and dedicated to Venus. They were also considered as allurements of love, and were distributed among lovers. Hence the expressions *μηλοβολεῖν* and *malo petere*, in Theocritus and Virgil.

Ver. 89. The ancients looked upon such eyebrows, which our poet calls *βλεφάρων συνοχήν* as essential to form a beautiful face. See Anacreon's description of his mistress, and *Theocr. Id. viii. 72*.

Ver. 99. They were supposed to be very numerous.

—volucrumque exercitus omnis amorum.

Val. Flacc. vi. 457.

Ver. 116. The cestus of Venus, of which Homer makes particular mention, *Il. xiv. 216.* derives its name ἀστὴν κινεῖν. To which stimulating quality our poet alludes in the following line.

And with this cestus I infix my sting.

Ver. 205.

—καλλος,

*Αντ' ἀσπιδὸν ἀσασῶν

*Αντ' ἵγχιον ἀσάντων.

Anacr. Ode xi.

Ver. 267, 268. *Ismarus, Pangrea.*] Mountains in Thrace. The former is also the name of a lake.

Ver. 269. Demophoon, son of Theseus, on his return from Troy, passed through Thrace, where he was hospitably received by Phillis, its queen, who fell in love with and married him. He having expressed his desire to visit Athens, his native country, Phillis consented to his departure, upon condition that he would return on a certain day which he should appoint. Demophoon promised to be with her on the appointed day. When the day came, Phillis, tortured with the pangs of an impatient lover, ran nine times to the shore, which from this circumstance was called in Greek *Enneados*; but unable any longer to support his absence, she, in a fit of despair, hanged herself. See *Ovid's Epist. ii. Phillis to Demoph.*

Ver. 274. A province and city of Thessaly; the birth-place of Achilles. But, for a more particular account of Coluthus's geography, the reader may consult Lennep's note on ver. 215, where he shows (to make use of his own words), "quam fuerit in geographicis hospes Coluthus."

Ver. 296. Hyacinthus was a young prince of the city Amyclæ in Laconia. He had made so extraordinary a progress in literature, that he was considered as a favourite of Apollo. As he was playing with his fellows, he was unfortunately struck on the head by a quoit, and died of the blow. The poets have enlarged on this simple story in the following manner:

The wind which blew the quoit aside, and gave it the fatal direction, they have called Zephyrus; whom they have represented as the rival of Apollo. Zephyrus having received for his kindnesses to Hyacinthus, the most ungrateful returns, was resolved to punish him for his insolence; and having challenged him one day to a game of quoits, he struck the unfortunate youth a blow on the temples.

The inhabitants of Amyclæ, says the poet,

—δνιδ' αἰήτου

Ἰνυζομένους, καὶ τοῦτον ἀνήγαγον.

were displeased with the contest proposed by Zephyrus, and withdrew Hyacinthus from the fight; or, perhaps (still better to connect this with the

following sentence), they brought him out, and spirited him on to the fight, presuming that his favourite god would enable him to come off victorious—ἀνταρ' Ἀπόλλων. &c.

This is Lennep's conjectural reading; which, whether the true one or not, must be allowed to affix a tolerable meaning to a passage that was before very unintelligible.

Ver. 302. From the blood that was spilt on the ground, Apollo produced a flower, called after the name of his favourite youth. See *Ovid. Metam. l. x.*

Ver. 331. Antiochus, mentioned frequently in *Hom. Il.*

Ver. 333. The descendants of Æacus. He was the son of Jupiter and Ægina: his offspring were Phocus, Peleus, Teucer, and Telamon.

Ver. 390. The fiction to which our author in this place, and Virgil, in *Æneid vi.* allude, is borrowed from *B. xix. of Hom. Odyss.* It is imagined, that this story of the gates of sleep may have had a real foundation, and have been built upon the customs of the Egyptians. See the note on ver. 656. book *xix. of Pope's Odyss.* Our poet has represented these fanciful gates as opened by Night; and with great propriety.

"The ancients," says Sir Edward Sherburne, "painted Sleep like a man heavy with slumber; his under-garment white, his upper black; thereby expressing day and night; holding in his hand a horn; sometimes really such, sometimes of ivory, in the likeness of one; through which, they feigned, that he conveyed dreams; true, when the same was of horn, false when of ivory." Some have assigned, as a reason why true dreams pass through the gate of horn, and false ones through the gate of ivory—that horn is a fit emblem of truth, as being transparent, and ivory of falsehood, as being impenetrable.

Ver. 448. Virgil, *Æn. vi. 278.* calls sleep *con-sanguineus letbi.*

Ver. 450. Hence, i. e. by reason of the likeness there is betwixt these two affections.

Ver. 464. The line in the original is obscure, and usually misplaced. It is given to Hermione, but without the least reason. It is here restored to its proper place; and is an observation which comes naturally enough from the mouth of Helen. See Lennep's note on the passage.

Ver. 482. Cassandra was the daughter of Priam, and priestess of Apollo. Apollo gave her the gift of prophecy; but on her refusing to comply with the conditions on which it was given her, he rendered it ineffectual, by ordaining that her predictions should never be believed. Hence it was, that, when Paris set sail for Greece in pursuit of Helen, her prophecy, that he should bring home a flame, which should consume his country, was not regarded. Her appearance, therefore, on the present occasion is quite in character; and our poet has shown his judgment by the representation he has given of her.

CREECH'S *LUCRETIUS*.

PREFACE.

THE poems of the ancients, translated into modern languages, are justly compared to flowers, of the growth of warmer regions, transplanted thence into our colder climates: They often die in the raising; but, if with difficulty they are brought to bear, the flowers they produce, wanting the indulgent warmth of their native sun, degenerate from their ancient stock; they impair in liveliness of colour, and lose their fragrantcy of smell, or retain at best but a faint odour. Verse, in like manner, when transplanted from the language of one country into that of another, participates of all the defects of the air and soil; and when ancient wit comes to be taught and confined in modern numbers, the noble spirit, for want of the warmth with which the original was written, evaporates in transfusing, and often becomes little better than a dead and senseless image. Hence we see, that though composing be indeed the nobler part of poetry, yet to translate well is scarce a less difficult task. The materials, I grant, are found to the translator's hands; but then his fancy is bound up and confined; for he must build according to his model; and though his invention toil the less, his judgment must labour the more; otherwise he will never copy his original, nor do justice to his author.

I will not presume to give my opinion, either in praise or dispraise, of the following translation in general; the many testimonies, given in behalf of it, by the translator's learned and ingenious friends, in their commendatory verses, which, as they were to all the former editions of this work, are likewise prefixed to this, render all that can be said in praise of it superfluous, and in blame of it ineffectual; for who will dare to censure a work, that has deservedly found so favourable a reception, and gained such a general approbation and applause? What Mr. Waller writes to Mr. Evelyn on his translation of the first book of Lucretius only, may with greater justice be applied to our translator:

For here Lucretius whole we find,
His words, his music, and his mind:
Thy art has to our country brought
All that he writ, and all he thought. *Waller*

Now all translated books, whatever subjects they treat of, are, or ought to be, intended for the be-

nefit and instruction of such as understand not the languages in which the originals are written, and if they fail of that end, they are always, and at best, but useless amusements: But if they assert principles, and advance maxims and propositions, that are repugnant to the doctrine of the Christian faith, or to the precepts of morality and good manners, they may prove of ill consequence to some, particularly to the unwary or less intelligent readers. It were better that books of that nature (and most of the writings of the ancient Heathens are such, in a less or greater degree) were never translated at all, than that, by being rendered into modern languages, they should fall into the hands of all sorts of readers; many of whom, not being capable to judge of the strength or weakness of the arguments they find in them, are often seduced into errors. Such books are a sort of edged tools, that either ought to be kept from the weak, and the illiterate; or, when they are put into their hands, they ought to be instructed how to use them without danger. This being granted in general, is sufficient to justify my undertaking, and to prove the usefulness of it, in writing the following notes and animadversions on this English Lucretius.

I foresee, nevertheless, that some will blame, and perhaps censure me severely, for having bestowed so much time and labour on an impious poet: For this, will they say, is that very Lucretius, who believes, and endeavours all he can to prove, the human soul to be corporeal and mortal; and who, by so doing, denies a future state, either of happiness or misery, and takes away all hopes of our salvation in a blessed and eternal futurity: This is he, who flatly denies the Providence of God, which is the chief basis and support of the Christian religion: And, lastly, this is he who teaches, and asserts to be true, that Atheistical hypothesis of Democritus and Epicurus, concerning the indivisible principles, and the nature of all things. This, I confess, seems at first sight to be a grievous accusation; but yet, if duly considered, it will appear to be of little moment: For not to mention that, for the same reason that we ought not, as some pretend, to read Lucretius, we ought likewise to abstain from reading all, at least most of the authors of antiquity, since in their writings are contained many impious, profane,

false, ridiculous, and fabulous assertions; inasmuch, that all our poets, orators, historians, and philosophers must be rejected and thrown away, as debauchers of youth, and corrupters of good manners, if their writings were once to be tried by the standard of our faith, and by the doctrine of Christianity; not to mention, I say, all this, I dare boldly affirm, that whatever propositions Lucretius advances, contrary to the Christian religion, are so visibly and notoriously false, and consequently so easily answered, that they cannot in the least startle any one, who professes our holy belief: For instance, Lucretius, in his third book, after having, as he thinks, fully demonstrated the corporality of the human soul, brings no less than twenty-six arguments to prove its mortality likewise: But all of them, when they come to be maturely considered, are of so little validity, and so obvious to be confuted, that, far from being able to stagger in the least the faith of a Christian, no man, I think, though but of mean capacity, can, on such slender and unconvincing proofs, believe, even if he would, that the soul dies with the body. Nor are his arguments, by which he labours to overthrow all belief of a divine Providence, and to wrest the power of creation out of the hands, even of Omnipotence itself, more cogent or persuasive, as will, I hope, be made appear in the following notes and animadversions; in which I have made it my chief study to show the weakness, and to expose to my readers the insufficiency of them. How well I have succeeded in my attempt must be left to the judgment of the public; the design, I am sure, was well-meaning and honest; and if the performance be answerable, it may justly challenge a favourable reception: For what Christian will not be pleased to see, that not even the most penetrating wit of Lucretius has been able to advance any thing solid against the power of that infinite God whom he adores; especially considering, that if any such impieties could have been defended, he certainly was capable of defending them:

Si pergama dextrâ
Defendi possent, certè hæc defensa fuissent. *Virg.*

Moreover, what danger can arise to any man, though but of common understanding, while he reads that ridiculous doctrine of the Epicurean philosophers concerning their atoms, or minute indivisible corpuscles, which they held to be the first principles of all things? An opinion so absurd, that even the bare mentioning of it confutes it. So far, therefore, from being of dangerous consequence to us is the reading those absurdities of the ancients concerning the nature of things, that, on the contrary, we may gain from thence the great advantage of acquiring a more perfect knowledge of nature, and of the wonderful works of God: For nature has imprinted on all men an innate desire of truth; and to know the false opinions of others, will excite and stir them up to be the more diligent in the inquiry and search of it, will render them the more capable to judge and determine concerning it, and to retain in their

minds the more firmly the convictions it imprints upon them. As light is then most beautiful when it first rises out of darkness, so truth is then most delightful when it first emerges out of errors. For as my lord Roscommon finely expresses it,

Truth stamps conviction on your ravish'd breast,
And peace and joy attend the glorious guest.

Essay on Translated Verse.

Nor is all that Lucretius has written, impious, false, or ridiculous: on the contrary, many excellent things are contained in his poem; many that well deserve to be read and remembered even by Christians. How excellently does he declaim against ambition, and all manner of injustice and cruelty; against superstition, and the fear of death; against avarice, luxury, and lust; against all the other passions of the mind, and dishonest pleasures of the body. Is he not continually exhorting his Memmius to sobriety, temperance, chastity, magnanimity, and all the rest of the moral virtues? Inasmuch that what Diogenes writes of Epicurus seems to be true; that he was falsely accused by some persons of indulging himself too much in pleasure, and that it was a mere calumny in them to wrest, as they did, to a wrong sense, the meaning of that philosopher, and to interpret what he said of the tranquillity of the mind, as if it had been spoken of the sensual delights of the body. To the same purpose Cassius, that great general of the Romans, after he had embraced the Epicurean philosophy, writing to Cicero, explains this matter in the following words: They, says he, whom we call lovers of pleasure, are indeed lovers of goodness and of justice; and men who practise and cultivate all manner of virtues: for there is no true pleasure without a good and virtuous life: "ii. qui à nobis φιλήδονοι vocantur, sunt φιλόκαλοι καὶ φιλοδικαίοι, omnesque virtutes et colunt et retinent: ὁ γὰρ ἑστηκόσιν ἀντι τῇ καλῇ καὶ δικαίῳ ζῆν." as the same Cassius there cites the very words of Epicurus, who himself takes notice of this calumny, and complains of the malice and dissingenuousness of his accusers, who, not understanding it aright, had misrepresented his doctrine concerning pleasure: When we assert, says he, that pleasure is the chief good and greatest felicity of man, we mean not the pleasures of the luxurious and libidinous; not the pleasures of the taste, the touch, or any other sensual enjoyments, as some ignorant persons, or such as dissent from our opinions, or as take them in a wrong sense, maliciously give out: but what we call pleasure is, to be exempt from pain of body, and to have a mind serene and void of all cares and perturbations; for not the company of lascivious boys and women, not luxurious eating and drinking; not to feed on fish, and other delicious meats that load the tables of the wealthy, nor any other sensual delights can procure a happy life; but a right and sound reason, that searches into, and discerns the causes why some things are to be desired, others to be avoided; and that chases and expels those opinions, by means of which the mind is disquieted, and vexed with passions and anxieties. Thus we

see there is nothing so prudent, nothing so true, nothing so virtuous, but what, by being misrepresented, may be made to appear its contrary. Nor indeed is it probable, that so many excellent and wise men, who were such great ornaments and supports of the Roman commonwealth, would so assiduously have frequented the gardens of Epicurus, or have engaged themselves to one another in the ties of friendship, as even their defamers allow they did, had they not been fully convinced of the good morals and innocence of life of that philosopher who first founded their sect: Galen, in *Art. Med.* witnesses of him, that he constantly exclaimed aloud against the use of all venereal actions, that he neglected the advantages of life, that he contemned all daintiness and excess in eating, drinking, and apparel; and that he would often say, that bread and water, when taken by those that wanted them, afforded the greatest pleasure. And in his epistles, which Diogenes Laërtius had the good fortune to see, he testifies of himself, that he was content to live on brown bread and water only; but send me, says he, a little of your Cyprian cheese, that I may feast myself deliciously, if I should have a mind to do so. Diocles reports of his disciples too, that they were satisfied with the meanest and the poorest fare: They scarce, says he, ever tasted of wine, and water was their chief beverage. To confirm this, it is observed, that this abstemiousness of theirs was the reason that they were the better able to undergo hardships, when Demetrius besieged Athens, during which siege, says Plutarch in the life of that prince, the philosopher Epicurus supported those of his sect, sharing with them daily a certain small number of beans. Cicero himself, though he was a professed enemy to this sect, yet says in many places, that the Epicureans were generally good men, and that none of the philosophers were less addicted to vice: And Seneca too witnesses of Epicurus, that he was a man eminently remarkable for his temperance and continence.

Thus lived Epicurus, whose very name nevertheless has for many ages been used as a proverb, to denote an atheistical voluptuous wretch, addicted to all manner of sensualities. Thus too lived his followers, who nevertheless are generally deemed to have been impious libertines, and represented as a herd of swine, indulging themselves in pleasure, and wallowing in all manner of impurities. How groundless this censure, how unmerited this reproach, the reader is left to judge, from the foregoing testimonies of the ancients, which, among many others that might have been produced, I have given in defence of the morals and innocence of life, both of Epicurus and his followers.

I wish there were as much to be said in behalf of their theology: Let me not, however, be thought to endeavour to patronize and defend their impieties; if, in a few words I give the opinion of Epicurus concerning the Deity; against whom, I own, he grievously offended, in absolutely denying a divine Providence, and in dethroning the Al-

mighty from the government of the world: But this impiety of his proceeded from an excess of superstition: For he apprehended that the eternal happiness, which the divine essence enjoys, must be perplexed and disturbed with the affairs of the lower world; nor could he comprehend how the most perfect and happy Being, that stands not in need of any thing in the power of man, could be pleased at their good, or offended at their wicked deeds. For he imagined and taught, that business and cares, and anger, and joy, and gratitude, were inconsistent with perfect happiness, and proceeded from infirmity and weakness, and from fear and indigence. But what just sentiments he had of the Deity we find in his epistle to Menæceus: God, says he, is an immortal and ever blessed being; and even common reason teaches, that nothing can be ascribed to the Deity, that is repugnant either to immortality or beatitude: That there are gods we know for certain; but yet they are not such as many believe them to be: He therefore is not impious who denies the gods of the multitude; but who ascribes to the gods the opinions of the multitude: For those opinions are not principles known by the light of nature; but merely false notions, that many conceive of the gods. Nor will I omit what Epicurus immediately subjoins: The gods, says he, punish the wicked, and reward the good: For being, as they are, all virtue and goodness, they take delight in whatever is virtuous and like themselves. And in the compendium of his philosophy, which he writ to Herodotus, speaking of the meteors, we find the following passage: You ought not, says he, to believe, that the motion and conversion of the heavens, the rising and setting of the planets, their eclipses, and the like, are the labour and work of any one, or effected by any other cause, but only by his will and command, who enjoys at once all immortality and beatitude.

Thus, whatever impious notions Epicurus might once have entertained of the Deity, it is not unreasonable to believe, that he was at length convinced of his error in that particular, and became, from an impious, a very pious philosopher. He persisted indeed to the last in his erroneous doctrine concerning the human soul; which he held to be corporeal, to consist of minute corpuscles, and alike with the body, to be obnoxious to mortality. In this, I own, he grievously erred: but yet, methinks, his censurers might animadvert with less severity against a poor shipwrecked heathen; since the Sadducees themselves, though they were brought up in the bosom of the law, struck on the same rock; considering besides, that by the consent, even of the best Christians, the immortality of the soul is an ocean that cannot be founded, nor the danger avoided, without the immeasurable plummet of faith.

Let none be offended that I have ventured thus far in defence of Epicurus, contrary to the commonly received opinion of that philosopher. It matters not much to our present purpose, whether he recanted his impieties or not; since it

cannot be denied but that Lucretius strenuously asserts them, and labours with all his force to inculcate his errors. Assertions of such a nature ought not to pass uncontrouled in so corrupt an age as ours; when even the very arguments, by which Lucretius endeavours to make good his impieties, are revived afresh; and alleged to justify new-broached opinions, that visibly tend to the establishment of deism, and consequently to the subversion of all revealed religion: for which reason I have chiefly laboured in the following notes, to demonstrate the weakness and invalidity of those arguments, that are brought in confirmation of propositions, that are repugnant to our holy Christian faith.

Besides, books that treat of subjects that are naturally so crabbed and obscure, as are many of those of which Lucretius argues, cannot be turned into our language in such a manner, as, by a bare translation only, to make them intelligible to a reader merely English, and that has no knowledge of the languages, in which the originals were composed; for the terms, though dark and difficult, must of necessity be retained; and yet they will not be understood by a great number of English readers. For example, the definition of the void, which we find in the first book of Lucretius, v. 334. is translated as follows:

A void is space intangible.—

Now I would fain know if those words do not as much require to be explained to a reader, who understands only the English language, as to one who knows the Latin, the following passage of Lucretius, of which they are the translation?

—Locus est intactus, inane, vacansque.

And yet how many sheets have been filled, and what labour has been bestowed, to explain the meaning of them, by the commentators on the Epicurean philosophy, is notorious to all the learned world. The least of Epicurus, both mathematical and physical, the homœomery of Anaxagoras, the harmony of Aristoxenus, are, till they are explained, no less difficult to understand; and ten thousand other instances of the like nature, that the reader will find in the following translation, are abundantly sufficient to evince the usefulness, and even the necessity of these notes. For, not to understand what we read, is at best but loss of time; and to take things in a wrong sense, or to gain an imperfect notice of them, as they must necessarily do, who understand by halves what they read, is always alike dangerous, and often proves of bad consequence, especially when the weak and unwary amuse themselves in the lectures of such authors as treat of subjects like those of which our poet disputes. Such readers, like men who sail in unknown seas, ought to be shown the rocks and shelvings, otherwise they are in great danger of being lost; for they are ever the most subject to take the strongest impressions; and it is no easy

task to eradicate from the minds of the less intelligent part of mankind, and dispossess them of those opinions which they have swallowed with greedy delight, and been long accustomed to believe. Such an inveterate credulity, like a disease of long standing, and that has gained a head, is not easy to cure; and, what is yet worse, we often find that the stiffest obstinacy attends the most erroneous belief.

To apply what I have been saying to the matter in hand, there is reason to suspect that some have not been wanting, and, I fear, are still to be found, who, not being capable of themselves to form a true judgment of these arguments of Lucretius, and for want of a right discernment, have imbibed some of his false notions, and yielded too easy an assent to them: they have taken the shadow for the substance of reason, and thus have been wretchedly seduced into error. The following notes are chiefly intended, not only to undeceive such persons, but also to prevent others from falling into the like mistakes; and, if they compass that effect, I shall have no reason to think my labour misemployed, nor to fear the censure of the public.

Having given this short account of the reasons that induced me to compose these annotations, it remains only to acquaint the reader with the helps I have had, and with the method I have observed in this undertaking.

As to the first of those points, the alphabetical catalogue of the names of the authors cited in the notes and animadversions, is a sufficient indication that I have spared no pains, nor wanted any assistance that could be required to render this work as perfect in its kind, as any thing of this nature can be expected to be, and that whatever defects shall be found in it, must be imputed to my want of judgment and capacity, since I was abundantly supplied with all the materials that were requisite to accomplish my undertaking. And throughout the whole work, I seldom advance any thing of my own, but have collected only the opinions of others, and left the reader to judge and determine concerning them.

In the text itself I have taken care to supply all the verses which Mr. Creech had not translated; and that were never before in any of the former editions of this English Lucretius. Those that were omitted towards the end of the fourth Book, where the poet treats of the nature of love, are taken from Mr. Dryden's translation of that part of our author. Of all the other verses that are now first inserted, I have given an account in their due places, in the notes upon them: Meanwhile, I have included all the verses that are thus supplied between crotchets, as a mark of distinction, to let the reader know that they were not in any of the former editions. Besides, I have prefixed to every book a several Argument, in which may be seen, at one view, not only the several subjects treated of in each of the six books; but likewise the manner in which they are handled, the method of the poet's disputation, and the connection of the following book to that which precedes

it. And each book concludes with an animadversion, briefly recapitulating the contents of it, and condemning or approving the maxims and arguments contained and asserted in it. This method our translator himself has observed in his Latin edition of Lucretius; from whence the animadversion, which the reader will find at the end of each book, is chiefly taken. Moreover, to make this edition more perfect than any of the former, where, in many places, several of the poet's arguments and propositions are joined together, without any distinction where one ends or the other begins, I have been careful to distinguish them from one another, by beginning each argument and proposition with a break; so that the reader will readily discern where it begins and where it ends: and that too the more easily, because each note begins by expressing the number of the verses that each argument or proposition contains.

As for the translator's own excellent and learned notes on Lucretius, which have hitherto been printed at the end of all the former editions, and all together by themselves, I have now disposed them into the several places to which he had directed them, and they properly belong: insomuch that the reader will now find them, not as before, in a body by themselves, but intermixed with my annotations, without the least alteration, and in their proper place*.

Each note has a number prefixed before it, which directs to the number in the margin of the text; which last number, for the greater ease of the reader, marks every tenth verse of the translation, and shows how many verses are contained in each book.

It will be observed, that in the notes that are merely explanatory, I often differ from the sense of my author; I mean Mr. Creech; for I exactly follow the sense of Lucretius; whose meaning that interpreter has mistaken in many places of this translation. This I the more confidently affirm, because I have his own authority to strengthen my assertion: for, in his Latin edition of Lucretius, he often gives his author an interpretation far different from, nay, sometimes quite contrary to what he makes him say in this translation. One manifest instance of this, among many others, may be seen in the note on the 547th verse of the 5th book, to which I refer the reader: and will here only observe, that our translator's mistakes of this nature have often forced me to the necessity of giving the original text of Lucretius; to the end, that such as understand the Latin may be convinced, that I have not taken upon me to blame and correct him without reason. And to exempt myself from all manner of imputation upon that account, I have scarce through the whole course of these annotations, ever accused this translator of error, except only in passages to which Mr. Creech himself in his Latin edition of our author, has given a different interpretation from what we find in this translation; insomuch, that, by pointing out those mistakes to the reader, I have not

only done justice to Lucretius, but in some measure even to his translator likewise: of whom I may say, without any derogation to his fame, that he had not so thoroughly digested his author when he translated him, as he had done afterwards when he came to publish his Latin notes upon him. And here, by the way, I cannot but wish that he had not been so severe on Du Fay, the editor of the Lucretius in Usum Delphini, in lashing him at the unmerciful rate he does in many places: in those notes, for errors of which himself had once been guilty, and into which they had both been alike led by Lambine; especially, too, since it is most evident that he is often indebted to that interpreter, I mean Du Fay, for the true understanding of the sense of his author. This will manifestly appear to any one, who will compare the notes of those two interpreters together, and reflect on the difference of time in which they were published.

But I have not taken upon me to correct our translator, only where he has palpably mistaken the sense of his author, but in those places likewise that he has rendered obscurely or imperfectly. One instance of this, among too many others, the reader may observe in the note on the 986th verse of the second book, where Lucretius, enumerating all the conjuncts and events, or properties and accidents of the Epicurean atoms, has included them all in the following verses:

Sic ipsis in rebus item jam materiâ
Intervalla, viæ, connexus, pondere, plagæ,
Concursus, motus, ordo, positura, figuræ,
Cum permutantur, mutari res quoque debent.

Lib. ii. v. 1. 1021.

To translate all which, Mr. Creech employs only these two verses and a half;

—In bodies so
As their seeds, order, figure, motion do,
The things themselves must change and vary too.

Now, how lamely and imperfectly the full sense and meaning of the above passage of Lucretius is expressed in this translation of it, appears, at first sight, to all that are acquainted with the Epicurean philosophy, and is fully made appear in the note on these verses, to which I refer the reader: and, in this place will only take notice, that I might justly have been blamed for discharging but ill the province I had undertaken, to explain Lucretius's system of the Epicurean philosophy, had I not supplied what I found wanting in this place, in order to attain the perfect understanding of the sense of the original, which I found thus wretchedly mangled in the translation. I have observed the like method throughout this whole work, having used my utmost diligence in comparing the translation with the original, and showing all along in what it differs, from it; insomuch that the following annotations, in which is contained a complete system of the Epicurean philosophy, are rather notes on the original poem of Lucretius, than on Mr. Creech's translation of it.

To conclude: Though I have swelled this work to a great length, yet I have made my notes and

Y

* This arrangement is altered in the present edition.
TRANS. II.

animadversions as short as I could without omitting any thing that I thought might conduce to the explication of the sense and meaning of the poet, to the right understanding of the historical and fabulous passages contained of him, to the ex-

plaining of the several terms and expressions that are not known to the generality of readers; to the intelligence of any thing that seemed difficult to understand, or, in a word, to the illustration of the whole.

THE LIFE OF LUCRETIVS.

THE present design does not require an exact search into the rise of philosophy, nor a nice inquiry, whether it began amongst the Brachmans; and from them, as Lucian, in *Fugitivis*, ranks the countries, visited Ethiopia, Egypt Scythia, Thrace, and Greece, or whether curiosity or necessity was the parent of it. The Chaldeans were invited to astronomy by the advantageousness of their wide-extended plains; and the overflowing of the Nile forced the Egyptians to be curious in the properties of figures; but I shall take it for granted, that philosophy came from the east. The truth of this, not to mention the weak oppositions of Laërtius, in his preface, the travels of Thales and Pythagoras, of Democritus, Plato, and others, sufficiently evince; and the Egyptians affirm, that the several methods of philosophy of the abovementioned ancients, are only their notions disguised, dressed after a Greek fashion, and in that garb proposed to their admirers. Thus, it is probable, that Democritus received his notions from Moschus, the Phœnician, or from the priests of Egypt, whose ambition for antiquity made them embrace some of those their absurd opinions: or, if he travelled farther, he perhaps learned the whole system of his philosophy, the fortuitous beginning of the world, and the origin of man, from the Indians, that being now the opinion of the principal philosophers in China, whither the learning of all India long ago retired.

This hypothesis, though commended to men as the strongest expedient against cares, and as the exactest method to obtain tranquillity, found not, nevertheless, many admirers, till Epicurus by an almost infinite number of volumes which he wrote on that subject, endeavoured to illustrate and recommend it to the world. Yet, notwithstanding he was so voluminous a writer, he, as Plutarch assures, added only one improvement to the hypothesis of Democritus, which is the declination, or inclining motion of an atom.

What Epicurus was in his morals, is not easy to determine; for, sometimes he seems to have been temperate and modest, otherwise Seneca would not have so often used his sentences as ornaments, in his most serious epistles: at other times, he seems to have been a most loose and dissolute voluptuary, for such his books declare him, if we may credit Tully, who, *De Fin.* lib. 2. sect. 7. makes a very confident appeal to mankind for the sincerity of his quotations; so that,

upon the whole matter, we cannot but be amazed at the unsettled humour of the man.

After his death, though in his will he had made great provision for the perpetuity of his sect, his opinions were but coldly received, and the school decayed, till C. Memnius, a man of ancient nobility, restored the garden, and, as Cicero acquaints us, designed to raise a public building for the advancement of Epicurism. His fame and authority drew many after him; and we find registered, at once as famous, Velleius, Patro, and our author Lucretius, of whose life antiquity has transmitted to us but few particulars, perhaps for the same reason that Ælian with reluctance mentions Diagoras, because he was an enemy to the gods; *Θεοῖς γὰρ ἰχθῆρας Διαγόρας, καὶ ἡ μὲν ἡδίων ἐπιπλεῖστον μνησθαι ὄντα*, says that author, lib. 2. cap. 23. What we know of him is as follows:

His name was Titus Lucretius Carus, and no other: for what Lambinus pretends, that besides his first name Titus, by the Latins called *Prænomina*, and which answers to what we call our Christian name, besides the name of his family, Lucretius, and his surname, Carus, he may have been called either T. Lucretius Vespillo Carus, or thus, T. Lucretius Offella Carus, is mere conjecture, and grounded on no authority whatsoever. Carus was a Roman surname, of which Ovid and many others make mention; but we nowhere find how it came to be given to Lucretius. However, it is not improbable but that it was conferred upon him, either on account of his excellent and sprightly wit, his affability and sweetness of temper and manners, or for some other the like endearing qualities, that rendered him agreeable to those with whom he conversed.

That he was a Roman, and born at Rome, is agreed on all hands, and even his own testimony assures us of it: therefore, what Cornelius Nepos writes of T. Pomponius Atticus, that it was the gift of fortune, that, preferable to all other places, he was born in that city where the seat of the empire of the whole earth was established, that he might have the same country and sovereign, may well be applied to Lucretius, of whom we may say, that the same city which was his country was mistress of the world.

His very name directs us to the noble and ancient family of the Lucretii, which, being divided into many branches, comprehended under it the Tricipitini, the Cinnae, the Vespillones, the Tricio-

nes, the Offellæ, and the Galli, and gave to Rome many consuls, tribunes, and prætors, who were great supports and ornaments of the commonwealth.

From which of the above branches our Lucretius sprung is not known, there being nothing any where recorded of his parentage. There lived, indeed, in those days, one Quintus Lucretius, but whether he was brother of our poet Lucretius, or in what degree of relation they were to one another, is altogether uncertain.

It has been observed by some, and the truth of it is uncontroverted, that the parentage of the best poets of antiquity is almost unknown, as if it had been industriously concealed; and in this they are thought to have affected something of divinity.

The time of his birth is almost as doubtful, some placing it in one year, some in another, in which, as in most things else, the authors who have delivered it down to us, make good that inverted taunt of Seneca, who, in his treatise, *De Morte Claudii*, says, "*Citius inter horologia quam auctores conveniet.*" Clocks will be found to agree sooner than authors.

Eusebius, the son of Pamphilus, brings him forth in the 171st Olympiad, when Cn. Domitius Ahenobarbus, and C. Cassius Longinus were consuls, which was in the 657th year after the building of Rome. But Lydiat leaves it doubtful, whether these were consuls in the first year of the 171st, or the fourth of the 170th Olympiad. Vossius makes him born in the second year of the 171st, whilst others place his birth in the 172d Olympiad, when L. Lucinius Crassus, and Q. Mucius Sævola were consuls, that is to say, in the 658th year of Rome; so that the difference between them is not great, and the age in which he lived is certain.

About this time, the Romans began to apply themselves to the study of the philosophy of the Greeks. Supposing, therefore, Lucretius to be nobly descended, and a man of sprightly wit, it is an easy inference, that he received a suitable education, and, by his parents or other relations, was sent in his youth to study at Athens. This is the more probable to be true, because it was then the custom of the Romans to send their youths thither to be instructed in the learning of the Greeks. Thus, some years after, Virgil too studied there, as we learn from himself, when, writing to Messala, he says:

*Et si mi vario jactatum laudis amore,
Irritaque expertum fallacis præmia vulgi,
Cecropius suaves expirans hortulus auras,
Florentis viridi sophiæ complectitur umbra.*

And the learned Propertius too earnestly desired

*Illic vel studiis animum emendare Platonis;
— aut hortis, docte Epicure, tuis.*

Zeno, together with the courteous good-natured Phædrus, as Tully calls him, was then master of

the gardens; and these were the preceptors of our Lucretius, as they were likewise of Pomponius Atticus, Memmius, Velleius, Pætus, Cassius and many others, who in that age rendered themselves very illustrious in the republic of Rome.

How Lucretius spent his time, how studiously he improved it, let this poem be witness. That he fitted himself for the best company, is evident by what Cornelius Nepos tells us of the great intimacy between him, Pomponius Atticus, and Memmius; and, no doubt but he was intimate likewise with Tully and his brother, who make such honourable mention of him.

If we look into his morals, we may discover him to be a man suitable to the Epicurean principles, dissolved in ease and pleasure, flying public employment, as a derogation to wisdom, and a disturber of peace and quietness, and avoiding those distractive cares which he imagined would make heaven itself uneasy.

As most of the other poets, he too seems to have had his share in sensual pleasures; and if the account which Eusebius gives of his death be true, it will strengthen this opinion; but it is hard to say for certain what sort of death Lucretius died; nor is it much easier to determine in what year of his life his death happened. Some make him die on the very day when Virgil was born, in the forty-third year of his age, when Pompey the Great was the third time consul, and Cæcilius Metellus Pius was his colleague, in the year of the city 761, at which time there were great commotions in the republic; for Clodius was then killed by Milo; Memmius and many others being convicted of bribery, were banished from Rome into Greece; and Cæsar, who was then forty-four years of age, was laying waste the provinces of Gaul. According to Eusebius, he died by his own hands, in the forty-fourth year of his age, being dementated by a philtre, which either his mistress, or his wife Lucilia, for so some call her, though without authority, in a fit of jealousy, had given him; not with design to deprive him of his senses, or to take away his life, but only to make him love her. Donatus, or whoever was the author of the life of Virgil that goes under his name, writes, that he died three years before, when Pompey the Great and M. Licinius Crassus were both of them the second time consuls. Others who allow that, having lost his senses, he laid violent hands on his own life, yet place his death in the twenty-sixth year of his age, and believe that his madness proceeded from the cares and melancholy that oppressed him on account of the banishment of his beloved Memmius: to which others again add likewise another cause, the fatal calamities under which his country then laboured. And indeed it is certain, that a few years before his death, Lucretius was an eye witness of the wild administration of affairs in the days of Clodius and Cataline, who gave such a blow to the republic of Rome, as not long after occasioned its total subversion. Of these commotions he himself complains, in the beginning of his first book, where, addressing himself to Venus, he

implores her to intercede with the god of war, to restore peace and quiet to his native country.

Hunc tu diva, tua recubantem corpore sancto
Circumfusa super, suaves ex ore loquelas
Funde, petens placidam Romanis incluta pacem.
Nam neque nos agere hoc patriâ tempore iniquo
Possumus æquo animo; neque Memmi clara
propago

Tallibus in rebus communi dēsse saluti.

Lucr. lib. i. v. 39.

There are yet some other accounts given of the time and manner of his death; but since in so great a variety of opinions we can fix on no certainty, nor determine which of them is true, it would be loss of time to dwell any longer upon them.

The only remains this great wit has left us, are his six books of the Nature of Things, which contain an exact system of the Epicurean philosophy. They were read and admired by the ancients; and if Ovid could presage,

Carmina sublimis tunc sunt peritura Lucreti,
Exitio terras cum dabit una dies.

Lucretius' lofty song shall live in deathless fame,
Till fate dissolves at once this universal frame.

But because some are in doubt concerning the number of books written by Lucretius, and believe that he writ more than six, it will not be improper to convince them of their error. They ground their opinion chiefly on a passage in Varro, which, say they, make it evident that Lucretius left one and twenty books, and that this is not the beginning of his poem which is commonly taken to be so, since Varro cites a quite different verse as the beginning of it.

The passage of Varro, which they allege in favour of their opinion, is in his fourth book, *De lingua Latina*, where we find these words: "Loca secundum antiquam divisionem prima duo, cælum et terra: à qua bipartita divisione Lucretius suorum unius et viginti librorum initium fecit hoc:

Ætheris et terræ genitabile quærere tempus."

These words, indeed, are very plain and positive; nevertheless, I insist, that unless there were another poet Lucretius among the ancients, who was author of the one and twenty books, spoken of in that passage of Varro: and that there was I own, no mention is made in any of the records of antiquity, I insist, I say, that there must be a fault in the above passage of that author, and believe, that instead of Lucretius, it was formerly written Lucilius. Whoever reflects on the following reasons, will, if I mistake not, be of my opinion.

In the first place, it is believed upon good grounds, that Varro writ that treatise of the Latin tongue, about the time that Cæsar was dictator, or rather a little before: if so, it is highly probable that copies of Lucretius could not so soon be got abroad, for he died but in the fourth year before the dictatorship of Cæsar; and after

his death, his poem of the Nature of Things, was first begun to be corrected by his intimate friend Tully, a task which may seem to require some time; and, it may be, even a longer than that which passed from the death of Lucretius to the writing of the treatise by Terentius Varro.

Moreover, faults of the like nature were very frequent in the writings of the ancients, where Lucilius, Lucretius, and Lucullus, in like manner as Cælius and Cecilius, and the like, were often put by mistake one for another. Thus, for example, Priscian, lib. xviii. observes, that in Sallust, Hist. lib. v. there was a mistake of this nature: "At Lucilius audito Marium regem proconsulem per Lycaoniam cum tribus legionibus in Ciliciam tendere," &c. which that grammarian thus corrects: "At Lucullus audito Marium regem proconsulem," &c.; for Sallust there treated of the war that Lucullus was carrying on against Mithridates. In like manner, Macrobius, lib. iii. Saturnal. cap. xv. "M. Varro in lib. de agricultura refert M. Catonem, qui Uticæ periit, cum hæres testamento Lucilii esset relictus," &c. I read, says he, "Testamento Luculli," &c. Macrobius, nevertheless is there mistaken in one thing, for, as Plutarch witnesses, Lucullus left not Cato his heir, but only appointed him to be guardian of his son, as being his uncle. And many the like instances might easily be produced.

But to remove all manner of objections concerning the beginning of this poem, and to evince beyond reply the first book now extant to be the first book Lucretius writ, besides the invocation, with which, according to the custom of all poets, he begins his poem, I will, in opposition to the above passage of Varro, produce the authority of old Priscian, who, after having said that words of the first declension form the genitive plural in *arum*, and by contraction in *um*, by way of example, adds *ampborum* for *ampborarum*, *eneadum* for *eneadarum*. For so, says he, Lucretius has it in his first verse: "Ita enim Lucretius in primo versu:"

Æneadum genitrix, hominum divamq; voluptas.

Besides, is there the least ground of probability that Lucretius ever writ above six books, since not one of the ancient grammarians, or other writers, neither Festus, Nonius, Diomedes, Priscian, Probus, Carisius, Donatus, Servius, Tertullian, Arnobius, nor Lactantius, who so frequently bring quotations from the fifth, sixth, and all the foregoing books of this poet, ever cite so much as one single verse from the seventh, eighth, &c. This, morally speaking, would be impossible, had Lucretius written fifteen books, of the Nature of Things, more than are now extant. This makes me the rather wonder at the positiveness with which some assert, that the seventh book of Lucretius is praised in Priscian, who, nevertheless, does not so much as mention any such book.

Moreover, in my opinion, Lucretius himself sufficiently determines this controversy, for, in his sixth book, reminding his reader of what he had been treating of in the first, he says,

Nunc omnes repetam quàm claro corpore sint res
Commemorare, quod in primo quoque carmine
claret.

Lucret. lib. vi. v. 936.

This sufficiently proves the first of the books now extant to be the first he writ, since in that he has endeavoured to evince, "omnes—quam claro corpore sint res," that no bodies are so solid as not to contain some void; "quod in primo quoque carmine claret." See Book I. ver. 402. And he seems expressly to call the sixth book his last, in these excellent verses,

Tu mihi supremæ præscripta ad candida calcis
Currenti spatium præmonstra, callida musa,
Calliope, requies hominum, divûmque voluptas,
Te duce ut insigni capiam cum laude coronam.

Lucret. lib. vi. v. 91.

From whence we may easily infer, that he never so much as proposed to himself to write above six books, since he tells us he is now hastening, "ad præscripta candida supræme calcis," to the end of the race he had determined with himself to run; and therefore he invokes his muse,

To lead him on, and show the path to gain
The race and glory too, and crown his pain.

Greeck.

Lastly, To strengthen all the foregoing arguments, we may observe, that in these six books only is contained the whole doctrine, and all the philosophy of Epicurus, in as much as it relates to the explication of nature, or natural causes and effects; and there is nothing left for any one to say farther upon that subject.

Add to this the manifest and pertinent connection of one book to another, the judicious method he has observed in handling the several subjects of which he treats, and his artfulness in the disposition of them. They seem naturally to follow one another. In the first book, he treats of the principles of things; in the last, of meteors and of the heavens. Has not this method been constantly practised by all who have treated of the knowledge of nature? Even Epicurus himself observed the very same disposition, as appears by the few surviving remains of that philosopher, his three epistles to Herodotus, Mœneceus, and Pythocles.

But as, for the reasons above alleged, I am verily persuaded that Lucretius never writ more than these six books of the Nature of Things; so,

on the other hand, I am readily inclined to believe, that some of his verses are, perhaps, wanting; for, as with almost all the ancient authors, so more especially with this poet, some have assumed to themselves too great a liberty, and altered, added, or taken away many things, as we have made it appear in several places in our notes. Servius cites this fragment from Lucretius:

——Superi spoliatus luminis aër.

which may perhaps have been his, though it be no where found in any of his books; nor can it easily be discovered where it has been left out. To restore it to its due place, would require an accurateness of judgment as great, if possible, as was their disingenuity who first left it out.

I now return to Lucretius, who, as Eusebius declares, wrote these six books of Epicurean philosophy, in his lucid intervals, when the strength of nature had thrown off all the disturbing particles, and his mind, as it is observed of madmen, was sprightly and vigorous. Then, in a poetical rapture, he could fly with his Epicurus beyond the flaming limits of this world; frame and dissolve seas and heavens in an instant; and, by some unusual fallies, be the strongest argument of his own opinion; for it seems impossible that some things which he delivers should proceed from reason and judgment, or from any other cause but chance, and unthinking fortune.

After his death, as I hinted before, Cicero, as Eusebius witnesses, revised and corrected his writings. Lambinus contradicts this; but the arguments he brings against the assertion of Eusebius are but weak, and of little validity.

Virgil, who was eager and assiduous in the study of them, has borrowed from him in many places: as both Macrobius and Gellius testify: the last of whom calls him "Poëtam ingenio et facundiâ præcellentem;" and Cornelius Nepos has placed him "inter elegantissimos poëtas." So that if some great divines have given him the ill name of Canis, it was not for any rudeness in his verse, but due rather to his Grecian master; the eternity of matter, and the like absurd assertions, having corrupted most of the philosophies of Athens.

As a corollary to these few remaining memoirs of the life of Lucretius, I will here give the opinions of several learned men, concerning him and his writings.

TESTIMONIES OF ANCIENT AND MODERN LEARNED MEN, CONCERNING LUCRETIIUS AND HIS WRITINGS.

M. Cicero to his Brother Q. Cicero, book ii. epist. 11.

THE poems of Lucretius, as you observe, are not written with much brightness of wit, but with a great deal of art.

Upon which passage of Cicero, the learned P. Victorius, in his *Castigations on Tully's Epistles*, makes the following remark :

If any one, says he, thinks it strange that some have been of opinion, that the poems of the most elegant and excellent poet Lucretius, are written with no great brightness of wit, let him blame the judgment of Quinctus ; for we may reasonably mistrust, that, since M. Cicero defends and commends him in the manner he does, he was not altogether of his brother's opinion, though he seems indeed, to confirm it; but that he would not thwart a testy man, who, perhaps, because he writ verses himself, was blinded with envy, and did not perceive the truth : Besides, he might be of that opinion, because Lucretius composed not his poem to boast his shining wit, but to explain, with his utmost art and industry, the whole philosophy of Epicurus.

The same Victorius Var. Lect. lib. xvii. cap. 16.

The copiousness and purity of the Latin tongue, appear chiefly in Lucretius.

M. Vitruvius, in his Treatise of Architecture, book ix. chap. 3.

Those, whose minds are instructed with the delights of learning, cannot, but with veneration, carry in their breasts, as they do the images of the gods, so, too, that of the poet Ennius. Those, who are pleasingly diverted with the poems of Attius, seem to have present with them, not only his virtues, but his figure and resemblance likewise. In like manner, many will, in after ages, seem to dispute, as it were, face to face with Lucretius, concerning the Nature of Things, as they will with Cicero, of the Art of Rhetoric.

Quintilian, book x.

For Macer and Lucretius are, indeed, worth the reading : but not as if they contained the whole body of eloquence. Each of them is elegant in the subject he treats of ; but the one is low, the other crabbed and obscure.

Upon which passage of Quintilian, Gifanius thus :

This opinion of Quintilian is, the greatest part of it, unanimously condemned by the ancients and moderns.

Barthius.

There are many things in Lucretius, that are not to be found elsewhere.

The same Author.

So great is the beauty of the pure and simple, that is to say, of the ancient, and almost only Latinity, that it easily prevails with intelligent readers, and such as are not superstitious, to condemn, in comparison of it, the borrowed charms of a gaudy and painted diction. This comes into my mind, chiefly when I read the poems of Catullus and Lucretius ; for, of all the Latin poets, who have survived to our days, these two deserve the preference ; and, therefore, no diligence can be misemployed, no pain nor study superfluous, that may tend to the right understanding of them, or to prevent their being corrupted.

Lactantius.

All the errors that Lucretius advances, were long before asserted by Epicurus.

Petrus Crinitus.

T. Lucretius Carus is believed to be descended of the family of the Lucretii, which, at Rome, was held to be very ancient and noble. He was a little older than Terentius Varro, and Marcus Cicero, as some have written : this is the rather to be taken notice of, because in the annals which we have from the Greeks, there are many things erroneously related, and perversely set down, contrary to the truth of chronology. He is represented to have been a man of a vast and soaring wit, in writing of verses. He was wont to apply himself to the muses at several intervals of time ; not without a certain fury and rupture of mind, as the authors of antiquity deliver. Quintilian witnesses, that Æmilius Macer, and Titus Lucretius, excel in elegance of style ; but that the poem of Lucretius is very difficult and obscure : this was occasioned not only by the subject itself, but by reason of the poorness of the tongue, and the newness of the doctrine he taught, as he himself testifies. He writ six books of the Nature of Things ; in which he has followed the doctrine of Epicurus, and the example of the poet Empedocles, whose wit and poetry he praises with admiration. There are some who write, that the poem of Lucretius was corrected by Tully : it is not, therefore, improbable, that, by reason of his sudden death, he left it incorrect and imperfect. Quinctus, the brother of Cicero, held in high esteem the

poetry of Lucretius; and allows his work to have a great deal of artfulness and wit: besides, that it ought not to be wondered at, that some of his verses seem rough, and almost like prose. This was peculiar to the age in which he writ, as *Furius Albinus* fully witnesses in *Macrobius*, whose words are as follows: No man ought to have the worse esteem for the ancient poets upon this account, because their verses seem to be scabrous; for that style was then in greatest vogue; and the following age had much ado to bring themselves at length to relish this smoother diction. Therefore, even in the days of the emperors the *Vespasians*, there were not wanting some, who chose to read *Lucretius* rather than *Virgil*, and *Lucilius* than *Horace*.

Franciscus Floridus Sabinus.

T. *Lucretius* was an excellent philosopher, and often gives very satisfactory reasons of the things that seem to happen contrary to nature.

Hieronymus Mercurialis.

Lucretius was the first who explained the Nature of Things in the Roman tongue; and he borrowed many things from *Democritus*, *Epicurus*, and *Hippocrates*.

Julius Scaliger.

Lucretius was a divine man, and an incomparable poet.

Casaubon.

Lucretius is the best author of the Latin tongue.

Justus Lipsius.

There are some antiquated, and almost obsolete words to be found in *Lucretius*, *Ennius*, and other ancients; but, though they are now out of use, and banished from our present way of speaking, yet, out of the respect due to antiquity, they ought to be carefully retained, and religiously preserved in the writings of the ancients.

Melchior Junius.

The diction of *Lucretius* is pure, plain, and elegant, though he defends the opinions of *Epicurus*.

Aldus Pius.

Lucretius, even in the judgment of the ancients, is both a very great poet and philosopher, but full of lies; for, having followed the Epicurean sect, his opinions concerning God, and of the creation of things, are quite different from the doctrine of *Plato*, and of the other academics; for which reason, some believe that he ought not to be read by Christians, who adore and worship the true God. But since truth, the more it is inquired into, shines the more bright, and appears the more venerable, *Lucretius*, and all that are like *Lucretius*, even though they be liars, as they certainly are, ought, in my opinion, to be read.

Adrianus Turnebus.

Lucretius, in his pleasing poem, has seasoned his verses with a certain delightful relish of antiquity.

Dionysius Lambinus, in his Epistle Dedicatory to Charles IX. the Most Christian King.

If among the few remains of the writings of the ancients, which have escaped as from a shipwreck, there be any sort of learning, from whence many and great advantages have accrued to us, it is from their poems, &c. But you will say, that *Lucretius* argues against the immortality of the soul, denies the providence of the gods, overthrows all religion, and places the chief good in pleasure. This is not the fault of *Lucretius*, but of *Epicurus*, whose doctrines *Lucretius* followed. His poem, though he advances in it some opinions that are repugnant to our religion, is, nevertheless, a poem; nay, and a beautiful noble poem too, distinguished, illustrated, and adorned with all the brightness of wit, &c.—What though *Epicurus* and *Lucretius* were impious; are we, who read them, therefore impious too? How many assertions are there in this poem, that are consentaneous to the opinions and maxims of the other philosophers! How many probable! How many excellent and almost divine! These let us lay hold on; these let us seize; these let us approve of.—Besides, are we so credulous and easy of faith as to believe, that what assertions soever all manner of writers have left recorded in their works, are as true as if they had been pronounced from the oracle of *Apollo*? And since we daily read many things that are fabulous, incredible, and false, either to give some respite to our minds, or to make us the more willingly acquiesce in, and the most constantly adhere to such as are uncontroversibly true; what reason is there, that we should condemn or neglect *Lucretius*, a most elegant and beautiful poet? &c.—I return to our great and excellent poet *Lucretius*, the most polite, most ancient, and most elegant of all the Latin writers; from whom *Virgil* and *Horace* have in many places borrowed not half, but whole verses. He, when he disputes of the indivisible corpuscles, or first principles of things; of their motion, and of their various figuration; of the void; of the images, or tenuous membranes that fly off from the surface of all bodies; of the nature of the mind and soul; of the rising and setting of the planets; of the eclipse of the sun and moon; of the nature of lightning; of the rainbow; of the *Averni*; of the causes of diseases, and of many other things, is learned, witty, judicious, and elegant. In the introductions to his books; in his comparisons; in his examples; in his disputations against the fear of death; concerning the inconveniences and harms of love; of sleep and of dreams, he is copious, discreet, eloquent, knowing, and sublime.—We not only read *Homer*, but even get him by heart, because, under the veils of fables, partly obscene, and partly absurd, he is deemed to have included the knowledge of all natural and human things. Shall we not then hear *Lucretius*, who, without the disguise of fables, and such trifles, not truly indeed, nor piously, but plainly and openly, and as an Epicurean, ingeniously, wittily, and learnedly, and in the most correct and purest of styles, disputes of the prin-

ciples and causes of things; of the universe; of the parts of the world; of a happy life; and of things celestial and terrestrial. And, though in many places he dissent from Plato, though he advance many assertions that are repugnant to our religion, we ought not therefore to despise and set at nought those opinions of his, in which not only the ancient philosophers, but we who profess Christianity agree with him. How admirably does he dispute of the restraining of pleasures, of the bridling the passions, and of the attaining tranquillity of mind! how wittily does he rebuke and confute those who affirm, that nothing can be perceived and nothing known; and who say that the senses are fallacious! How fully he defends the senses! &c.—How beautiful are his descriptions! How graceful, as the Greeks call them, his episodes! How fine are his disputations of colours, of mirrors, of the loadstone, and of the Avernus! How serious and awful are his exhortations to live contentedly, justly, temperately, and innocently! What shall we say of his diction; than which nothing can be said or imagined to be more pure, more correct, more clear, or more elegant? I make not the least scruple to affirm, that in all the Latin tongue, no author speaks Latin better than Lucretius; and that the diction neither of Cicero nor of Cæsar is more pure.

Obertus Gifanius in the Life of Lucretius.

I have retained the common title, of the Nature of Things: for, besides that the ancient copies have it so, and that Sospather in the second book of his Gram. mentions the third book of Lucretius, of Natural Things; our poet himself confirms it in book v. verse 381, where he says,

These truths, this rise of things we lately know:
Great Epicurus liv'd not long ago:
By my assistance young Philosophy
In Latin words now first begins to cry.

Creach.

Lucretius is in the right to say this of himself: for he was the first, who in the Latin tongue, writ of the Nature of Things; though afterwards many others followed his example; as C. Amasinius, Catus, M. Cicero Varro, and Ignatius: of the last of whom Aur. Macrobius cites the third book. But the same subject had, many ages before, been treated of in Greek by Empedocles, whom Lucretius held in great veneration, as appears by the following elegy, which he gives of him in his first book, where, speaking of Sicily, he says, that that island,

Though rich with men and fruit, has rarely shown
A thing more glorious than this single one:
His verse, compos'd of nature's works, declare
His wit was strong, and his invention rare;
His judgment deep and sound; whence some began,
And justly too, to think him more than man.

Creach, B. i. v. 748.

Him, therefore, our poet carefully imitated: For, what Aristotle says of Empedocles, that he writ in

the same style as Homer, and was a great master of his own language, as being full of metaphors, and making use of all other advantages that might conduce to the beauty of his poetry; all these perfections, I say, though they are scarce to be found in any other of the Latin poets, manifestly discover themselves in Lucretius: for he excels all the rest in purity of diction; and, if I may use the expression, in sublimity of eloquence: besides, he has adorned his whole poem with an infinite number of excellent metaphors, as with so many badges of distinction and honour. Tully, who was well able to judge, calls him a very artful poet: and, would I had leisure enough to show, not only what he has borrowed from Homer and others, but chiefly from Ennius, whom of all the Latin poets he most admired, and studied to imitate, but what Virgil likewise has taken from Lucretius: for that would make manifest what I have often said, that Ennius is the grandfather, Lucretius the father, and Virgil the son, they being the most illustrious triumvirate of the epic Latin poets.

The same Gifanius in his Preface to Sambucus.

Some there are, who will chiefly blame me for bestowing so much labour on an impious poet; for this, will they say, is the very Lucretius, who endeavours to evince that the soul is mortal; and thus takes away all hope of our salvation, and of a happy futurity; who denies the providence of God! which is the main basis and support of the Christian religion: and, lastly, who asserts in his poem that most absurd doctrine of Democritus and Epicurus, concerning the indivisible corpuscles or principles of all things. This being a grievous accusation, did indeed at first very much startle me; but having maturely weighed this objection, I was persuaded that it was not of such moment as to make us neglect the labours of this most excellent poet, or suffer them to be totally lost: For, by the same reason, we ought to condemn many of the writings of Cicero; since in them as well as in this poem, the same doctrine of the providence of God, of the nature of the soul; but above all of the atoms, is proposed, and often strenuously defended; nay, we must in that case be obliged to neglect almost all the writers of antiquity.—And, to say all in a word, almost all the authors of the preceding ages, the poets, the historians, the orators, and the philosophers, must all be laid aside, if their writings were once to be tried by the standard of our religion, and by the precepts of Christianity.—The assertions we find in Lucretius that are contrary to the Christian faith, are indeed of the greatest moment: but then they are so evidently false, that they can by no means lead a Christian into error.—What danger can accrue to us from the ridiculous doctrine of his atoms, since it is so easy to be refuted? On the contrary, we may from thence reap this great advantage, that, having discovered the falsity of his assertions concerning the Nature of Things, we shall be the more diligent to find out the truth; and, having found it, to retain

it the more strongly in our memory. It cannot be denied but that Lucretius is a sage and discreet writer; nor is there in all his poem any token or footstep of intemperance: nay, there are many excellent things contained in it, and many that well deserve to be read and remembered: for, in the first place, he teaches that they only are fit to be trusted with the administration of the government, who excel others in prudence, wisdom, and moderation. How discreetly and strongly too does he argue for the restraint of ambition, and for avoiding the miseries of intestine divisions and civil wars; the calamities that in his days afflicted the republic of Rome! He extols philosophy, and the studies of the wise in a style incredibly sublime. How beautiful is his poetry when he treats of serenity of mind, and of the contempt of death! In how many places, and in how excellent and almost divine a diction, does he confute the superstition of the vulgar, and their fabulous belief of the torments of hell! How elegantly does he detect the frauds, and deride the vanity of astrologers! Not to mention with how great severity he dissuades from avarice, and shows the many ills that arise from the greediness of riches; nor how wholesome are his instructions concerning temperance, frugality of living, and modesty of apparel. As to what relates to the restraints of the other cupidities of the mind, and sordid pleasures of the flesh, so excellent indeed are the instructions he gives us, that what Diogenes writes of Epicurus seems to be true, that he was falsely accused by some for indulging himself too much in pleasure and voluptuousness; and that it was a downright calumny in them to wrest his meaning, and interpret what he meant of the tranquillity of the mind, as if it had been spoken of the pleasures of the body; of which likewise our poet most excellently sings in the beginning of the fifth book.—Concerning some of the phenomena of the heavens, he advances indeed several opinions that are false, or rather ridiculous; but yet they are consonant to the Epicurean doctrine: and, on the other hand, how true are many of his assertions concerning thunder, the nature, force, and swiftness of lightning; the magnitude of the sea; the winds, and many other things of the like nature! With how wonderful a sweetness does he sing the first rise of the world, of the earth, of the heavens, and of all the several kinds of animals. As likewise the origin of speech, of government, of laws, and of all the arts. How full and satisfactory are his disputations of the flames of mount *Ætna*, of the *Averni*, and of the causes of diseases. How excellently has he described, as it were in a picture, that memorable and dreadful plague, which desolated *Athens*, and the whole country of *Attica*.

Thomas Scauranus.

Carus alone, of all the *Ausonian* bards, in search of truth employed his painful muse, greedy to view the secret holds of nature, and towering, soar even to the immortal gods: but oft, alas! he swerves, by thee misled, O *Epicurus*, from the paths of truth.

Quintus Serenus in his Poem of Physic.

If, after many years of kind endeavours, no tender offspring blest the nuptial joys; whether the female or the male be cursed with barrenness, shall be unsung by me: The fourth of great *Lucretius* solves the doubt.

Michael Du Fay in his Epistle Dedicatory to the Dauphin of France, only Son to the Most Christian King Lewis XIV.

Though in the writings of *Lucretius* there are some opinions that disagree with the doctrine of the Christian religion; yet, of all the Latin authors, he is esteemed to be the most judicious and elegant. For, laying aside the veil of fables, he disputes, plainly, accurately, and with great strength of wit, concerning the whole Nature of Things: his language is entirely correct and pure, his diction exceeding elegant, his style plain and easy, though at the same time domestic and sublime: his poem abounds with a wonderful plenty of moral sentences; and the admirable connection observed through the whole, is indeed surprising: By the lecture of it, not to mention the other advantages, we may acquire a nobler magnanimity against the blows of fortune, a greater fortitude against the fear of death, a stronger constancy against superstition, and a more constant temperance against the burning rage of lust. Add to this, that, excepting a few foolish assertions and impieties, he delivers many things that are consonant to truth and reason; more, to good manners; and that some of his disputations are almost divine. As bees, therefore, gather from each flower only what is useful and proper to make honey; so too, most judicious prince, do you accurately and diligently collect from this author, only what seems to conduce to the knowledge of things, and to the acquiring an elegance of style.

Mr. Dryden in his Preface to the second Volume of Poetical Miscellanies.

I have, in the next place, to consider the genius of *Lucretius*.—If he was not of the best age of Roman poetry, he was at least of that which preceded it; and he himself refined it to that degree of perfection, both in the language and the thoughts, that he left an easy task to *Virgil*, who, as he succeeded him in time, so he copied his excellencies: for the method of the *Georgics* is plainly derived from him.

Lucretius had chosen a subject naturally crabbed; he therefore adorned it with poetical descriptions, and precepts of morality in the beginning and ending of his books; which you see *Virgil* has imitated with great success in those four books, which, in my opinion, are more perfect in their kind than even his divine *Æneids*. The turn of his verses he has likewise followed in those places which *Lucretius* has most laboured, and some of his very lines he has transplanted into his own works, without much variation,

If I am not mistaken, the distinguishing character of Lucretius, I mean his soul and genius, is a certain kind of noble pride and positive assertion of his own opinions. He is every where confident of his own reason, and assuming an absolute command, not only over his vulgar readers, but even his patron Memmius. For he is always bidding him attend, as if he had the rod over him, and using a magisterial authority, while he instructs him. From his time to ours, I know none so like him, as our poet and philosopher of Malmesbury. This is that perpetual dictatorship, which is exercised by Lucretius; who, though often in the wrong, yet seems to deal *bona fide* with his reader, and tells him nothing but what he thinks; in which plain sincerity, I believe he differs from our Hobbes; who could not but be convinced, or at least doubt of some eternal truths which he has opposed: but for Lucretius, he seems to disdain all manner of replies, and is so confident of his cause, that he is beforehand with his antagonists; urging for them whatever he imagined they could say; and leaving them, as he supposes, without an objection for the future. All this too with so much scorn and indignation, as if he were assured of the triumph, before he entered into the lists.

From this sublime and daring genius of his, it must of necessity come to pass, that his thoughts must be masculine, full of argumentation, and that sufficiently warm: from the same fiery temper proceeds the loftiness of his expressions, and the perpetual torrent of his verse, where the barrenness of his subjects does not too much constrain the quickness of his fancy; for there is no doubt to be made, but that he could have been every where as poetical as he is in his descriptions, and in the moral part of his philosophy, if he had not aimed more to instruct in his system of nature than to delight. But he was bent upon making Memmius a materialist, and teaching him to defy an invisible power; in short, he was so much an Atheist, that he forgot sometimes to be a poet.

These are the considerations which I had of that author before I attempted to translate some parts of him, and, accordingly, I laid by my natural diffidence and scepticism for a while, to take up that dogmatical way of his, which, as I said, is so much his character, as to make him that individual poet.

As for his opinions concerning the mortality of the soul, they are so absurd, that I cannot, if I would, believe them. I think a future state demonstrable even by natural arguments; at least, to take away rewards and punishments, is only a pleasing prospect to a man who resolves beforehand not to live morally; but, on the other side, the thought of being nothing after death, is a burden insupportable to a virtuous man, even though a heathen. We naturally aim at happiness, and cannot bear to have it confined to the shortness of our present being, especially when we consider that virtue is generally unhappy in this world, and vice fortunate: so that it is hope of futurity alone that makes this life tolerable in expectation of a better. Who would not commit

all the excesses to which he is prompted by his natural inclinations, if he may do them with security while he is alive, and be incapable of punishment after he is dead? If he be cunning and secret enough to avoid the laws, there is no band of morality to restrain him; for fame and reputation are weak ties: Many men have not the least sense of them; powerful men are only awed by them, as they conduce to their interest, and that not always when a passion is predominant; and no man will be contained within the bounds of duty when he may safely transgress them. These are my thoughts abstractedly, and without entering into the notions of our common faith, which is the proper business of divines.

But there are other arguments in this poem which I have turned into English, not belonging to the mortality of the soul, which are strong enough to a reasonable man, to make him less in love with life, and consequently in less apprehensions of death. Such are the natural satiety proceeding from a perpetual enjoyment of the same things, the inconveniencies of old age, which make him incapable of corporeal pleasures, the decay of understanding and memory, which render him contemptible and useless to others. These, and many other reasons, so pathetically urged, so beautifully expressed, so adorned with examples, and so admirably raised by the *prophoeia* of nature, who is brought in speaking to her children, with so much authority and vigour, deserve the pains I have taken with them.

It is true there is something, and that of some moment, to be objected against my Englishing the nature of love, from the fourth book of Lucretius; and I can less easily answer why I translated it, than why I thus translated it. The objection arises from the obscenity of the subject, which is aggravated by the too lively and alluring delicacy of the verses. In the first place, without the least formality of an excuse, I own it pleased me; and let my enemies make the worst they can of this confession. I am not yet so secure from that passion but that I want my author's antidote against it. He has given the truest and most philosophical account both of the disease and remedy which I ever found in any author, for which reasons I translated him. But it will be asked why I turned him into this luscious English, for I will not give it a worse word? Instead of an answer, I could ask again of my supercilious adversaries, whether I am not bound, when I translate an author, to do him all the right I can, and to translate him to the best advantage? If to mince his meaning, which I am satisfied was honest and instructive, I had either omitted some part of what he said, or taken from the strength of his expression, I certainly had wronged him; and that freeness of thought and words being thus cashiered in my hands, he had no longer been Lucretius. If nothing of this kind be to be read, physicians must not study nature, anatomies must not be seen, and somewhat I could say of particular passages in books, which, to avoid profaneness, I do not name; but the intention qua-

lifies the act; and both mine and my author's were to instruct as well as please. It is most certain, that bare-faced bawdery is the poorest pretence to wit imaginable. But neither Lucretius nor I have used the grossest words, but the cleanliest metaphors we could find, to palliate the broadness of the meaning; and, to conclude, have carried the poetical part no farther than the philosophical exacted.

Mr. Dryden's opinion of the following Translation of Lucretius, by Mr. Creech, taken from his Preface to the second Volume of Poetical Miscellanies.

I now call to mind what I owe to the ingenious and learned translator of Lucretius. I have not here designed to rob him of any part of that commendation which he has so justly acquired by

the whole author, whose fragments only fall to my portion. The ways of our translation are very different; he follows him more closely than I have done, which became an interpreter of the whole poem. I take more liberty, because it best suited with my design, which was to make him as pleasing as I could. He had been too voluminous had he used my method in so long a work, and I had certainly taken his, had I made it my business to translate the whole. The preference then is justly his; and I join with Mr. Evelyn in the confession of it, with this additional advantage to him, that his reputation is already established in this poet, mine is to make its fortune in the world. If I have been any where obscure in following our common author, or if Lucretius himself is to be condemned, I refer myself to his excellent annotations, which I have often read, and always with some new pleasure.

T. LUCRETIIUS CARUS.

OF THE NATURE OF THINGS.

B O O K I.

THE ARGUMENT.

I. THE poet invokes Venus. II. Then, from ver. 64. to ver. 191, he dedicates to Memmius his books of the Nature of Things, praises Epicurus, whose philosophy he follows, endeavours to clear his doctrine from the charge of impiety; and briefly proposes the arguments of this and the following books. III. He enters upon his subject, and, from ver. 192. to ver. 315, teaches, that nothing can be made of nothing, and that nothing can be reduced into nothing. IV. From ver. 315. to ver. 380, that there are some little bodies, which though imperceptible to the eye, may be conceived by the mind, and of which all things are made. V. To these corpuscles from ver. 380. to ver. 479, he subjoins a void or an empty space. And, VI. From ver. 479. to ver. 526, he proves that there is nothing but body and void: and that all the other things which seem to be, as weight, heat, poverty, war, &c. are only conjuncts or events, properties or accidents, of body and void. VII. From ver. 526. to ver. 573, he teaches, that the first little bodies or principles of things, are perfect solids, and consequently, from ver. 573. to ver. 667, that they are indivisible leasts (for body cannot be divided into infinite), and eternal. VIII. In the next place, from ver. 667. to ver. 729, he confutes the opinion of Heraclitus, who held that fire is the principle of all things; and of others who believed the like of air, water, or earth. IX. Then, from ver. 729. to ver. 840, he proves against Empedocles, that things are not composed of the four elements. X. From ver. 840. to ver. 926, he refutes Anaxagoras. XI. Lastly, From ver. 926. to ver. 1049. he teaches, that the universe is infinite on all sides; that the corpuscles are infinite in number, and that the void cannot be included in any bounds. XII. And from ver. 1049. to the end of this book, he laughs at those who believe there is a centre in the universe, down to which all heavy things are continually striving, while the light work upwards of their own accord.

KIND Venus, glory of the blest abodes.
Parent of Rome, chief joy of men and gods;
Delight of all, comfort of sea and earth, [birth :
To whose kind pow'rs all creatures owe their
At thy approach, great goddess, strait remove,
Whatever things are rough, and foes to love.
The clouds disperse, the winds most swiftly waste,
And rev'rently in murmurs breathe their last :
The earth, with various art (for thy warm
pow'rs 9
That dull mass feels), puts forth her gaudy flow'rs:
(For thee does subtle luxury prepare
The choicest stores of earth, of sea, and air :
To welcome thee, she comes profusely drest
With all the spices of the wanton east :
To pleasure thee, ev'n lazy luxury toils) :
The roughest sea puts on smooth looks, and smiles;
The well-pleas'd heav'n assumes a brighter ray
At thy approach, and makes a double day.

When first the gentle spring begins t' inspire
Soft wishes, melting thoughts, and gay desire, }
And warm Favonius fans the amorous fire : 21 }
First through the birds thy active flame does move,
Who, with their mates, sit down, and sing, and
love;
They greedily their tuneful voice employ
At thy approach, the author of their joy.
Each beast forgets his rage, and entertains
A softer fury, through the flow'ry plains :
Then rapid streams, through woods, and silent
groves,
With wanton play, all run to meet their loves :
Whole nature yields to thy soft charms; the
ways 30
Thou lead'st, she foll'wing eagerly obeys :
Acted by the kind principles thou dost infuse, }
Each bird and beast endeavours to produce }
His kind; and the decaying world renews.

Thee, nature's pow'rful ruler, without whom
Nothing that's lovely, nothing gay can come
From darksome Chaos, deep and ugly womb.
Thee, now I sing of nature, I must choose
A patron to my verse; be thou my muse;
Polish my lines, while I to Memmius write, 40
Thy choice, thy most deserving favourite:
Inspire my breast with an unusual flame,
Sprightly as is his wit, immortal as his fame:
Let war's tumultuous noise and labours cease,
Let earth and sea enjoy a solid peace:
Peace is thy gift alone; for furious Mars,
The only governor and god of wars,
When tir'd with heat and toil, does oft resort
To taste the pleasures of the Paphian court;
Where on thy bosom he supinely lies,
And greedily drinks love at both his eyes;
Till quite o'ercome, snatching an eager kiss,
He hastily goes on to greater bliss.
Then midst his strict embraces clasp thy arms
About his neck, and call forth all thy charms;
Careless with all thy subtle arts, become
A flatterer, and beg a peace for Rome. [flow?

For midst rough wars how can verse smoothly
Or in such storms the learned laurel grow?
How can my Memmius have time to read, 60
Who by his ancestors fam'd glory led
To noble actions, must espouse the cause
Of his dear country's liberties and laws?

And you, my Memmius, free from other cares,
Receive right reason's voice with well-purg'd
ears;

Lest what I write, and send you for your good,
Be scorn'd, and damn'd, before well understood.
Entreat of things abstruse, the Deity,
The vast and steady motions of the sky;
The rise of things: how curious nature joins 70
The various seeds, and in one mass combines
The jarring principles: what new supplies
Bring nourishment and strength: how she un-
ties [dies:
The Gordian knot, and the poor compound
Of seeds or principles (for either name
We use promiscuously; the thing's the same),
Of which she makes, to which she breaks the
frame.

For whatsoe'er's divine must live in peace,
In undisturb'd and everlasting ease:
Not care for us; from fears and dangers free, 80
Sufficient to its own felicity:
Nought here below, nought in our pow'r it needs;
Ne'er smiles at good, ne'er frowns at wicked
deeds.

Long time men lay oppress'd with slavish fear;
Religion's tyranny did domineer,
And being plac'd in heav'n look'd proudly down,
And frighted abject spirits with her frown.
At length a mighty man of Greece began
T' assert the nat'ral liberty of man,
By senseless terrors, and vain fancies led 90
To slav'ry: straight the conquer'd phantom fled:
Not the fam'd stories of the Deity,
Not all the thunder of the threat'ning sky,
Could stop his rising soul; through all the past
The strongest bounds that pow'rful nature cast:

His vigorous and active mind was hurl'd
Beyond the flaming limits of this world,
Into the mighty space, and there did see
How things begin, what can, what cannot be:
How all must die, all yield to fatal force; 100
What steady limits bound their nat'ral course.
He saw all this, which others sought in vain.
Thus by his conquest we our right regain;
Religion he subdu'd, and we now reign.

Lest you should start at these bold truths, and
fly

These lines, as maxims of impiety:
Consider that religion did, and will
Contrive, promote, and act the greatest ill.
By that Diana's cruel altar flow'd
With innocent and royal virgin's blood: 110
Unhappy maid! with sacred ribbands bound,
Religion's pride! and holy garlands crown'd;
To meet an undeserv'd, untimely fate,
Led by the Grecian chiefs in pomp and state:
She saw her father by, whose tears did flow
In streams; the only pity he could show.
She saw the crafty priest conceal the knife
From him, bless'd and prepar'd against her life!
She saw her citizens with weeping eyes
Unwillingly attend the sacrifice. 120

Then, dumb with grief, her tears did pity crave;
But 'twas beyond her father's power to save.
In vain did innocence, youth, and beauty plead;
In vain the first pledge of his nuptial bed:
She fell; ev'n now grown ripe for bridal joy,
To bribe the gods, and buy a wind for Troy.
So died this innocent, this royal maid:
Such devilish acts religion could persuade!

But still some frightful tales, some furious
threats,

By poets form'd, those grave and holy cheats. 130
May bias thee. Ev'n I could easily find
A thousand stories to distract thy mind.
Invent new fears, whose horrid looks should
fright,

And damp thy thoughts when eager on delight:
And reason good——

But if it once appear,
That after death there's neither hope nor fear;
Then men might freely triumph, then disdain
The poet's tales, and scorn their fancy'd pain;
But now we must submit, since pain we fear
Eternal after death, we know not where. 140
We know not yet the soul; how 'tis produc'd;
Whether with body born, or else infus'd:
Whether in death breath'd out into the air,
She mix confus'dly with't, and perish there;
Or through vast shades and horrid silence go
To visit brimstone caves, and pools below;
Or into beasts retires.

As our fam'd Ennius sings, upon whose brow
The first, and freshest crowns of laurel grow, 150
That ever learned Italy could show:
Though he in lasting numbers does express
The stately Acherusian palaces,
Which neither soul nor body e'er invades;
But certain pale and melancholy shades,
From whence he saw old Homer's ghost arise,
An august shade; down from whose rev'rend eyes

While his learn'd tongue nature's great secrets told,

Whole streams of tears in mighty numbers roll'd.

Therefore I'll sing to cure these wanton fears,

Why sun and moon mete out the circling years :

How bodies first began : But chiefly this, 161

Whence comes the soul, and what her nature is :

What frights her waking thoughts, what cheats her eyes,

When sleeping, or diseas'd, she thinks she spies

Thin ghosts in various shapes about her bed :

And seems to hear the voices of the dead.

I'm sensible the Latin is too poor

To equal the vast riches of the Grecian store :

New matter various nature still affords,

And new conceptions still require new words. 170

Yet, in respect to you, with great delight

I meet these dangers; and I wake all night,

Lab'ring fit numbers, and fit words to find,

To make things plain, and to instruct your mind,

And teach her to direct her curious eye

Into coy nature's greatest privacy.

These fears, that darkness, which o'erspreads our souls,

Day can't disperse; but those eternal rules,

Which from firm premises true reason draws,

And a deep insight into nature's laws. 180

And now let this as the first rule be laid :

Nothing was by the gods of nothing made.

From hence proceeds all our distrust and fear ;

That many things in heaven and earth appear,

Whose causes far remote and hidden lie,

Beyond the ken of vulgar reason's eye ;

And therefore men ascribe them to the Deity. }

But this once prov'd, it gives an open way

To nature's secrets, and we walk in day.

How things are made, and how preserv'd we'll prove, 190

Without the trouble of the powers above.

If nothing can be fertile, what law binds

All beings still to generate their own kinds ?

Why do not all things variously proceed

From ev'ry thing ? What use of similar seed ?

Why do not birds, why fish not rise from earth,

And men and trees from water take their birth ?

Why do not herds and flocks drop down from air ?

Wild creatures and untam'd spring ev'ry where.

The same tree would not rise from the same root,

The cherry would not blush in the same fruit :

Nought fix'd and constant be ; but ev'ry year 202

Whole nature change, and all things all things bear.

For did not proper seeds on all things wait,

How then could this thing still proceed from that ?

But now since constant nature all things breeds,

From matter, fitly join'd with proper seeds ;

Their various shapes, their different properties,

Is the plain cause why all from all can't rise.

Besides, why is ripe corn in summer found ? 210

Why not bald winter with fresh roses crown'd ?

Why not his cups o'erflow with new press'd wine ?

Why sweaty autumn only treads the vine ?

But because seeds to vital union cast,

Spring and appear, but while the seasons last ;

While mother earth has warmth and strength to bear,

And can with safety trust her infant buds to the mild air.

Things made of nothing would at once appear

At any time, and quarter of the year ;

Since there's no seed, whose nature might remit,

And check their growth until the season's fit. 221

Besides, no need of time for things to grow :

For time would be a measure e'en too slow :

But in one instant, if from nought began,

A shrub might be a tree, a boy a man.

But this is false : Each mean observer sees,

Things grow from certain seeds by just degrees ;

And growing keep their kind : And hence we know,

That things from proper matter rise and grow ; }

By proper matter fed and nourish'd too. 230

Again, the earth puts forth no gaudy flow'rs,

Unless impregnated with timely show'rs !

And living creatures too, that scarce receive

Supplies of food ; nor can beget, nor live.

Wherefore, 'tis better to conclude there are

Many first common bodies every where,

Which join'd, as letters words, do things compose,

Than that from nothing any thing arose.

Besides, why does weak nature make such small,

Such puny things for men ? Why not so tall,

That while they wade through seas and swelling tides, 241

Th' aspiring waves should hardly touch their sides ?

Why not so strong, that they with ease might tear

The hardest rocks, and throw them through the air ?

Why cannot she preserve them in their prime,

Above the pow'r of all-devouring time ?

Why wanton childhood ends in youthful rage,

And youth falls swiftly into doating age ?

But because things on certain seeds depend,

For their first rise, continuance, and end. 250

Therefore unfruitful nothing nothing breeds ;

Since all things owe their life to proper seeds.

Lastly, experience tells us that wild roots,

Better'd by art and toil, bear noble fruits.

Whence we conclude, that seeds of bodies lie,

In earth's cold womb, which, set at liberty,

By breaking of the clods, in which they lurk,

Spring briskly up, and do their proper work.

For, were there none, though we no help afford,

Things would be better'd of their own accord.

Besides, as nothing nature's pow'r creates : 261

So death dissolves, but not annihilates.

For could the substances of bodies die,

They presently would vanish from our eye ;

And, without force, dissolving, perish all ;

And silently into their nothing fall.

But now since things from seeds eternal rise ; }

Their parts well join'd and fitted, nothing dies,

Unless some force break off the nat'ral ties.

If all things, over which long years prevail, 270

Did wholly perish, and their matter fail ;

How could the pow'rs of all-kind Venus breed

A constant race of an'mal to succeed ?

Or how the earth eternally supply,

With constant food, each his necessity ?

How could the springs and rivers flow so far,
And fill a sea? How could th' air feed each star?
For whatsoe'er could into nothing waste,
That infinite space of time already pass'd,
Had quite consum'd. ————— 280

But if those bodies, which compose this all,
Could for so many ages past endure:
They are immortal, and from death secure;
And therefore cannot into nothing fall.

Again, the same force ev'ry thing would break,
Were not the union made more strong or weak
By their immortal seeds: Nay, more than that,
One single touch would be the stroke of fate.
For things, where no eternal seeds are found,
Would strait dissolve, and die with any wound.

But since the seed's eternal, and the frame 291
Of bodies, and their union not the same;

Things may secure, and free from danger stand,
Until some force, driv'n by an envious hand,
Proportion'd to the texture, break the band.
Thus death dissolves alone; death breaks the
chain,

And scatters things to their first seeds again.

Lastly, when father ether kindly pours
On fertile mother earth his seminal show'rs, 299
They seem to perish there: But strait new juice
Ferment, and various herbs and trees produce,
Whose trunks grow strong, and spreading branches
shoot, [fruit.

Look fresh, and green, and bend beneath their
These nourishment to man and beast do prove:
Hence our towns fill with youth; with birds each
grove,

Who sit and sing; and in a num'rous throng,
With new-fledg'd wings clap, and applaud the
song.

These fat our cattle, that distended lie 308
On fertile banks, their spightful young ones by,
Rev'ling on milk, which their swoln udders yield,
Grow gay, and brisk, and wanton o'er the field.

And therefore bodies cannot fall to nought,
Since one thing still is from another bought
By prov'dent nature, who lets nothing rise,
Nor be, except from something else that dies.

Now since we have by various reasons taught,
That nothing rises from, or falls to nought;
Lest you dissent, because these seeds must lie
Beyond the ken, ev'n of the sharpest eye:

Know there are bodies, which no eyes can see, 320
Yet them, from their effects, we grant to be.
For first the winds disturb the seas, and tear
The stoutest ships, and chase the clouds through
air: [course

Sometimes through humble plains their vi'lent
They bend, and beat down trees with mighty
force;

Sometimes they rise so high, their strength so
great,

With furious storms they lofty mountains beat,
And tear the woods. —————

These must be bodies, though unseen they be,
Which thus disturb heav'n, earth, and air, and sea.
Which hardest rocks, and oaks, and all things
tear; 331

And snatch them up in whirlings through the air:

They all rush on as headlong rivers flow,
Swoln big with falling show'rs, or melting snow;
And rocks and trees o'erturn, and weighty beams;
And whirl their conquer'd prey in rapid streams,
No bridge can check, no force the stream controul;
It grows more wild, and fierce, and beats the mole.
Ruin and noise attend where'er it flows,
It rolls great stones, and breaks what dares op-
pose. 340

So rush the blasts of wind, which, like a flood,
Which way soe'er they tend, drive rocks and
wood,

And all before them: Sometimes upward bear
In rapid turns, and whirl them in the air.

'Tis certain then, these winds, that rudely fight,
Are bodies, though too subtle for our sight;
Since they do work as strong, as furious grow,
As rapid streams, which all grant bodies do.

The num'rous odours too, whose smells delight,
And please the nose, are all too thin for sight. 350
We view not heat, nor sharpest colds, which
wound

The tender nerves: Nor can we see a sound.

Yet these are bodies, for they move the sense;

And strait sweet pleasure, or quick pains com-
mence;

They shake the nerves. Now whatsoe'er does
touch,

Or can be touch'd, is body, must be granted such.

Besides, fresh clothes, expanded near the main,
Grow wet; but by the sun are dry'd again:

Yet what eye saw when first the moisture fate?

Or when it rose, and fled before the heat? 360
Therefore we must conclude, the drops t' have
been

Dissolv'd to parts, too subtle to be seen.

Nay more, 'tis certain, ev'ry circling year,
The rings, which grace the hands, diminish there:
Drops hollow stones; and while we plough, the
share

Grows less: The streets, by often treading, wear.
The brazen statues, that our gates adorn,
Show their right hands diminish'd much, and
worn.

By touch of those that visit or pass by. 369

'Tis certain from all these some parts must fly;
But when those bodies part, or what they be,
Malicious nature grants not pow'r to see.

Lastly, not ev'n the sharpest eye e'er sees
What parts, to make things grow by just degrees,
Nature does add; nor what she takes away,
When age steals softly on, and things decay.

Nor what the salt, to set the waters free,
Frets from the rocks, and beats into the sea:

'Tis certain then, that much which nature does,
She works by bodies, undiscern'd by us. 380

Yet bodies do not fill up every place;

For beside those, there is an empty space,

A void. This known, this notion form'd aright,
Will bring to my discourse new strength and
light;

And teach you plainest methods to descry

The greatest secrets of philosophy.

A void is space intangible: Thus prov'd,

For were there none, no body could be mov'd.

Because where'er the pressing motion goes,
It still must meet with stops, still meet with
foes :

'Tis natural to bodies to oppose.

So that to move would be in vain to try ;
But all would fix'd, stubborn and moveless lie ;
Because no yielding body could be found,
Which first should move, and give the other
ground.

But ev'ry one now sees that things do move
With various turns, in earth, and heav'n above :
Which, were no void, not only we've not seen,
But bodies too themselves had never been,
Ne'er generated ; for matter, all sides prest
With other matter, would forever rest. [pear, 400

Though free from pores, though solid things ap-
Yet many reasons prove them to be rare.
For drops distil, and subtle moisture creeps
Through hardest rocks, and ev'ry marble weeps.
Juice, drawn from food, ev'n to the head does
climb,

Falls to the feet, and visits ev'ry limb.

Trees grow, and at due seasons yield their fruit :
Because the juice, drawn by the lab'ring root,
Does rise into the trunk, and through the bran-
ches shoot. 410

Sounds pass through well-clos'd rooms, and hard-
est stones ;

And rig'rous winter's frosts affect our bones.
This could not be, were there no empty space,
Through which these moveables might freely pass.

Besides, why have not bodies equal weight
With those whose figure is but just as great ?
For, did as many equal bodies frame [same.
Both wool and lead, their weight would be the
For ev'ry part of matter downwards tends,
By nature heavy ; but no void descends. 420

Wherefore those lighter things, of equal size,
Do less of matter, more of void comprise.
But by the heavier more of seed's enjoy'd ;
And these convincing reasons prove a void.

But some object : The floods to fish give way,
Who cut their passage through the yielding sea ;
Because they leave a space where'er they go,
To which the yielding waters circling flow ;
And hence by an analogy they prove,
That, though the world were full, yet things may
move. 430

But this is weak. —

For, how could fish e'er ply their nat'ral oars,
How cut the sea, and visit distant shores,
Unless the waves gave way ? How these divide,
Except the fish first part the yielding tide ?
Therefore fight sense, deny what that will prove,
Discard all motion, and the pow'r to shove,
Or grant a void, whence things begin to move. }

Let two broad bodies meet, and part again,
The air must fill the space that's left between. 440
And ev'n suppose it flies as swift as thought,
Yet common sense denies it can be brought
O'er all at once : the nearest first possess'd,
And thence 'tis hurry'd on, and fills the rest.

But now, should some suppose these marbles
part,
Made firm by nature, and polite by art,

Because the air's condens'd, they err : 'tis plain
That a wide void is made and fill'd again :
Nor can the air condens'd be thus employ'd ;
Or, if it could, yet not without a void, 450
Could all the parts contract to shorter space,
And be combin'd with a more close embrace.
Thus though you cavil, yet at last o'ercome,
You must ignobly grant a vacuum.

Nor are these all ; ten thousand reasons more,
Clear, firm, convincing, yet ne'er heard before,
Might be produc'd ; but these, my curious youth,
Will guide thy searching mind to farther truth.
For as hounds, once in trace, still bear about,
Pursue the scent, and find the quarry out ; 460
So you, my Memmius, may from one thing
known

To hidden truths successfully go on.
Pursue coy truth with an unerring sense,
Into her close recess, and force her thence.
Go bravely on ; and, in such things as these,
Ne'er doubt ; I'll promise thee deserv'd success :
And my full soul is eager to declare
So many secrets, that I justly fear,
Ere I shall prove but one particular, }
The reasons flow in such a num'rous throng, 470
That age or hasty death will break the song.

But to go on : —

This all consists of body and of space :
That moves, and this affords the motion place.
That bodies are, we all from sense receive ;
Whose notice, if in this we disbelieve,
On what can reason fix, on what rely ?
What rule the truth of her deductions try
In greater secrets of philosophy ? }
Suppose no void, as former reasons prove, 480
No body could enjoy a place, or move :
Besides these two, there is no third degree
Distinct from both ; nought that has pow'r to be.
For if 'tis tangible, and has a place,
'Tis body ; if intangible, 'tis space.

Besides, whatever is, a power must own,
Or fit to act, or to be acted on,
Or be a place in which such things are done. }
Now, bodies only suffer and act ; and place
Is the peculiar gift of empty space : 490
And thus a diff'rent third in vain is sought ;
And ne'er can be found out by sense or thought.

For, whatsoe'er may seem of more degrees,
Are but th' events or properties of these.
Which to explain ; we call those properties,
Which never part, except the subject dies :
So weight to stones, so moisture to the sea,
So touch to body is, and to be free
From touching is to void ; but peace and wealth,
War, concord, slav'ry, liberty, and health, 500
Whose presence or whose absence nor prevents
Nor brings the subject's ruin, are events.

Time of itself is nothing, but from thought
Receives its rise ; by lab'ring fancy wrought
From things consider'd, while we think on some
As present, some as past, and some to come.
No thought can think on time ; that still confess ;
But thinks on things in motion or at rest.

Yet while the sons of fame their songs employ
On Helen's rape, or mourn the fall of Troy, 510

Take heed, nor fancy from such tales as these
That actions are, that they subsist confess.
Since all, of whom they were events, war's rage
Long since destroy'd, or more devouring age.
For action, or whate'er from action springs,
Is call'd th' event of countries or of things.

Lastly; suppose no frame, no seeds had been,
To act these things, nor space to act them in;
No gentle fire had warm'd kind Paris' breast,
No flames from beauteous Helen's eyes increas'd,
And kindled dreadful war; no teeming horse 521
Brought forth in one short night so great a force
As ruin'd stately Troy; which plainly show
That actions not subsist as bodies do;

Neither as void, but as events alone [done.
Of places where, and things by which they're

But farther; bodies are of diff'rent kinds,
Or principles, or made of those combin'd.
The principles of things no force can break;
They are too solid, and all strokes too weak: 530
Though such can hardly be believ'd: for voice,
Or thunder's sound, or ev'ry louder noise,
Breaks through our walls, which yet remain en-
tire:

So iron glows, and rocks dissolve in fire,
Strong flames divide the stubborn gold and brass,
And to a liquid substance break the mass:
Through silver, heat and cold: and each disdains,
And scorns a prison, though in precious chains.
This sense perceives; for, hold a silver cup,
And pour some water gently in at top, 540
Th' imprison'd heat or cold strait break their
bands, [hands.

Grow fierce, fly through, and warm or chill the
These instances are strong; these seem t' explain }
That beings, in their vast extent, contain }
No perfect solids; creatures of the brain! }
But yet attend my muse; she sweetly sings,
(Because right reason and the frame of things
Such seeds require) attend, she briefly shows,
And proves that things from perfect solids rose.

Two sorts of beings reason's eye descry'd, 550
And prov'd before; their diff'rence vastly wide:
Body and void, which never could agree
In any one essential property.

For body, as 'tis matter, is from place
Distinct; and void from body, as 'tis space.
Both these distinct subsist: and thus 'tis prov'd,
That seeds are solid, and from space remov'd.

But farther on: since things of seeds compos'd
Hold void, that thing by which that void's en-
clos'd

Is perfect solid; for what else employ'd 560
Can hold a space, or what contain a void?
Now what can sense, what searching reason find
To hold this void, but solid seeds combin'd?

This solid matter must for ever last,
Eternally endure, while compounds waste.

So grant no void, no spaces unpossess'd,
Then all would solid be, and all at rest.
And grant no solids, which fill up the place
That they possess, all would be empty space.
And thus seeds mix'd with void compose the
whole; 570

Nor all is empty space, nor all is full.

TRANS. II.

But solid seeds exist, which fill their place,
And make a diff'rence betwixt full and space.

These, as I prov'd before, no active flame,
No subtle cold can pierce, and break their frame,
Though ev'ry compound yields: no pow'rful
blow,

No subtle wedge divide, or break in two.
For nothing can be struck, no part destroy'd
By pow'rful blows, or cleft without a void,
And things that hold most void, when strokes do
press, 580

Or subtle wedges enter, yield with ease.
If seeds then solid are, they must endure
Eternally, from force, from stroke secure.

Besides, were seeds not eternal —
All things would rise from nought, and all return
To nought: nothing would be both womb and
urn.

But since my former reasons clearly taught
That nothing rises from or sinks to nought;
Those various things eternal seeds compose,
And death again dissolves them into those; 591
And thence new things were fram'd, new crea-
tures rose.

Then seeds are solid, else how could they last?
How things repair, so many ages past?

When nature things divides, did she go on
Dividing still, and never would have done;
The seeds had been so small, so much refin'd,
That nothing could have grown mature, no }
mass combin'd; }

For things are easier far dissolv'd than join'd. }
Then nature, who, through all these ages past,
Has broke the seeds, and still goes on to waste,
Could scarce contrive, though num'rous years re-
main, 601

To fit, unite, and join them close again.
But now 'tis plain, by strictest reason try'd,
Nature does not to infinite divide,
Since things are made, and certain years endure,
In which they spring, grow, and become mature.

But more; though seeds are hard through all
their frame,

A compound may be soft, as water, flame,
Whate'er it is, or whence'er it springs, 609
Because we grant a void, commix'd with things;
But were they soft, no reason could be shown
How harden'd iron's fram'd, or harder stone; }
For nature then would want fit seeds to work }

upon.
Then solid seeds exist, whose num'rous throng,
Closely combin'd, makes compounds firm and
strong. [growth

Besides; since things have time for life and
Prefix'd, and certain terms are set for both;
Since bounds are plac'd, o'er which they cannot
go, 618

And laws speak what they can and cannot do;
Since things not change; for all the kinds that fly
Are cloth'd with plumes of the same curious dye;
The matter must be firm, the seeds must be
Unchangeable, from alteration free:

For, grant the seeds may change, we could not
know

What things would be produc'd, or when, or how;

Z

How great their pow'r would rise, how far extend,
How long they'd live, or when their actions end:
Nor should we find the same delights pursu'd,
Nor parents' natures in their young renew'd. 629

Farther: those parts of things that utmost lie
Are something, though too subtle for our eye.
And these are leasts; they never break the chain,
And by themselves subsist, nor ever can;
For they are parts, whose both extremes the same;
And such like, plac'd in order, bodies frame.
Since these subsist not in a sep'rate state,
Their union must be strong, too firm for fate:
And stroke and wedge may try their strength in
vain;

No force can loose the tie, or break the chain.
Then seeds are simple solids, and their parts combin'd 640

By strongest bands, but not of others join'd.
These nature keeps entire: these seeds supply
For future things, repairing those that die.

Besides; suppose no least, then seeds refin'd,
Too small for sense, nay, scarce perceiv'd by mind,
Would still be full, still num'rous parts contain
No end, no bound, but infinite the train;
And thus the greatest and the smallest frame 648
Would both be equal, and their bounds the same;
For though the all be infinite, each single grain
And smallest seeds as num'rous parts contain:
But that's absurd, by reason's laws confess'd,
And therefore nature must admit a least;
Not fram'd of others, which no parts can show,
And which is solid and eternal too.

Besides; did nature not resolve to least,
Her pow'r quite spent, her works had long since
ceas'd:

Her force all gone; no beings rais'd anew, 658
Nor things repair'd: for no compositions show
What seeds must have those cath'lic qualities,
Nature's great instruments, weight, motion, size.

Lastly; great nature infinitely divides,
And never ceases: you must grant besides
That still some seeds exist, which, never broke,
Remain secure, free from the pow'r of stroke:
But 'tis absurd frail seeds should bear the rage
Of strokes unhurt, nor yield to pow'rful age.

They grossly err who teach all rise from fire;
As Heraclitus, whom vain Greeks admire
For dark expression; but the sober few, 670
Who seek for, and delight in what is true,
Scorn and condemn; for only fools regard
What seems obscure, and intricate, and hard:
Take that for truth, whose phrases smooth appear,
And dancing periods charm the wanton ear.

For how could bodies, of so diff'rent frame,
So various rise from pure and real flame.
Nor can you clear the doubt by fond pretence
That fire is made more rare, or else more dense:
This changes not the fire, 'tis still the same; 680
If dense, a strong; if rare, a weaker flame.
Yet this is all that can be said.

Who can believe that nature's various pride
Can spring from flame, condens'd or rarify'd?
'Tis true, did they admit an empty space,
Then flame, made rare, might fill a larger place,
Or dense, combine with a more strict embrace.

But since they think that hard, and void oppose,
Fearing the difficult, the right they lose;
Nor yet perceive, that banish void alone, 690
All bodies would be dense, and all be one;
From which no seeds could fly, no parts retire,
As smoke, and heat, and vig'rous light from fire:
This proves a void commix'd.

But if by any means, however, strange,
The flame could perish, and its parts could change;
If this could once be done, then all its heat,
And its whole nature would to nought retreat,
And therefore bodies would from nothing rise;
For what is chang'd from what it was, that dies.
But after change some seeds must still remain, 700
Lest all should sink to nought, and thence return
again.

Now, since our former reasons clearly show
Some seeds, and those of constant nature too,
Whose presence, absence, or whose diff'rent range
Of order makes the things themselves to change;
We certainly conclude they are not flame;
For then 'twould nought import, what newly
came,

What chang'd its order, or what did retire,
Since all would be of the same nature, fire. 710
But this is my opinion.

Some seeds exist, from whose site, figure, size,
Concussion, order, motion, flames arise:
And when the order's chang'd, the parts of fire
Their nature lose, and silently expire.
The disunited bodies fly from thence,
Not flame, nor any object of the sense.

But now to think, as Heraclitus tells,
That all that is is fire, and nothing else;
'Tis fond; and certainty of sense o'erthrows, 720
By which alone that flame exists he knows.
In this he credit gives: but fears t' afford
The like in things as plain; and that's absurd:
For what can judge, and what our search secure
Like sense, truth's great criterion? What so sure?

Besides; why should we rather all disclaim,
Reject all else, and fancy only flame,
Than fire deny, and all things else receive?
Both which 'tis equal madness to believe. [birth

Therefore all those who teach things took their
From simple fire, or water, air, or earth,
Lie under palpable mistakes.

And those
That teach from doubled elements they rose,
As air and fire, as earth and water join'd,
Or all four, earth, air, water, fire, combin'd.

Thus sung Empedocles—
In fruitful Sicily, whose crooked sides
Th' Ionian washes with impetuous tides,
And a small frith from Italy divides. }
Here Scylla raves, and fierce Charybdis roars, 740
Beating with boist'rous waves the trembling
shores.

Here press'd Enceladus with mighty loads
Vomits revenge in flames against the gods:
Through Aetna's jaws he impudently threats,
And thund'ring heav'n with equal thunder beats
This isle; though with such wond'rous sights as
these
She call forth trav'lers, and the curious please;

Though ch with men and fruit, has rarely shown
A thing more glorious than this single one :
His verse, compos'd of nature's works, declare
His wit was strong, and his invention rare ; 751
His judgment deep and sound, whence some be-
gan,

And justly too, to think him more than man.
Yet he, with all the meaner others nam'd,
Though for some rare inventions justly fam'd,
Which they have left as oracles, more sure
Than from the tripod spoke, and less obscure
Than those, th' ancients from the Pythia heard
In the first seeds of things has greatly err'd.

That things may move, or may be soft, or rare,
Without a void, as water, flame, or air, 761
They all affirm ;

That nature never rests
In breaking bodies, and admits no leasts :
When yet we see the part that topmost lies
Is least, that is presented to our eyes :
From whence we that a least may well conclude,
Which utmost is, too little to be view'd.

Besides, their seeds are soft, and can be born
And die ; then all would rise, and all return
To nought : nothing would be both womb and
urn. 770

Nay, farther : since they're contraries, at jars
Among themselves, engag'd in civil wars,
They perish when they meet ; or, scatter'd, waste,
Like wind and show'rs, cross'd by an adverse
blast.

If all things from four elements arose,
And are again by death dissolv'd to those ;
What reason we should rather fondly deem
Them principles of things, than things of them ?
For they alternately are chang'd, and show
Each others figure, and their nature too : 780
And if you think that earth is join'd with fire,
With water, air, their nature still entire,
Nothing could first be made ; or, made, increas'd ;
Nor tree, nor man, nor tender fruit, nor beast :
For each component in the various mass
Would keep its nature, and be what it was ;
And we should view, confus'dly join'd and fix'd,
Thin air with earth, and fire with water mix'd.
But principles of things must be unknown,
Of nature undiscern'd, lest any one 790
Rising above the other should appear.

And show that things not truly compounds are.
Besides, they all these four from heav'n derive ;
And first, that flame is turn'd to air, believe ;
Thence water, and thence earth ; and so retire
From earth to water, thence to air and fire :
Their change ne'er ceases, but about they're driv'n
From heav'n to earth, from earth again to heav'n.
But seeds can never change their nat'ral state ;
They must endure, free from the pow'r of fate, 800
Lest all should sink to nought, and thence arise ;
For what is chang'd from what it was, that dies.
Now, since these four can die, since those can fail,
Of other seeds, o'er which no strokes prevail,
They must be fram'd ; lest all should rise, and all
return

To nought ; and nothing be both womb and urn :
Then rather grant seeds such, that they did frame
A single body ; as, for instance, flame ;

Yet take away, or add some new to those ;
Their site and motion chang'd, would air com-
pose ; 810

And so of other things.——

But you'll object, and say, 'tis manifest
From earth rise trees, are nourish'd and increas'd ;
And if the seasons prove not kind and good,
Moisture and soaking show'rs corrupt the wood ;
And did not Phœbus shed enlivening hear,
No fruit or beasts could grow, look fair and great ;
And we, unless upheld by means, should die,
Swallow'd by treacherous mortality ;
Life loos'd from nerves and bones, long since had
fled, 820

And left the wasted carcase pale and dead.
For we from certain things our strength receive ;
And other things from certain others live ;
For various common principles are fix'd
In every thing, and all confus'd and mix'd.
And therefore nature knows no gen'ral good ;
But diff'rent things must have their diff'rent
food :

And thus it matters to the grand design,
How, or with what, the various seeds combine ;
What site, and what position they maintain ; 830
What motion give, and what receive again.
For the same seeds compose both earth and seas,
The sun, the moon, all th' animals and trees ;
But their contexture, or their motion, disagrees.

So in my verse are letters common found
To many words, unlike in sense and sound :
Such great variety bare change affords
Of order, in few elements of words. [may rise
Now, since the seeds of things are more, from them
More diff'rent shapes, and more varieties. 840

Next let's examine, with a curious eye,
Anaxagoras' philosophy ;
By copious Greece term'd homœomery. }
For which our Latin language, poor in words,
Not one expressive single voice affords :
Yet by an easy short periphrasis,
We plainly can discover what it is ;
For this it means : That bones of minute bones ;
That flesh of flesh, and stones of little stones ;
That nerves take other little nerves for food ; 850
That blood is made of little drops of blood ;
That gold from parts of the same nature rose ;
That earths do earth, fires fire, airs air com-
pose ;

And so in all things else alike to those.

But he admits no void, he grants no least ;
And therefore errs in this with all the rest.

Besides, too weak, too feeble seeds he chose, }
If they are like the bodies they compose,
And liable to death as well as those ;
For which of all these beings could endure 860
The violent jaws of death, from death secure ?
Could fire, could air, could water, blood, or bone ?
Which of all these ? In my opinion, none.

Since all would be as liable to die,
Subject to powerful mortality, }
As those, which force destroys before our eye ;
But I by former arguments have taught,
That things nor perish to, nor rise from nought.

Besides, since by our meat our bodies grow,
Are nourish'd and increas'd, we plainly know 870

That bones, and blood, and veins, and nerves are
made

Of parts dissimilar, in order laid.

But if the meat in perfect form contains

Small parts of nerves, of blood, of bones, and
veins;

Then meat and drink would in themselves preserve
Dissimilar parts, as blood, bone, vein, and nerve.

Yet more: if all those things, that spring from
earth,

Before they rose, before they show'd their birth,
Lay hid within; the clods must needs comprise,

As proper parts, those various things that rise: 880

Now change the subject, keep the terms the
same;

In wood, if smoke lies hid, and sparks and flame,
It must consist of parts of diff'rent frame.

But there's a little shift, a slight excuse,
Which Anaxagoras' scholars use.

Though such lie mix'd in all, that part alone
Appears, which only to the sense is shown;

Which in the composition does comprise

The greatest part, and on the surface lies. 889

But this is false; or through the weighty mill,

From broken corn would bloody drops distil;

Or some such parts as in our bodies grow;

From herbs and flow'rs a milky juice would flow;

In broken clods each searching eye might see

Some lurking, scatter'd herb, or leaf, or tree;

And in cleft wood, and broken sticks, admire

Smoke, ashes, flame, and little sparks of fire.

But since, on strictest search, no parts appear,

We must not fondly fancy they are there;

That bodies are compos'd of such combin'd; 900

But common seeds in various order join'd.

But you will answer thus: 'Tis often known,

That stately trees, on lofty mountains grown,

When beaten by a furious southern blast,

Grow warm and hot, and so take fire at last.

All this we grant:—

Yet there's no actual fire, but seeds of heat,

Which, dash'd together, all this flame beget.

For if in wood such actual flame were held,

How could it for one moment be conceal'd? 910

It straight would show its mighty force, and burn;

And shrubs, and trees, and all to ashes turn.

And hence, as we discours'd before, we find

It matters much with what first seeds are join'd;

Or how, or what position they maintain,

What motion give, and what receive again;

And that the seeds remaining still the same,

Their order chang'd, of wood are turn'd to flame.

Just as the letters little change affords,

Ignis and Ligna, two quite different words. 920

Besides, if you suppose no frame could spring,

Unless the principles were like the thing,

The same in nature seeds are lost; for then

Some seeds would laugh, and weep, and laugh
again;

With violent grin distort their little face,

And presently drop briny tears apace.

Now what remains observe; distinctly mark;

I know 'tis hard; 'tis intricate, and dark;

But pow'rful hope of praise still spurs me on;

I'm eager; and 'tis time that I were gone. 930

I feel, I rising feel poetic heats,

And, now inspir'd, trace o'er the muses' seats,

Untrodden yet: 'tis sweet to visit first

Untouch'd and virgin streams, and quench my
thirst;

'Tis sweet to crop fresh flow'rs, and get a crown
For new and rare inventions of my own;

So noble, great, and gen'rous the design,

That none of all the mighty tuneful nine

Shall grace a head with laurels like to mine.

For, first, I teach great things in lofty strains, 940

And loose men from religion's grievous chains;

Next, though my subject's dark, my verse is clear

And sweet, with fancy flowing ev'ry where;

And this design'd: for as physicians use,

In giving children draughts of bitter juice,

To make them take it, tinge the cup with sweet,

To cheat the lip: this first they eager meet,

And then drink on, and take the bitter draught;

And so are harmlessly deceiv'd, not caught:

For, by this means, they get their health, their
ease, 950

Their vigour, strength, and baffle the disease.

So, since our methods of philosophy

Seem harsh to some; since most our maxims fly,

I thought it was the fittest way to dress,

In pleasing verse, these rigid principles,

With fancy sweet'ning them: to bribe thy mind

To read my books, and lead it on to find

The nature of the world, the rise of things,

And what vast profit too, that knowledge brings.

Now, since my former various reasons show,

That seeds are solid, and eternal too; 961

Let's next inquire, if infinite or no?

Likewise, if void and space do somewhere end?

Or, without bound, t'immensity extend?

The all is ev'ry way immensely wide,

Or else it would have bounds on ev'ry side.

Now, what can be a bound, but that which lies

Beyond the body, whose extreme it is?

That nought's beyond the all, ev'n common sense

Declares; therefore the all must be immense. 970

Thus stand on any quarter of the space,

That's nothing: 'tis immense from ev'ry place.

But grant it finite.—

Suppose a man on the extremest part;

Suppose him stand and strive to throw a dart;

The dart would forward fly, or, hinder'd, stay:

Choose which you will, the reason's good each

way,

And firm. For if some farther space admit,

Or some resistance stop its hasty flight,

That's not the end: so place the utmost part 980

Where'er you will, I'll follow with the dart;

And by this single argument deface

(For still the void will give a farther place),

Those feign'd extremes and bounds you set to
space.

But to proceed.—

Suppose the all had bounds, suppose an end;

Then bodies, which by nature must descend,

And from eternity pursu'd the race,

Had long ere this time reach'd the lowest place,

Whence nothing could in decent order rise; 990

There could not be a glittering sun or skies;

For all the seeds must lie confus'dly mix'd
In a vast chaos, immoveable and fix'd.
But now the seeds still move, because the space
Is boundless, and admits no lowest place;
No end, which heavy seeds, by nature prest,
Might seek below, and settle there and rest.
Now all, from parts of matter mov'd, arise,
Which the vast mass eternally supplies.

But lastly; things to things still bounds appear;
So air to lofty hills, and hills to air; 1001
So earth the seas, and seas the earth controul;
But there is nothing that can bound the whole.
Wherefore 'tis such, that did swift light'ning fly
Through the vast space to all eternity,
No utmost part, no end would e'er be found,
So vastly wide it is, and without bound.

Again; nature's eternal laws provide,
That the vast all should be immensely wide,
Boundless and infinite, because they place 1010
Body as bound to void, to body space;
By mutual bounding making both immense:
For did they not each other bound, but one
Were infinite; for instance, space alone;
Nor man, nor earth, nor heav'n, nor could the
sea,

Nor bodies of the gods one moment be;
For seeds of things, their union all destroy'd,
Would fly dissolv'd and scatter'd through the
void;

Or rather into things had ne'er combin'd,
Because, once parted, they had never join'd. 1020

For sure unthinking seeds did ne'er dispose
Themselves by counsel, nor their order choose;
Nor any compacts made how each should move,
But from eternal through the vacuum strove,
Variously mov'd and turn'd, until, at last,
Most sorts of motion and of union past,
By chance to that convenient order hurl'd,
Which frame the beings that compose the world.
And these same seeds, now orderly maintain'd,
In the convenient motions they have gain'd, 1030
Is a sufficient cause why fertile earth,
By sun-beams quicken'd, gives new fruits their
birth;

Why rivers still the greedy deep supply;
Why beasts increase, why sun and moon ne'er die.
Which could not be, unless supplies still came
From the vast mass, and propp'd the sinking frame.

As beasts, depriv'd of food, so things must die,
As soon as matter fails of just supply.

Nor can external strokes preserve the whole;
Sometimes they may the hasty flight controul 1040
Of some small part, till others come and join,
And, taking hold, into one mass combine;
But very oft they must rebound, and then
The principles of things may break the chain,
And get their former liberty again.

Nay, that these strokes might be, this lasting fight,
The mass of matter must be infinite.

'Tis certain then, that there must come supply
From the vast mass, repairing things that die.

But scorn their dreams, who fondly can be-
lieve, 1050

And teach, that all things to the middle strive;

And by that nat'ral pressure this whole frame
Might be maintain'd, its order still the same,
Without external impulse; high and low
Would always be as firmly join'd as now;
And their own site their diff'rent place possess,
Since all unto one common centre press.

They farther teach, that pond'rous weights below
Unto their resting places upwards go:

And as our shadows in smooth streams appear,
So feet to feet some animals walk there; 1061

Yet can no sooner fall into those skies
That lie beneath, than we to heav'n can rise.
When Phœbus climbs their east, the feeble light
Of stars peeps forth, and beautifies our night.

But this ridic'lous dream, this fancy springs
From ign'rance, blind in principles of things.

For since the void is infinite, the space
Immense; how can there be a middle place?

Or grant there were——— 1070

Why may not bodies end their tedious race,
And stop as well in any other place,

As there? For ev'ry part of empty space,
Or midst or not, must equally allow

To pond'rous movents easy passage through:
For there's no place, to which by nature prest,
Seeds lose their force of weight and freely rest;
Nor empty space can prop the seeds, nor stay
Their motion: 'tis its nature to give way:

In bodies then there lies no fond desire 1080

To seek the midst which keeps this frame entire.

Besides, they grant not all, but only those
Which heavy water and dull earth compose,
Strive to the centre: but that two retire,
Endeav'ring from it as light air and fire;
Whence stars, those feeble ornaments of night,
Are nourish'd, and gay Phœbus' fiercer light:
Because the flame which from the midst retires,
When got on high combines its scatter'd fires.
But how could an'mals live, how leaves on branch-
es bud, 1090

If earthly parts rose not, and gave them food?
Then they contend, the highest heav'n, around
All things enclosing, is of all the bound;
Else the world's walls, like swiftest flames would
fly

Through the vast space; the fabric of the sky
Confus'dly falling, lower buildings meet;
Else faithless earth forsake our trembling feet;
And all things both in heav'n and earth destroy'd,
Confus'dly scatter through the boundless void;

And in one moment ev'ry thing deface, 1100
But unseen atoms, and vast empty space:

For wheresoe'er the fabric does begin
To fail, there greedy death will enter in,
And through the ruinous breach, the violent course,
Of rapid matter rush with mighty force.

This learnt, 'tis no uneasy task to know
The rest: I'll lead thee on, and clearly show
The pride of nature, and philosophy
Her greatest works, and please thy curious eye.
The walk is pleasant, 'tis an easy way, 1110
All bright and clear, for things will things betray
By mutual light, and we, from one thing known,
To hidden truths successfully go on,

NOTES ON BOOK I.

LUCRETIVS begins his poem with an invocation of Venus, a gay and beautiful goddess, a friend of Mars, and, as the fables say, sometimes too immodestly familiar with him: but by whose power all animals are generated; by whose charms all nature is governed; and who alone can give all beauty and gracefulness. He, therefore, makes choice of her as the fittest patron for a man, who is going to treat of the Nature of Things: he asks of her to bestow smoothness on his verse, and to procure a peace for Rome, which she may easily obtain from her dreadful servant the god of war. For, while the republic was engaged in arms, neither himself nor his Memmius, to whom he inscribes this poem, could find leisure to attend to the studies of philosophy. Now, whatever may be the opinion of others, he, by this invocation, excellently well performs the part of a poet, who intends to treat of nature and of an Epicurean philosopher likewise: for he derides while he invokes; and, as we seldom find a more beautiful, so we never can a more reproachful image of Venus and of Mars. But they seem too wittily pious, who believed that the poet, a professed enemy to Providence, was compelled by the Deity, as it were in sport and derision, to implore the aid of a most notorious goddess: nor are others less trifling, who observe, that Venus took care of gardens; and, therefore, was the most proper patroness for the Epicureans, who chiefly dwelt, or at least spent most of their time in gardens. Nor they neither, who discover, I know not what mysteries, that lie concealed under the names of Venus, Mars, Cælus, &c. Such trifles are beneath the disdainful and soaring wit of Lucretius; for, as Cicero tells us in the first book of the Nature of the Gods, sect. 59. the Epicureans despised the mysteries of the ancients no less than they did their religion. Hence, too, the grammarians, with their Venus Genetrix, unless they will allow Lucretius to have been inspired with so divine and prophetic a fury, as to have foreseen that Venus would one day be honoured with that title by Julius Cæsar. We need not then look any farther for a reason for the invocation. Lucretius was a poet, and therefore neglected not the rules of his art; an Epicurean, and therefore craftily conformed with the superstition of his country: besides, the practice of the poets is not more obvious, than the wantonness of the Epicureans is notorious: and, therefore, both like a poet, and according to the principles of his philosophy too, he might very well apply himself to Venus, that is, to the common natural appetite to procreation, which nevertheless he treats as a goddess, and gives her all her titles, as if he really expected some assistance from her; yet, even here he shows

his spite to religion, and scatters bitter reflections on the then fashionable devotion.

Ver. 1. We learn from Cicero, in book iii. of the Nature of the Gods, that there were four of this name. The two chief of them were she who was born of the froth of the sea, and another who was daughter of Jupiter and Dione. They are often confounded one for the other, both in regard to their actions and their name: for the Greeks called either of them Aphrodite, from *αφρός*, froth: but the Latins, Venus, because, as the same Cicero says, "ad omnes veniat," she comes to all; for she was the goddess of pleasure; "& trahit sua quemque voluptas."

Ver. 2. Because the Romans deduced their origin from Æneas, who was the son of Venus by Anchises.

Ver. 9. Because the earth produces flowers and fruits of all kinds and colours.

Ver. 10. This and the four following verses are an improvement of our translator upon his author, who only says,

—tibi suavis dædala Tellus
Submittit Flores—

Which thought is fully expressed in the two immediately preceding verses.

Ver. 14. He means Arabia Felix, a country that produces so great an abundance of aromatic spices, that when they are in bloom, their fragrance may be perceived at a great distance off at sea. Thus Milton, in his Paradise Lost,

—As when to them, who sail
Beyond the Cape of Hope, and now have past
Mozambique, off at sea, north-east winds bear
Sabæan odours from the spicy shore
Of Araby the blest, with such delay
Well-pleas'd they slack their course, and many a
league
Pleas'd with the grateful smell old ocean smiles.
And Waller in like manner:

So we th' Arabian coast do know
At distance, when the spices blow:
By the rich odour taught to steer,
Though neither day nor stars appear.

Pliny says, that the inhabitants of this country use no wood but what is sweet-scented; and that they even dress their meat with that of the trees from which they distil the frankincense and myrrh. "Nec alia ligni genera in usu sunt, quam odorata; cibosq. coquant Turis ligno, & myrrha," lib. 12. cap. 17.

Ver. 19. From this passage of our poet, Virgil has borrowed part of his excellent description of the spring, which we find in Georg. 2. ver. 328.

Avia tum resonant avibus virgulta canoris,
 Et venerem certis repetunt armenta diebus.
 Parturit almus ager : Zephyriq. tepentibus auris
 Laxant arva sinus : superat tener omnibus humor :
 Inque novos soles audent se gramina tuto
 Credere ; nec metuit surgentes pampinus Austros,
 Aut ætum cælo magnis Aquilonibus imbrem ;
 Sed trudit gemmas, & frondes explicat omnes.

Then joyous birds frequent the lonely grove,
 And beasts, by nature stung, renew their love ;
 Then fields the blades of bury'd corn disclose,
 And while the balmy western spirit blows,
 Earth to the breath her bosom dares expose.
 With kindly moisture then the plants abound,
 The grass securely springs above the ground.
 The tender twig shoots upward to the skies,
 And on the faith of the new sun relies.
 The swerving vines on the tall elm prevail,
 Unhurt by southern show'rs, or northern hail
 They spread their gems the genial warmth to share,
 And boldly trust their buds in open air. *Dryden.*

Ver. 21. The west wind, so called "à favore, quia favet genituræ," because it favours and helps forward the generation and production of things.

Ver. 37. The confused and unordered heap of matter, of which the poets supposed all things were made in the beginning. Hence Milton calls it,

The womb of nature, and perhaps her grave.
 And Ovid, *Metamorph.* 1. ver. 7.

—dixere chaos ; rudis indigestaque moles,
 Nec quicquam nisi pondus iners ; congestaque
 eodem

Non bene junctarum discordia semina rerum.

—Rude undigested mass ;
 A lifeless lump, unfashion'd and unfram'd,
 Of jarring seeds, and justly Chaos nam'd. *Dryden.*

Chaos was likewise the first of the gods, according to Hesiod, in *Theogon.* ver. 116, where he sets up Chaos, Tellus, and Amor, for the progenitors of the gods.

Ver. 40. C. Memmius Gemellus, with whom Lucretius had travelled to Athens, where they studied philosophy together ; and they were ever afterwards very intimate. He was descended of the noble family of the Memmii, who derived their extraction from the Trojans, as Virgil witnesses, *Æn.* 5. ver. 116.

Mox Italus Mnestheus, genus à quo nomine Memmi.

Then Mnestheus, from whom the Memmian race.

This C. Memmius, to whom Lucretius inscribes his poem, arrived to the dignity of Prætor, and obtained Bithynia for his province ; but was soon recalled, being accused by Cæsar of mal-gesture in his office. However, not many years after his return to Rome, he came to be tribune of the people ; and, in a little time, stood candidate for the consulship : of which he not only failed, but being accused of bribery, was, even though Cicero pleaded in his defence, convicted of it, and banished in-

to Greece, where he died in exile. Whoever desires to know more of him, may consult Gifanius, in his *Dissertation de Genti Memmia.*

Ver. 46. The son of Jupiter and Juno, or of Juno only without a father ; as Minerva was of Jupiter only without a mother. She is said to have conceived him by touching a certain flower, which Flora showed her for that purpose.

Ver. 49. The court of Venus, who herself was called Paphia, from Paphos a city of Cyprus, where she had a stately temple. It is now called Baffo.

Ver. 58. Lucretius, a few years before his death, was an eye-witness of the mad administration of affairs in the time of Clodius and Catiline, who gave such a blow to the republic of Rome, as occasioned its total subversion, which happened not long after. And this is what he speaks of in these six verses.

Ver. 59. Because that tree was sacred to Apollo, the god of learning. See the note on ver. 152 of the sixth book.

Ver. 60. For as Cicero says, "Nemo bene potest inter Belli strepitus, ac plebis seditiones, æquo animo philosophari," *Tuscul.* 1. No man can well apply his mind to philosophy, amidst the noise of war and the seditions of the people.

Ver. 64. In these fourteen verses, he unfolds to his Memmius, whose attention he bespeaks, and wishes him free from all cares and anxieties, the argument of his future disputation : and tells him, he is going to treat of the nature of the heavens, and of the gods ; as likewise concerning the first principles, of which all things are made, and into which they are again resolved. For, as to the gods, says he, they enjoy a blissful ease and idleness, and are exempt from all cares and business ; nor did they, as most philosophers believe, either make the world, or do they take care of it. "De Deorum immortalitate nemo dubitavit : quod autem æternum beatumq. sit, id non habere ipsum negotii quicquam, nec exhibere alteri ; itaque neque ira neque gratia teneri, quod, quæ talia essent, imbecilia essent omnia." No man doubts of the immortality of the gods : but whatever is happy and eternal, must have nothing to do itself, nor find out employment for others : thus it will exempt itself from anger and gratitude, to either of which, whatever is subject, must be frail and imperfect, says Epicurus in Cicero, lib. 1. de *Nat. Deor.*

Ver. 76. He means the atoms. And let it suffice to give notice once for all, that he calls them by several other names likewise : as corpuscles, elements, first matter, first causes, first bodies, little bodies, &c.

Ver. 78. Here Lucretius begins his impiety. Had he contented himself with deriding only the superstitious devotion of the age he lived in ; had he stopped there, and not proposed principles of irreligion drawn from the happiness of the Deity, which, therefore, must be universal, and against all religion under whatsoever denomination : he might have been read with much profit and satisfaction as an excellent satirist against the heathen worship ; for

he severely scourges the mad zeal of men-sacrificers; and though perchance he has not proposed a true instance in Iphigenia, yet histories, both sacred and profane, of former and present ages, give us too many sad relations of such cruelties. But, since he openly declares, that the design of his writing is to free men from the fears of that heavenly tyrant, Providence, and to induce perfect serenity, that boasted *Ἀταραξία* of Epicurus; and in pursuit of this, endeavours to maintain the great dictate of his master. "Nihil beatum, nisi quod quietum;" Nothing is happy but what is supinely idle and at ease. I shall examine his vain pretensions; and, in order to it, present you with a summary of the Epicurean religion.

If any man considers the inconsistencies that are in the Epicurean notion of a Deity, how the attributes disagree, and how the very being thwarts all their other philosophy, he will easily agree with Tully, and admit his censure to be true. "Verbis ponunt, Re tollunt Deos." In words they assert, but in effect deny a God: which is seconded by Dionysius in Eusebius, ἀλλὰ τὸ τοῦ περὶ ἡλίου ὅτι κατὰ τὸν Σοκράτους Δάναον καὶ Ἀπείρου Ἰηκῶν Ἀθηναίους ὡς μὴ δοκοῖν τὰ ὅτι ἐπεὶ ἡ Ἀθεὶς εἶναι, κενὰς αὐτοῖς ἀνυποστάτων θεῶν τετραβυσσάμενος ἐξωστράφησε σκιάς. Eusebius. lib. 15. It is evident, that after Socrates was put to death, being afraid of the Athenians, that he might not seem what really he was, an Atheist, he fashioned some empty shadows of fantastical deities: but since antiquity hath but three Atheists on record, why should we increase the catalogue? he therefore asserts a divine nature, and proves it from the common consent of mankind; which does not arise from any innate ideas as Gassendus phrases it, those being altogether strangers to his hypothesis: for every idea is a mode of thinking, and no thought can arise, according to the Epicurean principles, but from a previous image; and therefore Lucretius makes the cause of this general consent to be the constant deflux of divine images, which strike the mind. Plutarch de Placit. Phil. lib. 1. cap. 7. And Atticus, the Platonist asserts it to be the common doctrine of the garden, τὰς βλαστύνας ἀπερροίας τῶν θεῶν τοῖς μετὰ χεῖρας μετὰ γυναικῶν Παραξίας γενέσθαι, Eusebius. Præp. lib. 25. That the good emanations from the gods bring great advantages to those that receive them: to this the prayer of Democritus, ἀγαθῶν εἰδώλων μετέχων, that he might receive good images; and Cicero, de Natura, Deor. lib. 1. sect. 107. agrees, and I hope Gassendus's bare denial cannot stand in competition with all these. This divine nature is branched out into many, his gods are numerous, and even exceed the catalogue of Apollodorus; and this he gathers from that *ἰσονομία*, or equability which must be in the universe, "Si enim mortalium tanta multitudo, immortalium non minor, et si quæ interimant item quæ conferrent, infinita." For since there is so great a multitude of mortal things, there is no less of immortal; and if the things that die are infinite, so likewise are those that remain to all eternity. Their substance is not immaterial, and Velleius

reprehends Plato for his *ἀσώματον*, or incorporeality, as inconsistent with sense, prudence, and pleasure, and yet he cannot allow it to be a coalition of atoms, for that would destroy their necessity of being, and infer discernibility; but they have *quasi corpus*, and *quasi sanguinem*, as it were a body, and as it were blood: a fancy perchance received from Homer.

Οὐ γὰρ σῖτον ἔδουσ', ἢ πίνουσ' αἰδοπα αἶνον,
 Ἴ' ἐνὶ ἀναίμονις εἶσι καὶ Ἀθάνατοι καλίωνται.

They drink no wine, they eat no common food,
 And therefore nam'd immortal, void of blood.

They are of the figure of a man, that seeming the most beautiful, and the only receptacle of reason, without which the gods cannot be virtuous, nor happy: their knowledge infinite, and boundless; for Velleius in Tully, to confute Pythagoras, boldly inquires, "Cur quidquam ignoraret animus hominis, si esset Deus?" why the mind of man should be ignorant of any thing, if it were a god? easy and quiet is their life; and therefore unconcerned with the affairs of the world; for being full of themselves, why should they look on others, or trouble their minds with the consideration of less perfection, when they can expect no advantage nor addition to their happiness: yet these glorious beings are to be revered for the excellence of their nature. Our piety and religion must be heróical, not forced by fear, or raised by hope: interest must not bribe, nor terror affright us to our duty; but our devotion must be free, and unbiassed by the solicitations of the one, or the impulse of the other. These, in short, are the deities of Epicurus; and this is the sum of his religion: a sufficient instance, that men may dream when they are awake, and that absurd fancies are not only the consequents of sleep. Let us look on the favourers of these opinions, and what are they but exact images of Timon's philosophers?

Ἀνθρώποι κενεὴς οἰήσεις ἔμπλοιο ἄσχος.

Men, casks of vain opinion full.

For, as Tully long ago observed, it is their usual custom to avoid difficulties by proposing absurdities; that the less may not be discerned, whilst all mens eyes are on the greater. For, first, not to require an explication of their unintelligible *quasi corpus*, and *quasi sanguis*, it is very easy to be proved, and a direct consequence from their established principles, that the matter of the deities is perfectly like that of our bodies, and so discernible; nor can they find any secure retreat for their gods beyond the reach and power of troublesome atoms, which scattering every where must disturb their ease, destroy their quiet, and threaten a dissolution. For since the images that flow from them, move the mind, which they assert material, those must be body:

Tangere enim et tangi sine corpore nulla potest res. Lucret.

For nought but body can be touch'd, or touch.

And since it is the nature of body to resist, the greater and heavier the atoms are, the stronger and the more forcible will be the stroke on the divine substance; and consequently in this dissolution of worlds, in these mad whirls of matter, their deities, unless they remove them beyond the infinite space, must be endangered: for they are not perfect solids, and above the power and force of impulse, such combinations being unfit for sense, or animal motion. And thus the Epicureans must necessarily fall into that absurdity, for which Velleius lashes Anaximander, "Nativos esse Deos, et longis intervallis orientes et occidentes," That the gods are born, and that there is a long interval of time between their birth and their death. But since they offer as a reason, that immateriality is inconsistent with sense and prudence, I shall consider that in its proper place, and now examine how omniscience can agree to their gods. Lucretius, in his fifth book, asks the question, how the gods could have those ideas of man, sun, moon, and stars, before they were formed? from whence it is easily concluded, that they imagine the divine perception arises from the same causes that man's does, viz. from some subtile images that flow from the surfaces of things, and enter at the senses. Now it had been an attempt worthy the soaring wit of our poet, to have described the passages of these images; how they reach the happy seats entire, how these light airy things are undisturbed by the rapid whirls of matter, and how at last they should all conveniently turn round, and enter at the eyes of the deity. For if ours can ascend thither, why not the forms of these things that lie scattered through the infinite worlds reach us? no, their gods must be as senseless as they are careless; no intruding images must disturb their thoughts, or turn them from the contemplation of their happy selves; no doubt their ease will scarce agree with such troublesome agitations, and like the soft Sybarite, should the image of a man digging encroach upon them, they must necessarily undergo a *βήγμα*.

As for the figure they please to allow them, we must needs acknowledge it a wonderful chance, that man (for that is the most proper opinion) should so much resemble the divine nature; but I had rather believe all the adulteries in the poets, than that man was made after the image of the Deity without his direction. Besides, what need of all these members? why must they have eyes, unless they have a looking-glass in their hands? why mouth and teeth which will never be employed? and why does not that fancied *ισονομία*, or equability in the universe, require immortal men, and immortal beasts! for that would make it more perfect. These are absurdities fit for the credulity of an Epicurean, beyond imagination, had not these men abetted them, and made good to the utmost, that severe reflection of Tully, "Nihil est tam absurdum quod non aliquis è philosophis asserat;" There is nothing so absurd, but one or other of the philosophers has asserted it.

Now I come to consider, whether Providence is inconsistent with the happiness of the Deity. And

here the Epicureans are prest with the consent of mankind, there being no nation but has some shadow of piety, which must be founded on the belief of Providence, that being the basis of all natural religion. The Stoics took the notion of their *Πνεύματος νοῦν καὶ πυρῶδες*, their intelligent and fiery spirit, from the excellent order and disposition of the universe. The *Nῦς*, mind, of Anaxagoras is sufficiently known. Nor was Aristotle an enemy to Providence, though, as it was generally thought, and as Atticus the Platonist words it, *μηχρὶ Σηλήνης ᾤσας τὸ θεῖον τὰ λοιπὰ τὰ κόσμῳ μέση περιγράφει τῆς τῷ θεῷ διοικήσεως*, confining Providence within the moon's orb, he leaves nothing below to his direction, and compares him to Epicurus, *οὐ καὶ διαφέρει πρὸς ἡμᾶς ἢ τῷ κόσμῳ τὸ θεῖον ἰσοκρίσασθαι, καὶ μηδεμίαν πρὸς αὐτὸ κοινωνίαν ἀπολαπτεῖν*. For it is the same thing to us to have no Deity at all, as to have such a one with whom we can have no communication. And Athenagoras delivers it as the doctrine of the Peripatetum, *ἀπρονόητα πάντα ἵνα κατωτέρω τῷ ἕρανῳ*, that Providence takes care of nothing below the sky; and Origen, *ὁ ἱλαττον Ἐπικύρου εἰς τὴν πρόνοιαν ἀσέβως Ἀριστοτέλης*. Aristotle's opinions concerning Providence were somewhat less impious than those of Epicurus; but authority will prevail little with a proud Epicurean, whose talent it is to scoff at all beside his own sect, and undervalue every man that is not delighted with the weeds of his garden.

And here it must be observed, that as Epicurus circumscribed the Deity with the finite figure of a man, so he measured all his actions by the same model, and thought an intermeddling with the affairs of the world would bring cares, trouble, and distraction; because he sometimes observed a necessary connection betwixt these two, in those little intervals of business that disturbed his ease and quiet. A fond opinion, directly contrary to the consent of the world, and to his own principles and practice. For what trouble can it be for that Being, whom a bare intuition (for he grants him Omniscient) acquaints with all the springs and wheels of nature; who perfectly knows the frame, and with a nod can direct and rule the automaton; for self-existence necessarily infers Omnipotence. For what can determine the mode of existence in that Being? what confine its power? what circumscribe it? since it depends on nothing but itself. And since the Deity is the most excellent of beings, how can it want that amiable attribute, benevolence? will not an Epicurean commend it in the master of the garden? will he not be prodigal in his praises, and call the Athenian a god for his philosophy, and make his numerous books (Laetius calls him *πολυγράφωνταρον*, the most voluminous writer) an argument for his *Αποθέωσις*, deification? And are all these commendations bestowed on him, because he made himself unhappy? Or must the Deity be deprived of that perfection, which is so lovely in man, and which all desire he should enjoy; because when dangers press, they seek for relief to heaven, and passionately expect descending succour; which sufficiently declares

that the belief of the Providence is as universal as that of the happiness of the Deity, and founded on the same reason? for, as Tully argues, "fac" "imagines esse quibus pulsantur animi, species" "quædam duntaxat obijcitur, num etiam cur" "beata sit? cur æterna?" Grant they are images that strike the mind, a certain species only offers itself: why then must it be happy? why eternal? And, consequently, the same reason dictating that Providence is an attribute, requires as strong an assent as when it declares happiness to be one, since neither can be inferred from the bare impulse of the images. For suppose the stroke constant, yet what is this (as Lucretius would have it) to eternity. And why may not any thing we think upon be esteemed immortal on the same account? Suppose the impulse continual, yet what connection between that and happiness; so that the Epicurean's argument recoils against himself, and he is foiled at his own weapons.

And now who can imagine such absurd principles proper to lead any rational inquirer to serenity. Will it be a comfort to a good man, to tell him, as Aristophanes speaks in his *Clouds*, ἀντὶ Ζήνους ὁ Δῖνος βασιλεύει, instead of Jupiter a whirlwind rules, when it is his greatest interest, that there should be a merciful disposer, who takes notice of, and will reward his piety. It will be an admirable security no doubt for his honesty, to assure his malicious enemies, that nothing is to be feared but their own discovery. And unless their dreams prove treacherous or their minds rave, they are secure in their villanies, and may be wicked as often as they can fortunately be so, as often as occasion invites, or interest persuades. When commonwealths may be preserved by breaking the very band of society, τὸ σαυδίσμα τῆς πολιτείας, as Polybius in his history, book vi. ch. 54. calls religion; when treasons may be stifled by taking off from subjects all obligations to duty, but their own weakness; and when a Democles can sit quietly under his hanging sword; then the denial of Providence, then the belief of a world made and upheld by chance, will be a remedy against all cares, and a necessary cause of that desired Ἀταραξία, serenity of mind.

Ver. 84. In these four verses he describes the tyranny, as he calls it, of religion; whom he places in heaven, looking sternly down on mankind, and frightening them into a vain and empty fear of the gods. And here let all, who, with Cicero, find a want of wit in Lucretius, contemplate this image, and show me one more beautiful if they can: In what a deplorable state lie those abject wretches, oppressed under the tyranny of religion, and how dreadful are the gruff and haughty looks with which that heavenly tyrant threatens them from above;—the devil himself seems to be lashing his whips over them.

Ver. 88. Here the poet attempts the praise of Epicurus of Athens, the son of Neocles; and who first, says he, opposed himself to all these terrors, with an undaunted soul, and being by the strength of his mind carried beyond the limits of this world, into the infinite ALL, got a thorough in-

sight into the power of all nature; descried her in her inmost and most hidden recesses; and by teaching mankind that things are made without the care and workmanship of the gods, totally overthrew all religion, as Cicero observes, lib. i. de Natur. Deor. "Quid est enim cur ab hominibus colendos dicas, cum Dii, non modo homines non colant, sed omnino nihil curent, nihil agant?" For what reason is there why men should worship the gods, since not only they take no care of them, but are entirely void of all care for any thing, and do nothing? But Gassendus, Faber, and some others, waste their time to no purpose, while they endeavour to persuade that the book which Epicurus writ, περὶ εὐσέβειας of sanctity or holiness, and the piety of the Epicureans towards the gods, are a sufficient evidence, that the word religion is used in this place by the poet, to signify only superstition, and an idle and vain fear of the gods. As if Lucretius did not absolutely renounce all belief of Providence; or had been that superstitious man to believe that God did any thing, or concerned himself with the care of mankind.

Ver. 93. No natural effects whatever give such impression of divine fear as thunder. This is evident by the example of some wicked emperors; who, though they were Atheists, and made themselves gods, yet by their trembling and hiding themselves when they heard it, confessed a greater divine power than their own. "Cælo tonantem credidimus Jovem," Horat. And, therefore, Lucretius in this place says of Epicurus, as if it were a thing extraordinary and peculiar to him, that even the sound of thunder made not him superstitious.

Ver. 98. τὸ πᾶν The ALL, whatever is in the nature of things, Epicurus and Lucretius after him, distinguish between the ALL, and what they call *mundus*, the world. The ALL is the whole, or the universe; the world only a part of it. The Epicureans held the ALL to be infinite and eternal, never to have had a beginning, and that it will never have an end, and to be incapable of increase or decrease; but the world to be finite, to have had a beginning, and to be liable to have an end. Epicurus called the ALL, τῶν ὅλων φύσιν, the nature of the whole; and in Plutarch τῶν ὄντων φύσιν, the nature of beings. This is what Lucretius calls in this place, *omne immensum*, the immense All; and our translator, the mighty space.

Ver. 103. This is that conquest which Virgil celebrates, Georg. ii. ver. 490. where he sings a pæan to the victor Epicurus.

Fœlix qui potuit rerum cognoscere causas;
Atq. omnes metus, et inexorabile fatum
Subjecit pedibus, strepitumq. Acherontis avari.

Happy the man, alone, thrice happy he,
Who could through gross effects their causes see;
Whose courage from the deeps of knowledge
springs,
Nor vainly fear'd inevitable things;

But did his walk of virtue calmly go,
Through all th' alarms of death and hell be-
low.

Cowp.

Ver. 105. In those twenty-four verses, he seems to suspect that Memmius will be startled at this impious doctrine that tends to the subversion of religion and denies the Divine Providence; he therefore endeavours to buoy up his mind, by telling him that the religion which acknowledges Providence, did often formerly persuade men to commit the most horrid crimes. To prove this, he brings the example of Iphigenia, who, upon the account of religion, and even by command of the oracle, was sacrificed to Diana upon her altar at Aulis, a port of Bœotia on the river Euripus, even her own father assisting at the sacrifice; and this was done, says he,

To bribe the gods, and buy a wind for Troy.

For the story goes, that Agamemnon, king of Mycenæ and Argos, whom the Greeks made choice of to command in their expedition against Troy, had killed a favourite stag, belonging to Diana, who, enraged at it, sent a tempest among their ships, which forced them into the port of Aulis; where being detained for some time by contrary winds, they at length sent to consult the oracle, who told them Diana would not be appeased till Iphigenia the daughter of Agamemnon, was sacrificed to that incensed goddess; and this was accordingly done, says the fable, which, as well as what is related of Idomeneus, who, under pretence of a vow, would have sacrificed his eldest son, took rise, no doubt, from the story of Jephtha, which happened not a great many years before the siege of Troy.

Ver. 109. She was daughter of Jupiter and Latona, and born at the same birth with Apollo. A virgin goddess, whose chief delight was hunting of wild beasts; for which reason she was called the goddess of the woods. She was Luna in heaven, Diana upon earth, and Proserpina in hell. Hence Dryden, or rather Chaucer, in the Knight's Tale:

O goddess, haunter of the woodland green,
To whom both heav'n, and earth, and seas are
seen;
Queen of the nether skies, where half the year,
Thy silver beams descend, and light the gloomy
sphere;
Thou, goddess, by thy triple shape art seen,
In heav'n, earth, hell, and ev'ry where a queen.

Ver. 111. It was the custom to deck and trim up the victims with ribbands of several colours, and other gauderies, as if they were to be led to their nuptials, not their death.

Ver. 114. For she was led to the altar by her own father Agamemnon, and his brother Menelaus, who commanded the Greeks in the war against the Trojans.

Ver. 124. Because she was the eldest of all A-

gamemnon's children. Thus she says to her father in Euripides:

Πρώτη σ' ἐκάλεσα πατέρα, καὶ σὺ παῖδ' ἐμὴ.

Iphig. in Aul. ver. 1220.

I was the first that called you father, and first that you called child.

Ver. 129. Lucretius once more distrusts, lest Memmius giving credit to the fables of the poets of Acheron, Cerberus, the punishments after death, &c. to which he had been long accustomed, should still be averse to his opinions; he therefore obviates these scruples by suggesting to him, that all those and the like fables are only the mere inventions of poets; and that he himself could invent others altogether as dreadful.

Ver. 135. In these twenty-four verses he insinuates, that since the dread of punishments after death proceeds from the belief of the immortality of the soul, if it be once proved that the soul is mortal, all that vain fear will vanish; but since the philosophers have differed in opinion concerning the soul, some believing it to be born with the body, and to die with it; others, that it exists before, and is infused into bodies at the moment of their birth, and that being separated from the body by death, it goes down into hell; or transmigrates into the bodies of beasts, certainly men would be much in the wrong to condemn Providence, seeing eternal torments are reserved for all that despise it.

Ver. 141. The opinions concerning the soul were very different in the age of Lucretius. Some of the ancients believed it to exist from all eternity, and that it is incorporeal and immortal; others, that it is born with the body, and corporeal and mortal. Plato held it to be created from all eternity, and that it was placed among the stars; till grown weary of celestial, and falling in love with earthly things, it infused itself into bodies, at the moment of their birth. Aristotle, that it was not created from all eternity, but at the same time with the body; that is to say, that it begins to exist in heaven, at the time when the body is born, and is the same moment infused into the body, and continues in it, till it is separated from it by death, and then returns back to heaven; but he held it to be incorporeal and immortal. Hence others fabled, that after death souls return into heaven from whence they came; others, that they descend into hell, but not all into the same place; for they imagined that the souls of men who had lived wicked lives, were thrown down into Tartarus, which they held to be the lowest deep of the infernal abodes; but that the souls of those who had lived well, were received into Elysium. Others, as Ennius, held that the body returned into earth, and that the soul flew away into heaven; but that the shadows or ghosts, which they held to be certain images of souls, go into hell. Pythagoras believed the soul to exist from all eternity, and to be immortal and incorporeal, but that after death it goes from body into body, as well of man as of beast; and this is what

they call *metempsychosis*, transmigration of souls. But Heraclitus, Democritus, Epicurus, Hipparchus, Hippo, Thales, Hippocrates, Zenophanes, Parmenides, Empedocles, Lucretius, and others of the like gang, held the soul to be born with the body, and corporeal and mortal; but with this difference, that Hippo and Thales believed it to consist of water; Heraclitus, Democritus, and Hipparchus, of fire; some of the disciples of Thales, of air; Hippocrates, of fire and water; Xenophanes, of water and earth; Parmenides, of earth and fire; Empedocles, of all the four elements, fire, air, earth, and water; Critias, of blood, &c.

Ver. 148. He was a Latin poet, who lived about a hundred years before Lucretius; who calls him the first of the Latin poets, not that he lived before any of the others; for Livius Andronicus writ poems before Ennius; but because he was the first of the Latin poets, that writ an epic and heroic poem after the example of Homer. He was a Pythagorean, as indeed were most of the writers of that age.

Ver. 150. A country of Europe, very well known, it lies extended in the shape of a boot, between the Adriatic or Gulph of Venice, from the north and east; and the Tyrrhene or Tuscan Sea from the south; to the north and west the Alps divide it from Germany and France.

Ver. 152. So called from Acheron, one of the rivers of hell, that was feigned to receive the souls of the dead. What our translator calls *Acherusian palaces*, his author calls *Acherusia Templa*, the vast and spacious places of hell; for so the word *Templa* signifies; *Templa Cali* in Terence is used to signify the immense tract of the air; and thus too in Lucretius we find "*Ætheris Templa, trōnitra-lia Templa*," in the same sense.

Ver. 153. Ennius, as we observed before, held the Pythagorean doctrine of the transmigration of souls; and he affirmed that the soul of Homer was in his body. But that he might not injure Pluto, he bequeathed to the infernal mansions, not the souls nor the bodies, but the ghosts, spectres, images, or shadows of the dead, which appearing to us, or seeming to do so, when we are asleep, awake, or in our sickness, strike a terror into our minds. This was the opinion of Ennius; which Lucretius hints at in this place, and by the way takes occasion to deride.

Ver. 154. He means ghosts or spectres, which the ancients held to be a third nature, of which, together with soul and body, the whole man consists.

Ver. 155. Homer, the Greek poet, is too well known to need any thing that we can say in his commendation. But Cicero in Lucullus mentions this dream of Ennius, "*Visus Homerus adesse Poetæ*," Homer seemed to appear to the poet; and in the dream of Scipio, he says, "*Fit enim ferè ut cogitationes sermonesque nostri pariant aliquid in Somno, tale, quale de Homero scribit Ennius, de quo videlicet sapissimè vigilans solebat cogitare et loqui*." For it often happens that our thoughts and words produce in our sleep, something like that which Ennius writes of Homer, of

whom he waking was wont frequently to think and speak.

Ver. 158. For Ennius used to say, that the ghost of Homer came to him from hell, and bitterly weeping discovered to him the nature of things: a folly for which Cicero sufficiently laughs at him in his second book of *Academic Questions*.

Ver. 159. Therefore to deliver his Memmius from all his fears, he tells him in ver. 8. that he will dispute, not only of the heavens, of the gods, and of the generation of things; all which he had before promised to do; but that he will explain besides the nature of the soul, and what those things are which affect us to that degree, sometimes when we are awake, sometimes when asleep, that we think we see persons long since dead, and hear them talking to us; from whence we believe that the soul exists after her separation from the body.

Ver. 167. Having proposed the argument of the following work, the poet, in these ten verses, weighs the difficulty of it; and declares how hard a task it is to write in Latin verse the philosophy of the Greeks, that is to say, of Epicurus and his followers; as well because of the poorness of the Latin tongue, as of the newness of the subject: he professes, however, that he is willing to undergo any labour for the sake of his beloved Memmius, whom he has undertaken to instruct.

Ver. 177. In these four verses the poet declares, that those causeless and empty fears, and that inward darkness which religion and ignorance have produced in the minds of men, cannot be dispelled and chased away by any beams of outward sunshine; but by that philosophy, that instructs us aright in the nature of things, and teaches the true causes of them.

Ver. 181. At length in these eleven verses he enters upon his subject, and totally to overthrow all belief of Providence, he endeavours to prove, that things were originally made without the help of the gods; and therefore are not governed and administered by them: And that he may go on the more successfully in his argumentation, he first of all lays down this principle: That nothing is made of nothing, which he is going to prove at large; for he had taken notice, that the belief of Providence sprung from hence: That men had observed many things upon earth, and in the heavens, and not being able to discover the causes of them, immediately concluded that the gods had made them out of nothing; the falsity of which he undertakes to demonstrate.

Thus we see, that Lucretius begins his philosophy with the denial of the creation; and we shall find him very copious in his arguments to justify this absurd opinion, but not one of them reaches his design: For though all things now rise from proper seeds, and grow by just degrees; though they spring only at convenient seasons of the year, yet how does this evince that these seeds were not the production of the Almighty word? But to confute his impious opinion, and demonstrate that it is impossible matter should be self-existent; that it cannot be ἀδιὰ φη τῶ Θεῷ, sister to the Deity, as

Hierocles, "de Fato et Providentia," p. 10. says, the Platonists imagine, it is sufficient to look abroad into the world, and see that stones and mud are not beings of infinite perfection; for whatsoever is αὐταῦτο, self-existent, as Scaliger calls the Deity, can have no bounds set to its excellency: For what can hinder the utmost perfection in that being which depends only on itself? Now if he could have proved, that nothing is made of nothing, Providence had at once been overthrown; but the reader will easily discern, that after all his great labour, and the mighty bustle he makes, he in effect proves no more than what no man denies; that is to say, that nothing within the compass and circumference of nature is produced from nothing. And, therefore, Lactantius, 2. Inst. 10. speaking of this argument of the Epicureans, had reason to say, "Sin autem intra naturæ vires contineri voluerit Epicurus, non esset cur à nobis non laudaretur. Constat enim ex nihilo nihil fieri posse naturæ viibus." If Epicurus would be content, that this proposition should be interpreted to extend no farther than to things within the strength of nature, we should have no reason not to approve it: For it is most certain, that nothing is made of nothing by the strength and power of nature. There is not, therefore, any reason to fear whatever arguments can be brought against the power of God, since those which the most penetrating wit of Lucretius has been able to advance, are so weak; for if his impious doctrine could have been defended, he certainly was capable of defending it:

— Si pergama dextra
Defendi possent, certe hac defensa fuissent.

Ver. 192. Epicurus, in the epistle to Herodotus, has comprehended in a few words this first argument, which Lucretius brings to prove, that nothing is made of nothing, ὅδιν γίνεσθαι ἐκ τῆς μὴ ὄντος, πᾶν γὰρ ἐκ πάντος γίνεσθαι δὲν, ἀσπεμάτων δὲ ὅδιν προσδιδόμενον which is exactly what Lucretius says more at large in these eighteen verses. If things were produced from nothing, then every thing would proceed from every thing: there would be no need of seed, but men would start up out of the earth, beasts and fish would drop out of the sky, &c. Now since all things do not proceed from all things: but certain proper seeds are necessary, he rightly concludes, that nothing is produced from nothing. Nor indeed can any thing be objected against this argument, inasmuch as it extends only to things within the power of nature; for so far it holds good, but no farther.

Ver. 210. The preceding argument, to prove that nothing is made of nothing, was brought from the first rise and beginning of things. He now in twelve verses proves the same proposition by another argument, drawn from the constant and never changing effects of the seasons in which the things are brought forth. For why should roses be produced only in the spring, why fruits in summer, and grapes in autumn, and not any or all of them in winter, if matter contributed nothing to their production, since there is not

a greater disposition in one season of the year than in another, to produce any thing out of nothing? This argument likewise holds good, taking it to extend no farther than to things within the strength of nature.

Ver. 216. He means in the spring; the season
When first the tender blades of grass appear,
And buds, that yet the blasts of Eurus fear,
Stand at the door of life, and doubt to clothe
the year. Dryden.

Ver. 222. His third argument, contained in these nine verses, is brought from the natural growth of things. For if things were made of nothing, what hinders them from growing bigger out of nothing likewise? And thus there would be no need of time for them to attain to the height of their perfection, and fullness of growth; at least, in a moment of time, a new-born babe might start up into a sturdy youth, &c. For things grow slowly and by degrees, because they are increased by a certain matter, and by certain principles, which in one instant of time can neither be assembled, disposed in due order, nor joined together. Since, therefore, all things are nourished, and grow by the help of proper seed, they must of necessity be produced from proper seeds likewise. This argument too is valid, provided still it be not extended to things above the power of nature.

Ver. 231. These eight verses contain his fourth argument, which he has taken from the necessity of food and nourishment, and is no less cogent than the others. For since the earth can bring forth nothing without rain; and since animals, when deprived of food and nourishment, can neither propagate their kinds, nor even support their own lives; who can be so weak as to believe, that either animals, or the fruits of the earth, are produced out of nothing, it being most evident, that matter is essentially necessary for the production and nourishment of all things? Nay, we ought rather to conclude, that there are certain seeds, of which things are composed, as words are of letters.

Ver. 239. His fifth argument, in these fourteen verses, is taken from the fixed and determinate size and duration of things: For if men, for example, were produced of nothing, whence comes it to pass, that they are constantly so weak and little? Whence proceeds this shortness of life, and the other inconveniences and imperfections of mankind: But admit, that men proceed from certain seeds, and of a certain matter, and all those things will be easily accounted for, and even appear necessary and unavoidable.

This argument holds good with the same restriction as the former; but not without some distinction: For nature seems to have prescribed no bounds to the size of some inanimate things. Fire, for example, if you continue to supply it with still more and more fuel, it still grows bigger and bigger: But to all things that have life, to plants as well as animals, nature has fixed certain bounds of growth and magnitude: For things

grow by the strength of natural heat only; which lessens by degrees, when either through failure of strength, or the opposition of contraries, it can diffuse and spread itself no farther; besides it decays and grows weak with age.

Ver. 240. Lucretius seems to allude to the fable of Polyphemus, of whom Virgil, *Æn.* 3. ver. 364.

————graditurque per æquor
Jam medium, necdum fluctus latera ardua tinxit.

————Through seas he strides,
And scarce the topmost billows touch'd his sides.
Dryden.

Ver. 243. As the giants were feigned to be; of whom, Virgil, *Georg.* i. ver. 288.

Ter sunt conati imponere Pelio Ossam
Scilicet et Ossæ frondosum involvere Olympum.

Ossa on Pelion they thrice strove to call,
And on them would have heap'd Olympus too at last.

But this fable of the giants fight with the gods was not invented by the Greeks, but came from the eastern nations, and arose from the true story of the building of the Tower of Babel.

Ver. 253. The poet had observed, that corn, trees, flowers, &c. are improved and bettered by human industry; from whence he brings his sixth and last argument, to prove that nothing is made of nothing, and reasons thus in these eight verses. All this is occasioned by certain hidden seeds. For what would industry and labour avail, if those things were produced from nothing? It would indeed be vain and useless: And whosoever should undertake to cultivate nothing, would do nothing. Nay, what can hinder plants, that are produced from nothing, from improving and growing every year more fair and fruitful of their own accord?

Ver. 261. Hitherto Lucretius has been proving, that nothing is made of nothing. But now, in these two verses, he proposes another principle which is a consequent of the former, viz. that nothing is annihilated, or reduced into nothing.

Ver. 263. In these seven verses, he brings his first argument against the annihilation of things, and reasons to this purpose, from the common resolution of compound bodies. For, says he, if things resolved into nothing, or were mortal in all their parts, there would be no need of force or violence to dissolve any of them: But as every thing would be produced, and appear on a sudden, without the endeavour or force of any other thing; so without the force or violence of any other thing likewise, every thing would perish, not by a dissolution of its parts; but withdrawn from our eyes, would vanish away in a moment of time, and thus resolve into nothing. For the reason why force is requisite to dissolve each thing is, because it consists of seeds that remain after its dissolution.

Ver. 270. His second argument, to prove that nothing is reduced into nothing, is contained in these fifteen verses. Animals, says he, which, as

I have already proved, are not made out of nothing, are born daily, and die daily. The fountains perpetually supply waters, of which rivers and the sea consist, &c. Now whence could all these things proceed, if there were not some immortal seeds, that remain after the dissolution of the bodies? For who is so void of sense, as not to grant that the first matter of things, if it were sometimes subject to perish, must have been totally consumed in the infinite succession of years, that has passed away since the beginning of things; insomuch, that nothing of it would be now left to repair and renew the things that are daily dying?

Ver. 277. For the Epicureans held, that the sun and stars were fires, that required nourishment to feed and keep alive their flames; and that they were nourished by the vapours and exhalations that rise from the earth and sea. Nor was this the opinion of Epicurus only, but of the Stoics likewise. Nay, we may trace this belief even to before the age of Zeno.

But to answer this question of Lucretius, and give a probable reason of the perpetual supply of waters to fountains and rivers, we may have recourse to the invention that Cowley found out to justify his

————Eternal fountain of all waves,
Where there vast court the mother waters keep,
And undisturb'd by moons in silence sleep;

And stablish an abyfs, or deep gulf of waters, into which the sea discharges itself, as rivers do into the sea; and thus there is a perpetual circulation of water, like that of the blood in human bodies; and this Lucretius himself owns in some measure, Book vi. ver. 627. For to refer the original of fountains to condensation, and afterwards to a dissolution of vapours under the earth, is one of the most unphilosophical opinions in all Aristotle. Besides, such an abyfs of waters is very agreeable to the scriptures; for Jacob blesses Joseph with the blessings of the heavens above, and with the blessings of the depth beneath; that is, with the dew and rain of heaven, and with the fountains and rivers that arise from the deep; and conformably to this, Esdras asks, What habitations are in the heart of the sea, and what veins in the root of the abyfs? Thus too at the end of the deluge, Moses says, "That God stopped the windows of heaven, and the fountains of the abyfs."

Ver. 285. In these thirteen verses, he urges his third argument, and says, that it is evident, that nothing is annihilated, because the same force is not sufficient to dissolve all things; for it is in vain for any man to object, that the same force cannot dissolve all things, because the principles of bodies are joined together by different textures. For what would that disparity of texture avail, what even the principles themselves, if they can be reduced into nothing, are not able to resist, or hold good even against the slightest touch? But admitting there are certain principles, which are eternal, then indeed a reason may be given from the dissimilitude of their contexture with one ano-

ther, why the same force is not alike sufficient to dissolve all things.

Ver. 291. For the eternity of the seeds alone would signify nothing, unless there were a dissimilitude of them likewise, without which there can be no union or connection of things; and, therefore, though the first bodies were eternal, yet the compounds would not, for that reason only, remain entire one moment of time.

Ver. 298. But because there are many things which, as they dissolve, vanish both from our sight and touch, to that degree, that they seem totally to perish, he, in these eighteen verses, obviates that objection, and shows, that even the rain, which, when it falls upon the earth, dries away, and chiefly may seem to vanish, does not, nevertheless, perish, but supplies matter for the growth of all manner of plants and trees, and to enable them to bring forth their several fruits in great abundance, for the nourishment and support of men, birds, and beasts. We cannot, therefore, believe, that the least particle of the showers entirely perishes, since so many excellent things are renewed and repaired by them. Lastly, He concludes, that nothing returns to nothing, since nature produces one thing out of another, and never any thing new; but makes use of the matter of another thing that had been dissolved before. See the note on v. 957. B. ii.

Ver. 314. This agrees with the maxim of Aristotle, lib. i. "de generat et corrupt." Ἡ τῶν φθαρὰ, ἀλλὰ γίνεσις, ἢ τῶν γίνεσις ἀλλὰ φθαρὰ. The corruption of one thing is the generation of another, and the generation of one thing is the corruption of another.

Ver. 316. But that he may not dispute to no purpose, while his Memmius will perhaps distrust the validity of all the arguments he has hitherto brought to establish his atoms, because those eternal principles and seeds of things, in themselves, and apart from the bodies which they compose, are imperceptible to the sense, and, by reason of their exility, too small and subtle not to escape the sight, even of the sharpest and most piercing eye, he brings several instances of corporeal substances, to which no man denies an existence, though they are invisible to the eye. First, of the wind, in thirty-three verses, whose force and violence, says he, whoever thoroughly considers how it tosses and disturbs the sea, with what fury it drives the ships, &c. will acknowledge it to be corporeal, though no eye could ever discover its particles; and this too the more readily, if he reflects, that winds rush on in the same manner as rapid rivers do, when their waters are swoln with rain, and bear before them whatever opposes their course; and that rivers are bodies, the senses themselves most plainly demonstrate. Virgil seems to have imitated this description of a stormy wind, in the first *Æneid*, v. 86. and *Lucan*, lib. v.

Ver. 322. Virgil, *Georg. i. ver. 318.* describes the force of the wind in the like manner:

Omnia ventorum concurrere praelia vidi;
Quæ gravidam late segetem a radicibus imis

Sublime expulsam eruerent: ita turbine nigro
Ferret hyems culmumque levem, stipulasque volantes.

Oft have I seen a sudden storm arise
From all the warring winds that sweep the skies;
The heavy harvest from the root is torn,
And whirl'd aloft, the lighter stubble borne:
With such a force the flying rack is driv'n;
And such a winter wears the face of heav'n.

Dryd.

And Georg. III. ver. 196.

Qualis, Hyperboreas aquilo cum densus ab oris
Incubuit; scythiæque hyemes atque arida differt
Nubila: tum segetes altæ campiq. nutantes
Lenibus horrescunt flabris, summæque sonorem
Dant sylvæ, longiq. urgent ad littora fluctus:
Ille volat, simul arva fuga, simul æquora verrens.

Like Boreas in his race, when rushing forth,
He sweeps the skies, and clears the cloudy north;
The waving harvest bends beneath his blast,
The forest shakes, the groves their honours cast:
He flies aloft, and with impetuous roar,
Pursues the foaming surges to the shore.

Dryd.

Ver. 333. Thus too Virgil describes the rapidity of the Po, *Georg. i. v. 481.*

Proluit insano contorquens vortice sylvas
Fluviorum rex eridanus, camposque per omnes
Cum stabulis armenta trahit—

Then rising in his might the king of floods
Rush'd through the forests, tore the lofty woods,
And rolling onward with a sweepy sway,
Bore houses, herds, and lab'ring hinds away.

Dryd.

And the violence of a Torrent, Æn. II. ver. 305.

—Ceu rapidus montano flumine torrens
Sternit argos, sternit fata læta, boumque labores,
Præcipitesque trahit sylvas: stupet infcius alto
Accipiens sonitum saxi de vertice pastor.

Thus, deluges descending on the plains,
Sweep o'er the yellow ear, destroy the pains
Of lab'ring oxen and the peasant's gains;
Unroot the forest oaks, and bear away
Flocks, folds, and trees, an undistinguish'd prey.
The shepherd climbs the cliff, and sees from far
The wasteful ravage of the watery war.

Dryd.

Ver. 349. In these eight verses, he farther teaches, that it is but reasonable to allow that there may be in nature certain corporeal principles imperceptible to the sight, since all men confess that there are such things as odours, sounds, heat, and cold, though no man ever saw any of them; and yet who doubts but that all of them are bodies, since they affect and move the senses, and consequently touch them? for the Epicureans held, that whatever could touch, or be touched, that, and that only, was truly a body.

Thus Aristotle, lib. iv. Phys. *αὐτὸν οὐκ ἔστιν ἄνθρωπος* They believe whatever can be touched to be a body. Hence Epicurus in Laertius, lib. x. calls the void which is opposed to body, a nature free from touch, which opinion, Lucretius follows in this verse:

Tangere enim et tangi nisi corpus nulla potest res.

Nought but a body can be touch'd, or touch.

Ver. 357. He brings another example of an invisible body, in these six verses: Water, says he, is a body, and yet experience teaches, that it is sometimes divided into particles too small to be seen. Linen or woollen clothes, spread abroad near the sea, will grow damp, and the heat of the sun will dry them again; yet no man ever saw those particles of water, either rising from the sea, and fixing themselves in the clothes, or retiring from them.

Ver. 363. In these ten verses, he gives several other instances to the same effect: Rings grow thin with long wearing; drops of rain, by often falling on stones, will make them hollow; the pavement of the streets wear with treading on them; nay, we see that even brass statues will wear with frequent touching. Now, from all these things thus worn and diminished, certain corporeal particles must fly away, though, whoever sees them must be sharper sighted than "an eagle, and serpent epidaureus:" either an eagle or a serpent.

Ver. 364. Ovid says this admirably well in lib. iv. de Pon. Epist. x.

*Gutta cavat lapidem, confumitur annulus usu,
Et teritur pressa vomer aduncus humo.*

Which he most certainly took from our author.

Ver. 367. He speaks of the images of the tutelary or guardian gods, whose right hand whoever came into the city or went out of it, was wont to kiss, "*boni ominis causa*," for good luck's sake. Yet I know not one single passage in any of the ancient authors that mentions or confirms this custom; but it is so plainly described here that we have no room left to doubt of it. Why the ancients used to kiss the right hand rather than the left, Varro teaches, in Excerpt. ex Servio in l. Æneid.

Ver. 373. In the last place, he teaches, in the eighth verse, that certain corporeal particles are added to things that grow and increase, and taken from those that decrease and diminish; but that those particles too are invisible even to the sharpest eye. Epicurus has expressed all this very briefly in the epistle to Herodotus: *πάν τε μέγιστος μὴ εἶναι ὡς ἄτομος*; the atoms have no magnitude; and, *ἡδίστοτα γινώσκειν ἄτομος ὅφρα αἰσθῆται* for an atom is not visible to the sense. But Democritus believed that some atoms may be very big.

Ver. 381. Having thus proved that there are certain corporeal principles of things, he is now going to enter upon another subject, and in the sixth verse he teaches, that, in the universe, there

is another thing besides body, that is, a void, which void he thus defines: a place untouched and empty, that is to say, a space that neither touches, nor is touched, that can neither act nor suffer. Thus in Book iii. ver. 781, he says:

Or else because, like empty space, 'tis such
As is secure from stroke, or free from touch.

Laertius, lib. x. says, that Epicurus called the void an intangible nature, and a region. Empiricus, lib. ii. adv. Phys. says, that it is called an intangible nature, because of its being exempt from all impulse by touch; or, to use the words of Arnobius, lib. vii. adv. Gent. "*quod omni tactu sit incontigua*," that is to say, because it makes no resistance to touch. Thus Epicurus and Lucretius call that only a void which is incorporeal in its nature, that is, which can act nothing, nor suffer nothing, but only yields a free passage through itself to all bodies. Now, Empiricus says, that they called this intangible nature a void, because it is destitute of body; a space, because it contains bodies; and a region, because bodies are moved in it. Thus Aristotle, 3 Phys. vii. defines the void, a place in which nothing is; that is to say, as he himself explains it, a place in which nothing corporeal, no body is. He goes yet farther, and says, that it is a property of the void to be full and empty; full when it is; filled with body, empty when it is void of all body, almost in the same sense as we commonly say a vessel is full when it is filled with any liquor, but empty when there is no liquor in it, unless in the empty vessel, the air, which is a body, supplies the place of the liquor, by which means the vessel is not entirely empty, but would be empty if neither the air nor any other body came into it. This being premised, will help us to understand the following arguments of Lucretius, by which he strives to prove, that there is a void in the universe.

Ver. 387. The first argument to prove a void, is contained in these fifteen verses, and, the better to comprehend the force of it, imagine the universe, if there be no void or empty space interspersed in it, to be a vast heap of matter, thronged, crowded, constipated, and wedged in on all parts to such a degree, as not to be capable of receiving into its bulk the least corpuscle whatever; for, if there be nothing that is not full, then no place remains to be filled; therefore, either a new body will not be admitted, or it will be placed in the very place that is already taken up by some other body: and thus the same place will contain two different bodies, that must be penetrating into each other on all sides, which no man will pretend is possible to be done by the force of nature. By this we see too, whether it be possible for any one of the bodies that are seated in that immense mass of matter to be moved out of its place, and to take the place of another. Certainly, if it find a place already full, it must of necessity drive away the body that possesses and fills that place. And if all things are full, whether shall that body be driven? Shall that again thrust away another? The same difficulty will re-

turn upon us, and be continued for ever; therefore, unless there were a void interspersed in all things, all things would be crowded to such a degree, that not only nothing in the whole universe could be moved from its place, but it would be even impossible to give a reason, and explain how any thing can be generated because a local motion is absolutely necessary for the generation of all things: and without a void there can be no motion whatever: nothing could move any more than do those flints and shells, that are sometimes found in the very heart of huge stones, and in the entrails of the hardest rocks. Aristotle, in 4 Phys. 6. offers almost the same argument, which he had collected from Democritus and Leucippus, whose opinions Epicurus followed. Δοκεῖ αὐτῷ, says Laertius in Democritus, speaking of that philosopher, τὰς ἀρχὰς εἶναι τῶν ὄντων ἄτομους καὶ κενόν. He believed atoms and void to be the principles of all things; but Epicurus more truly held, that the void affords nothing besides place and discrimination; and, indeed, though it be mixed with all bodies, yet it is in no wise to be admitted as any constituent part of them; and, therefore, Plutarch wittily expresses body by τὸ ὄν, and void by τὸ μὴ ὄν, as if he had said, body is something, void nothing, which sense we must be sure to bear in mind, and carry about with us, in order to comprehend a right and true meaning of our poet.

Ver. 412. In these thirteen verses is contained his second argument, by which he proves, that there is a void, because some bodies penetrate into, and distil through the things that seem to be most solid. Thus water soaks through stones; nourishment conveys itself into all the members of animals; the sap rises into the trunks and branches of trees; sounds pierce through walls; and cold penetrates the flesh and nerves, nay, even into the very bones; none of which could ever be, were there not between the particles of those solid things, some small void spaces, through which those bodies work their way.

Ver. 415. The third argument to prove a void takes up these ten verses, and is brought from the different weight of things that are of the same bulk and figure. And, indeed, why of two bodies of a like size and shape should one weigh more than the other, except because in one of them there is more of body to which weight is natural, and the other more of void, which has no weight at all.

Ver. 425. But because some, and among them Aristotle, lib. 4. Phys. 7. Cic. lib. 4. Academ. et Seneca, lib. 2. Nat. Quæst. 7. endeavour to elude the force of these arguments, by objecting, that there is no need of a void for the motion of bodies, since in a full, bodies may officiously give way to one another; because whatever body is moved, leaves a space to be possessed by that body, which it thrusts out of its place: as water gives way to the fish that swim forward, and strait flows into the place they left. But Lucretius answers, that unless the water gave way, the fish could not move forward, nor open themselves a

passage, or leave a space behind them; but the water could not give way, unless there were an empty place for it to retire to. And therefore we must allow a void mixed with bodies, or deny the possibility of all motion whatever.

Ver. 439. These six verses contain his fourth argument; which indeed is strong and valid. For if two smooth broad bodies meet, and are parted on a sudden, a void will be caused by their dissolution. For all manner of matter must have been compressed and driven away by the meeting of those two bodies, and therefore the space that opens between them, as they part, will be void of all body: for what can fill it up? Shall the air, or any subtle matter? Impossible: for how subtle soever you imagine the matter to be, you nevertheless leave a void, because that air or subtle matter; whatever it be, cannot be imagined to possess and fill up in one instant of time all the space that two such broad and flat bodies will disclose, and lay open at parting.

Ver. 445. Our translator has rendered this passage of his author a little obscurely; but the meaning of Lucretius is this. It may, says he, be objected against my last argument, that when these two flat bodies meet, the air that is intercepted between the surfaces of them is condensed, or at least lies hid in the cavities of the surfaces of those bodies; for no bodies are perfectly smooth. Now when those bodies separate, the intercepted air is rarified, and possesses and fills up all the space that is disclosed and laid open by the separation of those parting bodies. But Lucretius answers this objection thus, urging still his former assertion: When these two bodies are separated, a void must of necessity be made, (for this cannot be denied, since they did, at least in some places, touch one another), and that void must be filled up again with air; and thus the foregoing argument holds good, and proves what it advances. However, he insists yet farther; at least says he, that intercepted air is not totally condensed, or even grant that it be so, yet it follows from that condensation that there is a void: because it is absurd to pretend, that one same heap of matter can take up more room at one time than it does at another, unless there were a void. Besides, from such a contraction and condensation of the air, this absurdity will follow, that what was before granted to be full, must now be empty; and, *vice versa*, what was empty, full: And even let it be granted, that such a compression of the disjoined and loosened parts of the air could be effected; yet even that would even be extremely distressed without an interspersed void; for otherwise all things would be full, solid, and mere bodies, whose properties no ways admitting of penetration, could not possibly suffer the least condensation. This is the sense of the text of Lucretius, which the English does not fully express.

Ver. 455. The poet here tells Memmius, that he could allege many other arguments to prove a void: but he leaves it to him to gather the rest out of those he has mentioned: For, says he, it is with philosophers as with hounds; and when they

have once fallen upon the sure trial of truth, they easily find her out in her most secret recesses.

These are the arguments Lucretius has brought to prove the two principles of Epicurus, body and void: that the former is sense sufficiently declares; and the latter is here evidently proved by two arguments (for the other are easily eluded): the first is drawn from motion; the second, from the parting of two flat smooth bodies.

Plutarch, in his second book, de Placitis Philosophorum, roundly tells us, οἱ ἀπὸ Θάλας φυσικοὶ πάντες μέχρι Πλάτωνος τὸ κενὸν ἐπέγνωσαν. All the natural philosophers from Thales to Plato denied a vacuum. But Laertius, in the life of Diogenes Apolloniates, who lived in the time of Xerxes, declares that he pronounced τὸ κενὸν ἄπειρον. Void space is infinite. For the antiquity of that opinion I shall not be solicitous, though the reasons are strong, and obvious enough to make it ancient; for what is more obvious than motion? And how necessarily this infers a vacuum, is very easily discovered. Motion is change of place, which change is impossible in a plenum; for whatever endeavours to change its place must thrust out other bodies; and so if the full be infinite, the protursion must be so; if finite, the endeavour is in vain, and therefore all must be fixed in eternal rest, and Archimedes himself with his engine would not be able to move the least particle of matter. Cartes, in the second part of his Principles, proposes a solution, much applauded by his admirers; but a little attention will find it vain, and weak, and contradictory to his own settled principles. For when a body moves in a straight line, it must give the body that lies before it the same determination with itself; and how this determination should alter, and the motion prove circular, neither Cartes nor his followers have condescended to explain. But grant (though the former reason has proved it impossible), that there may be such an attending circle of ambient air, yet unless it be perfectly mathematical (a thing very hardly supposed), each particle will acquire another attending circle, and so not the least fly stir her wing, unless the whole universe is troubled. To this may be added, that it is inconceivable how the most solid matter (for such is his first element) can so soon alter its figure, or be so easily dissolved, and fitted to the different spaces that lie between the little globules. We see gold and adamant resist the roughest stroke; it is pains and constant labour that must dissolve them; how then can we imagine this element will yield? But indeed Cartes proposes his ambient attending circle, as the only way to solve the phenomenon of motion in a full, which he thought he had sufficiently before evinced: but his arguments are weak and sophistical. For, in the first of his Meditations, he never takes notice of impenetrability, in which the very essence of matter consists: and in the second part of his Principles, he mistakes the notion of a void, and confounds substance and body. Take his own words: "Vacuum acem philosophico more sumptum, h. e. in quo nulla planè sit substantia, dari non posse manifestum est ex eo quod extensio spatii non differt ab extensione

corporis: nam cum ex eo solo quod corpus sit extensum in longum, latum, et profundum, rectè concludamus illud esse substantiam, quia omnino repugnat ut nihil sit aliqua extensio: Idem etiam de spatio, quod vacuum supponitur, concludendum est; quod nempe cum in eo sit extensio, necessario etiam in ipso sit substantia." It is manifest, that a void, taken after the manner of philosophers, that is to say, in which there is evidently no substance, cannot be granted: because an extension of space, does not differ from an extension of body; for since we rightly conclude body to be a substance, for this reason only, because it is extended into length, breadth, and depth, it being absolutely contradictory to sense and reason that there should be an extension of nothing. We must likewise conclude the same of space, which is supposed a void; that is to say, that since there is an extension in it, there must be a substance in it likewise. For void doth not exclude all substance, but only body; and substance and body, are not convertible in the full latitude of an universal proposition.

Secondly, It is evident, that when two smooth flat bodies are separated by a perpendicular force, the ambient air cannot fill all the space at once; and therefore there must necessarily be a void, and this Mr. Hobbes, a great plenist, in the second of his Ten Dialogues, freely confesses would follow, if the bodies were infinitely hard; but since nature knows no such, any bodies, though perfectly smooth, may be separated by a force that overcomes their solidity, and yet no vacuum ensue. A pretty invention, but extremely disagreeable to the phenomenon: for in the exhausted receiver, where there is no prop of under air left to sustain it, the lower marble falls by its own weight. Mr. Hobbes adds another argument, which is of no force against the vacuist, but overthrows his own notion of a material deity: these are the words. He that created natural bodies, is not a fancy, but the most real substance that is; who being infinite there can be no empty place where he is, nor full where he is not.

Now the other reason of Lucretius are insufficient; for that drawn from the different weight of bodies, would infer immense vacuities in the air, which is two thousand times lighter than gold, (see Glisson. de Substantia, c. 26.) and that from rarefaction and condensation is not cogent, though it is the most rational opinion, and more agreeable to the mind of Aristotle, than that which is commonly proposed as his, in Categoria Qualitatum, Πυκρὸν μὲν καὶ τῷ τὰ μόρια συνεγγυς εἶναι ἀλλήλοις, μακρὸν δὲ τῷ διαστάναι ἀπ' ἀλλήλων. That is dense, between whose parts there is a closer; that rare between whose particles there is a looser connection.

Ver. 472. In these seven verses he briefly recapitulates what he has been proving in the former arguments: and, to confirm them, adds, that sense itself evinces the truth of them; and that nothing exists of itself besides body and void. Thus, too, Epicurus, in the epistle to Herodotus, τὸ πᾶν ἴσται πῇ μὲν σῶμα, πῇ δὲ κενόν the ALL is partly body partly void. And Cicero, in 2. de Nat. Deor.

"Omnia quæ secundum Naturam Corpus & Inane docet Epicurus." Epicurus teaches that all things in nature are body and void. And this doctrine of his, though particularly designed against those who take accidents into the number of real beings, yet has a farther reach, and endeavours to overthrow the belief of immaterial substances; for an Epicurean perception being nothing else but imagination, as arising from the stroke of a piece of matter, he had no way left to get a notice of any such being, but by some deduction from those appearances, of which his senses had assured him: thus, from motion he infers that there is space; and that being once settled, he proceeds to the solidity of atoms. Now, though the very same method, with less attention, had forced him to acknowledge substances immaterial, and to have made the universe more complete by another kind of beings; yet it was hard to thwart the genius of his master, to start new fears that might disturb his soft hours, and amaze himself with melancholy thoughts of a future state. And therefore, to silence the clamours of his reason (for he could not but see such plain consequences), he secures motion as a property of matter necessarily resulting from weight; and this I take to be the basis of the Epicurean atheism, which once removed that tower of Babel, which now rises so proudly as to brave Heaven, must be ruined and overthrown. For, if matter as such, is destitute of that power, the inference is easy, that there must be some other being to bestow it. This cannot be space: and, therefore, another kind of substance is required; and hence follows all that train of consequences, of which the Epicureans are so afraid. For he that first moves the matter, has no reason to cease from his operation; and so must still govern and direct it. And Providence is nothing else but an orderly preservation of that frame which it first raised: and, if there is such a director, how easily it follows, that he would discover his pleasure to man, and prescribe rules how he may be happy? And this makes a fair way for revealed religion; and that necessarily infers a future state. This, methinks, is a considerable advantage of natural philosophy, that it can proceed from such sensible things, and plainly shows us the *τὰ ἀόρατα τῷ Θεῷ*, the invisible things of God, in these his visible operations. Now, that weight is not a property of atoms, will be afterwards demonstrated; and so another sort of beings proved against the Epicureans.

Ver. 480. In these six verses, he proves, that nothing exists of itself besides body and void: because, whatever is, is endowed with some quantity, great or small. Now, if it can be touched, and hinders motion, it must be body; if it cannot be touched, and does not obstruct motion, it must be void. Therefore, there is no third nature; and whatever is, is body or void.

Ver. 486. In these seven verses, he again proves, that nothing exists of itself but body and void: for, whatever is, either has a power of acting on another; or may suffer from another, that is to say, it must be subject either to action or to pas-

sion. And that must be a body (for whatever acts or is acted on, touches, or is touched), or else it must be that in which things are contained, and in which they are made and moved; and that is the void. Therefore, there is no third kind of things that can be perceived by the sense, which teaches that body is, or comprehended by reason, which demonstrates that void is.

Ver. 493. But, forasmuch as many things are said to be, besides body and void; as war is, peace is, heat is, &c. Lest errors should spring and get footing from this common way of speaking, he observes, in these ten verses, that all such things are either conjuncts, or events of body and void. Conjunct (*σύνεσσις*, or proper accident), is what cannot be absent without the destruction of the subject: such is heat in fire, moisture in water, &c. But event (*συμβεβηκός*, or common accident) is what may be absent or present, without the ruin or destruction of the subject; as war, poverty, concord, &c.

Ver. 503. Some, who were not offended that poverty, war, peace, &c. should be ranked among the number of events, had a nobler idea of time. Pythagoras, Heraclitus, and others, taught that it is a body; but the Stoics believed it to be incorporeal. To all these Lucretius opposes the opinion of Epicurus, in these six verses, which Gassendus thus explains: Time is an event attributed to things by the mind or thought only, according as they are conceived to persevere in the state in which they are, or to cease from it, and to preserve a longer or shorter existence, and to have it, to have had it, or to be to have it. Now, Epicurus, because he saw that time is something besides body and void, asserted, that it does not exist of itself; nor as a conjunct or event, but as the chief event of events; as Laertius positively says, lib. 10. He taught, therefore, that time exists not in reality, but only in the mind; and, therefore is, as I may call it, a being of the understanding. Hence Aristotle, 7. Metaphys. I. defines time, "Numerus, qui absque ratione numerante, nullus est," which is as much as to say, that it has no existence but in the understanding. Now, the reason why Epicurus held time to be an event of events, or an accident of accidents, was, because it depends upon days, nights, hours, passions, exemption from passions, motions and rest: for, as Empiricus says, adv. Phys. lib. 22. a day, a night, an hour, passions, exemption from passions, motions and rest, are accidents to which time is adventitious only: for, day and night are accidents of the ambient air; and day happens from the illumination of the sun; but night from the privation or absence of the solar light. An hour, since it is a part either of the day or of the night, is likewise an accident of the air, as day and night are. But time is coextended with each day, each night, and each hour. Passions too, and impatibility or exemption from passions, that is to say, pains or pleasures, happen to us; and, therefore, are not substances, but accidents of those persons who are affected with a sense of them, that is to say, either with pleasure or pain. Now, even

these accidents happen not without time. Moreover, motion and rest are accidents of bodies, and not without time neither: for we measure by time the swiftness and slowness of motion, and the length and shortness of rest. Therefore, since in common acceptation, time is divided into three parts, the past, the present, and the future; the sense, that is to say, the reason or understanding of the mind, comprehends all those parts of time from the things themselves: that is, we know the past time by things that are past, the present by the present, and the future by things to come. And without the motion or rest of things, we can have no notice of time, since it is something that is perpetually flowing. For the past time has already flowed away, the present is flowing, and the future is not yet flowed to us. Therefore, time exists not of itself. Thus Empiricus, whose text, for brevity's sake, I have omitted. And hence we see why, as Cicero 1. de Invent. says, "Difficile est Tempus definire," it is difficult to give a definition of time: and St. Austin, 2. Confes. 24. "Si nemo ex me quærat, quid sit Tempus, scio; si quærenti explicare velim, nescio." I know what time is if no man ask me; but when I would explain it to any man that asks me, I know not what it is. In a word, time does but measure other things, and neither works in them any real effects, nor is itself ever capable of any. And, therefore, what is commonly said, that time is the wisest thing in the world, because it produces all knowledge; and that nothing is more foolish than time, which never retains any thing long, whatever is learnt to-day is often forgot to-morrow. And again, that some men see prosperous and happy days, while the days of others are miserable. In all these and the like expressions, what is said of time is not verified of time itself, but agrees properly to the things that happen in time; and which, by reason of so near a conjunction, either lay their burden on the back, or place their crown on the head of time: nay, the very opportunities which we ascribe to time, do in reality adhere to the things themselves with which time is joined. And, as for time itself, it neither causes things, nor opportunities of things, though it comprise and contain them both.

Ver. 504. By fancy he means memory; for by memory we comprehend things past, and reason of things to come. Take away memory, the time past is nothing, and the future is not yet. And the present too, unless we remember and think of it, neither is, nor has any more a being, than either of the other two.

Ver. 509. I know not whether I shall be able to express my meaning, so as to make myself, or this passage of Lucretius be plainly understood; but I will do the best I can. The poorness of the Latin tongue, obliges to use the verb, "Sum, es, est," &c. I am, thou art, he is, &c. in relating of things that happened in time past; when we would tell any thing that was done. Thus if any one should say, "Victum est Ilium," Troy is conquered: some quibbler might presently answer, Is conquered? therefore it is. In my opinion,

this passage of our author, must, of necessity, be understood in this manner. Lucretius, therefore, in these eight verses, solves this captious sophism, occasioned by the common way of speaking, when we say that things past are done. For example, says he, The rape of Helen, and the destruction of Troy, are not at this time, nor do exist in themselves as body and void do, but are, as it were, the events of things, of persons, or of places, for the time past has swept away those men, of whom these actions are events; whence it follows, that the time past is not any thing in itself, absolutely and independent from things or countries, nor properly an event, but an event of events, as Epicurus himself expressly says, in the tenth book of Laertius. But whoever is of opinion, that these are dialectic trifles is certainly much in the right: nor would Lucretius have condescended to amuse himself with them, had not the Stoics, a most impertinent race of men, between whom and the Epicureans there was a mortal enmity, compelled him to it.

Ver. 510. Helena was daughter of Tyndarus, the husband of Leda, who brought forth two eggs at a time: out of one of them, which she had conceived by Jupiter, in the shape of a swan, were taken Pollux and Helena; out of the other, which she had conceived by Tyndarus, Castor and Clytemnestra. But Horace, though contrary to the common opinion, says, that Castor and Pollux came out of the same egg.

Castor gaudet Equis: ovo prognatus eodem

Pugnis——— Sat. 1. l. 2. v. 26.

Helena was very beautiful, and married to Menelaus king of Sparta. See the note on v. 519.

Ver. 517. He once more falls foul upon the sophism; and in these ten verses makes it appear, that things done in times past do not exist of themselves, but are only events of body and void. For, if there had formerly been neither body nor void, those things had never been done.

Ver. 519. *Pous.*] He was the son of Priamus king of the Trojans, and Hecuba; who, while she was with child of him, dreamed that she was delivered of a flaming torch: and the interpreters of dreams, being consulted upon this occasion, answered, that the burden she carried in her womb, would be the cause of the destruction of Troy: upon which Priam gave orders, that the child as soon as born, should be exposed in the woods: but his mother took care to have him brought up privately in Mount Ida. At length, it being discovered who he was, by his brother Hector and his relations, he was sent into Greece, where he was received at the court of Menelaus king of the Spartans, whose wife Helena he took away by the favour of Venus, and brought her to Troy. This was the cause of the Trojan war, and consequently of the fall of that city. He was likewise called Alexander, by which name Lucretius here mentions him. He killed Achilles in the temple of Apollo the Thymbræan; and was himself slain not long after by Philoctetes.

Ver. 520. *Helena.*] Of whom see the note on v. 510.

Ver. 521. This story is too well known to need any explication: but it was in the night-time that the Greeks went out of the belly of that wooden horse, and set fire to Troy, when the city was buried in sleep and wine, as Virgil expresses it, *Æn* 2. v 265.

Invadunt Urbem Somno Venoque sepultam.

Ver. 527. Having demonstrated the two principles of nature, body and void; and having explained likewise the nature of the void, he comes now to dispute more at large concerning bodies, which he divides into simple and compound: and in these twenty-three verses, farther teaches, that the simple bodies, or the principles of the compounds are most solid, perfectly full, and contain no void whatever: for which reason they can never be broken, nor divided by any force or violence how great soever it be. At the same time he owns there is need of very strong and convincing arguments to persuade men to believe that any bodies whatever are perfectly solid and full; since we know for certain, that gold, brass, stones, and all the other things that are thought to be most of all solid, are porous, and pervious to other bodies.

Ver. 529. Sextus Empiricus declares, that Epicurus hated the mathematics, and we may believe Lucretius follows his master, since, in his disputes concerning the indivisibility of atoms, he proposes the popular argument against the known and demonstrated property of quantity, infinite divisibility for as long as mathematics can boast any certainty, that must be acknowledged to be such.

I shall not engage in this unnecessary controversy; though I believe those common arguments against infinite divisibility are empty sophisms, and a little attention (as whoever considers the method in which they are proposed, must observe) will find them full of contradictions, and founded on absurdities; for the indivisibility of an atom proceeds not from the littleness, but the solidity: for since the atoms are of different figures, some triangular, some square, &c. it is absurd to imagine, that the mind, by which only atoms are perceived, cannot fancy a diagonal in the square, or a perpendicular erected to the basis of the triangle: yet from this mental to the physical divisibility of an atom (as Cartes proceeds) is extremely weak and deficient. That there are some solid particles Lucretius has evidently proved: These Democritus called *πρῶτα μέγιστα*, first magnitudes, Epicurus, *Ἀτόμους διὰ τὴν ἀλύτῃ ἐκέρροτῃ*. Atoms from their indissoluble solidity: but as Dionysius, in Euf. bius, *Præp. lib. 14. cap. 7.* observes, *τοσούτων διεφόνησαν ὅσον ὁ μὲν, ἐλαχίστας πᾶσας, καὶ διὰ τὸ ἀνεπαίσθητα, ὁ δὲ Δημόκριτος, καὶ μεγίστας εἶναι τινὰς ἀτόμους ὑπέλαβεν*, they so widely disagreed, that Epicurus made all his atoms to be leasts, and therefore insensible, but Democritus supposed some of his to be very great: Heraclides, *Ὀγκῆς*, tumid or massy. But none of all his reasons prove them unchangeable. For, if solidity, i. e. immediate contact were a necessary cause of indivisibility, it would follow, that no piece of matter could be divided, because the parts that are to be sepa-

rated enjoy an immediate contact, and that contact must be between surfaces as large as atoms, or, at least, some of their fancied parts. Besides, let two hard bodies perfectly smooth be joined together in a common superficies, parallel to the horizontal plain, and certain experience will assure us, that any force that is able to overcome the resistance of the supporting air, will easily divide them. His other arguments are all unconvincing: for suppose the seeds not eternal, i. e. divisible, it is a strange inference, therefore beings rise from nothing, since any body, and therefore one of these solid particles is not reduced into nothing by division, but only into smaller parts: and the weakness of the rest is so obvious, that I shall not spend time in declaring it.

Ver. 530. He has proved before that there are two principles of things, body and void, and that they are of very different natures. Now, who can deny, says he, but that these entirely different things subsist of themselves, wholly distinct and apart from one another. For it is absurd to say, that where void is, there body is likewise, and so on the contrary: from whence he infers, in these eight verses, that the first bodies are perfectly solid and full; because they subsist where there is no void.

Ver. 538. In these six verses he asserts, that in all compound bodies, which he here calls *γενίτα*, begot or engendered, there are little void spaces intermixed: and then he adds, that the first, or simple bodies, must be perfect solids, because the mass of those simple bodies contains those voids: and what can contain a void but a solid, unless any one will imagine that a void can contain a void?

Ver. 564. In these two verses he teaches, that these solids cannot be broken by any force or violence, and therefore are indissoluble and eternal.

Ver. 566. Here he confirms the solidity of his atoms by another argument, contained in these eight verses. For as the whole universe would be a full, if there was no void, which he has already proved to be absurd: so, on the other hand, if nothing were full, and consequently perfectly solid, the same universe, immense as it is, would be all an empty space; which would be no less incongruous and absurd. Epicurus speaks to the same effect in Plutarch de Plac. Philosoph. lib. 1. cap. 3. *ὅτι δὲ ἔστιν ἄτομος ἐνθάδε, τι γὰρ ἐστὶ στοιχεῖα αἰεὶ ὄντα, καὶ ἀπὸ τῆς κενῆς διοριζόμενα.*

Ver. 574. Having demonstrated the solidity of atoms, he, in these ten verses, asserts their eternity: for solids are perfectly full, contain no void, and, therefore, are not subject to dissolution; because every divisible and dissoluble body is such, by reason of the void that is intermixed in the mass of it, and that intercepts and breaks off the communication between its parts, and thus gives an entrance to some external power and force to separate and disjoin them: but whatever is indissoluble and indivisible is such, because it is perfectly full and solid, and because it has no void, which might subject it to a separation and divisibility.

its parts. Epicurus to Herodotus, defines an atom, *Πλήρη τῶν φύσιν, τὴν ἑκ ἑχέσσαν ὁπῆ, ἢ ὅπως διαλυθήσεται.*

Ver. 564. To prove the eternity of his seeds yet more fully, he brings another argument from that common principle of the Epicureans, that nothing is made of nothing, and that nothing is reduced into nothing. This argument, contained in ten verses, is to this effect: If the first seeds of things were dissolved and perished, they would fall into nothing; for there are no principles prior to the first, into which they can be resolved: and thus the things that are daily born would arise from nothing. It must, therefore, of necessity be granted, either that the seeds are eternal, or that things proceed from nothing: and this the philosophers held to be the greatest absurdity that any man could advance.

Ver. 592. In these two verses, he concludes to this purpose: The first seeds of things are eternal, because they are solid, and are solid, because they are simple; for, unless they were simple, they would not be solid, because all compound bodies have a mixture of void: unless they were solid, they would not be eternal, because they might be dissolved; and unless they were eternal, all things must have been produced from nothing, and would return into nothing. The impossibility whereof he has already demonstrated.

Ver. 594. He proceeds, in these thirteen verses, to show that there is a certain and definite time appointed for the growth of all things; and, therefore, that the seeds, by which things are increased, are of a certain fixed magnitude, and indissoluble, nor can be broken to pieces: for, otherwise, having been broken and wasted for so vast a tract of time as is already past, they would have been reduced into parts so extremely minute, that they could never in any length of years, and therefore not in a few, be reunited and made again into one mass. And this any man will acknowledge, who reflects, that it is a much easier task to divide and dissolve things, than to renew and rejoin them together.

Ver. 607. He confirms the solidity of his atoms in these nine verses. Now, because it is manifest, that there are in nature hard and soft bodies, he declares, that if the principles are allowed to be solid, not only hard things may be made of them, as it is most evident they may, but soft things likewise; because whatever is compounded of such seeds, may become soft by the intermixture of void: but if the principles themselves are allowed to be soft, then, indeed, soft things may be made of them; but no reason can be given, how any thing should be hard, because there would be no solidity in their composition: and solidity alone is the foundation of all hardness.

Ver. 616. In these fourteen verses, Lucretius confirms the solidity of his atoms by another reason, taken from the manifold and never-failing constancy of nature; as well in always carrying on of animals to certain bounds of strength, as in imprinting likewise always upon them the same distinguishing characters and marks of their respective kinds: which, indeed, she could not do;

but that she makes use of principles, that are firm and constant, and therefore not obnoxious to dissolution or change; for whence can proceed this so obstinate constancy in seeds that are daily changed? And were they so indeed, neither men, nor any other animals, would retain the same usual shapes; and some would enjoy a vast strength and length of days, while others of the same kind, would be puny and short-lived; we should frequently see white crows, and sometimes black swans.

Ver. 630. In these fourteen verses, he employs another argument; which is, indeed, something refined, and not understood by many. Seeds or atoms, according to Epicurus, are endowed with quantity; but all quantity has an extreme: now that extreme is the least thing that can be conceived; nor does it ever subsist separated, and disjoined from the other parts; and of these leasts the whole mass of each atom is composed: but since the constituent parts cannot subsist when they are separated from one another, they cannot be divided from one another; for whatever body can be disjoined from another, must be able to preserve its being without the help and assistance of the body, from which it is parted: every seed, therefore, is of necessity simple and indissoluble; because it consists of parts, even the least that can be conceived; and which no art or strength can disjoin, because no art or strength can reduce into nothing. For nothing goes into nothing.

To make this yet more easy to be understood, we must know, that the Peripatetics and Epicureans differed in many things, but chiefly in their opinions concerning these leasts. For the Peripatetics held, that every compound body may be divided into infinite parts; and that no part can be made so small, but that it may still be made smaller. But the Epicureans believed, that no compound body can be divided into such minute parts as may always be made less; but may, indeed, be divided into parts so small, as cannot be divided any more; and consequently no less parts can be made of them; so that they fix an end, and prescribe bounds to the divisibility. Thus we see, that the Epicureans held that every body may be lessened to a point that can neither be seen, nor divided any more; but that is invisible and void of parts: and this is what they call a least, which is the first and the last part in all things; that is to say, is the first principle that nature reserves for the creating and renewing of things, and likewise a something last, into which they are resolved: Now, because the first principles are these leasts, Lucretius argues, that the first principles are eternal, solid, and most simple.

Ver. 640. This must not be understood, that the atoms are composed of leasts, as of parts, as if they were bodies compounded of an aggregation and connection of things, in like manner as all the other things of nature consist of a coalition of atoms; but only in such a wise, that they cannot by any means whatever be broken or dissolved. We must, therefore, take care not to mistake our

poet's least for such a mathematical point, as is represented without magnitude; which his principles enjoy, and figure likewise; and that, too, as infinitely variable, as the Peripatetics is divisible. And these apices, or leasts of things, may, perhaps, upon serious and speculative disquisition, prove a notion to be hardly denied, whether physically or mathematically taken, as Gassendus demonstrates at large; where he speaks, "*de non esse Epicuro magnitudinem infinitè dividuam*," to which I refer the reader.

Ver. 644. He said, in the last place, that seeds are composed of parts so small, that they can scarce be conceived. But that such leasts are, he confirms in these twelve verses, by that most known argument which all the philosophers make use of. And here we may observe by the way, that Gassendus, in his explication of these verses, performs the part of a master, rather than of an interpreter, and takes upon him to blame and correct the opinion of Lucretius, rather than to explain it: for if there be any force in this argument, if the words themselves have any meaning, Lucretius evidently meant that these leasts, of which he composes his principles, are mathematical. For that the atoms of Epicurus are endowed with magnitude, and, therefore, have parts, none can oppose, but they who are strangers to his philosophy, and do not know that Epicurus ever writ *περὶ τῆς ἐν τῇ αἰθέρῳ γωνίας*. This, then, is the meaning of Lucretius. The first seeds are indissoluble and eternal, not because they are void of parts, but because they are endowed with solidity; and, therefore, cannot be broken to pieces nor torn asunder, or divided by any force whatever. If any one desires to know what these parts are, the answer is, that these parts have no parts, and that they are mathematical. For unless such leasts be granted, there would be no inequality between the greatest and the smallest thing; because either of them would contain infinite parts alike, and thus both of them would be infinite: than which what can be more absurd? For this reason Arcefilas laughed at the Stoics in their schools, about the leg of a man that was cut off, putrified, and thrown into the sea, which, they asserted, might be so resolved, and mixed with the waters of the sea, that not only the fleet of Antigonius might sail through that leg, but that even the twelve hundred ships of Xerxes, and the three hundred galleys of the Greeks might maintain an engagement in it. This, too, makes Plutarch deride Chrysippus, for believing that one drop of wine may be mingled with all the water of the sea; and that a wing of the least fly may be coextended throughout the whole space of the sky.

Ver. 656. The poet having explained the meaning of a mathematical least, returns to his physical least, which he imagines to be indissoluble and eternal; not because of its exility, but by reason of its solidity. For if nature did not attain, says he, to the extremest resolution; if she did not divide and lessen even to the minutest mites; the matter, of which things are composed, would be improper, and unfit to undergo all those mutations, and

to receive all those figures, to which it must be subject and exposed: for those minute bodies, if they were connected of several parts, and contained any void within themselves, could not, in the opinion of Epicurus, have an equal weight, nor an uniform motion: they would awkwardly, and, as it were with an ill will, obey any foreign and exterior strokes; and, therefore, could in no wise be connected together.

Ver. 662. In these six verses, he concludes for the solidity of his atoms, from what he has proved already. For he has demonstrated, either that there must be some seeds from all eternity undissolved and unbroken, or that no thing whatever could have been produced, or at least must have been produced of nothing. That things are produced, the senses themselves evince; and all men allow, that nothing comes from nothing: therefore, if there be no solids, which cannot be broken nor dissolved, where can we find those bodies, that have from all eternity remained undissolved and unbroken? For frail atoms, which are obnoxious to such an infinity of strokes and blows, in so long a space of time, must of necessity have been dissolved.

Ver. 668. Having hitherto laid down and established the principles of Epicurus, he now attacks the opinions of other philosophers; and, distributing all his arguments into two heads, he first falls upon those, who believe and teach that but one of the elements only is the principle of all things: and, in the next place, argues against those who assert more. Among the first he has singled out Heraclitus, who held fire to be the principle of all things, and bestows sixty-two verses to confute his opinion: for he takes it for granted, that whatever arguments he brings against him, will hold good against the others likewise; since nothing can be opposed against his doctrine of fire, but with what equal reason will be conclusive, as to the air, or any other of the elements. And, indeed, says Gassendus, whoever weighs this matter fully, will believe this variety of opinions to be a mere game; for though the authors of them assert different positions, yet they only beat about the bush, use a great circumstance of words, and, at length, fall all of them into the same thing: for let any man make choice of which of the elements he thinks fit; he will get neither more nor less, nor be able to make good his opinion any otherwise than any other who has pitched upon any other of the elements; because, whoever has but one of them, has nothing to do, but to condense and rarefy that; and he will presently have all the rest; so that it signifies nothing, whether this or that be first made use of.

Ver. 669. *Heraclitus.*] He was son of Blython or Heracion, and born at Ephesus in Ionia, 504 years before the birth of Jesus Christ. He flourished about the 69th Olympiad, in the reign of the last Darius. "*Ἐδοξεν αὐτῷ πάντα ἐκ πυρὸς συνιστάναι, καὶ εἰς τὴν αἰθέρα λυθίσθαι*." Laert. He taught that all things are made of fire, and resolved again into fire. This was that philosopher, who is reported to have wept so often at the vanities of other men; which, never-

theless, some say he did but dissemble, out of an excess of pride and disdain, being self-conceited, and believing himself the only person in the world for profoundness of learning and wisdom.

Ver. 669. *Vain Greeks.*] For Heraclitus had many interpreters, and a world of followers, who were called Ἡρακλειτεύς, Heraclitians. *Laert. in Vit. Herac.*

Ver. 670. He writ many things in Greek verse, and is often cited by Aristotle: but in all his writings he affected obscurity. "De industria et consulto occultè dixit Heraclitus," says Cicero, *De Fin. lib. 2.* Heraclitus studied and affected to speak obscurely. And, in the third book of the Nature of the Gods, he says, that he would not be understood: "intelligi noluit." Hence he was surnamed Σκοτεινός, obscure. And in this says Menagius, and *Laert. Vit. Heracliti*, he imitated nature: Φύσις γὰρ κατ' Ἡρακλείτην κρυπταῖσθαι φιλεῖ. For nature, according to Heraclitus, takes delight in being hid. *Themist. Orat. 12.*

Ver. 675. D'Avenant, speaking of the schoolmen, says, that

With terms they charm the weak, and pose the wise.

Ver. 676. In these seven verses, he proposes his first argument against Heraclitus: it cannot, says he, be conceived, how so great a variety of things, nay, how one thing only, that is endowed with different parts, should be made and consist of one simple and uniform principle: suppose it fire; yet, unless you mix some other things with it, you can make nothing of it but fire: for in what manner soever its parts are transposed and blended together, it will be always the very same thing, by reason of the sameness of the nature of all its parts. And that none may escape by the subterfuge of condensation and rarefaction, he confesses that it may be understood, how a thing may become more warm by the condensation of the hot parts of fire, and less warm by their rarefaction; and that the reason of this is obvious: but that any thing should become cold, nay, and most cold too, as we find many things in nature to be, from fire only, how can that be understood?

Ver. 679. Heraclitus, as we find in *Laertius*, to make good his hypothesis, pretended that fire, by being condensed, grows moist, and thus becomes air: that the air, by compression, becomes water; that the water, by condensation, is turned into earth, &c. But all this, says *Lucretius*, signifies nothing; for the more the fire is condensed, the more it is fire. And the rarefaction will avail nothing; for rarefy fire as much as you will, it will still be fire.

Ver. 683. In these twelve verses he insists, that they who favour the opinion of Heraclitus, cannot fly to condensation and rarefaction, to justify their belief, because they admit not a void, without which nothing can be made rare or dense; as he has proved above, in ver. 450.

Ver. 695. But lest there should still remain some means to escape and elude this argument, by pretending that the fire is extinguished, and changed into another body, he urges, in these

eight verses, that that cannot be, unless it be granted that the fire retreats into nothing; because a simple and uncompounded thing, as that element ought to be, if it is indeed the first and only matter of which all things are made, cannot be changed, except it totally perishes. For a compound body may be changed in such a manner, that, ceasing to be what it was, it may leave its remaining part; which having lost its former state, may take up and put on a new one; but a simple, or uncompounded body, cannot utterly lose its nature; but it entirely dies: nor is it capable of any alteration, without a total perdition.

Ver. 703. He concludes in these fifteen verses, that if any thing were to be generated out of the extinguished fire, there must of necessity remain something of it, which, having lost and laid aside the form of fire, may take up, and put on the form of that generated thing. But it is most evident, that it is the common matter, which *Lucretius* supposes to be uncorruptible corpuscles, that by the various addition, deduction, and transposition of themselves, can take up, and appear now in the form of fire, and now of any thing else. But to prove, that these corpuscles are not fiery in their own nature, he gives this convincing reason: because if they were, neither the addition, deductions or transposition would produce any effect: For if that nature of fire remain safe and untouched, nothing but fire can be made of it. Then he explains the opinion of *Epicurus*, that certain corpuscles, which have no form perceptible to the sense, are the principles of things; and that, from them meeting and conjoining in various manners, fire and all other things proceed.

Ver. 718. In these eight verses, he appeals to the certainty of sense, to confirm that all things do not consist of fire. Heraclitus confesses, that he knows fire by the help of his senses; and *Lucretius* urges that the senses do as plainly perceive many other things of a quite different nature from fire, as they do fire itself; and that we ought to give always the same, or never any credit at all to the senses. Then he briefly explains the opinion of *Epicurus* concerning a criterion. Of Heraclitus, see ver. 669.

Ver. 711. Heraclitus never denied, but that some things besides fire appear, but he never granted them to be. This opinion *Lucretius* opposes, and therefore urges, that other things besides fire truly are, and that even the senses discover, and certainly know them to be.

Ver. 720. For Heraclitus allowed the certainty of the senses, and yet destroyed that certainty in teaching that all things are fire: For if that were true, our senses would perceive fire in all things; and yet they perceive no such thing in an apple, in wood, in marble, &c.

Ver. 726. He adds in these four verses, that if we look upon water, and many other things, and handle them, we shall evidently discover in them another, and that too a quite different nature from fire; from whence he infers, that there is no more reason to assert all things to be fire, than there is to reject fire, and say they are any thing else.

Ver. 730. In these three verses, he concludes concerning fire, or any other single element, against any of which the same objections will proportionably hold good; that they are horribly mistaken, who hold that fire, as Heraclitus, that air, as Anaximenes Milesius, that water, as Thales Milesius, or that earth, as Pherecydes, is the principle of all things.

Ver. 732. Among the philosophers, who held more than one of the elements to be the principles of all things, he has singled out Empedocles, and employs 108 verses to confute his opinion. Now whatever he objects against his doctrine, in asserting the four elements to be the principles of things, will be conclusive likewise against those other philosophers, who taught that all things are produced from two or three of them only. For if four cannot be thought sufficient, much less will a fewer number suffice. But that four, nay nor a much greater number of bodies, are not sufficient to produce so vast a variety of things, as are contained in the universe, will more evidently appear by what shall be said hereafter. In the mean while, it may be considered, that as from one letter you can have but one figure, as A; from two but two, as Am, Ma; from three, but six, as Amo, Aom, Mao, Moa, Oam, Oma; from four, but 24, as Amor, Amro, Mora, &c. from five 120, from six 720, from seven 5040, from eight 40320, from nine 362,880, from ten, 3,628,800, and so on, till you have completed the number of the twenty-four letters, as shall be said more at large in the note on book ii. ver. 643. So of one simple body, turn it ever so much, you can make but one body; of two bended together, but two; that is, to say, one compound; which, the more rare or dense it is, or the more it has of the one, or of the other, the nearer it will approach the nature of one, than of the other: And for the like reason, of three, but six; of four, but twenty-four, &c.; and change their positions, turn them and turn them again, and shift their places as often as you please, they will still be the same figures: and lastly, he concludes, that to produce such an innumerable variety of things, as are contained in the universe, an innumerable variety of elements or principles is likewise necessary.

Ver. 734. *Water.*] Thales, the Milesian, held water to be the first principle of all natural bodies; of which they consist, and into which they resolve. He endeavoured to establish this opinion by arguments drawn from the origin and continuation of most things. First, Because the seminal and generating principles of all animals is humid. Secondly, Because all kinds of plants are nourished by mere water; and when they want moisture, wither and decay. Thirdly, Because fire itself cannot live without air, which is only water rarefied; and the sun and stars draw up vapours for their own nourishment and support. These were the considerations upon which he grounded his opinion; and hence it is easy to guess, that he kept up the credit of his school, rather by the riches he gained by his lucky conjecture of the scarcity of olives, than by the strength of reason and argu-

ment. Some, however, have not been wanting to father this philosophy on Moses; and Hippo and Theophrastus were of the same faith. Nay, Hippocrates himself lays great stress upon it: and of later days the great Sendivogius, and generally the most learned of the Spagirists; who own that water is really a very *παναντιμία*, or universal principle.

Ver. 734. *Air and Fire.*] As Oenopides of Chios, Earth and water, as Xenophanes; but Armenides joined fire and earth; and Hippo of Rhegium, fire and water; and Onomacritus held that fire, water, and earth, all three together, are the principles of all things.

Ver. 736. *Empedocles.*] He was son of Meton, or, as others will, of Archinomus, and some say, of Exinetus; but all agree, that he was born, and lived at Agrigentum in Sicily. He was contemporary with Euripides and Armenides. He flourished in the 84th Olympiad, about 404 years before J. C. He taught, that all things are made of the four elements, fire, water, air, and earth, and are resolved into the same again. To which he added two powers, amity and discord; the one unitive, the other discreitive. *Ἐμπεδοκλῆς Μήλωνος Ἀκραγανθίνος* τέσσαρα μὲν λέγει στοιχεῖα, πῦρ, αἶρα, ὕδωρ γῆν, δύο δὲ ἀρχαί, τὴν δυνάμιν, καὶ τὴν φιλίαν, τὰς καὶ νεῖκος, ἃν ἡ μὲν εἰς ἐνωσιν, τὸ δὲ εἰς διαίρεσιν. Plutarch de Placit. Phil. l. i. c. 3. See likewise Laertius, in Vita Emped. Achilles Tatius, in Arat. Phænomen. et Laëtantius, lib. 2. Which last says, he derived this opinion from Hermes Trismegistus. These elements he called after this manner, fire he termed Jupiter, the air Juno, or as Laertius says, but not with so good reason, Pluto. The water Nestis, from *ναεῖν*, to flow. The earth Pluto, or according to Laertius, Juno, i. e. Vesta. Consonant to this opinion of Empedocles, Ovid sings:

Quatuor æternus genitalia corpora mundus
Continet.——— *Metam. xv. ver. 259.*

For this eternal world is said of old,
But four prolific principles to hold. *Dryd.*

And again, ver. 244.

———Omnia fiunt
Ex ipsis, et in ipsa cadunt———

All things are mix'd of these, which all contain,
And into these are all resolved again.

Ver. 737. In these seventeen verses, he describes Sicily, the country of Empedocles, and praises that philosopher. Sicily is the largest of all the islands of the Mediterranean sea; it has been called by several names, and has had several different inhabitants. First, The Cyclops, who, as Cluverius says, de Sicil. lib. i. cap. 2. were the first who inhabited this island, which was then called Trinacria; and they dwelt chiefly about Mount Ætna, and in the Leontinian territory. Secondly, The Sicanians, a people of Spain, who dwelt on the banks of the river Sicanus, which, according to some, is the Segro, according to others, the Cinca; from them it was called Sicania. Thirdly, The Italians, who, under the command of Siculus,

drove the Sicanians into the west part of the island, and gave it the name of Sicilia; though some are of another opinion. Fourthly, Greeks and barbarians of several countries, who brought colonies into the island, and settled themselves in it. Lastly, it was subject to the Carthaginians, Romans, &c.

For the island of Sicily has three promontories or forelands. Pelorus towards the north, now called Capo di Faro, from Pharos, a watch-tower, or light-house, that is built upon it, to direct ships in their course: Pachynus, Capo di Passaro towards the east, and Lilybæum, Capo di Marsalia, towards the south and west, which made it triangular, almost in the form of a Δ Delta.

Ver. 738. That part of the Mediterranean, which lies above the Streights of the Adriatic, and extends itself between Crete and Sicily. Whence the Greeks divide the Ionian Sea into the Cretan and Sicilian, Plin. c. 11. l. 4. It surrounds a great part of Sicily, and received its name from Ionius, the son of Dyrribachius, whom Hercules killed unawares, and threw him into that sea to perpetuate his memory: But Solinus will have it named from Ionia, a little country on the farthest side of Calabria: Lycophron, from Io the daughter of Inachus; and others from the Ionians, who often suffered shipwreck in that sea.

Ver. 739. The sea that divides Sicily from Italy is not above half a league over. Those two countries were formerly contiguous, till about the days of Joshua, as Faber has shown in his epistles, the force of the sea divided Sicily from the rest of Italy.

Ver. 740. Lucretius mentions only Charybdis, not Scylla; which is a rock in the sea, between Italy and Sicily, on the Italian coast, off the promontory of Cœnys. It continually makes a roaring noise, by reason of the rough and tempestuous waves of that sea, which are always beating into its hollows and dashing against it. It is now called Sciglia, and took its name from σκύλλω, I vex or disturb. Charybdis, now called Calafaro, is a gulf or whirlpool, almost opposite to Scylla, on the coast of Sicily: from χασχω, I gape, and σιέδω, I swallow: it sucks in the waters, and belches them out again with violence. Scylla is said to be the daughter of Phorcus, and changed by Circe into a monster, whose upper parts retained the form of a woman, and whose lower parts were transformed into dogs, by whose barking the poets expressed the roaring of the waves, and fabled that the monster lay hid in the rock, and allured ships thither, which by that means were cast away. Charybdis, they say, was a notorious harlot and thief together, who having stolen some oxen from Hercules, Jupiter struck her with a bolt of his thunder, and threw her into the sea, where she was changed into a whirlpool. Virgil, *Æn.* iii. v. 420. describes them thus:

Dextrum Scylla latus lævum implicata Charybdis
Obsidet; atque imo barathri ter gurgite vastos
Sordet in abruptum fluctus, rursusq. sub auras
Erigit alternos, et sydera verberat unda.

At Scyllam cæcis cohibet spelunca latebris,
Ora exsertantem, et naves in saxa trahentem:
Prima hominis facies, et pulchro pectore virgo
Pube tenus: postrema immani corpore priftis,
Delphinum caudas utero commissa luporum.

—In the streights

Where proud Pelorus opens a wider way,
Far on the right her dogs foul Scylla hides;
Charybdis, roaring on the left presides;
And in her greedy whirlpool sucks the tides:
Then spouts them from below; with fury driv'n
The waves mount up, and wash the face of heav'n.
But Scylla from her den, with open jaws
The sinking vessels in her eddy draws,
Then dashes on the rocks: a human face,
And virgin's bosom hide her tail's disgrace:
Her parts obscene below the waves descend,
With dogs enclos'd, and in a dolphin end.

Dryden.

Thus the fables; but Cluverius, who went on purpose to Messina to be satisfied, and learn the nature of this whirlpool, says and proves, lib. 1. c. 5. "de Sicilia antiqua," that though it be shown near Messina, and called Califaro and la Rema, yet the whole sea is tempestuous and full of whirlpools: and he commends Thucydides, for giving the name of Charybdis to all that sea, lib. 4. where he says, that the streight between Rhegium, now called Rezzo, and Messina, where Sicily is least distant from the continent, is the sea that is called Charybdis, through which Ulysses is said to have sailed, καὶ ἐστὶν ἡ χαρύβδις ἀληθέστα, τῦτο, &c. And this is the reason why some place Charybdis near the Cape of Pelorus, and others near Messina. Homer describes it under a rock shaded with wild fig-trees, and as a gaping gulf of whirling waters; but, in truth, it is only the impetuous current of the sea, that flows in with greater violence from the north than from the south; and whose billows, when adverse winds struggle with one another, especially when the south sea rages, are driven into the streights; and being there compressed in a narrow space, and dashing with violence against one another, and against the rocks and shores, are by that conflict twisted into whirls, and cause that noise and roaring.

Ver. 742. *Enceladus.*] He is said to be the hugest of the giants that fought against the gods. He was the son of Titan and Terra; Jupiter killed him with thunder, and threw Mount *Ætna* upon him: Thus Virg. *Æn.* iii. ver. 578.

Fama est, Enceladi semustum fulmine corpus
Urgeri mole hac, ingentemq. insuper *Ætnam*
Impositam, ruptis flammam exspirare caminis:
Et fessum quoties mutat latus, intremere omnem
Murmure trinacriam, et cælum subtexere fumo.

Enceladus, they say, transfix'd by Jove,
With blasted wings came tumbling from above:
And where he fell, th' avenging father drew
This flaming hill, and on his body threw:
As often as he turns his weary sides,
He shakes the solid isle, and smoke the heavens
hides.

Which may serve to explain this passage of our translator; for Lucretius makes no mention of Enceladus.

Ver. 744. *Ætna*.] A mountain in Sicily, of which Lucretius disputes at large in book vi. ver. 675. See that place and the notes upon it.

Ver. 750. The ancients were in doubt whether they ought to rank Empedocles among the philosophers, or among the poets; so elegant was the poem which he writ of the Nature of Things.

Ὀμηρικὸς Ἐμπεδοκλῆς, καὶ δεινὸς περὶ φράσιν γέγονε, μετὰ φόβου δὲ ἄν, καὶ τοῖς ἄλλοις τοῖς περὶ ποιητικῶν ἐπιτόμοις χράμενος. Aristot. *in τῷ περὶ ποιητικῶν.* Laert. Aristotle likewise ascribes to him the invention of rhetoric.

Ver. 754. In these six verses, he owns Empedocles to have been an excellent philosopher, even greater than Heraclitus, and the others, whom he has already refuted, and whom we may more safely believe than the oracles of the gods; yet he is going to show, by several arguments, that even Empedocles himself is mistaken in the principles of things; and thus Lucretius includes him in the number of those philosophers of whom the Stagyrite somewhere pronounces, *ζητούντες γὰρ οἱ καὶ φιλοσοφίαν πρῶτοι τὴν ἀλήθειαν καὶ τὴν φύσιν τῶν ὄντων ἱετέρας ἔπεισαν*, which our poet interprets,

*Principiis tamen in rerum fecere ruinam,
Et graviter magni magno cecidere ibi casu.*

Ver. 757. *Tripod*.] A table, or stool that was supported by three feet, and upon which the priestesses of Apollo were wont to stand or sit, when they pronounced the oracles, Plin. l. 34. c. 3. This tripod, and the priestesses themselves were decked and crowned with laurel, a tree sacred to Apollo, and therefore they were said to speak from the tripod and laurel, "*ex tripode et lauro*."

Ver. 758. *Pythia*.] Was the priestess of Apollo at Delphos, who answered from the tripod those that came to consult the oracle. She was called Pythia, from the Greek word *πυθάνεσθαι*, to consult or ask.

Ver. 760. His first objection against them is contained in these three verses: That as well Empedocles, as the other asserters of several elements, deny a void, no less than the philosophers mentioned above, and yet they admit motion, rareness, and softness, none of which can be without a void.

Ver. 762. His second objection, contained in these six verses, is to this purpose: That they held all bodies to be infinitely divisible, contrary to what Lucretius has shown before, ver. 630. and what he now proves by the same argument he then made use of.

Ver. 678. Thirdly, He objects against them in these three verses, that their elements are soft, and consequently subject to change, and therefore must fall into nothing; for, if the first bodies could change, they would be annihilated. But he has proved already, that nothing proceeds from or returns into nothing.

Ver. 771. Fourthly, He objects in these four verses, that the elements which they set up are

contrary to one another, and therefore will mutually destroy each other; at least they can never combine, and grow into one body; for the sticklers for these elements, like masters of families, give to each its proper qualities: heat and dryness to one, humidity and cold to another, humidity and heat to the third, and dryness and cold to the fourth: thus they arm these elements to destroy one another, and yet expect nothing from them but peace, concord, and alliances.

Ver. 775. In these eighteen verses, he objects, in the fifth place, that they ought to say, either that the elements, having first lost their nature, are changed into things, which things are again changed into them: in which case the elements are not more properly the principles of things, than things are the principles of the elements; or that, retaining their nature, certain heaps only are made of them; and in this case, nothing of one species and of one name could be produced, but only a certain rude and undigested mass of fire, air, water, and earth: in like manner, as of the filings and dust of gold, silver, tin, and brass, you can never make any thing but a heap of gold, silver, tin, and brass. Lastly, He concludes, that principles endowed with any sensible quality are altogether unfit and improper for the generation of things.

Ver. 784. The meaning of this is, that in case the elements preserve their nature entire, they are capable of making only some confused or rude heaps of matter, without producing any thing perfectly distinct;

Non animans; non ex animo cum corpore, ut arbor,

says Lucretius; and though our translator takes no notice of "*ex animo cum corpore*," yet those words allude to a particular doctrine of Epicurus, who did not admit of any soul to reside in plants, but held that they are produced and grow by virtue of a certain nature not vegetable, but proper to them alone; yet he affirmed that they live, that is, enjoy a peculiar motion; as the water of springs, the fire which we excite to a flame, is called living water, and living fire; something analogical to that which I think is more difficult to express than comprehend; for such is fire without light, &c. But concerning this, see the treatise written on this subject by the learned T. Campanella, in his book, *De Sensu Rerum et Magia*.

Ver. 793. Sixthly, He objects farther in these nineteen verses, that they who admit a mutual transmutation of the elements, ought to admit likewise a common or general and prior matter, that may successively put on their various forms: for Empedocles and his followers taught, that the elements are continually preying upon one another; that now fire takes away some parts of the air, and now the air robs the fire of some of its particles; and that the other elements are continually doing the like. But Lucretius insists: Let the principles be changed, and they will fall into nothing; and, therefore, since they all allow that the elements are changed, they are not the prin-

ciples of things; for nothing comes from nothing. There is, therefore, an immutable matter, which, being variously moved and disposed, produces now air, now water, now fire, now earth.

Ver. 794. Hefychius says, ἀγίνετα στοιχεῖα παρὰ Ἐμπεδοκλῆν. If then the grammarian be not mistaken, Lucretius disputes to no purpose; and Plutarch will not suffer him to be mistaken, who so often affirms that Empedocles acknowledged στοιχεῖα τῶν στοιχείων, the principles of the elements, and Hefychius must be understood of these first principles. Empedocles, therefore, and Epicurus agree very well, except that the opinion of the first of them is more abstruse and intricate, and that of the latter more plain and simple; for Empedocles composes his elements of the first principles, and of those elements constitutes all things; but Epicurus will have all things proved immediately from the first principles.

Ver. 797. Laertius says of Heraclitus, and the like may be affirmed of Empedocles, that he held that fire, when it is condensed, humectates and becomes air; that air, when compressed, becomes water; that water, contracting and growing concrete, becomes earth, and that this is the way down: On the contrary, that earth, being diffused, is changed into water; and of water the rest in like manner that this is the way up. Πυκνόμενον τὸ πῦρ ἐξυγραινεται καὶ αἶρα γίνεσθαι; συνιστάμενον αἶρα γίνεσθαι ὕδωρ πυκνόμενον τὸ ὕδωρ εἰς γῆν σπένδεται, καὶ ταύτην ὁδὸν ἐπὶ τὸ χατὰ εἶναι. Παλιν δὲ αὐτὴν τὴν γῆν κείσθαι, ἐξ ἧς τὸ ὕδωρ γίνεσθαι, ἐκ δὲ ταύτης τὰ λοιπὰ ὁμοίως αὐτὴν δὲ εἶναι τὴν ἀνω ὁδόν.

Which Ovid fully explains in these verses: Metam. xv. 245.

—Resolutaq; tellus

In liquidas rorescit aquas: tenuatus in auras
Aeraque humor abit: dempto quoque pondere
rursus

In superos aer tenuissimus emicat ignes:
Inde retro redeunt, idemq; retexitur ordo:
Ignis enim densum spissatus in aera transit;
Hic in aquas; tellus glomerata cogitur unda.

Which Dryden renders thus:

Earth rarefies to dew: expanded more
The subtle dew in air begins to soar:
Spreads as she flies, and, weary of her name,
Extenuates still, and changes into flame.
Thus having by degrees perfection won,
Restless, they soon untwist the web they spun;
And fire begins to lose her radiant hue,
Mix'd with gross air, and air descends to dew;
And dew condensing does her form forego,
And sinks a heavy lump of earth below.

Ver. 812. In these twenty-three verses, he starts an objection, and solves it. Plants and all animals owe their nourishment and growth to the four elements; for no man denies that all things grow out of the earth; but yet, without the assistance of the kindly warmth of the air, of the heat of the sun, and of seasonable showers, the earth will produce nothing of herself; therefore it must be allowed, that water, fire, &c. are the

principles of all things. To which Lucretius answers, that they are no more the principles than wine, wheat, and the other things with which we support our life; for the things that nourish are not therefore principles, but those from which they receive such a contexture as makes them fit nourishment for things.

Ver. 816. Phæbus.] As it were φῶς τῷ βίῳ, "the light of life;" the same with Apollo and Sol, the sun. He was son of Jupiter and Latona, born at the same birth with Diana. He invented physic, and was the god of divination, music, and poetry. Ovid. Metam. i. v. 517.

Jupiter est genitor: per me, quod eritque, fuitque,
Esque, patet: per me concordant carmina nervis:
Certa quidem nostra est; nostra tamen una sagitta
Certior, in vacuo quæ vulnera pectore fecit
Inventum medicina meum est, opiterque per orbem
Dicor; et herbarum subjecta potentia nobis.

Which Dryden thus translates:

The king of gods begot me: what shall be,
Or is, or ever was in fate, I see.
Mine is th' invention of the charming lyre;
Sweet notes and heav'nly number I inspire:
Sure is my bow, unerring is my dart;
But, ah! more deadly his who pierc'd my heart.
Med'cine is mine, what herbs and simples grow
In fields or forests; all their pow'rs I know;
And am the great physician call'd below.

Ver. 835. In these six verses, he illustrates his opinion with the similitude he so often uses. The same letters, by the various changes of their order, only compose innumerable words that are very different both in sense and sound. Why then do we doubt but that the same seeds, which far exceed the letters in number, and which have different figures, are able to produce fire, water, and, in short, all the immense variety of things? For so it fares with them as with the different disposition and various location of these Miranda Naturæ, as Vossius, lib. 1 de Arte Grammat. calls the few letters the distinction of words; as with the position of six or seven notes in music the change of tunes; and, as with the wonderful variety of sums by figures, the amazing diversity of numbers. And, if it be really so in these familiar instances, what stupendous variety cannot then the changes and sundry scites, orders, and positions of atoms, the ἀρχαὶ and principles of our poet produce? And, indeed, the comparisons are exceedingly just and apposite; since in all confused and tumultuous commixion of any of them, neither articulate words nor harmonious concerts; nor proportionable numbers, can possibly result from them. So, neither in these natural things, all atoms are not in general to be thought fit and capable to produce and constitute all sorts of concrete bodies; but only such as are endued with a particular and prone disposition so to do.

Ver. 838. Letters; so called by way of similitude; for, as the elements are called the first principles of things; so the letters are commonly called elements, because of them are first formed syllables and words.

Ver. 841. Having refuted the opinions of Heraclitus, Empedocles, and other philosophers, concerning the principles of things, he now, in 86 verses, attacks Anaxagoras, who held the matter of which all things are produced, to be infinite, and that it consists of very minute particles, exactly like one another, and at first confused, but afterwards brought into order by the Divine Mind. Cicero, Acad. Quæst. lib. 4. he asserted, that all things are made of similar parts: as bones of little bones, blood of small drops of blood, &c.

Ver. 842. *Anaxagoras.*] He was the son of Hegesibulus, or of Eubulus, and born at Clazomenæ in Ionia, twenty years before the traject of Xerxes, as Laertius witnesses. He applied himself to the study of the Nature of Things, and left his country for the sake of philosophy. He lived sixty-two years, and died 286 years after the building of Rome: 368 before the birth of Jesus Christ. He was disciple of Anaximenes of Miletum, and of Pherecydes the Syrian. This opinion of his, which Lucretius here mentions, is thought to have been taken out of a book which he composed, of physiology, and which is much commended by Socrates in Plato.

Ver. 843. Likeness of parts, from the Greek words *ἴσους*, like, and *μέρος*, part. We call homœomeries those things whose minutest parts have the name of the whole; as stones, gold, blood, &c. It may be called in Latin *similaritas*, says Faber: but Lucretius complains in the next verse, that his language had no word to express it by.

Ver. 855. The opinion of Anaxagoras not pleasing Epicurus, Lucretius gives him no quarter, and begins to fall upon him in these two verses, in which he makes use of two arguments which he had alleged before against Heraclitus, Empedocles, and others. The first, that there is a void; the second, that no continuous body is infinitely divisible.

Ver. 877. Thirdly, He argues, in these twelve verses, that seeing Anaxagoras was of opinion, that like things consisted of like; and that the principles are exactly of the same nature with the compounds, it follows, that they are both of them equally liable to perish. And certainly no reason can be given, why a small portion of flesh should not be obnoxious to corruption as well as a greater; nor does it appear, even though it do consist but of a least; yet, since it is flesh, why it should not suffer from exterior violence, and be at length destroyed. But, if the principles are corruptible, they will fall into nothing, which he has sufficiently proved already to be absurd and impossible.

Ver. 869. His fourth argument, contained in these eight verses, is very cogent. Our bodies are nourished with several sorts of food, which most evidently consists of dissimilar parts; whence it follows, that the parts of our body consist of dissimilar likewise: for the several parts of it, the bones, the veins, the nerves, &c. are nourished with different and dissimilar aliments. But, if it be pretended that those aliments contain some particles of bones, nerves, &c. it must of necessity be granted, that there is not in these bodies that homœomery, which Anaxagoras imagined. Lu-

cretius calls the different and dissimilar parts, alienigenas of another kind; but retaining the Greek word, we commonly call them heterogeneous, as we do the similar homogeneous.

Ver. 877. In these seven verses he proposes his fifth argument against Anaxagoras. If every thing that the earth produces, lay hid in the earth, then even the earth must of necessity consist of dissimilar things. He argues yet farther: if flame, smoke, and ashes, that are things very unlike one another, be in the wood, then wood is composed of dissimilar things, and therefore there is no homœomery.

Ver. 844. In these eighteen verses, he proposes and answers an opinion of Anaxagoras, which Aristotle expresses in this manner: "Res et apparere, et denominare, invicem differentes aiunt, ab eo, quod in infinitorum mistura maxime abundat: Non enim esse totum pure aut album, aut nigrum, aut dulce, aut carnem, aut os: Cujus autem amplius unumquodque habet, eam talis rei naturam videri." Which Gassendus thus interprets: Under the name of flesh, for example, is not to be understood a nature that is simple and of one sort; but an united heap of many, nay, innumerable and different particles, which then make this species of the body which we call flesh, when there is a certain greater plenty of those particles which are fit and proper to exhibit that species, and to appear in it, than of all the rest whatsoever, which lurking among them might give them a form and name. But if those particles be resolved, and translated into any other mass or body, then the fleshy particles that are lurking with the others, will yield, and give likewise a name and form to those of which there happens to be a greater plenty, and whose species is the most visible. To this Lucretius answers, that, if this opinion were true, then in the detrition, bruising and crumbling to pieces of corn, herbs, or any the like things, there must of necessity appear at some time or other, the species or likeness of blood, milk, or other things of the like nature, &c.

Ver. 885. *Anaxagoras.*] Of him, see ver. 842.

Ver. 902. The poet, in eleven verses, proposes and solves what Anaxagoras urged to prove, that all things are in all things, and consequently that all things are made of all things. For instance, fire must lie hid in the trees that take fire by a vehement collision, which Thucydides, lib. 2. witnesses has sometimes happened. See Book v. ver. 168. Lucretius answers, that there is not indeed any fire in the tree itself, but that the seeds of fire, or the molecule of the atoms being disposed in a certain and new order, and dashing with violence against one another, exhibit and produce the species of fire: for otherwise, and if there were actually and indeed any fire in woods and forests of trees, it would, without doubt, show its strength, and make a wide destruction.

Ver. 911. Virg. *Æn.* x. ver. 405. has an excellent description of a wood set afire:

Ac velut operatò ventis æstare coortis,
Dispersa immitit sylvis incendia pastor:
Correptis subito mediis, extenditur una

Horrida per latos acies Vulcania campos :
Ille sedens victor flammas despectat ovantes.

As when in summer welcome winds arise,
The watchful shepherd to the forest flies,
And fires the midmost plants ; contagion spreads,
And catching flames infest the neighb'ring heads ;
Around the forest flies the furious blast,
And all the leafy nation sinks at last,
And Vulcan rides in triumph o'er the waste : }
The pastor pleas'd with his dire victory,
Beholds the satiate flames in sheets ascend the sky.

Dryden.

Ver. 913. He asserted above, that many seeds of fire lie concealed in wood ; but that they do not consume that wood, because, being hindered by other seeds of a different figure, they cannot put on the species and form of fire : and from hence, in these eight verses, he takes occasion to confirm the above-mentioned opinion of Epicurus, viz. That the common seeds or principles of many things are in many things ; and that the same principles made the heavens, the earth, the sea, in a word, all things : but that the things themselves are different, because seeds of a different figure are joined to others of a different figure, and in a different order, even as in the words, *ligna*, wood, and *ignis*, fire ; the letters are common, and almost the same, but the words very different in sense and sound. In like manner, wood is compounded of a vast variety of corpuscles, which being disposed in a certain order, constitute the forms as well of wood as of divers other things that are less concrete ; inasmuch that some more subtle and moveable bodies that are contained in the wood, may specify and produce fire, flame, smoke, &c. according to its composition, density, coherence, laxity, resolution, &c. So that in truth only, this simple connection, disposition, and fabric of the parts, is at any time destroyed when the matter is fired, and to all appearance consumed, viz. its external form, species, and accidents which denominate it wood ; the rest being resolved into flame, fire, smoke, ashes, phlegm, spirits, salts, &c. all of which are only those minute particles that lurk in it, though ever so imperceptible to our senses.

Ver. 921. His last argument against Anaxagoras is contained in these six verses, and drawn from the absurdity of the opinion. For, to evince that all things proceed from similar things, it would be absolutely necessary, that laughing, weeping, &c. Homœomeries should sometimes be seen in the world : if because men laugh, weep, &c. they had those faculties from laughing, weeping, &c. principles ; to imagine which is altogether ridiculous and absurd. To assert that the principles of things are joyful or lugubrious, is, indeed, very ridiculous philosophy : and yet some of the later philosophers seem at least to favour this opinion of Anaxagoras, when they assert that these affections do indeed "præesse in Elementis," though not altogether after the same manner as in man. St. Augustin himself may be a little suspected, since he affirms, "Omnium rerum semina occulta extare ab initio."

Ver. 925. Cowley in the third book of his *Davideis* :

Sometimes a violent laughter screw'd his face,
And sometimes briny tears dropp'd down apace.

Whether he took this from Lucretius, or whether our translator has copied him rather than his author, may be seen by comparing the originals.

Ver. 927. In these thirty-three verses, he first bespeaks the attention of his Memmius, whom he supposes wearied with this long disputation concerning the principles of things ; and tells him, he is now going to enter upon a more noble and sublime subject. He speaks haughtily of his own poem ; he confesses that the doctrine of Epicurus is dark, intricate, and not adapted to the vulgar taste : however, he promises to adorn and sprinkle it with his smooth and flowing verses. And this at least he will do like physicians, who, when they are to give an ill-tasted potion to sick children, tinge the brims of the cup with sweets, by whose flavour and taste deceived, they swallow down the nauseous draught. The task is indeed great ; but the hopes of future praise spurs him on, and to explain to his Memmius the nature of things, he undertakes a difficult and painful work, unattempted hitherto by any man in Latin verse.

Ver. 932. *Muses*.] They were daughters of Jupiter and Mnemosyne, born in Pieria, a country of Macedonia, and dwelt upon Helicon in Bœotia, and Parnassus in Phocis, two hills that were near one another : the goddesses of poetry, learning, and music, and nine in number : I. Calliope, so called from καλὸς, good, and ὄψ, voice ; she was the mother of Orpheus, and presided over heroic verse. II. Clio, from κλέω, I celebrate ; she was believed to have invented history. III. Erato, from ἔραω, I love ; she ruled over lovers. IV. Thalia, from θάλλω, I live, or flourish ; because the fame of poets never dies. V. Melpomene, from μέλω, I sing or celebrate in verse ; she was the first that writ tragedies. VI. Terpsichore, from τίρω, I delight, and χορὴς, dancing, in which she took delight ; the invention of the harp is ascribed to her. VII. Euterpe, from εὖ, well, or pleasantly, and τίρω, I delight : she invented the flute and mathematics. VIII. Polyhymnia, from πολλή, many, and ὕμνος, a hymn ; she presided over pænegyrics. IX. Urania, from τὰ ἄνω ὁρᾶσα, contemplating the things above ; she is said to have invented astrology.

Ver. 933. This is a kind of boast which may not be charged with immodesty, since almost all the poets, as well the ancient as the modern, make use of the same allegory. Virgil exactly imitates this passage of Lucretius, Georg. iii. ver. 289.

Nec sum animi dubius, verbis ea vincere magnum
Quam sit, et augustis hunc addere rebus honorem :

Se me Parnassi deserta per ardua dulcis
Raptat amor : juvat ire jugis qua nulla priorum
Castaliam molli divertitur orbita clivo :

Because none of the Latins had written on the subject of agriculture before him ; so Horace, Epist. i. lib. i.

*Libera per vacuum posui vestigia princeps,
Non alieno meo pressi pede.——*

Thus too Matilius, lib. i. ver. 4.

*Aggredior primusque novis Heliconæ more
Cantibus.——*

Hospita sacra ferens nulli memorata priorum.

And in his second book, v. 59. he uses the same allusion. And Nemefianus :

*——Ducitque per avia, quæ sola nunquam
Trita Rotis.*

Though in this he does wrong to Grotius, who treated of the same argument before him. And we may observe the like in our own poets too : particularly in Milton and Cowley. The first of whom says his subject was

Unattempted yet in verse or prose.

And the other :

*Guide my bold steps——
In these untrodden paths to sacred fame.*

The very expression Creech uses ; and indeed he has taken occasion, in this translation, to rifle that poet.

Ver. 939. Lucretius makes no mention of laurel ; and indeed garlands or wreaths of ivy seem to have been the first ornaments of poets and other learned men, and laurels of conquerors : Thus Horace :

*Me doctarum hederæ præmia frontium
Diis miscent superis——*

And Virgil :

*——Atqua hanc sine tempora circum
Inter victrices hederam tibi serpere lauros.*

However, that poets did wear wreaths of laurel is most certain ; though ivy seems to have been more proper for them, because it requires the support of some stronger tree, as learning does of princes and great men.

Ver. 944. This passage of Lucretius the incomparable Tasso has rather translated than barely imitated ; and if we may give credit to his countryman Nardius, has surpassed his author : *Dum æmulatur*, says he, *palmam auctori eripuit* ; the verses are in his Goffredo, and well deserve to be transcribed :

*Sai che là corre il mondo, ove più versi
Di sue dolcezze il lusinghier Parnaso,
E che'l vero condito in molli versi
I più schivi allettando hà persuaso :
Così al 'egro fanciul' porgiamo aspersi
Di soavi licor gli orli del vaso
Socchi amari, ingannato, in tanto ei beve,
E dal inganno suo vita riceve.*

Cant. i. St. 3.

Of which I will give likewise Fairfax's interpretation, which perhaps equals, if not excels this of our translator :

Thither thou know'st the world is best inclin'd,
Where luring Parnass most his beams imparts ;
And truth, convey'd in verse of gentlest kind,
To read sometimes will move the dullest hearts :
So we, if children young diseas'd we find,
Anoint with sweets the vessel's foremost parts,
To make them taste the potions sharp we give,
They drink deceiv'd, and so deceiv'd they live.

Ver. 960. Lucretius has proved by many arguments, that bodies are, and that they are perfectly solid and indissoluble ; and likewise that there is a void. He has farther taught, that the universe consists of these two, body and void, and that there is no third kind of things. Now, in these four verses he starts a noble question, whether the universe be infinite, or included and circumscribed in bounds ? And he will now endeavour to evince by several arguments, that the universe is terminated on no side, but is altogether infinite, as well in the multitude of bodies, as in the extent and magnitude of the void.

Ver. 965. The first argument, by which, in these eight verses he endeavours to prove the infiniteness of the universe, is explained by Cicero, lib. ii. de Divinit. sect. 154. Whatever is finite has an extreme ; but whatever has an extreme, may be seen by what is without or beyond it. Now the universe, or the ALL, is not seen by any thing that is beyond it ; therefore the universe has no extreme. Empiricus adv. Phys. Stobæus, Eclog. Phys. and Plutarch, i. de Placit. 3. confirm this to be the doctrine of Epicurus, who himself writes thus to Herodotus : *Ἀλλὰ μὲν τὸ πᾶν ἄπειρον ἐστὶ, τὸ γὰρ περιπερασμένον ἀκρον ἔχει, τὸ δὲ ἀκρον πᾶν ἵτιον τὸ διαρῆται, ὥστε τὸ ἄκρον ἔχειν ἀκρον πέρας ἑκ' ἔχει, πέρας δὲ ἑκ' ἔχειν ἄπειρον ἂν εἴη, καὶ μὴ περιπερασμένον.*

Ver. 973. In these twelve verses, Lucretius struggles bravely with his dart for the immensity of the universe. Grant the universe to be finite, and let any man be placed on the extremest verge of it, and strive to throw a dart, either that dart will fly forward, or something will stop it ; if it flies forward, there is a space beyond the extremest brink ; if it be stopt by any thing, there must be something without the utmost part. Thus wherever you fix the extremest bound of the universe, there Lucretius will press on, and brandish his dart against you.

This convincing instance is likewise used by the learned and judicious Bruno, who has written an excellent treatise on purpose to prove not only the infinity of space, but even that of worlds also : and in his first dialogue we find these words, which exactly agree with, and may serve to explain this argument of our poet : “ Mi pare cosa “ ridicola,” &c. In my opinion, says he, it is extremely ridiculous to affirm, that there is nothing without, or exterior to the heavens, and that the heaven itself is a thing placed, as it were, *per accidens*, or by its own parts ; for be their meaning by these notions what they please themselves, it is impossible, nor can they any ways elude it, but they must make two of one, since there will eter-

nally remain one and another; that is to say, the thing that contains, and the thing that is contained; and in like manner so another and another; so that the container must be incorporeal, the contained corporeal; the one immoveable, the other moveable; the one mathematical, the other physical. But whatever this surface be, I demand eternally what there is beyond it? If it be answered that there is nothing, then it is void; and such an inanity as has no extreme; bounded, indeed, on this part towards us, which is yet more difficult to imagine, than that the universe should be immense and infinite, because we can then no way avoid a vacuum, if we will admit the whole to be finite. Thus far Bruno: and, indeed, our metaphysical eyes discern, as they conceive, the bounds of two worlds, of which some imagine the supreme heaven to be the term of this, and the convexity of that to the boundary of the other; but how that should then be habitable, as they likewise assert, where there is neither place, full, nor void, time nor motion, nor any thing else: *ἔτι σῶμα, ἔτι τόπος, ἔτι κινῆν, ἔτι χρόνος*, Arist. lib. i. de Cælo, cap. 9. for so they also affirm, is infinitely strange, and deserves second thoughts. But our author concludes, that as there is a space, in which this material world of ours actually is; so neither can it be denied, but that another and another, even to infinite, perpetually equivalent to what this machine employs, may likewise subsist in that vast and unlimited space.

Ver. 985. The poet insists yet farther; and in fifteen verses mentions the mischief that would unavoidably ensue, if the universe were finite, and circumscribed within bounds. For in that finite space there would be some lowest place to which matter, that by its natural heaviness has been subsiding from all eternity, would have sunk down and rested. And thus it would long ago have happened, that the universal matter, having reached the lowest place, would from that time have generated nothing: for nothing can proceed from seeds that lie quiet and at rest: But there being no lowest place, the seeds are in perpetual motion, and thus things are produced on all sides, and the infinite universe continually supplies the respective worlds with new principles of things.

Ver. 993. *Chaos*.] See the note on ver. 37. To which we add, that in this place it signifies a vast receptacle, capable to receive all things: in which sense Plutarch likewise takes it, in his Treatise of Isis and Osiris, where he calls it, *χώραν τίναν καὶ τόπον τῷ πάντος*, the place and region of universal matter, to which its name answers; chaos signifying only "Hiatus, seu vastitas quædam." But of the several acceptations of this word, according to the different notions of the poets, philosophers, and divines, see Ricciolus on that subject, in *Almagest. nov. Tom. 2. lib. 9.*

Ver. 1000. In these eight verses, he brings another argument, and says, That whatever is bounded by any thing that is exterior to it, has an end: thus the air bounds the mountains, and the mountains the air; the sea the earth, and the

earth the sea: but who can pretend that there is any thing without, or exterior to the universe, that can be its bound, since the very thing that is exterior to it is a part of it: for the universe contains all that is. He therefore concludes, that the universe is immense, and describes that immensity by so excellent a periphrasis, that I cannot forbear giving it in Lucretius's own words:

Usque adeo passim patet ingens copia rebus,
Finibus exemptis in cunctas undique partes.

This argument, which is taken from the evidence of our own senses, the above-cited Bruno thus illustrates: Our very eyes, says he, acknowledge as much, because we still see, that one thing ever comprehends another; "et mai sentiamo ne con esterno, ne con interno senso, cosa non compresa da altra o simile:" And there is nothing which terminates itself: In short, after no less than eight arguments, he concludes, "Che non si puo negare il spacio infinito, se non con la voce, come fanno gli pertinaci," &c. That space is infinite, cannot be denied, except by the noisy tongues of some obstinate impertinents; to confute whom, he brings twenty very close and convincing arguments, but to repeat them would be too prolix in this place. In a word, thus: there is nothing which contains, or can indeed be said to embrace and bound the universe, but what is immensely profound, and in a manner infinite, so that the most rapid rivers, and most exuberant streams in the world can never arrive to the limits of it, were they to glide incessantly, and to all eternity; nor would they ever have a less way to go. Out of this vast space new and never-failing supplies are brought to every thing by a perpetual succession of a like number of atoms to a like number: "Et medesimo parti di materia con le medesimo sempre si convertono," as the same Bruno expresses it, which is exactly the opinion of Epicurus, and proves the universe to be infinite not only from its number of atoms, or the indefiniteness of the void; but by both together (and so too the following verses declare): Yet not as if this universe were continuous, but that there are some empty interstices distant from the body of it.

Ver. 1004. The words in Lucretius are:

Est igitur natura loci, spatiumque profundi,
Quod neque clara suo percurrere flumina cursu,
Perpetuo possint ævi labentia tractu:
Nec prorsum facere, ut restet minus ire meando.

The translator has changed the word *flumina* into *fulmina*, contrary to the authority of all the editions of our author, and to the opinion of, I think, all the annotators, except Faber, who, in his note upon this place, says that *fulmina* would be better; though he retains *flumina* in the text: And indeed the reasons he gives for *fulmina* appear weak and little persuasive; because, says he, lightning is frequently brought as an instance of swiftness, "Et fulminis ocior alis;" and because the word *clara* suits better to the nature of that than of a river. The first is certainly true; but, on the

other hand, a river is frequently used as an instance of perpetual motion :

*Rusticus expectat dum defluat amnis ; at ille
Labitur, et labetur in omne volubilis ævum. Horat.*

And the words *labentia, ire, meando*, seem to agree better with the gliding of a river, than with the impetuous swiftness of lightning. And our translator himself, in his Latin edition of this author, reads *flumina*, and gives this passage the same interpretation that I have given it in the immediately preceding note.

Ver. 1008. In these thirteen verses, he proves the universe to be infinite, by an argument which seems to be levelled against the Stoics : who, as Plutarch witnesses held indeed the void to be infinite, but bodies finite : but Lucretius, following the doctrine of Epicurus, teaches that body and void mutually bound each other ; and that an immensity must of necessity proceed from that mutual termination, because neither of them, that is, neither body nor void, can be the last ; but whatever has no part, that can be the last or extremest, that indeed is infinite : For, if one of the two (body for example), did not bound the other, (void) yet the void would be infinite, as he has proved it to be : but all finite bodies would be dissolved ; for the finite seeds, their texture being all at once broken, would be scattered through the immense void, nay, would never have joined : for the finite seeds being once dispersed in the infinite void, would have continually wandered up and down in it. Epicurus writes all this to Herodotus : Εἴτε γὰρ ἢν τὸ κενὸν ἄπειρον, τὰ δὲ σώματα ὀρισμένα, ὕδαμῦ, ἂν ἔμεινε τὰ σώματα. ἀλλ' ἐφ' ὅσῳ καὶ τὸ ἄπειρον κενὸν διασπαρμένα, ἢ ἔχοντα τὰ ἐπιδιδόντα, τί εἰλλοντα κατὰ τὰς ἀνέκδοτας.

Ver. 1013. The obscurity of these four verses have made some of the commentators on Lucretius give them over as inexplicable ; and even our translator is a little dark in the interpretation he has given them : but the sense of them evidently is this : If there were either an infinite space, without as infinite a number of atoms or bodies, to give bounds and limits to it ; or an infinity of bodies, and not an infinite space for them to act in) for “ corpus terminatur inani, et inane corpore),” it would follow, that nothing could enjoy the least permanency : For it does not appear that Lucretius any where positively asserts, that the corruption of one thing is the product of another, according to the vulgar sense of the schools, and perhaps too he had considered those creatures that are nourished so long by sleep and other solitary ways ; as bears, tortoises, dormice, some sorts of summer birds, flies, and other insects : and this made Nardius upon this place thus wittily exclaim : “ Edaciores proinde atque infirmiores sunt Lucretiani divi gliribus abstinentibus.” The gods of Lucretius are more hungry, voracious, and weak than even dormice, and such abstemious and inconsiderable animals. His opinion was, that the portion of matter, which is necessary for the daily supply of decaying compounds, would else have been lost and utterly dispersed

in so vast, bottomless, and indeterminate an abyss, and that nothing could ever meet again and produce, or create, if the supplies were not equally as infinite. And to speak the truth, it is not so extremely difficult to comprehend a space in a manner indeterminate, if not infinite : since the infinite God is able to affect things infinitely exceeding our slender and bounded speculations. Heraclitus says, τῶν Θεῶν τὰ πολλὰ διὰ ἀπιστίαν μὴ γινώσκεισθαι, that many of the great and wonderful works of God are not known to some men, because of their incredulity. And Chrysippus adds, “ Si quid est quod efficiat ea, quæ homo, licet ratione sit præditus facere non possit : id profecto est majus, et fortius, et sapientius homine,” Lactant. de Ira Dei. If there be any created thing, which exceeds the utmost skill and comprehension of the wisest man upon earth, that was certainly made by one who is infinitely greater, more powerful, and more wise than man.

Ver. 1016. In this verse Lucretius seems to overthrow his own opinion concerning the nature of the Deity, and makes it subject to the same dissolution with compounded bodies.

Ver. 1021. To understand the true meaning of Lucretius in this passage, we must call to mind that the Stoics held the world to be a rational creature, and to consist of heaven and earth, as of soul and body : The heavens, according to them, being the same to the whole as reason is to man. Hence Arnobius, lib. 3. “ Advers. gentes: in philosophiæ memorabiles studio, atq. aditius nominis columnen, vobis laudatoribus elevati, universam istam molem mundi, cujus omnibus amplexibus ambimur, tegimur, ac sustinemur, animans esse unum, sapiens, rationale, consultum, probabili asseveratione definiunt :” with whom agrees Hilarius in Genes.

*Hæc tamen æthereo que machina volvitur axe,
Non tantum pictura poli est, sed celsa voluntas,
Mens ratioque subest. —*

Upon which verses Barthius, lib. 31. Adversar. cap. 12. observes, that, “ mens et ratio cœli est astrorum, ut vocant, influentia, quæ genus gubernat humanum.” The mind and understanding of the heaven is the influence, as they call it, of the stars, which governs mankind. The Stoics likewise, as Plutarch, “ de facie in Orbe Lunæ,” tells us, held the stars to be the eyes of the world, their corporeal deity. Pythagoras, Plato, Trismegistus, and many other of the ancient philosophers, believed the world to be endued with a rational soul, being persuaded to that belief by the admirable order and connection of its parts, which they conceived could not be sustained, but by a soul intrinsically informing, ordering, disposing and connecting them. Hence Virgil, *Æn.* 6 v. 724.

*Principio cœlum, ac terras, camposque liquentes,
Lucentemque globum lunæ, Titaniaque astra
Spiritus intus alit, totamque infusa per artus
Mens agitat molem, et magno se corpore miscet.*

Which Dryden thus interprets.

Know first, that heav'n and earth's compacted frame,

And flowing waters, and the starry flame,
And both the radiant lights one common soul
Inspires, and feeds, and animates the whole.
This active mind, infus'd through all the space,
Unites, and mingles with the mighty mass

And this soul of the world Thales imagined to be God himself. But the Platonists and Stoics, though they held the world to be a god, allowed it to be but a secondary one: for that power which they primarily called God, is by them termed *Ratio* and *Mens*, by whom they affirmed the world to be created. Thus Cicero in *Timæus*: "*Deus ille æternus (scilicet mens) hunc perfectè beatum deum (scilicet mundum), procreavit:*" the world being, in their opinion, the universal fusion of the first Divine Mind. For so Chrysippus in Cicero, lib. i. de *Natura Deor.* describes it: "*Vim divinam in ratione esse positam, et universæ naturæ animo atque mente: ipsumque mundum deum dici et ejus animæ fusionem universam;*" the Divine power is seated in reason, and in the mind of universal nature and this world is said to be a god, and the universal fusion or extension of that mind. But Lucretius, in these sixteen verses, pleasantly rallies these philosophers, and pursues his argument. For finite seeds, says he, dispersed in the infinite space, had never combined together, unless, as the Stoics held, the world were a huge animal, and evidently a god, and its seeds disposed and ordered with the greatest art and prudence, by a spirit that is infused through all the members and parts of it. He derides these prudent and thinking principles of the Stoics, and teaches, from the maxims of Epicurus, that after a length of time, all things were produced by a fortuitous concurrence of the infinite bodies, that had been fluttering up and down in the infinite void, and that they are daily renewed and repaired by the seeds which the infinite abundance of the first bodies continually supplies.

Ver. 1027. This infinite magazine or chaos of atoms, being of so many different figures, shapes, and dimensions, and indefatigably and restlessly moving to and fro, and up and down, in the boundless space and infinite inanity, "*in quo,*" says Cicero, lib. i. de *finibus*, "*nec summum, nec infimum, nec medium, nec ultimum, nec extremum fit.*" These indivisible bodies, I say, jostling, striking, urging, and crowding one another by so incessant an inquietude and estimation upon all encounters imaginable, and perhaps for many myriads of ages, having thus essayed, as it were, all possible configurations, changes, postures, successions, and mutual agitations, chanced at last to meet, consent, and fall into this goodly fabric, this wondrous architecture of the universe, which we daily contemplate with so much ecstasy and amazement: and in this instant it was that the gross precipitated downwards, compelling and driving upwards the more light and easy, which convening in the circumference of the immense

poles, wedged each other into the form of that canopy which we call the heaven or firmament; while, from the more closely compacted, resulted the mass of earth, and those of a more middle nature, upon the concurrence of the condensed particles, ran into the humid substance, part whereof being afterwards fitly prepared, was exalted into those glorious luminaries which adorn the celestial concave, the residue being reserved for the composition of other bodies. Thus we have, in a few words, the belief of Epicurus concerning the first beginning of all things, upon which we may justly exclaim with Lactantius, de *ira Dei*, and say, "*implevit numerum perfectæ insanix, ut nihil ulterius adjici posset,*" while he denies God to have had any hand in the creation of the world. For, indeed, what greater madness can there be than to imagine that a sword or a book was made "*propter finem,*" for some end, and that the whole universe, the great code of nature, our eyes, and other members, plants, and a thousand natural and wonderful curiosities, which infinitely surpass all things of art, should result from chance only? But yet how new soever and very ridiculous this system may seem, the hypothesis is methodical, and not of so vast difficulty for a rational, pious, and practical philosopher to believe and rely on, as perhaps appears at the first discovery. It is the opinion of the learned Des Cartes, that though God had given no other form to the world than that of the chaos, and only establishing laws to nature, had so far afforded his concurrence, that she should have been obliged to act in the manner she usually does, we might safely believe, without violating the miracle of the creation, that by her alone all things which are purely material, might in time have rendered themselves such as we now behold them to be. Besides, the difficulty of resolving how this mass of matter on which we inhabit, and of which we are indeed a part, should be composed of such principles as are before described, will appear to be no such vast incongruity, if we give ourselves leave but gradually to consider, and imagine the earth as but one solitary part of the universe, composed of many such congestions; and then by consequence, we must be forced to grant, that the ball may be co-augmented of many smaller portions or masses heaped one upon another. In like manner as mountains sometimes, from an aggregation of rocks; those rocks, from an accumulation of stones; those stones, again, from a multitude of grains of sand; that sand from an assembly of dust; and lastly, the dust from a more minute, but innumerable collection of imperceptible atoms or principles. But, indeed, few of the ancients favoured the opinion of the fortuitous production of the universe from "*frustis quibusdam temere concurrentibus,*" and, therefore, Lactantius, in his treatise de *Ira Dei*, is in the right to break out: "*Quanto melius fuerat tacere, quam in usus tam miserabiles, tam inanes habere linguam!*" Yet what some of those very ancients have written and confessed of the first Mover is indeed very extraordinary, con-

sidering, that they had only natural reason for their guide. Thales, Milesius, Pythagoras, Plato, and others, whom the learned Grotius, in his assertion of the verity of the Christian religion, has mentioned altogether, ascribed the creation of the universe to God alone; nay, they held that the Almighty was even himself in all things.

—Deum namque ire per omnes [dum :
Terrasque, tractusque maris, cœlumque profun-
Hinc pecudes, armenta, viros, genus omne ferarum
Quemque sibi tenues nascentum arcessere vitas.

Virg. Georg. iv. ver. 221.

To the same purpose too the great apostle himself truly and divinely philosophises to the superstitious Athenians, Acts xvii. 28. Nay, even Aristotle, as much an Atheist as many take him to have been, held the same belief in his more mature and serious thoughts, as may be deduced from divers expressions in his book de Mundo. And, as for any other fortuitous production, such as our Epicurus, Heraclitus, Empedocles, Parmenides, Leucippus, and Aristotle too seemed at first to favour, by which all things were constrained to act by certain fatal necessities; this single objection, how those curious animals, perfect, and admirable plants, &c. could, by a beginning so extraordinary, be built, composed, and excogitated in so exquisite a manner, that the mere consideration, even of a gnat, or the eye of a paltry fly, the least particle of the microcosm, man's body, has been able to open the eyes of one of the world's most learned Atheists without the Divine Providence and some omnipotent cause, is undoubtedly not to be imagined, much less demonstrated. Well, therefore, might he thus exclaim: "Compono hic profecto canticum in creatoris nostri laudem," Galen. de usu partium, lib. iii. and who that seriously considers this can abstain from joining in the canticle with him? For then we might with as much reason believe, that a great volume of excellent sentences, the historical relation of some intricate and true affair, or an epic poem in just and true numbers, should result from the fortuitous and accidental mischance of a printer's alphabet, the letters falling out of their boxes confusedly, and without the disposition either of author or artist.

Ver. 1035. The Stoics were of opinion, that the worlds had been frequently destroyed, or rather that they decayed, and were dissolved by time, but that still, phoenix-like, they were continually restored, as it were, from the ashes of the expiring world. Now, Epicurus makes this restoration to proceed from the changes and fortunate encounters of his atoms, which not having, since the moment of their accidental coition, which begot the universe, deviated from their originally designed, stated, and equal motions, nor sunk any lower to hinder and discompose the rest, are the cause of the preservation of the whole frame; for without this infinite supply of matter, rivers themselves would have become channels of dust; the sun and stars have waxed cold, dim, and without influence: and the very

bodies of animals have sunk to an utter destruction both of the species and individuals.

Ver. 1037. In these two verses, he illustrates the argument he last proposed, and teaches, that all things would soon be dissolved, unless matter were continually supplied from the infinite plenty of atoms, to make good the damage that bodies daily suffer, in like manner, as all animals would soon die, if they were not daily supported with food,

Ver. 1039. In these eleven verses, he goes on and says: But, lest any should perhaps object, that the atoms, officiously moving up and down, which even Lucretius owns they do, meet, and rudely shock one another, and that from that conflict it proceeds, that being thus stopped and hindered in their course, they join together, and are compacted into bodies; and, therefore, though they be finite, yet, since they mutually strike one another, the things that are already conjoined, are so far from losing any of their parts, that, on the contrary, they are more and more increased by the new atoms, that are always coming to them. He asserts, that finite atoms cannot always, and at every moment of time, mutually strike one another; nay, that when they do, they must sometimes rebound, and thus give time and room to the principles of the compounds, which affect to be in continual motion, to break the chain of their contexture, and to fly away from one another; nay more, that there could be no strokes whatever, except the atoms were infinite, as he observed before, ver. 1019.

Ver. 1050. Lastly, Lest his Memmius should have embraced a different opinion, and believe that the universe has a centre, to which all things tend by their natural heaviness, and therefore that there is no need of an infinite multitude of atoms, that, continually meeting together, may, by external blows, keep this compacted frame of the world in good repair; he confutes, and, at the same time, derides all belief of a centre; for he supposes, with the Stoics, who were very zealous asserters of a centre, that there was heretofore a confused multitude of particles scattered up and down through the whole immense space, and that all those particles made their way to one point, that is to say, to the middle of the universe. That this is the reason that the earth is round, and suspended in the midst of the world, and that all, even the opposite parts of this globe, are inhabited by animals, which fall not down into those parts of the heavens that are beneath them, because their heaviness makes them tend to the middle; that, for the same reason too, the sky is vaulted and rolled round; and the sun, who with never-ceasing motion runs through the arch of the heavens, alternately gives day to the opposite parts of the earth; and that it is not to be feared that the highest and lowest parts of the frame will ever be disjoined from one another, since they all strive to one and the same centre. He has comprised this in sixteen verses, and will now endeavour to prove this opinion to be weak and foolish, and that there is no middle place whatever in the

universe. Besides, he supposes it an absurdity to believe that any ponderous thing can stop and support itself, or make its way upwards into the adverse parts of the earth; for the Epicureans adhered to that vulgar notion; and, indeed, many of the ancients, and even of the first Christians, did not believe the Antipodes, particularly Lactantius and St. Augustin were very difficult of belief upon that matter. Virgilius, a German bishop, as it is related by Aventinus, in Hist. Boiorum, was like to have suffered a very severe punishment for favouring a little of this mistaken heresy. Plutarch, de Placitis Philosoph. lib. i. tells us, that Oecetes affirmed there were two earths, between which, Philolaus, a disciple of his, interposed another continent of fire, which opinion Sandivogius, and other hermetic philosophers, have also illustrated; but a sounder philosophy, and certain experience and knowledge, have long since evinced the error of all those opinions.

Ver. 1060. For if we look on the shadows of animals in the water, their feet seem directly upwards towards our sky.

Ver. 1062. For one of the trifling objections which some of the ancients made against the Antipodes was, that if there were any such place, all weights and heavy bodies must there tend upwards towards the centre, to which they tend downwards with us; nor could they comprehend how the creatures there did no more fall downwards to their skies, than our bodies here mount upwards, and knock their heads against the opposite hemisphere. And this foolish conceit, perhaps, was what made Lucius, as Plutarch, de Mac. in Orbe Lun. reports, deride those in his time who fancied that men crawl there with their backs downwards, as cats, mice, and spiders do upon the walls and ceilings of our houses. We read likewise of the scoff which Demonactes put upon a man who was discoursing with him concerning the inhabitants of the regions ἀντιχθώνων, when leading him to the mouth of a well, "Numquid," says he, "tales esse Antipodas asseris?"

Ver. 1064. *Phabus.*] Of whom, see ver. 816.

Ver. 1066. Having laid down and explained the opinion of those who held a centre in the universe, he attacks it in these sixteen verses, and teaches, in the first place, that there can be no middle, because the void is infinite. Plutarch too, in like manner: The universe is infinite; but what is infinite has neither beginning nor end, and therefore it cannot have a middle, for the middle itself is a sort of extreme, and infiniteness is a privation of extremes; and he argues Chrysippus to be guilty of a manifest contradiction, in giving a middle place to infinity. De Stoic. Repugn. And Plato himself, in his Timæus, seems to question any sursum or deorsum at all in nature; for, says he, the whole heaven is round, and therefore it would be absurd to call any place higher or lower, as in relation to the middle. Besides, says Lucretius, grant there be a centre yet no reason can be given why heavy things should stop and rest in that middle part of

the void, rather than in any other part of it; because it is the nature of the whole void to give way to ponderous things; nor can any part of the void support any thing that has but the least weight, because the void is of all things the least firm and solid.

Ver. 1080. In most of the former editions of this translation, these two, and most of the following verses of this book are transposed, and the sense of Lucretius wretchedly embroiled and confused, if not totally mistaken. No doubt our translator followed some of the old editions of Lucretius, and finding them incorrect in this passage, endeavoured to mend them in his interpretation, but has succeeded so ill, that we may well apply to his version what Lambinus said of the original text, before he had corrected and brought it into some tolerable order: "Totus hic locus, qui deinceps sequitur, miserabilem in modum perturbatus et confusus erat: ex qua ordinis perturbatione ita obscurus erat, ut nulla ex ea probabilis sententia ellici posset." I have attempted to set it to rights in this edition; and in the few alterations and additions I have made, where the true meaning of Lucretius was evidently mistaken, or imperfectly rendered, as well as in the disposition and placing of the verses, I have followed the interpretation and order which Creech himself has given and observed in his Latin edition of Lucretius, and hope I have done justice both to our translator and his author.

Ver. 1082. His second argument against those that hold a centre, is contained in these twenty-two verses, which are chiefly taken up in reciting their opinion; and he that recites an absurdity, confutes it. Now they teach, says he, that the particles of earth and water only tend to the centre, but that those of fire and of air strive upwards. That of the fires which arise from the centre the planets and stars are made, and their flames preserved and kept alive. But Lucretius answers, If some earthy particles did not rise upwards likewise, how could animals be nourished? how could trees, and all manner of plants grow, become green, and flourish, but by help of the needful food with which the earth supplies them? In the next place, says he, they pretend, that certain solid heavens, which stop and enclose these light particles that arise from the centre, are rolled around all things: for if these particles were not stopped and restrained in their motion, they would immediately fly away through the immense void; the heavens would fall to pieces, the earth slip away from our feet, and the contexture of the whole frame would be dissolved; for whenever any part of the world begins to fail, the dissolution of the whole will follow.

Ver. 1086. Of this opinion, see the note on ver. 277.

Ver. 1094. The whole circuit or circumference of the heaven, with which the world is enclosed and surrounded, as with walls, Lucretius calls it *Mœnia Mundi*; and Rónius, Virgil, Manilius, and others, use the same expression.

Ver. 1106. Through this whole book he has

been making grievous complaints of the obscurity and intricateness of his subject, and of the difficulty of his undertaking; and, lest this should have deterred his Memmius from giving ear to his argumentations, he now, in these eight verses, encourages him to take heart, promising that his future disputation will be plain and easy.

ANIMADVERSION

BY WAY OF RECAPITULATION, ON THE FIRST BOOK OF LUCRETIIUS.

Thus I have finished my notes on the first book: may the reader enjoy the benefit of my labours, and pardon my mistakes. But how can I bespeak the candour and favour of my judges, who are going to pass a sharp, and perhaps too severe a censure on Lucretius himself. For, I will examine what he has advanced amiss, and what with good reason. And as I will not reject all he has said, so neither will I approve all his assertions. He who denied the praise of wit to Lucretius, granted him art; and who will refuse him that honour which the most spiteful envy allowed him. I affirm, therefore, that his work is disposed in an excellent method. Order shines throughout the whole; and the arguments support and strengthen one another in such a manner, that if, in the opinion of Epicurus, there had not been a certain deformity, which no beautifying art could varnish over and conceal, a certain weakness and deficiency which no strength of wit, nor force of reasoning could sustain and make good, the poet would have represented to us a most beautiful, and at the same time, a most strong and sound philosopher.

Epicurus was of opinion, that not the least part of happiness consists in living exempt from fear; and that this happiness can be attained only by the knowledge of nature:

—Terrores Animi, tenebrasque necesse 'st,
Non Radium Solis, non lucida tela diei
Discutiant; sed Naturæ Species, Ratioque.

Lucret. lib. i. v. 147.

These bugbears of the mind, this inward hell,
No rays of outward sunshine can dispel;
But nature and right reason must display
Their beams abroad, and bring the darksome soul
to day. *Dryden.*

Epicurus writes thus to Pythocles: Μη ἄλλο τὸ τέλος ἐκ τῆς περὶ μετεωρῶν γνώσεως εἶτε καὶ συναφὴν λεγομένων, εἶτε αὐτοβλαῦς, νομίζειν δεῖ εἶναι, ἢ περὶ ἀτυραξίαν, καὶ πῶς ἐν βίῳ ἀνόν, καθάπερ τὰ ἐπὶ τῶν λοιπῶν. And Cicero says, that by the knowledge of the nature of all things, we are eased of superstition, we are delivered from the fear of death, we are not disquieted by the ignorance of things, which alone is often the cause of our most horrid and amazing terrors. "Omnium natura cognita levamur superstitione, liberamur mortis metu, non conturbamur ignoratione rerum, ē qua ipsa existunt horribiles sæpe formidines," lib. I. de Fin.

Epicurus asserts, that all the fears that disturb the minds of men, proceed from the belief of Providence, and of punishments after death, which last is a necessary consequence of the former. For who is the man, that believing that God takes care of him, does not day and night dread the Divine Majesty? See Cicero in Lucullus. This was the opinion of that mistaken man, who was wise and knowing in a mad and foolish philosophy: against whom, whoever undertakes to dispute, will engage himself in a most ridiculous attempt: for whosoever favours so absurd an opinion, plainly wants common sense, and is fit company only for lunatics. The care and protection of a gracious prince, or of a kind parent, deliver us from fear and sorrow, nor do we dread the good will of courteous and charitable men. Whence then this horror, to think that we are taken care of by a most beneficent and Almighty Deity?

Lucretius proposes this absurd opinion in this first book; and after having prepared his reader by an artful introduction, he illustrates and adorns the subject, of which he had unhappily made choice. Ver. 181. He endeavours to prove by ten arguments, that nothing is made of nothing, and that nothing returns into nothing. I confess he is ingenious in the invention, and copious in the explication of them, but he does by no means come up to the matter: For, let us grant, I. That every thing cannot proceed from every thing. II. That things are produced at fixed and certain seasons. III. That they require time to grow: And, IV. Matter to make them grow. V. That bounds are set to strength and life. VI. That the earth becomes more fertile by culture and by the industry of men. VII. That nothing dies unless it be dissolved by some force: VIII. That animals cannot be born daily, unless they be renewed by certain seeds. IX. That one and the same strength is not able to dissolve all things: And, X. lastly, That nature does not produce any thing, unless she be assisted by the death of another. Let us, I say, grant all this, and what will it avail Lucretius? Will he conclude that the seeds themselves were not made of nothing? Or, that nothing is ordered by the will and providence of the Deity? He can rationally conclude neither; and thus his ten arguments come to nothing: not indeed for any want of wit or artfulness on his part, but through the weakness of the cause itself, which he undertook to support.

Ver. 316. He admirably well defends his subtle and minute seeds against such as believe their senses only: and ver. 381, he evinces that there is a void, by four arguments, than which no man yet ever brought more convincing. I have never seen any thing that could be replied to the first and fourth of them; but indeed, the second and third are not of the same validity.

Ver. 472. He confirms by two arguments, that nothing is besides body and void: and whatever else others allow to be things, he confines to the class of accidents which subsist, and are distinguished from body and void by the imagination

only. But here he cunningly supposes what he ought to prove: that body only can act and suffer, touch, and be touched: for the souls of men, and all immaterial substances, contradict this definition.

Ver. 627. He, in many arguments, ascribes perfect solidity to his atoms; nor do I deny it. But there is no reason to believe that therefore they cannot be dissolved: for the solidity of the seeds proceeds from the immediate contact of their parts. But in all concrete bodies the contact of the parts is allowed to be at least equal to that which is between the parts of the seeds. And therefore concrete bodies should be equally, and no more liable to dissolution than the seeds themselves. The other argument by which he asserts the eternity of his atoms, are built on a false supposition: he assumes what he ought to prove; and when he at length flies to what they call a

mathematical least, ver. 630. he indeed presses hard on his adversaries, and reduces them to great difficulties, but is reduced to no less straits himself.

Ver. 668. He triumphs over Heraclitus, Empedocles, Anaxagoras, and others. At length, ver. 960. he employs a long disputation, to prove the universe, which consists of body and void, to be infinite: and here he is very copious in his arguments against the Stoics, who held a centre in the infinite universe, and describes the opinions of Epicurus with a great deal of eloquence; but they being all built on false suppositions, fall together to the ground. Then he banishes the Antipodes, which a truer philosophy and experience have long since recalled, and settled in their ancient abodes. However, he soothes with his arguments the imagination of man, which delights to be led away into an infinite, and never yet fixed any bounds to space, nor ever will dare to do so.

BOOK II.

THE ARGUMENT.

I. FROM ver. 1. to 63, Lucretius exhorts his Memmius to the study of philosophy, which alone can alleviate our cares and anxieties, and deliver the mind from fears. II. He disputes concerning the properties or qualities of the seeds or atoms; the first of which is motion. That seeds move is demonstrated from the generation of things; but their motion is downwards; for all seeds are heavy. But when solid seeds meet, they must of necessity rebound every way from one another. Thus some seeds happen to unite and join together, and those whose union is most close, compose the things that are hard and dense; but the seeds whose connection is more loose, make those that are soft and rare. But some seeds never combine into one, but like the motes which we see in the beams of the sun, are in perpetual motion, flying to and fro in the void, and incessantly strike and drive up and down other atoms and themselves. These arguments end at ver. 133. III. He explains the swiftness of the seeds that tend downwards, to ver. 160. IV. Then to ver. 177, he severely, according to his usual method, falls upon those who acknowledge a Divine and ruling Providence. V. He resumes his argument, and to ver. 209, asserts that all bodies tend downwards. VI. To ver. 280, he shows, that the seeds, as they tend downwards, decline a little from the straight line; for unless they did so, nothing at all, at least no free agent could ever be produced. VII. Then to ver. 318, he teaches that the seeds still move in the same motion in which they have moved from all eternity: and that no man ought to distrust this opinion because he does not see the motion, since even the seeds themselves cannot be perceived. Figure is the second property or quality of the seeds: and he proves, VIII. to ver. 454, That all seeds are not of the same figure; but that some are round, some square, some smooth, some rough, some hooked, &c. And he shows at large what figures compose bitter bodies, what sweet, what hard, what soft. IX. To ver. 546, that this variety of figures is not infinite, but that the seeds of the same figure are infinite; that is to say, that the round are infinite, the square infinite, &c. X. In the next place, to ver. 678, he proceeds to show, that things are not composed of atoms of the same figure; and proves by several arguments, that compound bodies contain seeds of different figures. XI. Then he teaches that seeds have none of those qualities which we call sensible; as colour, taste, cold, heat, &c. XII. And that they are not endowed with sense, though coloured, savoury, hot, cold and sensible things are composed of them, to ver. 988. XIII. Lastly, That these infinite seeds, flying up and down through the infinite void, compose infinite worlds, and that these worlds are sometimes increased in bulk by the seeds that drop down out of the infinite space: and sometimes diminished and dissolved, because the seeds get loose, and fly away from them into the infinite space likewise; in like manner as plants and animals are born, increase in growth, wax old, and at length die.

'Tis pleasant when the seas are rough, to stand
And view another's danger, safe at land:
Not 'cause he's troubled, but 'tis sweet to see
Those cares and fears from which ourselves are
free.

'Tis also pleasant to behold from far
How troops engage, secure ourselves from war.
But above all, 'tis pleasantest to get
The top of high philosophy, and sit
On the calm, peaceful flourishing head of it.

Whence we may view deep, wond'rous deep below,
How poor mistaken mortals wand'ring go, 11
Seeking the path to happiness: some aim
At learning, wit, nobility, or fame:

Others with cares and dangers vex each hour
To reach the top of wealth and sov'reign pow'r:
Blind wretched man! in what dark paths of strife
We walk this little journey of our life!

While frugal nature seeks for only ease;
A body free from pains, free from disease;
A mind from cares and jealousies at peace. 20

And little too is needful to maintain
The body sound in health, and free from pain.
Not delicacies but such as may supply
Contented nature's thrifty luxury.
She asks no more. What though no boys of gold
Adorn the walls, and sprightly tapers hold,
Whose beauteous rays, scatt'ring the gaudy light,
Might grace the feasts and revels of the night:
What though no gold adorns; no music's sound
With doubled sweetness from the roofs rebound;
Yet underneath a loving myrtle's shade, 31
Hard by a purling stream supinely laid, [spread,
When spring with fragrant flow'rs the earth has
And sweetest roses grow around our head;
Envy'd by wealth and pow'r, with small expence
We may enjoy the sweet delights of sense.
Who ever heard a fever tamer grown
In clothes embroider'd o'er, and beds of down,
Than in coarse rags?

Since then such toys as these
Contribute nothing to the bodies ease,
As honour, wealth, and nobleness of blood,
'Tis plain they likewise do the mind no good.
If when thy fierce embattled troops at land
Mock-fights maintain; or when the navies stand
In graceful ranks, or sweep the yielding seas,
If then before such martial fights as these,
Disperse not all black jealousies and cares,
Vain dread of death, and superstitious fears
Not leave thy mind; but if all this be vain,
If the same cares and dread and fears remain, 50
If traitor-like they seize thee on the throne,
And dance within the circle of a crown;
If noise of arms, nor darts can make them fly,
Nor the gay sparklings of the purple dye.
If they on emperors will rudely seize,

What makes us value all such things as these,
But folly and dark ignorance of happiness?
For we, as boys at night, by day do fear
Shadows as vain and senseless as those are. [souls,
Wherefore that darkness which o'erspreads our
Day can't disperse; but those eternal rules, 61
Which from firm premises true reason draws,
And a deep insight into nature's laws

But now I'll sing, do you attend, how seed
Proceeds to make, and to dissolve things made:
What drives them forward to their tedious race,
What makes them run through all the mighty
space.

'Tis certain now no seed to seed adheres
Unmov'd and fix'd: for every thing appears
Worn out, and wasted by devouring years;
Still wasting, still it vanishes away, 71
And yet the mass of things feels no decay:

For when those bodies part, the things grow less,
And old: but they do flourish and increase,
To which they join; thence too they fly away;
So things by turns increase, by turns decay:
Like racers bear the lamp of life and live,
And their race done, their lamp to others give.
And so the mass renews: few years deface
One kind, and straight another takes the place. 80

But if you think the seeds can rest, and make
A change by rest, how great is the mistake?
For since they through the boundless vacuum rove,
By their own weight, or other's stroke they move,
For when they meet and strike, that furious play
Makes each of them reflect a diff'rent way:
For both are perfect solids, and nought lies
Behind, to stop their motion as they rise. [move,

But that you may conceive how thus they
Consider that my former reasons prove, 90
That seeds seek not the midst, and that the space
Is infinite, and knows no lowest place;
And, therefore, seeds can never end their race,
But always move, and in a various round. [bound

Some when they meet, and rudely strike, re-
To a great distance; others when they jar
Will part too, and rebound, but not so far.
Now these small seeds that are more closely join'd,
And tremble, in a little space confin'd, 99
Stopp'd by their mutual twinings, stones compose
Iron or steel, or bodies like to those;

But those that swim in a wide void alone,
And make their quick and large rebounds, or run
Through a large space, compose the air and sun.

Besides these two, there is another kind;
Bodies from union free, and unconfin'd;
With others ne'er in friendly motion join'd. }
Of these there's a familiar instance——

For look where'er the glitt'ring sun-beams come
Through narrow chinks into a darken'd room;
A thousand little bodies straight appear 111
In the small streams of light and wander there:
For ever fight, reject all shows of peace;
Now meet, now part again, and never cease.
Hence we may judge how th' atoms always strove
Through the vast empty space, and how they
move.

Such knowledge from mean instances we get,
And easily from small things rise to great.

But mark this instance well, and learn from
thence

What motions vex the seeds, though hid from
sense: 120

For here you may behold, by secret blows
How bodies turn'd, their line of motion lose:
How beaten backward, and with wanton play,
Now this, now that, and ev'ry other way.
All have their motions from their seeds; for those
Move of themselves, and then with secret blows
Strike on the small molecularæ; they receive
The swift impression, and to greater give:
Thus they begin from the first seeds; and thence
Go on by just degrees, and move our sense. 130
For look, within the little beam of light
You see them strike; but what blow makes
them fight }
Is undiscern'd, and hidden from our sight.

And yet how swift the atoms motions are,
 This foll'wing instance will in short declare:
 For when the morning climbs the eastern skies,
 And tuneful birds salute her early rise;
 In ev'ry greve and wood with joy appear,
 And fill with rav'ning sounds the yielding air.
 How swift the beams of the bright rising sun 140
 Shoot forth! Their race is finish'd when begun:
 From heav'n to earth they take their hasty flight,
 And gild the distant globe with gaudy light.
 But this thin vapour, and this glitt'ring ray,
 Through a mere void, make not their easy way;
 But with much trouble force a passage through
 Resisting air; and therefore move more slow:
 Nor are they seeds, but little bodies join'd;
 And adverse motions in small space confin'd:
 And therefore from without resisting force, 150
 And inbred jars must stop their eager course;
 But solid seeds, that move through empty space,
 And all whose parts do seek one common place;
 Whom nothing from without resists; than light
 And beams more swift, must make their hasty
 flight;

And in that time a larger distance fly,
 While the sun's lazy beams creep through our sky:
 For they by counsel cannot move more slow;
 Or stop to make inquiry, or to know 259
 How they must work, on what design they go.

But some, dull souls! think matter cannot move
 Into fit shapes, without the pow'rs above:
 Nor make the various seasons of the year
 So fit for men; nor fruit, nor bushes bear,
 Nor other things, which pleasure prompts, could
 do:

Pleasure, that guide of life, and mistress too!
 That we should seek love's generous embrace,
 And thence renew frail man's decaying race:
 And therefore fancy that the gods did make
 And rule this all. How great is that mistake!
 For were I ignorant whence things arise, 171
 Yet many reasons from the earth and skies,
 From ev'ry thing deduc'd, will plainly prove,
 That this imperfect world——
 Was never made by the wise pow'rs above.
 This I'll explain hereafter; now go on
 To finish what already I've begun.

And this I think a proper place to prove,
 That nothing of itself can upward move:
 Lest when you see th' ambitious flame aspire, 180
 You think 'tis nat'ral force bears up the fire.
 For ev'ry tree does rear its lofty head,
 Each tender ear and shrub does upward spread,
 And all draw up their nourishment from below,
 But yet all weights by nature downward go.
 So when the subtle flame, and shining streams
 Of fire arise, and waste the upper beams;
 'Tis some force drives them up. So from a wound
 Our blood shoots forth, and sprinkles all around.
 Again, who sees not that a quiet flood 190
 Throws back with mighty force th' immersed
 wood?

For when we strive, in deeper streams, to drown,
 And scarce with all our force can press it down,
 The waves, with double vigour, throw it up,
 And make it strongly leap above the top:

And yet who doubts all these would downward
 tend,

When plac'd in void, and nat'rally descend?
 So rising flames by th' air are upwards borne,
 Although their nat'ral weights press a return:
 Besides, we all behold, how ev'ry night 200

The falling meteors draw long trains of light.
 Wherever nature yields a passage through,
 We see stars fall, and seek them here below:
 The sun too from above his vigour yields
 To us below: and cherishes our fields.

Therefore its fire descends; swift lightning flies;
 Now here, now there, betwixt the parted skies:
 And fighting through the clouds, its place of birth,
 The broken sulph'rous flame descends to earth.

Now seeds in downward motion must decline,
 Though very little from th' exactest line: 211
 For did they still move straight, they needs must
 fall,

Like drops of rain, dissolv'd and scatter'd all;
 Forever tumbling through the mighty space,
 And never join to make one single mass.

If any one believes, the heavier seed,
 In downright motions, and from hind'rance freed,
 May strike the lighter: and fit motions make,
 Whence things may rise, how great is the mis-
 take!

'Tis true, when weights descend through yield-
 ing air, 220

Or streams; the swiftness of the fall must bear
 Proportion to the weights; and reason good;
 Because the fleeting air, and yielding flood
 With equal strength resist not ev'ry course,
 But sooner yield unto the greater force:
 But now no void can stop, no space can stay
 The seeds; for 'tis its nature to give way;
 Therefore through void unequal weights must be
 Like swift in motion, all of like degree.

Nor can the heavier bodies overtake 230
 The lighter falling seeds; and, striking, make
 The motions various, fit for nature's use,
 By which all pow'rful she may things produce.

'Tis certain then and plain, that seeds decline,
 Though very little from th' exactest line,
 But not obliquely move: that fond pretence
 Would fight all reason, nay, ev'n common sense:
 For ev'ry body sees, a falling weight
 Makes its descent by lines direct and straight.

Besides, did all things move in a straight
 line, 240

Did still one motion to another join
 In certain order, and no seeds decline,
 And make a motion fit to dissipate [fate:
 The well wrought chain of causes, and strong
 Whence comes this perfect freedom of the mind?
 Whence comes the will so free, and unconfin'd,
 Above the pow'r of fate, by which we go
 Whene'er we please, and what we will we do?
 In animals the will moves first; and thence
 The motions spread to the circumference, 250
 And vig'rous action through the limbs dispense;
 For look, and see, when first the barrier's down,
 The horse, though eager, cannot start so soon
 As his own mind requires; because the force,
 And subtle matter that maintains the course,

Must be stirr'd through the limbs, then fitly join'd,
Obey the eager motions of his mind:
Which proves these motions rise within the heart,
Beginning by the will, then run through ev'ry
part.

But now 'tis otherwise, when 'tis begun 260
From force; for then our limbs are hurry'd on
By violent strokes, no pow'r of our own,
Until the will, by her own nat'ral sway,
Shall check, or turn the force another way. [on,
Wherefore 'tis plain; though force may drive us
And make us move our limbs, and make us run;
Yet something lies within, that can oppose
The violent stroke, and still resist the blows;
At whose command a subtle matter flies,
And bends through all our limbs, our arms, our
thighs; 270
And check'd again, and all the vigour dies.

Therefore, we must confess, as these things
prove,
There is another cause, by which seeds move,
Besides dull weight and stroke, from whence is
wrought

This pow'r: for nothing can arise from nought,
For weight forbids that things be only join'd
By stroke, and outward force; and lest the
mind
Should be by strong necessity confin'd,
And, overcome, endure fate's rigid laws,
This little declination is the cause. 280

Nor was this mass of matter, the whole frame,
Ever more loose or close, but still the same:
For it can never fail, or greater grow;
Wherefore the seeds still mov'd, ev'n just as now:
And the like motions ever will maintain;
What things were made, will be produc'd again
In the same way; look fair, grow strong, and
great,

And live as long as nature's laws permit.
Nor is there any force can change this all:
For there's no place from which strange seeds
may fall, 290

And make disturbance: no space does here lie
Beyond the whole, to which the seeds may fly,
And leave the mighty all to waste and die.

Besides, 'tis nothing strange that ev'ry mass
Seems quiet, and at rest, and keeps its place;
Though ev'ry little part moves here and there:
For since the principles too subtle are
For sight, their motion too must disappear:
Nay, objects fit for sense, which distant lie,
Conceal their motions too, and cheat our eye.
For often on a hill the wanton sheep, 300
At distance plac'd, o'er flow'ry pastures creep,
Where'er herbs, crown'd with pearly dew, in-
vite,

And kindly call their eager appetite.
The lambs, their bellies full, with various turns,
Play o'er the field, and try their tender horns:
Yet all these seem confus'd at distance seen,
And like a steady white, spread o'er the green.
And thus, when two embattled armies rage,
And in a spacious plain at last engage, 310
When all run here and there; the furious horse
Beat o'er the trembling fields with nimble force:

Straight dreadful sparklings from their arms ap-
pear,

And fill with a strange light the wond'ring air:
Earth groans beneath their feet; the hills around,
Flatt'ring the noise, restore the dreadful sound:

Yet this would seem, if from a mountain shown,
A steady light, and a continu'd one. [are,

Now learn what manner of things first bodies
What diff'rent figures, shapes, and forms they
bear. 320

For though the shape to many is the same,
Yet all agree not in one common frame:
Nor is this strange, or to be wonder'd at:
For since the numbers are so vastly great,
And know no bound, nor end, it cannot be,
That all in the same figures should agree.

Besides, consider men, or beasts, or trees,
Or silent fish, that cut the yielding seas;
Or birds, that either wanton o'er the floods,
Or fill with tuneful sounds the list'ning woods;
Consider each particular, you'll find 330
How diff'rent shapes appear in ev'ry kind.

Else how could dams their tender young, or
how [know;

The new-born young their distant mothers
Which all perform as well as men can do.

For often when an inn'cent heifer dies,
To angry gods a spotless sacrifice;
When all around she sheds atoning blood,
And stains the altars with a purple flood:

Her dam beats o'er the fields in wild despair, 340
And wounds with loud complaints the tender air;
Now here, now there will run, and still complain;
Now leaves her stall, and then returns again:
Mad for her young, she ev'ry field does trace;
With passionate eyes she visits ev'ry place:

No streams, no flow'rs, her former great delight,
Can raise or quicken her dead appetite,
Allay her grief, divert her pining care,
And though a thousand heifers should appear,
More fat, more fair than hers, she passes by, 350
And looks on none, or with a slighting eye:
So plain it is, she looks for something known,
And view'd before; she only seeks her own.

Besides, the tender kids, and wanton lambs
All know the voice, and bleatings of their dams:
And all, as nat'ral instinct prompts them on,
When hunger calls, to their own mothers run.

Besides, what various shapes in corn appear?
A diff'rent size to ev'ry grain, and ear.

And so in shells, where waters, washing o'er, 360
With wanton kisses bathe th' amorous shore.

And therefore seeds, since they from nature
came,

Not made by art, after one common frame,
Must not be all alike, their shapes the same.

And hence a reason's seen why light'ning flies
With keener force, through stones, through
parted skies. [arise:

Than those blunt flames, which from our fires
Because its little parts, more loosely join'd,
More subtle far, an easy passage find

Through such small pores, as stop the blunter
flame, 370

Which parts of heavy oil, or timber frame.

Through horn the sun-beams pass, and strike
our eye;

But water on the surface stays: and why?
Because the parts of light are less than those
That make up water, and dull streams compose.

So through the strainer wines with ease will
flow;

But heavy oil, or stops, or runs more slow:
The reason's this; 'cause 'tis of parts combin'd,
Far greater, and more hook'd, and closely twin'd,
Which therefore cannot be disjoin'd as soon, 380
And through each little passage singly run.

From tasted honey pleasing thoughts arise,
And in delightful airs look through our eyes:
When rue, or wormwood's touch'd, flies ev'ry
grace,

And violent distortions screw the face. [smooth,
Whence you may eas'ly guess those round, and
That with delightful touch affect the mouth:
But those which we more rough or bitter find,
Are made of parts more hook'd, and closely
twin'd;

Which wound the organ, as they enter in, 390
And force a passage through the injur'd skin.

In short, what things are good for sense, what
bad,

Of seeds of diff'rent shape, and size are made:
Nor must you fancy bodies that compose
The harsher sounds of saws, as smooth as those
That form the sweetest airs that viols make,
When gentle strokes the sleeping strings awake.

Those seeds have diff'rent figures, form, and
That from all rotting carcases arise, [size,
From those that new-press'd saffron yields, or rear
From incens'd altars, sweet'ning all the air. 401

And so in colours too, that gaudy dye,
That pleases, and delights the curious eye,
A diff'rent form, and shape, and figure bears
From that which wounds the sense, and forces
tears;

Or mean and ugly to the sight appears.
For seeds of all that please the sense are smooth;
Of all that hurt, are rough, or hook'd, or both.

But besides these, there other bodies are,
Not perfect smooth, nor hook'd, but angular: }
With little corners butting ev'ry where, 411
Which tickle more than hurt the sense; such join
To make the acid taste of palling wine.

Lastly, that heat and cold, form'd diff'rent ways,
Affect the organs, ev'n our touch betrays.

For touch, that best, that chiefest sense is made,
When strokes, from things without, the nerves
invade,

Or something from within does outward flow,
And hurts, or tickles as it passes through:
As 'tis in venery, or when the seed 420

Remain within, and strange confusions breed,
Stirr'd up by violent stroke: for strike a blow
On any limb, and you will find 'tis so.

Wherefore these seeds must be of diff'rent size,
Of diff'rent shapes and figures; when arise }
In sense, so great, so strange varieties.

Farther, what things seem hard and thick, are
join'd [twin'd;
Of parts more hook'd and firm, and closely

As iron, flints, brass, steel, and diamonds,
Gems free from pow'r of stroke, secure from
wounds. 430

But fluids are composed of smooth and round;
For their small parts, by no strong union bound,
Are very easily disjoin'd, and move
Or here, or there, at every little shove.

Lastly, Whatever's soon dissolv'd, or broke,
As morning mists, or yielding flames, or smoke;
If all its little bodies be not smooth
And round in figure, form, or shape, or both,
Yet they are not all twin'd, all have not hooks,
And so may pass through stones and hardest rocks.

Nor must you think it strange the same should
Fluid and bitter too, as is the sea; [be,
For fluids are of smooth and round combin'd;
To these are little pungent bodies join'd;
Yet there's no need they should be hook'd or
twin'd;

For they may globous be, though rough, and
thence
Are fitted both to move, and hurt the sense.

But to convince you with a clearer proof,
That acid fluids have smooth join'd with rough, }
They may be sep'rated with ease enough, 450
For when salt streams through winding caverns
pass,

They rise up sweet, and bubble o'er the grass:
Because those pungent parts they roll'd before,
Now stay behind, and lodge in every pore.

This being prov'd, I'll now go on to show
These various shapes are finite, and but few;
For grant them infinite, it follows thence
That some among the seeds must be immense:
And how can numerous sorts of shapes appear
In such small bodies as the atoms are? 460

For think that some minutest parts compose
The seed: add two, or three, or more to those;
Now, when the topmost parts are plac'd below,
And the right turn'd to left, you'll plainly know,
By changing ev'ry way their former place,
What figure each position gives the mass.

But if you'd make it capable of more,
You must subjoin new parts to those before,
And so go on, if you would vary those; 469
Thus with the shapes the body greater grows:
Wherefore 'tis downright folly to admit
That this variety is infinite,
Unless you grant some seeds immensely great. }

Besides; embroider'd stuff, and purple dye,
Or gaudy peacocks plumes, that court our eye,
Excell'd by finer colours would seem less bright,
And lose their wonted power to delight.

So things more sweet than honey would appear,
And sounds more soft than swans salute the ear;
Nay, music's sweetest airs would cease to please,
Because there might be better than all these: 481

So on the contrary, we still might fall
From bad to worse, but ne'er to worst of all;
For still in nature something worse may rise,
Still more offensive to our ears, our eyes,
Our smell, our taste But now, since 'tis confess'd
That some things are in nature worst, some best,
And we can fear no high'r, 'tis likewise true,
These various shapes are finite, and but few.

Lastly, In fire and snow the heat and cold's
intense, 490

The utmost qualities that strike our sense;
These two, as bounds, the middle warmth con-
troul,

Which rise by just degrees, and make a whole :

'Tis certain then that these varieties
Are finite, and that two extremes comprise,
On this side melting flames, on that side ice. }

This prov'd, it follows, that those seeds whose
frame

Is perfectly alike, their shapes the same,
Are infinite; for, since these reasons teach,
That those varieties of shape ne'er reach 500
To infinite, there must be infinite of each;
Or else, what I before successfully oppos'd,
The all is finite, and in bounds enclos'd.

This taught, my lab'ring muse next sweetly
sings,

That proper seeds for ev'ry kind of things
Are infinite; that these preserve the mass,
And kinds of things, by constant strokes in ev'ry
place :

For though some kinds of beasts we rarely view,
As if unfruitful nature bore but few;
Yet other countries may supply our wants :
Thus India breeds such troops of elephants,
As fight their wars, and usually o'ercome;
So num'rous are they there, so few at Rome.

But grant in nature such a single one,
The like to which nor is, nor e'er was known :
Yet were its proper seeds but finite, how
Could that be made, or when 'twas made, how
grow ?

For think the seeds of any single mass
Being finite, scatter'd through the mighty space,
Where, how, or when, what force, or what de-
sign, 520

Amid such diff'rent seeds, could make them
join ? }

For 'tis not reason prompts them to combine.
But as in wrecks, the seats, the masts, the oars,
Confus'dly scatter'd, fill the neighb'ring shores;
That men might learn by such sad sights as these
The force, and cruel treach'ries of the seas;
And still distrust, though with perfidious smile.
Becalm'd, it tempts them on to farther toil.

So finite seeds would in the space be tost,
And in the whirls of diff'rent matter lost; 530
So that they ne'er could join, or be at peace,
Nor yet preserve their union, nor increase :

But now 'tis plain, and ev'n our senses show
That things are made; and, made, increase and
grow.

'Tis certain then that seeds of ev'ry kind
Are infinite. —

Nor can destructive motions still prevail,
And bring a universal death on all;
Nor motions, which compose or else increase,
Always preserve things made, but sometimes
cease : 540

So these two contraries do always jar
With equal force, and still maintain the war.
Now these, now those prevail; and infant's moans
Are ever mix'd with others' dying groans :

And ev'ry day and night the tender cry
Of new-born babes joins with their sighs that die.

Now you must farther mark that nought's com-
bin'd,

Compos'd, or made of seeds all of one kind;
But things of diff'rent pow'rs and faculties
Do equal diff'rent sorts of seeds comprise. 550

The earth does in itself such parts contain,
As make up springs which feed the greedy main;
And such seed too as fiercest fire can frame;
For many parts, like *Ætna*, vomit flame:
And such whence trees and tender shrubs do
shoot; [fruit.

And grafs for beasts, for man sweet corn and
Hence term'd the mother of the gods; confess'd
The common parent too of man and beast.

The poets sing, that through the heav'ns above,
She chariots, drawn by fierce yok'd lions, drove;
And riding to and fro, she wanders there :

They teach by this, that in the spacious air
Hangs the vast mass of earth, and needs no prop
Of any lower earth to keep it up.

They yoke such beasts, to show that ev'ry child,
Though form'd by nature fierce, untam'd, and
wild, [mild.

Soften'd by care and love, grows tame, and
Her lofty head a mural garland wears,
Because she towns and stately castles bears :

And thus adorn'd with gaudy pomp and show,
Goes through our towns, and as she passes
through, 571

The vulgar fear, and all with rev'rence bow.
Concerning her fond superstition frames
A thousand odd conceits, a thousand names; }

And gives her a large train of Phrygian dames :
Because in Phrygia corn at first took birth,
And thence was scatter'd o'er the other earth.

They eunuch all her priests, from whence 'tis
shown,

That they deserve no children of their own,
Who or abuse their fires, or disrespect, 580
Or treat their mothers with a cold neglect;

Their mothers, whom they should adore. —
Amidst her pomp fierce drums and cymbals beat,
And the hoarse horns with rattling notes do threat.

The pipe with Phrygian airs disturbs their souls,
Till, reason overthrown, mad passion rules.

They carry arms, those dreadful signs of war,
To raise in impious routs religious fear. [goes,
When carry'd thus in pomp, through towns she
And health on all most silently bestows; 590

With offer'd money they bestrew the plain,
And roses cover her, and all her train.

Here some in arms dance round among the
crowd, }

Look dreadful gay in their own sparkling blood,
Their crests still shaking with a dreadful nod.
These represent those armed priests, who strove
To drown the tender cries of infant Jove;

By dancing quick they made a greater sound,
And beat their armour as they danc'd around;
Lest Saturn should have found and eat the boy,
And Ops for ever mourn'd her prattling joy. 601

For this her train is arm'd; or else to show
They'll serve their country, and enlarge it too,

Whenever danger, or when honour calls,
All which, though well contriv'd, is fond, and
false;

For ev'ry deity must live in peace,
In undisturb'd, and everlasting ease:
Not care for us, from fears and dangers free;
Sufficient to his own felicity. 609
Nought here below, nought in our pow'r he needs;
Ne'er smiles at good, ne'er frowns at wicked deeds.

The earth wants sense, and yet contains the
seeds;

And therefore trees and living creatures breeds.
Now those that would their wanton fancies please,
And use the name of Neptune for the seas;

Ceres for corn, or Bacchus for the vine,
Rather than speak the plainer terms of wine,
Such men may call, and strength of fancy show,
The earth the mother of the gods below,
And those above, although she is not so. 620

The sheep, the warlike horse, and bull, in food
Agree; and all drink of the same cold flood:
And yet they diff'rent are; and each delights
In proper motions, manners, appetites;
Such diff'rent seeds in ev'ry herb do grow;
Such diff'rent seeds in ev'ry water flow.

Now though blood, humour, nerves, and vein,
and bone,

Are parts of animal, and make up one;
Yet what varieties their forms divide? 629
How all unlike? Their diff'rence vastly wide!

So all combustibles, though not the same
In other things, have parts of such a frame
As make gay sparkles, ashes, light, and flame. }
And so consider ev'ry thing, you'll find
Each made of diff'rent seeds in shape and kind.

Lastly, We all confess some object please
The smell and taste at once. ——— }
Now seeds of diff'rent shapes must make up these,
For taste and smell do diff'rent organs strike,

Therefore their figures cannot be alike: 640
So that each mass does diff'rent shapes enclose,
And ev'ry body diff'rent seeds compose.

A pregnant proof of this my song affords,
For there are letters common to all words;
Yet some of diff'rent shapes and figures join,
To make each diff'rent word, each diff'rent line.
Not but that many are in shape the same,
But all agree not in one common frame.

And so of other things; though things are made
Of many common seeds in order laid, 650
Yet may the compounds widely disagree,
And we may justly guess that stone, and tree,
Or an'mal kind, as bird, and beast, and man,
From seeds of diff'rent shapes and kinds began.

Yet all join not with all, for thence would rise
Vast monsters, nature's great absurdities;
Some things half-beast, half-man, and some would
grow

Tall trees above, and animals below;
Some join'd of fish and beasts, and ev'ry where,
Frightful chimeras, breathing flames, appear. 660
But since we see no such, and things arise
From certain seeds, of certain shape and size,
And keep their kind, as they increase and grow;
There's some fix'd reason why it should be so.

For see, our limbs receive from all their food
Agreeable parts, which, turn'd to flesh and blood,
Accept the vital motions: but for those
That disagree with her, some nature throws
Through open passages away; but more
By secret impulse fly through ev'ry pore: 670
For they could never join, but still at strife,
Obstruct all motions that are fit for life.

Now these are cath'lic laws; these rules do bind
Not animals alone, but ev'ry kind;
For since they all of diff'rent natures are,
The figures of their seeds can never square;
Not but, that many are in shape the same,
But all agree not in one common frame.

Now since the seeds are diff'rent, thence will grow
A diff'rence in their weight and motion too, 680
Their stroke, connection, concuss. Now by
these,

Not animals alone, but heav'n, earth, seas,
Are plac'd in their own proper species. }

Now farther learn, what I with toil and pain,
With many a careful thought, and lab'ring brain,
Have sought to teach thee; lest thou shouldst mis-
take,

And think the seeds of black composures, black;
Of white things, white; or other bodies wear
Those diff'rent colours that their seeds did bear.

For seeds are colourless; without a dye, 690
Or like, or unlike those that seem to lie
On bodies surfaces, and strike our eye. }

Now if you think such seeds are things unfit
To be conceiv'd, how fond is the conceit!
For since that men born blind, whose nat'ral night
Was never scatter'd by one beam of light,
Know things by touch, he's foolish that denies, }
That any notices of things can rise,
Unless from colours ent'ring at our eyes. }

For in the dark we feel, and form from thence 700
Some images; yet then no colours strike our sense.

But this position stronger reasons show;
For seeds of things ne'er change, though co-
lours do:

For somewhat must survive each change, and be
Essentially immutable, and free;
Lest all should sink to nought, and thence arise,
For what is chang'd from what it was, that dies.
Therefore seeds colourless, unfit for view,
Or grant: or grant annihilation true.

Though seeds are colourless, and free from
dyes, 710
They're form'd of diff'rent figures; whence arise
The num'rous colours, gay varieties. }

And since, as we discours'd before, we find
It matters much with what first seeds are join'd,
What figure, what position they maintain,
What motions give, and what receive again;
'Tis strait resolv'd why things as black as night
Can change so soon, and put on virgin white; }

And scatter all around their vig'rous light. }
As in the sea, when the mad ocean raves, 720
And white curls rise upon the foaming waves;
For thus it is: That which seem'd black before,
By losing little parts, or taking more,
Their number, motion, order, station, site,
Position chang'd, from black are turn'd to white.

But if the sea were ting'd with nat'ral sky,
What force, what art could make it change the
dye?

For change its frame, and change, and change
Yet still the native tincture would remain, [again,
And never put on white; but if the seed, 730
Painted with diff'rent colours, all agreed
To make one white; as little parts, that bear
Quite diff'rent figures can compose one square;
Then it would follow, as in squares there lie
Such diff'rent figures, naked to our eye,
Just so, in one pure whiteness, we should view
A thousand colours mix'd, and diff'rent too.

Besides; look o'er those diff'rent shapes; for
there

No hindrance in their natures does appear,
Why all may not agree to make one square. 740
But neither sense, nor nature's laws permit,
That diff'rent colours should compose one white.

Nay more; the only cause that all propose
For colour'd seeds, this fancy overthrows;
For here from white, white bodies do not rise,
Nor black from black, but seeds of various dyes,
Now colourless seeds will sooner make a white,
Than black, or any other opposite.

Besides; since colours are alone by day,
And owe their beings to the glitt'ring ray, 750
But seeds of things do not exist alone
By day: 'tis plain that they are ting'd with none;
For how can colours be in darkest night,
Since they all change, and vary with the light,
According as the ray's oblique or right.

So plumes, that go around the pigeon's head,
Sometimes look brisker, with a deeper red;
And then in different position seen
Show a gay sky, all intermix'd with green:
And so in peacock's tails, all fill'd with light, 760
The colour varies with the change of site.
Now since these colours rise from beams o'th' sun
Reflex, they cannot be when those are gone.

And since the eyes a diff'rent stroke receive
From white, from that which black, or others
give:

And since it matters not what colour's worn
By things we touch, but what fit shapes are born,
We easily infer seeds want no dyes;
Those the variety of shapes supplies,
And thence those diff'rent sorts of touch may
rise. 770

Besides; since certain colours not agree
To certain shapes; and any dye may be
In any shape, then tell me why we find
Such colours still belong to such a kind?
Why cannot crows their usual dye forsake,
And put on white? Why swans not mourn in
black?

Again: break any thing, we find at last
The less the parts, the more the colours waste:
For instance; shave but gold, the gaudy red,
Which through the whole compofure once was
spread, 780
Is lost and gone, the parts unheeded lie,
Nor with their tempting purple court our eye.
Which shows that bodies are from colours freed,
Before they come to be as small as feed.

Farther; since some ne'er touch the ear or
nose,

With sound, or smell; we nat'rally suppose
That neither sound, nor smell belong to those.
So likewise, since 'tis nonsense to deny
Some seeds too small, and subtle for our eye,
These free from colour we must all conceive, 790
As well as those from sound and taste believe,
Whose sound, nor taste, our ears, nor tongue
perceive.

And yet the mind can comprehend as well
These void of dye, as those of sound and smell.

Besides: not only colour is not found
In seeds; but neither smell, nor taste, nor sound:
They no brisk odours in effluvia send,
Or to delight the nose, or to offend;
But void of odours all. So artists choose
An odorous liquor to compose 800
Their rich perfumes; lest they infect and spoil
Their odours, with the native smell of oil.
And thus as all their former reasons show,
The seeds on compound bodies ne'er bestow
Their sound, their taste or smell; for they have
none,

No proper sound, or odour of their own;
Nor heat, nor cold, nor any quality;
For those are subject all to change, and die:
Ev'n such as viscous, brittle, hollow are;
All which arise from putrid/soft, and rare. 810
For either these can not to seeds agree,
Or seeds are not immortal all, and free
From change; and therefore things may fall to
nought:

All which bow fond my former reasons taught.

Now farther; those composures that per-
ceive,

Ennobled all with various sense, derive
Their beings from insensibles, and live.
This every common generation shows,
And rather proves this truth, than overthrows.
For look what num'rous swarms of worms and
flies 820

From putrid and fermenting clods arise,
When sem'nal rain descends in soft'ning dew,
And makes the weary'd earth bring forth anew.

Besides, leaves, water, grafs, do make up beast,
And man too feeds on blasts, and is increas'd:
Their flesh is turn'd to ours; and so again
The birds and blasts increase by eating men.
All these things prove, that any sort of food
Nature can easily turn to flesh and blood:
Whence animals, those things of sense, she frames,
As out of wood she raises fire and flames. 830
And hence, as we discours'd before, we find
It matters much with what first seeds are join'd;
What site, and what position they maintain,
What motions give, and what receive again.

But what confirms, what prompts thee to be-
lieve,

That things, endow'd with sense, can ne'er de-
Their beings from insensibles, and live?
Perchance, as common observation shows,
Because earth, stone, wood, various things com-
pose; 840

And yet there's neither life, nor sense in those.

But here you must consider, neither I,
Nor any master of philosophy
Affirm, that ev'ry being may commence
A sensible, and show the acts of sense :
But that those seeds, whence sensibles arise,
Must all have a convenient shape and size,
Position, motion, order : now not one
Of these appears in earth, or wood, or stone :
Yet these fermented by a timely rain, 850
Grow fruitful, and produce a num'rous train
Of worms; because the little bodies leave
Their former site and union; and receive
New motion, into new position fall,
And order, fit to make an animal.

Besides, they who contend that things com-
mence
Sensibles, from seeds endow'd with sense,
Must grant those seeds are soft; for sense does
To tender gut alone, or nerve, or vein: [join
All which are soft and easily dissolv'd. 860

But grant they could eternally endure,
Suppose them all from fatal change secure :
Yet other doubts occur. For further see,
If all those seeds have sense, that sense must be
Or of one single member, or of all;
And so be like a perfect animal.
But now the parts in a divided state
Enjoy no sense : The hand, if separate
Can feel no more, nor any member live
Divided from the body, nor perceive : 870
Therefore each must be like an animal,
Each single seed contain the sense of all.
But if like animals; then tell me why,
As well as animals, they cannot die ?
And why immortal all ?

But grant them so;
Yet what could all their combinations do,
But make some animals ? And what could be in-
creas'd

But sensibles ?
As man gets only man, and beast gets beast.
But if the seeds in mixture lose their own, 880
And take another sense, when theirs is gone,
What need of any ? Why should we suppose,
They ever had that sense, which they must lose ?
And since, as I have urg'd before, 'tis true,
That birds are made of eggs; since soft'ning dew
Ferments the clods to worms, we know from
thence

That sensibles arise from seeds devoid of sense.
If any grants the thing, that sense can rise
From senseless seeds, if he consent to this,
But says, that it is form'd and fashion'd all 890
By change, that's made in th' atoms, e'er the
animal,

Or any other things are born, and grow;
For his conviction I shall only show,
That nature's fix'd, and steady laws decreed,
That nothing should be chang'd, that nought
should breed

Without a combination of the seed.
And thus without the limbs no sense can rise.
It cannot be, before the body is :
Because the seeds lie scatter'd ev'ry where,
In heav'n, and earth, in water, flame and air; 900

Not yet combin'd to make an animal,
Nor sense, that guide, and governor of all.

Besides, when strokes too strong for nature
fall,
And mighty pressure crush an animal,
Its seeds and vital pow'rs are scatter'd all.
For then the little seeds do separate,
And all the vital pow'rs are stop'd by fate.
At length the motion, scatter'd through the whole,
Breaking the vital ties of limbs and soul,
Expels, and drives it out at every pore; 910
For what can force, for what can stroke do
more

Than disunite those seeds that join'd before ?
But when the force is weak, more light the
blows,

The small remains of life with ease compose
The violent motions of approaching fate,
And call back all things to their former state;
Expel usurping death, that seem'd t'obtain
An empire there; and settle sense again.
Else why should living creatures, that arrive
So near the gates of death, return and live, 920
Rather than enter in, when come so nigh,
And end their almost finish'd race and die ?

Besides, since we feel pain, when outward force
Diverts th' atoms from their natural course,
And shakes them o'er the limbs, but when th'
obtain

Their nat'ral motion, and their place again,
A quiet pleasure straight succeeds the pain,
It follows, that the seeds are things unfit,
Or to be touch'd with pain, or with delight;
Because they are not made of other seed, 930
Whose change of motion, or of site may breed
Or pain, or pleasure, or delight; and hence
It follows too, that they are void of sense.

But farther still; if we must needs believe,
That seeds have sense, because the things perceive;
What sort of seeds must form the human race ?
Can violent laughter screw their little face ?
Or can they drop their briny tears apace ?
Can they or laugh, or weep ? Can they descry
The greatest secrets of philosophy ? 940

Discourse how things are mix'd ? Or comprehend
On what firm principles themselves depend ?
For all things, which enjoy the faculties,
And pow'rs of perfect animals must rise
From other seeds, and these must be begun
From others : thus we endlessly go on :
For thus I'll urge : whatever can perceive,
Discourse, laugh, reason, flatter, weep, and grieve,
Must be compounded, and must owe its frame
To proper seeds, which can perform the same, 950
But if this seems absurd, and dull, morose,
And heavy seeds can laughing things compose;
If wise and if discursive things can rise
From seeds, that neither reason, nor are wise :
What hinders then but that a sensible
May spring from seeds all void of sense as well ?

Lastly, We all from seeds celestial rise,
Which Heav'n our common parent still sup-
plies.

From him the earth receives enliv'ning rain,
And straight she bears bird, tree, and beast, and man,

And proper food for all by which they thrive,
Grow strong, and propagate their race, and
live:

Thence justly all the name of mother give.
And so each part returns, when bodies die,
What came from earth to earth, what from the
sky

Dropt down, ascends again, and mounts on high.
For death does not destroy, but disunite
The seeds, and change their order and their site:
Then makes new combinations, whence arise
In bodies all those great varieties: 970
Their change in colour, shape, and frame; and
thence

Some for a while enjoy, then lose their sense.
From whence, as we observ'd before, we find
It matters much with what first seeds are join'd:
What site, and what position they maintain,
What motion give, and what receive again;
And that the seeds of bodies ne'er contain
Such frail and transient things as seem to lie
On bodies' surfaces, and change and die.

It matters much, ev'n in these ruder lines, 980
How, or with what each single letter joins:
For the same letters, or almost the same,
Make words to signify earth, sun, and flame,
The moon, the heav'n, corn, animals, and trees,
And sea: but their position disagrees;
Their order's not alike; in bodies so;
As their seeds order, figure, motion do, [too.]
The things themselves must change and vary

But now attend, I'll teach thee something new;
'Tis strange, but yet 'tis reason, and 'tis true: 990
Ev'n what we now with greatest ease receive,
Seem'd strange at first, and we could scarce believe;
And what we wonder at, as years increase,
Will seem more plain, and all our wonder cease,
For look, the heav'n, the stars, the sun, the moon,
If on a sudden to us mortals shown,
Discover'd now, and never seen before, [more?
What could have rais'd the people's wonder
What could be more admir'd at here below?
Ev'n you had been surpris'd at such a show. 1000
But now, all cloy'd with these, scarce cast an eye,
Or think it worth the pains to view the sky.
Wherefore fly no opinion, 'cause 'tis new;
But strictly search, and after careful view,
Reject, if false; embrace it, if 'tis true.

Now I have prov'd before, this mighty space
Is infinite, and knows no lowest place,
Nor uppermost: no bounds this all controul;
For that's against the nature of the whole.

Through this vast space since seeds then always
move 1010

With various turns, and from eternal strove;
Who can imagine there should only rise
Our single earth, our air, and but our skies,
Whilst all the other matter scatter'd lies?
Especially, since these from change arose,
When the unthinking seeds, by various blows,
Now this, now that way mov'd, at last were
Into the decent order of this world, [hurl'd
And made fit combinations; whence began
The earth, the heav'n, the sea, and beast, and
man. 1020

Thus then 'tis prov'd, and certain, that elsewhere,
The busy atoms join, as well as here:
Such earths, such seas, such men, such beasts
arise,

All like to those surrounded by our skies.

Again: when there can be no hindering cause,
But place and seed enough; by nature's laws
Things must be made: Now if the seed surmount
The utmost stretch of number's vast account;
And the same nature can compose a mass,
As once in this, in any other place; 1030
It plainly follows, that there must arise
Distinct and num'rous worlds, earths, men,
and skies,

In places distant, and remote from this.

Now farther add: No species has but one,
Which is begun, increas'd, and grows alone:
But ev'ry kind does certainly contain,
Of individuals, a num'rous train;
As bird, and silent fish, as beast and man:
Therefore the species of the sun and moon,
Of heav'n and earth, must needs have more than
one. 1040

For ev'ry one of these is made, and grows
By the same nature's cath'lic laws, with those
Whose spacious kinds do num'rous trains en-
close.

If this you understand, you'll plainly see
How the vast mass of matter, nature, free
From the proud care of any meddling deity,
Does work by her own private strength, and move
Without the trouble of the pow'rs above.
For how, good gods! can those that live in peace,
In undisturb'd and everlasting ease, 1050
Rule this vast all? Their lab'ring thoughts divide
'Twixt heav'n and earth, and all their motions
guide?

Send heat to us, the various orbs controul,
Or be immense, and spread o'er all the whole?
Or hide the heav'n in clouds, whence thunder
thrown,

Beats ev'n their own aspiring temples down?
Or through vast deserts break th' innocent wood,
Nor hurts the bad, but strikes the just and good?

Learn next, th' infinite mass sends new supplies
Into the world already form'd, whence skies, 1060
And this vast ball of earth, and boist'rous seas,
And spacious air grow bigger, and increase;
For all to their own proper kinds retire,
To earth the earthy, fiery parts to fire,
To water, wat'ry; till they grow as great
As nature's fix'd and steady laws permit.
For as in animals, when ev'ry vein
Receives no more than what flies off again,
They can increase no more: such means secure
Those things from farther growth, when once
mature. 1070

For that which looks so fair, so gay, and young,
Climbs to maturity, grows great and strong,
That many parts receives, and still retains,
And spends but few; because through all the veins
The little nour'ishing parts, with ease diffus'd,
Are there in little space confin'd, and us'd
For growth; but few fly off, and break the chain,
And get their former liberty again.

For though things lose their parts, when they are
gone,

Some new supplies of other seeds come on, 1080
And more than they have lost: Thus things en-
dure,

Look gay and young, until they grow mature.
Thence by degrees our strength melts all away,
And treach'rous age creeps on, and things decay:
For bodies, now grown big and large, which
cease

From their continu'd growth, nor more increase,
Still waste the more, their parts disperse with
ease.

The nour'ishing parts come slowly on, and few,
Too small decaying nature to renew;
The stock is largely spent; no new supply, 1090
Sufficient to make good those parts that die:
Therefore they needs must fall, their nature broke
By inward wasting, or external stroke;
Because the stock of nourishment decays,
As age creeps on; and still a thousand ways
The little enemies without oppose,
And strive to kill them by continual blows.

And thus the world must fall, though new
supply

The mass affords to raise those things that die:
Yet all in vain; for nature cannot give 1100
Supplies sufficient, nor the world receive.

Even now the world's grown old: th' earth
that bore

} Such mighty bulky animals before,
Now bears a puny insect, and no more.

For who can think these creatures, fram'd above,
The little bus'ness of some meddling Jove?

And thence, to people this inferior ball,
By Homer's golden chain let gently fall?

Nor did they rise from the rough seas, but earth,
To what she now supports, at first gave birth. 1110

At first she corn, and wine, and oil, did bear,
And tender fruit, without the tiller's care;
She brought forth herbs, which now the feeble
soil

Can scarce afford to all our pain and toil:
We labour, sweat, and yet by all this strife

Can scarce get corn and wine enough for life:

Our men, our oxen groan, and never cease,
So fast our labours grow, our fruits decrease?

Nay, oft the farmers with a sigh complain,
That they have labour'd all the year in vain,

And, looking back on former ages, bless, 1121

With anxious thoughts, their parents happiness;

Talk, loudly talk, how pious they were fill'd,

Content with what the willing soil did yield. }

Though each man then enjoy'd a narr'wer field.

But never think, fond fools! that age will waste

This mighty world, and break the frame at last.

NOTES ON BOOK II.

Ver. I. LUCRETIIUS had made choice of a sub-
ject naturally crabbed, and therefore he adorned
it with poetical descriptions and precepts of mo-
rality, in the beginning and ending of his books:
And thus intending in this book to treat of the
motions and figures of his atoms, and of their
other properties, which we call qualities, he in-
troduces his subject by the praise of that philoso-
phy which Epicurus taught, as well to give some
respite and relaxation to the wearied mind of his
Memmius, as by laying before his eyes, and fore-
warning him of the dangers and calamities of
others, to allure him to the study of that philoso-
phy which he calls the doctrine of the wise.
Thus, the first twenty verses contain two compa-
risons and a metaphor, in which he asserts, that
the life of a wise man consists in a perfect tran-
quillity of mind, and indolence of body; and, at
the same time, he derides and bemoans the anxie-
ties and restless desires of other men. But there
are some who accuse Lucretius of ill nature and
cruelty of temper, on account of the first verses
of this book, where he says,

'Tis pleasant safely to behold from shore
The rolling ship, and hear the tempest roar:
Not that another's pain is our delight;
But pains unfelt produce the pleasing sight.
'Tis pleasant also to behold from far
The moving legions mingled in the war;

But much more sweet thy lab'ring steps to guide
To virtues heigh's, with wisdom well supply'd, }
And all the magazines of learning fortify'd:
From thence to look below on human kind,
Bewilder'd in the maze of life, and blind.

Dryd.

But their censure seems too severe and unjust.
The poet asserts only the sentiment of all man-
kind: for who beholds another in any great af-
fliction, or groaning under the violence of tor-
ments, and does not presently think within him-
self, how happy am I not to be in that condition!
Isidorus Pelus. lib. ii. Epist. 240. says, that no-
thing is more pleasant than *ἐν λιμένι καθήσθαι*,
καὶ τὰ τῶν ἄλλων σκοπεῖν ναυάγια, to sit in the har-
bour, and behold the shipwreck of others. Cicero
too is of the same mind, in the second epistle to
Atticus. And our excellent Dryden, describing
the life of a happy man, says to the same purpose
with Lucretius:

No happiness can be where is no rest;
Th' unknown, untalk'd of man, is only blest'd:
He, as in some safe cliff, his cell does keep;
From thence he views the labours of the deep:
The gold-fraught vessel which mad tempests beat,
He sees now vainly make to his retreat;
And, when from far the tenth wave does appear,
Shrinks up in silent joy that he's not there.

Tyran. Love.

Ver. 7. In this excellent metaphor, the poet teaches, that the life of a wise man is placed in tranquillity of mind and indolence of body. And this was the doctrine of Epicurus, who, in Cicero, Tusc. 3. says: 'Ergo is, quisquis est, qui moderatione et constantia quietus est animo, sibi que ipse placatus, ut neque tabescat molestiis, neque fragrantur timore, neque sitientur quid appetens ardeat desiderio, nec alacritate futili gestiens deliquescat, is est sapiens quem quærimus.' He, therefore, whoever he be, who by moderation and constancy is sedate in his mind, who is at peace within himself, so as not to pine and languish with sorrow, so as not to be disquieted with fear, nor to burn with a thirsty desire for any thing, nor to be foolishly transported with unseemly mirth, he, I say, is the wise man whom we are seeking. And what Lucretius here proposes to his Memmius, Epicurus had written long before to Menæceus: *Μήτε νέος τις ὦν μελλήσει φιλοσοφῆν μήτε γέρον ὑπάρχων κατὰ τὰ φιλοσοφῶν· ἔτι γὰρ ἄωρος ἄδεις εἶναι, ἢ πᾶρως πρὸς τὸ κατὰ ψυχὴν ὑγιαίνειν ὃ δὲ λέγαν, ἢ μήσω τῷ φιλοσοφῆν ὑπάρχειν ὄραν, ὁμοίως ἔστι τῷ λέγοντι, πρὸς εὐδαιμονίαν ὃ μὴ παρῆναι τὴν ὄραν, ἢ μηκέτι εἶναι.*

Ver. 15. To be the chief in a government; than which state of life nothing can be more unhappy to an Epicurean, and to a man who delights to live by the rules of nature: For to what end dost thou burden thyself with the care of an untractable multitude? Live for thyself: Do good to thyself: *τὰ πολίτικα ἔδιν πρὸς τὸ εὖ.* No man is the happier for being at the helm: If thou governest well, thy body will suffer for it; because a thousand cares and businesses will be always disturbing thy brain and quiet: if ill, thou wilt live in continual dread; in a word, thou wilt be a wretched slave; If thou convert any thing to thy private use, thou wilt one day perhaps be forced to restore it with interest; therefore fly from greatness, *καὶ λάβε βιώσα.* Thus says Faber, who himself led a retired life. To which we may add what Epicurus says in Laertius, lib. x. *Ἐνδοξοὶ καὶ περιβλεπτοὶ τίνες ἐβλήθησαν γινώσκειν, τὴν ἐξ ἀνθρώπων ἀσφαλείαν ἔτι νομίζοντες περιποιήσεσθαι ὥστε εἰ μὴν ἀσφαλὲς ὁ τῶν τοιούτων βίος, ἀπίλαστον τὸ τῆς φύσεως ἀγαθὸν εἰ δὲ μὴ ἀσφαλὲς, ἐκ ἔχουσιν ὃ ἐνκαὶ ἐξ ἀρχῆς παρὰ τὸ τῆς φύσεως ὁκῶν ἀρίχθισαν.*

Ver. 18. For the Epicureans did not chiefly follow those pleasures that affect the senses with delight; but held the greatest of all pleasures to consist in an exemption from grief and pain. They did not, says Cicero, lib. i. de Fin. think the chief happiness to consist in that pleasure, "quæ suavitate aliqua naturam ipsam movet, et cum jucunditate quadam percipitur sensibus, sed quæ percipitur omni dolore detracto." And when Epicurus writes to Menæceus, that *πᾶν ἀγαθὸν καὶ κακὸν ἐν αἰσθήσει*, the word *αἰσθήσει* must be taken in a larger sense, and as opposed to death, which is *σῆψις τῆς αἰσθήσεως*. For that philosopher differed in opinion from the Cyrenaics, who held pleasure to be the "summum bonum;" *οἱ μὲν γὰρ τὴν κατασηματικὴν ἐκ ἐγκρίσεως, μόνον δὲ τὴν ἐν κινήσει, ὃ δὲ ἀμφοτέρων, ψυχῆς καὶ σώματος,* says Laertius, II.

tius in the life of Epicurus: who says himself in the book *περὶ αἰρίσιος*: *Ἡ μὲν γὰρ ἀταραξία τὴν ἀπονίαν κατασηματικὰ εἰσιν ἡδοναί, ἢ δὲ χαρὰ τὴν εὐφροσύνην κατὰ κίνησιν ἐνέργειαι βλίσπονται.*

Ver. 21. In these nineteen verses he asserts, that but few things are requisite for the ease and delight of the body, and that neither great riches, nor delicious eating and drinking, nor costly apparel, or furniture, are of any considerable advantage, since without any of them, our natural wants may be supplied, and that too with pleasure enough: and even though we enjoyed all those delights, our bodies would nevertheless be liable to diseases and pain. How vain is it then to contend ambitiously for wit, for wealth, and for power; to bend our lost endeavours to outshine each other; and to waste our time and our health in search of honour and in pursuit of riches! Lucretius was aware of this, and therefore had reason to exclaim:

O wretched man! in what a mist of life,
Enclos'd with dangers, and with noisy strife,
He spends his little span; and overfeeds
His cramm'd desires with more than nature needs:
For nature wisely stints our appetites,
And craves no more than undisturb'd delights;
Which minds unmix'd with cares and fears obtain:
A soul serene, a body void of pain;
So little this corporeal frame requires,
So bounded are our natural desires,
That wanting all, and setting pain aside,
With bare privation sense is satisfy'd.

Dryd.

Ver. 25. He means the golden statues, which were formerly used in the houses of the rich, instead of sconces and candlesticks, in their entertainments by night; and he seems to blame the expensiveness and prodigality of the suppers of the Romans in his age. This passage, which Virgil has imitated in Culice, ver. 60. and in Georg. ii. ver. 461. Lucretius himself took from Homer, Odyss. vii. ver. 100.

Ver. 37. Thus Horace, in Epist. ii. B. i.

Non domus et fundus, non æris acervus et aur
Ægroto domini deduxit corpore febres,
Non animo curas.

Which Dryden's translation of this passage of Lucretius shall serve to interpret:

Nor will the raging fevers fire abate,
With golden canopies and beds of state:
But the poor patient will as soon be found
On the hard mattress, or the mother-ground.

Ver. 39. In these twenty-five verses, the poet declares, that since even kings and princes, the most potent and wealthy of men, are disquieted with fears and cares, and lead not happier lives than others, the greedy thirst of honour, power, riches, &c. must proceed from the ignorance of true happiness; and no wonder that this ignorance is so gross, since we walk as it were in the dark, and lead a life not yet enlightened with the rays of Epicurean philosophy. And he insists from the vain and groundless fears and terrors of

men, that we all live in darkness. For as children in the dark dread every thing, and imagine ridiculous dangers, so all men are terrified with the belief of Providence, and punishments after death, which, according to Epicurus, are but the day-dreams of a crazy mind. Now Lucretius, to dispel this darkness, and deliver his Memmius from all fears and disquiet of mind, pursues his subject, and fully and elegantly explains the nature of things.

Ver. 46. Faber, in his note upon this passage of Lucretius, says, that Horace had it in his mind when he writ,

Non enim gazæ, neque consularis
Summovet licet microcos tumultus
Mentis, et curas laqueata circum
Tecta volantes.
Scandit aratas vitiosa naves
Cura; nec turmas equitum relinquit,
Ocyor cervis, et agente nimbos
Ocyor euro.

Which Otway thus interprets:

Neither can wealth, nor power, nor state,
Of courtiers, nor of guards the rout,
Nor gilded roof, nor brazen gate,
The troubles of the mind keep out.
For baneful care will still prevail,
And overtake us under sail.
'Twill dodge the great man's train behind,
Outrun the doe, outfly the wind.

To which I will add these excellent verses of Varro the Epicurean:

Non sit thesauris, non auro pectus solutum:
Non demunt animis curas, nec religiones
Persarum montes, non divitis æria cræsi.

Ver. 57. Seneca, in Epist. cx. says: Such is the nature of the mind, as it seemed to be to Lucretius, when he said:

Nam veluti pueri trepidant, atque omnia cæcis
In tenebris metuunt; sic nos in luce timemus,
Interdum nihilo quæ sunt metuenda magis, quam
Quæ pueri in tenebris pavitant, finguntque futura.

—As children are surpris'd with dread,
And tremble in the dark, so ripper years
Even in broad day-light are surpris'd with fears;
And shake at shadows, fanciful and vain,
As those that in the breasts of children reign.

Dryd.

And are we then, who tremble in the light, more foolish than children? 'Tis false, Lucretius! We are not afraid in the light, but have made all things darkness to ourselves: We see nothing neither what is hurtful, nor what expedient: We blunder on all our life long, and stumble at every step; yet we still continue to stagger forwards in the same method, and take no care to place our steps with greater circumspection: we see how dangerous it is to make haste in the dark, and nevertheless we persevere in driving full speed to our journey's end: but if we would, we might have light upon the road; though there be but

one way to get it, which is, by acquiring a thorough, not a superficial knowledge of human and divine things; if we would continually contemplate and study the same things over and over again, even though we know them; and if we would apply them often to ourselves; if we would inquire diligently into what is good, and what evil; if we would examine with care and submission into the wonderful works of Providence; and lastly, if we would learn truly to distinguish between what is honourable, and what base.

Ver. 64. The argument of this second book is briefly contained in these four verses. He promises first to explain the motions of the seeds, by which motions things are generated and dissolved. Secondly, the cause of those motions; and, thirdly, the swiftness of them. When he has performed this, every thing will be prepared and ready for him to enter upon the explication of the generation and dissolution of things.

Ver. 68. Being about to dispute of the different motions of the atoms, and of the causes of those motions, he fortifies his way beforehand, and in opposition to some weak and foolish philosophers, demonstrates in these thirteen verses, from the growth and decrease of things, that there is motion: for the reason why things grow is, because some particles of matter fly and adhere to them; and the reason why they diminish, is, because some minute particles having lost their hold, retire and fly away from them. And it would be absurd to say, that those particles either come or go without motion.

Ver. 77. He alludes to the λαμπαδηρόμια, the race of torches, which were certain games celebrated at Athens in honour of Vulcan, and in which the racers carried torches in their hands, and strove who should get first to the goal with his torch not extinguished: Thus the Scholiast on Aristophanes in Ranis. These Athenian games were called λαμπαδίσται, and the victor, λαμπαδηφόρος, a bearer of torches; because all the torches of those that run were delivered to him as the prize of his victory: from whence the word λαμπαδίσσθαι is used to signify, to deliver successfully and in order. Casaubon. in Pers. Sat. 6. Thus Plato, in 6. de Legibus: Γινώσκεις καὶ ὑπερέχοντες παῖδας, καθάπερ λάμπαδα τὴν βίην παραδίδοντες ἄλλοις ἢ ἑαυτοῖς, begetting and breeding children, as it were delivering the lamp of life. But Pausanias makes this more plain. In the academy of Prometheus, says he, there was an area, where men were wont to run in a circle, carrying lighted torches in their hands, and the main of the strife consisted in keeping their torches alight during the swiftness of their running: For he whose torch was extinguished, yielded the victory to him who came next after him, and he in like manner to the third. Thus Pausanias. Now this custom Lucretius thus applies: As the runner whose torch went out yielded the victory to the follower; so a living thing when its light of life is extinguished, yields and gives up to another living thing, as it were, the lamp of life. Thus the remains of the vegetable life in grass, yields itself

up to the sensible life of an ox: thus the remains of the animal life in an ox, yields itself up into the life of man: thus the life of man yields itself up to worms. And thus the vicissitude is continued, and a new structure ever arises from the ruins of the other; the forms only perish, the matter is eternal, and suffers no decay.

Ver. 79. Ovid. Metam. xv. ver. 252.

—Rerumque novatrix

Ex aliis alias reparat natura figuras:

Nec perit in tanto quicquam mihi credite, mundo:

Sed variat, faciemque novat.—

—For nature knows

No steadfast station, but or ebbs or flows:

Ever in motion, she destroys her old,

And casts new figures in another mold.

Dryd.

Ver. 81. He esteems all who believe the new motions of things, that is to say, that their increase or decrease can proceed from atoms lying still and at rest, to be so void of sense, as not to deserve to be confuted. Then he teaches, in these eight verses, that the seeds, which he has proved are always wandering up and down in the void, owe their motion either to their own weight, or to the blows of others. For whatever is solid (and solidity is the chief property of the seeds) is heavy: but heavy things tend downwards, therefore, the seeds must have a downward motion. But when these solid seeds, in their descending motion, light upon bodies that are lying still, and without motion, or that move more slowly than themselves, they must of necessity rebound; for a solid body that strikes against another solid body, does not impart all its motion to that other, and therefore will be borne another way by the degrees of motion which it still retains; and this proves the upward or ascending motion. One of these motions is natural, the other violent; and both of them are necessary to the generation and dissolution of things. Epicurus taught, *κινῆσθαι τὰ ἄτομα κάτω, τότε μὲν κατὰ ἐνάβησιν, τὰ δὲ ἄνω κινέμενα κατὰ πλῆγην καὶ παλμὴν.* Laert.

Ver. 89. That Memmius may the more fully comprehend this agitation and motion of the seeds, he reminds him, in these six verses, of what he taught him, in the first book, viz. that in the infinite space there is no middle or centre, nor any lowest place to which the seeds are tending, and where, when they have once reached it, they may rest from motion. Since, therefore, they are borne downwards by their own weight, and sometimes dashing against one another rebound, who can deny that they are tost and agitated to and fro in a perpetual motion.

Ver. 95. Since, therefore, the seeds are continually in motion, and since they strike and rebound, he teaches, in these ten verses, that the resiliency of those rebounding seeds is made to unequal distances, and that the difference of the blows produces the difference of the resiliencies. Now, of those seeds that rebound to the less distances, and that are tossed to and fro in a narrower space than

others, iron, stone, and the other hard and solid bodies are composed: but those that rebound to a greater distance, and wander in a wider space, produce the air, fire, and the other soft and rare bodies of the like nature.

Ver. 105. Besides the seeds whose motion is confined to a narrow space, and that are compacted into hard and solid bodies, and besides those that result to a greater distance, and wandering in a wider space, compose the bodies that are soft and rare, there are other seeds that are always in motion, and being exempt from all contexture and coalition, are continually dashing against the others, and disturbing them. Now to represent, as it were by a similitude, that careless and random agitation, with which the atoms that never unite with others, are, as I may say, exercised in the void, he, in these fourteen verses, borrows a comparison from Democritus and Alcippus; who, as Aristotle says, compared the atoms to those minute corpuscles that are called motes, which fly in the air, and ἀφαίνονται ἐν ταῖς διὰ τῶν θυρίδων ἀκτίσιν, are very visible in the beams of the sun, when they strike through the chinks of windows or doors into a darkened room.

Ver. 119. In these fifteen verses, he turns into an argument the similitude with which he has illustrated the motions of his atoms. We see that those motes that are dancing up and down in the beams of the sun, are driven about in various and different manners. Now they seem to be striving to get into a line; now they are moved to the right, now to the left, in short, every way. But since all bodies ever keep the same line, unless they are turned out of their course by some exterior violence, or by the pressure of their own interior weight; it must be granted, that some motions of the seeds, though invisible to the eye, agitate those motes or little bodies, and drive them to and fro in that manner; for the primary cause of all motion and agitation whatsoever, that is observed in things, is in the seeds themselves. Thus we see that the Epicureans held, that the atoms were not only the first principles of things, but also the first cause of all motion. An impious belief, and condemned by the Christian faith, which teaches us that God alone is the Creator and first mover of all things.

Ver. 125. When Democritus, as Plutarch tells us, lib. i. de Placit. Philosoph. had given only two properties to atoms, bulk and figure; Epicurus bestowed a third weight: ἀνάγκη γὰρ (φησὶ) τὰ σώματα κινῆσθαι τῇ τῆ βάρους πλῆγῃ ἵνα εἰ κινηθῶσι αἰετ. It is necessary that bodies should be moved by their weight, otherwise they would not be moved at all; and besides this, he endowed his atoms with other motions, κατὰ παρέγκλισιν, καὶ κατὰ πλῆσιν of inclination and of stroke, which two last, though prest with a thousand peculiar difficulties, yet because they depend on the other motion κατὰ ἐνάβησιν, downwards, which proceeds from the weight, are likewise liable to all those exceptions that may be made against that. First, then, that weight is not a property of atoms is evidently proved from the difference of weight in bodies: for take a cube of gold, and hallow it half through, and weigh it

against a solid cube of wood of the same dimension; that gold, though it has lost half its matter, and consequently half its weight by the hollow, is twenty times heavier than the wood; from whence the consequence is natural and easy. For if weight were a property of matter, it would be impossible that a hollow piece of gold should outweigh the wood, because the wood cannot contain a ten times greater vacuity than that hollow. And this argument, if applied to the air, more strongly concludes, because that is lighter, especially if we consider that the air is a continuum, and not a congeries of particles, whirled about without any union and connection; for innumerable experiments almost in all fluids evince the contrary. I shall pass by those Dr. Glisson hath proposed, and content myself with one concerning the air, which may be deduced from the faithful trials of the honourable Boyle. The 38th of his continuation of his Physico-Mechanical Experiments sufficiently evinces, that the exhausted receiver is quite void of all particles of air, which evidently proves (as little attention to the experiment will discover) that there is *motus nexus*, as Bacon calls it, in the air, which cannot be but in a continuum. The same may be proved in water from refraction; for why are not the rays disturbed, if the parts are in motion? When experience tells us, that a little stirring with the finger troubles them. Not to mention, that this motion of fluidity, though embraced by the Platonists, is inconsistent with their hypothesis, an ambient attending circle being not to be found in nature for each moving particle; and to pass by the difficulties that press their opinion, who fancy rest to be the cause of continuity, since two smooth bodies, whose surface touch, and eternally rest, will never make one continuum; my next argument against the Epicureans is drawn from their own principles. For suppose weight a property of atoms, it is impossible the world should be framed according to their hypothesis; for how could the higher atom descend, and touch the lower, when the motions of both were equal? Nor can that little declination, that *κίνησις μὲν παρὰ γὰρ κλίσιν* (which the Epicureans are so bold to assume, contrary to all sense and reason, and which Plutarch, "de Animæ Procreatione, ex Timeo," declares as the great charge against Epicurus *ὡς ἀναίτων ἐπέσθαι κίνησιν ἐκ τῆς μὴ ὄντος*, as asserting a new motion without a cause) lessen the difficulty; for, as Tully argues, if all atoms decline, then none of them will ever stick together; if only some, "*hoc esset quasi provincias atomis dare, quæ rectè, quæ obliquè ferantur*," that would be to prescribe to atoms their particular offices, which of them should not decline, and which move obliquely. But grant there could be a combination, and grant that combination (which is impossible) should stop in some parts of the space, yet from the very nature of weight, and motion, it follows that the world, according to their hypothesis, could not be made in that order we now perceive it. For suppose this quiet frame; the atoms that fall on it, as the laws of motion in

solid bodies require, must leap backward; but meeting with other descending atoms, their refutation is soon stopt, and so they must descend again, and then striking, return, but not to so great a distance as before, because the velocity of the descent was less; and so the distance still decreasing, the atoms in a little time must rest, and only a vast heap of matter, close, and moveless, must lie on that supposed quiet frame as its basis.

Ver. 127. *Moleculæ*.] This Latin word is a diminutive of *moles*, and signifies small heaps or lumps of any matter whatever. Our translator uses it to express no less than two verses of his author; who says that the atoms first move of themselves; and

*Inde ea, quæ parvo sunt corpora conciliatu,
Et quasi proxima sunt ad vireis principiorum,*

then the concrete bodies, that are of the least bulk or size, and that approach nearest as it were to the exility of the principles (all which our interpreter has expressed no otherwise than by the word *Moleculæ*).

Ictibus illorum cæcis impulsu cientur.

are moved by the invisible blows they receive from them.

Ver. 128. The smallest bodies are moved first, and they move the greater; for the nearer any compound bodies approach to the unmixed simplicity of their principles, the more easy they are to be put in motion.

Ver. 134. To express the celerity of his atoms, he brings an instance of the swiftness of the beams of the sun, and employs it in these twenty-seven verses, as an argument *à minore*. The Epicureans believed that light consists of small particles that flow out of the sun, who is the fountain of all light. Moreover, that these minute particles consist of seeds agitated by various motions, whence the motion of those minute particles must be retarded, and become more slow: and, lastly, that they do not find an open passage through the air, but make one, and are hindered in their flight by meeting with particles of the air. But that atoms are simple bodies, not obstructed by the motions of their own parts; and are moved through the free and unmolested void. And hence they conclude, that the rays of the sun being composed of a most subtle contexture of atoms, which do not at all agree in the same motion, nor pass through a space entirely free and empty, ought to yield in swiftness to the atoms, which are wholly disentangled from one another, and move through a space altogether empty and unobstructed by any matter whatever: *καὶ μὲν καὶ ἡ διὰ τῆς κενῆς φερὰ καὶ μὴ μὴ μίαν ἀπάντησιν τῶν ἀντιποφάντων γινώμην, πᾶν μῆκος περιληπὸν ἐν ἀπερίνευκτο χρόνῳ, συντελεῖ,* &c. Epicurus to Herodotus.

Ver. 141. The very words of Cowley, in his hymn to the Light, Stanza 6.

Swift as light thoughts their empty career run,
Thy race is finish'd, when begun.

Nor was he obliged to Lucretius for the thought, which our translator has taken wholly from him, not from his author.

Ver. 145. That is to say, they pass not through a void that is altogether free and empty of all bodies: for the heat of the sun passes through the air, which is full of atoms and other bodies; as winds, exhalations, &c. which resist and retard the course of his rays; and this is what he means by the resisting force from without, ver. 150.

Ver. 151. He means that the corpuscles of the light and heat of the sun pass not through the whole air in an instant of time, nor singly one by one, but conglobed and entangled in one another, which must, of necessity, hinder the swiftness of their course.

Ver. 158. No man will be so foolish as to pretend, that the atoms stop in the air to consult and deliberate among themselves which shall go first, which second, &c. This and the two following verses, some of the editors of Lucretius have rejected: others retain them, and interpret them as above. Whoever think fit to reject them, may give them what explication they please.

Ver. 161. In these seventeen verses, Lucretius, who is always arguing, though but very weakly against Providence, takes occasion to deride the Stoics, who held matter of itself to be unactive, and incapable to produce any thing: but that it is moved and disposed to act, not by its own strength and power, but by the Divine Mind. Then he audaciously and impiously affirms, that matter, rude as it was, did make this world without any art or counsel, or design, and accomplish all those works which the ignorant and superstitious vulgar ascribe to wisdom and providence. That pleasure is the guide of the life of man; that all things are ruled and governed by her direction, and that God neither made this world, nor any thing else for the sake of man. And, lastly, he promises to show in another place, that the frame of the world is so artless, confused, and ill put together, as to evince itself to be a work altogether unworthy of the Divine Wisdom. In the fifth book we shall see how he will keep his word with us:

Quid dignum tanto feret hic promissor biatu.

Meanwhile, how much wiser he, who said, "Cœli enarrant gloriam Dei, et opera manuum ejus enunciat firmamentum," Psal. xix. 1. When we see any thing move, says Cicero, in fixed and regular motions, as the spheres, the seasons, and many other things, do we doubt those works are made without counsel and reason? When we consider with how wonderful a celerity the heavens are whirled around in so constant and never-failing a manner, making and maintaining the universal vicissitudes, to the preservation and utmost benefit of all things, can we doubt that they are made and done without reason, nay, and without an excellent and Divine reason and wisdom too? "de Natura Deor." lib. 2.

Ver. 178. He has already affirmed, that all the seeds tend downwards, and that all upward motion is violent. He, now, in thirty-two verses, urges the same again, and teaches, that no body,

not even fire excepted, naturally aspires, but is driven upwards by the force of other bodies, in like manner as the sap rises in trees, as blood gushes out of a wound, and as a piece of timber mounts when it is plunged into water. For, who doubts but that the same sap, the same blood, and the same piece of timber would tend downwards in the void, though the sap rises up in the trees, the blood spouts out of the veins, and the timber emerges and leaps, at least half of its thickness, out of the water. Lastly, he observes, that the rays of the sun tend downwards, that stars, fiery meteors, and lightning, fall to the ground; and concludes, that fire is carried upwards, not by its own force, but by the impulse of protruding bodies. And, upon this he lays the foundation of the double, that is to say, natural and violent motion of his atoms. Plutarch, 1. Plac. Phil. cap. 12. καὶ τὰ πρῶτα μὲν ἄλλα τὰ τὰ ἐξ ἐκείνων συγκρούματα βάρους ἔχει. And Simplicius teaches that Epicurus was of opinion, ἅπαν σῶμα βάρους ἔχει, τῷ δὲ τὰ βαρύτερα ὑφίστανται, τὰ βάρεια ὑπὸ ἐκείνων ἐκθλίβονται ἐπὶ τὸ ἄνω.

Ver. 180. Here we may observe a silent antithesis: for the poet answers beforehand the objections that his adversaries might urge against him. But it will be said that fire moves upward: to which he answers: And plants and trees rise upward likewise, by reason of the driving force from beneath, which breaking out of the earth, compels them to grow by ascent: and yet all ponderous things naturally, and as much as in them lies, sink downwards.

Ver. 199. Though the weight of the flame naturally strives to depress and bring down the flame; yet the force and strength of the ambient air compels and drives it upwards. Thus it yields to an element heavier and more dense than itself, but is not borne upwards of its own accord.

Ver. 203. Here some may be apt to think, that Epicurus, and Lucretius, who follow his opinion, are mistaken; for the stars never fall. But by the word stars in this place, we are to understand a fatty, oleaginous and sulphureous exhalation, which kindles in the air, and falls to the ground in a purple-coloured jelly. Virgil has imitated this passage of Lucretius, and describes the fall of these exhalations, Georg. i. v. 365.

*Sæpe etiam Stellæ, vestito impendente videbis
Præcipites cælo labi; noctisque per umbram
Flammarum longos a tergo albescere tractus.*

The seeming stars fall headlong from the skies:
And shooting through the darkness, gild the night
With sweeping glories, and long trails of light.

Aristotle says, they are exhalations of the earth, that are apt to take fire; and that being carried up into the middle regions of the air, they kindle, by means of their being compressed by the cold of the circumfused air: and he calls this kind of exhalation Ἐπιδρομή, and Ἄσπερ ῥύσις, "discursus et fluxus Stellæ." Anaxagoras held these meteors to be sparkles that fall from the fiery region. Eusebius in *Jædes*, calls them, ἀπορροαὶ τινὲς ἄσπερ, "Ef-

fluentiæ quædam Stellarum." And the Arabs Sbi-bab, which the Commentator upon Ulugh Beigh's Fables, explains, "Stella quæ nocte incedit sicut ignis;" and Stella "Demones pellens;" for the ancient Arabs and eastern people fancied falling stars to be fiery darts lanced from heaven, against the devils, or evil spirits of the air; as the learned Golias has likewise observed in his notes upon Alfergan, p. 65. But Fromondus Meteor. lib. 2. cap. 3. describes them, according to the doctrine of Aristotle, to be a fiery exhalation forced out of a cloud, and having the resemblance of a true falling star. They are thought to come from the same cause and origin as lightning, though they are not attended by thunder, at least not perceivable by us: but they bear the same proportion to lightning, as the fire of a musquet does to that of a cannon; for, as at a great distance we may see the fire of a musquet, but scarce here its noise, though the fire of a cannon at the same distance is seen, and its noise plainly heard; so by the reason of the exility of the exhalation, we hear not the noise when these fallen stars break from a cloud, as we do that of thunder that follows lightning. Fromondus compares these meteors to our kind of fireworks called rockets (though their motions be different, that of the one being forced upwards, the other downwards); which run in a train and fall in the manner of the stars. And, therefore, Pliny calls them "Scintillas & Discursus Stellarem," and Ptolemy, "Trajectiones:" both which are expressed by Manilius in these verses:

Præcipientes stellæ passimque volare videntur,
Quum vaga per nitidum scintillant lumina mun-
dum;

Et tenuis longis jaculantur crinibus ignes,
Exurguntque procul volucres imitata sagittas,
Arida quum gracili tenuatur semita filo.

Lib. i. v. 845.

Which Creech renders thus:

And still, when wand'ring stars adorn the night,
The falling meteors draw long trains of light:
Like arrows shot from the celestial bow,
They cut the air, and strike our eyes below.

Ver. 210. To do justice in this place to Lucretius, I must give the original text of this passage, which our interpreter has not faithfully rendered:

Illud in his quoque te rebus cognoscere avemus:
Corpora cum deorsum rectum per inane feruntur
Ponderibus propriis, incerto tempore ferme,
Incertisque locis spacio decedere paulum,
Tantum quod Momen mutatum dicere possis.

To explain these five verses, Creech bestows but two:

Now seeds in downward motion must decline,
Though very little from th' exactest line.

He has totally omitted, "incerto tempore ferme, Incertisque locis;" which words, nevertheless, have a signification, and that too of great importance in this place: for what Lucretius says is this, that the atoms, when by their own weight, they are

borne downwards through the void in a direct line, do at some time or other, but "incerto tempore," at no one fixed and determinate time, and in some parts of the void likewise, but "incertis locis," not in any one certain and determinate place of it, decline a little from the direct line by their own strength and power; but so, nevertheless, that the direct motion can be said to be changed the least that can be imagined. Inasmuch that he insinuates, that his atoms are moved as animals; which appears more evidently, ver. 259. where speaking of the voluntary motion of men, he uses almost the very same words.

Declinamus item motus, nec tempore certo,
Nec regione loci certa, sed ubi ipsa tulit Mens.

Thus this inveterate enemy of Providence, bestows only not a mind, only not a will on his stupid and senseless atoms. But, to proceed to the explication of this declining motion.

The poet has disputed at large of the seeds natural motion downwards, and violent upwards. Now, from whence can that violent motion proceed but from stroke? but the seeds being heavy, and therefore descending through the void in a direct line, and with equal swiftness, could never meet, never overtake one another, so that nothing could be generated whatever; and nothing would exist but empty space, and invisible principles.

Desertum præter Spatium, et Primordia cæca.

Lucretius.

The opinion of Democritus laboured under this defect: for, as Plutarch says, "de Placit. Philosoph." lib. i. c. 23. he acknowledged only one sort of motion; κατὰ πλῆγην, for so it ought to be read, not κατὰ πλῆγιον, as is manifest from Cicero, who, in his Book of Fate, says, "Quandam vim motus habebant, impulsione, quam Plagam ille appellat, à te Epicure, gravitatus et ponderis." Formerly, they [the atoms] had a motion of impulse, which he (Democritus) calls stroke: but you, Epicurus, gave them a motion of heaviness and weight. Epicurus, therefore, held two sorts of natural motion: one perpendicular, the other declining: δύο εἶδη τῆς κινήσεως, τὸ κατὰ σκέλην, καὶ τὸ κατὰ παράγληκιν. "Plutarch. de Placit. Philosoph." lib. i. cap. 23. Now, this motion of declination was thought necessary, because, otherwise the atoms could never have met together; and, consequently, there could have been no generation of any thing whatever. Cicero, in 1. lib. de Fin. Censet [Epicurus] "illa solida ac individua Corpora Materiam ferri suo deorsum pondere ad lineam: hunc naturalem esse omnium Corporum Motum. Deinde ibidem homo acutus cum illud occurreret, si omnium deorsum è regione ferrentur, et ut dixi, ad lineam, nunquam fore ut Atomus altera alteram posset attingere: itaque attulit rem commentitiam: declinare dixit Atomum perpaulum, quo nihil posset fieri minus. Ita effici Copulationis, et Complexiones et Adhæsiones Atomorum inter se, ex quo efficeretur mundus, omnesque partes mundi, quæque in eo sunt." Epicurus was of opinion, that those indivisible and solid bodies are carried

downwards in a direct line by their own weight; that this is the natural motion of all bodies: but at the same time, he sagaciously reflected, that if all the atoms descended by their own weight in a straight line, they would never reach or touch one another. He, therefore, being put to his shifts for another invention, asserted that they decline some small matter in their descent; but so very little, that nothing can be less: and that from this declination proceed the conjunctions, unions and adhesions of the atoms to one another, and among themselves: by which means was made the world and all its several parts, and whatever things are contained in it. This opinion Lucretius explains in 30 verses; and first, in these six verses, teaches, that this declining motion must be granted, otherwise the seeds would be moved like drops of rain, always apart and disjoined from one another. There would be no blows, and the atoms would never combine and join together: the consequence of which would be, that there could be no compound bodies.

Ver. 216. Lucretius adheres so obstinately to this *κίνησιν κατὰ πρὸς γὰρ κλίσιν*, motion by declination, that he will by no means suffer it to be extorted from him; and, therefore, he sharply inveighs against those who believe that the heavier seeds, as they descend through the void, can overtake and strike the lighter; insomuch that there is no need of his pretended declination in their descent; he asserts, that all seeds are alike swift, and that they are hurried through the void with an equal velocity: and, therefore, those that follow, can never overtake those that are before them. But he grants that the medium through which they pass, may contribute to the hastening or retarding of their motion; and that bodies of the same matter, but different in weight, when they fall from above downwards through water, or through the air, are not alike swift, which is false; but he will have the motion to be the swifter, the more free and empty the place is, through which the bodies move; so that where the space is most void and empty, there the motion must consequently be most swift; and be there ever so many motions, or things moving in that space, they are all of a like swiftness.

Ver. 234. Having confuted the opinion he last proposed, he concludes in these six verses, that the atoms decline in their motion; but so little, that nothing can be less: nay, not so much as that they can be said to be moved obliquely: for the senses themselves teach us, that heavy things when they tend downwards, make not their descent in an oblique motion; but the same senses cannot persuade, that heavy things do not decline in the least; since the declination is so small that it cannot be perceived. And, therefore, since the senses are not repugnant to it, and that the generating of things, which could never be done at all without that motion, indispensibly requires it, we must, of necessity, admit a declination of the seeds in their descent. Here, too, our translator has omitted these two verses of his author,

Sed nihil omnino recta regione viai
Declinare, quis est, qui possit cernere, sese?

And yet they contain a part of the argument, as the reader may observe by the explication I have given of them.

Ver. 236. It is modest in the poet to ask of us to believe only this; and yet he might with equal reason have insisted on the most oblique motion that can be imagined. If he apprehends the judgment of the senses, away with these importunate judges, and for once let them suffer themselves to be imposed upon. This request would be no less reasonable than the other. Besides, even this declination is invented at pleasure: for as Cicero tells us in the first book de Finib. "Ait declinare Atomos sine causa, quo nihil turpius est Physico: Et illum motum naturalem omnium ponderum e regione inferiorem locum petentium sine causa eripuit Atomis. Nec tamen id cuius causa hæc fecerat affecutus est: Nam, si omnes Atomis declinant, si aliæ declinant, aliæ suo motu recte ferentur: primum erit hoc quasi provincias Atomis dare, quæ recte, quæ oblique ferantur: deinde eadem illa Atomorum, in qua etiam Democritus hæret, turbulenta Concurfus hunc Mundi ornatum efficere non poterit." Epicurus says, the atoms decline without cause, than which nothing is more unbecoming, more unworthy of a natural philosopher; and has, without any reason likewise, taken from them that motion which is natural to all heavy bodies, that descend in a straight line from a higher to a lower place: but neither has he gained the point for the sake of which he invented all this. For either all the atoms will decline, and none will ever cleave and stick together, or some only will decline, while the others descend perpendicularly, as they naturally ought to do. And this is, in the first place, to prescribe to atoms their several duties and offices; which of them shall descend in a straight line, which obliquely: and in the next place, such a turbulent and confused concourse of atoms, the shell on which Democritus likewise run aground, could never make this beautiful and regular frame of the world.

Ver. 240. In the following 41 verses, Lucretius contends yet farther for the declining motion of his atoms. All men feel within themselves, that some of their motions are voluntary. Every one perceives a liberty in himself, and does not, without good reason, conjecture the like freedom to be in other animals; for he sees that they do not perform their motions at a certain time, nor in a certain order; but vary them as they list, and live as they please themselves. Nay, when the barriers of the lists are thrown open on a sudden, we only not see the will of the courser starting to the race, and running even before his limbs are in motion. Upon hearing the first shout he pricks up his ears, and the inward motion of his mind is hurried forward, while the spirits that are to be conveyed through the nerves into the several joints and members of his body assemble more slowly; and with greater difficulty obey the eager mo-

tions of his mind. Besides, when we are compelled to act by any exterior or foreign force, something, I know not what, lies hid within us, that resists and opposes that compulsion. And we plainly perceive a difference within ourselves, and seem to do another thing when we act of our own accord, than when we are compelled and moved to action by any exterior and foreign force. But from whence proceeds this liberty? Search the seeds themselves; nothing like it is concealed in them. The chain of necessity and fate is fast linked together by the straight and direct motion of the principles, from their striking one another, if they can strike, unless they decline, the same necessity follows. The declination therefore of the atoms only remains to which our liberty can be due.

Plutarch, in the *Treatise de At. Solert.* teaches us, that this doctrine of the declining motion of atoms was first broached by Epicurus, ὅπως εἰς τὴν ζωὴν ἡ τύχη παρεστέλληται, καὶ τὸ ἐφ' ἡμῖν μὴ ἀπογῆται. And that the reason why he set up this opinion, was, because he feared that if no other motion were allowed to atoms but that which they naturally, and of necessity have, by their own weight, we should not be free agents in any thing, since our mind would be moved in such a manner as it would be compelled to move in by the motion of the atoms. But Cicero in his *Treatise of Fate*, blames Epicurus for this foolish opinion, in these words: "Epicurus ab Atomis petit præsidium, easque de via deducit, et uno tempore suscipit duas res inenodabiles: unum, ut sine causa fiat aliquid, ex quo existet ut de nihilo quippiam fiat; quod nec ipsi, nec cuiquam Physico placet: alterum, ut cum duo individua per inanitatem feruntur, alterum, è regione moveatur, alterum declinet." Epicurus fled for refuge to the atoms, and leads them out of their way: and by so doing, subjects himself to two difficulties that can never be solved. One, that any thing can be done without a cause: from whence it follows, that every thing may proceed from nothing; which neither himself, nor any natural philosopher will allow: the other, that when two indivisible bodies are moved through the void, one of them should move in a direct line; the other by declination. And the same author farther evinces the vainness of his opinion, by showing it to be wholly needless; and that the freedom of will in animals proceeds from another cause. "Ad Animorum motus voluntarios non est requirenda causa externa. Motus enim voluntarius eam naturam in se continet, ut sit in nostra potestate, nobisque pareat: nec id sine causa: ejus enim causa ipsa est Natura." We need not seek an external cause for the voluntary motions of the mind; for voluntary motion contains within itself such a nature, that it is in our power, and is obedient to us; and this too not without a cause, for nature herself is the cause of it. *Lib. de Fato.* Thus, even in Cicero's opinion, any antecedent external cause takes away liberty. But freedom of will does not require an antecedent external cause to make it move; since it has the cause of its motion within itself. There-

fore, Lucretius has no reason to ascribe the voluntary motions of men, or of irrational animals, to the exterior motion of atoms, since they proceed from the very nature of the free mind. It is well, however, that Lucretius owns that all our actions are not the effects of necessity or fate; but he was in the wrong to impute this freedom to the declining motion of his atoms.

But since the Epicureans acknowledge the liberty of the will, we may take it as a supposition already granted, and without any farther proof, make use of it in our disputes against them: but, because it is of great consequence, and is the foundation of Seneca's and Plutarch's discourses, "Cur Bonis malè, et Malis benè," why good men are afflicted and why villains prosper, it deserves some confirmation. The liberty of the will is a power to choose, or refuse any thing after that the understanding hath considered it, and proposed it as good or bad. This is that τὸ ἐφ' ἡμῖν of Epictetus; and, as he calls it, ἐλεύθερον, ἐκώλυτον, ἀπεριεμπόδιτον free, not subject to hindrance or impediment. And Adrian delivers it as his doctrine, τὴν προαίρεσιν ἢ ὁ Ζεὺς νικῆσαι δύναται. Our will not Jupiter himself can fetter. Epicurus calls it τὸ παρ' ἡμᾶς and that such a power belongs to every man, is evident from the general consent of mankind; for every man finds such a power in himself, and thence proceeds this agreement; it is the foundation of all laws, of all rewards and punishments. For it would be very ridiculous for a prince to command a stone not to fall, or break it for doing so. Origen declares, ἀρετῆς ἵαν μὲν ἀνέλθῃ τὸ ἐκύσιον, ἀνέλθῃ αὐτῆς καὶ τὴν ἑστίαν and Lucian ingeniously makes Sosastrus baffle Minos, after he had granted that all men act according to the determination of fate, ἡ ἐκαστὴ ἐπίταξι γεννηθέντι τὰ πρακτικά, which ordains every man's actions as soon as he is born; and the compassionate philosopher, who would have all offences forgiven, produceth this argument: ἡ γὰρ ἐκόντα ἀμαρτάνειν ἀλλὰ τινι πάθει κατὰ βίαν, for none sin willingly, but are forced. But more, this may receive a particular confirmation from every man's experience; for let him descend into himself, he will find as great evidence for the liberty of his will, as for his being, as Cartes delivers; though he is extremely mistaken, when he tells us in a metaphysical ecstasy, "A quocunque sumus, et quantumvis ille sit potens, quantumvis fallax, hanc nihilominus in nobis libertatem esse experimur, ut semper ab iis credendis quæ non planè certa sunt et explorata, possimus abstinere, atque ita cavere, ne unquam erremus." From whomsoever we have our being, and how potent or deceitful soever he be, yet we find within ourselves this liberty, that we can abstain from believing those things that are not evidently certain, and experimentally tried and proved to be so: and be so aware of ourselves as never to be mistaken: for what does he in this but determine the extent of that power, of whose bounds he is altogether ignorant? and place this cogitation beyond his reach, whose power to deceive is infinite, and his will equal to his ability. But let us all consider our usual actions, and we shall find every one

a demonstration. For let a thousand men think on any thing, and propose it to my choice, I will embrace or reject it according to their desire, which necessarily proves my liberty; unless these thousand, or perhaps the whole world, were determined to think on the same thing I was to act. For my part, if any one would take the bit and bridle of fate, I shall not envy him the honour, nor be very willing to blind myself, to have the convenience of a guide. Let Velleius think it a commendation for Cato to be good, "*quia aliter esse non potuit*," because he could not be otherwise; and Lucan agree with him in his sentence: I should rather be freely so.

This is opposed by those who imagine the soul material, and therefore all her actions necessary; because matter once moved will still keep the same motion, and the same determination which it received, which must needs destroy all liberty, and evidently proves the Epicurean hypothesis to be inconsistent with it. Others urge prescience, and think themselves secure of victory, whilst the Deity is on their side. The weakness of the former opinion will, hereafter, be discovered; and Cartes has said enough to silence the latter objection. "*His difficultatibus nos expediemus, si recordemur mentem nostram esse finitam, Dei autem potentiam, per quam non tantum omnia, quæ sunt, aut esse possunt, ab æterno præscivit, sed etiam, voluit, ac præordinavit, esse infinitam, ideoque hanc quidem à nobis satis attingi, ut clarè et distinctè percipiamus ipsam in Deo esse, non autem satis comprehendere, ut videamus quo pacto liberas hominum actiones indeterminatas relinquat. Libertatis autem, & indifferentiæ quæ in nobis est, nos ita conscios esse ut nihil sit quod evidentius & perfectius comprehendamus. Absurdum enim esset, propterea quod non comprehendimus unam rem, quam scimus ex natura sua nobis debere esse incomprehensibilem, de alia dubitare quam intimè comprehendimus, atque apud nosmet ipsos experimur.*" We may extricate ourselves from these difficulties, if we reflect that our mind is finite; but that the power of God, by which he not only foreknew from all eternity all things that are, or that can be, but likewise willed and preordained them, is infinite; and therefore, that it is enough for us plainly and distinctly to perceive and know that such a power is in God: and though we cannot so fully comprehend the extent of it, as to see how and by what means he leaves the free actions of men undetermined, yet we are so conscious of the liberty and indifference that is within us, that we comprehend nothing more perfectly, nor with greater evidence. For it would be absurd, because we do not comprehend one thing, which we know ought in its nature to be incomprehensible to us, to doubt concerning another, which we entirely comprehend, and experience within ourselves.

Ver. 244. For as Cicero, de Fato, says, fate is only *ἔκτατος*, or *συμπλοκή αἰτίων τιταγμένη*, and they who introduce a fixed and eternal succession of causes, deprive the mind of man of all its freedom and liberty, and subject it to the inevitable necessity of fate.

Ver. 249. Here the poet takes occasion to explain the voluntary motion of animals. First, the mind is willing, then it collects the spirits which are always obedient to its will, and conveys them through the nerves into the members, cherishes the languid and weak spirits, and supplies new and vigorous. Thus the animal is moved, and its motion continued.

Ver. 260. In these twelve verses the poet illustrates the voluntary motion of animals, which he has explained, and makes a comparison between that and a violent or constrained motion. For when we are moved by a violent motion, we feel an exterior force: but when we move of our own accord, we perceive no such thing. Besides, our will resists and opposes an outward force, and sometimes even overcomes it: whence it appears, that there is some inward principle of motion entirely free, and not bound or compelled by any necessity.

Ver. 262. So far are we from giving consent to this violent exterior force, that on the contrary, the mind resists it, and yields with reluctance. Aristotle in the third of his Ethics gives this definition of a violent and compulsive motion: "*Est Motus violentus, cujus Principium extrinsecus est, nihil ad juvante eo, quod agit.*" That is a violent motion, whose principle and cause proceed from without, the movent, or thing moved contributing nothing to it.

Ver. 267. *Something.*] He means the will that is seated in the heart.

Ver. 270. At the command of the will a fable matter, that is to say, the spirits fly, &c.

Ver. 272. In these nine verses he at length concludes for the motion by declination from the freedom of will, which cannot proceed from stroke; for motion by stroke is an outward force, which is wholly contrary to all liberty; and even destructive of it. Weight, though it be an inward principle of motion, yet since it always tends downward, and in the same manner, is no less an enemy to liberty, than stroke itself. Therefore declination only remains, which being made neither at any certain time, nor any certain place, avoids that necessity of which both weight and stroke are the cause, and unlinks the chain of destiny.

Ver. 274. Whence proceeds the freedom of will; i. e. the declining motion of the atoms is the cause of it. Cicero, in the first book of the Nature of the Gods: "*Epicurus cum videret, si atomi in inferiorem locum ferrentur suo pte pondere, nihil fore in nostro potestate, quod illarum motus esset certus et necessarius, invenit declinationem, ut hanc necessitatem effugerit.*" When Epicurus saw, that if the atoms were moved downward by their own weight only, and had no other motion whatever, nothing would be in our power; because their motion would then be certain and necessary, he invented declination to avoid this necessity.

Ver. 277. I take this passage, of which by the way, the interpreters say nothing to be very difficult, and this to be the meaning; nothing is made of nothing; therefore freedom of will proceeds

from something; but what that something is, we must now inquire. There is a twofold motion of the seeds; one natural, which is downwards, and proceeds from weight; the other violent, which is upwards, and occasioned by stroke. Now it is manifest that all things are not made by stroke, because some motion proceeds from weight. But since the motion that proceeds from weight is natural, and keeps due on always in the same tenor, it is no more favourable or conducive to liberty, than the motion caused by stroke. Nothing, therefore, can prevent the mind, which consists of seeds, from being determined by a certain inward necessity, that is to say, by the motion that proceeds from weight, but the declination of the seeds, which motion of theirs being made in no certain nor determinate place, nor at any certain or determinate time, can alone be the cause of liberty, or freedom of will.

Ver. 280. Lucretius says,

*Id facit exiguum clinamen principiorum
Nec regione loci certa, nec tempore certo.*

In this disputation for the declination of his atoms, this is the third time that our poet has repeated these words, "*nec regione loci certa, nec tempore certo*," and as often too has our translator omitted them; even though they are an essential part of the argument, and the main support of it. For if the declination were made at a certain time, and in a certain place, the necessity would be equally inevitable. And of this he himself was afterwards aware, as may be seen in his explication of these passages in his Latin edition of this author; where he has given them the same interpretation that I have done in these annotations.

Ver. 281. Lucretius has already taught that seeds are not liable to change; and now in these thirteen verses he asserts, that the universal mass of matter can never increase or diminish; for not one seed dies, whereby a gap might be made in it, and no new seed is introduced, whereby it may become more close; but it remains always the same. Then he affirms that the motions of the seeds are immutable; that they have always moved in the same manner they now do, and will always continue in the same motion to all futurity. And therefore, that whatever things have been produced heretofore, the like things may also be produced now. For where the same seeds, and the same weight, always remain, and where no external force can be introduced, there too the same motion that proceeds from that weight, must of necessity be also.

Ver. 294. Lest any one should object against Lucretius, that the senses themselves overthrow this opinion of the perpetual motion of the atoms; for if the universal matter be agitated, how comes it to pass that the all, the *τὸ πᾶν*, seems buried in so profound a tranquillity. The poet answers in these twenty-five verses, that this objection is very weak; for the motion of the seeds must of necessity be imperceptible, since the seeds themselves are invisible to the sharpest sight. Then he adds, that the motions even of sensible things

often cannot be perceived by the eyes of such as behold them from afar; which he illustrates by the example of sheep frisking up and down on the side of a hill, and of an army moving to and fro in a plain. He means the whole mass of all things; the universe.

Ver. 296. The atoms of which all things are composed.

Ver. 313. We have an excellent description of this in Sir R. Blackmore's *K. Arthur*:

The various glories of their arms combine,
And in one fearful dazzling medley join.
The air above, and all the fields beneath
Shine with a bright variety of death.
The sun starts back to see the plains display
Their rival lustre, and terrestrial day.

Ver. 319. He has disputed at large of the solidity of the atoms, and of their properties, weight and motion, that proceed from it. He is now going to treat of another of their properties, which is figure, and this relates to their size or magnitude; for figure is the bound and manner of magnitude. And first, he asserts in eight verses, that atoms are of different figures; not that their shape is discernible to the eye any more than their magnitude, which is imperceptible, as has been said already: but because their different figuration may be made evident by several arguments. Epicurus in Plutarch teaches that atoms, *ἴδια ἔχουσιν σχήματα λόγῳ διαόροισιν*, have proper figures that are discernible to the eye of reason. And in the epistle to Herodotus: *τὰ ἄτομα τῶν σωμάτων καὶ μετὰ, ἔξ ὧν τὰ αἰ συγκρίσεις γίνονται τὰ εἰς ὧν διαλύονται, ἀπερίληπτα εἰσι τὴν διαφορὰν τῶν σχημάτων ἢ γὰρ δύνατον γίνεσθαι τὰς ποσαύτας διαφορὰς ἐκ τῶν αὐτῶν (perhaps ὁρίσων) σχημάτων περιειλημμένων.*

Ver. 323. In the first place, he teaches that seeds are of different figures; because it is not likely that those corpuscles, being infinite as they are, should be all of the same figure. Consider any things whatever, the greater their number is, the greater too, for the most part, is the variety of their figures; and therefore, what we ought to believe likewise of the atoms.

Ver. 327. Secondly, in these six verses he argues for the different figures of his atoms, from the various shapes and figures of all natural things that are composed of them; as men, beasts, birds, fish, &c.

Ver. 328. This is certainly a very proper epithet for fish; though Aristotle, and some others, will not allow all fish to be mute.

Ver. 333. Thirdly, he shows in twenty-five verses, that this different figuration is very manifest and visible, not only in all kinds of things taken collectively, but even in the individuals of the same kind; for among brute beasts the dams know their young, and the young their dams, only by their different figuration. Then he illustrates this argument with an elegant and lively description of a cow passionately bemoaning the loss of her sacrificed calf; to which he lastly adds a hint of the agnition that lambs have of their mothers.

Ver. 340. Of the maternal affection of beasts to their young, see Oppian *Ἀλλυτ. α. ver. 724.* and Ovid, *Fast. 4.*

Ver. 358. In the four first of these seven verses he teaches, that the same species, or, as they call it, individual difference may be discerned by any who attentively consider them, not only in the stalks and ears, but in the very grains of corn, in shells and the like; and in the three last verses he concludes, that the seeds themselves, since they are not made by any artist, after one and the same shape and form, ought no less than the rest of things to be adorned with various and different figures.

Ver. 365. He proves that this contention for the variety of figures is not vain and useless, but ever necessary for the explication of several phenomena of nature; and from those very phenomena he fully proves the variety of the figures of his atoms. And first, in seven verses he teaches why the fire of lightning penetrates things more easily, and with greater force than the fire that proceeds from oil, pitch, wood, &c. which is because the fire of lightning consists of small and subtle seeds; but those of the fire that comes from oil, &c. are thicker and more blunt. Thus some seeds are less than others, according to the doctrine of Lucretius.

Ver. 366. He means that penetrates more easily, for lightning lets out the wine, and leaves the vessel unhurt; spares the scabbard, and melts the sword within it; and does several other wonderful things of like nature, which our fires will not do.

Ver. 372. In these four verses he teaches that this diversity of figures is the cause that light pierces through horn, and that water stops on its surface.

Ver. 374. Here Lucretius acknowledges, that some seeds are less than others, though he asserted before that all seeds are leasts: yet he contradicts not himself, for by leasts, the Epicureans mean only bodies that are simple and solid, and therefore indivisible.

Ver. 376. In these six verses he demonstrates, that some seeds are not only bigger than others, but that some are hooked and branchy, while others are smooth and round. For the reason why wine passes through a strainer sooner than oil, is, because the seeds of oil are full of hooks, and therefore the texture of the principles being more intricate and perplexed, they are not so easily loosened and disjoined, to pass through the holes of the strainer.

Ver. 382. In these ten verses he urges the same thing in an argument taken from the different taste of things. For milk and honey are sweet, because they consist of little bodies formed in such a manner, that when they are poured upon the organ of the taste, and are entering into the little pores of it, they are exactly fit for those small passages, and thus they gently and smoothly touch the organ, and pleasingly affect the taste. But wormwood and centaury are bitter and sharp, because the little bodies of which they are made, are form-

ed in such a manner, that when they come to enter into the little pores of the organ, they bear no proportion with them, and thus prick and hurt the particles of it, and tear and wound the organ itself. And hence it is reasonable to conjecture, that sweet things are composed of smooth and round principles; and bitter things of seeds that are rough and full of hooks.

Ver. 384. *Rue.*] Lucretius mentions not rue, but centaury, which is indeed a very bitter herb: the French call it *fiel de terre*, gall of the earth; it had its name from Chiron the Centaur, who first discovered the virtues and use of it: for as he was handling the arms of Hercules, he chanced to wound himself in the foot with an arrow, and cured the wound by the application of this herb; of which see more in Pliny, lib. xxv. c. 6.

Ver. 385. In like manner, whoever eats of the herb sardon is said to die of a distorted mouth; for that herb contracts the nerves of the mouth, and causes a violent grinning and laughing, followed by death. Hence the proverb, "*Risus Sardonius*," is said of those who laugh without cause, and when they have more reason for sorrow than for joy.

Ver. 392. He has hitherto been speaking of sweet and bitter tastes, and now he teaches, in seventeen verses, that things are pleasant or unpleasant to the other senses likewise, for the same reason, that is, because the seeds of which they are composed are smooth and round, or rough and hooky. Thus in grateful and pleasing sounds, smells, and colours, we must acknowledge the seeds to be smooth and round, but in ungrateful and offensive, hooky and rough.

Ver. 400. He alludes to the custom of the ancients in strewing the stage with saffron and other flowers, when plays were to be acted. Horace in the epistle to Augustus:

*Recte necne crocum floresque perambulet attæ
Fabulam si dubitem, &c.*

And this they did to delight the audience with the fragrantcy of odours.

Ver. 409. Because there are some objects that are not altogether so offensive as to wound the organs of the sense, as bitter things do; nor so grateful as to delight and please them, as do the things that are sweet, but rather tickle and affect them, with a sort of inoffensive pain, if I may so call it, we are to believe that the seeds of such things are not entirely smooth and round, nor hooky and rough, but that they are shaped with angles jutting out, so that they may sometimes gently prick and tickle; but cannot wound and tear. This opinion the poet has included in five verses.

Ver. 413. Here our translator has not fully expressed his author, whose words are,

Fœcula jam quo de genere 'st, inulæque Sapoꝛes.

The *fœcula* and the *inula* were two sauces of the Romans: The first of them, the *fœcula*, was an acid sauce, whose chief ingredient was indeed the lees of wine, (and the word properly signifies the

lees or dregs of any liquid), as Turnebus says on this passage of Horace :

—acria circum

Rapula, lactuæ, radices : qualia lassum

Pervellunt stomachum, ciser, haleræ sæcula coa.

Lib. ii. Sat. 8.

The other, the inula, was a sweet sauce, made of the sweetish bitter root of the herb inula, elecampane ; of which see Columella, lib. xii. cap. 46. Horace too makes mention of it in the place above-cited :

Erucas virides inulis ego primus amaris

Monstravi incoquere. —

Now Lucretius says, that the reason why the sæcula has an acid taste, and the inula as it were a sweetish bitter, is, because they do not consist of atoms that are wholly rough, or wholly smooth, but of such as are of a nature between both, and have minute angles whose points are blunted, and therefore rather tickle the organ of the taste, than hurt or wound it.

Ver. 414. In the last place he comes to the sense of touch ; and in thirteen verses teaches, that the objects of that sense are differently figured ; because heat and cold affect the organs in different manners. For Epicurus held, that since the seeds of fire are pungent, and prick the sense, they must of necessity have some prominent angles ; and that the seeds of cold have a trigonical or pyramidal figure ; that is to say, their figure consists of four triangular faces. This we find in the epistle to Pythocles, where giving the reason of ice, he says it is made κατ' ἐκδήλιν μὲν τῷ σφαιροῦ σχηματισμῷ ἐκ τῆς ὕδατος, σύνεστιν δὲ τῶν σκαλινῶν, τὴν ἰξυγονίαν τῶν ἐν τῷ ὕδατι ὑπερχόντων, ἢ κατὰ δὲ τὴν ἰξυγονίαν τῶν τοιούτων πρόσχερσιν, when the orbicular corpuscles (that are the efficient causes of heat) are driven out of the water, and when those of a trigonical and acutangular figure, that are in the same water are compressed together, or when such corpuscles come from without, and join themselves to the water. Plutarch too is of the same opinion in the treatise, " De primo Frigido." Then he describes the touch ; the darling sense of the Epicureans, and the several kinds of it, not without some transport and exultation of mind.

Ver. 421. The seeds being tumultuously mixed together, confound the sense, because they are in a sort of commotion and uproar.

Ver. 427. He has hitherto been proving the diversity of the figures of his atoms from the different motions which the objects excite and cause in the organs of the senses : he now brings other arguments to the same purpose, taken from the firmness, as well as from the fluidity of things. For some seeds have little hooks and clasps, by which they catch and hold fast one another ; and the little empty spaces being filled up as much as possible, they have not the liberty of mutually disentangling themselves, and getting free from one another ; and thus they compose the firm and hard bodies of brass, iron, stones, and the like. Other particles are smooth, and approaching to an

orbicular figure, and of these are composed all fluid bodies ; for the smooth and round particles will not join to others, yield to the least thrust, are always in motion, and rolling up and down from place to place.

Ver. 430. A diamond is esteemed the hardest of all stones, and scarce any blows can break it. Pliny, lib. xxxvii. c. 4. says of it, " Incudibus deprehenditur ita respuens ictum, ut ferrum utrinque diffiliat." It is so proof to blows, that beat it on an anvil, and the iron on both sides will give way to its hardness.

Ver. 435. In these six verses, he says, there are some bodies we may reckon in the number of fluids, as smoke, mist, flame, &c. which may be dissipated and dissolved with the slightest stroke, and therefore do not consist of hooky seeds entangled with one another. Yet these very bodies hurt and prick the senses ; for mist and smoke offend the eyes ; and flame penetrates hard things, and passes even through stones and rocks, therefore they are not composed of principles entirely smooth and round. He, for this reason asserts, that they are made partly of acute principles.

Our translator has omitted the three last verses of this argument, which are as follows :

Non tamen hæere inter se, quod quisque videmus
Sentibus esse datum : facile ut cognoscere possis
Non è perplexis, sed acutis esse elementis.

Lambinus rejects them likewise, and asserts them to be needless, for which Faber commends him, and adds, that they cannot be of Lucretius. The other editors, Nardius, Fayus, &c. retain them ; and so too does even Creech himself in his Latin edition, but only wishes for another word in lieu of *sentibus*, in which he seems too critical and hard to please. I take the verses to be not only not useless, but even necessary ; and am of opinion, that Lucretius was in the right, and ought to affirm, as he does, that since those fluid bodies affect and penetrate into hard, they are composed of pungent, penetrating, and acute principles, no less than of smooth and round : for the atoms that are either smooth or round cannot prick, offend, nor easily penetrate into bodies ; " nec tamen hæere inter se," &c. nor do their particles nevertheless adhere and mutually stick to one another, as the particles of thorns do ; inasmuch, that from thence you may rightly conjecture, that all those things that are so soon and easily dissipated, are not composed of principles that are hooked, entangled, and perplexed among themselves : but of acute,

Non è perplexis, sed acutis esse elementis :

And this is the meaning of this passage, which has so much employed the interpreters.

Ver. 441. There are other fluids that are both bitter and sharp : for instance, the water of the sea. And the poet asserts, in these fourteen verses, that all such things are composed partly of smooth and round principles, from whence they have their fluidity ; partly of sharp and rough, from which they derive their tartness and bitterness.

Lastly, he demonstrates, that bodies of that nature are made of particles different in figure, because they may be separated. For, strain seawater through sand, it loses its sharp particles, and becomes sweet, so that it retains only its smooth and round principles.

Ver. 455. What he here undertakes to prove, is this: The atoms vary in their figure, and in their bigness too, as is proved already. But yet that variety is not infinite, though it be indefinite or incomprehensible. This he proves, first in nineteen verses, from the minuteness of the seeds, which he has before demonstrated: for to make an infinite variety of figures, the mass of some of the seeds must of necessity be immensely great, since an immense magnitude only is capable of an immense variety of figures. If you would change the figure of a body, transpose its parts, and as many different positions as it can receive, so many different figures there will be. Attempt to do the like with an atom, turn and transpose every way the parts that can be conceived in it, and you will find only a finite variety of figures in so small a body. Epicurus taught, that the figures of the atoms are incomprehensible, but not infinite, εἶναι τὰ σχήματα τῶν ἁτόμων ἀπερίληπτα, ὡς ἄπειρα, says Plutarch, de Placitis Philosoph. lib. i. c. 3. And Epicurus himself writes thus to Herodotus: Ἀτόμοι ταῖς διαφοραῖς ὡς ἀπλῶς ἄπειροι ἔσιν, ἀλλὰ μόνον ἀπερίληπτοι, εἰ μὴ μίλλει τις τὸ τοῖς μεγέθεσιν ἀπλῶς εἰς ἄπειρον αὐτὰς ἐκβάλλειν, ὥστε ἐν τῷ ὀρισμῆναι μεγέθους ἀπείρου ἐνῆεν διαφοράς ἀδύνατον.

Ver. 462. He does not mean that you should add two, three, or more parts; but suppose it to consist of three or more, that is to say, of a definite number of parts, each figuration requires a peculiar position of the parts. Now the parts of any finite magnitude may be transposed so many ways, that no new way shall remain to change the position from what it had been in before, for otherwise there would be still new and new parts even to an infinity; from whence the magnitude might at length be conceived to be infinite; but nothing of this can be in an atom, which is too little even to be seen.

Ver. 474. He brings another reason, in these sixteen verses. If we grant still other and other figures, even to an infinity, no external qualities of natural things would be certain and determined, since they might be so diversified by a new figuration, that at length there might arise a better than every best, and a worse than every worst. Garments of the most precious colours, the sweetest odours, sounds, and tastes, might be surpassed by others, and would be no longer in esteem, while the things that seem now most offensive and displeasing, and to which we are most averse, would be valued above worse than might arise daily.

Ver. 479. For swans, when they are near their death, are said to sing very sweetly. Thus Martial, lib. xiii. Epig. 77.

Dulcia defecta modulatur carmina lingua
Cantator Cycnus funeris ipse sui.

The mournful swan, thus when his death is nigh,
In tuneful strains sings his own elegy.

But Pliny denies it, "Olerum morte narratur flebilis cantus falso, ut arbitrer, aliquot experimentis," lib. x. cap. 20. See the note on Book iii. ver. 5.

Ver. 486. Though our interpreter here mentions the sense of smelling, yet he, at the beginning of his argument, says, "Has et contemptus odor myrrhæ," the odour of myrrh would be contemned, which Lucretius there alleges as an instance of an object of that sense.

Ver. 488. *No higher.*] That is, from either extreme, either of worst or best. Nor can there be an infinite number of things between either extreme, because every thing is inclosed within certain bounds, and can neither enlarge itself into an infinite magnitude, nor contract itself into an infinite littleness; so neither can the goodness of things be improved to an infinite, nor the badness of things be impaired to an infinite.

Ver. 490. In these seven verses, he confirms his foregoing arguments, because, says he, things are generally determined and bounded by their contrary qualities, which are so extreme that though they may indeed have middle degrees, yet they can have no degree whatever without or beyond themselves. Lambine interprets this of the zones; but I rather think our translator in the right, and that Lucretius meant to speak of the most intense power and force of fire and frost, which are the extremes that bound the middle degrees of heat and cold. For fire is the most hot, and frost or ice the most cold of all things.

Ver. 497. Having proved the different figures to be finite, he now adds, in seven verses, another of Epicurus's opinions, which is, that the seeds of a like figure are infinite in number; that the globous are infinite, the oval infinite, the pyramidal infinite, and in like manner of all the other figures. Then he adds a reason for this opinion, from the infiniteness of the atoms which he has proved before. For, since the different sorts of the figures are finite, it is evident, that if the atoms contained under each sort were finite in number, there could be no infinity of atoms in the universe. Epicurus writes to the same purpose in the epistle to Herodotus: Καθ' ἑκάστην δὲ σχημάτων ἀπλῶς ἄπειροι ἔσιν ἁτόμοι, ἡ γὰρ τὸ πᾶν εἴη τῷ πλήθει τῶν ἁτόμων ἄπειρον, εἰ μὴ ἀπλῶς ἂν ἔσιν αἱ καθ' ἑκάστην τὰ σχημάτισιν ὁμοῖαι.

Ver. 504. Gassendus has omitted the four first of these verses, as being improper to the explication of the argument: and indeed we may dispense with the want of them, if we take Lucretius to be disputing still concerning the figures of his atoms; but if we consider the particular argument that follows, they seem even necessary. For he has just proved the infinity of the atoms under each figure: but foreseeing an objection hanging over his head, and that it might be the better understood together with the answer, he, in these four verses, gives notice to the reader what he is to expect: and certainly our transla-

tor was in the right to retain them. But to return to the explication of Lucretius, who, in these thirty-three verses, first objects against what he has been already arguing, that the atoms under certain figures may seem to be finite, because we see that some animals are more scarce and fewer in number than others: to which he answers, that the animals that are scarce in one country abound in another. For instance, that there are many elephants in India, though he scarce ever saw one at Rome. In the next place, that granting there were but one only thing of one certain kind in the world, yet unless the atoms of the same figure were infinite, that only thing could not be born, nor grow. And, lastly, he brings a comparison to illustrate this assertion; and as it is difficult to find a simile more elegantly expressed, so we can never meet with one more properly applied. For what can better represent the perpetual motion of his atoms, than the disturbed and restless agitation of the sea.

Ver. 511. A region of Asia, where there is great plenty of elephants, as there is likewise in Africa, though none are bred in Europe. Pliny, Nat. Hist. lib. viii. cap. 10. and Polybius, lib. v. says, that in India the houses, and even the stalls of their beasts were enclosed with the trunks of elephants. And who knows not that the chief strength of the Indians consisted in their elephants, by the help of which they defended both themselves and their country.

Ver. 525. Cowley in his *Davideis* seems to have imitated this passage of Lucretius:

The sea itself smooths her rough looks awhile,
Flatt'ring the greedy merchant with a smile:
But he whose ship-wreck'd bark she drank before,
Sees the deceit, and knows she would have more.

Ver. 536. Lucretius struggles hard for the infiniteness of his atoms, the figures of which he will have to be very various, and those of each shape to be infinite, which last assertion is the greatest absurdity imaginable. For infinite atoms must fill all the space that is, because if there be any place that can receive another, there may be conceived an addition to the former number; and therefore to say it was infinite is absurd. And this proves that the infinite atoms of Epicurus can be nothing else but a vast heap of dull moveless matter, coextended, with the infinite space. And how then could the world be made, how these various alterations of bodies, all which proceed from motion, is difficult to be conceived. And this likewise presses the hypothesis of Cartes and his indefinite matter, as a little application will discover.

Ver. 537. These ten verses contain an argument that is a necessary consequent of the former. If we grant the seeds of one sort of figure to be finite, then the things that are composed of those finite seeds, when they once come to be dissolved should never be restored. If the seeds were finite, we should in vain expect the growth and generation of things. And what is more certain than that some things are born, and grow; and that

others decrease and die? from whence it must be concluded that the seeds of a like figure are infinite in number.

Ver. 549. He has hitherto been proving the infinity of atoms, under all the several sorts of figures; and now, in four verses, he teaches, that things cannot be composed of seeds of one and the same figure; and that the various qualities of things proceed from the variety of the seeds, which must necessarily produce a variety likewise of contexture. And this, indeed, he sufficiently proves in several places.

Ver. 551. In these six verses, he brings his first argument from the earth, which none will deny, consists of several sorts of seeds, if they consider the springs that bubble, and the flames that burst out of its bowels, together with what variety of trees and plants it produces, and that it supplies nourishment to man and beast. For all those things cannot proceed from seeds of the same magnitude, weight, and figure. Then in sixty four verses he subjoins many things concerning the earth: how the ancient poets feigned her to be the mother of the gods, and called her Cybele; he describes the ornaments of the goddess, explains the mysteries of the whole fable, derides the superstition of it, and at length falls foul upon Providence itself.

Ver. 554. As Hecla, Vesuvius, and other mountains, which, as well as *Ætna*, eject flames, a convincing proof that there are subterranean fires, and those too great and many, as appears likewise by the *Vulcanian* islands, and by the hot baths and fountains that break out of the earth in many places; and which, as *Vitruvius*, lib. ii. rightly observes, could not be, "*si non in imo haberent aut de sulphure, aut de alumine, aut bitumine ardentes maximos ignes*:" in which words he briefly declares the causes of them. To which, as a farther proof, not to mention divers others, may be added earthquakes, some of which most certainly derive their original from these subterranean fires. Whoever desires to be farther satisfied touching this matter, may consult *Pliny*, l. ii. c. 106. The *Epicurean* animadversions of *Gassendus*, and particularly *Kircher* in his *Mund. Subterr.* lib. iv. See likewise *Ittigius* expressly upon this subject, in his treatise de *Montium Incend.* and the accurate disquisition of *Alphonsus Borellus*, in *Historia et Meteorologia Incendi. Ætnæi*. Anno 1669. Of *Ætna*, see Book I. ver. 744. and Book VI. ver. 646.

Ver. 557. The earth, which produces all things, is said to be the mother of the gods, of men, and of beasts. Holy rites are instituted to her, which Lucretius applies partly to natural, partly to moral philosophy. Those which relate to Jupiter he proposes as a subject worthy of derision; but she is deservedly owned as a goddess, for the reasons he enumerates in these forty-nine verses, in which he tells us why men gave the earth the name of *Magna Parens*, great mother, and why she was worshipped as a goddess: and he takes occasion to explain the ceremonies that were observed in the mysteries of that great mother, and

gives the reasons of those rites. The same ceremonies are likewise mentioned by St. Austin, de Civit. Dei, lib. vii. c. 24. and Arnobius, lib. iii. adv. Gent. says, "Quidam è vobis terram, quod cunctis sufficiat animantibus victum, magnum matrem esse dixerunt." Some among you called the earth the great Mother, because it supplies all animals with food and nourishment.

So Virgil, *Æn.* vi. ver. 784.

—Qualis Berecynthia mater,
Invehitur curru Phrygiæ turrita per urbes,
Læta deum partu, centum complexa nepotes,
Omnes cœlicolas, omnes supera alta tenentes.

—In pomp she makes the Phrygian round,
With golden turrents on her temples crown'd :
A hundred gods her sweeping train supply ;
Her offspring all, and all command the sky.

Dryd.

In a palace at Rome, belonging to the family of Colonna, there is to be seen to this day the following inscription :

DOMUS ÆTERNA FLAVIÆ CHRYSYDIS
LABERIA FELICIA SACERDOS MAXIMA
MATRIS DEUM, M. L.

Ver. 560. Virgil speaking of this great mother, says,

—Hinc fida silentiâ sacris,
Et juncti curru dominæ subiere leones.

Æn. iii. v. 112.

She secret rites and ceremonies taught,
And to the yoke the savage lions brought.

Dryden.

Ver. 562. Macrobius *Saturnal.* lib. i. cap. 21. "Hæc Dea leonibus vehitur, validis impetu atque fervore animalibus; quæ natura cœli est, cujus ambitu aer continetur, qui vehit terram." This goddess is carried by lions, impetuous and fiery animals; of which nature is the heaven, within whose circumference is contained the air that carries the earth.

Thus too Claudian :

Et qui perpetuo terras ambitque vehitque,
Nec premat incumbens oneri, nec cesserit aer.

And Lucan :

—Dum terra fretum, terramque levabit
Aer. —

To which Aristophanes, in *Nubib.* likewise alludes :

Ὁ δῖος ποτὶ δ' ἀναξ' ἀμύχαν' ἀνέ, ὃς ἔχει τὴν γῆν μντιώμεν.

And, indeed, if this opinion were to be examined into, according to the decrees of nature, rather than to the doctrines of the poets, it would appear ridiculous to philosophers. Yet Pliny, who was admitted into the secrets of nature, as far as any of the Latins, visibly favours this belief : "Hujus aeris vi suspensam cum quarto aquarum Elemento librari medio spatio tellurem," says he, lib. i. *Nat. Hist.* cap. 5. And Achilles Tatius, in *Arat.* *Phæ-*

nomen. illustrates the liberation or suspension of the earth in the following manner : "Put," says he, "one single sheet of millet, or any other small grain whatsoever into a bladder, and by blowing the bladder full of air, the seed or grain will be carried up and remain in the middle of it. After the same manner, the earth being on all sides forced by the air, suspends poised in the midst of it." See Turbenus, l. *Adversar.* 4, c. 17. where he explains these verses of Ovid.

Et circumfuso pendebat in aere Tellus
Ponderibus librata suis. — *Metam.* l. 1.

Ver. 565. Thus too Ovid, 4 *Fast.*

—Cur huic genus acre leonum
Præbeat insolitas ad juga curva comas ?
Desieram : cœpit : feritas molita per illam
Creditor : id curru testificata suo est.

Ver. 578. The Romans had several sorts of crowns or garlands, which it was the custom to give as tokens or badges of honour, to such as had distinguished themselves in any action, or done any signal service to the republic. Among the rest there was the "Corona Muralis," the Mural Crown, which was given by the emperor, or general of an army, to him who first scaled the walls of a town that was besieged. It was made of gold, and had spikes that imitated the battlements or pinnacles of walls and towers. Ovid, in the place above cited, gives the same reason why the ancients crowned the image of the earth with a Mural Crown :

—Turris fera caput est onerata figura :
An primis turres urbibus illa dedit ?

Ver. 574. Cybele, the mother of the gods, was daughter of Minos king of Crete, and wife of Saturn. The ancients called her by several names. I. Cybele, either from Cybelus, a hill in Phrygia, where, in her infancy, she was exposed to wild beasts; or from *κυβήτειν*, which signifies to throw and set upon the head, because of the frequent turning and fantastic motions of their heads, which her priests were obliged to observe and practise in her rites and ceremonies; and it is probable she had this name from both: for the Greeks called her *Κυβέλη*, and *Κυβήτειν*. II. "Ops: quod ipsius auxilio vita constet," says Macrobius, because the life of all things is preserved by the assistance of the earth. III. Rhea, from *ῥέω*, to flow, because the earth abounds with all good things. IV. Berecynthia, from Berecynthus, a castle of Phrygia, on the banks of the river Sagaris, or a hill of Phrygia, of the same name, near the river Marfyas. V. "Vesta, à vehendo," because the poets feigned her to be carried in a chariot. VI. Pessinuntia, from Pessinus, a city of Phrygia where she was honoured. VII. "Fauna à fevendo," because the earth is beneficial to all animals. VIII. "Fatua à fando," because, as the same Macrobius says, infants never speak till they can set their feet to the earth. XI. Pales, because she was the goddess *Pastorum* and *Pabulorum*, of shepherds and pasturage. X. Dindyme

& Dindymene," from Dindymus, a mountain of Phrygia. *Virgil.*

Alma Parens Idæa Deum, cui Dindyma cordi,
Turrigeræque urbes, bijugique ad fræna leones.

Æn. 10. v. 252.

XI. "Idæa Mater, from Ida, a hill and town of the same name in Phrygia, where her rites were first instituted. XII. "Phrygia Mater;" because she was generally worshipped throughout that country. But Faber on this passage of Lucretius, gives another etymology to these two last names of the Great Mother, and dissents from all others, and even from Lucretius himself. These are his words: "Idæa signifies mountainous and woody places, as we find in Hesychius, Eustathius, and Herodotus in Melpomene, Sect. 259. whence Idæa is used to signify wood or timber for building. Now, men first fed upon acorns; the oak was their storehouse, and supplied them with provisions: from hence, therefore, the mother of the gods was called Idæa. But after the use of wheat was invented, she was called Φρύγία, Phrygia; for they were wont, Φρύγεω, to parch their wheat. We may observe that Lucretius says, these appellations were given her from the ancient ceremonies of her mysteries: to which I add out of Virgil and others, that those ceremonies were first brought from Crete to the shores of the Hellespont: but the Cretans had all these customs and rites from the Syrians. Thus Faber, to whose opinion many things might be objected, if it were worth the while; but what should we be the worse, if we were ignorant of all the etymologies of the heathen gods? I will only add, that the image of this Idæan mother was brought out of Phrygia to Rome, at the time when Hannibal infested Italy. For the Romans had found in the books of the Sibyls, that they should be able to drive away their foreign enemy, if the Idæan mother were brought to Rome: upon which M. Valerius Levinus, Cæcilius Galba, Cn. Tremellus Flaccus, and M. Valerius Falco, were sent into Phrygia, and to them king Attalus gave the image of the Idæan mother, which they brought into the city: and this was only a rough unpolished stone which the Phrygians worshipped for the Idæan mother. *T. Liv. Lib. 2. Ovid. Fast. 4.*

Consulitar Pæan: Divumque accersite Matrem,
Inquit; in Idæa est invenienda iugo:
Mittuntur Proceres: Phrygiæ tunc Sceptra tenebat
Attalus, &c.

Ver. 575. "Phrygiæque catervas—Dant Comitæ," says Lucretius; and with our translator's leave, he should not have made them all women; for, no doubt but both sexes assisted at the procession. Fayus is as much mistaken the other way; for he calls them legions, as if they were regular and armed troops.

Ver. 576. *Phrygia.*] i. e. Dry or burning; from Φρύγεω, torrere, or from Phrygius, a river that divides it from Caria; or from Phrygia, the daughter of Cyclops. A country in Asia, bounded with Caria, Mysia, Lydia, and Bithynia: it is divided

into the Greater and the Lesser, which last called Troas, was of old the kingdom of the Trojans.

Ver. 578. The priests of Cybele were called Galli, from Gallus, a river of Phrygia; of whose waters they had no sooner tasted, than they were seized with madness, and made eunuchs of themselves. This story, how strange and ridiculous soever it may seem, is related by St Jerome. And Tertullian in Apologetico, Sect. 25. calls the venerable and reverend high-priest of this goddess, Archigallus, Archeunuch. See more of them in Ovid, Fast. 4. where he calls them Semi-mares, half men.

Ver. 582. He bestows divinity on the mothers, of whom we puny creatures are born; and asserts, that the children who are guilty of undutifulness or impiety towards their parents, are unworthy to be parents themselves.

Ver. 582. The Phrygian muse was a sort of enthusiastic harmony, and very proper to excite the passions of the mind, and to swell the soul to rage and fury. Macrobius in his second book on the dream of Scipio, chap. 3. speaking of the power and force of music, says, "Ita omnis habitus animæ cantibus gubernatur, ut & ad bellum progressi & item receptui canatur; cantu & excitante & rursus sedante virtutem: daps somnis adimitque; nec non curas & immittit & retrahit: iram suggerit, clementiam suadet, corporum quoque morbis medetur." And all who are conversant among authors, meet with so many instances of the amazing effects of harmony, that there is no room to doubt of the truth of them. Timotheus, by music, inflamed Alexander to what degree he pleased, and cooled him again as easily; which Dryden describing, says, admirably;

Pleas'd with the sound, the king grew vain,
Fought all his battles o'er again,
And thrice he routed all his foes, and thrice he
flew the slain.

The master saw the madness rise,
His glowing cheeks, his ardent eyes;
And while he heav'n and earth defy'd,
Chang'd his hand, and check'd his pride.

A musician in Denmark, by the same art, enraged king Ericus even to the striking of all his friends about him. Pythagoras taught a woman to stop by the same means the fury of a young man, who came to set her house on fire; and his scholar Empedocles hindered another from murdering his father, when the sword was drawn for that purpose. The fierceness even of the nature of Achilles was allayed by playing on the harp; for which reason Homer gives him nothing else out of the spoils of Eëtion. Damon, by music, reclaimed wild and drunken youths to sobriety and temperance; and Asclepiades reduced even seditious multitudes to temper and reason. And thus, too, these effeminate priests of Cybele were animated by their Phrygian arts to cut and hack their own flesh, as our poet observes of them, v. 594. Many more examples of this nature may be seen in Gronovius, Lib. II. Observation. cap. I. Nor is it wonderful, that sudden passions should be raised and suppressed.

sed by music; (for which reason, Pindar says to his harp, τὸν αἰχμαλὸν κραυγὴν σβέννεις, thou quenchest the raging thunder); but that it should cure settled diseases in the body, is what we should hardly believe, if we had not both human and divine testimony for it. Plin. lib. 28. cap. 1. "Dixit Homerus profluvium sanguinis vulnerato femore Ulysses inhibuisse Carmine: Theophrastus Ischiadicos sanari: Cato prodidit luxatis membris carmen auxiliari, Mar. Varro podagris." Where the word *carmen* must be understood as joined with musical notes. For the cure of the sciatica, Theophrastus commends the Phrygian music upon the pipe; and A. Gellius for giving ease to it, "ut memorie proditum est," says he, as it is reported. Apollonius in his book de Miris, speaks to this purpose: it deserves admiration, what Theophrastus writes in his treatise of Enthusiasm, that music cures many passions and diseases both of the mind and body. Καθάπερ λειποθυμίας, φέβης, καὶ τὰς ἐπὶ μακρὸν γίγνομενάς τῆς διανοίας ἐκπάσεις, ἰάσαι γὰρ φησὶν ἡ καλαύλησις καὶ ἰχθυὰ καὶ ἱστιλῆψίαν. And the same author witnesses that many in his time, especially the Thebans, used the pipe for the cure of several diseases: and this Galen calls καλαυλεῖν τῷ τόπῳ, "super loco affecto tibia canere," or "loca dolentia decantare." So Zenocrates is said to have cured madmen, Terpander and Arion divers other maladies. But were it not for the example of David, (which we find in I Sam. xvi).

— Whose lyre did Saul's wild rage controul,
And tun'd the harsh disorders of his soul.

we should hardly be convinced of this physic, unless in the particular cure of the tarantism; the experiments of which are too notorious to be denied or eluded; and therefore afford a probable argument, that other diseases might naturally be expelled so too; but that we have either lost, or not yet found out the art. For the explication of the reason of these surprising effects of music, the magicians fly to their Calcodea; the Platonists to their Anima Mundi; the rabbies to fables and prodigies too trivial to deserve repeating. Baptista Porta, in his Natural Magic, seems to ascribe it to the magical power of the instrument, rather than of the music: for he says, that madness is to be cured by the harmony of a pipe made of hellebore; because the juice of that plant is held good for the same purpose: and the sciatica, by a musical instrument made of poplar, because of the virtue of the oil that is extracted from that tree, in mitigating those kinds of pains. But these, and many sympathetical experiments are so false, that we have reason to wonder at the negligence, or rather impudence of those that report them. Picus Mirand. says, that music moves the spirits to act upon the soul, as medicines do to operate upon the body; and that it cures the body by the soul, as physic does the soul by the body. But the true natural reason may be, that in the same manner as musical sounds move the outward air, so that does the inward, and that moves the spirits, and they the humours, which are the seats of diseases, by condensation, rarefaction, dissipation, or

expulsion of vapours, and by virtue of the sympathy of proportion, which allies them to man.

Thus they our souls, thus they our bodies win,
Not by their force, but party that's within:
Thus the strange cure on our spilt blood apply'd,
Sympathy to the distant wound does guide:
Thus when two brethren strings are set alike,
To move them both, but one of them we strike.

Cowley.

But for the producing of the desired effect, Kircherus requires four conditions. I. Harmony. II. Number and proportion. III. Efficacious and pathetic words joined with the harmony, which, by the way, were fully and distinctly understood in the music of the ancients. And, IV. An adapting of all these to the constitution, disposition, and inclination of the patient. Of which, and all things on this subject, his book "De Arte magna Consoni & Dissoni," is well worth the diligent reading. I will conclude this remark with these excellent verses of an anonymous poet, touching the power of music on the mind of man.

For man may justly tuneful strains admire;
His soul is music, and his breast a lyre:
A lyre, which whilst its various notes agree,
Enjoys the sweets of its own harmony.
In us rough hatred with soft love is join'd,
And sprightly hope with grov'ling fear com-

bin'd,
To form the parts of our harmonious mind.
What ravishes the soul, what charms the ear,
Is music, though a various dress it wear.
Ev'n beauty music is, though in disguise,
Too fine to touch the ear, it strikes the eyes,
And through them to the soul the silent stroke }
conveys.

'Tis music heav'nly, such as in a sphere
We only can admire, but cannot hear.
Nor is the power of numbers less below;
By them all humours yield, all passions bow,
And stubborn clouds are chang'd, yet know not }
how.

Let other arts in senseless matter reign,
Mimic in brass, or with mix'd juices stain:
Music the mighty artist man can rule,
As long as that has numbers, he a soul,
As much as man can those mean arts controul. }

Ver. 587. With these arms they did not only terrify and strike a dread into the common people, but sometimes slightly wounded themselves: hence the poet says, v. 594. that they

Look dreadful gay in their own sparkling blood.

Ver. 590. This verse contains a most sharp invective and derision. This great mother; a rough stone, unpolished by art, and not much given to rattle, did, no doubt, a world of good; but even she herself kept silent the benefits she bestowed. Lucretius says:

Munificat tacita mortales mutua salute.

Meanwhile those abused wretches strewed the way with flowers, and gave money to her beg-

ging train; unmindful of Antisthenes, who answered one that asked him money for the goddesses: *ὃ τρέφω τὴν μητέρα τῶν θεῶν, ἢν εἰ θεοὶ τρέφουσιν.*

Ver. 596. Saturn, the husband of this great mother Cybele, used to devour his male children, either by agreement with his brother Titan, as some say, or as others, because he knew that the fates had decreed that he should be dethroned and expelled his kingdom by his son. But Cybele hid Jupiter, of whom she was delivered in Crete, in a cave in the mountain Dicte, and gave command to her priests, who were called, Curetes Corybantes, and Dactyli, to take care of him: and if Saturn should come to look for him, to make a noise near the place where he was hid with their cymbals and brazen bucklers, that the crying of the infant might not betray him to his father. And this is what Lucretius hints at in this passage.

Ver. 597. *Jove*] Jupiter, so called, "quasi juvenis pater." The chief of the fabulous gods of the heathens. He was son of Saturn and Ops, and born at the same time with Juno, whom he married. See the preceding note.

Ver. 600. *Saturn*] The son of Cælus and Terra. He was cast into prison by his brother Titan; there arising a difference between them which of them should govern; but was set at liberty by his own son Jupiter: by whom, nevertheless, he was afterwards dethroned, having attempted to take away his life. Being expelled the kingdom, he fled into Italy to king Janus, whence the country in which he lay concealed was called Latium. Vossius, l. de Philosoph. cap. 6. not improbably supposes, that by him is meant Adam; for who besides him was the son of Heaven and Earth? Besides, the name Saturn seems to be derived from the Hebrew word Sotar, which signifies to lie hid; and may well be applied to Adam for his flight, and absconding himself after his fall. But Cicero is of another opinion concerning his name, and says, "Saturnus appellatus est, quod saturetur annis: Ex se enim natos commesse fingitur solitus, quia consumit ætas temporum spatia, annisque præteritis insaturabiliter expletur." De natura Deorum, lib. 2.

Ver. 601. *Ops*] The daughter of Cælus and Vesta, or Tellus, and wife of Saturn. Why she was called Ops, see in the note on v. 574.

Ver. 602. Here the poet gives the reasons why the priests and attendants of this great goddess are armed. I. Says he, in remembrance of the Curetes, those armed priests, by whose means Jupiter was preserved from being devoured by his father. II. To signify that all men ought to be ready at all times to defend their country, with their lives and fortunes. And, III. To assist and protect their parents, "decorique parentibus esse;" of which last reason our translator takes no notice.

Ver. 605. In these sixteen verses he praises the witty invention of the poets, but rejects the thing itself: for why should the gods, who are blessed with eternal ease, take care of the earth or those who cultivate it; of the fields, or the corn that grows in them. The gods lie supinely indulging

themselves in indolence, and lulled in undisturbed repose. They take no care of the affairs of the earth, and are wholly unconcerned at the good or ill actions of men. The word Ceres, Neptune, Bacchus, may be used for corn, for the sea, and for wine; but do not therefore fondly fancy them to be gods.

Ver. 606. Behold the true image of the Epicurean god! How thoughtless and supine he lies, indulging himself in ease and idleness! Epicurus writing to Menæceus, describes him exactly in the same manner: *τὸ μακάριον, τὸ ἀφθάρτον ὅτι αὐτὸ πρᾶγμα οὐκ ἔχει. ὅτι ἄλλω παρέχει, ὥς ἔστι ὀργαῖς, ὅτι χάρις συνέχεται· ἐν αἰσθησέει γὰρ πᾶν τὸ τοιοῦτον.* Who despises not so lazy a prince, or but such a private man. These six verses are repeated in this place from book i. ver. 78. See there the note upon them.

Ver. 615. *Neptune*] He was the son of Saturn and Ops, brother of Jupiter and Pluto. In the division of the world, the godship of the sea fell to his lot; and therefore, the poets used the word Neptune for the sea. He married Amphitrite, the daughter of Nereus, or Oceanus, by whom he had many nymphs. His name, according to Cicero, comes from nando, swimming; according to Varro, "à nubendo, quia terras aquis obnubit & cooperit;" because he hides the earth, and covers it over with waters. He bore a trident as the token of his power, because of the three parts of the ancient world, that are surrounded by the sea. Let us hear Virgil describe him in all his pomp; and allaying the boisterous fury of the winds and waves.

Jungit equos curru Genitor, spumantiaque addit
Fræna feris, manibusque omnes effundit habenas:
Cœruleo per summa levis volat æquora curru:
Subsidunt undæ, tumidumque sub axe tonanti
Sternitur æquor aquis: fugiunt vasto æthere,
nimbi:

Tum variæ comitum facies; immania cete,
Et senior Glauci chorus, Inousq. Palæmon,
Tritonesque citi, Phorcique exercitus omnis,
Læva tenent Thetis, & Melite, &c.

Æn. 5. v. 817.

And *Æneid.* i. 158.

Sic cunctus pelagi cecidit fragor; æquora postquam
Prospiciens Genitor, cœloque innectus aperto
Flectit equos, curruque volans dat lora secundo.

His finny train Saturnian Neptune joins:
Then adds the foaming bridles to their jaws,
And to the loosen'd reins permits the laws.
High on the waves his azure car he guides;
Its axles thunder, and the sea subsides,
And the smooth ocean rolls her silent tides.
The tempests fly before their father's face,
Trains of inferior gods his triumphs grace;
And monster whales before their master play,
And quires of tritons crowd the wat'ry way.
The marshall'd powers in equal troops divide
To right and left, the gods his better side
Enclose, and on the worse the nymphs and ne-
reids ride.

Dryden.

When thus the father of the flood appears,
And o'er the seas his sov'reign trident rears,
Their fury falls: he skims the liquid plains,
High on his chariot: and with loosen'd reins
Majestic moves along, and awful peace main-
tains. *Dryden.*

Ver. 616. *Ceres.*] So called, "quasi Geres, à gerendis frugibus;" as Cicero says, or rather as Vossius conceives, from the Hebrew word Geros, which signifies a green spike of corn. She was daughter of Saturn and Ops and mother of Proserpina. She invented tillage and the use of corn; which she taught to many people, as she went searching up and down the earth for her daughter, whom Pluto had ravished. Whence the ancient poets made her the goddess of corn, and used her name to express it, in which the modern too have followed their example.

As when a field
Of Ceres, ripe for harvest, waving bends
Her bearded grove of ears, which way the wind
Sways them, &c. *Milton.*

Bacchus, the son of Jupiter and Semele; called by the Greek Διόνυσος, having two mothers: because he was taken out of his mother's womb, who was killed with lightning, and put into Jupiter's thigh; from whence, when he was grown ripe for birth, he again came into the world.

Imperfectus adhuc infans genetricis ab alvo
Eripitur, patrioque tener, si credere dignum,
Infuitur semori; maternaque tempora complet.

says Ovid, *Metamorph. iii. 310.* where the whole fable may be seen at large. He travelled over all the earth, conquered the Indies, and was the first who triumphed, which he did riding on an elephant, and surrounded by a throng of wild and bawling women, who from him were called Bacchæ; and he himself had his name Bacchus, *ἐκ τοῦ βαχᾶν*, "à vociferando vel ululando." He is likewise called by several other names, as Liber, Dionysius, Lenæus, Bromius, &c. He is said by the poets to have invented wine; for which reason they made him the god of wine, and expressed it by his name.

Ver. 621. Having described the pompous ceremonies of the great mother of all things, he returns to his subject, and in these six verses brings his second argument, to prove that several sorts of seeds are employed in the composition of every thing; for example; in the same herbs, and in the same water; for since they serve for food to so many sorts of animals, as horses, sheep, oxen, &c. they must, of necessity, contain several sorts of principles that may make them proper nourishment for each sort.

Ver. 627. In these four verses he adds another argument, and urges, that even the atoms that compose but one animal, must, of necessity, be of many very different figures; that by their variety they may be proper and fit to make the several parts of the animal; the veins, the bowels, the bones, &c.

Ver 631. In these five verses he brings his fourth argument, and instances in wood and all combustible matter: for they are resolved into fire, light, smoke, and ashes; and we ought to believe that the dissolution is not made into any thing but what was actually contained in the thing dissolved: and that nothing perishes out of the wood but the connection and position of its parts, or the peculiar manner of existing, the form, the quality, the species, the accident, the event, by whose means it was, and was called wood. It must therefore be granted, that in wood and other combustible things, there lies hid those different kinds of seeds, of which fire, light, smoke, and ashes consist.

Ver. 636. His fifth argument is contained in these seven verses. We find several qualities to be in the same body; that is to say, smell and taste. But it is evident, that smell and taste consist of seeds of different figures; for they affect different senses: and while one of them enters through the nostrils, the other affects the tongue and the palate.

Ver. 643. In these twelve verses he illustrates his opinion with the simile he often uses, then he proposes an objection, and solves it. And, first, if any one should ask, since the same seeds are common to many things, how come the things themselves to be different? Like seeds ought to make like things. Lucretius bids this caviller look upon his verses, and he will find the same letters common to many words; yet it cannot be denied but that those words are different from one another, nor that different verses are composed of them. For the like reason, though the same seeds are common to many things, yet the things themselves that are composed of those like seeds, may be wholly different from one another. See the note on ver. 833. book i. To which I add that if any one be desirous to know how many different words can be contained in any one language, that acknowledges but four and twenty letters, he may take the trouble of computing the total of these nine and thirty figures, 200232790039604140847618609643520000000; for the number cannot be expressed otherwise.

Ver. 647. This must be referred to what he said above, ver. 501, of the infinity of the seeds of a like figure; and likewise to what he said on the contrary, ver. 456, of the finite number of the unlike figures. These two verses the poet repeats again, a few verses forwarder, viz. at ver. 677.

Ver. 655. Though many seeds are common to many things, yet each thing requires a certain order and disposition of the atoms that compose it: and to have them join, and, as it were, associate themselves with such as are congruous, and will agree with them, and pass by and avoid to unite themselves with others: from whence it farther comes to pass, that when the thing is dissolved, the congruous atoms mutually withdraw themselves, and get away from the incongruous. This Lucretius proposes in these ten verses, and gives this reason why it must be so; because o-

herwise monsters would be born every day; and we should see chimæras, centaurs, and all the fabulous animals of the poets. But that none of these portentous monsters are seen, because all things proceed from certain, not from omnigenous seeds; and are nourished by certain seeds likewise.

Ver. 658. It would indeed be a miracle that boughs should grow out of the body of a living man; and perhaps what Gassendus, in the fifth book of the life of Pireiskius, relates of a plum-tree that sprouted out at the sternum (the part of the body where the ribs join upon the breast) of a shepherd who lived near Tarragona in the kingdom of Arragon, will meet with little credit. This shepherd, says he, happened to fall down upon a dwarf plum-tree, and a splinter chanced to run into that part of his body where it took root for the space of two years, to such a degree, that after several shoots had been cut off, some at length sprung out upon which blossoms and fruit were seen. Pireiskius insisted on the truth of this so long, that at length Cardinal Barberini sent to inquire concerning it of the Archbishop of Tarragona, who certified to him that the thing was true; and Puteanus not only received letters attesting the truth of it likewise, but even some of the shoots were sent him; and he held a correspondence with the man upon whose body they grew. Nor was the Cardinal so hard of belief afterwards, having heard that something like this had happened in Tuscany, about the neck of a hen; and at Frontignan in Languedoc, about the finger of a fisherman, into which there had run a bone of a sea-fish, called a scorpion; which wound came to that pass, that a chirurgeon took out of it three small fish of the scorpion kind. Yet after all, none but they who have been eye witnesses of these things, will readily give credit to them.

Ver. 660. A sort of monster that vomits flame, And that has a head and breast like a lion, the belly of a goat, and the tail of a serpent. Ovid. Met. ix. ver. 646.

Quoque chimæra jugo mediis in partibus Hircum, Pectus et ora leæ, caudam serpentis habebat.

For this fable of the poets took rise from the mountain in Lycia called Chimera, that sometimes belches out flames; lions haunt upon the top of it; about the middle, which produces a great quantity of grass, are abundance of goats; and a world of serpents are lurking at the foot of it. Thus Plin. lib. xii. c. 106.

Ver. 665. These eight verses do not so much advance any new argument, as they explain the latter part of the former. For things that proceed from certain and fixed seeds, therefore preserve their kind, as they grow and increase, and do not degenerate into another; because nature chooses out of the nourishment only those particles that are proper and fit for her; for which reason boughs never grow out of a living body; because a human body throws out all the particles of the matter that is fit to nourish trees, and never converts it into aliment

Ver. 666. Specific parts; for example, a man by concoction extracts from bread what is proper for human kind; a dog, on the contrary, what is agreeable to the species of dogs.

Ver. 669. Many things that we do not see, are evacuated out of the bodies of animals by a certain imperceptible force, διὰ τὸ μὴ δύνασθαι σαυῆσθαι τοῖς ἐκ ὁμοιογένειαι, which static experiments fully confirm.
